part of Brzesko Stare village – parson of Brześć, part of Imbramowice village – parson of Sieciechów, part of Janikowice – parson of Nasiechów, part of Kijany village, part of Przymeków (Przemyków) – parson of Przymeków, part of Koniusza village – parson of Koniusza.
Książ district
part of Kamienica village, part of Ulinka village – parson of Sieciechów.
Lelów district
part of Kluczyce village – parson of Przyłęków.
Szczyrzyc district
Liczanka (Łyczanka) – parson of Wieliczka, Pokrzywnica – parson of St. Jacob's Church in Cracow.
Silesian district
Sparowice, Włosienica – parson of Oświęcim.
The Duchy of Siewierz
Warężyn – parson of Siewierz.

ANNEX III

TOWN PROPERTY IN THE SECOND HALF OF THE SIXTEENTH CENTURY

Present name was given in brackets, if it differed much from the sixteenth century name.

Proszowice district

City of Cracow: Dąbie, Garbary, Grzegórzki, Kawiory.

City of Olkusz: part of Parcze village, villages: Starczynów, Ujków, Witaradów, Zdurada (Żurada).

Lelów district

City of Lelów: Stare Miasto (Staromieście), Ślężany, Zbyczyce.

Szczyrzyc district

City of Bochnia: Chodzinice, Krzyżanowice, Podedworze, Ryczywół.

Town of Kazimierz: Zabłocie.

City of Wieliczka: part of Mierzączka suburbs.

Nowy Sącz district

City of Nowy Sącz: Gocz, Gołąbkowice, Gorzków, Hamplowa, Paszyn, Piątkowa, Roszkowice, Żeleźnikowa Mała, Żeleźnikowa Wielka, parts of villages: Falkowa, Jamnica, Kamionka, Kunowa.

Biecz district

City of Biecz: Przedmieście.

Town of Dukla: part of Przedmieście Niższe village (Nadole).

ANNEX IV

LARGE LANDED PROPERTY IN 1595

Present name, if much different from the sixteenth century name, was given in brackets. Office occupied in 1595 given by a person's name.

1. Anna nee Sieniawski Jordanowa, wife of the castellan of Cracow † 1597/1598

Szczyrzyc district

Chabówka, Głogoczów, part of Jordanów town, Łęki, Łętownia (Łętownia Dolna), Malejowa, Mogilany, Naprawa, Osieczany, Ponieca (Ponice), Poręba, Raba (Raba Wyżna), Rabka, Rokiciny, Sieniawa, Słona (Słonne), Skomelna (Skomielna Czarna), Skomelna (Skomielna Biała), Tokarnia, part of Trzemeszna village, Wieczerza, Włosań, Zawada.

Nowy Sącz district

Biskupice, Charzowice, Dogalin, Domasławice, part of Druszków village, Faliszowice, Filipowice, Gwoździec, part of Jazowsko village, Jurków with Ludzimierz, Łąg, Melsztyn castle, Niedźwiedza, Olszowa, Palecznica, Pobrzeże, Rudka, Tworkowa, Ujazd, Zawada, Zakliczyn town, Zdania, Złota.

Biecz district

Olszyny, Ołpiny Wyższe with Ołpiny Niższe.

2. Sebastian Lubomirski, the Castellan of Malogoszcz † 1613

Proszowice district

Bielany, Bobin, Budziejowice, Chełm, part of Cudzynowice village, Kazimierza Wielka, Kościelniki, Leksice, Piotrkowice (Piotrkowice Wielkie), Podchełmie (Zakamycze) demesne, part of Przegorzały village, Stanisławice, Wola (Wola Justowska), Wolica, Wolwanowice, Wrzodowa Góra (Górka Kościelnicka).

Szczyrzyc district

Bogucice, part of Borowna village, Brzegi, Brzozowa, Chyszówka, Czarnochowice, Dąbrowica, Dobra, Dofuszyce, Dzielec, Gierczyce, Grabie with Wola Grabska and Niwy Grabskie, Grabiny, Grajów, Gruszowiec, Janiszówka (Janikówka), Jurków, part of Kawec village, Kobyle, Kobelec, Kokotów, Kurów, Lednica Dolna, Leksendrowa, Lubomierz, Łakta Nowa (Łakta Dolna), Łęczany (Łazany), Łomna, Mietniów, Nieszkowice Więsze, Niezdów, Olchawa, Połomia, Pułrzeczki, Siercza, Sławkowice, part of Stare Rybie village, Sułów, Szyk, Śledziejowice, part of Trąbki village, part of Trzemeszna village, part of Węgrce village, Wilczyska, Wiśnicz Wielki (Stary Wiśnicz), Wiśnicz Mały, Wola Leksandrowska, Wola Lubomirska (Łazany), Wolica, part of Zabłocie village, Zborów.

Nowy Sącz district

part of Kęty village, Zatok.

3. Stanisław Szafraniec, the wojski of Cracow † 1598

Proszowice district

Pieskowa Skała castle, Przeginia, part of Sąsów village, Sułoszowa, Wielmoża, Wola (Wola Kalinowska).

Lelów district

Czaryż, Krzepice, Psary, Sasinowa Wola (Wola Czaryska).

4. Aleksander Myszkowski † 1617

Proszowice district

Brodła, Oklesna.

Lelów district

Jaworznik, Kotowice, Leśniów, Mirów, Moczydła, Myszków ironworks (Myszków Stary), Postawczowice (Postaszowice), Przybynów, Trzebnów, Ultowiec (Łutowiec), Wysokie, Zaborze, Żarki town.

Silesian district

Podolsze, Polanka, Przeciszów, Spytkowice, Wieprz.

5. Gabriel † 1617, Andrzej † 1613 and Jan † 1637 Tęczyński, sons of the Voivode of Cracow

Proszowice district

part of Baczyn village, Brzoskwina, Cholerzyn, part of Chrosna village, Czerмна (Czerna), Czyżówka, Filipowice, Frywałd, Góra Nawojowa, Grodziec, part of Janikowice village, Kępa (Budzyń), Krzeszowice, Miękinia, Młynka, part of Morawica village, Myślechowice, part of Nielepice village, Nowa Góra town, Obrazowice (Obrażejowice), Ostroźnica, part of Prądnik village (Prądnik Biały – part), Rudno, Sierzna (Trzebinia-Siersza), Tęczyn castle, Tęczynek, Wodna, Wola (Wola Filipowska), Zalas.

Książ district

Giebułtów, Maciejów, Małuszów, Tuchołów.

Silesian district

Bachowice, part of Dwory village, Grodzisko.

6. Konstanty Wasyl Ostrogski, the Voivode of Kiev † 1608

Proszowice district

part of Czechy village, Grębocin, Kowala, Krzyszowice (Skrzeszowice), part of Marszowice village, Pleszów, Polanowice, Szczepanowice, Zębocin, Żerkowice.

Szczyrzyc district

part of Piasek Mały village, Prokocin, Przewierczany (Przebieczany).

Nowy Sącz district

Bartkówka, Brzeziny, Glinnik, Gurowa, Jedlna, Łaziska, Podole, Posadowa, Przedanica Niżna, Radziejowice, part of Roztoka village, Wiesiołka, Zagórze, Załęże Niżne, Załogoszce.

7. Piotr Myszkowski, the Starosta of Chęciny † 1601

Książ district

Boczkowice, Brzeście, Częstoszwowice, Głogowiany, Karczowice, Kąpie, Kropidło, Książ Mały, Książ Wielki town, part of Krzeszówka village, Kunaszówka, Marcinowice, Marcinkowice, Mierzawa,

Moczydła, Niesków, Olszówka, Pogwizdów, Pokrzywnica, Przyłek, Przysieka, Słaboszów, Trzonów, Wielowieś (Wielka Wieś), Wolica.

8. Wojciech Padniewski, the Castellan of Oświęcim † 1610

Książ district

Jedlca.

Lelów district

Bielanowice (Zawiercie-Blanowice), Biskupice, Cięgowice, Czarna Poręba (Poręba), part of Dobra village, Kidów, Kocikowa, Krzemienda ironworks, Łońnice, Mrzyglód town, Niwki, Pileza (Pilica) town, Poręba ironworks, Przechody, Rząsawa, part of Siadca village, Sławniów, Słupia, Smoleń, part of Strzegowa village, Wierzbka, Zawiercie (Zawiercie), Złosieniec (Złożeniec).

9. Joachim Ocieski, the Starosta of Olsztyn † 1613

Szczyrzyc district

Besów, part of Bielczyce village, Bieńkowice, Cerkiew, Czaślawice, Czerzów (Czyżów), Kłęczany, part of Marszowice village, part of Podgrodzie village, part of Szczytniki village, part of Świątniki village, Wrząpia.

Nowy Sącz district

Grabno, Więckowice.

Biecz district

Bączal Niżny (Bączal Dolny), Kunowa, Lichtarz, Lisówek, Skoliszyn (Skołyszyn), part of Sławęcın village, Szerzyny, Świącany, Ziołków (Żółków).

10. Krzysztof Komorowski, the Castellan of Nowy Sącz † 1608

Silesian district

Biernia, Cięcina, Cisiec, Gilowice, Jelesna, Jeżowice (Kurów – part), Kocanie (Kocoń), Kocórów, Krzeszów, Kurów, Las, Lipowa, Łękawica, Łodwigowice (Łodygowice), Mały Wieprz (Wieprz), Międzybrodzie (Międzybrodzie Żywieckie), Mikłuszowice (Mikuszowice Krakowskie), Milówka, Oczków, Pewła (Pewel Ślemieńska), Pietrzykowice, Przyborów, Radziechów, Rybarzowice, Rychwałd I, Rychwałd II (Rychwałdek), Sporysz, Stary Żywiec, Ślemię (Ślemień), Świnna, Trzebinia, Wielki Wieprz, Wilkowice, Zabłocie, Zarzeczce, Żywiec town.

11. Mikołaj Firlej, the Voivode of Cracow † 1599

Proszowice district

Klucze, Olenin, part of Parcze, Podolany, Rodaki, part of Stojanowice.

Książ district

Bydlin, Domaniowicze, Załęże.

Lelów district

Dąbrowica (Kuźnica Masłońska) ironworks, Kielkowice, Kromołów town, Mądolice (Górka Włodowska), Niegowanice, Ogrodzieniec town, Ogrodzieniec castle, Parkoszowice, Pomrożyce, Rokitno (Rokitno Szlacheckie), Rudniki, Ryczów Leśny, Włodowice town.

12. Andrzej Zebrzydowski, the Castellan of Śrem † 1597

Szczyrzyc district

Bystra, Chrobaczna (Jordanów-Chrobacze), Jawczyce, part of Jordanów town, Rdzawa, Skawa, Spytkowa, Surówka, Toporzysko, Wysoka, Zaryte.

13. Stanisław Tarnowski, the Voivode of Sandomierz † 1618

Proszowice district

Gruszów, Imbramowice, Karniów, Miechowice, Nasiechowice, Radzimice, Żerkowice.

14. Stanisław Ługowski † 1612

Proszowice district

part of Biały Kościół village, Brzozówka (Brzozówka Korzkiewska), Grębenice, Januszowice, Korzkiew, Kowary, Maszyce, Rzędowice, Szczytniki.

Książ district
Deszno, part of Warzlin village.

15. Jan Myszkowski † 1604

Silesian district
Bestwina, part of Biertułtowice village, Dankowice, Janowice, Jawiszowice, Kaniów, Komorowice (Komorowice Krakowskie), Pasieki, Żebracza.

16. Andrzej Stadnicki † 1614

Biecz district
Dołche, Grabie, Hałbów, Kąty with Wola, Krempna, Łysa Góra, Miscowa (Myscowa), Olchowiec, Ozinna (Ożenna), Polana (Polany), Radocina, Ropianka, Rostanie (Rostajne), Siedliska, Świętkowa (Świątkowa Mała), Tichania, Toki, Wysowatka, Żmigród town (Żmigród Nowy), Żmigród Stary, Żydowsko.

17. Jan Mniszech, the Starosta of Krasnystaw † 1612

Biecz district
Cieklin, Dobrzynia, Duląbka, Mrukowa, Nowa Wola Cieklińska (Wola Cieklińska), Pielgrzymka, Sowokłęski (Samokłęski).

18. Maciej Szczepanowski

Lelów district
Raszków, Szczekocińskie Przedmieście, part of Siedliska village, part of Sprowa village, Szczekociny town, Tęgoborz.

19. Mikołaj Ligęza, the Castellan of Wiślica † 1603

Proszowice district
Balin, Chrzanów town, Libiąż Mały, Libiąż Wielki, part of Łapszów village, Niegoszowice, Włostowice.
Silesian district
Bobrek castle, Bobrowniki, Chelmek, Gorzów, Gromiec.

20. the Czerny family

Szczyrzyc district
Brzeżek (Brzesko), Brzozowiec, Jasień, Pomianowa.

21. Hieronim Wodzisławski (Lanckoroński), the Master of the Hunt of Sandomierz † 1605/1610

Książ district
Klimęcice, Laskowa, Łany, Świętniki, Wodzisław town, Zielonki.

22. the Śmigielski family

Proszowice district
Chmielów, Działoszyce town, part of Dziekanowice village, Jazdowice, Niewiatrowice, Szczodrkowice (Szcotkowice).

23. Przeclaw Pieniążek † after 1596

Biecz district
Glinnik (Glinnik Mariampolski), Gorlice town, Ropica (Ropica Polska), Rychwałd, Stróżówka.

24. the Rzeszowski family

Lelów district
Brzostek demesne, Chycza Mała, Chycza Wielga, Kossów town, part of Radków village.

25. Oktawian Gucci

Biecz district

Barwinek, Dukla town, Lipowica, part of Przedmieście Niższe village (Nadole), Trzciana, Tylowa, Zydranowa.

26. Achacy Jordan † 1608

Biecz district

Bobowa town, Stróżna.

ANNEX V

COMMENTARY TO THE MAP: LAYOUT OF LANDED PROPERTY IN CRACOW VOIVODESHIP IN THE END OF THE SIXTEENTH CENTURY

The map of landed property (at a scale of 1:500,000) shows the territorial division of land into five ownership categories: royal, Church institutions, towns, great nobility, gentry, and petty gentry. Mixed ownership occurs when a settlement point is located on the borderline between two categories.

Town names were shown on the map, in case of villages – names of starosta's districts' and leases seats (in royal lands), and seats of major estates belonging to Church institutions. The remaining settlements were marked with dots, but without names. Names of smaller royal estates were included. The numbers denote Church institutions and great land owners. The estates of those rich Church institutions, which possessed only few, isolated settlements in Cracow Voivodeship (the archbishopric of Gniezno, the bishopric of Przemyśl, the Benedictine abbeys in Sieciechów and Święty Krzyż).

The map shows the ownership in the end of the sixteenth century and in case of the property of the nobility: exactly in 1595.

In the areas, where the settlement was scattered, it was difficult to define the borders of ownership precisely. The cartographic image is thus general, and so small enclaves of one type of ownership in estates of the other type, could be omitted, especially in densely populated areas. The measurements of the range of landed property in particular categories were made with a planimeter, on the map at a scale of 1:500,000. As such, the numbers presented in the table should be considered approximate.

Table 6. Landed property at the end of the sixteenth century

District	Ownership										Total km ²
	Royal		Church		Town		Great nobility		Minor nobility		
	Km ²	%	Km ²	%	Km ²	%	Km ²	%	Km ²	%	
Proszowice	418	12.7	1,057	32.1	33	1.0	599	18.2	1,186	36.0	3,293
Książ	94	6.5	198	13.6	–	–	389	26.8	770	53.1	1,451
Lelów	1,197	37.5	223	7.0	12	0.4	577	18.1	1,182	37.0	3,191
Szczyrzyc	1,542	45.4	434	12.8	20	0.6	733	21.6	665	19.6	3,394
Nowy Sącz	1,235	31.5	1,283	32.7	51	1.3	239	6.1	1,114	28.4	3,922
Biecz	583	26.9	162	7.5	6	0.3	441	20.4	971	44.9	2,163
Silesian	342	13.0	110	4.2	–	–	1,451	55.2	726	27.6	2,629
Cracow Voivodeship	5,411	27.0	3,467	17.3	122	0.6	4,429	22.1	6,614	33.0	20,043
The Duchy of Siewierz	–	–	381	56.1	–	–	–	–	298	43.9	679

Royal property covered a relatively large area, larger than in the neighbouring Voivodeship of Sandomierz (19.6%). The dominance of royal property is even more visible in comparison with the Voivodeships of Łęczyca (13.0%), and Sieradz (11.1%). Royal estates in Cracow Voivodeship included, among others, poorly inhabited piedmont areas in Szczyrzyc, Nowy Sącz and Biecz district, and large woodland territories in Lelów district. The number of royal settlements was 477 (18.5% of all settlements), whereas in Sandomierz Voivodeship it was 331 (11%).

In Cracow Voivodeship, Church property dominated over royal property in terms of the number of settlements (573, that is 22.2%), but covered a smaller area. A similar situation could be found in Sandomierz Voivodeship, where the estates of Cracow bishopric were larger than in the Voivodeship of Cracow. Due to numerous Church and royal estates, the property of the nobility occupied a lower percentage of the area in Cracow Voivodeship (55.1%) than in the Voivodeships of Sandomierz (62.1%), Łęczyca (64.9%), or Sieradz (71.0%). The greatest compact area owned by the nobility was that of Żywiec estates in Silesian district, the property of Krzysztof Komorowski, the Castellan of Nowy Sącz (in the hands of the family since the fifteenth century).

(2008)

Translated by Agata Staszewska

III.3.3a.2 SANDOMIERZ VOIVODESHIP

Władysław Palucki

Ownership relations presented on the map of Sandomierz Voivodeship, shown in colours assigned to each type of property (red – royal, purple – Church, yellow – nobility, brown – town), in fact are not different that in other parts of Poland. The differences are related mostly to the size of royal estates, smaller in the north western voivodeships of the Crown, e.g. in Greater Poland and in Cuyavia, and larger in Red Ruthenia, in Ruthenian and Belz Voivodeship, or in Royal Prussia.

In our voivodeship the majority of estates belonged to the nobility, the property of the Church (spiritual and secular) occupied the second place, royal estates were the fewest. Although, in comparison with the calculations for individual categories of property, done by A. Pawiński,¹ and for royal property – by J. Rutkowski² and W. Ochmański,³ our research shows significant differences. They stem from the basis for detailed calculations, namely the general number of settlements in Sandomierz Voivodeship in the end of the sixteenth century – 3,059 – which we managed to assess, exceeding Pawiński's result (2,686) by nearly 14%.

The list of royal estates was provided by A. Pawiński on the basis of selected tax registers from 1569–1581. The number he obtained was understated, because these registers encompassed only around 70% of royal villages in Sandomierz Voivodeship. J. Rutkowski, on the other hand, limited himself to the estates included in the first inspection, disregarding royal property kept in the 'old sums', ultimately revindicated only in the seventeenth century. Finally, the precious inspection of Sandomierz Voivodeship from 1564–1565 covered also the lease of Żarnów (one town and 14 villages), which never belonged to Sandomierz Voivodeship, but to Cracow; it was inspected because its owner was Andrzej Gnoiński, the starosta of Nowe Miasto Korczyn.⁴ The inspectors omitted then many single villages and smaller leases, which – though formally acknowledged as royal during the revision – were claimed for the Treasury only after a prolonged trial,⁵ like the villages Zbigniew (today: Zbydniów) or Śmierdzina in Sandomierz district.⁶ The extension of the source basis allowed us to mark all royal estates in Sandomierz Voivodeship

¹ P. Małopolska, introduction, table after p. 70.

² J. Rutkowski, *Badania nad podziałem dochodów w Polsce w czasach nowożytnych*, vol. 1, Warsaw 1938, tab. 1, table 1, pp. 270–271.

³ LS 1564/1565, pp. XXIV–XXVI. The publisher omitted Stopnica starosty.

⁴ Andrzej Gnoiński, since 1548 the starosta of Nowe Miasto Korczyn, since 1549 also of Żarnów (LS 1564/1565, p. 4, footnote 1; p. 21, footnote 2). The starosty of Nowe Miasto Korczyn for a long time was held together with the starosty of Wiślica and Żarnów lease; in 1530 it was given to Krzysztof Szydłowiecki (MK 43, f. 568).

⁵ The publisher of the inspection from 1564/1565 did not take these royal estates into consideration in his calculations.

⁶ Śmierdzina, a royal village in Sandomierz district, in 'old sums' since the king Władysław III of Warne (the Revision of letters: AGAD, the so-called Lithuanian Metrica, IV B 8, f. 70). In 1521 Prokop Ossoliński obtained the king's permission to buy this village (MRPS IV, no. 3728), only in 1596 it became property of Zbigniew Ossoliński, Prokop's grandson, when it was exchanged for a royal village Laszki by Lwów with Stanisław Mroczek, the owner of Śmierdzina (*Pamiętnik Zbigniewa Ossolińskiego woj. sandomierskiego*, pub. W. Kętrzyński, Lwów 1879, pp. 12 f.). The village was never inspected. The first inspection from 1564/1565 does not even mention it. Next inspections, in 1569, 1602 and 1616, mentioned that it was a village 'in old sums', obliged to annually provide one cow and a cart of timber to Osiek (AGAD, Oddz. XVIII, no. 29, f. 51, no. 19, f. 241, ASK XLVI 99 B, f. 505). In the inspection conducted in 1602 (AGAD, Oddz. XVIII no. 19, f. 241) it was highlighted: 'Sir Ossoliński, subcamerarius of Sandomierz, the owner of this village, on what ground we do not know, because he did not disclose this to us'. In 1621 Zbigniew Ossoliński gave this village to his son Jerzy (*Jerzego Ossolińskiego pamiętniki*, comp. W. Czaplński, Warsaw 1976, p. 97), who during the royal elections in 1633 obtained permission to make Śmierdzina

on the map, both: these covered by the first inspection from 1564–1565, and those which were considered as belonging to the Treasure as a result of the revision of letters i.e. laws to possess royal lands.

In general, royal estates in the end of the sixteenth century in Sandomierz Voivodeship consisted of: 21 towns, 266 entire villages, 17 parts of villages and 22 independent industrial settlements (including six ironworks, 13 mills, two mines and one glassworks) and five demesnes not connected to villages and constituting autonomous units, with individual names. In relation to 3,059 of all settlements in the voivodeship, royal estates comprised 11%.

Table 1. Royal property according to different sources

d) Together with parts of villages and industrial settlements constituting independent settlement units, with their own name.

The revision of letters also covered some number of the so-called *frymarks*;⁷ these were exchanges of royal property for estates of the nobility of roughly equal income. In Sandomierz Voivodeship the majority of those exchanges, and there was six of them, were annulled, with two of them deserve special attention,. During the revision of bestowals it was observed, that these were ‘unequal exchanges’; to the detriment of the Treasury; and what was worse – the king was deceived, because the royal estates were exchanged allegedly for the estates of a noble, which in fact also belonged to the king. So Stanisław Lupa Podlodoski had an exchange with the king,⁸ which was – according to the burghers of Radom ‘on wrong grounds made and to the detriment of His Highness and the Republic’.⁹ Having illegally bought the vogt’s office of Radom and three villages: Dzierzków, Gołębiów and Wola Gołębiowska, which belonged to the city of Radom since 1349 by the bestowal of Casimir the Great, and provided income – according to the inspectors’s calculations from 1564 – of 112 *grzywna* (1 *grzywna* was around 200 g) per year, Podlodoski exchanged them in 1559 with Sigismundus Augustus for the royal villages Mleczków, Mazowszany in Radom district, Blizocin, Blizocka Wola in Stężyca land, near which Podlodoski located a new village Podlodów just before his death, and for a square in Radom, a garden next to the hospital in Radom and 1,000 florens. The income from these villages was assessed in 1564 at 414 *grzywna*.¹⁰ This vividly unequal exchange was annulled in 1566. However, after 15 years the sons of S. Podolski requested another inspection of this exchange during the *Sejm* in Warsaw in 1579, adding one part of Piotrowice village to it.¹¹ A selected, or rather: properly chosen, committee, despite the protests of Radom burghers, decided that the Treasury did not lose in this exchange, but made a profit,¹² and the Podolowski brothers were given the aforementioned villages for their own in

his hereditary property, in return for his estates ‘corresponding to this village’ (VL, vol. 3, f. 816). Because at that time he obtained Ryga lease, he bought half of Okrzeja town from the family Samborzecki, and ceded it to the Republic, incorporating this part of Okrzeja into Ryga lease (LS 1660/1664, vol. 2, p. 165), and so he became a lawful owner of Śmierdzina. Later publishers of the diary of Jerzy Ossoliński (J. Kolasa and J. Maciszewski, Wrocław 1952; W. Czaplinski, op. cit.), disregarding the explanations provided by the publisher of *Pamiętnik Zbigniewa Ossolińskiego* (p. 12), failed to identify this village, and J. Kolasa and J. Maciszewski claimed even, with a disarming calm: ‘Śmierdzina, a today-unknown village’ (p. 73).

¹¹ MK 116, f. 16; *Księgi Referendarii Koronnej*, vol. 1, pp. 192–195.

¹² This income was calculated in the following, astonishing way: the villages Dzierzków, Gołąb, Wola Gołębiowska and a part of Piotrowice – 286 florins of income (grosze omitted), unlawfully obtained Radom Voivodeship – 1,288, in total – 1,575

the circumstances similar to those when the royal estates Oryszew – Miedniewice in Sochaczew land were obtained by the Wolski family.¹³

Another exchange of this kind concerned the village Siedlec in Cracow Voivodeship,¹⁴ exchanged with the king in 1554. According to the document, the village was a hereditary property of Wawrzyniec Spytek Jordan, the castellan of Sącz at the time (the future voivode, and then castellan of Cracow), it was exchanged for the royal lease Bratkowice – Mrowla in Plizno district. The exchange was meant as ‘bona pro bonis, terram pro terra et fundum pro fundo’.¹⁵ During the revision of rights it again turned out, that this exchange was hugely unequal¹⁶ – and deceitful too. Siedlec proved to be a royal estate,¹⁷ and as such the exchange was annulled, which must have happened as it discredited Spytek Jordan in the eyes of the patriotic circle of the supporters of the execution of property; during the exchange in 1554 Jordan was supposed to be a guardian of the king’s property and of the Republic, as the Great Treasurer of the Crown.

The state of royal property presented on the map shows, that it was situated near major starosta’s gords, covering well-developed lands in the more fertile areas in the basin of the Vistula and the Pilica, and partly the forests: Jedlnia Forest (Radom Forest), Przedbórz Forest, Szydłów Forest, Solec Forest, and the greatest in the voivodeship – Sandomierz Forest. Royal forests of this size in the sixteenth century could only be found in one more place – Mazovia.

There were no royal estates in central parts of Sandomierz Voivodeship – in Kielce-Świętokrzyskie region. Since the early Middle Ages these areas, more difficult to develop, were being handed to knighthood and the Church, especially the richly-bestowed Cracow bishopric and two monasteries: Święty Krzyż and Wąchock.

Obviously, the state of royal property presented on the map, differed greatly from the former state from the fourteenth and fifteenth centuries. The distribution and liens of royal property practiced by the members of Jagiellonian dynasty – despite the limitations introduced by the 1504 bill of King Alexander – proved significantly detrimental to royal property. The so-called *awulsy*, contributed to further reduction of royal estates, especially in woodland areas. These were instances when pieces of royal estates, smaller or larger, and sometimes even entire villages,¹⁸ were intercepted by the nobility residing in the vicinity, who appropriated these lands into their heirloom.¹⁹ *Awulsy* of royal estates were so common, that the first general inspection of royal estates in 1564–1565 was unable to prevent them. The inspection provides quite a detailed description of not only state and income of the estates, but also of their borders. Already in the next inspection in 1569 a dozen or so of new instances of such appropriations were noted, mostly in the royal estates situated in Sandomierz Forest.²⁰

florins. Royal estates returned to Podlodowski: Mleczków, Mazowszany, Blizocin, Blizocka Wola and Podlodów – 1006 florins (MK 116, ff. 17–24).

¹⁵ *Ibidem*.

¹⁶ According to the inspectors’ calculations in 1564 the income from Siedlec village – 56 grzywna; from Bratkowice and Mrowla (disregarding Przewrotna newly-located village there, freed from taxation for 20 years) – 339 grzywna; LK 1564, part 1, pp. 87–89; LS 1564/1565, pp. 79–82.

¹⁷ ‘And because Siedles turned out to be a royal property, given by the lord of Cracow for Bratkowice and Mrowla, then it cannot stay’, AGAD, The so-called Lithuanian Metrica, IV B, 8, f. 52.

¹⁸ See footnote 23.

¹⁹ The case of seizing royal grounds in Mędrzechów Forest in Korczyn starosta’s district in the end of the sixteenth century by Andrzej Firlej, the castellan of Radom, could provide an example here. Firlej founded his own village Skrzyńska on these grounds. This resulted in a military conflict between Firlej’s Stanisław Ligęza’s, the starosta of Opoczno, troops and the forces of Zygmunt Myszowski, the starosta of Korczyn and the Great Marshal of the Crown, who defended royal estates (see W. Pałucki, *Drogi i bezdroża skarbowości polskiej XVI i pierwszej połowy XVII w.*, Warsaw 1974, p. 18, footnote 187; Stanisław Cikowski is incorrectly mentioned there as the unlawful founder of Skrzyńska). The annexation of these areas was shortly expanded by A. Firlej and his son Jan. In 1618 ‘the subjects of His Majesty [from Mędrzechów] informed that Skrzyńska, Wojcina and Laskówka were founded by Jan Firlej on the King’s grounds in Mędrzechów, where His Majesty’s ancestors hunted’ (ASK XLVI 99 B, p. 846).

²⁰ AGAD, Oddz. XVIII, no. 29, ff. 27–27v, Wola Ramiszowska: ‘the peasants from this village said that sir Gnoiński took His Majesty’s forest, and sir Pileczki does not allow the subjects of His Majesty in the forest, and to sow and takes one mile wide and three miles long of the forest of His Majesty [...] also the inhabitants of Wola Ramiszowska complained mostly about sir Pileczki, saying that he does great damage to the game in this forest’. Similarly in villages Pław and Wola Pławska (f. 40), Jaślany (f. 44): ‘Sir Mielecki and sir Czechowski [castellan Mikołaj Ligęza] locate a new village on old thickets in

Often, a given estate was appropriated when it remained for a prolonged period in the use of successive possessors fulfilling the same land office, or when it was passed from father to son, or other relatives, with royal permission. For Sandomierz Voivodeship we can provide two examples.

Brzezinki village in Radom district, given in 1379 'ad bene placitum' to the pantler of Sandomierz Dzierśław Karwacjan, and then to successive pantlers of Sandomierz. With time it was treated as related with this office. Only during the revision of letters in 1563 was this village returned to the Treasury and inspected. Jan Leżeński, the pantler of Sandomierz, by way of exception remained in the possession of the village for life.²¹

The other example of prevented appropriation of royal property was related to Stopnica starosta's district in Wiślica district. This starosta's district was granted as a lien by Władysław III of Varna and Casimir IV Jagiellon,²² during the revision of letters the lien was freed from inspection and for years remained in possession of the family Zborowski, and then Tarnowski. After the death of Stanisław Tarnowski, the castellan of Sandomierz, in 1618 the district was given to Zbigniew Ossoliński, who passed it to his son Krzysztof. However, the family Tarnowski, especially Gabriel, the son of Stanisław, kept some of the more prosperous demesnes and villages (Brzozówka, Wolica, Fałęcin and Suska Wola). It was their desire to turn these estates into a hereditary property. Their attempt was prevented by the family Ossoliński, who 'recuperated' the estates back to the starosta's district in the course of a court trial.²³

An opposite process, increasing royal property, e.g. purchasing or repurchasing, was very modest in Sandomierz Voivodeship. It was limited to the buyout of several villages of the nobility, in order to enlarge some keys of property, like the starosta's district of Nowe Miasto in Wiślica district,²⁴ which were frequently visited by the kings for their good hunting areas, and which traditionally formed bride wealth of the kings' wives.

Two estates, completely different in terms of their size, deserve more attention of all royal estates in Sandomierz Voivodeship. They were called 'stool benefits', because they belonged to the benefits of the two senators of this voivodeship. The larger key of property, encompassing vast forests (second only to the rich benefits of the castellan of Cracow), consisted of the villages: Iwierzyce, Wierciany, Bystrzyca, Witkowice, Gnojnica, Kozodrza and Czarna (situated in Pilzno district, 'Over the field'), and belonged to the castellan of Sandomierz;²⁵ fragmentary benefice, of only 2.5 lan in the village Czechów (the rest of the village belonged to petty gentry) was in the hands of the castellans of Czechów.²⁶ Stool benefits were not subject to inspection since 1765, and did not pay for the quarter army (*wojsko kwarciane*) As they were in fact royal property, also called the property of the Republic,²⁷ so having described their nature here, we marked them on the map with the colour reserved for royal property.

Jaślany'. The same in royal village Tuszów (p. 45) 'they founded a new village on the grounds of His Majesty. Item sir Baranowski seized what His Majesty's grounds surrounded'.

²¹ W. Pałucki, *Studia nad uposażeniem urzędników ziemskich w Koronie do schyłku XVI w.*, Warsaw 1962, pp. 175–177.

²² ASK LIV 14a: 'old sums shown during the revision of the Warsaw Sejm', f. 13.

²³ *Pamiętnik Zbigniewa Ossolińskiego*, p. 102: 'I obtained the starosta's district of Stobnica, and issued petitions and started legal action for them, because the family Tarnowski had seized several demesnes, and took them pro bonis haereditariis'; p. 104: 'I won Fałęcin demesne in Stobnica district from the family Tarnowski'. The inspection of Sandomierz Voivodeship in 1627 (AGAD, Oddz. XVIII, 33, ff. 80–98): 'Fałęcin village with a demesne, mill and pond, recuperated to the starosta's district by the present Leaseholder from the family Tarnowski', ditto: Brzozówka, Wolica and Sucha Wola, 'which was by the Leaseholder sua sumptu lawfully recovered'.

²⁴ In 1420 Władysław Jagiełło bought the villages Stróżyska and Ucisków in Wiślica district from Marcin Ścibór for 1400 grzywna (ZDM I, no. 34); in 1479 Casimir Jagiellon bought Parkocin from Paweł of Parkocin and Świniary, and in 1482 Sepichów from Mikołaj Sepichowski, both in the district of Wiślica; E Rykaczewski, *Immentarium omnium privilegiorum in archivo Regni... confectum 1682*, Paryż 1862, p. 244; *Materiały archiwalne wyjęte głównie z Metryki Litewskiej od 1348 do 1607 r.*, pub. A. Prochaska, Lwów 1890, p. 206. More precious was the key of Kozienice (Kozienice – later town, Gałązki and Wargocin), purchased earlier (in 1390, formally in 1429; KDP II, p. 846), exchanged with the Norbertine Sisters from Płock for a royal village Bronisław in Cuyavia. Ultimately, this was confirmed by Casimir Jagiellon in 1447; J. Wiśniewski, *Monografia dekanatu kozienickiego*, Radom 1913, p. 69; ZDM III, no. 768.

²⁵ W. Pałucki, *Studia nad uposażeniem*, pp. 143–145. In the first quarter of the seventeenth century the estates of the castellan of Sandomierz already consisted of nine villages: Iwierzyce, Wierciany, Gnojnica, Witkowice, Kozodrza, Czarna, Wieprz alias Turzynka and Oblim; MS BJ, no. 7609/IV, f. 1619.

²⁶ W. Pałucki, *Kasztelania czechowska*, Warsaw 1964, pp. 99–15.

²⁷ LS 1660/1664, vol. 2, p. 181: the borders of starosta's district of Ropczyca 'with Gnojnica, Witkowice and Kozodrza, the estates of the Republic, belonging to Sandomierz castellany'.

The data on the settlements belonging to the king in Sandomierz Voivodeship presented in Table 1 do not, however, reflect their full material value or the area they occupied in relation to other categories of property. As we have stated in the commentary to the map of Mazovia, royal villages were usually bigger and more populated than villages of the nobility, and the peasants were given more land than in the estates of the nobility, or even of the Church. The same was true for royal property in Sandomierz Voivodeship – on average, the serf farms here 0.5 lan.

The property of the Church (bishopric, chapter, collegiate, monastery and parsonry) in Sandomierz Voivodeship (see Table 2) in relation to the number of settlements of other categories of landed property, was second to the property of the nobility.

