Dedicated to Professor Beloslav Riečan on his 75th anniversary

On a new approach towards defining intuitionistic fuzzy subtractions

Abstract

A new set of operations subtraction over intuitionistic fuzzy sets are defined and some of their basic properties are studied.

Keywords: intuitionistic fuzzy set, operation, subtraction.

To my friend Prof. Beloslav Riečan

1 Introduction

In a series of papers, part of which written together with Prof. Beloslav Riečan, the concept of “subtraction” operation over an Intuitionistic Fuzzy Set (IFS, see [1]), was introduced for the first time (see, [2, 3, 4, 6, 7, 8, 9]).

In the first two papers [6, 7], we offered direct definitions of subtractions. Later, an approach providing a series of definitions was introduced and 67 different instances of the “subtraction” operation were constructed and their properties were studied. B. Riečan participated actively in this research [8, 9].

Now, a new approach to defining different “subtraction” operations is constructed and some of the basic properties of the derived new instances will be studied.

New Developments in Fuzzy Sets, Intuitionistic Fuzzy Sets, Generalized Nets and Related Topics. Volume I: Foundations (K.T. Atanassow, M. Baczyński, J. Drewniak, J. Kacprzyk, M. Krawczak, E. Szymidt, M. Wygralak, S. Zadrożny, Eds.), IBS PAN - SRI PAS, Warsaw, 2012.

2 Some preliminary results

Up to now, different operations have been defined over IFS. Let

$$A^* = \{\langle x, \mu_A(x), \nu_A(x) \rangle | x \in E\},$$

where the functions $\mu_A : E \rightarrow [0, 1]$ and $\nu_A : E \rightarrow [0, 1]$ stand for the degrees of membership and non-membership of the element x from a fixed universe E to the set $A \subset E$, respectively, and every x satisfies that: $0 \leq \mu_A(x) + \nu_A(x) \leq 1$.

Let for every $x \in E$:

$$\pi_A(x) = 1 - \mu_A(x) - \nu_A(x).$$

Therefore, function π determines the degree of uncertainty.

Below, for brevity, we write A instead of A^* . When the IFSs A and B are given, we can construct the IFS $A - B$. The currently existing forms of this operation are given below. The first two forms are taken, respectively, from [6] and [7] and we will denote them as $BR1$ and $BR2$:

$$A -_{BR1} B = \{\langle x, \mu_{A-B}(x), \nu_{A-B}(x) \rangle | x \in E\},$$

where

$$\mu_{A-B}(x) = \begin{cases} \frac{\mu_A(x) - \mu_B(x)}{1 - \mu_B(x)}, & \text{if } \mu_A(x) \geq \mu_B(x) \text{ and } \nu_A(x) \leq \nu_B(x) \\ & \text{and } \nu_B(x) > 0 \\ & \text{and } \nu_A(x)\pi_B(x) \leq \pi_A(x)\nu_B(x) \\ 0, & \text{otherwise} \end{cases}$$

and

$$\nu_{A-B}(x) = \begin{cases} \frac{\nu_A(x)}{\nu_B(x)}, & \text{if } \mu_A(x) \geq \mu_B(x) \text{ and } \nu_A(x) \leq \nu_B(x) \\ & \text{and } \nu_B(x) > 0 \\ & \text{and } \nu_A(x)\pi_B(x) \leq \pi_A(x)\nu_B(x) \\ 1, & \text{otherwise} \end{cases}$$

and

$$A -_{BR2} B = \{\langle \min(\mu_A(x), \nu_B(x)), \max(\mu_B(x), \nu_A(x)) \rangle | x \in E\}.$$

In some definitions below, we use functions sg and $\overline{\text{sg}}$, defined by

$$\text{sg}(x) = \begin{cases} 1 & \text{if } x > 0 \\ 0 & \text{if } x \leq 0 \end{cases},$$

$$\overline{\text{sg}}(x) = \begin{cases} 0 & \text{if } x > 0 \\ 1 & \text{if } x \leq 0 \end{cases}$$

The next definitions of instances of the “subtraction” operation are based on the well-known formula from set theory:

$$A - B = A \cap \neg B$$

where A and B are given sets. In the IFS case, if the IFSs A and B are given, we define the following versions of “subtraction” operation:

$$A -'_i B = A \cap \neg_i B, \text{ and } A -''_i B = \neg_i \neg_i A \cap \neg_i B,$$

where $i = 1, 2, \dots, 34$.

Of course, for every two IFSs A and B , it is valid that

$$A -'_1 B = A -''_1 B,$$

because the first negation will satisfy the Law of Excluded Middle, but in the other cases this equality is not valid.

