

THE FLORA OF THE TATRA MOUNTAINS

by

Adam JASIEWICZ

It is the continuation of the work initiated by Prof. B. Pawłowski, who published the first volume of the Flora in 1956.

The composition of the Tatra's flora is rather well known. The main problem is to construct short up-to-date descriptions of species based on the newest taxonomic conceptions. The work goes rather slowly which is caused by the author's engagement in different other subjects.