The estates of four, and before 1514 even five,²⁸ oldest Polish bishoprics were situated within boundaries of the voivodeship. However, the part of the benefits of these four bishoprics (except for Cuyavia bishopric) located in Sandomierz Voivodeship, lay within the borders of their own dioceses, which entered the area of Sandomierz Voivodeship: Gniezno archbishopric in Kurzelów archdeaconry, Poznań bishopric in Warsaw archdeaconry (Łaskarzew key in Stężycza district). Cracow bishopric was the greatest owner, it possessed six cities (Bodzęcin, Daleszyce, Iłża, Jastrząb, Kielce and Kunów), 123 villages, nine parts of villages and 26 industrial settlements (ironworks, glassworks, mines and mills) and one demesne, not spatially related to the village (Kargów).²⁹ The estates of this bishopric lay in Sandomierz district (Bodzęcin key and Złotka key), Pilzno district (Radłów key), Chęciny district (Kielce key), Radom district (Iłża key) and from 1574 in Opoczno district (Odrowąż key) and in Wiślica district (over a dozen villages). The estates of Gniezno archbishopric, situated in Sandomierz Voivodeship in Kurzelów archdeaconry encompassed: Kurzelów key (Kurzelów town, seven villages and an autonomous demesne Modrzewie in Chęciny district) and the town of Łęgonice (Opoczno district).³⁰ Much larger were the estates of Cuyavia bishopric located in Sandomierz Voivodeship. They consisted of two independent keys: the larger, Piotrków or Łagów key (Łagów town and 16 villages, part of another village, two ironworks, one glassworks in Sandomierz district), and a smaller one, comprised of six villages, Smardzewice key in Opoczno district (two other villages in this key lay in Łęczycza Voivodeship).³¹ The smallest part of this group of Church estates in Sandomierz Voivodeship was the small fragment of the lands of Poznań bishopric encompassing the town of Łaskarzew, two villages (Wola Łaskarzowska, Pilczyn) and a part of the village Wierzbiny, and a mill Krupa.³²

²⁸ The bishop of Lubusz owned the key of Opatów estates in Sandomierz Voivodeship, which was bought by Krzysztof Szydłowiecki for 10,000 *grosze* in 1514; J. Kieszkowski, *Kanclerz Krzysztof Szydłowiecki*, Poznań 1912, p. 509.

²⁹ The former village Kargów, localized in approximation, was taken into account here (Pilzno district, Radłów parish). In the sixteenth century it was slowly being turned into a demesne. Also – the village Klatki, absorbed in the end of this century by Daleszyce town (Chęciny district). Brzechów, Szydłówek, Zagórze in Chęciny district belonged to Kielce collegiate, and not to the bishopric. This was a mistake made in the register from 1573 (P. Małopolska, pp. 276 f.); Sędek, Wola Ząbkowa, Żerniki and Nieskurzów in Sandomierz district described in the 1578 register as the property of the bishop of Cracow (ibidem, p. 189) belonged in fact to the bishop of Cuyavia. Omięcín, Koryciska and Kamień in Radom district were exchanged in 1574 for Odrowążek and Sarbin by the bishop. The ‘key of Chroberz’, mentioned by Pawiński (ibidem, introduction, p. 78) as belonging to Cracow bishopric, is a misinterpretation of the tax register for Wiślica district from 1579 he published (ibidem, p. 218): ‘Chroberz, rndi episc. Cracovien’ and similarly by other villages in this property. In reality this key was a private property of Piotr Myszkowski, who was the bishop of Cracow. These estates, bought before 1579 from Stanisław Tarnowski, the castellan of Radom, were inherited by the bishop’s nephews after his death in 1591; see footnote 55.

³⁰ In 1623 archbishop J. Wężyk ceded Łęgonice to Gniezno chapter; J. Topolski, *Rozwój latyfundiów arcybiskupstwa gnieźnieńskiego od XVI do XVIII w.*, Poznań 1955, p. 108. The villages in the key of Kurzelów: Lipna Nowa, Wojciechów, Oblasy and Rudniki, listed in the register (P. Małopolska, p. 273) belonged actually to the abbot of Jędrzejów, and Jeżowice – to the provost of Kurzelów (ibidem, p. 273). In the Middle Ages, there was a village Modrzewie near Kurzelów, in the first half of the sixteenth century it was turned into a demesne, connected to the archbishop’s manor in Kurzelów; cf. *Wizytacje dóbr arcybiskupstwa gnieźnieńskiego i kapituły gnieźnieńskiej z XVI w.*, pub. B. Ulanowski, Cracow 1920, pp. 336–369, 707–714.

³¹ In Pawiński’s table (P. Małopolska, after p. 70 of the introduction) 5.5 villages in Pilzno district were affiliated to the bishopric of Cuyavia, what is an obvious mistake. The newly-located village Porzeczyn in the key of Piotrków was shown on the map. Apart from two ironworks marked on the map, in this key there also were two not localized ironworks, which were also not put on the lists, just like the glassworks Śliwka near Ząbkowa Wola and Śliwczyk near Lechów village, which were not considered separate settlements.

³² The privilege for founding a town named after his father on the grounds of the village Korciszewo was obtained in 1418 from Władysław Jagiełło by the bishop of Poznań Andrzej Łaskarzewic of Gosławice; M. Kubiak, *Z dziejów Łaskarzewa 1418–1864*, „Rocznik Mazowiecki”, vol. 4, 1972, p. 370.

The cathedral chapter in Cracow had only one village – Dzierżązna in Wiślica district – in Sandomierz Voivodeship.³³ According to Długosz's hierarchy of Lesser Poland chapters, the second place after Cracow was occupied by Sandomierz chapter, whose estates were situated mostly in Sandomierz district (Andruszkowice, Bożydar, Dwiekozy, Kunice, Marszów, Mistrzowice, Motycze, Obojna, Piekary, Świątniki, Turbia, Zajęczkowice, Zarzykowice and parts of the villages Prusinowice, Ruszcza and Ubnin) and in Wiślica district (parts of the villages Chotel Zielony and Wawrowice), Radom district (Świerże Wielkie) and Opoczno district, situated the farthest from Sandomierz (Żarnów town and the villages Siedlec and Zdziszowice). In general, the chapter in Sandomierz had one town, 16 villages and five parts of villages (part of Ubnin belonged to the vicars of this collegiate).³⁴ The mansionaries by the collegiate in Sandomierz had two villages in Sandomierz district (Gojców and Okalina). Only one whole village belonged to Wiślica collegiate – Ogłędówek, and a demesne on the suburbs of Wiślica called Kuchary, and parts of three villages: Siedlec, Chotel Czerwony and Pęczelice, all located in Wiślica district. In the times of Długosz the collegiate in Wiślica owned also Mistrzowice,³⁵ a village that became nobility property in unknown circumstances. Some difficulties arose when we tried to determine which estates belonged to the wealthy Kielce collegiate. After some research on this matter, it became apparent that the income of the provost and prebendaries of this collegiate came mostly from tithes. Only five villages comprised their estates: Brzechów, Szydłówek and Zagórze in Chęciny district,³⁶ Żydówek in Wiślica district and Grabków in Sandomierz district. The land benefits of the remaining collegiats were modest. The collegiate in Skalbmierz, situated by the River Nida, already in Cracow Voivodeship owned two villages: Kujawki and Zamoście, and a part of the village Kwaszyn (Wiślica district). The Opatów collegiate – Marcinkowice village and a part of the village Biała. Finally, the collegiate of St. George in Cracow castle owned Janczyce village in Baczkowice parish in Sandomierz district,³⁷ and Kurzelów collegiate – Jeżowice and Ciemiętniki.

In Lesser Poland there were over a dozen older and newer monastery foundations, the mother abbeys of some of them (among other: Święty Krzyż, Sieciechów, Wąchock, Sulejów and Pokrzywnica) were situated in Sandomierz Voivodeship. Other old monasteries, located in Cracow Voivodeship (e.g. Tyniec, Jędrzejów, Miechów), also owned some of their estates in Sandomierz Voivodeship.

In terms of the number of settlements, the first place was occupied by the Cistercian monastery in Wąchock, situated almost in the middle of the left-bank part of the voivodeship, between the keys of property of Cracow bishopric – Ilża and Kielce. Towards the end of the sixteenth century Wąchock abbey owned: three towns (Wąchock, Waśniów,³⁸ Wierzbica), 34 villages and a part of one village and six industrial settlements (ironworks, mills). Together: 43 settlements and one part of a village. The second in terms of wealth, also situated in the central part of the left-side area of the voivodeship, was the Benedictine abbey Święty Krzyż. The abbey owned one town (Słup Nowa), 27 villages, parts of five other villages, ironworks and a demesne, and the monastery on the Łysa Góra mountain, together: 31 settlements and five parts of settlements situated in Radom and Sandomierz districts. The Cistercians

³³ In Pawiński's table (P. Małopolska, after p. 70 of the introduction), there is a mistake: six villages in Wiślica district belonging to Cracow chapter. We list the estates of cathedral chapters and collegiats together, and do not divide them into prebends; we treat the estates of abbots and monastery convents in similar manner.

³⁴ P. Małopolska, p. 182 and table, according to 1578 tax register 'Kunice, rev. Archidiaconi Vilnensi[s]', in reality this village lay in Wojciechowice parish and belonged to the estates of Sandomierz collegiate (Kunice prebend); Długosz LB, I, p. 356; LR, p. 387. In the fifteenth century the vicars of Sandomierz collegiate owned a 3-lan village Dziwków in Goźlice parish (Długosz LB I, pp. 367 f.), in the second half of the sixteenth century it belonged to the family Ossoliński (P. Małopolska, p. 173), and in the end of this century Zbigniew Ossoliński finally obtained this village as his property: 'finished lawsuit with Sandomierz priests, who pretendebant their heirloom in Dziwków'; *Pamiętnik Zbigniewa Ossolińskiego*, p. 8.

³⁵ Długosz LB, I, p. 404.

³⁶ The vice-dean of Kielce had three lans in the first half of the sixteenth century in Mojeza (Chęciny district), and the bishop of Cracow – 1 lan (P. Małopolska, p. 584); according to the register from 1573, this villages belonged to the bishop (ibidem, p. 277); in the eighteenth century it was owned by the vicars of Kielce chapter. For the end of the sixteenth century we assumed that it belonged to the bishop of Cracow, although he could have owned it only partially, as a lease.

³⁷ This village, according to the register from 1578 (P. Małopolska, p. 189) the property of 'rev. Wolski canonici Cracovien.', Pawiński (ibidem, table after p. 70 of the introduction) incorrectly marked this village as a property of Cracow chapter.

³⁸ Waśniów and Jeżów, bought in 1422 from the Regular Canons from Trzemeszno (according to Długosz LB, III, p. 412, incorrectly – from Czerwińsk) in exchange for the key of property of Wąchock monastery in the land of Łęczycza; see M. Niwiński, *Opactwo cystersów w Wąchocku*, Cracow 1930, p. 65.

Table 2. Church property in the end of the sixteenth century

Owner	Number of settlements					Comments
	Towns		Monasteries and castles	Other settlements ⁸		
	whole	parts		whole	parts

a) These are industrial villages and settlements, if they had their own name.

in Koprzywnica owned a town and an abbey (Pokrzywnica-Koprzywnica),³⁹ 25 villages and parts of three other villages in Sandomierz and Pilzno district.

At the end of the sixteenth century, the old, once wealthy Benedictine abbey in Sieciechów by the Vistula owned one town (Sieciechów), a nearby monastery village, 22 villages and two industrial settlements (ironworks, mill). The monastery of the Cistercian abbey in Sulejów was situated on the right bank of the Pilica in Sandomierz Voivodeship, but the majority of the estates of the abbey were located in Łęczyca Voivodeship (Bałdrzychów key) and in Cuyavia. In Sandomierz Voivodeship the Cistercians from Sulejów apart from the monastery village owned, in Opoczno and Radom districts, ½ of the town of Skrzynno,⁴⁰ eight villages, parts of three other villages and one mill. The Benedictines from Tyniec owned four towns (Opatowiec in Wiślica district, Brzostek, Kołaczyce and Tuchów in Pilzno district), 11 villages, and four parts of villages, one demesne and one castle with a demesne in Pilzno district (Golesz) and three villages and one part of a village in Wiślica district. Jędrzejów abbey owned 11 settlements in Sandomierz Voivodeship, including two ironworks – in Chęciny and Wiślica district. The monastery of the Order of the Holy Sepulchre in Miechów owned Skaryszew town and the villages Dzierżkówka, Sławno and Twarogowa Wola in Radom district, and Gotartowice, Stawiany and a part of Chomętów in Wiślica district. In Sandomierz district the monastery owned Jadowniki. Together it was one town, six villages and a part of one village. A large part of the benefices of the monastery of St. Andrew belonging to the Sisters of St. Clare from Cracow was actually situated in the borderland of Sandomierz and Lublin Voivodeship, in the key of Zawichost – far from Cracow.⁴¹ In our voivodeship this monastery owned the town of Zawichost along with its suburbs, seven villages and parts of three villages in the districts of Sandomierz, Chęciny and Wiślica. The Norbertine Sisters monastery in Busk owned one town (Busk) and nine villages in Wiślica and Radom districts. Of lesser monastic houses in Sandomierz Voivodeship the Pauline brothers from Beszowa had three villages (Beszowa, Beszówka and Bedłowa) in Wiślica district, and Bystramowice in Sandomierz district; the

³⁹ Alternative form of the name in the sixteenth–seventeenth century, see W. Pałucki, *Geographic nomenclature*, [in:] AHP Sandomierz, in this edition III.4.2.

⁴⁰ Second half of Skrzynno belonged to the rector of Skrzynno.

⁴¹ Initially the nuns of this rule resided in Zawichost, but due to Tatar invasions they were moved after 1257 to a safer place to Skała (Grodziska) near Cracow (KDMłp., vol. 1, no. 63), and later, around 1318, to Cracow, where they were placed by the church of St. Andrew, from where the canons moved to the church of St. Giles near Wawel; Z. Kozłowska-Budkowa, *Z dziejów kolegiaty św. Andrzeja w Krakowie*, „Studia Historyczne”, vol. 10, 1967, pp. 23–27.

Paulines from Pińczów – Podłęże village near Pińczów; the Order of the Holy Ghost from Sandomierz – two villages (Głazów and Wieprzki) and part of Obrazów in Sandomierz district; the Dominicans from Sandomierz – Suchorzów and Gołębice near the capital of the voivodeship; and the Bernardines from the monastery in Święta Katarzyna owned only the monastery. It is interesting, that until the end of the sixteenth century the Jesuits obtained only one small village in Sandomierz Voivodeship – the house of the novitiate in Cracow was given Przeclawka in Wislica district from Anna from Lipnik Komarnicka, the widow of Aukt Ligęza, the castellan of Czechów.⁴²

The list of estates belonging to various Church institutions should be supplemented with the information on villages, or larger parts of villages, which belonged to some of parochial churches. In Sandomierz Voivodeship a part of the town of Skrzynno, 18 villages and parts of 12 villages could be found among such parsonic benefices; the town hospital of the Holy Ghost in Opoczno owned one village.

Typical benefices of parochial churches (praedium, several serf or *hortulani* farms, an inn) were not included on the map. We have also omitted, due to the degree of generalization of the map, individual serf of *hortulani* farms, or inns belonging to Church institutions, but situated in villages of the nobility. In settlements, whose parts were owned by the king, the Church, and the nobility (or towns) at the same time, only two types of property were presented, disregarding the smallest property. The property of the King, the Church and the nobility in towns was not marked, as it was not subject to town law.

In total, in Sandomierz Voivodeship secular and regular clergy at the end of the sixteenth century owned 25 towns, 424 villages, industrial settlements and autonomous demesnes, 57 parts of villages, one castle with a demesne and five monasteries, comprising isolated settlement clusters, which constituted 16% of all 3,059 settlements in the voivodeship.

Landed estates of the nobility, marked with dots on the main map, and with planes, dominated other kinds of property, which was in fact common in the whole of Poland in this era.

In relation to the number of other types of property (royal, Church) the property of the nobility constituted around 73%, i.e. nearly $\frac{3}{4}$ of all settlements. A concise characteristic on landed estates in sixteenth century Poland in terms of statistics and geography was provided 90 years ago by A. Pawiński, and volumes III and IV of the published tax registers of Lesser Poland included also a detailed list of estate owners from the nobility (for Sandomierz Voivodeship, introduction, pp. 157–201), with the number of villages and other settlements situated in particular districts of the voivodeship. It convinces us, also for other reasons (to be described later in the text) to prepare an additional map, presenting the territorial layout and size of the estates of all ownership categories. That is why, in order to supplement Pawiński's information, or to clarify his mistakes, we limit ourselves to explaining several important matters, which arose during the cartographical work concerning the estates belonging to nobility.

Beginning with the largest estates, we can confirm the widely accepted opinion that such estates were not so few in Lesser Poland, especially in Sandomierz Voivodeship. But in order to determine which, and precisely whose, estates should be counted among magnate estates, the tax registers – as noted by a great expert on the genealogy of the Polish aristocracy W. Dworzaczek – cannot be considered a sufficient source basis: 'Tax registers do not, as a rule, list deserted villages and only mention deserted lans in inhabited villages. What is worse, very often they fail to provide names of the owners [...]. Additionally in several cases the occupants were listed instead of the owners, and it was done almost always with widows holding the estates of their husbands as a bride price, or life estate. All this makes the image arising from tax registers far from reality. We must also remember that it is possible to recreate only cross-sectionally, for these years, for which we possess records listing many names, and such registers are unfortunately rare [...]. For the main body of information [rightly concludes Dworzaczek] we should look somewhere else, namely in gord documents [...] family files, cases on bride price, but between those there were years of transactions increasing or decreasing family fortunes'.⁴³ Let us also recall here, what was said about the classification of landed estates in the commentary to the map of Mazovia, stating briefly that no two villages were alike.⁴⁴ This means that the real value

⁴² In 1585; S. Załęski, *Jezuici w Polsce*, vol. 4, part 1, Cracow 1905, p. 462; ASK I 7, p. 70. Half of Uście village, near the mouth of the Dunajec, was given to the Jesuits by Gabriel Tęczyński in 1621. Since then the village was called Uście Jezuickie.

⁴³ W. Dworzaczek, *Wielkopolska reprezentacja sejmowa w latach 1572–1655*, RH, vol. 23, 1957, p. 283.

⁴⁴ W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Mazovia, in this edition III.3.3.7. This had also been noted by W. Dworzaczek, *Wielkopolska reprezentacja*, p. 281.

of estates, and so the wealth of their owners, depended not on the number of owned villages, but on their location (soils), size (number of lans), population (number of serfs) or other economic elements (demesnes, mills, fulling mills, ironworks, inns and forests).

When it comes to the most important of the aforementioned elements forming the base for the assessment of landed estates – the number of lans subject to taxation (on a nationwide scale the lan tax, as it was said and written, ‘was small and unfair’), we must note here another flaw concerning Sandomierz Voivodeship: the lack of tax registers from 1563. The constitution from that year for the first time charged lan tax not on the basis of old bills, as it was done for many years, but on the basis of established holdings, confirmed by ‘a vow for just taxation’.⁴⁵ It could be assumed that the fact that this valuable register from Sandomierz Voivodeship was missing might not have been accidental, if I add that (1) the lan tax collected on the reformed basis in the neighbouring Cracow Voivodeship covered around 60% more lans than in previous years; (2) during the gathering of the nobility from Lesser Poland, which took place in Sandomierz in this year, by the calling of the two highest dignitaries of this voivodeship – the voivode and the castellan of Sandomierz – the nobles rioted in protest against this tax reform.⁴⁶

What was said about the lack of a broader source basis for the presentation of the complete image of the property of the nobility in Sandomierz Voivodeship leads us to the following conclusions: even despite the huge effort to enlarge our source basis (queries in various archival collections) the result obtained will be accidental, and also insufficient. The will not replace the materials found in court books, and those in Sandomierz Voivodeship – apart from Pilzno district – were destroyed. In this respect the neighbouring Voivodeships: Cracow and Lublin, are in a better situation.

Given that, we could confine ourselves (as we had done up to this point in this series of AHP) with the main map, where the property was marked only in dots. However, having considered the scientific and research needs, or the benefits from the spatial presentation of ownership relations, this volume of AHP contains also a map of plane presentation of landed estates in Sandomierz Voivodeship, prepared on the basis of tax registers from 1569–1581.

This map (its contents and creation were described in another chapter of this commentary) contains the territorial ranges of particular ownership categories are roughly identical to real state, which existed in this short period of 12 years. The internal ownership structure of the estates belonging to the nobility was subject to constant changes. We could talk about the increase, not decrease in the general mass of lands belonging to the nobility, usually at the cost of royal property,⁴⁷ even though the latter were described in details in subsequent sixteenth and seventeenth century inspections as a result of the 1563 execution of property. The growth of Church estates in the second half of the sixteenth century was rather modest, accomplished rather because of purchase and donations. The period of greater bestowals to the Church from dukes, kings or knights already belonged to the past. The Reformation movement, extremely active in Lesser Poland, especially in Sandomierz Voivodeship, as well as bills prohibiting alienation of estates for churchmen, reduced these bestowals to a minimum.

There were also opposite cases, when Church property became the property of noble families. For instance, in 1525 the key of the estates of Kochów (six villages) in Stężyca land belonging to regular canons in Czerwiński in Mazovia was sold to Feliks Zielonka.⁴⁸ Earlier, in 1514, Opatów estates (of the bishops of Lubusz land) became the property of the family Szydłowiecki in similar circumstances.⁴⁹

The origins and growth of large, magnate property, as presented on the example of Mazovian relations, were closely related to lucrative state functions of their owners. Pawiński saw this in Lesser Poland, and said about large, magnate property that ‘it usually accompanied highest dignities’.⁵⁰ These dignities, when granted wealthy starosta’s districts – which was almost the rule, especially when these

⁵⁰ P. Małopolska, introduction, p. 90.

royal estates neighboured on the dignitary's hereditary lands – literally and metaphorically enlarged the area of magnate estates, or their lucrativeness.

In Sandomierz Voivodeship there are many examples confirming this state of affairs. Apart from the estates situated outside the voivodeship, the family Tarnowski possessed hereditary property surrounded or royal estates, and parts of three royal villages.⁵¹ They also kept the wealthy Sandomierz starosta's district long in their hands.⁵² The voivode of Cracow, Piotr Zborowski, apart from many hereditary villages and parts of villages, held 'in old sums' the starosta's district of Stopnica, freed from inspection and quarter tax.⁵³ His brother Andrzej, the Court Marshal of the Crown, held a wealthy starosta's district of Radom until 1588, when 'ob rebelionem' it was taken from him,⁵⁴ and the third of the brothers, Mikołaj – the starosta's district of Szydłów. The voivode of Podole, Grand Hetman of the Crown Mikołaj Mielecki, who died in 1588, held the starosta's districts of Sandomierz and Korczyn, and the voivode of Cracow Mikołaj Zebrzydowski – of Stężyca. Finally, to mention only the more important ones, the voivode of Sandomierz Zbigniew Ossoliński, who started to amass the family fortune on a larger scale, fortified this fortune at the turn of the sixteenth and seventeenth centuries with starosta's districts of Stopnica and Korczyn in Sandomierz Voivodeship.

The estates of dying out magnate families of Sandomierz Voivodeship – the families Kurozwęcki, Szydłowiecki and later Tęczyński, did not fall apart, but – as bride prices of widows and daughters – went to their wealthy husbands, sometimes coming from lands far away from Sandomierz: Szydłowiec-Ćmielów estates went of the Radziwiłł family from Lithuania; Tarnów estates to Konstanty Ostrogski from Wołyń, which allowed his son Jerzy to become the castellan of Cracow; finally to Andrzej Leszczyński from Greater Poland – the key of Baranów by the Vistula in Sandomierz Voivodeship, where he built a wonderful magnate residence.

The fortune of the family Myszkowski occupied a separate position within the group of great, magnate property. The position was fortified by Piotr Myszkowski, the bishop of Cracow, when he bought the Chroberz estates,⁵⁵ then Pińczów estates, finally: Szaniec estates (all in Wiślica district). The tax registers do not provide clear clues as to the owners of these lands; they even mislead the readers, as mentioned above, by stating: 'Chroberz, rudi episcopi Cracoviensis'.⁵⁶ However, it is enough to add here that the heirs (nephews) of Piotr Myszkowski at the end of the sixteenth century created the first fee tail in Lesser Poland, about which it was commonly said: 'who has Chroberz, Książ and Szaniec could dance with the queen'.

The estates belonging to the nobility of average wealth (one to several villages) were the most common in Sandomierz Voivodeship. Also, the percentage of the nobility possessing parts of villages, several lans or even parts of lans was also high there. These petty parcels belonged to what was called 'partial gentry' (*szlachta cząstkowa*), until recently incorrectly ranked among demesne gentry (*szlachta folwarczna*).⁵⁷ Finally, insignificant on a scale of the entire voivodeship (1.3%), and higher in two districts (Wiślica and Sandomierz) where it was most common, was the property of serfless farm gentry (*szlachta zagrodowa*). In total, the tax registers list around 40 such villages in Sandomierz Voivodeship in the sixteenth century.⁵⁸ There were probably more such villages earlier, but they were

⁵¹ Jaślany, Sobów and Grębów in Sandomierz district.

⁵² After Hetman Jan Tarnowski, forced in 1550 to resign from the starosta's district kept against the bill of 1478, the district was given to his son, Jan Krzysztof Tarnowski, the castellan of Wojnicz, who dies in 1567.

⁵³ A. Pawiński was wrong to believe that the key of Stopnica belonged to hereditary estates of Piotr Zborowski (ibidem, introduction p. 95). He was led to such a belief on the basis of a tax register of Wiślica district from 1579, which listed the villages near Stopnica as a property of 'mgci palatini Cracoviensis' (P. Małopolska, pp. 223 f.).

⁵⁴ W. Pałucki, *Drogi i bezdroża skarbowości polskiej XVI i pierwszej połowy XVII wieku*, Warsaw 1974, p. 180.

⁵⁵ For Chroberz with Kozubów, Michałów, Bralczyn, Wojsławice, Wola Chrobberska, Zawarza, Zagórzycze, Sadek, Zagajów, Skrzypniów, Zakrzew, Młodzawy, Ociosęki and Mozgawa P. Myszkowski paid Stanisław Tarnowski, the castellan of Cracow 182,000 florens in 1580; A. Skalkowski, *Aleksander Wielopolski*, vol. 1, Poznań 1947, p. 186. The document of purchase was recorded formally in town record of Sieradz in 1580 (*Codex Myszkovianae ordinationis diplomaticus*, comp. G. Labuda, Chroberz, 1940, TS in the Scientific Library of the PAAS and the PAS, Cracow, no. 5637, p. 183, no. 70); P. Myszkowski obtained these lands at least a year before, as in tax registers from 1579 (P. Małopolska, p. 218) the lan tax from Chroberz estates was paid already by the bishop of Cracow (P. Myszkowski).

⁵⁶ See footnote 29.

⁵⁷ Cf. W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Mazowie, in this edition III.3.3.7.

⁵⁸ The list of 39 villages of this kind in Sandomierz Voivodeship was presented by Pawiński (P. Małopolska, introduction, p. 202); see A. Dunin-Wąsowiczowa, *Character and size of settlements*, [in:] AHP Sandomierz, in this edition III.3.2.2.

bought by wealthier nobility. For instance, in Łagiewniki, Chmielnik parish, Wiślica district there were seven poor members of farm gentry in 1538,⁵⁹ but already in 1577 the entire village belonged to Jan Oleśnicki.⁶⁰ Another village – Mietel, in the same district, had 16 parcels belonging in 1538 to farm gentry, among whom we meet such characteristic names, or nicknames, for this group, as: Pikorak, Gałka, Dziwisz, Kiwiorek, Donat, Krystek, et. al.⁶¹

However, the village Czechów is the most interesting one in this, poorest, group of nobility estates. This village, situated in Kije parish in Wiślica district, was still in the sixteenth century inhabited by 14 such nobles. In this respect it is exceptional not only in the entire voivodeship, but in the whole of contemporary Poland in this period. Czechów was a castellany gord.⁶² One part of this village (2.5 lan) was part of the benefits of Czechów castellans until the end of the old Republic. The rest was owned by poor members of farm gentry, probably coming from the early-medieval burghers (castrenses), who later found themselves among petty knighthood. As a completely poor serfless gentry they survived in their gord-castellany village for quite a long time, since the poll tax register from the second half of the seventeenth century lists 10 parcels belonging to different taxpayers in this village.⁶³

The last, and the smallest, group of landed property in Sandomierz Voivodeship were the villages formally royal (their inhabitants had the right of appeal in controversial cases to referendary court), but in fact under the complete legal and economic authority of royal towns. In Sandomierz Voivodeship there were 18 villages and parts of two villages of this kind. Eleven villages belonged to Sandomierz, including eight called suburbs (which we call further suburbs) and three vogt villages (bought by the town at the beginning of the sixteenth century). These were suburbs-villages: Chwałki, Gierlachów, Gołębice, Kobierniki, Nabrzezie, Rzeczyca Sucha, Strohcice and Suchorzów; vogt villages: Ocinek, Radoszki and Wysiadłów.⁶⁴ Three villages: Dzierzków, Gołębiów and Wola Gołębiowska were returned to Radom during the revision of bestowals in 1563, one (Gorysławice) and parts of two (Siedlec and Kobylniki) belonged to Wiślica, two villages (Gorzałów and Wola Opoczyńska) – to Opoczno, and one (Polikno) – to Chęciny. Only one village, namely: Rżyska, was a property of a private town – Żochów in Pilzno district.

III.3.3b.2 MAP OF LANDED PROPERTY

Anna Dunin-Wąsowiczowa

The Map of landed property in Sandomierz Voivodeship (1:500,000) shows the division of land between three basic categories of owners: the king, Church institutions, and the nobility (see map 7). Due to the scale of the map, we did not isolate the lands and villages¹ belonging to towns (property of burghers), treating them – because of dominion sovereignty – as a part of the great landed property. The generalization of the cartographic picture forced us to omit some small enclaves of one type of property situated in complexes of estates belonging to another of the three categories; this mainly means villages, which belonged to different types of owners; in such cases only the dominant type was taken into account. As these situations were quite exceptional, so the error resulting from this simplification does not exceed the error resulting from the accuracy of measurement.

Against the background of the entire settlement, shown in blank dots, the towns were distinguished by their name, and in royal estates – the centres of starosta's districts, and more important leases. In other types of property we marked, where the scale of the map allowed – the centres of important property complexes.

A. Pawiński studied the arrangement of great property in Lesser Poland on the basis of the sixteenth century tax registers; the distinguished publisher described the course of the borders of largest keys of property, and gave their approximate area.² The published map of landed property, prepared on the basis of the materials provided by the extended source query, conducted for the research on the map of Sandomierz Voivodeship, specifies the results of Pawiński's research with respect to Church and royal property. On the other hand, the reconstruction of greater – magnate and gentry – property, showing more fluency of holdings, was limited to data chronologically close to tax registers published by A. Pawiński (from 1569–1581), assuming the conventional chronologic range of 1570s for our cartographic presentation.

A map at a scale of 1:500,000 can only hold information concerning the largest keys of property. As such, it seems that we were able to present them in Sandomierz Voivodeship on the basis of the aforementioned registers without major errors. This version of the map allowed us to broaden the range of data about the state of property in the voivodeship in comparison to what was presented on the map of Mazovia in the sixteenth century.³ At the same time, we believe it was possible to avoid the danger related to the still-discussed method of research on the structure of landed property in Poland in the sixteenth century, also because of the very specific chronologic cross-section.

The borders of the estates were prepared at a scale of 1:100,000, their size was measured with planimeter also at this scale. The map was prepared on the mechanically reduced basis at a scale of 1:400,000 and then transferred to the publishing scale of 1:500,000.

¹ About villages belonging to towns in Sandomierz Voivodeship in the sixteenth century see W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Sandomierz, in this edition III.3.3.2.

² P. Małopolska, introduction, pp. 62–99.

³ The map of landed property in Mazovia in the second half of the sixteenth century (W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Mazovia, in this edition III.3.3.7) shows only general division into royal, Church and nobility property. Given the fact that proof-reading was not included in the key to the map, it presents the percentage of royal and Church property. It should be: royal – 20%, Church – 14%, nobility – 66%.

‘Great landed property’ is a conventional term. We took into consideration estates belonging to one owner, encompassing at least 10 villages (or, respectively higher number of parts of villages) of 50 serf lans, based on the results of research of various authors reconstructing the state of property in Poland in the sixteenth and seventeenth centuries.⁴

Royal and Church property in Sandomierz Voivodeship in the second half of the sixteenth century was thoroughly characterized by W. Pałucki in the previous chapter. The map shows all royal estates. However, aiming at presenting only greater complexes of property in our voivodeship, we did not isolate these estates belonging to Church institutions, which were smaller than our assumed limit, even if those institutions had owned great estates outside Sandomierz Voivodeships. We did not present the estates of the Order of the Holy Sepulchre from Miechów as a separate complex, even though they constituted a fragment of great property of these canon brothers, which was, however, situated mainly in Cracow Voivodeship. The estates of Gniezno archbishopric situated on the margin of our criteria, this archbishopric owned seven villages in our voivodeship (Denków, Gościęcín, Kaparzów, Konieczno, Międzylesie, Motyczno, Silpie Ruda), two towns (Łęgonice, Kurzelów), and a demesne Modrzewie. The property of collegiates was not isolated from small Church estates, due to virtual fragmentation of these estates into particular prebends. Abbey and convent goods were treated jointly. Given these assumptions, great complexes of Church property in Sandomierz Voivodeship belonged to the bishops of Cracow and Cuyavia, the monasteries in Wąchock, Święty Krzyż, Sieciechów, Koprzywnica, Tyniec, Sulejów, Jędrzejów, Busko (Norbertine Sisters) and Cracow (Sisters of St. Clare). A list of these estates was provided in the annex.

The method of research on keys of greater magnate and gentry estates is worth discussing. Tax registers published by A. Pawiński were the starting point for the research; next, after determining particular estates fitting the range of our interest, the state of holdings of their owners was checked in the surviving registers from the second half of the sixteenth century. We believe that the comparison of the informaton from several subsequent registers allowed us to almost completely eliminate the leaseholders, and determine the real owners of the estates.⁵ As in the case of complexes of Church property, we did not try to present the holdings in Sandomierz Voivodeship of magnates on the scale of the entire country, so we omitted small estates in the voivodeship, which belonged to owners of great property in other parts of the Republic. We also disregarded leases and liens.⁶

In Pilzno district, where great property was the most common, the research was based on the 1581 register and the list of land owners, published by A. Pawiński.⁷ Larger estates were studied in terms of the number of villages and lans. The following estates were not marked on the map: of

⁴ The caesura of 10 villages was accepted by the publishers of Rej. pob. 1629, p. XXXVII. They included 16 private owners in this group of property. M. Wisińska, *Koncentracja feudalnej własności ziemskiej w powiecie kaliskim na przełomie XVI i XVII w.*, „Rocznik Kaliski”, vol. 5, 1972, p. 59 followed suit and stated that ‘magnates’ owned 4.1% of all villages here. Similar caesura was used by W. Szczygielski, *Zmiany w stanie posiadania i w strukturze własnościowej szlachty powiatu wieluńskiego od połowy XVI do końca XVIII wieku*, „Rocznik Łódzki”, 1958, p. 266 (for the district of Wieluń there was only one estate with more than 10 villages, a one with more than five), and L. Polaszewski, *Własność feudalna w województwie kaliskim w XVI w.*, Poznań 1976, p. 55. A bit lower limit was assumed for Lublin Voivodeship in the beginning of the seventeenth century, namely eight villages (J. Kolasa, K. Schuster, *Rejestr poboru województwa lubelskiego 1620–1626*, Wrocław 1957, p. XX). To isolate larger estates of the nobility in Pomerania in the sixteenth–seventeenth century the caesura accepted was above 50 lans (A. Mączak, *Struktura majątkowa szlachty pomorskiej w XVI–XVII w. Próba analizy statystycznej*, PH, vol. 53, 1962, p. 664), what showed 14 owners of estates larger than 50 lans. In Łęczyca Voivodeship, on the other hand, characterized by a large number of petty property, larger property was not isolated. It was only state that average size of a multi-village in the entire voivodeship was three villages (T. Sobczak, *Zmiany w stanie posiadania dóbr ziemskich w województwie łęczyckim od XVI do XVIII w.*, RDSG, vol. 17, 1955, pp. 171 f.).

⁵ For instance, in the district of Radom we did not include Stanisław Błotnicki, because the estates attributed to him in the register proved to be mostly a lease (P. Małopolska, pp. 309–311, 313–314), and in Stężyca district – Anzelm Gostomski, the voivode of Rawa, who in fact was a leaseholder of Ciołek’s estates (ibidem, p. 334).

⁶ Therefore we did not mark royal property with a separate sign for estates mortgaged ‘in old sums’, which estates, according to the constitutions from 1566 and 1588 were to be returned to the Treasury after four lifelong leases, and before then the entire income was granted to the leaseholders. In Sandomierz Voivodeship this concerned six towns and 54 villages. Also, we did not isolate royal estates mortgaged on the basis of the 1565 constitution, from which a half of the quarter was begun to be paid to the Treasury in 1601. See K. Chłapowski, *Realizacja reform egzekucji dóbr (1563–1665). Sprawa zastawów królewskich malopolskich*, Warsaw 1984, pp. 42 f., 60 f., 67 f., 90 f.

⁷ P. Małopolska, pp. 241–269, introduction, pp. 157–201.

the family Bączalski;⁸ of Piotr Bużyński;⁹ of Andrzej Gołuchowski;¹⁰ of Sebastian, Teodor and Stanisław Ligęza and Zofia Ligęzina;¹¹ of Stanisław Machowski;¹² of Jacek Młodziejowski;¹³ of Stanisław Strzeżowski.¹⁴

The following estates in this district were counted among great property of the nobility: of the Duke Konstanty Wasyl Ostrogski, the voivode of Kijów, Stanisław Tarnowski (son of Wojciech), Hieronim Mielecki the starosta of Brześć Kujawski, Walenty Dembiński (in the register he was described as and owner of appropriate villages, and only his office was mentioned – the castellan of Cracow, his surname was omitted), Jan Tarło, the voivode of Lublin, and Mikołaj Przedbór Koniecpolski, the castellan of Rozprza.