All new subtractions are given in Table 1.

Table 1: List of intuitionistic fuzzy subtractions

$-'_1$	$\{\langle x, \min(\mu_A(x), \nu_B(x)), \max(\nu_A(x), \mu_B(x)) \rangle x \in E\}$

------------	--

We immediately see that operation $-_{BR1}$ does not occur in Table 1, while operations $-_{BR2}$, $-'_1$ and $-''_2$ coincide.

3 Main results

Initially, we give the list of all intuitionistic fuzzy implications (see Table 2). They generate 34 different negations, given in Table 3. The relations between the implications and negations are shown in Table 4.

Table 2: List of the intuitionistic fuzzy implications

Now, we introduce the definitions of the new “subtraction” operations. As a basis of the new instances of this operation, we use the formula from classical set theory

$$A - B = \neg(A \rightarrow B),$$

where A and B are two IFSs. Therefore, 134 new “subtraction” operations can originate. This process is difficult, having in mind the very complex forms of some implications and negations from Tables 2 and 3. By this reason, here we introduce the definition of the first 14 new instances of the “subtraction” operation (see Table 5) and the rest definitions will be given in future.

Table 5: List of the intuitionistic fuzzy subtractions

-1	$\{\langle x, \min(\mu_A(x), \nu_B(x)), \max(\nu_A(x), \min(\mu_A(x), \mu_B(x))) \rangle x \in E\}$

Some of the most important properties of the subtractions are:

- (a) $A - E^* = O^*$,
- (b) $A - O^* = A$,
- (c) $E^* - A = \neg A$,
- (d) $O^* - A = O^*$,
- (e) $(A - B) \cap C = (A \cap C) - B = A \cap (C - B)$,
- (f) $(A \cap B) - C = (A - C) \cap (B - C)$,
- (g) $(A \cup B) - C = (A - C) \cup (B - C)$,
- (h) $(A - B) - C = (A - C) - B$,
- (i) $(A - C) \cap B = A \cap (B - C)$,
- (j) $O^* - U^* = O^*$,
- (k) $O^* - E^* = O^*$,
- (l) $U^* - O^* = U^*$,
- (m) $U^* - E^* = O^*$,
- (n) $E^* - O^* = E^*$,
- (o) $E^* - U^* = O^*$.

In Table 6 are given these subtractions that satisfy these properties.

In a next research we will continue to study the definitions and properties of the new subtractions based on the intuitionistic fuzzy implications.

An **OPEN PROBLEM** is to find another approach to introducing variants of the “subtraction” operation over IFSs. If this is possible, the behaviour of the new operations must be studied, also.

Acknowledgement

The author is grateful for the support provided by the projects DID-02-29 “Modelling processes with fixed development rules” and BIn-2/09 “Design and development of intuitionistic fuzzy logic tools in information technologies” funded by the National Science Fund, Bulgarian Ministry of Education, Youth.

The papers presented in this Volume 1 constitute a collection of contributions, both of a foundational and applied type, by both well-known experts and young researchers in various fields of broadly perceived intelligent systems.

It may be viewed as a result of fruitful discussions held during the Tenth International Workshop on Intuitionistic Fuzzy Sets and Generalized Nets (IWIFSGN-2011) organized in Warsaw on September 30, 2011 by the Systems Research Institute, Polish Academy of Sciences, in Warsaw, Poland, Institute of Biophysics and Biomedical Engineering, Bulgarian Academy of Sciences in Sofia, Bulgaria, and WIT - Warsaw School of Information Technology in Warsaw, Poland, and co-organized by: the Matej Bel University, Banska Bystrica, Slovakia, Universidad Publica de Navarra, Pamplona, Spain, Universidade de Tras-Os-Montes e Alto Douro, Vila Real, Portugal, and the University of Westminster, Harrow, UK:

The consecutive International Workshops on Intuitionistic Fuzzy Sets and Generalized Nets (IWIFSGNs) have been meant to provide a forum for the presentation of new results and for scientific discussion on new developments in foundations and applications of intuitionistic fuzzy sets and generalized nets pioneered by Professor Krassimir T. Atanassov. Other topics related to broadly perceived representation and processing of uncertain and imprecise information and intelligent systems have also been included. The Tenth International Workshop on Intuitionistic Fuzzy Sets and Generalized Nets (IWIFSGN-2011) is a continuation of this undertaking, and provides many new ideas and results in the areas concerned.

We hope that a collection of main contributions presented at the Workshop, completed with many papers by leading experts who have not been able to participate, will provide a source of much needed information on recent trends in the topics considered.
