

POLISH STROPHARIACEAE. 1. THE GENUS *HYPHOLOMA* (Fr.) Kummer IN POLAND

by

Zofia HEINRICH

The aim is the study of the occurrence, distribution, and ecology of all the Polish species of the Strophariaceae.

The author has made a critical, up-to-date analysis of the genus *Hypholoma*. About 16 species of this genus have been found in Poland. They correspond to all European taxa. Dot maps of their distribution were made. A new section of *Gragaria* in the genus *Hypholoma* was described and two species new to the flora of Poland have been discovered:

H. laeticolor and *H. subfusisporum*.