In Sandomierz district, the division into areas was based on the 1578¹⁵ register and the list of owners published by Pawiński.¹⁶ The following estates were studied and not qualified for presentation: of Stanisław Gniewosz,¹⁷ of Józef Ożarowski,¹⁸ of Małgorzata Tarło,¹⁹ of Stanisław Wolski,²⁰ of Zborowska,²¹ of Jan Turski,²² of the family Ossoliński.²³ The map does present the estates belonging to the following people: Konstanty Wasyl Ostrogski, Hieronim Mielecki, Andrzej Leszczyński, Jan Słupecki, Mikołaj Radziwiłł, Stanisław Tarnowski the castellan of Radom (son of Stanisław), and Piotr Zborowski.

In Stężyca district, on the basis of the 1576 tax register,²⁴ the estates of three people were isolated, namely: Stanisław Ciołek, Mikołaj Kłoczowski and Samborzecka. On the other hand, the holdings of

⁸ Bączalski – five villages, 21 $\frac{5}{8}$ of lan (Kozłów, Jedlice, Godowa, Gbiska and Tropa).

⁹ Piotr Bużyński – five villages, 18 $\frac{1}{2}$ of lan (Konary, Oporyszew, Wszeradza, Chrzastów, Żelazówka).

¹⁰ Andrzej Gołuchowski, the wojski of Sandomierz – nine villages and a part of the tenth; in total 43 $\frac{1}{2}$ of lan (Skorocice, part of Żydów, Chwałowice, Wola Żydowska, Gołuchów, Wola Gołuchowska, Marzęcin, Borków in Wiślica district, sołtys office in Królew, Witowice in Pilzno district, Wola Zadybska in Stężyca district.)

¹¹ Sebastian Ligęza, vice-pantler of Sandomierz – five villages and seven parts: Motycz (leased part), Wola Lipieńska (part), Lipiny (part), Łęki (part), Zwiernik (part), Sepnica (part), Zępnioówek, Łysaków, Gliny and Wola, Miłonin (part), Wrzoski (part), in total over a dozen lans; Teodor Ligęza – in total 26 $\frac{3}{4}$ lan in Wiślica district, Stanisław Ligęza – in total 20 lans in Wiślica district, Zofia Ligęzina – 26 $\frac{1}{2}$ lan in Wiślica district (Jurków, Paszyna, Brzeźnica, Wola Brzeźnicka, Dolcza Wielka, Kozłów).

¹² Stanisław Machowski – Dobieszyn, Polanka Wielka, Polanka Mała, Konieczkowa, in total: 13 $\frac{1}{2}$ lan.

¹³ In the district of Pilzno Jacek Młodziejowski only leased villages of the monastery in Koprzywnica: Połomia, Golcowa (P. Małopolska, pp. 245 f.) and Oporówka, Stodolina Wola, Wysoka (ibidem, p. 246, data on lease omitted in print), in Sandomierz district he leased Świnzyca (ibidem, p. 166), Młodziejowski owned only Żórawice in Sandomierz district, where there were only four serf lans and a demesne (ibidem, p. 171).

¹⁴ In Pilzno district Stanisław Strzeżowski owned Czudec town with suburbs, and nearby villages: Barycz, Zaborowie, and Nowa Wieś Pstrągowa (P. Małopolska, p. 257); he also leased Dobrzechów, a village of Koprzywnica monastery (ibidem, p. 245).

¹⁵ P. Małopolska, pp. 165–208.

¹⁶ Ibidem, introduction, pp. 157–201.

¹⁷ Stanisław Gniewosz owned parts of the following villages: Skrzypaczowice, Żórawice, Świniary, Chobrzany, Małżynie and Nawodzice, in total only 14 $\frac{3}{4}$ of serf lan.

¹⁸ Józef Ożarowski owned 22 serf lans in Sulejów, Leszczków, Żołcice, Dzierżązna and Wyszumuntów.

¹⁹ Małgorzata Tarło had 18 serf lans in Słupia, Szczekarzowice, Okół, Kosowice and Mirkowice, even if we assumed that at the time she also owned the town Tarłów, the area of her estates would not reach the caesura of 50 lans.

²⁰ Stanisław Wolski owned over a dozen lans in Sulisławice, Mietnia, Dmoszyce (Sandomierz district), Potworów, Pawłowice, Wola (Radom district) and Wola Zadybska, and Wola Korycka (Stężyca district); it is difficult to define their number, because it is possible that there were other co-owners.

²¹ Zborowska owned parts of many villages (Malikowice, Wola, Grzybów, Gryzikamień, Łopacino Wielkie, Dziewiątle, Wygietłów, Wierzbka, Ujazdek Mały, Żaliwdów, Krępa), in total – 22 $\frac{3}{4}$ lan.

²² Jan Turski had only 7 $\frac{1}{2}$ lan in seven villages (Niekraszów, Tursko Wielkie, Ossala, Trzcianka, Kępka, Opatów Las, Nakole Las), but serf lans were only in four villages, and in the three remaining villages only hortulani paid the tax.

²³ One of the arguments not to take this estate into account was the fact that it was impossible to determine individual owners, another – small number of lans, only 19 $\frac{1}{4}$ in 11 villages in this estate (Goźlice, Pęchów, Żuków, Dwiekozy, Ossolin, Dziwków, Nowawieś, Koprzywianka, Klimuntów, Zakrzów, Łownica).

²⁴ ASK O I, 9, ff. 199–225. The attempt to arrange all landowners, who possessed more than three lans, according to their property was based on this register. The following were listed in 1576 as the owners of 3–5 lans: Jan Trojanowski, Hieronim Żeleński, and Andrzej Zerzyński. To the group of owners of 5–10 lans belonged: Jan Firliej the voivode of Cracow, Krzysztof Sobieski, Hieronim Trojanowski, Wilski described as ‘sacerdos’, Krzysztof Wilski, chorążyna Wilska, Stanisław and Sebastian Wolski, Zofia Zalewska and Mikołaj Zalewski, and Sebastian Ciołek. The group 10–20 lans: Mikołaj Przerębski the starosta of Opoczno, Stanisław Zarzycki and Stanisław Zerzyński. The group 20–50 lans: Frączowa Górzyńska, Anzelm Gostomski, Piotr Kłoczowski, Maciejowski, Jakub Podlodoski, Hieronim Rusiecki the chorąży of the land of Sandomierz, Stanisław Sobieski, Jan Sobieski, Marcin Trojanowski and Stanisław Zbąski.

Anzelm Gostomski were not shown on the map, because the majority of estates from which he paid tax were leases.²⁵

The tax register from 1579 was the basis for our presentation of great property in Wiślica district.²⁶ The size of estates was checked against it, and the following owners did not qualify for presentation: Prokop Balicki,²⁷ Jan Chycki,²⁸ Andrzej Gołuchowski,²⁹ Stanisław Karwicki,³⁰ Teodor Ligeża and Stanisław Ligeża,³¹ and Andrzej Zborowski.³²

The map shows the estates belonging to Wojciech Padniewski, Stanisław Szafraniec, Fryderyk Boner, Jan Tarło, Jan Oleśnicki and several dignitaries, who paid taxes for their estates but did not reveal their names, and yet specified their office, namely: Piotr Zborowski the voivode of Cracow, Walenty Dembiński the castellan of Cracow, Jan Sienieński the castellan of Żarnów, Mikołaj Ligeża the castellan of Wiślica, and Stanisław Tarnowski the castellan of Radom.

For Radom district, the reconstruction was based on the tax register from 1569.³³ The size of the estates was controlled, but not put on the map, in case of the following: Stanisław Błotnicki (he does appear on A. Pawiński's list as an owner of 10 villages and four parts of villages, yet closer analysis revealed that he only leased at least six of these settlements),³⁴ Janusz Karczewski (he paid the tax for 25 villages not as their owner, but as an official: the vice-starosta of Iłża, from the key of the bishops of Cracow),³⁵ Stanisław Ossuchowski (who, similarly, paid for 12 villages as an abbot of Sieciechów, not as an owner),³⁶ and Jan Modrzewski (the burgrave of Radom, who owned only 7.5 lan of the 11 villages and seven parts of villages ascribed to him by A. Pawiński).³⁷ The borders of the estates belonging to the following owners were marked on the map: Andrzej Drzewicki, Andrzej Firlej and Jan Oleśnicki.

In Chęciny district, the unpublished register from 1577 formed the basis for research on great property of the nobility; it was verified against the information provided by the registers from 1527–1530 and 1573.³⁸ Larger estates of the following families were studied, but not included on the map: Gosławski, Masłomięcki, Michowski, Morawicki, Odrowąż, Secygniowski, Szafraniec, and Wolski. Only the holdings of Stanisław Szafraniec and Jan Oleśnicki proved to be larger fortunes.

Landed property in Opoczno district was prepared on the basis of the 1577 register.³⁹ The estates of Stanisław Karwicki, Jan Kochanowski (the owner of many small parcels in the districts of Sandomierz, Radom, and Opoczno, which – however – did not exceed 17 serf lans in total), or Jan Strasz. The estates of Andrzej Drzewicki and Wojciech Padniewski were shown.

In general, it must be stated that there was a partial reshuffle among the owners of larger states in Sandomierz Voivodeship towards the end of the sixteenth century. For instance, in the 1580s and 1590s new great property owners appeared in Wiślica district: Mikołaj Firlej the voivode of

²⁵ A. Gostomski owned Dąbrówka, Pawłowice, Samwodzia, Wola Długa, and Wola Paprotna.

²⁶ P. Małopolska, pp. 209–240; the list of owners: *ibidem*, introduction, pp. 157–201.

²⁷ Prokop Balicki, the owner of Słodków, Zrzecze Małe, Szyszczycy, Polanki, Zawady and Balice had only 11 serf lans altogether.

²⁸ Jan Chycki, the owner of eight villages: Sokolina, Kamiona, Stropieszyn, Mikołajów, Sędziejowice, Dąbrowa, and Rzędów, all in all, he paid for 33½ serf lan.

²⁹ See footnote 10.

³⁰ Stanisław Karwicki owned five villages and five parts of villages in the district of Wiślica (Żabiec, Karsy Wielkie, Szczeglin, Książnice, Komorów, Rataje) and of Opoczno (Bielejowice, Siedlec, Karwice, Blizin), in total: 23½ lan.

³¹ Teodor Ligeża had seven villages and a part of one village (Jurków, Bolesław, Brzeźnica, Świebodzin, Grądy, Bory, Kana and Kozie), in which there was 26 ¾ serf lan. Stanisław Ligeża paid from six villages and one part (Uście, Strzałków, Lubiczko, Braciejów, Stobiernia, Zawada and Wola) situated in the districts of Wiślica and Pilzno, in total: 20 serf lans.

³² Andrzej Zborowski had nine villages, and 37 serf lans.

³³ P. Małopolska, pp. 297–330; *ibidem*, introduction, pp. 157–201; ASK O I, 8, ff. 513 ff.

³⁴ Stanisław Błotnicki paid for Czyżówka 'in the name of the Pasek family' (P. Małopolska, p. 311), for Kobylnik 'in the name of Zborzeński', for Gałki 'in the name of Jakubowa Drzewicka', for Przysiałowice 'in the name of S. and J. Przysiałowski' (*ibidem*, p. 313), for Chlewiska 'in the name of Jakub Chlewicki', for Skłoby 'in the name of Chlewicki' (*ibidem*, p. 314), and others similar (*ibidem*, pp. 309–310).

³⁵ P. Małopolska, p. 322 and introduction p. 171.

³⁹ P. Małopolska, pp. 281–296; *ibidem*, introduction, pp. 157–201.

Cracow,⁴⁰ who also owned several villages and a newly-located town Radomyśl in Pilzno district,⁴¹ Zofia of Wzdów, the widow of Krzysztof Lanckoroński the castellan of Radom;⁴² in Pilzno district: Agnieszka Tarłowa, widow of Jan, the voivode of Lublin,⁴³ Andrzej Koniecpolski,⁴⁴ or Jan Kiszka, the castellan of Vilnius.⁴⁵ At the same time, we noted that larger estates, despite the indubitable fluency of the holdings of their owners, usually remain – because of family relations and hereditary issues – in the hands of a specific, quite close circle, comprised mainly of noblemen holding higher land offices, leaseholders of starosta's offices, and often senators.

Below we present detailed information about magnate property complexes in Sandomierz Voivodeship, and comment on the holdings of particular persons in the 1570s, on the basis of fiscal sources.

The wealth of Jakub Fryderyk Boner (son of Seweryn, the castellan of Sącz, and Jadwiga from the family Kościelecki) comprised of hereditary estates, which emerged in 1550–1557, and were situated in Wiślica district.⁴⁶ After his childless death in 1585 these became part of his brother's – Seweryn – estates.⁴⁷ In the 1570s the holdings consisted of the demesnes: Chrzanów and Lubacz, villages: Dalestowice, Kryniczna Wola, Kwasów, Laskowa Wola, Oblekoń, Otmęt, Wojcina, Wola Jurkowska, Wójcza, Wójczka, and parts of villages: Biechów and Piestrzec.⁴⁸ Together it was: two demesnes, 10 villages and parts of two villages. The estates measured 34.5 of fiefs.

The brother of Jakub Fryderyk – Seweryn Boner, the starosta of Rabsztyn (since 1564), and future castellan of Biecz and starosta of Żarnowiec (since 1585), and finally the castellan of Cracow (since 1590),⁴⁹ in the described period possessed the following villages in Pilzno district: Jazowa, Krośnia, Niewodna, Pstrągówka, Wiśniowa, Wiśniówka;⁵⁰ in the 1580s we can include also Żyźnów Wyższy, Bonarówka, Węglówka and a part of Jedlicze to his estates;⁵¹ after 1585, as already mentioned, the took his late brother's estates in Wiślica district.

The estates of Stanisław Ciołek from Żelechów in Stężyca land comprised of 17 villages and two parts of villages – 125 serf lans altogether. Part of these were leased, mostly to local noblemen. One of his leaseholders was Anzelm Gostomski, the voivode of Rawa, who owned vast riches in Mazovia. The following villages belonged to Ciołek's estates: Ciechomin, Grabów, Goniwilk, Guzówka, Kamionka, Kęblów, Łomnica, Ostrożenie, Powały, Przyłek, Sobolów, Turzec, Wilczyńska, Wiśniówka, Wola Ostrożeńska, Wola Żelechowska, Zasiadały, and parts of Górzno and Wola Łączna.⁵²

⁴⁰ In the district of Wiślica in 1591: Kobiela, Wyszogród, Kęsow, Chrostowice, Rogów, Bejsce, Piotrkowice, Grodowice, Królewice, Czyżewice, Morawiany Wielkie, Morawiany Małe, Charbinowice, Zbylutowice, Młogolice and Pierszyce (these were estates along with leases); ASK O I, 7, ff. 633–634v, 636v, 638v, 692.

⁴¹ Ruda, Klęczany, Brzezcie, Bobrowa, Lubzina, Brzozówka, Słostowa; *ibidem*, ff. 830, 839 (y. 1589). Rogów, the visitation of Opatowiec decanate (y. 1595), f. 114, and Radomyśl, Boniecki, vol. 5, p. 297; SGKP, vol. 9, pp. 432 f.

⁴² In Wiślica district in 1591: Wilkowa, Strzelec, Sufczyce, Kępie, Wola, Pieczyniegi, Sieczków, Grzymała, Żerniki, Jastrzębiec, Korytnica, Jasień, Jabłonica, Ponik, Żabiec, Karsy Wielkie, Szczeglin, Książnice – part, Komorów – part, Rataje – part; ASK O I, 7, ff. 671, 671v, 677, 678, 680v, 682, 684v–686v, 697v.

⁴³ Gumńska, Krzyż, Chorążec, Laskówka, Rudno, Rostawice, Ilkowice, Łąka, Siedlec, Łysagóra, Powężów, Śmigłowa Wola, Brnik, Pilzno district, y. 1589; *ibidem*, ff. 829, 858–866v.

⁴⁴ Pilzno district, y. 1589: Dobrków and Mokrzec, Parkosz, Łabuzie, Jaworze, Przedzborz, Połomia, Gołaczyna, Złotoria, Przeclaw-suburbs, Męciszów, Krownice, Łęki, Wylów, ASK O I, 7, ff. 817v, 830, 831.

⁴⁵ Pilzno district, y. 1589: Zaszów, Doleza Wielka, Żdżar, Mokre, Wiewiórka, Borowa, Róża, Czarna, Jaźwiny, Dębie, Dąbrówka, Przeryty Bór, Jastrząbka, Korzeniów, Wolica, Nagoszyn; *ibidem*, ff. 827v–829, 831.

⁴⁶ Genealogy, table 124; PSB, vol. 2, p. 297; J. Ptaśnik, *Bonerowie*, RK, vol. 7, 1905, pp. 62–72.

⁴⁷ Tax from this estates was paid by Seweryn Boner, the castellan of Cracow, in 1589; ASK O I, 7, ff. 713–810.

⁴⁸ P. Małopolska, pp. 230, 231, 234–235 (Kryniczna Wola accidentally omitted by the publisher); Lubacz in 1576 appeared as a village turned into a demesne (ASK O I, 9, f. 140v), in 1577 also did not pay tax (*ibidem*, f. 280v), as a village recorded again in 1589 (ASK O I, 7, f. 796).

⁴⁹ PSB, vol. 2, p. 301; Genealogia, table 124.

⁵⁰ Tax register from 1576, ASK O I, 9, ff. 157, 157v, 164, 179–179v.

⁵¹ Tax register from 1581, P. Małopolska, p. 256; estates in later years: ASK O I, 8, f. 811v, y. 1581; ASK O I, 7, f. 835, y. 1589.

⁵² According to the register from 1576, the tax from this village complex was paid by 'dominus Ciołek'. This 'dominus Ciołek' paid, according to the aforementioned register, the tax from two royal villages in Stężyca district, namely: Krępa and Pogorzelec (ASK O I, 9, f. 201). In 1551 these villages were leased to Andrzej Ciołek of Żelechów and his son Stanisław (MRPS V, no. 5384; MK 80, ff. 68v–69). Krępa and Pogorzelec were leased to S. Gostomski the voivode of Rawa in 1591 (K. Chłapowski, *Realizacja reform*, annex, p. 217), so we identify the owner of the villages listed in the text with Stanisław Ciołek Żelechowski. After his father's death, Walenty Dembiński, the future castellan of Cracow and the Great Chancellor of

Walenty Dembiński, the castellan of Cracow,⁵³ had only 6.5 village in Sandomierz Voivodeship in 1570s, but in total it was 113 fiefs. These were: Czarnków, Czarnków Mały, and a part of Żukowice⁵⁴ in Wiślica district, and in Pilzno district: Błędowa, Niechnobrz, Zgłobień and Zgłobień Nowy.⁵⁵

The estates of Andrzej Drzewicki⁵⁶ in Opoczno district consisted of villages: Dąbrówka, Drzewica, Jedlna and Żelazowice.⁵⁷ In Radom district he owned: Bieliny, Drogowa, Klonowa, Przysiałowice, and Wola Więcierzowa,⁵⁸ together: 59 serf lans.

Andrzej Firlej, the castellan of Lublin,⁵⁹ owned 12 settlements in Radom district. In total they made 40.5 fiefs. These were: Janowiec (Serokomla) town, and the villages: Babin, Gniazdówek, Janowice, Łągów, Łaguszów, Mszadła, Oblasy, Przyłęk, Rudki, Zamoście and Kijanka.⁶⁰

Mikołaj Przedbor Koniecpolski, the castellan of Rozprza,⁶¹ owned 43.25 serf lan in total in the suburbs of Przecław and in 12 villages (Dobrków, Gołęczyzna, Jaworze Przedbor, Krownice, Łabuzie, Męciszów, Mokrzec, Parkosz, Podole, Połomia, Pustków and Złotoria).⁶² Perhaps he also owned Dolcza Mała and Ruda, which were described as belonging 'ad Przecław' in the registers from 1576–1577,⁶³ and in 1581 the castellan of Biecz paid for them.⁶⁴

The estates of Mikołaj Kłoczowski, the scribe of Stężyca,⁶⁵ situated in Stężyca land comprised seven villages, in which there was 62.5 of serf lan: Grabowce, Kobylnica, Lipiny, Strych, Tyrzyn, Ulęże, Zawitała and probably also the town Drażgów.⁶⁶

Jan Oleśnicki from Pińczów⁶⁷ owned the town of Chmielnik, part of the town Pińczów,⁶⁸ in Wiślica district: Szczepiec, Brzeście, Zrzecze Wielkie, Łagiewniki and Jesień,⁶⁹ and probably also Oleśnica town; in Radom district: Wola Bąkowa, Łaziska, Krępa, Jawor and Wierzchowiska,⁷⁰ and in Chęciny district: Nieznanowice, Węgleszyn, Rębiechowa, Wola Wiśniowa and Zambrzeg;⁷¹ together 75 serf lans in 15 villages.

the Crown, became the protector of Andrzej's underage children (between 1553 and 1563). Stanisław Ciołek Żelechowski's sister Anna later married the chancellor's son Stanisław Dembiński, the starosta of Chęciny (A. Tomczak, *Walenty Dembiński, kanclerz egzekucji, ok. 1504–1584*, Toruń 1963, p. 147). This would explain the title 'dominus' given to Ciołek by the author of the register. Ciołek's estates were determined on the basis of ASK O I, 9, ff. 204v, 205, 215v. In the beginning of the seventeenth century parts of these estates, Wilczyska among others, became property of Jan Gostomski of Leżenice, son of Hieronim, the voivode of Inowrocław, and then of Kalisz, married to Zofia Firlej; PSB, vol. 8, pp. 366 f.; Boniecki, vol. 6, p. 347).

⁵³ About him A. Tomczak, *Walenty Dembiński*.

⁵⁴ P. Małopolska, p. 213; ASK O I, 9, y. 1576, ff. 103–103v; y. 1577 ibidem, f. 243v; these estates were described by the office of the owner, the castellan of Cracow.

⁵⁵ P. Małopolska, p. 253, y. 1581. The author of the monograph on Walenty Dembiński does not list these estates (A. Tomczak, *Walenty Dembiński*, p. 163). After Walenty Dembiński's death the tax from his estates in Pilzno district was paid in 1589 by 'Anna de Sieniawa Cast. Crac.', who was the wife of Wawrzyniec Spytek Jordan, the castellan of Cracow (Genealogia, table 129), these estates were: Błędowa, Zgłobień, Nockowa (part), and Wiśniowa (ASK O I, 7, f. 845v).

⁵⁶ Andrzej Drzewicki, Ciołek coat of arms, son of Adam the castellan of Małogoszcz, then of Radom, the nephew of the archbishop of Gniezno Maciej, since 1569 the leaseholder of the vogt's of Opoczno; Boniecki, vol. 5, pp. 55 f.

⁵⁷ P. Małopolska, pp. 282, 283, 288.

⁵⁸ Ibidem pp. 312, 313, 316.

⁵⁹ Son of the voivode of Ruthenia Piotr Firlej, who in 1537 founded Janowiec town (Serokomla) in his estates, the castellan of Lublin since 1576; PSB, vol. 6, p. 474 f., 7, p. 16; Boniecki, vol. 5, p. 289; J. K. Kochanowski, *Firleje*, [in:] idem, *Szkice i drobiazgi historyczne*, Warsaw 1904, p. 97.

⁶⁰ The register from 1569 lists these villages, except for Kijanka, without owner's name (P. Małopolska, pp. 305, 319, 329), and Andrzej Firlej is listed in the register from 1576 (AKS I 8, ff. 480, 513); Kijanka appears as his property in the document of the division of the estates of the family Firlej from 1557 (MK 89, ff. 262v–263v).

⁷¹ ASK O I, 9, ff. 346–347.

The estates of Mikołaj Ligęza, the castellan of Zawichost in the 1570s, and then of Wiślica,⁷² situated within the boundaries of Wiślica and Pilzno district, consisted at that time of 14 villages and 107.5 serf lans. In Wiślica district he owned the following villages: Borek, Czyżów, Gorzyce, Janikowice, Mikołajów (or Jadamierz), Otwinów and Wielopole,⁷³ at the end of the sixteenth century his holdings grew significantly, both due to the purchase of neighbouring villages (Dymlin, Mnichowice, Przybysławice and a part of Siedliszowice), as well as due to the location of new villages – Dąbrówka and Bucze.⁷⁴ Also in Pilzno district, apart from the villages Brnik, Dąbrowa Wielka, Nieczajna, Wola Dąbrowska, Radgoszcza, Wola Szarwark and Żdżary, did M. Ligęza own toward the end of the 1570s a newly-located village Wola Ligęzów.⁷⁵

The holdings of Hieronim Mielecki, the starosta of Brześć Kujawski, and then of Sandomierz,⁷⁶ encompassed in Sandomierz Voivodeship estates inherited from his father Sebastian, the castellan of Wiślica, the brother of Jan the voivode of Podole.⁷⁷ Major part of these estates, situated in Sandomierz district, consisted of a part of the town of Mielec,⁷⁸ and the villages: Łubnica, Markowa Wola (Pogwizdów), Wojśław, Złotniki,⁷⁹ and certainly also Trzęsówka,⁸⁰ and Cmolos and Zarudzie;⁸¹ in the 1580s Hieronim Mielecki located in this key the villages Trześnik, and probably Kosów as well,⁸² and the village Trzcianka (Trzciana), which fell to Walerian Mielecki in the division of 1548, was listed in 1578 among the properties of Hieronim Mielecki, but in the next year, and 10 years later, the tax was paid by the heirs of Jan Mielecki, and finally in 1591 it belonged to the family Turski.⁸³

In Pilzno district, Hieronim Mielecki owned two villages: Ostrów and Skrzyszów,⁸⁴ and Okunin – for which he paid tax in 1579 and 1581,⁸⁵ was leased by him, as it belonged to the Cistercian monastery in Koprzywnica.⁸⁶

⁷² Since 1561 the castellan of Czechów (W. Pałucki, *Kasztelania czechowska*, Warsaw 1964, p. 31, footnote 86), in 1566 obtained the castellany of Zawichost, in 1576 chosen the castellan of Radom by the nobility, but was not confirmed, in 1577 became the castellan of Wiślica, died in 1603; PSB, vol. 17, p. 318. His estates in tax registers appear without owner's name, he is identified by his office – first the castellan of Zawichost, then of Wiślica.

⁷³ P. Małopolska, p. 233 f.

⁷⁴ Dymlin in 1581 still belonged to the family Pacanowski (ASK O I, 9, f. 679), Przybysławice – to Mniszewska (ibidem, f. 682), Siedliszewice – to the family Otwinowski (ibidem, k. 680), Dąbrówka and Bucze, described as 'noviter loc.' appear in 1591 (ASK O I, 7, f. 693).

⁷⁵ P. Małopolska, y. 1576, ASK O I, 9, ff. 186v ff.; y. 1579, Wola Ligęzów 'noviter loc.' ASK O I, 51, f. 964.

⁷⁶ Geneaologia, table 128; PSB, vol. 20, f. 754 f.; K. Niesiecki, *Herbarz Polski*, vol. 6, p. 395.

⁷⁷ The document of the division of the estates from 1548, MRPS V, no. 85; see also earlier documents of these estates: MRPS IV, no. 5386, y. 1528, no. 5700, y. 1529, no. 5403, y. 1530, no. 16665, y. 1532. We do not include smaller parts of the estates, belonging to his uncles and cousins: Mikołaj Mielecki son of Jan, and Jan Mielecki, probably son of Walerian, because the majority of their property, according to the document of division from 1548, was situated in Cracow Voivodeship, and in Kołomyja district.

⁷⁸ ASK O I, 10, f. 898, y. 1579: 'oppidum m. dominorum Hieronimi Mielecki et successorum m. domini Nicolai Mielecki palatini Podoliae, una cum successoribus gen. d. Joannis Mielecki'.

⁷⁹ P. Małopolska, p. 202.

⁸⁰ This village, listed among hereditary villages of the family Mielecki in 1548 (see footnote 204), and in the document of the separation of royale estates from the estates of Stanisław Mielecki from 1528 (Archive of the Princes Sanguszkos, no. 178, p. 210), in the 1589 register, was described – probably incorrectly – as 'regalis' (ASK O I, 51, f. 875); Hieronim Mielecki paid tax from this village in 1578, 1579, 1591; P. Małopolska, p. 202; ASK O I, 10, f. 843; ASK O I, 51, f. 769.

⁸¹ Cmolos and Rudnik forest (Zarudzie) were given to Sebastian Mielecki, Hieronim's father, as a result of the division of the heirloom in 1548 (MRPS V, no. 85); according to registers from 1578, 1589 and 1591, these villages belonged to Hieronim Mielecki (P. Małopolska, p. 202; ASK O I, 51, ff. 874, 875; ibidem, ff. 768, 769); and in 1579 the tax was paid by Andrzej Leszczyński (ASK O I, 10, f. 843v).

⁸² Kosów and Trześnik do not appear in registers from 1570s. In 1589 (ASK O I, 51, f. 875) they were listed as property of Hieronim Mielecki, and the latter was described as 'noviter locata'; as property of Mielecki they were listed next in 1591 (ibidem, f. 769).

⁸³ MRPS V, no. 85; P. Małopolska, p. 202; ASK O I, 10, f. 842v; ibidem, f. 712.

⁸⁴ In 1581, P. Małopolska, p. 251; in 1579, ASK I, 51, f. 956.

⁸⁵ P. Małopolska, p. 251; ASK O I, 51, f. 954v.

⁸⁶ Długosz LB, III, 388; ASK O I, 8, ff. 789 ff.; P. Małopolska, p. 251 (text compared with the original, this information was omitted by the publisher); in 1576 'Pani Krakowska' paid for this village (ASK O I, 9, f. 172), that is the mother of Hieronim Mielecki, Zofia from the family Kościelecki, the wife of the castellan of Cracow, Sebastian; Geneaologia, table 128.

For the 1570s it is difficult to determine, which estates in Sandomierz Voivodeship belonged to Konstanty Wasyl Ostrogski,⁸⁷ mainly because of the argument about Tarnów estates, reaching that period. The argument began in 1567, after Jan Krzysztof Tarnowski, the castellan of Wojnicz, died and his fortune was inherited by his sister Zofia, who died in 1570. She bequeathed her holdings to her husband – Duke Ostrogski. However, Zofia's close relatives: Stanisław Spytek Tarnowski the castellan of Sandomierz, who died in 1568, and his son Stanisław Tarnowski, since 1569 the castellan of Czechów, also claimed their rights to the estates. The latter took Tarnów and its vicinity by force in April 1570, right before Zofia's death. Yet, already on 18 July the Sejm court ordered him to return the appropriated lands and cover the damages inflicted during his foray.⁸⁸

When analyzing the holdings of Konstanty Wasyl Ostrogski, we were basing on the estates listed in Pilzno district in 1581. We found that of 47 villages listed in this year as belonging to Ostrogski,⁸⁹ the tax for 17 villages was paid in 1576 by the voivode of Sandomierz, these were: Borowa, Czarna, Dąbrówka, Dąbie, Jażwiny, Jastrząbka, Korzeniów, Mokre, Nagosin, Przeroty Bór, Róża, Wiewórka, Wolica, Wola Żędzińska, Żdżar, Żdżarzec and Zaszów;⁹⁰ Ostrogski and Jan Tarła, the voivode of Lublin,⁹¹ together owned five villages: Łysa Góra (Lisia Góra), Luszowice, Krzyż, Powężów and Śmigłowa Wola. The provost of Tarnów Marcin Liczko paid for three villages: Mikołajowice, Ostrów, Sirachowice (Szwoszowice).⁹² We suppose he was Ostrogski's leaseholder, because as such he appeared in 1577, when he paid for Gosławice.⁹³ In the 1570s Ostrogski was the sole possessor of the following estates in Pilzno district: the suburbs of Klikowa, Grabówka, Gumniska, Łękawka, Łękawica, Nowodworze, Podgrodzie, Pogwizdów, Poręba, Skrzyszów, Szywałd, Trzemeszna, Tarnowiec, Wola Pogórska, Wierzchosławice, Wola Lisiogórska, Wolica, Zalasowa, Zabłocie, Żędzin, Zawada, Zgłobice and the city of Tarnów.⁹⁴ The 1589 register also mentions Wola Tarnowska (in the 1581 register without owner's name) and Żukowice.⁹⁵

In Sandomierz district, of 19 villages described in 1578 as Ostrogski's property,⁹⁶ the village Glinka became in 1591 the property of Piotr Czajka,⁹⁷ and in 1576 Krzczonowice were owned together by Ostrogski and Piotr Czajka.⁹⁸ In Sandomierz district Ostrogski owned: Biskupice, Bukowiany, Czerwona Góra, Grodziec, Jasków, Jurkowiec, Jałowasy, Podgrodzie, Przepaść, Ruskowice, Stoki, Tudorów, Wojnowice and Wola Jaskowska. The towns: Ćmielów and Opatów belonged at the end of the sixteenth century to Janusz Ostrogski, Konstanty's son, and to Mikołaj Buczacki.⁹⁹

It was relatively easy to distinguish the estates belonging to the two noblemen called Stanisław Tarnowski who lived at the time. One of them, son of Stanisław Spytek, since 1569 the castellan of Czechów, since 1576 the castellan of Radom, and since 1582 the castellan of Sandomierz, who died in 1618, in the 1570s owned the estates situated in the districts of Sandomierz and Wiślica; the other, son of Wojciech (cousin of the aforementioned Stanisław Spytek), died in 1586/1587 and was married to Zofia from the family Mielecki.¹⁰⁰ His estates, together with Rzemień castle, were situated in Pilzno district. The registers usually give the castellan title of the first Stanisław mentioned, or call him only by his dignity. However, it was not entirely possible to separate the property of the other Stanisław

⁸⁷ Konstanty Wasyl Ostrogski, son of Konstanty, the Great Hetman of Lithuania, the voivode of Kijów, died in 1608; *Genealogia*, table 165; PSB, vol. 24, pp. 489–495.

from the estates of other members of this line, sometimes called Rzemieński, mainly from the estates of his brother Marcin.¹⁰¹ The constituted a part of the estates belonging to his grandfather, also Stanisław Tarnowski, the castellan of Sącz.¹⁰² Having compared this list against the information on income from 1576–1579, and then with a list of villages, for which Stanisław Tarnowski son of Wojciech paid tax in 1581, and those for which his widow paid in 1589,¹⁰³ it should be concluded that in the 1570s they owned the following villages: Biały Bór, Kielków, Kolbuszowa, Kościelów, Myślików, Niwiska, Odsieka, Rzemień, Świerczów, Trześnia, Tuszynia, Wola Ociecka, Wyrzynia, castle Rzemień, castle ironworks (in 1582: ‘dicta Lubelczik’, in 1589 – ‘Vach’) and Żochów town (Rzochów). According to Stanisław Tarnowski’s will from 1585, after his wife’s death these estates went to her brother, Hieronim Mielecki.¹⁰⁴

Stanisław Tarnowski, son of Stanisław Spytek, paid taxes – in 1576 as the castellan of Czechów and in 1578 as the castellan of Radom – from the following villages situated in Sandomierz district: Tursko Małe, Luszyca, Rudnik, Okrągła, Ostrów, Zawada (Ruda?) in Połaniec parish, Dzików in Michocin parish, Zdaków, Krzemienica, part of Kliszów, Wola Kliszowska and Borków in Gałuszowice parish, Wielawieś, Zakrzów, Siedlce in Wielawieś parish, Trześnia in Trześnia parish, and part of Jaślany in Jaślany parish.¹⁰⁵ The majority of the village Jaślany belonged to the king.¹⁰⁶ The tax from the village Dziewiątle (in Połaniec or Gałuszowice parish), which in 1576 was listed as a property of the castellan of Czechów, i.e. Tarnowski, was paid two years later by the castellan of Sandomierz, Stanisław Szafraniec at the time. Undoubtedly, due to the marriage of his daughter with Jan Tarło, the voivode of Lublin, this village belonged to the heirs of the voivode in the 1580s.¹⁰⁷ Already in 1579 Tarło paid tax also from parts of Kliszów, Wola Kliszowska and Borki.¹⁰⁸ It could be said that at the same time the voivode obtained other estates, previously belonging to S. Tarnowski, namely: Kęblów, Luszyca, Okrągła, Ostrów, Rudniki, Tursko, Zawada, Zdaków with Krzemienica, and parts of Jaślany, for which the taxes were paid in 1589 and 1591 by the successors of Jan Tarło.¹⁰⁹ The castellan Stanisław Tarnowski kept the following villages in Sandomierz district: Dzików, Siedlec, Trześnia, Wielawieś and Zakrzów,¹¹⁰ to which he added in the 1580s Wszeźwięte and Andrzejów (in 1578 listed as property of the voivode of Cracow Piotr Zborowski) and parcels in Kaimów, Machów and Michocin.¹¹¹

In the 1570s the castellan Tarnowski owned the following villages in Wiślica district: Młodzawy, Ocioseki, Zagajówek and Zakrzów, which he sold in 1580 to the bishop of Cracow Piotr Myszkowski; later they went to the bishop’s nephew, Zygmunt Myszkowski, the starosta of Piotrków.¹¹²

The estates situated in Sandomierz district, described in 1576–1578 as holdings of Mikołaj Radziwiłł Sierotka, the Duke of Ołyka,¹¹³ encompassed the following villages or parts of villages: Bogusławice, Częstocice, Garbacz, Goździelin (part), Manina (part), Niemienice, Szczucice (part), Śniatkowa Wola, Stryczowice, Wodziradz (part), Worowice (part),¹¹⁴ and the towns: Szydłowiec, Ćmielów and Opatów.¹¹⁵ These estates went

¹¹⁵ Ćmielów and Opatów next became property of Mikołaj Buczacki, the subcamerarius of Kamieniec and duke Janusz Ostrogski, AV Cap. 1, f. 482; Szydłowiec remain the property of Mikołaj Sierotka, AV Cap. 14, f. 282.

partly to Mikołaj Buczacki, the subcamerarius of Kamieniec,¹¹⁶ probably as a result of the settlement of the dowry of Mikołaj Sierotka's sister, who married Buczacki¹¹⁷ in 1570, and partly to Duke Janusz Ostrogski.¹¹⁸

Wojciech Padniewski, the starosta of Dybów, inherited – among other estates – Szaniec in Wiślica district¹¹⁹ after his uncle Filip Padniewski the Bishop of Cracow died in 1572. This estate consisted of the following villages: Kozina, Mikułowice, Młyny, Skarbisławice, Skorzów, Sławkowice, Szaniec, Uników, Zbrodziejce¹²⁰ and Galów. The tax from the latter was paid in 1579 by Marcin Padniewski's wife, Ewa from the family Czarnkowski.¹²¹ Odrowąż Wielki in Opoczno district was only Padniewski's leaseholding,¹²² similarly: in Chęciny district he leased Piękoszewo village.¹²³ Altogether, his property comprised of 10 settlements and 43 serf lans.

The holdings of Samborzecka¹²⁴ in Stężyca district consisted of one town and seven villages and occupied the area of 62.5 serf lan. She owned: Okrzeja town,¹²⁵ and the villages Branka, Gozd, Grabowa, Jagodne, Sokola (Sokolnia), Wola Okrzejska and Zwadnik.¹²⁶

Jan Sienieński, the castellan of Żarnów,¹²⁷ owned two towns and 11 villages in Wiślica district in 1570s; these were the towns Raków (earlier: Pągowiec village) and Dębno, and the villages Bardo, Grabowa, Grzybów, Łyczba, Lipiny, Przeczów Stary, Krzywołęcz, Siedlec, Soboszków and Zalesiany, and also Wrębów,¹²⁸ where Sienieński's heirs¹²⁹ founded a town in the second half of the sixteenth century or at the beginning of the seventeenth century. In 1581 he owned also the village Podlesie.¹³⁰

The estates of Jan Słupecki¹³¹ in Sandomierz district could be reconstructed on the basis of the tax registers from 1577–1578. The estates consisted of the villages: Nieciecza, Mściów, Konary, Mała Wieś, Rzeczyca, Słupca, Szczytniki, Wola Konarska, Wola Nowa and parts of the villages Czernin and Kamień (parts of these villages belonged to the monastery of the Cistercians from Wąchock), in total: nine villages and two parts of villages.¹³²

Vast estates of Stanisław Szafraniec, the castellan of Biecz, and later of Sandomierz, finally: the voivode of Sandomierz,¹³³ were situated in three districts of our voivodeship in the 1570s. In Chęciny

¹²⁶ Year 1569; P. Małopolska, p. 333; y. 1576, ASK O I, 9, ff. 208v, 209, 223v.

¹²⁷ The castellan of Żarnów, y. 1568, died in 1583; I. Kaniewska, *Małopolska reprezentacja sejmowa za czasów Zygmunta Augusta, 1548–1572*, Warsaw 1974, table 13, no. 53.

¹²⁸ P. Małopolska, p. 224–226, 229; these villages were described as property of the castellan of Żarnów, without specifying the owner's name.

¹²⁹ *Miasta polskie*, vol. I, pp. 535 f.

¹³⁰ Year 1581, ASK O I, 9, f. 658v.

¹³¹ Jan Słupecki, son of the castellan of Połaniec Zbigniew and his wife Barbara from the family Firlej, father of Samuel and Jan; S. Kot, *Słupeccy w ruchu reformacyjnym*, „Reformacja w Polsce”, 1926, p. 181; Genealogia, table 126; Stanisław Słupecki, the castellan of Lublin, was his uncle.

¹³² Year 1577, ASK O I, 7, ff. 521, 521v, 522, 543, 544, 547v; y. 1578, P. Małopolska, pp. 165, 174–176. Jan Słupecki died in 1578/1579, because already in 1579 Słupca estates were in the hands of his heirs, similarly in 1589 (ASK O I, 51, ff. 840, 840v) and in 1591 (ibidem., ff. 704, 704v, 705, 725v, 726).

¹³³ Son of Piotr and Agnieszka from the family Sienieński, since 1569 the castellan of Biecz, since 1576 the castellan of Sandomierz, in 1581–1587 the voivode of Sandomierz, 1589 the wojski of Cracow, married to Anna Dembińska, father of Agnieszka the wife of Jan Tarło, who was the voivode of Lublin; Genealogia, table 108; H. Kowalska, *Stanisław Szafraniec z Pieskowej Skaly*, OiRwP, vol. 3, 1958, pp. 99–131; W. Pałucki, *Studia nad uposażeniem*, p. 181.

district he owned Bałków, Bichniów, Gruszów, Krasocin, Lasocin, Mieczyn, Krzepin, Nawsie (Secemin suburbs), Olesno, Sulików (Sulków), Zwleczka and Secemin town;¹³⁴ in Wiślica district – Chrostowice, Gruszów, Kęsów, Kobiela, Oleszno, Rogów, Smogorzew, Smarszów, Wyszogród¹³⁵ (this key of property went to Mikołaj Firlej, the voivode of Cracow, in the 1580s¹³⁶); in Sandomierz district Szafraniec temporarily owned Dziewiątle, which formerly belonged to castellan Stanisław Tarnowski, and later to Jan Tarło.¹³⁷

Jan Tarło the voivode of Lublin¹³⁸ owned in the 1570s the following estates: in Pilzno district – Ilkowice, Jaworze, Gumniska, Laskówka, Rosławice, Rudno, parts of Kobierzyn and Latoszyn; together with Duke Konstanty Wasyl Ostrogski he paid tax from the following villages: Krzyż, Luszowice, Łysagóra, Powezów and Śmigłowa Wola.¹³⁹ In Wiślica district Tarło held Krępace and a part of the village Ciuślice,¹⁴⁰ in Stężyca district – Dęblin and Wola Mierzęcza.¹⁴¹ At the end of the sixteenth century the estates in Pilzno district were kept by the voivode's widow – Agnieszka Tarłowa, who also paid from three other villages: Łąka, Chorążec and Brnik,¹⁴² and the villages in Wiślica district belonged to Jan Ocieski, the starosta of Olsztyn.¹⁴³

Piotr Zborowski, the voivode of Sandomierz, and then of Cracow,¹⁴⁴ owned estates in three districts of Sandomierz Voivodeship in the 1570s: in Wiślica district he owned Boszowice, Czyżów, Kępie, Klępice Górne, Pieczeniegi, Prusy, Smogorzew, Skrobaczów, Strzelce, Sufczyce, Wola Sucha, Wola and Zdziesławice, and parts in the villages: Sroczków and Topola;¹⁴⁵ in Sandomierz district – Andrzejów, Grocholice, Ostrów, Wola Grodzka, Wsześwięte and Żórawniki.¹⁴⁶ His wife probably owned (because 'generosa Zborowska' appeared there as a taxpayer) estates in Sandomierz district, which in 1578 consisted of the following villages: Dziewiątle (Gryzikamień or Ujazd parish), Gryzikamień, Grzybów, Łopatno Wielkie, Mydlów, Żaliwdów and parts of Ujazd and Krępa.¹⁴⁷ In Stężyca district Zborowski owned parts of Zakalów, Bodzynowice and Białobrzegi, which still in 1569 belonged to the family Zerzyński.¹⁴⁸ At the end of the sixteenth century his estates came under the ownership of Stanisław Tarnowski, Elżbieta of Wzdów (widow of Jędrzej Niedrzwicki, the castellan of Połaniec¹⁴⁹), and Zofia of Wzdów (wife and later widow of Krzysztof Lanckoroński, the castellan of Radom¹⁵⁰).

Andrzej Leszczyński, the future voivode of Brześć Kujawski (since 1591), became the owner of Baranów estates already in the 1570s, even if the formal partition of property was conducted in 1600.¹⁵¹ These holdings were bought in 1568 by Andrzej's father, Rafał Leszczyński, the castellan of Śrem, and one of the wealthiest magnates in Greater Poland, from Stanisław Górka.¹⁵² According to the document of purchase, the estates consisted of 10 settlements, of which the 1578 register mentions seven as belonging to Andrzej Leszczyński, namely: Baranów, Dymitrów, Gołego Wola, Przewóz, Skopanie, Suchorzów, Wojków, in total 61.25 inhabited serf lans, two deserted lans and two lans of the sołtys.¹⁵³

¹³⁴ P. Małopolska, pp. 274, 276, y. 1573, describes these villages as property of the castellan of Biecz, without specifying the name of the owner.

¹³⁵ Ibidem, p. 214, y. 1579.

¹³⁶ ASK O I, 7, ff. 633–634v.

¹³⁷ See footnote 107.

¹³⁸ Since 1563 the castellan of Małogoszcz, since 1565 of Radom, since 1574 the voivode of Lublin (married for the first time to Dorota Gostomska of Leżenice, who died in 1565, married for the second time with Agnieszka Szafraniec, who died in 1601), died in 1587; Genealogia, table 131.

¹⁵¹ PSB, vol. 17, pp. 101–103.

¹⁵² Ibidem, p. 134; MRPS V, no. 10328.

¹⁵³ P. Małopolska, pp. 198, 200.

The remaining three villages were Koło, from which the tax in 1578 was paid by Eustachy Dzik,¹⁵⁴ and Otoka and Wola (Wolica Dymitrowska), already in 1565 described as deserted.¹⁵⁵ The fields of these villages probably belonged to Baranów demesnes, as suggested by the fact that they were not included in the 1578 lan tax collection.¹⁵⁶

Finally, we should mention the estates bought by Stanisław Wolski, the castellan of Rawa and the starosta of Krzepice, from Olbracht Łaski in 1565. These were 11 villages in Wiślica district (Budziska, Czarzyzna, Góra, Grabowa, Liczba, Łubnice, Orzelec Mały and Orzelec Wielki, Przechów Stary, Stara Wieś, Zrębin) and two villages in Sandomierz district (Otałęż, Wola Otałęska). However, the estates were then held by Jan and Andrzej Tęczyński ‘modo obligatorio’.¹⁵⁷ In 1576–1581 the tax registers stated that the majority of these villages in Wiślica district (Czarzyzna, Góra, Łubnice, Orzelec Mały and Orzelec Wielki, Zrębin) was owned by Mikołaj Wolski, the starosta of Krzepice and son of Stanisław Wolski, and three villages (Grabowa, Liczba, Stary Przechów) by the castellan of Żarnów – Jan Sieniński.¹⁵⁸ Otałęż and Wola Otałęska were, on the other hand, listed in 1578 without owner’s name.¹⁵⁹ In 1589 these villages in Wiślica district (except for one) belonged to the castellan of Wojnicz, so – Jan Tęczyński, we do not know, whether this was a lease on the grounds of the ‘old sums’, or a property; only Zrębin belonged to Stanisław Ciołek.¹⁶⁰ In this case we included Grabowa, Liczba, and Stary Przechów in the 1570s in the estates belonging to Jan Sieniński, and the remaining Wolski’s villages were not counted among larger complexes of property.

Table 1. Landed property in the 1570s

District	Landed property area in %				
	royal	Church	larger complexes of Church estates	nobility and magnates	larger complexes of nobility and magnate estates
Sandomierz	30.2	21.0	20.8	48.8	7.9
Pilzno	13.1	12.0	6.9	74.9	30.0
Wiślica	15.3	13.5	9.1	71.2	15.1
Radom	16.7	21.0	19.3	62.3	5.0
Stężyca	25.1	9.3	0.5	65.6	20.7
Chęciny	19.1	30.2	23.8	50.7	8.1
Opoczno	11.8	13.4	9.6	74.8	1.2
Sandomierz Voivodeship	19.6	18.3	14.9	62.1	11.6

The measurements of landed property area in all categories on working maps at a scale of 1:100,000 helped us to determine the proportions between them. Mindful that village borders, especially in less-inhabited areas might not always be correctly marked, we ascribe greater value to relative data, than to the results of the measurements.

In Sandomierz Voivodeship in the 1570s royal property covered 19.6% of the area of the entire voivodeship, the property of Church institutions – 18.3% (including larger estate complexes – 14.9%),

¹⁵⁴ Ibidem, p. 200.

¹⁵⁵ LS 1564/1565, p. 324: ‘Wola, Othoka villae desertae in toto’.

¹⁵⁶ In 1588/1589 A. Leszczyński bought a tenement house by the market square in Sandomierz from a nobleman Piotr Grocki; H. Rutkowski, *Sandomierz w okresie Odrodzenia*, [in:] *Studia sandomierskie*, p. 293 and footnote 28 on p. 327.

¹⁵⁷ MRPS V, no. 9541.

¹⁵⁸ Year 1576, ASK O I, 9, ff. 124, 134, as property of ‘imp. Starosta of Krzepice’ or ‘imp. of Żarnów’ without specifying the owner’s name; identification according to A. Sucheni-Grabowska, *Monarchia*, p. 296, and footnote 127. Year 1577, ASK O I, 9, f. 227 f.; Czarzyzna, Góra, Łubnice, Orzelec Mały and Orzelec Wielki, and Zrębin were marked as an estate of ‘dni Czirkowski tenutarii’; Grabowa and Stary Przechów – as property of the castellan of Żarnów. Number listed without owner’s name. Year 1579, P. Małopolska, pp. 226, 231; villages belonging to Wolski were described as property of ‘magei Nicolai Wolski, castellani bieccensis’, although Mikołaj Firlej (!) was then the castellan of Biecz; see *Genealogia*, table 126; villages belonging to Jan Sieniński were described as property of ‘mgci castell. Żarnoviensis’. Similarly in 1581, ASK O I, 9, ff. 659 f., and Przechów Stary was then leased from the castellan of Żarnów by Łukasz Pożowski, and ‘at that time Stan. Kutlieński, an official in Łubnice’ paid in the name of Wolski.

¹⁵⁹ Year 1589, ASK O I, 7, ff. 732 f.

¹⁶⁰ P. Małopolska, p. 201.

and the property of magnates and noblemen – 62.1% (including larger property complexes – 11.6%). In all, larger complexes of property covered 46.1% of the area of the voivodeship. However, because – as it was said in the beginning of this part of the commentary – smaller estates, belonging to institutions and people who possessed larger estates in other parts of the Republic, were not included, so the great property of the king, the Church and the nobility reached at least 50% in the 1570s, and probably covered more than a half of the voivodeship, including the great Church and magnate property – slightly over 30%.

ANNEX

LARGER ESTATE COMPLEXES OF CHURCH INSTITUTIONS IN SANDOMIERZ VOIVODESHIP IN THE LAST QUARTER OF THE SIXTEENTH CENTURY

The following list was made on the basis of tax registers, Church visitations and lists found in *Materiały do dziejów górnictwa i hutnictwa z archiwów metropolitalnego i kapitulnego w Krakowie z lat 1497–1640* by S. Kuraś, [in:] *Studia z dziejów górnictwa i hutnictwa*, vol. 3, J. Pazdur [ed.], Warsaw–Wrocław, pp. 263–357.

Cracow bishopric

Sandomierz district

Bodzęcin town, Bronikowice, Brzezcie, Bukowie, Dąbrowa, Dębno, Godów, Gorczyca mill, Jamnik, Jeziorko, Kałków, Krajków, Krzynki, Kunów town, Lechów, Leśna, Łączna, Łojowice, Malice, Milczany, Niekurza, Nietulisko Wielkie, Parszów, Psary, Radkowice, Ruda Andryszowa ironworks, Ruda Baranów ironworks, Ruda Berezów ironworks, Ruda Kunowska ironworks, Ruda Majek ironworks, Ruda Michałkowa ironworks, Ruda Stara Krzynecka ironworks, Ruda Suchyniowska ironworks, Siekierno, Sieradowice, Szczygiełkowa Wola, Szewna, Szyrzawy, Śniadka, Świętomarza, Świślina, Tarżek, Udziów, Wiry, Wzdół, Złota. Parts of: Doły, Życ.

Pilzno district

Bachowice, Bielcza, Biskupice, Bodzęcin, Kargów demesne, Kwików, Lętowice, Niedzieliska, Radłów, Rajsko, Rolowa Wola, Ruda Ciechon, Rzeżachowa, Szczurowa, Wokowice, Wola Radłowska, Zaborowie. Parts of: Biadoliny, Rudka.

Wiślica district

Baranów, Biskupice in Opatowiec parish, Biskupice in Zborówek parish, Cisów, Dobrowoda, Drogowle, Grodzonowice, Kępa, Korzyń, Ksany, Olganów, Ruda Mędrów ironworks, Sokolniki, Widelki glassworks, Zborówek. Parts of: Chotel Czerwony, Kraśniów, Kwaszyn, Piestrec, Żukowice.

Opoczno district

Huta glassworks, Odrowąż Mały, Wola Sarbin,¹⁶¹ Zbroja ironworks.

Radom district

Bieszków, Błaziny, Chwałowice, Gąsawy, Iłża town, Jasieniec, Jastrząb town, Kowalików, Lepienice, Lipie Nowe, Lubienia, Małomierzyce, Małyszyn, Mirów, Niedźwiedzi Kierz, Niegosław, Prędocin, Rogów, Ruda Bród ironworks, Ruda Kowalikowska ironworks, Ruda Lepieńska ironworks, Ruda Śmiłowska ironworks, Rzechów, Śmiłów, Tychów, Wola Lepieńska, Wola Parstowa, Wszeradzice Bliższe, Wszeradzice Dalsze, Zbijów.

Chęciny district

Bęczków, Białogon mill, Bielcza, Bieliny, Bobrze, Brzeziny, Cedzyna mill, Czarnów Mniejszy, Czarnów Więszy, Ćmińsko, Daleszyce town, Dąbrowa, Domaszowice, Dyminy, Górne, Kielce town, Klatki, Kołomania, Kostomłoty, Kowala, Krajno, Leszczyny, Masłów, Mąchocice, Miedziane Góry mine, Mojcza, Nida, Niestachów, Niewachłów, Posłowice, Radlin, Ruda Adam ironworks, Ruda Belno ironworks,

¹⁶¹ Odrowąż Mały and Wola Sarbin exchanged in 1574 by the bishop of Cracow for Umiecin, Koryciska and Kamień Biskupi in Radom district; *Katalog rękopisów Biblioteki Zakładu Narodowego im. Ossolińskich*, vol. 1, pub. W. Kętrzyński, Lwów 1881, pp. 142 f., no. 106–108.

Ruda Michałowska ironworks, Ruda Niedźwiedź ironworks, Skorzeszyce, Słopiec mill, Suków, Szałas ironworks, Szczukowskie Góry mine, Tumlin, Wola Jachowa, Wola Kopcowa, Zagnańsko.

Cuyavia bishopric

Sandomierz district

Bączkowice, Baranów, Gęsiice, Huta (Małacentów), Lechów Mały, Łągów town, Nieskurzów, Olszownica, Piórków, Piotrów, Porzeczyn, Ruda Krzysztoperek ironworks, Ruda ironworks, Sadków, Sędek, Wola Łągowska, Wola Ząbkowa, Wszachów, Zbylutka, Żerniki. Part of Piskrzyn.

Opoczno district

Brzostów, Sługocice, Smarzewice, Ściebłowice, Twarda, Zarzęcin.

Benedictine monastery in Tyniec

Pilzno district

Birówka, Brzostek town, Chrzastówka, Dęborzyn, Garbek demesne, Golez castle and demesne, Kamienica, Kawęczyn, Kołaczyce town, Krajowice, Przeczyca, Tuchów town, Warzyce, Wola Brzostowska, Wolica, Zagórze. Parts of: Januszkowice, Mieszna, Klecice, Niepla.

Wiślica district

Opatkowice, Opatowiec town, Piotrkowice, Urzuty. Part of Uście.

Benedictine monastery in Święty Krzyż

Sandomierz district

Baszowice, Bielów, Boleszyn, Czażów, Dziurów, Irzmanowice demesne, Janowice, Jeżów, Koprzywianka, Kraszków, Michałów, Milanowa Wola, Mirocice, Modlibożyce, Paprocice, Pawłów, Prawęcín, Ruda Kuczów ironworks, Rzepin, Rzepinek, Skały, Słup Nowa town, Słup Stara, Wenecja, Wola Zerwikaptur, Zawada, Św. Krzyż monastery. Parts of: Dąbrowa, Doły, Milejowice, Szczegiel, Worowice.

Radom district

Boiska, Braciejowice, Goszcza, Zakrzów.

Benedictine monastery in Sieciechów

Radom district

Brzeźnica, Garno, Garbatka, Janików, Kobylany, Międzylesie, Mozolice, Nasiłów, Opatkowice, Psary, Rajec, Rębiertów, Ruda Janikowska ironworks, Sadków, Sieciechów town, Sieciechów monastery, Słowiki, Szawłowice, Śmietanka mill, Świecica, Zalesie.

Stężyca district

Ciszycza, Kępica, Nagórník, Piwonia, Przewóz.

Cistercian monastery in Jędrzejów

Wiślica district

Chańcza, Skowronno.

Chęciny district

Kanica, Lipna, Mniszek, Oblasy, Ruda Pękowiec ironworks, Ruda Grodzisko ironworks, Rudniki, Wojciechów, Złotniki.

Cistercian monastery in Sulejów

Opoczno district

Dąbrowa, Jaksonek, Prócheńsko, Stoki, Strzelce, Sulejów monastery, Taraska mill, Wojcin. Parts of: Błogie, Końskie Małe, Świeciechów.

Radom district

Osiny Mnisze, Zagórze. Part of: Skrzyń town (Skrzynno).

Cistercian monastery in Wąchock

Radom district

Bzin, Chronów Mniszy, Gadka, Grzybowa Góra, Jabłonica Mnisza, Jagodno, Krupa mill, Laskowa Wola, Lipowe Pole, Łączany, Mierc, Modrzewice, Mniszek, Osiny, Pomorzany, Polany, Rogowa, Rzeczków, Wierzbica town, Skarżysko, Suliska, Świerczek, Trębowiec, Wawrzyszów, Zalesice.

Sandomierz district

Kamień, Krzyżowa Wola, Lisów, Łukawa, Ostrów, Pękosławice, Ruda Bzin ironworks, Ruda Marcinkowska ironworks, Ruda Siekliny ironworks, Ruda Starzechowska ironworks, Ruda Wierzbnik ironworks, Świątniki, Wąchocko town, Waśniów town, Wielawieś. Part of Prusinowice.

Chęciny district

Marzysz, Radomice, Wola Łabęcka.

Cistercan monastery in Koprzywnica

Sandomierz district

Bęszyce, Ciszycza, Dobrucice, Krobielice, Krzcin, Nagnajów, Niekisiałka Wielka, Pielaszów, Pokrzywnica monastery, Pokrzywnica town, Sośniczany, Strączków, Szewce, Świnżyca, Zarzecze, Zdanów. Parts of: Gnieszowice, Gołębiów, Karwów.

Pilzno district

Dobrzeczków, Golcowa, Grodzisko, Kozłów, Lubla, Okunin, Oparówka, Połomia, Stodolina Wola, Wysoka, Zawadka.

Cracow monastery of the Sisters of St. Clare

Sandomierz district

Chodków, Daronin, Dziurów suburbs, Piotrowice, Szawłowice, Węgierce, Zawichost town. Parts of settlements: Czernin, Dębiana, Królewice.

Chęciny district

Włoszczowice.

Wiślica district

Umianowice.

Monastery of the Norbertine Sisters in Busko

Wiślica district

Busko town, Branina, Kostera, Kowale, Sarbków, Służów.

Sandomierz district

Kliczanów, Kotarszyn, Nosów, Piotrów.

(1993)

Translated by Agata Staszewska

III.3.3.3 LUBLIN VOIVODESHIP

Stefan Wojciechowski

The map presents the ownership of settlements according to the three basic categories (royal property, Church property, property of the nobility) and also distinguishes villages owned by towns. Mixed, shared ownership was marked with a two-coloured symbol, in which each of the colours occupies an equal part of the symbol. We decided not to designate Church property belonging to individual parochial churches and situated in a village where a given parochial church stood.

Table 1. Ownership

Ownership	Number of settlements			Percentage	
	towns	villages	total	without towns	with towns
royal	8	103	111	11.7	12.1
Church	2	33	85	3.8	3.8
of the nobility	26	133	759	83.3	83.1
royal-nobility	–	4	4	0.5	0.4
Church-nobility	–	1	1	0.1	0.1
town	–	5	5	0.6	0.5

Land ownership in settlements was easy to determine, as the tax registers in fact provide the name of the person who paid the tax, and clearly emphasize the name of a village's owner, if the tax was paid by his representative. As for villages inhabited by petty gentry, the registers usually list every nobleman by name and surname, although sometimes the entry is shorter and provides only the name and surname of the taxpayer, and either the number of the remaining owners, or their general degree of kinship with the taxpayer. Inspections were particularly useful when solving the matter of royal property.

Royal property was scattered over the entire voivodeship. The largest area of high density of this type of ownership, the starosta's district of Parczów, lay in the parishes of Ostrów and Parczów. Another similar area was the starosta's district of Łuków, with settlements in the east (Kąkolownica) and west of the district. Smaller areas were situated to the south and west of Lublin: the key of property of Krzczonów, Zemborzyce, Wrotków and Świdnik located just outside of Lublin, Gołąb and its vicinity, the starosta's district of Kazimierz, the vicinity of Wąwolnica, some small patches of land in Powiśle and the starosta's district of Urzędów. The Kock estates, a fief held by the family Firlej, was not included in the number of royal settlements.

In the sixteenth century, the clergy owned little property in Lublin Voivodeship. Apart from some minor parson estates, not always recorded in tax registers, Lublin monasteries owned small property outside of the town, one of them (the Birgittine Order) had a larger estate to the south of the city (Czerniów, Krzynice). The remnants of the old splendour of the Benedictines survived in Puhaczów parish, still almost entirely owned by this order. The Cistercians maintained their thirteenth century property almost intact, it was located by the upstream Bystrzyca in Kraśnik parish. One village by the River San, and several in the vicinity of Świeciechów, belonged to the collegiate church in Sandomierz, and several villages across from Zawichost were owned by the local Order of the Sisters of St. Clare.

Few settlements were owned by towns. The royal city of Lublin owned three villages: Bronowice, Konopnica and Ponikwoda. Kraśnik, a town belonging to the nobility, had some small settlements on the outskirts. Other towns, particularly owned by the nobles, belonged entirely to their owners, and had no ownership rights to the so-called city grounds.

Only after a separate file of owners was made did it become evident how much land was owned by the nobility. It came to light that some nobles owned large patches of arable land – in individual villages their area was usually small, but after summing up of such scattered, and often remote, pieces of property some individuals and families could without any doubt be included in the group of great land owners. The lower limit of great land ownership was 10 serf lans per one owner, just as in similar studies on the issue.

Large property was concentrated in the hands of several dozen families. In Lublin district large estates belonged to: Barzy, Branicki, Czerny, Firlej, Gorajski, Górka, Maciejowski, Myszkowski, Orzechowski, Ossoliński, Ostrowski, Ożarowski, Pilecki, Pszonka, Rey, Słupecki, Sobieski, Suchodolski, Szamotulski, Tęczyński, Zbąski, Zebrzydowski, Żyrzyński. In Urzędów district these were: Siemieński, Sienicki, Słupecki, Stojański. In Łuków land: Gojski, Jarczowski, Kanimir, Kazanowski, Mysłowski, Siedlecki.

One of the characteristic features of Lublin Voivodeship is the intensification of petty farm gentry settlement. An interesting document from 1418,¹ issued by the bishop of Cracow after the foundation of a parish in Zbuczyn, lists those villages which remained in Łuków parish and provides the number of nobles and peasants inhabiting it (Trzebieszów, Ulan and a village Biała, where Kozirynek, Radzyń and Budzyń were to be founded later, still belonged to Łuków parish). Villages inhabited in the second half of the sixteenth century solely by farm gentry were inhabited only by the gentry in 1418, but in a very modest number of one to five families. For example, we list here these farm gentry villages (excluding villages with peasants and several unlocalized settlements) providing in brackets the number of families in 1418 and in the second half of the sixteenth century: Czerśl (3 – 6), Dminin (2 – 8), Domanin (5 – 27), Gołębki Jeziory (1 – 1), Jastrzębie (5 – 30), Jeziora (2 – 2), Ławki (2 – 5), Mościska (2 – 3), Radomyśl (2 – 11), Rozwadów (5 – 11), Sobole (1 – 9), Stok (1 – 9), Szczygły (4 – 15), Świdry (4 – 8), Wierzejki (4 – 14), and Zarzecze (4 – 8).

In Łuków land farm gentry lived close to each other in the parishes: Łuków, Trzebieszów, Ulan and Zbuczyn, whereas in the south, in the district of Lublin, their settlements were scattered, situated both among royal estates (area of Parczów, Ostrów and Kazimierz), and landed nobility. The largest and most numerous settlements of farm gentry could be found in the strip of land stretching from Kazimierz to Wysokie. We must also add that town or royal servants in the villages: Jurki, Karcze, Słotwiny, Rogalów and Niezabitów were counted among noblemen, and in Krzczonów, Tatary, and Żuków – among peasants.

(1966)

III.3.3.4 GREATER POLAND*

Krzysztof Chłapowski

The ownership affiliation of the settlements of the Poznań and Kalisz Voivodeships at the end of the sixteenth century was established based on recruitment registers, inspections, inventories, documents, and other sources from this century, as well as – additionally – earlier and later sources. They were all characterized in the chapter *Written sources*.¹ We also consulted the literature on the subject. The settlements have been marked with the same colours as in the remainder of the AHP series: royal – red, those belonging to Church institutions – purple, those belonging to the nobility – yellow, town – brown.

The royal estates in the Poznań and Kalisz Voivodeships belonged to the gord starosta's and land-starosta's districts, leaseholders (*tenuty*). In the mid-sixteenth century, three gord starosta's districts existed in these voivodeships: the general starosta's district of Greater Poland (the jurisdiction of those holding this office covered almost the entire area of the two voivodeships), along with starosta's districts of Wschowa and Nakło.²

In 1554, the then owner of the Wałcz rent, Łukasz Górka, together with his brothers, Andrzej and Stanisław, obtained the privilege to establish a town court in Wałcz, whereby the starosta obtained the same powers as the general starosta in Poznań. Janusz Kościelecki, the general starosta of Greater Poland, protested against this. Nonetheless, the land court in Wałcz was established and operated.³

The Wałcz district was considered a gord starosta's district. This is evidenced by the following: 1) in all royal dispositions regarding changes in the use of this district (perpetuity, consensus about cession, cessions) there is a condition that the district is granted (transferred) *cum iurisdictione*, i.e. with the prerogative of the gord starosta, and moreover in these dispositions there are no mentions of the starosta's wife, in accordance with the principle that a woman cannot be a gord starosta,⁴ 2) during the Sejm (Diet) of 1585, deputies accused the voivode of Poznań, Stanisław Górka, of violating the prohibition of managing two gord starosta's districts at the same time, because he simultaneously held the office of the starosta of Wałcz and Busko (in the Belz Voivodeship). In light of this accusation, Górka ceded the Wałcz district to Stefan Grudziński.⁵

It should be noted that in the second half of the sixteenth century, official sources no longer followed the principle of using the terms starosta's district, *capitaneatus*, *praefectura*, in relation to a gord starosta's district, while referring to land-starosta's district as estates, *bona regalia* or lease

* The article was written within project no. 2015/19/B/HS3/01756 funded by National Science Centre, Poland.

(‘tenuta’). At the time, numerous leases were called *capitaneatus*,⁶ *praefectura*,⁷ and even *praefectura seu tenuta*⁸ or *capitaneatus, praefectura seu tenuta*.⁹

The published inspection of Greater Poland Voivodeships from 1564–1565¹⁰ specifies to which individual starosta’s districts and leases the settlements belonged. This inspection did not include the royal estates, which the Sejm (Diet) of 1562/1563 recognized as legally charged (the so-called ‘old sums’) and were, therefore, not subject to inspection. Their full list was established on the basis of protocols on the control of legal titles for the use of royal estates, carried out during the Sejm (Diet) of 1563/1564 (the so-called revision of letters),¹¹ and their full composition (lists of settlements forming them) was created on the basis of various sources (tax registers, entries to Records, later inspections). We also used protocols of detailed decisions taken by the Sejms (Diets) in 1567 and 1569 in matters relating to some royal properties in Greater Poland.¹²

In the period of 1565–1600, there were numerous foundations of new villages in the Drahim, Wałcz and Ujście-Piła starosta’s districts, as well as individual foundations in others.

The list of starosta’s districts and leases in the Poznań and Kalisz Voivodeships underwent one minor change in the second half of the sixteenth century. On 1 January 1580, the village of Krąpsko (Kramsko), which had been part of the Konin starosta’s district, was assigned to Piotr Żychliński by the Konin starosta Jan Służewski,¹³ and this exclusion proved to be permanent. The list of royal settlements was also altered only once. On 2 November 1588, the royal village of Domanice in Wschowa land, which was in use by Andrzej Opaliński, was exchanged for his hereditary villages Lubaszcz and Rozwarzyno in the Nakło district. The king confirmed this trade on 31 July 1590.¹⁴ Domanice was adjacent to Opaliński’s hereditary property in the Wschowa land, which explains his interest in such an exchange. Domanice did not appear in later inspections of royal estates, but Lubaszcz appeared in them as a village of the Nakło district, and Rozwarzyno figured as a forest.¹⁵

On 28 January 1559, Marcin Zborowski, the Poznań castellan, received the king’s consent to buy the village of Szczytniki in the Kalisz district from the Gniezno chapter,¹⁶ and on 5 April 1565, the confirmation of its perpetuity and that of the neighboring village of Korzekwin was issued.¹⁷ On 12 January 1591, the king confirmed the exchange of Szczytnik, the lease of Jan Zborowski, castellan of Gniezno, for his hereditary town Borek in Wieluń land, Ostrzeszów district,¹⁸ and in 1592 Zborowski sold Szczytniki to Paweł Potworowski.¹⁹ Since we demarcate the ownership of royal estates at the end of the sixteenth century on the map, we treated both these villages as belonging to the nobility.

¹⁹ Teki Dworzaczka, 1566 (no. 3).

During the inspection of legal titles for the use of royal estates carried out by a special commission during the Sejm (Diet) of 1563–1564, the issue of the equivalence of the exchange made by the king with Łukasz Górka, the Poznań castellan, in an act from 4 March 1515, came up. In exchange for presenting the king with the Pobiedziska hereditary estates in the Kalisz Voivodeship and waiving the sum of 8,000 złote from the Kościan starosta's district bequeathed by the monarch, the castellan received a donation of royal estates of Wieleń-Wronki.²⁰ The commission referred the case “for review”, i.e. it ordered the auditors to examine both sides of the exchange.²¹ Therefore, during the inspection of 1564–1565, the properties of Wieleń-Wronki and Pobiedziska were inspected.²² In 1567, on the basis of inspection protocols, another commission ruled that the king, considering Górka's renouncement of the sum bequeathed to Kościan, “on the advice of the lords of the Councils and the permission of the deputies of the sejmik (dietine)” recognized this replacement as equivalent,²³ thus maintaining the state of affairs existing since 1515. Therefore, Urszula Piotrkowska was incorrect in classifying the estate of Wieleń-Wronki as royal.²⁴

In total, at the end of the sixteenth century, the royal estates in the Poznań Voivodeship counted 17 towns, 81 villages, four parts of a village, three forges, five mills, three demesne farms, one suburb, one castle (Drahim) – all with their own names and with reliably discernible locations, and in the Kalisz Voivodeship 16 towns, 114 villages, eight parts of a village, three mills, one forge and one suburb – with equally clear locations.

Church ownership in the Poznań and Kalisz Voivodeships (in the lists we call it Church property, i.e., we use the abbreviation ‘c’) are estates that were the income of various institutions of the Roman Catholic Church (see Annex II). We adopted the principle that even if the sołectwo in villages belonging to Church institutions were used by lay people, we treated such villages as Church property.

During the sixteenth century, the number of Church institutions whose incomes were in the Poznań and Kalisz Voivodeships slightly changed.

On 28 May 1526, in connection with the discontinuation of the practice of appointing a suffragan bishop from the ranks of monks and the introduction of the rule of appointing him from the diocesan clergy, the Archbishop of Gniezno issued a privilege regarding, among others, his salary, assigning him a presbytery in Żnin.²⁵ The furnishings of this presbytery consisted of the village of Skarbienica and the Rydlewo demesne farm (in the Kcynia district of the Kalisz Voivodeship) and the village of Chomiąża in the Gniezno district.

On 21 November 1566, the monastery of the Order of the Holy Sepulcher in Miechów in the Kraków Voivodeship gave Jan and Piotr Zborowski the villages of Grodzisko, Rokutowo, Jankowo and Sierzchowo in the Kalisz district in exchange for their hereditary village Głuchów in Proszów district.²⁶

On 1 July 1572, Poznań bishop Adam Konarski founded a Jesuit college in Poznań, endowing them with villages belonging to the bishop at that time: Zemsko in the Poznań district, Kiełczewo in the Kościan district (both in the Poznań Voivodeship), Bochlewo and Tokarki in the Kalisz Voivodeship, Pyzdry district, approved by the king on 1 February 1574.²⁷ On 1 July 1579, the same bishop granted the villages of Januszewo and Słupia in the Poznań district, confirmed by the king on 3 March 1581.²⁸ The transfer of Słupia was blocked by the Poznań chapter and only on 16 November 1588, the bestowal was renewed, this time effectively.²⁹ In 1584, the Wągrowiec abbot gave the Jesuits the

village of Legnieszewo in the Kcynia district, which was approved by the king on 24 February 1585, along with the confirmation of the archbishop of Gniezno's grant of the village of Piekary in the Poznań district (15 September 1584).³⁰ On 25 July 1592, the Jesuits purchased the village of Jeziorki in the Poznań district from Jan Jeziorkowski and Stanisław Skrzetuski³¹ and finally in 1593, the Poznań college bought the village of Luciny in the Pyzdry district with adjoining land.³²

On 25 April 1584, the Archbishop of Gniezno, Stanisław Karnkowski founded a Jesuit college in Kalisz, endowing it with the villages of Sławno and Kokanin in the Gniezno district, Żychowo and Liskowo in the Kalisz district, taken from the archbishop's property, which the king confirmed on 24 February 1585, and 14 January 1591.³³ On 27 April 1587, Primate Karnkowski donated the villages of Sierzchów and Zawodzie in the Kalisz district,³⁴ and in 1590 a part of the village of Kościelec to the college.³⁵ In 1591, the Kalisz college exchanged land with the Poznań college, trading Sławno for Bochlewo and Tokarki.³⁶ In 1596, the Archbishop of Gniezno gave the college in Kalisz the villages of Sławin and Zamość in the Kalisz district, which he bought in 1594 from Marcin Żeroński, the Kalisz land scribe, Piotr Sulisławski and Katarzyna Korycińska, and which the college sold to Mikołaj Orzelski in 1597.³⁷ Since on the map we record ownership of estates by Church institutions at the end of the sixteenth century, we treated both these villages as belonging to the nobility. Stanisław Załęski reported that on 5 April 1589, the Primate donated a part of the village of Dobrzec in the Kalisz district to the Kalisz college,³⁸ but earlier and later reports indicate that it belonged to the Canons of the collegiate of the Church of the Blessed Virgin Mary in Kalisz; therefore we did not take into account the information provided by Załęski. In 1599, the Primate Karnkowski purchased the village of Marchwacz in the Kalisz district from the Gniezno chapter, which he gave to the Jesuit convent in Kalisz to provide a source of income for the boarding house for youth existing at the same college.³⁹ On 5 October 1599, the king approved this.⁴⁰

In 1585, the Poznań chapter sold the village of Umultowo in the Poznań district to the Dominican Order from Poznań.⁴¹

We did not change the ownership affiliation in the case of the villages of Wójcino and Ostrówek in the Kalisz district, which on 26 February 1577, Archbishop Jakub Uchański allowed the Gniezno chapter to sell.⁴² Both were mentioned as property of the nobility only in the seventeenth century.⁴³

In the sixteenth century, three suburbs of the archbishop's town of Żnin had their own names: Ostrów, Piskorzewo and Radostowo.⁴⁴ According to the rules adopted in AHP, they are not on the map or in the index and they are not taken into account in statistical calculations.

³⁰ *Kronika Jezuitów*, p. 75; MK 133, ff. 149–149v, 150–152; *Kronika Jezuitów*, p. 75; M. Banaszak, *Początki kolegium*, p. 516; Rybus, p. 202. In 1591, the Jesuits sold Legnieszewo to Stanisław Karśnicki (*Kronika Jezuitów*, pp. 3, 99), which is why on the map they figure as belonging to the nobility.

³¹ *Kronika Jezuitów*, p. 105. The king approved the transaction in 1593 (*ibidem*, p. 110); Teki Dworzaczka, 13681 (no. 1400), 13683.

⁴⁴ LBG I, pp. 147–148.

As for the shift in ownership affiliation by way of exchange of estates, on 28 April 1577, the abbot of Przemęt traded his village of Sączkowo and half of Lake Starkówko in the Kościan district for the empty village of Zaborówko, adjacent to the town of Przemęt. The king approved this exchange on 22 November 1577.⁴⁵

On 31 July 1556, Poznań's bishop Andrzej Czarnkowski approved the sale of the village of Świątniki in the Poznań district, which was the income of the Poznań curator, to Jan Krześciński, the *chorąży* of Bydgoszcz and the vice-starostas of Poznań. Later this was confirmed by the king on 15 October 1556.⁴⁶

On 24 February 1564, the villages of Łąkie and Szczawinko in the Gniezno district were the income of the provost of the collegiate chapter of St. George in Gniezno. They were incorporated into the estates of the cathedral chapter, which became the institutional provost.⁴⁷ The villages of Malenino and Jerzykowo in the Gniezno district, the income of the Canons of the collegiate of St. George, remained as such.⁴⁸

In 1573, the Gniezno chapter bought the village of Wełnica in the Gniezno district from a certain Karczewski.⁴⁹ In the same year, it was also supposed to exchange the village of Braciszewo for the village of Skrzynka (both in the Gniezno district, but in the tax registers created after 1573, both appear as belonging to the chapter and remain as such later⁵⁰).

In 1588, the Poznań chapter sold the village of Drożdżyce in the Kościan district to Jan Zadorski.⁵¹

In 1591, Archbishop Stanisław Karnkowski handed over the town of Kwieciszewo and the village of Gorzyszewo in the Gniezno district to the Gniezno chapter.⁵²

On 22 August 1598, the Archbishop of Gniezno, Stanisław Karnkowski founded a seminary in Gniezno. The suburb of Gniezno, Cierpięgi, is not mentioned among the incomes of the seminary.⁵³ However, it figures as the income of the seminary in the second foundation act of 1602, in which the archbishop expanded the income sources.⁵⁴

As for the endowment of the parsons, we only took into account cases when it exceeded the standard endowment ("poświętne", mansus ecclesiasticus), especially, when the parson owned an entire village, as well as the fact that part of Poznań's suburb of St. Adalbert belonged to the endowment of the parson of the church of St. Wojciech, and part of the suburb of St. Martin belonged to endowment the parson of St. Martin.⁵⁵

In total, 13 towns, 229 villages, seven parts of a village, 13.5 towns in the Poznań Voivodeship and 325 villages, 15 parts of a village in the Kalisz Voivodeship belonged to Church institutions at the end of the sixteenth century. Altogether, it totaled to 26.5 towns, 554 villages, 22 parts of the village in Greater Poland.

The town property in the Poznań and Kalisz Voivodeships (see Annex III) consisted almost exclusively of settlements belonging to royal towns. The only exceptions are the villages of private towns Lwówek and Międzychód in the Poznań district, Gostyń and Poniec in the Kościan district and Brudzewa in the Konin district. In 1571, the town of Środa sold the village of Urniszewo to Sebastian Niwski.⁵⁶

In the Poznań and Kalisz Voivodeships in the sixteenth century, property of the nobility dominated over other categories of landed property, as in other voivodeships, which was confirmed by the research of Leon Polaszewski and Urszula Piotrkowska.

⁵⁶ Teki Dworzaczka, 10996.

The tax registers of the Kalisz Voivodeship from the second half of the sixteenth century contain separate registers of villages inhabited by farm gentry (“*regestrum villarum nobiles cmetones in eis non habentium sed eorum agros per se colentium*”, “*regestrum villarum de praediis solventium*”, “*nobiles pauperes qui solvunt a suis praediis*”, “*pauperum nobilium census et colonos non habentium*”, “*regestrum propriae aratrice de agros nobilium*”, “*descriptio mansorum praedialium*”, “*mansi nobilium culturae suae cum hortulanis*”, the nobility with their plows – “*szlachta od pługów swoich*”, the register of the property of nobles who do not have serfs – “*regestr z dobr szlacheckich kmieci nie mających*”, the register of the property of nobles who work with their own plows – “*regestr z dobr szlacheckich co pługami swoimi robią*”).

In the registers of the Konin district, separate registers occurred only in 1576 and 1581,⁵⁷ in the Nakiel district – 1576 and 1577,⁵⁸ in the Kalisz district – 1552, 1564 and 1576,⁵⁹ while in the registers of the Pyzdry, Gniezno and Kcynia districts they constantly repeat. The number of villages differs greatly (from five to seven villages in Kcynia, eight in Nakło to more than 50 in Kalisz and Gniezno) and varies depending on the register. There are no such separate registers in the Poznań Voivodeship.

Polaszewski devoted a separate subchapter to the farm gentry, however since in it he combined two concepts – farm and partial gentry – his statistical calculations should be questioned.⁶⁰ In the Kalisz Voivodeship in the sixteenth century, partial gentry was present in every district, most numerous in Kalisz.

Partial gentry also existed in the Poznań Voivodeship, but less numerous than in Kalisz. In a dozen or so cases, one can assume the presence of the farm gentry based on the tax amount reduced by half.⁶¹ As Urszula Piotrkowska has already noted, the Poznań Voivodeship predominantly housed undivided villages belonging to single-village or wealthy nobility, with the northern part of the region demonstrating a much smaller degree of fragmentation than the southern one.⁶²

As in the volumes of the AHP devoted to the Cracow and Sandomierz Voivodeships, we decided to indicate to the larger estates belonging to the nobility.⁶³ Since the Greater Poland tax registers from 1591 cover only some districts, we used the registers from 1580–1583 as the basis.

The tax registers of the Gniezno, Kcynia, Nakło, and Kościan districts from these years provide a very limited number of owners belonging to the nobility (predominantly in cases when the village was divided between two or more partial owners) or do not supply such information at all. Furthermore, it was not important to the tax collector whether he recorded the real owner of the village or only the taxpayer to whom it was leased or the broker. Terms such as *factor*, clerk or the phrase “X in the name of Y” only exist in the registers of the Pyzdry district. For these reasons, in order to supplement and verify information regarding larger landowners, we reached for *Teki Dworzaczka* (registers of entries in the gord books and monographs of the Latałski, Leszczyński, Opaliński, Ostrorogi families developed by the eminent expert of the genealogy of noble families, Włodzimierz Dworzaczek), the monograph of the Potulicki family penned by Sławomir Leitgeber,⁶⁴ entries in the Crown Register, etc.

Piotrkowska’s works,⁶⁵ which we reviewed, also proved useful, but we decided to forgo Polaszewski’s table entitled *Medium and large estates of the nobility in the Kalisz province in the 16th century*,⁶⁶ as it contains information from the entire sixteenth century. For the same reason, the author’s tables on estates of the nobility in individual districts of the voivodeship were of little use to us as well.⁶⁷

Neither tax registers nor any other sources of mass or statistical nature provide any data concerning the sole, unquestionable criterion on the basis of which it is possible to objectively classify estates

⁶¹ Piotrkowska pointed this out in *Kość. Wsch.*, p. 212.

⁶² Piotrkowska *Pozn. Wał.*, pp. 8–9.

⁶³ E. Opaliński created a table of the land estates of Greater Poland’s ruling elites during the reign of Sigismund III, though he separated the estates owned at the beginning of one’s public life, those at the end of one’s life and those outside of Greater Poland; idem, *Elita władzy w województwach poznańskim i kaliskim za Zygmunta III*, Poznań 1981, pp. 34–37. Due to the dynamic nature and broad scope of this data, which included part of the seventeenth century, we decided not to include it as a point of reference.

into categories of large and petty property – the information about the actual income earned by the owners of the estates. To create a table of large landed properties in Greater Poland, we had to use other available criteria: the number of towns and villages that were part of the estates and the number of peasants in these estates. Furthermore, we know that the tax registers did not include the entire settlements (newly founded settlements and some small settlements were omitted), and when determining the fee, not all sources of income were taken into account (court lands, in particular demesne farms, were omitted). We also know that, due to exemption from fees and concealment, the number of *lans* in the registers deviated from the real one by more than 10%. We are aware that the picture painted on the basis of tax registers slightly differs from the reality of the time, but we believe that despite all these reservations, the cognitive value of this picture of a large property presented on the basis of tax registers justifies the preparation of a personal (see Annex IV) and tabular list (see Tables 3–5), provided that the criterion determining the order in the table is the number of *lans*, not villages (one village would not have been equal to another village).

We adopted 30 *lans* instead of 50 as the lowest qualifying limit for placement in the tables and the annex, in order to increase the cognitive value of the tables. Only in the summary table did we adopt the limit of 50 *lans*. The annex and tables do not include many owners of a small town and surrounding villages. Despite owning a town or part of it, owning less than 30 *lans* would produce only a small income, which would not provide them with a significant position even within their district. Among those with 30 *lans* or more, there were also those whose last names did not matter much. A special case is Gerd Popielewski, co-owner of the village of Popielewo in the Wałcz district, in the Czaplinek parish, whose part had 34.5 *lans*.⁶⁸

The hierarchies of the largest landowners in the two voivodeships forming Greater Poland proper differ. But the true hierarchy in Greater Poland was determined by additional factors: the possession of estates in both voivodeships, the number and importance of royal estates used in Greater Poland and elsewhere, the fact of additionally possessing landed estates outside the discussed district and their size. It should also be remembered that the composition of the wealthy elite of Greater Poland was constantly shifting as a result of the extinction or weakening of the position of some families alongside the increase in wealth of others. Włodzimierz Dworzaczek noticed this phenomenon in the scale of the entire district.⁶⁹ Around the years 1579/1581, the Szamotulski family died out and so did the Górka family in 1592. After the death of Jakub Rokossowski, treasurer of the Crown, castellan of Śrem (13 July 1580),⁷⁰ his fortune was gradually dispersed, as was the property of Jan Krotoski, castellan of Inowrocław (died before 11 February 1583),⁷¹ Kasper Zebrzydowski, voivode of Kalisz (died after 6 August 1582, and before 26 August 1584),⁷² Krzysztof Iwiński (died before 17 December 1592),⁷³ Jan Konarski, castellan of Kalisz (died after 14 June, and before 20 August 1599),⁷⁴ and later Jerzy Latański (died in 1602),⁷⁵ Jan Spławski, voivode of Inowrocław (died in 1602, before 15 April),⁷⁶ Jan Roszkowski, castellan of Przemęt (died after 16 August 1603, and before 22 June 1604).⁷⁷ However, the estates of the Czarnkowski, Leszczyński, Grudziński, and Przyjemski (the starting point was the position of the starosta of Konin in this family from 1580 onwards) and Opaliński families grew.

Out of 46 people found in the tables, only eight had estates in both voivodeships: Piotr and Kasper Potulicki, Andrzej and Stanisław Górka, Jakub Rokossowski, Andrzej Opaliński, Rafał Leszczyński, Krzysztof Iwiński.

As for the use of royal estates, especially in Greater Poland,⁷⁸ in the early 1580s, Andrzej Opaliński was the general starosta of Greater Poland, Andrzej Górka was the starosta of Kościan, Gniezno, Wałcz and Jaworów in the Ruthenian Voivodeship and the starosta of Busko in the Belz Voivodeship, Stanisław Górka – the starosta of Koło, Mosina (up to 1588), Ujście-Piła (up to 1588), and from 1583 (after the death of brother Andrzej) also the starosta of Gniezno, Jakub Rokossowski was the gord starosta of Ostrzeszów in the Wieluń land and a tenant of customs of the Crown and (jointly with Piotr Zborowski) administrator of the crown mint, Andrzej Opaliński – starosta of Śrem and Kopanica, and the starosta Rohatyń in the Ruthenian Voivodeship, Piotr Czarnkowski – starosta of Babimost and Kcynia, Stefan Grudziński – starosta of Mieścisko and – from 1585 – of Wałcz, Jan Opaliński – starosta of Pobiedziska, Krzysztof Iwiński – starosta of Powidz. In 1588, Stanisław Górka lost the Mosina and Ujście-Piła starosta's districts due to his consistent support for the election of Maximilian Habsburg. The first was received by Hieronim Gostomski, the owner of estates in the Rawa and Masovia Voivodeships (formerly the starosta of Środa by marriage with the widow of the previous starosta), who simultaneously (after the death of Stefan Grudziński) received the starosta's district of Wałcz, entering the wealthy elite of Greater Poland, even though his fortune in Greater Poland was based almost exclusively on the royal lands.⁷⁹ A similar situation has occurred in the cases of Jan Zborowski, the castellan of Gniezno, the starosta of Odolanów⁸⁰ and Jan Zamoyski, the chancellor and hetman, the starosta of Międzyrzecz, who had fortunes in Lesser Poland.

The second starosta office after Stanisław Górka (Ujście-Piła) was received by Piotr Potulicki, from 1585 the gord starosta of Wyszogród in the Mazovia Voivodeship.⁸¹

As for hereditary estates outside Greater Poland, the Górka brothers were unparalleled. At the end of his life, Andrzej Górka, castellan of Międzyrzecz (died on 5 January 1583),⁸² was the owner of huge estates in Szczepieszyn in the Chełm land of the Ruthenian Voivodeship, Złoczów estates in the Lwów land of the same voivodeship, two manors in Kraków and a manor in Lwów. His brother Stanisław, the voivode of Poznań, after 1580 owned the Turobin estate in the Chełm land, the Goraj estate, Dłotlice, Bochoznica, Kamionka in the district and Lublin Voivodeship, a manor in Kraków. In 1583, he inherited the fortune of his childless brother. He died on 23 October 1592, as the last member of the family.⁸³ His enormous fortune was shared by his nephews, the Czarnkowski brothers.⁸⁴ It must be noted that, through a complicated settlement process, the Szczepieszyn estate was sold on 19 June 1593, to Jan Zamoyski.⁸⁵

Piotr Potulicki, the voivode of Płock, owned the town of Służewo and eight villages in the Dobrzyń land, cluster of estates in Sierpc and Biezuń (three towns and numerous villages) in the Płock Voivodeship, three villages in the Rawa Voivodeship, Sarnowo in the Dobrzyń land.⁸⁶ Rafał Leszczyński, from 1580 the castellan of Śrem, owners of minor royal lands in the Kalisz district and in the Radziejów district of the Brześć Kujawski Voivodeship, from 1570 was the heir of the Baranów estates (nine villages) in the Sandomierz district,⁸⁷ and Krzysztof Iwiński, leaseholder of the minor royal lands in the Pyzdry district.⁸⁸

⁷⁸ The following paragraph is based on: K. Chłapowski, *Starostowie w Wielkopolsce*, pp. 19–46; UdR. Spisy I/2, no. 1185; UdR. Spisy II/2, no. 1508; K. Chłapowski, *Starostowie niegrodowi w Koronie 1565–1795. Materiały źródłowe*, Warsaw 2017, p. 4, footnote no. 26.

⁷⁹ In 1589, he is mentioned as the owner of 3.5 villages in the Pyzdry district; Teki Dworzaczka, 13138 (no. 1400).

⁸⁰ From 1566 onwards, Zborowski owed four villages in the Kalisz district (see above, p. 231, footnote no. 17). He was also the owner of the town of Pleszew.

ANNEX I

ROYAL ESTATES AT THE END OF THE SIXTEENTH CENTURY

The modern names are provided in brackets if they clearly differ from the sixteenth century ones or in a way that hinders identification.

1. General starosta's district of Greater Poland (starosta's district of Poznań, starosta's district of Kalisz) (Adam Sędziwój Czarnkowski, voivode of Łęczyca)
 - Poznań Voivodeship
 - Poznań district: Poznań – town, Ławica;
 - Kalisz Voivodeship
 - Kalisz district: Kalisz – town, Nędzrzewo, part of Ogrody, part of Stare Miasto, part of Winiary.
2. Starosta's district of Wałcz (Jan Gostomski)
 - Poznań Voivodeship
 - Wałcz district: Wałcz – town, Gostomia, Brzeźnica, Budy, part of Chwiram, Duderlak (Dudy-lany), Jaroszewo, Klawiter (Głowaczewo), Leżenica, Nadorycz (Nadarzyce), Nowy Dwór, Róża, Rozwałd (Różewo), Skrzatusz, Sypnow, Szwecja, Wiesiołka, Witkowo (Witankowo), Zbytno.
3. Starosta's district of Wschowa (Wacław Kiełczewski, castellan of Biechowo)
 - Poznań Voivodeship
 - Wschowa district: Wschowa – town.
4. Starosta's district of Nakło
 - Kalisz Voivodeship (Piotr Opaliński, incisor Regni)
 - Nakiel district: Nakiel – town, Cietrzewnica (Trzeciewnica), Karnowo, Lubaszcz, Olszewka, Sadkowski – mill, Satki.
 - Kcynia district: Polikno.
5. Starosta's district of Drahim (Jan Sędziwój Czarnkowski)
 - Poznań Voivodeship
 - Wałcz district: Czaplonek – town, Drahim – castle, Baugienbul, Cykier (Sikory), Flokesia (Jeziorna), Heinrichsdorf (Siemczyno), Klausewo (Kluczewo), Lubowo, Nabliny, Nowa Wieś (Prosinko), Nowe Worowo, mill in Piła (Żerdno), Prosino, Rakowo, forge in Ruda (Kuźnica Drawska), Szarpenort (Ostroróg), Swartężel (Czarne Wielkie), Swartężel Mały (Czarne Małe).
6. Starosta's district in Ujście (Piotr Potulicki, Kalisz voivode)
 - Poznań Voivodeship

 - Kalisz district: Łuszczonowo (Łuszczanów), Słaboszewo
 - Pyzdry district: Borzujewo (Borzewo), Cielcza, Cząszczewo, Radlino, Wilkowyja.
- 5. Marcin Ostroróg-Lwowski, castellan of Kamień
 - Poznań Voivodeship
 - Poznań district: Lwówek – town, Trzciel – town, Bobrówka – mill, Bolelice (Bolewice), Chmielinka (Chmielinko), Głuponie, Grodna (Grudna), Grońsko, Hamrzysko, Jabłonka, Komorowo, part of Konino (Konin), Mościejewo, Orle Małe (Orliczko), part of Pakosław, Róża, Rybojady, mill in Sąpolny Młyn, Sątop (Sątopy), Siercz, Tomyśl (Stary Tomyśl), Węgielny Młyn – mill (Węgielnia), Wielim (Wielonek), Wytomyśl, part of Zębowo.
- 6. Stanisław Górka, voivode of Poznań
 - Poznań Voivodeship
 - Poznań district: Stanisławowo – town, Wieleń – town, Drawsko, Kissy (part of Wieleń), Miała (Miały), Robakowo, Tulce, Wrzeszczyna, Żelichowo
 - Kościan district: Borowo, Borówko.
 - Kalisz Voivodeship
 - Pyzdry district: Kurnik (Kórnik) – town, Brzezcie, Czmiń (Czmoń), Dziećmiarowo – demesne farm, part of Januszewo, part of Kijewo, Kromolice – demesne farm, Pierzchno, Prusinowo, Radzewo, Runowo – demesne farm, Skrzyńki, Zieminio (Zimin)
 - Gniezno district: Czerniewo – town, Czerniewo, Nidom, Rakowo, Strzeżewo.
- 7. Rafał Leszczyński, castellan Śrem
 - Poznań Voivodeship
 - Kościan district: part of the town of Śmigiel, Bocz (Bucz), part of Drzeczkowo, Grobia, part of Kuranowo (Koronowo), part of Nietaszkowo (Nietążkowo), part of Radomicko, part of Wyciążkowo (Wyciążkowo)
 - Wschowa land: part of Boguszyno, part of Długie Nowe, part of Długie Stare.
 - Kalisz Voivodeship
 - Kalisz district: Dojutrowo (Dojutrów), Gołuchowo, Jankowo, part of Jedlec, Kajewo, Kliszewo, Pamięcino (Pamięcin), part of Pruszkowo (Pruszków), Przygodzice, Topola Mała, Topola Wielka, Wysocko Małe, Zagórzyno, Ząbczewo (Zębców), Żegocino.
- 8. Kasper Potulicki, son of the voivode of Brześć Kujawski
 - Poznań Voivodeship
 - Poznań district: Pniewy – town, Koninko (Koninek), Koźle, Krzestkowice (Krzestzkowice), Lubocześnica, Lubosina, Psarskie, part of Zajączkowo, Zamorze.

- Kalisz Voivodeship
 - Keynia district: Grabowo, part of Konary, Kowalewo, Ostrówek (Ostrówki), Próchnowo, Słanki (Konstantynowo-Słomki), Stróżewo, Strzelce, Studzieniec, Szulaszewo.
9. Piotr Czarnkowski, castellan of Poznań
 - Poznań Voivodeship
 - Poznań district: part of the town of Człopa, Ryczywół – town, Boruszyno, Brzoza, Ciężym, Czuczarz (Szczuczarz), Drzonek, Drzonowo, Dupiewiec, Dupiewo, Krężoły, Krośnino (Krosin), Krośninko (Krosinek), Nieproszewo (Niepruszewo), Pieczyska (Przelewice), Połajewo, Prosna, part of Przybychowo, Sierakówko, Szonowo (Dzwonowo), Tarnowiec, Trzebinia (Trzebin), Wyszyny
 - Kościan district: Kietlice, part of Wronczyno.
 10. Zofia Ostroróg, wife of the castellan of Międzyrzecz
 - Poznań Voivodeship
 - Poznań district: Międzychód – town, Charzewo, Chudopsice (Chudobczyce), part of Kozłowo, Lubosz, Łagwy, Michocino (Muchocin), Radgoszcz, Sędzinko, Strych (Strychy), Szewce, Świniary, Wielawieś, Wojnowice.
 11. Jan Rozdrażewski, subcamerarius of Poznań
 - Kalisz Voivodeship
 - Pyzdry district: Krotoszyn – town, Biejatki (Biadki), Bożacino, Dąbrowa, Durzyno, Dzielice, Gorzub, Grębowo, Kobierno, Krotoszyn Stary, Rozdrażewo – town, Sośnie, Tomice, Trzemeszno, Wrożewy.
 12. Barbara Czarnkowska, wife of the castellan of Rogoziniec
 - Poznań Voivodeship
 - Poznań district: Wronki – town, Białężyno, Biedzrowo, part of Brzeźno, part of Ciszkowo, part of Dębe, part of Goraj, part of Golcz (Gulcz), part of Góra, Hamer Czarnkowski – forge, Kissy (part of Czarnków), Klempicz, Kruszewo, Pianówka, Radosiewie (Radosiewo), Samoląsz (Samołęż), part of Sarb (Sarb), part of Walkowice, Zakrzewo (Wartosław).
 13. Stanisław Rydziński
 - Poznań Voivodeship
 - Kościan district: Poniec – town, part of the town of Rydzyna, Gołębino (Stary Gołębin), part of Gorzyce, part of Gorzyczki, Jasienie (Jasień), Jaszkowo, part of Kłoda, Lubonia, part of Moraczewo, part of Oporowo, Oporówko, Pomykowo, Słonino (Słomin), Witkówki.
 14. Kasper Zebrzydowski, voivode of Kalisz
 - Kalisz Voivodeship
 - Nakiel district: Sempelborg (Sępólno Krajeńskie) – town, Więcborg – town, Pemperzyno (Pęperzyn), Sikorze (Sikorz), Sitno, Śmiełowo (Śmiłowo), Wiśniewka, Witunia, Zakrzewko, Zboże.
 15. Stefan Grudziński, castellan of Nakło
 - Kalisz Voivodeship
 - Nakiel district: Gromadno, Gruszka (Kruszki), Podróźna, Radownica, Szczerbinko (Szczerbin), Żelazne (Żelazno).
 16. Katarzyna Szamotulska
 - Poznań Voivodeship
 - Poznań district: Kazimierz – town, part of the town of Szamotuły, part of Brodziszewo, Cerkwica, part of Gaj (Gaj Mały), Gałowo, Gorszewice, part of Jastrowie, Komorowo, Nowa Wieś (part of Kaźmierz), Piersko, part of Szczuczyno, Śmiłowo.
 17. Piotr Opaliński
 - Poznań Voivodeship
 - Kościan district: Dokowo Mokre, Dokowo Suche, Jabłona Nowa (Wioska), part of Lubiechowo, part of Łęki Wielkie, Łomnica, part of Parzęczewo, Ptaszkowo Małe, Ptaszkowo Wielkie, Uścięcice.
 18. Jan Krotoski, son of the voivode of Inowrocław
 - Kalisz Voivodeship
 - Gniezno district: Bielawy, Jankowo, Krotoszyno, Mikołajkowo (Ludwiniec), Piekcino, Przedmiejska Wieś (part of Pakość), Sadłogoszcz, Wilkowo (part of Bielawy).

19. Jerzy Latański, son of the voivode of Poznań
 - Kalisz Voivodeship
 - Gnizeno district: Skoki – town, Brzozogaj, Dębica Mała, Dębica (Dębica Wielka), Dziecniarki, Łagiewniki, Myślęcino, Nowa Wieś (part of Strychowo), Oleksino, Opieczycze (part of Biskupice), Owieczki, Pępcice, Stawiany, Strychowo, Sulino, Zwanowo (Dzwonowo).
 - Kalisz district: Cieszykowo, Kościany, Krowica Wielka (Krowica Pusta), Sobiesęki
 - Kcynia district: part of Łekno town.
20. Krzysztof Iwiński
 - Kalisz Voivodeship
 - Gniezno district: Chwałkowo, Czechowo, Drachowo Kopciów, Jarząbkowo, Kawieczyno, Mieroszka, Niechanowo, Nowa Wieś (Nowa Wieś Niechanowska), Potrymowo, Żelaskowo
 - Konin district: part of Leśnica, part of Powiercie.
21. Jan Roszkowski, castellan of Przemęt
 - Kalisz Voivodeship
 - Kalisz district: part of Klichowo (Ludwinów)
 - Pyzdry district: Żerków – town, Bieździadowo, Dębno, Gąsiorowo, Jaszkowo, Konarzewo, Krzan, Lgowo, Lisówko (Lisew), Murzynowo Borowe (Murzynówko), Ostrówko, Pawłowice, Pulwica, Stanowo, Szczedrzejewo, Szczyrkowo, Śmiełowo, Żółkowo.
22. Abraham Zbąski
 - Poznań Voivodeship
 - Kościan district: Zbąszyń – town, Boruja, Chrośnica, Hamer – forge (Kuźnica Zbąska), part of Jabłona Stara, Nadnie (Nądnia), Nowa Wieś, Przeprostynia (Przyprostynia), Pyrzyny (Perzyny), Rajewo (part of Zbąszyń), Strzeżewo (Strzyżew).
23. Jan Leszczyński
 - Poznań Voivodeship
 - Kościan district: part of Drzeczkowo, Grunowo, Piotrowice, Wolikowo (Wolkowo)
 - Wschowa land: Leszno – town, Lasocice, Strzeżewice (Strzyżewice).
24. Andrzej Kościelecki, abbot of Bledzew
 - Kalisz Voivodeship
 - Nakiel district: Głupczyno, Krostkowo, Niezuchowko (Niezychówko).
25. Jadwiga Czarnkowska, wife of the castellan of Santok
 - Poznań Voivodeship
 - Poznań district: part of the town of Człopa, Biała, Bukwolt, part of Dębe, Gogolce (Jaglice), Gołacza (Golin), part of Góra, Kissy (part of Czarnków), Niekursko, part of Sarb (Sarbia), Stradom, part of Śmieszkowo, Trzcianka, part of Walkowice, Wołowe Lasy, Załomia (Zalom).
26. Łukasz Rydzyski
 - Poznań Voivodeship
 - Kościan district: part of the town of Rydzyna, Będlewo, part of Gorzyce, part of Gorzyczki, part of Jarogniewice, Kawczyno, part of Kłoda, part of Srocko Małe, part of Srocko Wielkie, Tarnowa (Tarnowa Łąka), part of Wronczyno, part of Zaparczyno (Zaparcin)
 - Wschowa land: part of Kowalewo.
27. Mikołaj Tomicki
 - Poznań Voivodeship
 - Poznań district: Koźmino, Obrzycko, Śliwno, Wąsowo.
28. Janusz Przeclawski
 - Poznań Voivodeship
 - Poznań district: part of Chojnica, Drogocino, Knyszyno, Krzyszkowo, Napachanie, Przeclawie, Przeclawko, Żydowo.
29. Jan Opaliński, castellan of Rogoźno
 - Poznań Voivodeship
 - Kościan district: Opalenica – town, Jastrzębniki, Michorzewo Mokre, Michorzewo Suche (Michorzewko), Porażyno, Silino (Sielinko).
30. Jan Zbyszewski
 - Poznań Voivodeship
 - Poznań district: Goślina Długa, Łoskuń, Potrzezanowo, Włókna (part of Potrzezanowo).

31. Jakub Niegolewski
 - Poznań Voivodeship
 - Poznań district: part of Kozłowo, Niegolewo, part of Otusz, part of Więckowice, Wilkowo, Wysoczka.
32. Łukasz Gułtowski
 - Poznań Voivodeship
 - Poznań district: part of the town of Stęszew, Dębno (Wielkie and Małe), part of Krapiewo (Kraplewo), Trzcielino Wielkie
 - Kościan district: Darnowo, part of Gryżyna, Kurowo, Lubosz (Lubosz Stary), part of Nielegowo, Piotrowo, Racat (Rakot), part of Spytkówki.
33. Jan Konarski, castellan of Kalisz
 - Kalisz Voivodeship
 - Pyzdry district: Baszkowo, Bestwin, Chocica, Dzierzanowo, Ruda Bestwińska – forge, part of Rogożewo, part of Siedlec, Sarygród, part of Zaczółtowo Małe.
34. Mikołaj Borek-Gostyński, castellan of Santok
 - Poznań Voivodeship
 - Kościan district: part of the town of Gostyń, Chrzastowo, part of Czachorowo, part of Czajkowo, Drobnino, Garzyno, part of Grodzisko, Krzemieniewo, part of Podrzecze.
35. Jan Małachowski
 - Poznań Voivodeship
 - Kościan district: Czempiń – town, Gościejewice, part of Iłowiec Mały, part of Iłowiec Wielki (Ogieniewo), Piechinino, part of Rokosowo, Sowiny, Tarnowo.
36. Krzysztof Kościelecki, son of the voivode of Sieradz
 - Kalisz Voivodeship
 - Nakło district: Krajenka – town, Hamer Żelazny – forge (Żeleźnica), Śmiardowo, Zalesie.
37. Maciej Rostworowski
 - Poznań Voivodeship
 - Poznań district: Będlino (Bąblin), part of Chlewiska, Lulino, Lulinko, Myszkowo
 - Kościan district: part of Mórkowo
 - Wschowa land: part of Długie Nowe, part of Długie Stare, part of Wilkowo (Wilkowice).
38. Jan Broniewski
 - Poznań Voivodeship
 - Poznań district: part of the town of Stobnica, Jaryszewo, Piotrkowo (Piotrówko), part of Podlesie, Popowo, Popówko.
39. Janusz Grudziński, castellan of Krzywiń
 - Poznań Voivodeship
 - Poznań district: Boruchowo, Dąbrówka, Grodna (Grudna), Ludomie (Ludomy), Wełna.
40. Rudiger Wedelski
 - Poznań Voivodeship
 - Wałcz district: part of the town of Tuczno, part of Chwarstnica, part of Knakendorf (Rzeczyca), part of Marta (Martew), Mielęcín, part of Stibowo (Zdbowo), part of Stralemberg (Strzaliny).
41. Stanisław Tuczyński
 - Poznań Voivodeship
 - Wałcz district: part of the town of Tuczno, part of Brunkowo (Bronikowo), part of Knakendorf (Rzeczyca), part of Marta, part of Schultzenhof (Jeziorki), part of Stibowo, Złotowo.
42. Gerd Popielewski
 - Poznań Voivodeship
 - Wałcz district: part of Popielewo.
43. Katarzyna Przyjemska, wife of the castellan of Łąd
 - Kalisz Voivodeship
 - Konin district: Cienino Małe (Cienin Zaborny), Cienino Wielkie (Cienin Kościelny), Inopole, Kamień, Nowa Wieś, Wilczna, Wola Podłęzna.

44. Stanisław Prusimski
 - Poznań Voivodeship
 - Poznań district: Bielsko, Bienino (Binino), part of Debrzno (Ławica), part of Milustowo (Miłostowo), Prusim, Tuczep (Tuczepy).
45. Henryk Blankenburg
 - Poznań Voivodeship
 - Wałcz district: part of Giżyno, part of Hansfeld (Kłosowo), Hermansdorf (Rutwica), part of Łowicz (Łowicz Wałęcki), Orla, Sadowo.

ANNEX V

COMMENTARY ON THE MAP: LAYOUT OF LANDED PROPERTY IN GREATER POLAND IN THE SECOND HALF OF THE SIXTEENTH CENTURY

The map of landed property (at a scale of 1:500,000) shows the territorial division of land into five ownership categories: royal, Church institutions, towns, great nobility, and minor nobility. Mixed ownership occurs when a settlement point is located on the borderline between two categories.

The names of towns that are centers of estates have been indicated on the map. Other estates are marked with points. The numbers indicate starosta's districts, Church institutions and larger private owners.

The map shows the state of ownership of royal and Church institutions at the end of the sixteenth century, and in the case of nobility – due to the limitations of the sources – at the beginning of the 1580s.

In areas with a sparse settlement network, determining the ownership boundaries was difficult. As a result, the cartographic image is general, which caused the omission of very small enclaves of one type of property in estates of another type. The measurements of the range of landed property in individual categories were made using the Geographic Information System (GIS). The relatively large percentage of lands belonging to the Crown and Church institutions in two Lesser Poland Voivodeships were impacted by the capital, Cracow, and the affiliation to royal estates in large foothill and forested areas, which were poorly populated. In the Poznań Voivodeship, the extensive starosta's districts of Drahim, Wałcz and Ujście-Piła were located in sparsely populated, forested areas.

In the Greater Poland Voivodeships (as well as in the Cracow Voivodeship), unlike other voivodeships included in this series, there was clearly noticeable urban ownership. This was due to the existence of relatively large land ownership affiliations of Poznań and Kalisz.

In sixteenth century Greater Poland, large complexes of estates belonging to landed nobility occurred much more frequently in the Poznań Voivodeship than in the Kalisz Voivodeship (in the latter, the estates of Andrzej Górka and Jan Rozdrażewski in the Pызdry district and Piotr Potulicki in the Nakło district were particularly noticeable).

A novelty in this volume of AHP was the use of geoinformatic methods to determine ownership boundaries. Each place that is marked on the property map in the scale of 1:500,000 also boasts information on the type of ownership and owner in the database. The first step in developing the map was to generate Thiessen polygons (Voronoi polygons) around each settlement (each point). These are model surfaces whose boundaries are exactly halfway between the points and constitute their spatial “interaction zones”.⁸⁹ The next step was to aggregate (combine) those areas that had the same owner in the GIS program. The last step was their cartographic editing and adaptation to the previously designated borders of districts and voivodeships (see M. Gochna, *Administrative division. Borders of state territorial units*, in this edition III.2.1.4). It should be remembered that the method used is a certain model of reality, and therefore the surface measurements of areas with a certain property are approximate.⁹⁰

⁸⁹ J. Urbański, *GIS w badaniach przyrodniczych*, [no place] 2012, p. 55, http://cgis.oig.ug.edu.pl/CentrumGIS/dane/GIS_w_badaniach_przyrodniczych_12_2.pdf (access 13.12.2017).

⁹⁰ This paragraph was written by Tomasz Panecki, who together with Katarzyna Słomska, was responsible for the cartographic shape of the map.

III.3.3.5 SIERADZ AND ŁĘCZYCA VOIVODESHIPS

Krzysztof Chłapowski, Anna Dunin-Wąsowiczowa

Tax registers and other sixteenth century sources (inspections, inventories, documents) constituted the basis for determining the affiliation of settlements at the end of the sixteenth century. Earlier and later sources played an auxiliary role. The source base was described in the chapter *Written sources*¹. We have also used other studies. As in the entire AHP series, royal settlements were marked in red, settlements belonging to various Church institutions – in purple, settlements belonging to members of the nobility – in brown.

Royal estates consisted of towns and villages that belonged to gord starosta's districts ('elderships') and to the so-called non-gord starosta's districts, i.e. *tenutas* (rents). In the second half of the sixteenth century the gord starosta's district for Łęczyca Voivodeship was situated in Łęczyca. There were four gord starosta's districts in Sieradz Voivodeship: in Sieradz, in Piotrków, in Wieluń and in Ostrzeszów. In the first half of the sixteenth century there was only one gord in Sieradz land – in Sieradz. The 1557 Sejm (Diet) decided that another gord was to be built in Piotrków, but there was to be only one common starosta.² In 1569 the right of use of the estates belonging to the Piotrków division of Sieradz starosta's district was granted to Piotr Dunin Szpot.³ This separation proved permanent and thus the process of the emergence of a new starosta's district was fulfilled. It must be emphasized, that there were some villages belonging to the estates of gord starosta's district of Przedecz (in Brześć Voivodeship) in Łęczyca district. The most important non-gord starosta's districts (rents) were: Inowłódz (Łęczyca Voivodeship), Brzeźnica, Radomsko ('starostwo radomskie' in the sources), Szadek (in Sieradz land), Bolesławiec and Grabów (in Wieluń land), of which two were separated from their mother gord starosta's district in the second half of the sixteenth century: Radomsko from Wieluń in 1579 and Szadek from Sieradz in 1588.⁴

The affiliation of royal villages to particular starosta's districts and rents was presented in the published inspection of Sieradz and Łęczyca Voivodeships from 1564/65.⁵ The list of Crown lands omitted in this inspection due to their encumber obligations, that the 1562/63 Sejm (Diet) considered legally fulfilled (the so-called 'old sums'), is also known. The full list of these estates was given by Andrzej Tomczak in the introduction to the above-mentioned inspection, based on the protocols of the so-called 'revision of letters', namely: the control of legal rights of use of Crown lands, executed during the 1563/64 Sejm (Diet).⁶ For our part we took into account the protocols from particular decisions made during the 1566 Sejm (Diet).⁷

Moreover, two villages were marked as royal, that were actually not mentioned in the 1564/65 inspections or in source materials related to the execution of property movement, and yet there are

some hints in the sources suggesting that these villages belonged to the Crown. Wiechucice Wielkie, a village in Sieradz district, was frequently mentioned in the sixteenth century as a property of the wójt ('village-mayor' or 'town-mayor') of Sieradz and as such it was listed in the 1659 inspection.⁸ In the village Ruda in Wieluń district there were, apart from the property of the nobility, four serfs belonging to the Wieluń castle according to the 1552 register, and the 1628 lustration mentions the: 'wójtostwo' (the village magistrate) in Ruda, village of the nobility, that earlier belonged to Wieluń starosta's district'; in this situation, even though Ryszard Rosin failed to find any earlier information that would confirm this state of affairs, we treated Ruda as a partly Crown village.⁹

In comparison to the state of Crown property recreated by A. Tomczak, the picture presented on the map is slightly different, because we marked settlements located in Crown property in the second half of the sixteenth century (after 1564) and treated mills, ironworks and demesnes that had their own name and that we were able to localize with certainty as separate hamlets. The list of Crown property with the division into starosta's districts and rents is included in Annex I.

Two villages mentioned in the inspections were marked as nobility villages. It was suggested to the inspectors that Kotków village (Łęczyca district) belonged to the Crown. During the 1566 Sejm (Diet) the case was considered but no decision was made.¹⁰ Later this village always appears in sources as a village belonging to the nobility. Because we know that it became a property of the nobility already in 1428 by way of conversion,¹¹ there are no doubts that the record in the inspection must have been influenced by earlier affiliation of Kotków. Also, during the inspection, the inspectors were informed that the village Pacierz (Radomsko district) belonged to the Crown.¹² In 1566 the decision in this matter was postponed on the grounds that 'more ample evidence is needed'.¹³ We found no evidence proving that this village had ever been a part of Crown property, so we marked Pacierz as a village of the nobility.

Church property, also called property of the clergymen in the AHP (due to abbreviations used in lists and indexes), consisted of property benefices of various church institutions (see Annex II). Detailed numerical data is presented in Table 1. It also points, that – as opposed to Sandomierz Voivodeship or Mazovia – in Sieradz and Łęczyca Voivodeships almost half of these institutions was seated outside the described territory. We present the state of the property for the end of the sixteenth century, and therefore we have included changes that occurred in the second half of this century, together with Gniezno seminary benefices in 1590: villages Mazowo and Romartowo (former property of Łęczyca custody) and in 1598: village Wola Kościelna (former property of Uniejów chapter).¹⁴

In the second half of the sixteenth century a new institution appeared among Church institutions owning estates in Sieradz and Łęczyca Voivodeships, and the one that deserves distinction for its rank and size of property. It was the Gniezno chapter. In 1555 archbishop Mikołaj Dzierzgowski handed the archbishopric property in Wieluń to the chapter. It consisted of: a part of Bobrowniki village, villages Brzoza, Drobnice, Grębień, Kadłub, Kamionka, Lisowice, Raduszyce, a part of village Sieniec, Wydrzyn, Załęcze Małe, Załęcze Wielkie in Wieluń district, Owieczki and Jarocice villages in Sieradz district and villages Rząśnia and Makowska in Radomsko district. In 1570 the chapter bought a part of Unków village in Sieradz district and exchanged it with the nobility, giving them Brzoza, Jarocice and Rząśnia for a part of Łaszew village in Wieluń district and for Cisów.¹⁵ The latter was identified by Jerzy Topolski with Cisów in Sieradz district, that is, however, later described always as a property of the archbishop, so we have rejected this identification. In the eighteenth century a demesne Cisowa, belonging to Gniezno chapter and adjacent to the village Załęcze Małe is mentioned.¹⁶ We decided that this is the demesne meant in 1570. In the eighties the chapter bought the remaining part of the

village Sieniec from the nobility, as well as parts of Mierzyce and Przewóz villages in Wieluń district, and a part of the town Toporów in this district.¹⁷

In the first half of the sixteenth century among monasteries that owned property there was a Norbertine Sisters monastery in Imbramowice, to which the villages of Brzeźno, Dębowa Łęka and Nowa Wieś in Sieradz district belonged. In 1559 they were exchanged for the village Głanów and a part of Porąbka village in Proszowice district in Cracow Voivodeship, a hereditary property of Rafał Wargawski, the provost of the chapter of St. Florian in Cracow.¹⁸

Wisnka village in Radomsko district was included in the benefices of this chapter. In 1578 Stephen Báthory donated it, along with the entire prebend, to Cracow Academy, as we know – a Church institution as well.¹⁹

Unlike S. M. Zajączkowski, we have not marked Kotlinki Małe village in Szadek district as a Church property, because in 1520 Szadek mansionaries sold it to Mikołaj Starczewski.²⁰

In several cases the question of ownership was debatable. Such was the case of the village Zakrzew in Radomsko district, about which we know from seventeenth century sources that it was obtained by Radomsko parish by virtue of the Koniecpolscy donation.²¹ The Koniecpolscy administered the Radomsko rent in 1558–1645 (before 1579 as Wieluń starostas),²² so perhaps this donation occurred before 1600. However, because we do not know the date of this alienation, we marked the village as a property of the nobility. The doubts concerned also the affiliation of Brudaki village in Brzeziny district. In the inventory of the property of Włocławek bishopric from 1534, and in the tax register from 1563, the village is described as ‘bishopric’s’.²³ In the inventories of the bishopric property from 1567, 1582 and 1598 the village does not appear, and in the remaining tax registers and later sources it is a village of the nobility. As such, we assumed that at the end of the sixteenth century Brudaki belonged to the nobility.

There were no doubts concerning the village Prusicko in Radomsko district, that was described by A. Pawiński as a property of Jędrzejów Abbey in the tax register from a 1553 publication.²⁴ However, apart from this entry, in revenue and Church sources (from *Liber Beneficiorum* by Długosz to eighteenth century sources) this village appears as a property of the nobility. As such, we assumed that the entry in the register is a mistake.

When it comes to parson benefices, it is known that the parochial church owned the so-called ‘poświętne’, usually of 1 lan (‘manus ecclesiasticus’), only sometimes bigger, and usually freed from taxation, so it did not appear in the registers.²⁵ We took into consideration only cases, in which an entire village belonged to parson benefices, or when the parson’s part exceeded standard benefice and constituted a significant part of a given settlement.

In town property we included villages belonging to towns, and in the described territory these were only royal towns. Town property consisted of: Wójciki demesne (belonged to Łęczyca), Zapusta Wielka and Zapusta Mała (to Sieradz), Bogwizdowy, Świerznica and Stobiecko (to Radomsko), part of Stare Miasto village (to Brzeźnica), Kurów, Turów, a part of Niedzielsko village (to Wieluń) and Budzice (to Bolesławiec). Together nine hamlets and two parts of hamlets (in Łęczyca Voivodeship one hamlet, in Sieradz land five hamlets and one part, in Wieluń land three hamlets and one part).

²³ Inw. 1534, pp. 88 f.; ASK I 16, f. 72; in 1529 the act of exchange of the nobility villages Skotniki, Wola Skotnicka, Raczków and Suliborowice, situated in Opoczno district in Sandomierz Voivodeship, for bishop’s village Brudaki and a half of Nowe Stawy village, that belonged to Niesułków presbytery (MRPS IV, no. 15261). This exchange was not fulfilled, what is proven by the fact that the listed villages from Opoczno district remained villages of the nobility. Perhaps the exchange occurred later, and in different scope.

²⁴ P. Wielkopolska, p. 281.

²⁵ ‘Et hic mansus dicitur ecclesiasticus... in Regno nostro Polonico vocatur Poświętne. Hic itaque mansus... est liber et immunis ab omni onere et servitio’, J.N. Gaworski, *Disertatio canonicocivilis de mensoribus sive agrimensuris*, Cracow 1775, pp. 67 f.

The list of villages and all Crown and Church settlements on studied territory (Table 6 and Table 1 in chapter III.4.4) shows irregularity in the location of villages from these two ownership categories.²⁶ The highest degree of Crown settlements occurred in Wieluń land. Certainly, their percentage in Łęczyca Voivodeship would be higher, were it not for the complete lack of Crown settlements in the small Orłów district, an exceptional situation in the entire Commonwealth. In the cases of villages and settlements of the Church in all three territorial units constituting the area of our interest their percentage is similar. Great estate complexes belonging to Włocławek bishopric and Cracow chapter are the reason why the percentage of villages and settlements of the Church in Piotrków and Brzeziny districts is significantly higher than in other districts. In Wieluń district a similar situation was caused by the growth of the property of Gniezno chapter.

It must be noted that – in comparison to Mazovia and Sandomierz Voivodeship – the percentage of Crown settlements (7.9) is higher than in Mazovia (6.5) and lower than in Sandomierz Voivodeship (11.0).²⁷ The percentage of Church settlements (13.8) is also higher than in Mazovia (9.0) and lower than in Sandomierz Voivodeship (16.0).²⁸ Only in Wieluń land the percentage of both these ownership categories is higher.

The differences in calculations concerning the percentage of Crown and Church villages in Wieluń land between us and Ryszard Rosin must be emphasized.²⁹ The slight increase in the percentage rate was due to our inclusion of the newly located village Czajków and detailed findings concerning Church property.

The percentage of Crown towns in Sieradz and Łęczyca Voivodeships (30.6) was lower than in Mazovia (43.0) and higher than in Sandomierz Voivodeship (19.6).³⁰ Only in Wieluń land the situation was different and the percentage (43.8) was close to that of Crown towns in Mazovia and almost equal to their percentage in Rawa Voivodeship (43.0).³¹ The percentage of Church towns in the described territory (16.0) was similar to the percentage of such towns in Mazovia (15.0) and lower than in Sandomierz Voivodeship (23.1).³²

In the lists of localized mills, ironworks and demesnes with individual names (Table 5) the fact that there are definitely more Crown and Church settlements of this sort than those of the nobility catches our attention. The reason lies in the different source basis – inspections and inventories of Crown property and inventories of Church property provided much information that could not have been included in tax registers, our only source for settlement of the nobility.

As in Mazovia and in Sandomierz Voivodeship nobility estates were the most common ownership category. The specific character of Łęczyca and Sieradz Voivodeships included numerous instances of partial and one-village ownership and a lack of great ownership complexes of a dozen or so villages, present in Sandomierz Voivodeship³³ and many other voivodeships of the Commonwealth.

The estate structure of the property of the nobility could not be presented, as the information concerning village ownership in tax registers of Sieradz Voivodeship, especially from 1570s, is incomplete or wholly absent. It must be noted that farm (serfless) and partial gentry was present in Łęczyca Voivodeship and in the northern part of Sieradz district, such gentry was also recorded in the registers from Szadek and Piotrków districts, and also – to a lower degree – in Radomsko district and Wieluń land.

²⁶ We do not compare our findings with Zajązkowski's findings on the property affiliation of settlement points in the beginning of the sixteenth century; Zajązkowski, *Sieć osadnicza*, p. 49–56.

²⁷ W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Mazovia, in this edition III.3.3.7; W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Sandomierz, in this edition III.3.3a.2.

ANNEX I
CROWN PROPERTY AT THE END
OF THE SIXTEENTH CENTURY

The present name, if different from the sixteenth century name, was given in brackets.

Łęczyca starosta's district

Łęczyca district

Part of Błonie village, part of Czerchów village, Dąbrówka, Dzierzbietów (Dzierzbietów Duży), Kargolec (Krogulec), Kowalowice, part of Krzeszewo Piskorze village (Krzeszew Szlachecki), Łęczyca city, part of Modlno village, Orla, Ostrów, Parzyce, Sobótka, Topola (Topola Królewska), part of Tymienica village, part of Wiczkowice village (Wilczkowice), part of Zegrzany village (Zegrzanki), Zgierz city

Przedecz starosta's district

Łęczyca district

Baby, Dąbrowice city, Długie Kąty (Długie), part of Jasieniec village, Kłodawa city, Kopy, Ostrówki

Sieradz starosta's district

Sieradz district

Baszków demesne, Brodnia, Brzeg, Ciągnisz mill, Czartek (Czartoria) mill, Dźwigorzów (Dzigorzew), Jakubice, Jeziora, Karśnia (Karsznie) mill, Kłocko, Kolasa mill, Koszatka (Świątki) mill, Lipka mill, Manice (Monice), Męka, Mnichów, Ruda, Sieradz city, Sucha, Wąglczów, Wiechucice Wielkie, Woźniki Szadek district

Czechy, Polków

Piotrków starosta's district

Bugaj mill, Lubień, Meszcze, Mojków (Majków-Folwark), Piotrków city, Tuszyn city, Stary Tuszyn (Tuszynek Starościński), Wielga Wieś (Piotrków Trybunalski-Wielka Wieś)

Wieluń starosta's district

Radomsko district

Kielczygłów

Wieluń district

Part of Bobrowniki village, Czastary, Drab mill, Kamion (Kamień) city, Kniatowy, Krzywa Rzeka (Krzyworzeka), Łąka (Łąki Duże), part of Mokrsko village, Osiek, part of Pątnów village, Pichlice, Sokolniki, Wieluń city, Wierzbie, Wróblów

Ostrzeszów starosta's district

Ostrzeszów district

Borek city, Korpys mill, Mechnice, Ostrzeszów city, Siedlików

Inowódz rent

Brzeziny district

Bobrowiec, Brynica (Brenica), Gielzów, Glina, Glinnik, Góra, Inowódz city, Jasień, Konewka mill, Krępa mill, Królowa Wola, Lubocheń Mały (Lubochenek), Lubocheń Wielki (Lubochnia), Luboszewy, Luciąża (Liciażna), Łąg, Małomierz, Rzeczyca, Sadykierz, Spała mill, Zakościele, Zamoście (Inowódz – part), Zawady, Żędlowice

Warta rent

Sieradz district

Glinno, Kawieczynko, Warta city

Szczerców rent

Sieradz district
Chrzastawa, Stary Szczerców, Szczerców city

Szadek rent

Szadek district
Kobyła (Kobyła Miejska), Kromolin (Stary Kromolin), Szadek city, Wielga Wieś

Radomsko rent

Radomsko district
Dąbrowa (Dąbrówka) mill, Dobryczyce, Olszyński (Żaba) mill, Orzechów, Osty (Borowe) mill, Piekary, Radomskie (Radomsko) city, Radziechowice (Radziechowice Pierwsze), Ruda mill, Soczewka (Secówka) mill, Stępka mill, Strzałkowiec, Uszczanowice (Łuszczanowice), part of Wiewiórów village (Wiewiórów Rządowy)
Szadek district
Niechcice

Brzeźnica rent

Radomsko district
Bądków, Borowy (Borowiec) mill, Brzeźnica city, Dupice (Dubidze), Dworzyszowice (Dworszowice Kościelne), Dylów, Gajęcice, Kruplin (Kruplin Radomszczański), Pajęczno city, Siedlec, part of Stare Miasto village (Stara Brzeźnica), Wójtowski mill
Wieluń district
Wąsosze

Krzepice rent

Wieluń district
Stare Krzepice, Zajączki

Bolesławiec rent

Wieluń district
Bolesławiec city, part of Chotynino village, Wójcin, Żdżar
Ostrzeszów district
Domaborów, Jankowy, Wyszczanów

Grabów rent

Ostrzeszów district
Czajków, Czyżowski mill, Grabów city, Komorów, Kotłów, Kraszowice, Kuźnica Kraszowicka (Kuźnica Grabowska), Mikstat city, Smolny (Smolniki) mill

Lesser rents

Łęczyca district
Bolków (Balków), Dąbie city, Krzeszewko Średnie (Krzeszew Rządowy), Lubino (Lubień), Lućmierza, part of Niwki village, Ostrowy Wielkie, Wołodrza
Brzeziny district
Part of Swędowo village, Szczawin, Szeligi, Wiączeń Leśny (Wiączeń Dolny), Wiączeń Polny (Łódź – Nowosolna)
Sieradz district
Bogumiłów, Brąszewice, Czekań mill, Dupie (Dubie), Godynice, Grodziec Wielki (Grójec Wielki), Grzybek mill, Jaryszek (Sójki) mill, Kiełbaska mill, Klonowa, Kuźnica Brąszowska (Kuźnica Zagrzebska), Kuźnica Kłobar (Kuźnica Błońska), Lisek (Liski) mill, Luboła, Łagiewniki, Sokołów, Tyczyn, Witów, Żeglina inn
Szadek district
Grzybów, Prusinowice, Szadkowiec, part of Trzebiczna village, Wilamów

Piotrków district
Łęki Królewskie, Uszczyn
Radomsko district
Dębowiec, Konary, Zawada
Wieluń district
Part of Biała (Biała Rządowa) village, Bieniec, part of Ruda village, Skomlin, Toplin

ANNEX II CHURCH PROPERTY AT THE END OF THE SIXTEENTH CENTURY

The present name, if different from the sixteenth century name, is given in brackets.

Gniezno archbishopric

Łęczyca district
Boguszyna Woda (Boguszyniec), Chełmo, Choiny, Dobrogosty, Grzegorzewo city, Kielczewo, Kobele, Koczawia (Kocewia), Kościół (Tum Poduchowny), Krzepocino Wielkie, Ladorudz Mały, Ladorudz Wielki, Łęka, Mąkolice, Mąkolska Wola, Mrozowice (Mrożewice), Parądzice, Piątek city, Pieczewo, Podgórzyce, Przybyłowo, Rdułtów (Rdutów), Rzuchowo, Skobielice, part of Słupeczka village, Smarzewka (Smardzew) Sobótka, part of Solca Wielka village, Swarowa
Orłów district
Bąkowo, Boguria, Jackowice, Łaźniki, Maurzyce, Ostrówek, Kokoszki, Kowale Arcybiskupie (Kowale Księżę), Malanów, Oraczów, Proboszczowice, Przykuna, Rzestarzów, Rzęzawy, Smólsko, Szadów Arcybiskupi (Szadów Księży), Szłop mill (Człopki), Turek city, Turkowice, Wojków
Szadek district
Borzyszowice (Borszewice), Cichmiana, Kobylniki, Kopyść, part of Kościelnica village, Księży Młyn, Lubiszowice, Luciejów, Niemysłów, Orzeszków, Ostrowsko with Kawieczyn, Sędziejowice, Spicymierz, Ubysław demesne, Uniejów city, Welszczyce (Wieścice), Wielenino, Wola Rozworzyna (Księża Wólka), Zagliny
Piotrków district
Gołkowice (Stare Gałkowice), Grocholice city, Kluki, Parzno, Rozdzin, Sobki, Strzyżowice, Świerczów, Wierzchy mill, Zbyszek mill
Radomsko district
Rzujewice (Rzejowice)
Ostrzeszów district
Biskupice (Biskupice Zabaryczne), Bukownica

Włocławek (Cuyavia) bishopric

Brzeziny district
Będzelin, part of Bogusławice village, part of Chorzęcin village, Chrapek mill, Chrosty (Chrusty Stare), Dąbrówka, Gałków Mały, Gałków Wielki, Godoszewice, Komorniki, Kulan mill, Lamus mill, Lipka, Łaznowo, Łódzia city, Mierzączka, Niesułków, part of Nowe Stawy Małe village, Nowe Stawy Wielkie, Pluskwa mill, Poćwiardówka, Popielawy, Rokiciny, Rozrażew (Łódź-Zarzew), Stara Łódzia, Widzewnica (Łódź-Widzew), part of Żakowice village, Żywocin
Piotrków district

ANNEX III

COMMENTARY TO THE MAPS: ESTATE LOCATION

Anna Dunin-Wąsowiczowa

The matter of land property in Łęczyca and Sieradz Voivodeships is shown on a choropleth map on a 1:500,000 scale, containing three property groups: Crown, Church and nobility. Town ownership (town villages) was not distinguished. Mixed ownership is indicated when a settlement point is situated on the borderline between two ownership categories.

The choropleth map gives names of towns, and names of those villages, in which seats of starostwos, rents (in Crown property) and larger complexes of Church property centres were located. The remaining settlements were marked with unnamed points.

The presented state is adequate to the state from the end of the sixteenth century; changes of ownership of Church institutions and Crown property during the second half of the sixteenth century were indicated in the main part of this commentary.

Clergymen estates that could be considered great land property within the boundaries of Sieradz and Łęczyca Voivodeships were distinguished in the areas of Church property. According to the rule assumed in the previous volume of the AHP (Sandomierz Voivodeship), the caesura distinguishing great land property means 10 villages or 50 serf lans. As such, the properties of seven Church institutions were distinguished: Gniezno archbishopric, Włocławek (Cuyavia) bishopric, Gniezno cathedral chapter, Cracow cathedral chapter, Łęczyca collegiate chapter, Cistercians abbey in Sulejów and Norbertine (Premonstratensians) abbey in Witów.

Due to reasons listed in the main part of the commentary, we could not distinguish great property of the nobility, but we marked those villages, in which farm gentry lived.

Measurements of the size of land property in particular ownership categories were made with a planimeter on draft maps on a scale of 1:100,000. The results of these measurements are more precise in areas, where the borders could be marked more precisely, i.e. in areas of compact property of one owner with relative dense settlement (as for instance around Zduna, a territory of Gniezno archbishopric, around Wolbórz of Cuyavia bishopric, around Pabianice of Cracow cathedral chapter). Distinguishing the range of nobility estates or small Church benefices in areas of thinner settlement network raises many doubts, especially when there were large forest complexes in the area, and no Crown property in the vicinity, to which wooded areas could be assigned.

The following sizes of land property were obtained:

In Łęczyca Voivodeship, covering the area of 4,326 km², Crown property was 561 km² (13.0%), Church property – 956 km² (22.1%), nobility owned 2,809 km² (64.9%) of the land.

In Sieradz Voivodeship, covering the area of 12,525 km² Crown property was 1,393 km² (11.1%), Church property – 2,247 km² (17.9%), and nobility estates – 8,885 km² (71.0%).

Together in both voivodeships (16,851 km²) Crown property covered 1,954 km² (11.6%) of land, Church property – 3,203 km² (19.0%) and the property of the nobility – 11,694 km² (69.4%).

(1998)

Translated by Agata Staszewska

III.3.3.6 CUYAVIA AND DOBRZYŃ LAND

Michał Słomski

For the purpose of determining the ownership affiliation of settlements situated within the boundaries of Brześć and Inowrocław Voivodeships and Dobrzyń land in the second half of the sixteenth century, we analysed the information obtained from tax registers, inspections of royal property, inventories of estates, canonical visitations, and Crown Metrica documents and entries. To varying degrees, we also used sources dating back to the late Middle Ages, and the seventeenth and eighteenth centuries; these have been discussed in the chapter *Written Sources*.¹ We also consulted subject literature, which oftentimes proved extremely helpful in clarifying the information arising from extant records of the analysed period. As in previous volumes of the AHP series, we used red to highlight settlements belonging to the monarch, purple for Church property, yellow to mark nobility property, and orange for town property.² We identified ownership based on the legal title to a given property, not the purpose that a given settlement fulfilled. Sources most frequently recorded latter case as numerous instances of royal domains being leased to nobility (such mentions are particularly perceptible in sources on royal estates in Brześć Voivodeship) and clergy (granted frequently as endowments to parsons), or even of hereditary settlements.³

Royal property

The royal estates in Brześć and Inowrocław Voivodeships and Dobrzyń land formed part of property sets of two types: royal estates under a *starosta*'s administration, in which the *starosta* had the right to judge not only subjects from royal estates, but in some cases also noblemen and their subjects from the district, and had the right to accept perpetual entries from district dwellers) called *gord starosties* (*starostwo grodowe*, literally in English: *gord starosta's royal estate*) and royal estates under a *starosta*'s administration, in which the *starosta* had the right to judge and to administrate only subjects from settlements belonging to monarch, called *non-gord starosty* (*starostwo niegrodowe* or *tenuta*, literally in English: *non-gord starosta's royal estate*). Crown land was also leased in small parcels of one or several villages.⁴ In the second half of the sixteenth century, there were eight *gord*

Chorążyczewski, *Gniewkowo i starostwo gniewkowskie w XVI–XVIII wieku*, [in:] *Pamięć – tradycja – trwanie. Szkice z dziejów Gniewkowa i okolic*, ed. T. Łaskiewicz, Gniewkowo 2014, pp. 57–73. A work of J. Dumanowski's hands, *Hrabiowie na Lubrańcu. Dzieje fortuny magnackiej*, Toruń 1999, pp. 31–40, provides

starosties in the analysed area. In Cuyavia, these units were centred around the capital towns of districts (*powiat*): Brześć Kujawski, Kowal, Kruszwica, Przedecz and Radziejów in Brześć Voivodeship, and Inowrocław and Bydgoszcz in Inowrocław Voivodeship. The seat of Dobrzyń land's only gord starosty was Bobrowniki, which was not the central town of its administrative district (Bobrowniki was located within the boundaries of Lipno district).⁵

Royal property was grouped around settlements situated within the administrative borders of the two Cuyavian voivodeships and Dobrzyń land. However, settlements belonging to the gord starosty in Przedecz also cut into the northern part of Łęczyca Voivodeship.⁶ As a result, the sixteenth-century inspection records of Przedecz Gord Starosty were included in the descriptions of the royal estates situated within the administrative boundaries of Łęczyca Voivodeship.⁷ This was probably caused by the fact that this unit was leased together with Łęczyca Gord Starosty in the first half of the sixteenth century (1501–1539).⁸ Przedecz Gord Starosty was listed among other royal estates of Łęczyca Voivodeship even in the first half of the seventeenth century.⁹ Although chunks of land were not carved out of existing gord starosties to create new royal estates in the second half of the sixteenth century, single villages were placed in lease and treated as separate leaseholds.¹⁰ The 1510 inventory of Inowrocław Gord Starosty carries Tuczno (Inowrocław district) as part of that gord starosty;¹¹ inspections from 1564–1565 state Tuczno was leased separately, but continued to mention its affiliation with Inowrocław Gord Starosty.¹² In later periods, Tuczno was a separate leasehold.¹³

Sources from the second half of the sixteenth century were not strict about reserving the terms *starostwo*, *capitaneatus* and *praefectura* for gord starosties. Nor did their authors use *dobra* (estates), *bona regalia* and *tenuta* exclusively for non-gord starosties.¹⁴ Royal property in Cuyavia and Dobrzyń land also fell victim to the confusion. In 1567, and then in 1616–1620 and 1628–1632 inspections, small estates with seats in Gniewków (Inowrocław district) were referred to as *dzierżawa* (lease).¹⁵ The same term was used to describe Nieszawa (Nowa Nieszewa, Lipno district) in the 1628–1632 inspection and the 1633 document on transferring Nieszawa Non-gord Starosty to Paweł Działyński.¹⁶ For this reason, we employ the terms used in sources to describe these two small clusters of royal property.

an interesting description of royal property in Brześć and Inowrocław Voivodeships in the period spanning the sixteenth and eighteenth centuries, mainly as concerns the nobility's use of Crown land, as well as the income generated from royal estates to bolster their financial standing.

⁵ Guldon, Kujawy, pp. 40–41, 46; Urzędnicy VI/2, p. 8.

⁶ LWWK 1564, part 1, p. XLV; K. Chłapowski, A. Dunin-Wąsowiczowa, *Ownership affiliation of settlements*, [in:] AHP Sieradz, in this edition III.3.3.5; J. Dumanowski, *Hrabiowie na Lubrańcu*, p. 21.

⁷ LWWK 1564, part 2, pp. 160–186; LWWK 1569, ff. 209r–226r (more recent numbering); J. Dumanowski, *Hrabiowie na Lubrańcu*, p. 32.

⁸ Urzędnicy VI/2, pp. 152–153. The publishers of 1564–1565 inspections presume that this could be connected with the fact that Kłodawa, a town of Przedecz Gord Starosty falling within Łęczyca Voivodeship, was the residence of Starosta Jan Sierakowski, who served as starosta of Przedecz at the time of the inspections; LWWK 1564, part 1, p. XLVII.

⁹ LWWK 1616, part 1, pp. 216–240; LWWK 1628, part 3, pp. 38–54. The 1659–1665 inspection was the first to list Przedecz Gord Starosty among royal property in Brześć Voivodeship. The starosty had already been divided into Przedecz Gord Starosty, whose estates were located within Brześć Voivodeship, and Kłodawa lease, which encompassed the royal property in the northern part of Łęczyca Voivodeship, as well as two villages in Brześć Voivodeship, and – interestingly – the villages of Dąb and Dobiegniewo situated on the Vistula in Kowal district of Brześć Voivodeship: LWWK 1659, part 2, pp. 266–268 (Przedecz Gord Starosty), 268–274 (Kłodawa lease).

¹⁰ This phenomenon intensified in the seventeenth and eighteenth centuries; see J. Dumanowski, *Hrabiowie na Lubrańcu*, pp. 32–40. I have taken the liberty of disregarding the final isolation of separate starosties in Kowal and Radziejów from Brześć Gord Starosty, which presumably took place at the turn of the sixteenth century; see e.g. Urzędnicy VI/1, pp. 221–222, 228–229.

¹¹ R. Guldon, Z. Guldon, *Inwentarz starostwa inowrocławskiego z 1510 roku*, ZK, vol. 3, 1971, pp. 201–202; LWWK 1564, part 2, pp. 254–256; J. Wiesiołowski, *Rejestr dochodów i rozchodów starostwa inowrocławskiego z 1510/1511 r.*, ZK, vol. 8, 1986, pp. 292–294; MK 80, ff. 309r–309v; MRPS V/1, no. 1336.

¹⁵ Z. Guldon, K. Wajda, *Zarys dziejów Gniewkowa*, Bydgoszcz 1970, p. 87; LWWK 1616, part 1, p. 290; LWWK 1628, part 3, p. 134; W. Chorążyczewski, *Gniewkowo*, p. 58.

¹⁶ LWWK 1628, part 3, p. 118; MK 180, p. 239: 'super tenutam Nieszoviensem' (reg.: *Metryka Koronna Władysława IV Wazy. Sumariusz księgi MK 180 z Archiwum Głównego Akt Dawnych w Warszawie, z lat 1633–1635, kanclerstwa Jakuba Zadzik*, comp. W. Krawczuk, Cracow 2015, no. 352).

We adopted the same approach for the estates near Rypin (Rypin district) (referred to as *tenuta* in 1618¹⁷) and Lipno (Lipno district) (referred to as *tenuta* in 1607¹⁸).¹⁹ In line with the terminology of the sources, albeit most dating to the seventeenth century, we use the term *starostwo* to denote only the non-gord starosties in Dybów (Inowrocław district²⁰) and Dobrzyń (Dobrzyń district²¹).

The 1564–1565 and 1569 inspections of Cuyavian and Dobrzyń land royal property are only partially useful for determining the affiliation of royal villages to individual gord starosta's and non-gord starosties. At that time, all royal property of Dobrzyń land, as well as the starosties of Kowal, Kruszwica, and Radziejów in Brześć Voivodeship, and the starosties of Bydgoszcz and Dybów in Inowrocław Voivodeship, were lawfully encumbered with so-called 'old sums'. Thus, they have not been described in sixteenth-century inspections. Gniewków lease was not taken into account in the 1564–1565 inspection, which had already been done in 1569. We determined the full list of royal property in Cuyavia and Dobrzyń land based on other sources, mainly inspection of royal estates from the seventeenth century, predominantly 1616–1620 for Cuyavia and 1628–1632 for Dobrzyń land. The so-called 'revision of letters', an inspection of legal titles to royal property use performed during the 1563/1564 diet, was of paramount importance.²² Moreover, we used sources from the second half of the sixteenth century and the first half of the seventeenth century.

It proved somewhat problematic to assign several royal settlements in Kruszwica and Radziejów districts to a specific starosty. Early sixteenth-century sources gives rise to the presumption that Skulsk (Skulsko) Town and Skulska Wieś (Skulsko Małe; Kruszwica district), as well as the villages of Złotowo (Radziejów district) and Sadowie (lost), belonged to Kruszwica Gord Starosty.²³ One possible interpretation of the 1514 reference where Skulsk (Skulsko), Sadowie and Złotowo are classed as a separate non-gord starosty (*tenuta*)²⁴ is that the connection of these settlements with Kruszwica Castle was not that close. The 1531 document, under which the king bequeathed to Brześć Castellan and Radziejów Starosta Jan Leszczyński sums on the settlements of Radziejów Gord Starosty and on – separately listed – Skulsk and the villages of Sadowie and Złotowo, points to a similar conclusion.²⁵ When analysing the organisational and administrative affiliation of the aforementioned settlements forming part of royal property in Cuyavia, Złotowo raises fewest doubts. The 1557 tax register defines Złotowo as part of Radziejów Gord Starosty,²⁶ and the 1628–1632 inspection states that it had been 'removed from Radziejów Gord Starosty.'²⁷ Sadowie, in turn, had gradually vanished. Skulsk and Skulska Wieś (Skulsk Mały) pose graver interpretation difficulties. The 1579 document on the assignment of Radziejów Gord Starosty to Jan Leszczyński, son of the previous Starosta Rafał Leszczyński, lists Skulsk (Skulsko) together with Złotowo and Sadowie after villages described as belonging to Radziejów Castle.²⁸ In 1578, a church

¹⁷ MK 159, f. 125v: 'Tenuta Ripinensi generoso Ioanni Krosnowski confertur.'

¹⁸ MK 151, f. 250v. In the 1583 royal consent to Jakub Jankowski's buy-out of Lipno, the town was referred to as 'bona nostra Lipno'; MK 129, f. 262v.

¹⁹ Thusly, we proceed differently than K. Chłapowski, *Starostowie niegrodowi w Koronie*, pp. 198, 336, 338, and 340. The term *dzierżawa* (lease) was used to denote these two complexes of royal property in: LWWK 1628, part 1, p. XIX.

²⁰ MK 93, f. 355r: 'capitaneatum nostrum Diboviensem' (1562) = reg.: MRPS V/1, no. 2618; MK 145, f. 264v: 'et capitaneatum nostrum Diboviensem' (1603); LWWK 1616, part 1, pp. 294, 309.

²¹ Z. Górski, *Inwentarz starostwa dobrzyńskiego z 1616 roku*, ZK-D, vol. 7: *Stosunki polityczne i społeczne w XX wieku*, 1990, pp. 229–238.

²² AGAD, so-called Lithuanian Metrica IV B 8, pp. 590–636. A. Tomczak also made reference to this item of information in the foreword to the 1564 inspection of Greater Poland and Cuyavia; LWWK 1564, part 1, pp. L–LVIII.

²³ MK 19, f. 149v: 'in bonis nostris oppido Skulsko et villis Slothow et Sadowie [– –] que bona praefata ad castrum Cruswiciense pertinebant' = reg.: MRPS III, no. 1367 (1504).

²⁴ MK 23, p. 412 = reg.: MRPS IV/1, no. 435 (1514).

²⁵ MK 47, f. 422r = reg.: MRPS IV/2, no. 15983. Złotowo was described as a settlement situated 'in districtu Cruswiciensi'. See also: 1544 document issued by Rafał Leszczyński on the dower bequeathed to his wife Barbara, where Skulsk (Skulsko) Town and the two villages are described in a similar fashion: MK 66, f. 273v = reg.: MRPS IV/3, no. 21430.

²⁶ ASK I 29, f. 256v. Same as in 1589: MK 135, f. 711v: 'villarum [– –] Złoczowo ad capitaneatum praedictum Radzieioviensem pertinentium' = reg.: SMK IV, no. 817.

²⁷ LWWK 1628, part 3, p. 97.

²⁸ MK 119, f. 363r: 'quod super castro oppidoque nostro Radzieiow ac villis earumque haereditariibus [sic!] Stary Radzieiow, Bithom, Prochnowo, Bodzanowo, Czolowo, Bieganowo, Skochniki, Ostrow, Płowcze minori ad praefatum castrum et oppidum Radzieiowenses pertinentibus, nec non oppido Skulsko et villis Złothow ac Sadowie in districtu Cruswiciensi sitis ac earum similiter haereditatibus.'

visitor also placed this town in Radziejów Gord Starosty.²⁹ The 1589 deed on granting Radziejów Gord Starosty to Świętosław Orzelski lists the town as part of that gord starosty.³⁰ However, a 1599 visitation placed Skulsk (Skulsko) in Kruszwica Gord Starosty.³¹ Skulsk (Skulsko) is nonetheless listed among the territories affiliated with Radziejów Gord Starosty also in the first half of the seventeenth century.³² Thus, despite certain source references pointing to a possible connection between Skulsk and Kruszwica Gord Starosty in the sixteenth century, we decided that it had formed part of Radziejów Gord Starosty already in the second half of the sixteenth century. The village of Skulska Wieś (Skulsko Małe) was defined as a settlement belonging to Kruszwica Castle in 1504,³³ though by 1526 it was mentioned as a settlement of Radziejów Gord Starosty.³⁴ Half a century later, the king granted Kruszwica Gord Starosty to Adam Baliński under a privilege issued in 1583 and confirmed in 1588. Still, the document placed emphasis on the fact that Skulska Wieś (Skulsko Małe) was excluded from the bestowal.³⁵ The settlement was granted to Adam Baliński and his wife for lifelong use only in 1597.³⁶ A 1590 reference defining this village as part of Kruszwica Gord Starosty might also point to a connection between Skulska Wieś (Skulsko Małe) and that Gord Starosty.³⁷ The settlement was also described as a separate unit during the inspection of royal property conducted in the late 1610s and early 1620s.³⁸ It therefore seems that, at the close of the sixteenth century, Skulsko Wieś (Skulsko Małe) was most often a separate lease,³⁹ though at times it was classified as part of the above-listed starosta's Gord Starosty.⁴⁰

We also labelled Wołodrza (Kowal district) and Wierzniczka (Wierzbica Mała, Dobrzyń district) as royal villages. Sources describe these settlements as the property of Kowal Vogt's Office (Wołodrza) and Dobrzyń Vogt's Office (Wierzniczka).⁴¹

The second half of the sixteenth century did not witness any larger settlement foundation campaigns in the royal estates of the Cuyavian voivodeships and Dobrzyń land. At the turn of the seventeenth century, the starostas who governed areas belonging to Bydgoszcz and Dybów Gord Starosty recodified the charters of existing villages to Dutch law.⁴² In the second half of the sixteenth century, Dutch settlers were brought to Łęgowo (Łąg) (1596)⁴³ in Bydgoszcz Gord Starosty and to Wielka Nieszawka and Mała Nieszawka (Nieszewa and Nieszawka Mała) (1600) in Dybów Gord Starosty.⁴⁴ Such villages appeared also in Bobrowniki Gord Starosty in Dobrzyń land, and Zenon Guldon mentions the 1562 contract on the foundation of Silna Village.⁴⁵

⁴⁵ Z. Guldon, *Osadnictwo ziemi dobrzyńskiej w XVI–XVIII wieku*, ZK-D, series D: *Gospodarka*, 1981, p. 237. Before the 1616–1620 inspection, another Dutch settlement called Bóg Pomóż was founded in the estates belonging to Bobrowniki starosty (LWWK 1616, part 1, p. 309; Z. Guldon, *Osadnictwo ziemi dobrzyńskiej*, p. 241). It remains unclear, however, whether this locality had been incorporated as early as in the second half of the sixteenth century.

In the second half of the sixteenth century, a single yet relatively profound change took place in the royal holdings of Cuyavia and Dobrzyń land. Płowce village (Radziejów district) ceased to form part of Radziejów Gord Starosty. In 1579, Radziejów Starosta Rafał Leszczyński bestowed this settlement, described as hereditary, onto his son Jan.⁴⁶ Already a year before, Płowce had not been listed among Radziejów Gord Starosty.⁴⁷ As Władysław Pałucki noted, this fact is interesting for another reason – Rafał Leszczyński belonged to the leaders of the Executionist Movement.⁴⁸ Given that the files connected with the Royal Chancellery confirm this ownership transfer, Rafał Leszczyński must have indeed taken over this village. Seventeenth-century inspections of Radziejów Gord Starosty do not define Płowce as a settlement of this set of royal property.

In the years 1565–1566, the vacant Pniewy village (Brześć district) was exchanged for Żakowice village (Brześć district), a former Church property, which incited controversies resurfacing in sources throughout the analysed period. We discuss these disputes in greater detail in the section on Church property (see below).

The 1560s inspections of royal property audited Dobre village (Radziejów district).⁴⁹ King Sigismund the Old had swapped Dobre for Mikołaj Kościelecki's Gnojno village in Dobrzyń land (Lipno district) in 1524).⁵⁰ Be that as it may, the so-called 'revision of letters' mentions that Dobre had already been inspected,⁵¹ probably to make certain that the exchanged settlements were of equivalent value. The case was resolved in 1569, by letting Zofia Kościelecka retain ownership of the village and ordering that Dobre be inspected just like Gnojno and Celiny.⁵² And yet Dobre is not present in seventeenth-century inspections.

In 1558, Brześć Starosta Mikołaj Trzebuchowski exchanged three empty lans in Kłobia village (Brześć district) for the vogt's mill in Kłobia, whereby Mikołaj Ciepliński and other vogt's office owners were the other party to the transaction.⁵³ We construe this event as an exchange of land within one village, which in whole constitutes royal property.

While determining the ownership of this settlement, we came across an item of information which called for clarification. In 1555, Sigismund Augustus allowed the noble Piotr Gądkowski to purchase the royal village of Jachcice ('villam regalem Zachcice dictam'; Bydgoszcz district) from its then owners, whose names were not mentioned.⁵⁴ Back in 1489, the village was assigned to Bydgoszcz Castle,⁵⁵ though information dating to the same year indicates that Scibor Nieciszewski put Jachcice (Zachcice) Demesne in pledge to the benefit of Bydgoszcz Carmelites.⁵⁶ In 1494, Mikołaj and Bartłomiej of Nieciszewo endowed half of this village to Bydgoszcz Carmelites.⁵⁷ In the 1514 accounts of Bydgoszcz Gord Starosty, Jachcice is not listed as a village belonging to this district.⁵⁸ Tax registers dating to the second half of the sixteenth century state it constituted Church property in its entirety.

⁴⁶ MK 121, pp. 163–164: 'villam suam haereditariam Płowcze Maiorem in districtu Radzieioviense sitam'; W. Pałucki, *Drogi i bezdroża skarbowości polskiej*, p. 16. L. Bokota, P. Bokota, G.J. Budnik, *Płowce – dwór*, [in:] *Materiały do dziejów rezydencji w Polsce. Kujawy wschodnie*, vol. 1, part 2, ed. S. Kunikowski, Włocławek 2001, p. 143, present this event from a slightly different angle: by providing information confirming Stephen Batory's 1580 sale of Płowce Wielkie Village to Jan Leszczyński, son of Rafał. In the sales document, the ruler confirms the transfer of Radziejów starosty from Rafał Leszczyński to his son Jan; MK 121, pp. 285–286.

The 1557 tax register on Przedecz district carries the villages of Bogusławice and Góraj (Goraj) under Przedecz Gord Starosty.⁵⁹ This is most likely a scribe's mistake,⁶⁰ as we did not succeed in finding these settlements in the inventories of Przedecz Gord Starosty, among others in the 1556 register drafted after Starosta's Wojciech Koryciński's demise. These villages do not appear in later inspections of this starosty, and later data indicate they constituted nobility property,⁶¹ and so we labelled them. We reached a similar decision on Siemnowek (Siemianowo Małe), which was described in the 1557 tax register of Brześć district, and in that source only, as a royal village.⁶²

The so-called 'revision of letters' of the 1560s mentions Mierzynek (Mierzyno, Lipno district), which was escheated to the king after the death of Jakub Mierzwinski,⁶³ a member of the family who owned Mierzynek in the first half of the sixteenth century.⁶⁴ In 1563 Mierzynek (Mierzyno) was granted to Brześć Voivode Jan Służewski, who ceded this village to Jerzy Tolibowski, who appeared in the 1564 Dobrzyń land register as payer of Mierzynek's dues.⁶⁵ With this bestowal, the king observed the 1562 law which mandated that escheated property be granted to nobility so as to prevent noble holdings from being depleted.⁶⁶

Certain interpretation difficulties arose due to the fact that large parts of villages belonging to royal property in Brześć Voivodeship were granted to nobility, and when reflected by the tax registers consulted suggest varied ownership affiliation of settlements which in fact were in their entirety royal holdings. Brześć registers often took note of the individuals who paid the tax on the given settlement part they were using at the time. The 1564/1565 and 1569 inspections give brief descriptions of those village parts bestowed on nobility, which facilitated decisions on ownership affiliation. The example of Falborz (Chwaliboż; Brześć district), part of Brześć Gord Starosty, is worth a closer look. The starostas of Brześć granted and leased certain parts of this village and the *soltys* office to nobility.⁶⁷ What proved troublesome was defining the ownership of a specific part of the village, to be precise, the demesne and the part leased by Stanisław Bielicki in the 1560s. During the inspection, this nobleman presented entries to the Brześć court books and notices of termination of Brześć Voivodeship privileges to substantiate his hereditary right to use a part of the village.⁶⁸ Information on Bielicki's part of Falborz is missing from the 'revision of letters', and tax registers do not mention Bielicki as owner of a village part until 1583. In 1589, there is mention of a part held by Brześć burghers, which is reprised in seventeenth-century sources.⁶⁹ As a result, we marked Falborz (Chwaliboż) as mixed-royal and town-property on the main map.

At the close of the sixteenth century, royal property consisted of seven towns, one town part, 58 villages, eight village parts, six mills, 11 demesnes, one ironworks, one suburb in Brześć Voivodeship; six towns, 28 villages, two village parts, 14 mills, two demesnes, one ironworks, one castle in Inowrocław Voivodeship; five towns, 21 villages, two village parts, four mills, one demesne in Dobrzyń land. In total, royal property in the analysed area encompassed: 18 towns, one town part, 107 villages, 12 village parts, 24 mills, 14 demesnes, two ironworks, and one castle.

Royal property accounted for 12.3% of all localised settlements in Cuyavia and Dobrzyń land, with a higher share of royal estates in Cuyavia (13.8%: 15.4% in Inowrocław Voivodeship, 13% in Brześć Voivodeship) than in Dobrzyń land (a mere 8.2%). The bulk of royal settlements (38) was

situated in Inowrocław district, mainly due to the settlement structure of Dybów Gord Starosty, which was the largest, densely settled complex of royal property in Inowrocław Voivodeship, with a high number of separate mill settlements on Zielona River. All in all, Inowrocław district did not top the ranking for the analysed area in terms of the ratio of royal property to overall settlement. Inowrocław district's result of 16.6% was lower than the royal-to-overall property rate in Kowal district, where royal estates corresponded to 20.1% of all settlements, and Kruszwica district, where this proportion equalled 18.5%. Owing to its modest surface area, the situation in the latter district is quite distinctive. A mere eleven royal settlements were located within the boundaries of Kruszwica district, which gives it the antepenultimate position. Kruszwica district was followed by Dobrzyń district with seven royal localities (6.4% of all settlements) and Rypin district with six and a half settlements (4.9% of total settlements) occupies the final position on this list. Nonetheless, royal estates held a relatively large share in Kruszwica district settlements. Brześć district illustrates a contrary case. Although it had a whopping 22.5 royal settlements, a number trumped only by Inowrocław district, their share in all settlements amounted to a mere 8.4% as this district abounded with settlements owned by representatives of other social estates. The meagre share of royal property in Dobrzyń land is slightly redressed by Bobrowniki Gord Starosty, which was relatively populous with active settlements, and individual royal villages.

Church property

Catholic Church property or should be understood as the assets located in Brześć and Inowrocław Voivodeships granted to various institutions of the Roman Catholic Church as endowments. As in previous volumes of the AHP series, this Cuyavia and Dobrzyń land volume pays heed to the principle that if a *sołtys* office in a village held by a Catholic Church institution was usufructed by a lay person, such a village should be treated as Catholic Church property.

The major part of Catholic Church property in Cuyavia and Dobrzyń land consisted of endowments granted to ecclesiastical institutions with seats in the analysed area. Among the most sizable Catholic Church property, whereby 'sizeable' is defined as having more than 10 villages, we must enumerate the estates of Włocławek Bishopric, Włocławek Cathedral Chapter, Koronowo Cistercians, Kruszwica Collegiate Chapter, and the Strzelno-based Norbertine (Premonstratensian) Monastery. Of institutions with seats elsewhere in the Polish lands of the Crown, Płock Bishopric held ten or more villages in this territory. The Gniezno Archbishop held individual settlements, as did Płock Cathedral Chapter and the Norbertine Monastery in Płock. The endowments of Płock-based Catholic Church institutions, which apart from the aforementioned also included the Benedictines, lay predominantly in Dobrzyń land, albeit villages of Płock Norbertines were situated in Cuyavia.

In 1569, Włocławek Bishop Stanisław Karnkowski granted two villages, supply estates of the Bishop until then, to a newly established theological seminary in Włocławek. The deed of canonical erection mentions that the villages of Witowo (Radziejów district) and Zbłęg (Zbłąg, Brześć district) were passed on to the seminary.⁷⁰

In the second half of the sixteenth century, several changes occurred in the estates of Catholic Church institutions in Cuyavia and Dobrzyń land. The most significant development was a change in ownership of the set of multiple-village property with its centre in Dobrcz, which was composed of, alongside Dobrcz, Czarnówko, Osielsko and Trzemiętowo Villages (all in Bydgoszcz district) in Inowrocław Voivodeship. Wincenty Przerębski, Włocławek Bishop from 1503 to 1513, handed the Dobrcz set of property over to the Włocławek suffrage bishop.⁷¹ Włocławek suffragan bishops derived profits

⁷⁰ *Documenta historica seminarii Wladislaviensis*, pub. S. Chodyński, Varsaviae 1897, p. 15; idem, *Seminarium włocławskie. Szkic historyczny na podstawie akt i dokumentów miejscowych*, Włocławek 1904, p. 177; S. Librowski, *Czterechsetlecie erekcji seminarium włocławskiego (1569–1969)*, ABMK, vol. 18, 1969, p. 129. The 1582, 1598 and 1607 inventories of bishop property describe these settlements as villages of the set of Włocławek property held by Włocławek bishops; Inw. 1582, p. 14; Inw. 1598, p. 13; Inw. XVII, p. 95.

⁷¹ R. Biskup, *Powstanie, ustrój i organizacja diecezji*, [in:] *Dzieje diecezji włocławskiej*, vol. 1: *Średniowiecze*, ed. A. Radziwiński, Włocławek 2008, p. 18. S. Chodyński (*Biskupi sufragani włocławscy. Z akt kapituły włocławskiej*, pub. S. Chodyński, Włocławek 1906, p. 16) indicated that the handover took place in 1536, but this is probably a reference to

from Dobrcz property for more than half a century, until Włocławek Bishop Stanisław Karnkowski granted other estates to Włocławek Chapter as part of an exchange in 1576.⁷² In return, the suffragan bishop received Lubomin (Lubomino) (Brześć district), the former property of Włocławek Chapter. The property transfer was confirmed in 1589 by Cardinal and Papal Legate Ippolito Aldobrandini.⁷³ In the first half of the sixteenth century, Lubomin (Lubomino) was mentioned among the estates of Włocławek bishops, but in 1557 Włocławek Cathedral Chapter was specified as the taxpayer.⁷⁴ Despite the fact that 1577 canonical visitations define Lubomin (Lubomino) as a *villa episcopalis*, 1582 records describe it as a village held by the dean of Włocławek. Maciej Wielicki was the dean at that time, and he also served as Włocławek suffragan bishop since 1579. In 1584 r. this settlement regained the status of bishop-held village (*villa reverendissimi*).⁷⁵ Later visitations from 1594 and 1598 state that the suffragan bishop owned the village;⁷⁶ the situation might have stabilised once the legate approved the exchange.

Some minor changes in the ownership of Catholic Church institutions occurred also in Cuyavia and Dobrzyń land. In 1557, Sigismund Augustus confirmed Włocławek Cathedral Chapter's sale of Kobylniki village (Kobelniki, Inowrocław district, Tuczno Parish) to Wojciech Tupadłski, Inowrocław land court scribe.⁷⁷ The village had most probably been abandoned; the 1563 tax register described it as 'noviter [-] locata et constructa'.⁷⁸ In 1563, at the Diet (Sejm) in Piotrków Trybunalski, the king, at the request of Jerzy Raciąski, confirmed the document of Inowrocław Voivode Janusz Latałski on the 1544 exchange of villages between Włocławek Chapter and Jan Raciąski. In return for the villages of Jordanowo (*Jardanowko*) and Krężoły (*Krzolkowicze*), both in Bydgoszcz district, Jan Raciąski granted Murzynkowo village (Inowrocław district) to the Chapter.⁷⁹ In 1565, Włocławek Bishop Mikołaj Wolski gave Młyniec Drugi (Młyniec; Lipno district) village, together with Osmolno Lake, to Dobrzyń Chamberlain (*subcamerarius*) Stanisław Sierakowski, in return for Kaczewo Village (Radziejów district).⁸⁰

Two Cuyavian hospitals in Brześć and Inowrocław, which had been administered by the Knights of the Cross with the Red Star since the twelfth century, were also affected by changes.⁸¹ In 1565, King Sigismund Augustus incorporated the Brześć hospital provostry of the Holy Spirit into Włocławek (Włocław) Cathedral Chapter,⁸² which Stephen Bátorý then incorporated into the Włocławek (Włocław)

including the revenue from Dobrcz Parish in the endowment of the suffragan bishop. Already the 1527 *Liber Retaxationum* and the 1534 inventory of bishop property mention that the set of Dobrcz property belonged to the suffragan bishop; MHDW 11, p. 25; Inw. 1534, p. 46.

⁷² MHDW 16, pp. 54–56; M. Morawski, *Ks. Stanisław Karnkowski, „Życie Włocławka i Okolicy”*, vol. 3, 1928, no. 4, p. 10. Apart from these villages of Bydgoszcz district, the Chapter also gained Świekatowo (Siekotowo) village, and the vacant villages of Świekatówko (Siekotówko), Lipienica (Lipnica) and Zalesie (all in Świecie district, Pomeranian Voivodeship; K. Mikulski, *Osadnictwo wiejskie województwa pomorskiego od połowy XVI do końca XVII wieku*, Toruń 1994, pp. 175–176). Z. Guldon listed Zalesie among the settlements of Bydgoszcz district (Guldon, *Kujawy*, p. 85).

⁷³ The Włocławek Suffragan Bishop also received the canonry of Kruszwica Collegiate, and the canonry of Włocławek Cathedral Church later on; MHDW 10, p. 6; *Biskupi sufragani włocławscy*, pp. 16–17, 98–101; K.R. Cathedral Chapter in 1576.⁸³ Kąty Małe village (Kąty, Brześć district) and part of Sokołowo village (Brześć district)⁸⁴ formed part of the provostry's endowment.⁸⁵ In 1592, Włocławek Bishop Hieronim Rozdrażewski incorporated the hospital provostry of the Holy Spirit in Inowrocław into the College of Vicars of Włocławek Cathedral. The endowment of Inowrocław provostry encompassed Szpital village (Inowrocław district) and Dalkowo Demesne (Inowrocław district).⁸⁶ As Włocławek colleges of cathedral canons and vicars were the actual holders of legal interest in these settlements, we class these entities as the owners of the above-listed property.

In his work on the college of Włocławek vicars, Stanisław Chodyński stated that in 1551 Stanisław Chodowski sold Szpital Dolny (Szpital Nadolny; Dobrzyń district) to the vicar corporation.⁸⁷ In fact, in 1550 Chodowski granted the annual rent on his parts in the villages of Szpital Górny (Szpital Górny; Dobrzyń district) and Szpital Dolny (Szpital Nadolny) to the vicars.⁸⁸

Czerniewiczki (Czernielice Małe; Kowal district) is another settlement whose ownership affiliation with the College of Vicars of the Włocławek Cathedral remains unclear. The altarist of Włocławek Cathedral had almost always been mentioned as Czerniewiczki owner or taxpayer.⁸⁹ In 1557, this role was ascribed to Włocławek Vicar Łazarz Olszówka,⁹⁰ who simultaneously served as the altarist to the altar of the Immaculate Conception of the Blessed Virgin Mary at Włocławek Cathedral.⁹¹ The description of Grabkowo (Grabków) Village borders in the inventory of Włocławek Bishopric property also mentions that the Cathedral village of Czerniewiczki (Czernielice Małe) belonged to the Cathedral altarist, but in 1607 it stated that it was the property of the College of Vicars.⁹² Right before the sixteenth century reached its midpoint, a dispute erupted in the Cathedral College of Vicars. In 1542, Włocławek Bishop Łukasz Górka ordered Włocławek Suffragan Bishop Jan Dziaduski to resolve the conflict. One of the vicars, Stanisław Olszewski, altarist to the altar of the Immaculate Conception of the Blessed Virgin Mary at Włocławek Cathedral, claimed that Czerniewiczki (Czernielice Małe) village formed part of his benefices, while the remaining vicars argued it was the 'common property of the whole college'. Jan Dziaduski upheld the viewpoint of the vicars, but eventually the dispute ended with a compromise; part of the village was recognised as the altarist's benefices, and part was held by Cathedral College of Vicars.⁹³ However, at the end of the sixteenth century Włocławek Bishop Hieronim Rozdrażewski passed the BVM Immaculate Conception altarage, along with part of Czerniewiczki (Czernieliczki Małe), to the vicar penitentiary; in 1594 this office was held by Jan of Śrem.⁹⁴ Owing to the procedure for appointing the altarist to this altar, this incorporation was not beneficial to College members. In 1605, Włocławek Bishop Piotr Tylicki returned the altarage to the College of Vicars. Nevertheless, since the main map strives to reflect the situation in 1600 as faithfully as possible, the incorporation took place between Church entities of the same type. A Catholic Church

⁸³ S. Kuliński, *Monografia Brześcia Kujawskiego*, p. 52; mention about incorporation into Chapter in 1598 visitation: MHDW 20, p. 4.

⁸⁴ The deed on the incorporation of the hospital provostry into Brześć parsonage lists only Kąty; MK 99, f. 181r.

⁸⁵ Two lans were mentioned in 1564 (LWWK 1564, part 2, pp. 215–216), and four hospital lans were listed in 1598 (MHDW 20, p. 18).

⁸⁶ *Wikariusze katedry włocławskiej (collegium vicariorum). Z akt kapituły włocławskiej*, pub. S. Chodyński, Włocławek 1912, pp. 137–138, 289–294 (document issued by Sigismund III Vasa confirming the incorporation).

⁸⁷ *Wikariusze katedry włocławskiej*, p. 130.

⁸⁸ MK 78, ff. 417r–417v; reg.: MRPS V/1, no. 1063.

⁸⁹ ASK I 29, ff. 391r (1567), 429r (1577); ASK I 30, ff. 578r (1581), 644r (1582), 702r (1583), 753r (1589); ASK I 50, f. 779v (1570).

⁹⁰ ASK I 29, f. 265r.

⁹¹ *Wikariusze katedry włocławskiej*, p. 118.

⁹² Inw. 1598, p. 38; Inw. XVII, p. 93.

⁹³ MHDW 18, p. 42; *Wikariusze katedry włocławskiej*, pp. 160–161; S. Librowski, *Inwentarz realny II/5*, p. 122, no. 422–424. It seems that the misunderstanding arose from the fact that in 1392, upon granting Czerniewiczki (Czernielice Małe) to Włocławek Vice-treasurer Mikołaj of Kowal, who was to use this bestowal to fund a new altar, Włocławek Bishop and Duke of Legnica Henryk specified that Mikołaj must be succeeded by an altarist selected from among vicars; MHDW 18, pp. 41–42; *Wikariusze katedry włocławskiej*, pp. 158–159. The document on the incorporation of the BVM Immaculate Conception altar dates to 1397 and gave the altar to the College of Vicars which chartered Czerniewiczki (Czernielice Małe) with Magdeburg law (S. Librowski, *Inwentarz realny II/5*, p. 130, no. 270a), which could have substantiated the claim of the College of Vicars, yet Chodyński gives the impression that he is sceptical about its reliability (*Wikariusze katedry włocławskiej*, pp. 159–160).

⁹⁴ *Wikariusze katedry włocławskiej*, p. 163.

institution still owned half of Czerniewiczki (Czerniewiczki Małe) – the settlement still belonged to the altarist of the BVM Immaculate Conception altar.

In 1581, the villages of Ujma Duża (Ujma Wielka) and Ujma Mała (Brześć district) belonging to Gniezno Archbishop were bestowed to Gniezno Cathedral Chapter as so-called episcopal (*gracjalne*) villages.⁹⁵ Although the villages were in actual fact administered by Gniezno canons, reflected in *i.a.* the sources from the second half of the eighteenth century which mention that the Gniezno Chapter was the owner of the two villages,⁹⁶ both Ujma villages belonged to the Archbishop's property.⁹⁷

Concerning parson endowments, we only looked at those cases where an endowment exceeded the standard parson's land endowment called *poświętne* or *mansus ecclesiasticus*, especially when the parson owned an entire village or when the endowment was located outside of the parochial village.

In the section on royal property, we mentioned Żakowice village and the vacant settlement of Psary. In 1489, Żakowice (Brześć district) was mentioned as a settlement belonging to the Chapter of Włocławek (Włocław) Cathedral.⁹⁸ In 1531, Włocławek Bishop Maciej Drzewicki issued a document confirming that he and Włocławek Canon and Kowal Parson Stefan Łochowski exchanged 'the tithe of the bishop's mensa in Kromszewice and Pyszkowo in Chodecz Parish for Żakowice village, a benefice of his parish'.⁹⁹ Perhaps the exchange took place earlier, as Żakowice was described as the property of the Kowal parson already in 1527.¹⁰⁰ However, another change in ownership occurred in the years 1565–1566. In return for Żakowice village, which became royal property, the Kowal parson received the vacant settlement of Pniewy (Brześć district),¹⁰¹ which had previously formed part of royal property.¹⁰² Still, the ownership affiliation of this village is disputable. The 1584 canonical visitation lists Żakowice as a benefice of Kowal Parish.¹⁰³ In 1590, the case of this exchange was examined at the request of the Kowal parson,¹⁰⁴ even though the village belonged to the king, who in 1593 confirmed the granting of the settlement to Łukasz Mielżyński for life-long use.¹⁰⁵ Nevertheless, Catholic Church sources describe Żakowice as a village forming part of the Kowal parochial church endowment.¹⁰⁶ Also the 1598 inventory of Włocławek Bishopric property, in the description of the episcopal village of Wola Skarbkowa (Wola Skarbek; Brześć district), defines Żakowice as a settlement belonging to Kowal church, and outright calls Łukasz Mielżyński an usurper of the village.¹⁰⁷ In the first half of the seventeenth century, subsequent inspections of royal property enumerate Żakowice,¹⁰⁸ and Karol Perthées marked this settlement as royal property on his map of Brześć Voivodeship. We therefore decided on assigning the status of royal property to Żakowice, while we classed the vacant settlement of Pniewy as the property of Kowal parson.

Parson property also proved problematic in terms of determining who held a legal interest in a given part of land after the assignment of a settlement, in whole or in part, to a lay person. In 1567, the major and the councillors of Brześć, as collators of the benefice held by the preacher of Brześć Kujawski parochial church, granted emphyteusis on Maszonki Demesne (Radziejów district), which constituted the preacher's endowment, to Jakub Rusinowski.¹⁰⁹ This nobleman had appeared in tax registers as the payer of tax on Maszonki,¹¹⁰ and, in the 1584 pastoral visitation, as Maszonki owner.¹¹¹ The 1598 visitation mentions that this demesne was added to the preacher's benefice,¹¹² which is why we classified Maszonki as Church property which formed part of the Brześć preacher's benefice. We proceeded similarly in the case of the BVM Assumption altar at Brześć Kujawski parochial church in Kuczyna village (Brześć district), which belonged to the Brześć parson and altarists – tax registers indicate that Mikołaj Luboński, granted life-long use, was the payer of tax for a part of that altar-age.¹¹³ The tax on Paruchowa (Parchowa; Brześć district), which formed part of the endowment of the parochial church in Koneck (Brześć district), was paid by Łukasz and Marcin Grabski, to whom Paruchowo was leased.¹¹⁴

As in 1576 King Stephen Bátorý incorporated Brześć parsonage into Włocławek Cathedral Chapter, we marked the estates which constituted the benefice of Brześć parson (Siedlimin (Siedlimino) and part of Kuczyna, Rzadka Wola (Wola Rzadka) and Stare Miasto (Stary Brześć)) as property of the Chapter in Włocławek (Włocław).¹¹⁵ We also labelled the settlements held by parochial churches and incorporated into the Canons Regular Monastery in Lubraniec (Bytoń (Bytom), Lubraniec and Zgłowiączka (Zgłowiątko)) as monastery property.

At the close of the sixteenth century, the Catholic Church had the following holdings: in Brześć Voivodeship: three towns, 82 villages, nine village parts, 14 mills, nine demesnes; in Inowrocław Voivodeship: two towns, 56 villages, one village part, seven mills, nine demesnes, one demesne part, one pitch production settlement; in Dobrzyń land: one town, 24 villages, one village part, five mills, one ironworks. The complete list of Church property in Cuyavia and Dobrzyń land runs as follows: six towns, 162 villages, 11 village parts, 26 mills, 18 demesnes, one demesne part, one ironworks, one pitch production settlement.

The bulk of Catholic Church property was located in Brześć district: 56.5 villages, which accounted for 21.1% of all settlements identified in this district. Nonetheless, in the second half of the sixteenth century Bydgoszcz district had the largest Church-to-overall settlement ratio of 24.8%, with a count of 28.5 Church villages. Kruszwica district followed close on its heels with 14.5 Church villages corresponding to 24.4% of all settlements. Inowrocław district also displayed a high percentage share of settlements which constituted the endowments of Catholic Church institutions (46.5 settlements making up 20.4% of total settlements), which boosted Inowrocław to leading position with 21.8% of settlements held by Catholic clergy in its overall make-up. Inowrocław Voivodeship was the location of numerous villages forming part of Włocławek Bishopric's endowment and the estates of the Cistercian Abbey in Koronowo in the northern part of Bydgoszcz district, hence such a high share of Church settlements. Church settlements were fewest in Dobrzyń district: a mere 3.5 settlements, which accounted for 3.2% of settlements in total. The figures for Church property were low in Przedecz district (six settlements, 4.9% of all settlements), Kowal district (eight and half settlements, 10.7% of all settlements), and Rypin district (10 settlements, 7.5% of all settlements). Across the analysed area, Catholic Church property accounted for 15.5% of all settlements, whereby their general distribution in Cuyavia and Dobrzyń land differed notably. There was quite a considerable disparity between these administrative units: the ratio of Church to total settlements amounted to 18.3% in Cuyavia, and to 8.1% in Dobrzyń land. This latter

¹⁰⁹ Guldon, Kujawy, p. 275.

¹¹² MHDW 20, p. 10.

¹¹³ ASK I 29, f. 645v (1580); ASK I 30, f. 561v (1581). Mikołaj Luboński still held part of the village in 1598; MHDW 20, pp. 7, 10; see also S. Kuliński, *Monografia Brześcia Kujawskiego*, p. 72. In 1780, Brześć Provost was defined as owner of the village; R. Guldon, Z. Guldon, *Materiały do osadnictwa powiatu brzesko-kujawskiego*, p. 158, np. 123.

¹¹⁴ ASK I 29, ff. 236v (1557), 458v (1579); MHDW 22, p. 90 (1584).

¹¹⁵ The incorporation is mentioned in the 1577 visitation; MHDW 1, p. 11. In 1607, Siedlimin was described as a village of Włocławek Chapter; Inw. XVII, p. 90.

percentage has been inflated by the 16 settlements of Włocławek Bishopric, which made up 11% of all Lipno district settlements, though Płock Bishopric also had 10 settlements in Rypin district, which corresponded to 8% to that district's total settlements. Brześć and Inowrocław Voivodeships alike had a higher count of settlements which constituted the endowments of Catholic Church institutions than royal property, while in Dobrzyń land the figures were practically balanced.

Town property

We defined town property as settlements which belonged to towns and were fully controlled by towns in legal and economic terms. In Cuyavia and Dobrzyń land, settlements were held by royal and Church towns. We did not identify any cases where a nobility-owned town had a settlement in its possession. With 16 settlements, Inowrocław was the largest landholder in the analysed area. We did, however, determine that five of those localities were vacant.¹¹⁶ Apart from that,¹¹⁷ separate settlements were held by the burghers of Brześć Kujawski (Brzeście), Nieszawa (Nowa Nieszawa; Lipno district) and Raciążek (Raciąż, Inowrocław district).¹¹⁸ We also marked Nowy Dwór Demesne (Bydgoszcz district) as a settlement partially owned by a town, as Koronowo burghers owned 31 lans there at the close of the sixteenth century.¹¹⁹

¹¹⁶ These were: Kotwiniec, Marulewy (Marulewo), Michowice (purchased by the town in 1540 from Wągrowiec Cistercians; MK 61, pp. 54–55; reg.: MRPS IV/3, no. 20103), Mikorzyn (Mikorzyno) and Szydłowy.

¹¹⁷ Sources also provide information on burghers of some towns using other settlement units, in whole or in part. Fordon (Fordan) is a case in point. Z. Guldon identified Sierniczek (Sierniczko; Bydgoszcz district) as property of Bydgoszcz Gord Starosty; Guldon, Kujawy, p. 83. Indeed, the 1489 land tax register and the 1530 Bydgoszcz district register define Sierniczek (Sierniczko) as part of that royal estate; Lustracja 1489, p. 173; ASK I 50, f. 535r. Based on a mention in the 1563 tax register, which describes Sierniczek (Sierniczko) as the property of Fordon burghers (ASK I 92, f. 12v: 'oppidanorum Fordanensium'), and entries to the 1597 visitation to Fordon church about tithe paid by Fordon burghers to Frodon parson on *i.a.* the town-held field called Sierniczek (VAP, vol. 2, p. 312), we classed this vacant hereditary property as town property. Still in 1717, Fordon burghers held some Sierniczek land; *Zarys dziejów osad miejskich oraz miejscowości przyłączonych do Bydgoszczy do 1939 roku*, [in:] *Historia Bydgoszczy*, vol. 2, part 1: 1920–1939, ed. M. Biskup, Bydgoszcz 1999, p. 858; *Sierniczek*, [in:] *Encyklopedia Bydgoszczy ('Encyclopaedia of Bydgoszcz')*, vol. 2, Bydgoszcz 2017, p. 148. The property of Fordon (Fordan) also encompassed Łoskoń (Bydgoszcz district), a vacant settlement mentioned in 1580, granted in 1424 by Ladislaus Jagiello to the burghers of Fordon when the settlements received its town charter; *Fordon*, historical comp. E. Okoń, R. Czaja, cartographic comp. R. Golba, Z. Koziół, A. Pilarska, Toruń 2016 (Atlas Historyczny Miast Polskich, vol. 2: Kujawy, no. 3), p. 10 and footnote 24 on p. 20. We entered both cases as Fordon Town property to the AHP database. Contrary to Z. Guldon (Guldon, Dobrzyń, p. 30), we did not place Wyszyn Village, a holding of Dobrzyń-upon-Vistula (Dobrzyń) Town, on the map. Information on this settlement ceased to appear in 1521; MRPS III, no. 2813; MRPS IV/1, no. 3968. 1564–1565 records provide information on the use of the deserted settlement of Bławaty by Strzelno burghers. Bławaty belonged to the Norbertines Monastery in Strzelno (LWWK 1564, part 2, p. 233), which sold the empty settlement to the burghers in 1605; R. Kabaciński, *Historia miasta Strzelna (przełom XIV/XV wieku – 1773 r.)*, Bydgoszcz 2001, p. 75.

¹¹⁸ In 1573, Włocławek Bishop Stanisław Karnkowski incorporated areas called Podole (Małe Podole) and Wola to Raciążek (Raciąż); S. Librowski, *Inwentarz realny dokumentów Archiwum Diecezjalnego we Włocławku. Dokumenty w kopia-riuszach*, vol. 8: *Kopiarusze gospodarcze z XVI–XVII wieku*, Włocławek 2001, p. 33, no. 82. Both settlements are mentioned in sources before the second half of the sixteenth century: Wola was described as the property of Raciążek (Raciąż) in 1489 (Lustracja 1489, p. 165), while Podole was defined as an abandoned demesne which constituted part of the set of Raciążek property in the 1534 inventory of episcopal property (Inw. 1534, p. 23). In 1582 and 1604 Raciążek inventories, Podole and Wola had already recorded fields used by Raciążek burghers; Inw. 1582, p. 183; Inw. XVII, p. 2. The 1604 inventory mentions that the villages of Chlewiska (Brześć district) and Mleczkowo (Inowrocław district) were the property of Raciążek (Raciąż); Inw. XVII, pp. 12–13. As we did not succeed in establishing the date when these two villages were granted to the town to own (?) or to use (?), we were not in a position to confirm that it fell within the sixteenth century; we classified both settlements as the property of Włocławek Bishopric.

¹¹⁹ In 1370, Koronowo Abbot Jan gave 27 lans situated between Koronowo and Nowy Dwór (Bydgoszcz district) to Koronowo burghers, and in 1563 Koronowo Abbot Adam Mirkowski granted them another 24 lans in Nowy Dwór demesne. The next abbot, Wawrzyniec Żaliński, took 20 of those lans in 1597, whilst he combined the four remaining lans with the 27 lans granted under the 1370 privilege. In exchange, the abbot bestowed land in an abandoned village called Samociążek (Bydgoszcz district) and part of the vacant settlement of Mokre (Bydgoszcz district); R. Kabaciński, *Uposażenie ziemskie mieszczan koronowskich w XVI wieku*, „Nasza Przeszłość”, vol. 96, 2001, pp. 170–173, 185–192; *Koronowo*, historical comp. E. Okoń, R. Czaja, cartographic comp. R. Golba, Z. Koziół, A. Pilarska, Toruń 2016 (Atlas Historyczny Miast Polskich, vol. 2: Kujawy, no. 2), p. 12.

Nobility property

Nobility property was the predominant ownership category of settlements in the voivodeships of Cuyavia and in Dobrzyń land. This ownership make-up does not differ from that of other Polish voivodeships. We identified a total of 1,002 nobility-held settlements, which corresponds to 71% of all settlements in Cuyavia and Dobrzyń land. It is, however, possible to note quite a large discrepancy in the percentage share of nobility property between Cuyavian voivodeships and Dobrzyń land. Most nobility property was situated in Dobrzyń land, and accounted for 83.6%. The districts of Dobrzyń land were the ones with the highest nobility-to-overall-settlement rate: 90.4% in Dobrzyń district and 87.6% in Rypin district. This share was lower in Brześć Voivodeship (69.9%), and smallest in Inowrocław Voivodeship (59.1%). The percentage of nobility settlements in the districts of Brześć Voivodeship generally did not diverge from the voivodeship average, yet it ought to be underlined that in Przedecz district noble-held settlements constituted 79.3% of all settlements. Inowrocław (57.8%) and Kruszwica (57.1%) districts had the smallest fraction of nobility property.

What was characteristic about the analysed areas were the large populations of partial and serfless gentry. These territories were also devoid of large complexes of property encompassing more than ten villages, the likes of which were present in Sandomierz, Cracow, Poznań and Kalisz Voivodeships.

Lubraniec Fee Tail

When discussing nobility estates in Cuyavia, it is worth mentioning that the southern part of the analysed area saw the establishment of one of Poland's first fee tails.¹²⁰ The fee tail was established by Sigismund the Old in 1518 at the request of the Lubrański brothers, Poznań Bishop Jan Lubrański and Poznań Voivode Mikołaj Lubrański. The fee tail was composed of 19 settlements listed in the founding document. Seventeen of these fell within the boundaries of Brześć, Przedecz and Radziejów districts, and two were located in Łęczyca Voivodeship.¹²¹ The fee tail did not survive long, because it was plagued by inheritance problems,¹²² and was dissolved in either 1558¹²³ or 1563.¹²⁴ Since the last male heir, Wawrzyniec Lubrański, had not come of age, between 1552 and 1558 the fee tail was administered by Erazm Kretkowski, appointed as property guardian by King Sigismund Augustus in 1552, at the request of Cracow Castellan Jan Tarnowski and Poznań Voivode Janusz Latański, custodians of the underage Wawrzyniec. Following Kretkowski's death in 1558, Wawrzyniec Lubrański took over Lubraniec and part of Lubraniec-related estates, and in 1563 Lubraniec holdings became the property of Jakub Chlewicki, husband to Zofia, Wawrzyniec's sister, which was confirmed in 1570.¹²⁵

¹²⁰ The first fee tails established in the sixteenth-century Polish-Lithuanian State were quite ephemeral; J. Rafacz, *Ordynacja lubraniecka według przywileju z r. 1518*, PH, vol. 30, 1932–1933, no. 2, p. 401. The first fee tails to prove lasting were those of the Radziwiłł family in Lithuania (1586) and the Zamoyski family (1589); A. Meleń, *Ordynacje w dawnej Polsce*, Lwów 1929, p. 9; T. Zielińska, *Ordynacje w Polsce*, PH, vol. 68, 1977, no. 1, pp. 19–21.

In the 1580s, Lubraniec and its estates was put in pledge for three years by Jakub Chlewicki, son of Jakub Chlewicki and Zofia Lubrańska, to Łukasz Kretkowski; P. Bokota, P. Nowakowski, *Lubraniec – zespół pałacowy*, p. 234 (authors date this event to 1585); W. Kubiak, *Dzieje Lubrańca*, p. 59 (dates to 1583); while T. Stawiński, *Materiały do dziejów własności ziemskiej Kretkowskich w latach około 1500–1613*, ZK-D, vol. 17: *Gospodarka (XX – początek XXI wieku)*, 2002, p. 267, wrote that the pledge covered the period from 1585 to 1596, and in 1596 Chlewicki sold Lubraniec and 12 villages to Łomża starosta Mikołaj Modliszewski; J. Dumanowski, *Hrabiowie na Lubrańcu*, pp. 78–79; P. Bokota, P. Nowakowski, *Lubraniec – zespół pałacowy*, p. 234; W. Kubiak, *Dzieje Lubrańca*, p. 59. L. Kajzer, *Szesnastowieczne „fortalicjum”*, pp. 64–65 also presented the history of Lubraniec Fee Tail, albeit with slight differences.

Map 1. Villages of Lubraniec Fee Tail, based on 1518 founding document

Own elaboration based on: MRPS IV/1, no. 2786.

The villages which formed part of the original Lubraniec Fee Tail in 1557 were not held only by Erazm Kretkowski, but also by other bearers of the Godziemba coat of arms.¹²⁶ It is worth underlining that Kąkowa Wola (Kunkowa Wola, Brześć district), a royal village granted in 1519 by Sigismund the Old to Jan and Mikołaj Lubrański with the right to redeem the property for 1,600 *złoty* (lat. *floren*), was among the settlements of the fee tail.¹²⁷

Table 1. Owners/payers of tax on Cuyavian settlements of Lubraniec Fee Tail in 1518 (except for Łęczyca Voivodeship settlements, for which there are no data available)

Name of settlement	Owner/payer as at 1557
Biernatki (Biernacie)	Erazm Łochocki
Biskupice	Erazm Kretkowski
Bycz	Erazm Kretkowski
Chodów (Chodowo Większe; Łęczyca district)	Marcin standard bearer, Anna Rusocka (1552)
Janiszewo	Bernard Redecki
Kazanie (Kazom)	Erazm Kretkowski
Kąkowa Wola (Kunkowa Wola)	royal property (Erazm Kretkowski)

Name of settlement	Owner/payer as at 1557
Krowice (Redecz Krowi)	Bernard Redecki
Kwilno	Erazm Kretkowski
Lubraniec	Erazm Kretkowski
Lubrańczyk (Lubraniec Mały)	Erazm Kretkowski
Psary	Piotr Psarski
Redecz Kalny	Bernard Redecki
Redecz Wielki (part)	Erazm Kretkowski
Siemnowo (Siemianowo Wielkie)	Wawrzyniec Lubieniecki
Szczecin (Szczecino)	Marcin Psarski, Piotr Psarski
Wiewierz (Wiewierze; Łęczycza district)	Anna Rusocka (1552)
Wrzosowo	Bernard Redecki, Jakub Kobieliński
Żydowo (Żydowo Wielkie)	Sułkowski, Wawrzyniec Lubrański

Source: ASK I 14, f. 384r; ASK I 29, ff. 238v–239r, 240r–241r, 253r–253v, 257v, 273v.

Serfless gentry

In Cuyavia and Dobrzyń land, serfless gentry paid tax on whole villages and parts of villages. We found separate lists of villages inhabited by farm gentry in Brześć and Inowrocław Voivodeships registers. Save for tax registers from 1553, 1557, 1576 (the surviving part on Brześć district) and 1579, such registers appeared in six of the tax registers for Brześć Voivodeship used.¹²⁸ Among Inowrocław Voivodeship registers, only the 1552 register provided a separate list of serfless gentry in Inowrocław and Bydgoszcz districts.¹²⁹ In other Inowrocław Voivodeship registers, serfless gentry was not listed separately, and information on taxes paid by this group was carried together with the payments made for all settlements in Inowrocław Voivodeship. Dobrzyń land tax registers from the second half of the sixteenth century do not list serfless gentry.¹³⁰ This is quite interesting, as the percentage of farm gentry was very high in the analysed area, and yet information on lans held by farm gentry was recorded together with details on tax collected for serf lans.

As serfless gentry formed a vital part of the general structure of nobility in Cuyavia and Dobrzyń land, below we present information on villages belonging to serfless gentry farms. We compiled this information based on 1564 (Dobrzyń land) and 1581 (Brześć and Inowrocław Voivodeships) registers. We are aware that in the analysed period larger nobility estates absorbed smaller nobility property, while partial and farm gentry holdings became fragmented, and representatives of partial and petty gentry climbed to the category of serfless gentry.¹³¹ Below, we depicted the spatial layout of villages where in 1564 and 1581 tax payments were declared for lans farmed directly by serfless gentry. This provides an accurate reflection of ownership structure in the said years, and it is more or less similar to the data presented in tax registers for the remaining years.

¹²⁸ 1567: ASK I 29, ff. 389r–390r, 394r–394v, 398v–401v, 408v–410r; 1577: *ibidem*, ff. 427v–428v, 431v–432r, 435v–438r, 443v–444r, 446v; 1581: ASK I 30, ff. 574r–577r, 582r–583v, 589r–593r, 602v–604r, 608r–609r; 1582: *ibidem*, ff. 641r–642v, 647r–648r, 653r–656r, 663r–664r, 667r–667v; 1583: *ibidem*, ff. 699v–701r, 706v–707v, 713v–717r, 725v–727r, 730v; 1589: *ibidem*, ff. 751v–752v, 755v–756r, 759v–762v, 768v–769v, 772v.

¹²⁹ ASK I 50, ff. 550r–550v, 561v–562v.

¹³⁰ Such lists were drafted in the first half of the sixteenth century, e.g. in 1535: ASK I 30, ff. 120r–121v, 125v–127v, 130v–133r.

¹³¹ W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Mazovia w tej edycji III.3.3.7. K. Boroda, *Geografia gospodarcza Królestwa Polskiego w XVI wieku*, Białystok 2016, pp. 186–188 analyses such examples in the northern part of Łęczycza Voivodeship neighbouring on Brześć Voivodeship in the south.

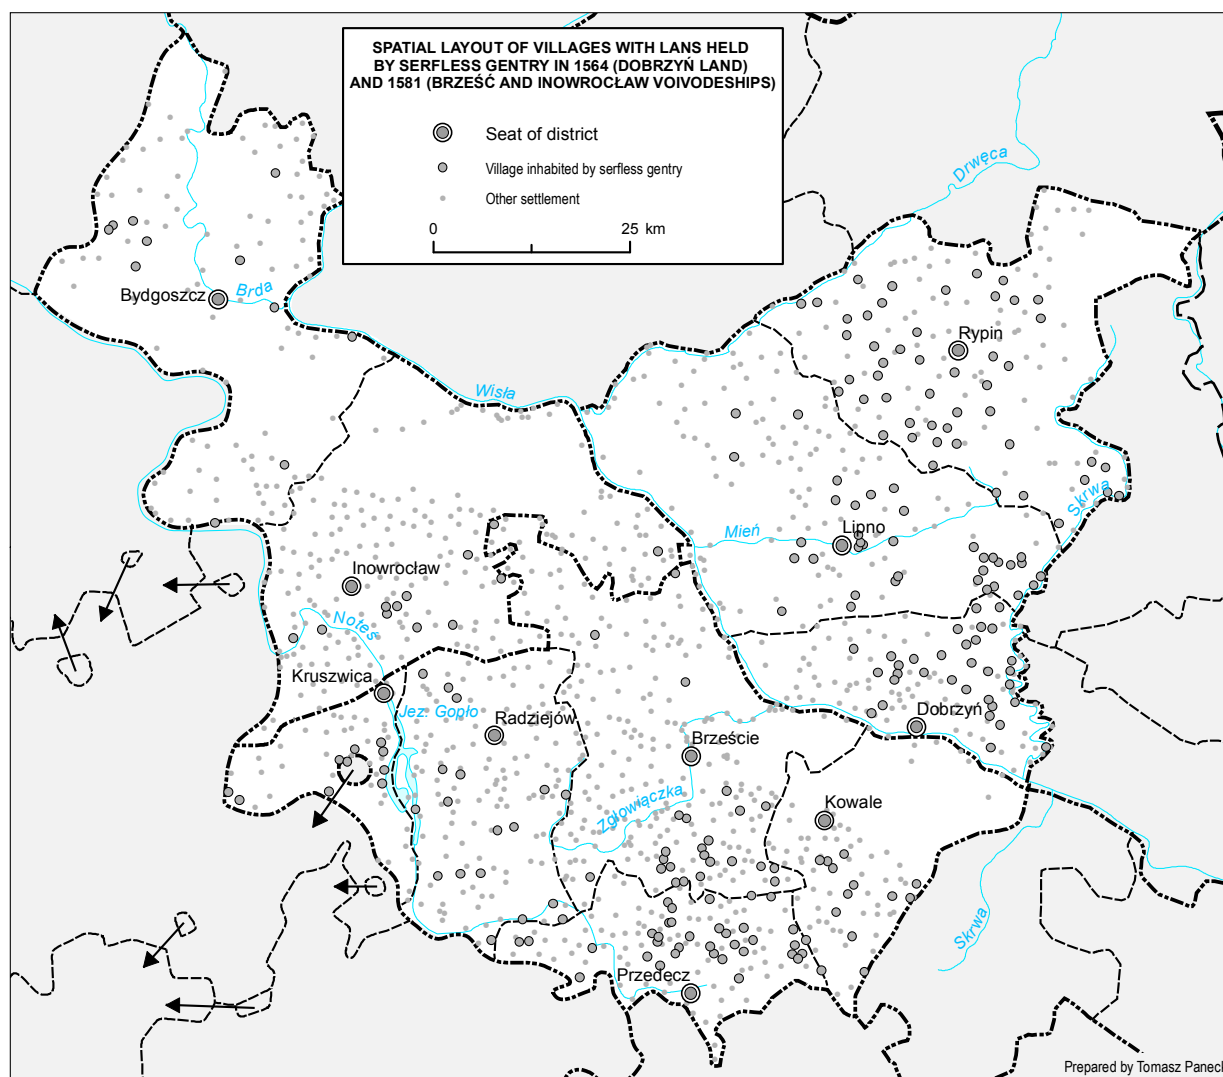

Table 2. Number of villages held by serfless gentry

District	Number of villages	Percentage share in overall settlements in district	Percentage share in overall nobility settlements in district
Brześć Voivodeship (1581)			
Brześć	29	11	16
Kowal	14	18	25
Kruszwica	10	17	29
Przedecz	42	34	43
Radziejów	16	11	16
Total	111	16	23
Inowrocław Voivodeship (1581)			
Bydgoszcz	12	10	17
Inowrocław	13	6	10
Total	25	7	12
Cuyavia			
Total	136	13	20
Dobrzyń land (1564)			
Dobrzyń (district)	35	32	36
Lipno	38	26	35
Rypin	50	38	43
Total	123	32	38
Cuyavia and Dobrzyń land			
Total	259	18	26

In Cuyavia, the highest concentration of serfless gentry farms was identified in the southern part of Brześć Voivodeship: in Przedecz district (highest population) and Kowal district, and in the southern part of Brześć district. It seems that the presence of serfless gentry villages in this very part of Poland may be seen as the continuation of a similar phenomenon observed in Łęczyca Voivodeship (clearly present in Orłowo district neighbouring on Rawa Voivodeship, but also discernible in the northern part of Łęczyca district neighbouring on Przedecz district).¹³² In 1581, a serfless gentry farm could be found in every third settlement in Przedecz district (34%). Taking into consideration settlements owned only by nobility, this percentage rises to 43%. In Brześć Voivodeship, such villages were less frequent in Kruszwica and Radziejów districts, mainly near Gopło. As Kruszwica district had a low settlement count in general, villages with serfless gentry farms held the second largest share in Brześć Voivodeship, followed by Przedecz, on a par with Kowal district. These 10 registered villages accounted for 17% of all settlements in the district, and corresponded to 29% of settlements held in whole or in part by nobility.¹³³ Serfless taxpayers were recorded in 29 villages of Brześć district. Nonetheless, this made up only 11% of all settlements in the district and 16% of noble-held settlements in that administrative unit. One could sporadically come across serfless gentry in Inowrocław Voivodeship, with the largest

¹³² *Map of Landed Property in Sieradz and Łęczyca Voivodeships*, comp. A. Dunin-Wąsowiczowa, [in:] AHP Sieradz, part 1: *Maps, plans*, no. 4; K. Chłapowski, A. Dunin-Wąsowiczowa, *Ownership affiliation of settlements*, [in:] AHP Sieradz, in this edition III.3.3.5. The property of farm gentry in Łęczyca Voivodeship has been discussed in detail in: K. Boroda, *Geografia gospodarstwa Królestwa Polskiego*, pp. 212–227.

¹³³ Other opinion in: Guldon, Kujawy, p. 44, who wrote that farm gentry played the least significant role *i.a.* in Kruszwica district. Although in nominal values the village count was only 10, the share of farm gentry in the settlements of Kruszwica district was higher.

Map 2. Spatial layout of villages with lans held by serfless gentry in 1564 (Dobrzyń land) and 1581 (Brześć and Inowrocław Voivodeships)

Own elaboration based on: ASK I 30, ff. 290r–352r, 574r–577r, 582r–583v, 589r–593r, 602v–604r, 608r–609r (1581); ASK I 50, ff. 659r–694v (1564).

concentration east of Inowrocław and in the western part of Bydgoszcz district which neighboured on Nakło district of Kalisz Voivodeship. This ‘high concentration’, however, boiled down to clusters of five to six villages. In the analysed area, the percentage share of villages with serfless gentry farms in all settlements was lowest in Inowrocław district (6%). Bydgoszcz district exhibited an identical ratio of villages with serfless gentry farms to all settlements as Brześć district, that is the district with the lowest share of such settlements in Brześć Voivodeship. Nevertheless, were only nobility settlements taken into account, this share would amount to 17% for this district, and 10% for Inowrocław district – which is the lowest value among all districts of Cuyavia.

The figures for villages with serfless gentry farms were definitely higher for Dobrzyń land. The only area where such property was not identified was the westernmost tip of Dobrzyń land, occupied by relatively large villages belonging to Bobrowniki Gord Starosty and the set of Ciechocinek property held by Włocławek bishops. The highest density of villages with serfless gentry was in the east of Dobrzyń land, at the border with Płock Voivodeship, especially in Dobrzyń and Lipno districts. These territories should be analysed in conjunction with the eastern part of Płock Voivodeship, mainly Płock and Sierpc districts,¹³⁴

¹³⁴ K. Boroda, *Geografia gospodarcza Królestwa Polskiego*, pp. 228–241.

as a large cluster of villages with serfless gentry. Serfless gentry settlements were also present in the central belt of Dobrzyń land, which stretched from Kretki Duże (Kretki Wielkie) and Kretki Małe and Radziki Duże (Radziki) and Radziki Małe (Rypin district) through less densely populated areas around Lipno and Skępe (Skąpe) (Lipno district), to practically Dobrzyń-upon-Vistula (Dobrzyń; Dobrzyń district). However, their density was lower when compared to the eastern part of Dobrzyń land. Both values – the number of villages with serfless gentry farms and their percentage share in total settlements within districts and in nobility settlements – were higher in Dobrzyń land than in the voivodeships of Cuyavia, with the exclusion of Przedecz district. In terms of the ratio of serfless gentry villages to all settlements in a given district, Lipno district had the lowest share (26%). In Dobrzyń district, a serfless gentry farm existed in every third village (32%). Rypin district exhibited the highest share of 38%. When juxtaposed with all nobility settlements, these values increase from 35% in Lipno district, through 36% in Dobrzyń and Lipno district, to 43% in Rypin district. This last area had the highest rate of villages with serfless gentry to all nobility villages across the entire analysed area.¹³⁵

Taking the above values into consideration, the figures for voivodeships run as follows: in Brześć Voivodeship, serfless gentry villages constituted 16% of all settlements and 23% of all noble-held settlements; in Inowrocław Voivodeship – 7% of all settlements and 12% of all nobility settlements; and in Dobrzyń land, serfless gentry farms were present in every third village (32%), and their share in all noble-held villages (38%) was even slightly higher. Thus, as at 1581 we identified a total of 136 villages with serfless gentry farms in the two voivodeships of Cuyavia, which accounted for 13% of all settlements in Brześć and Inowrocław Voivodeships, and 20% of all noble-held settlements in this area. Overall, villages with serfless gentry farms constituted 18% of all settlements and 26% of all nobility settlements in Cuyavia and Dobrzyń land.

Partial gentry

Partial gentry, *i.e.* representatives of the nobility who owned only part of a village, were also numerous in the analysed area. It follows from 1564–1565 Dobrzyń land tax registers that, of the 324 noble-held settlements, 98 had only one owner or only one taxpayer. Statistically, this means that nearly every third (30.2%) of nobility settlements was the property of a single owner, while the remaining 69.8% was held by either partial or farm gentry.

In the second half of the sixteenth century, partial gentry was present in both districts of Inowrocław Voivodeship, and in Brześć Voivodeship.

Larger landowners

In the Cuyavia and Dobrzyń land volume, we decided on discussing larger estates held by the nobility. Starting with the AHP volume on Sandomierz Voivodeship, we have presented larger noble-held property in the areas analysed. In the said volume, we define ‘larger landowners’ as individuals who owned at least 10 villages and/or at least 50 serf lans.¹³⁶ A different understanding of this term was adopted for Cracow, Poznań and Kalisz Voivodeships, namely that of an individual who owned at least 30 lans and paid tax on at least 30 lans.¹³⁷ The same threshold applies to this volume.¹³⁸

¹³⁵ Guldon, Dobrzyń, pp. 28–29, presents data on the ratio of serfless gentry lans to total nobility (expressed in per cent): 15.2% in Lipno district, 19.2% in Dobrzyń district and 25.7% in Rypin district, and in total this ratio amounted to 21% for Dobrzyń land.

¹³⁶ A. Dunin-Wąsowiczowa, *Map of Landed Property*, [in:] AHP Sandomierz, in this edition III.3.3b.2.

¹³⁷ W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Cracow, in this edition III.3.3.1; idem, *Ownership affiliation of settlements*, [in:] AHP Greater Poland, in this edition III.3.3.4. K. Boroda *Geografia gospodarcza Królestwa Polskiego*, pp. 150–151 developed the following classification of nobility who held more than 30 lans: 30–40 lans – wealthy nobility, 40–60 lans – very wealthy nobility or lower magnate stratus, 60 or more lans – magnates.

¹³⁸ Guldon, Dobrzyń, p. 28, enumerated nobility holdings of more than 15 lans situated in Dobrzyń land.

The wealth of a given landowner can only be gauged by the number of lans held, not the number of owned settlements.¹³⁹

Still, we encountered a severe difficulty when attempting to achieve this goal by identifying nobility property within a possibly convergent time span for all three parts of the analysed lands. The complication arose from the fact that more precise information on owners in particular voivodeships and in Dobrzyń land come from different periods.¹⁴⁰ In the case of Inowrocław Voivodeship, we adopted registers from the early 1580s (1581–1583) as the basis for our analysis. We selected these sources since they provide the most accurate records on owners (taxpayers) of settlements.

Regrettably, the source information provided by Brześć Voivodeship registers for the same period is not satisfactory. In practice, 1580s Brześć registers recorded owners or payers solely when a village was divided into parts.¹⁴¹ The bulk of such information on Brześć Voivodeship can be found in 1557 and 1567 registers. We decided to map nobility property on the basis of the 1557 – not the 1567 – Brześć Voivodeship tax register for the reason set out below. In 1557, owners (or payers) were listed next to 268 nobility settlements, out of 474.5 nobility settlements in total. This corresponds to 56% of all nobility settlements and settlements owned in part by a representative of a different social estate which we identified to have existed in this voivodeship in the second half of the sixteenth century. The 1567 register provides such data only for 177 (37%) settlements.¹⁴² Opting for the larger dataset, we chose to recreate nobility ownership in Brześć Voivodeship as at 1557, even though this tax register is not free from certain shortcomings. A major deficiency is that this register generally recorded lower amounts of taxed lans than the registers drafted between the 1560s and the 1580s. What is more, in instances where a village was divided into parts held by two different noblemen, the register usually states the total number of lans in a given village. Therefore, aware of its weaknesses, we adopted the assumption that the lan number entered into the register should be divided by the number of part owners mentioned in the source.¹⁴³ While 1560s materials on Dobrzyń land and 1580s records on Inowrocław Voivodeship enabled producing a relatively legible analysis of the above issue, the 1557 Brześć Voivodeship registers did not facilitate this task in the least. Quite often, the tax collectors entered different owners or payers for 1557 and 1567. What is more, we frequently discovered that a village stated to have a single owner or taxpayer in 1557 had been divided between more holders in the course of the decade. We also came across cases where a village was not mentioned in 1557, but appeared in 1567. The reverse also happened, albeit was more seldom.

The absence of any extant 1580s tax registers severely hampered analysis of nobility ownership in Dobrzyń land. In an attempt to overcome this hurdle, we availed ourselves of the information provided by two tax registers drafted in 1564 and 1565. These sources contain complete details on ownership, as they recorded the surnames of owners and payers (mainly of tax on royal property) from the vast majority of settlements.¹⁴⁴

Owing to these difficulties, we attempted to consult subject literature as well, and sought out publications on the property of selected families who had ties with Cuyavia and Dobrzyń land. These,

¹³⁹ Obviously, the selection of criteria for evaluating a property's real value is broader than that: W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Sandomierz, in this edition III.3.3a.2; K. Boroda, *Geografia gospodarcza Królestwa Polskiego*, pp. 136–139.

¹⁴⁰ See also J. Dumanowski, *Hrabiowie na Lubrańcu*, p. 23.

¹⁴¹ This was standard practice in the first half of the sixteenth century, and was also employed in the 1567 Płock Voivodeship tax register; K. Boroda, *Geografia gospodarcza Królestwa Polskiego*, pp. 71, 144. The authors of previous AHP volumes, e.g. on Sandomierz and Sieradz, also identified instances where information on settlement owners (taxpayers) was not provided. Authors of the latter volume abandoned any attempts to analyse larger nobility property in this voivodeship; W. Pałucki, *Ownership affiliation of settlements*, [in:] AHP Sandomierz, in this edition III.3.3a.2; K. Chłapowski, A. Dunin-Wąsowiczowa, *Ownership affiliation of settlements*, [in:] AHP Sieradz, in this edition III.3.3.5; see also K. Boroda, *Geografia gospodarcza Królestwa Polskiego*, p. 142.

¹⁴² Different opinion in: J. Dumanowski, *Hrabiowie na Lubrańcu*, p. 23. This author mentioned that the 1557–1566 [sic!] Brześć Voivodeship tax registers published by A. Pawiński 'did not allow for determining the surnames of owners of 87 property units (villages and parts of villages), which corresponds to ca. 11% of all analysed holdings' (ibidem, p. 24). In our volume, it proved impossible to identify the owners of 128 noble-held settlements in Brześć Voivodeship, mainly mill and demesne settlements.

¹⁴³ K. Boroda, *Geografia gospodarcza Królestwa Polskiego*, p. 149 adopted a similar assumption when analysing ownership of serfless gentry parts on the basis of information obtained from the 1567 Płock Voivodeship tax register.

¹⁴⁴ In general, the sources failed to provide information on owners of mill settlements.

however, generally relied on the tax registers edited by Adolf Pawiński, the materials compiled by Maksymilian Borucki,¹⁴⁵ and the information presented by Zenon Guldon in his two books on settlement in the analysed regions in the second half of the sixteenth century, and seldom delved into materials from noble court books. Nonetheless, we had to approach such publications with caution.¹⁴⁶ Since owner surnames were not listed alongside payments made for each town, we were forced to resort to subject literature to determine the owners of noble-held towns for each voivodeship in the analysed periods.

Based on the number of lans listed as taxed in the 1557 Brześć Voivodeship register, the property of two individuals should be classed as large nobility property: Erazm Kretkowski (one town, six villages and one village part with 49 lans, one mill settlement) and Łukasz Lubieński (one town, five villages and two village parts with 35 lans).¹⁴⁷ However, the lans held by Erazm Kretkowski calculated on the basis of the 1557 tax register also belonged to Lubraniec Fee Tail settlements, which had been placed under Erazm Kretkowski's supervision and administration until Wawrzyniec Lubraniec came of age.¹⁴⁸ Thus, even though tax registers portray Erazm Kretkowski as a larger landowner, we are not of the same mind, as he was not the direct owner of all lans listed.¹⁴⁹ At the time, Erazm Kretkowski owned the following settlements in Dobrzyń land: Płonne, Płonko (Płonne Małe), Kretki Duże (Kretki Wielkie), Rusinowo, Rętwiny and Dzierzno (Dzieżno) (all in Rypin district). He also held Pызdry Gord Starosty.¹⁵⁰ These possessions would probably have sufficed to class Erazm Kretkowski as a large landowner in that period, but we do not have 1557 data on Dobrzyń land, and large landowners should not be identified by extrapolating information from registers drafted a few years later. It is worth mentioning that this 1557 source ascribes 26 serf lans to Kruszwica Castellan Stanisław Siewierski, owner or payer of tax for seven whole villages and one village part. Despite this high settlement count, for Cuyavia at least, the low number of held lans prevented him from being added to our list of large landowners.

Our list of the great landowners of Brześć Voivodeship differs notably from that presented by Zenon Guldon. Guldon indicated six noblemen (Łukasz Lubieński, Jan Lubstowski, Mikołaj Sokołowski, Stanisław Siewierski, Erazm Kretkowski, and Andrzej Serocki – all were to hold more than 40 lans), and one family (Lubieniecki), which he classed as nobility.¹⁵¹ It is highly likely that Zenon Guldon based this list on the Brześć Voivodeship tax registers published by Adolf Pawiński. The 1557 tax register lists Mikołaj Sokołowski as the owner of five villages¹⁵² with a total surface of 21.5 taxable lans. The owner or taxpayer surname is missing in the 1567 register for these very villages, and the number of taxable lans was much higher (we mentioned this shortcoming above). The contamination of facts caused by Pawiński's editing of the source thus led to basing the identification of certain

¹⁴⁵ M. Borucki, *Ziemia kujawska*, list of landowners in Cuyavia therein, pp. 140–176, yet this list is also based mainly on tax registers.

¹⁴⁶ For example, T. Sławiński mentioned that 1557–1567 Brześć Voivodeship tax registers did not record payers of the tax on most villages held by Andrzej and Grzegorz Kretkowski at the time; idem, *Materiały do dziejów własności ziemskiej Kretkowskich*, p. 262. However, an analysis of Brześć Voivodeship tax registers for the above years revealed that such information could be identified for some of these villages, e.g. the villages of Andrzej Kretkowski enumerated by the author: Andrzej was listed as the owner of Brzyszewo, Osiecz Wielki and Pyszkowo (Piskowo) (Przedecz district). The specified number of 25 settled lans in these three settlements does not correspond to the data provided by tax registers, which recorded that in 1557 tax was paid only for 9.5 lans in these settlements.

¹⁴⁷ In the biogram of Łukasz Lubieński, A. Boniecki writes that Lubieński was also heir to Kąty and Żorawice (Żorawice) (both in Kowal district), and Łękny (Łakno, Przedecz district). In 1577, the son of Lubieński, Marcin, was recorded as heir to Żorawice (Żorawice); A. Boniecki, A. Reiski, *Herbarz polski*, vol. 15, Warsaw 1912, p. 49.

¹⁴⁸ The events leading to the appointment of an administrator for Lubraniec estates have been described in: T. Sławiński, *Kretkowsy i ich dzieje od połowy XIV wieku*, Warsaw–Skrzeszew 2011, pp. 115–116.

¹⁴⁹ P. Bokota i P. Nowakowski, *Lubraniec – zespół pałacowy*, p. 233 expressed a different opinion by stating that '[t]his form of administering part of the fee tail [by Erazm Kretkowski – M.S.] resembled the right of ownership; Kretkowski was granted the right to collect income from the administered property'.

¹⁵⁰ T. Sławiński, *Kretkowsy i ich dzieje*, p. 125.

¹⁵¹ Guldon, *Kujawy*, p. 44.

¹⁵² These were Bartłomiejowice, Chocień, Krzykosz (Brześć district), Rzeżewo Małe (Rzeżewo; Kowal district) and Stypino (Przedecz district). J. Dumanowski, *Hrabiowie na Lubrańcu*, p. 28 stated that Mikołaj Sokołowski's property amounted to seven villages in whole. This could have been caused by the fact that Z. Guldon provided only the initials, not the full names of the noblemen he listed as owners of noble-held settlements. If our hypothesis proves correct, that will mean Dumanowski was right about the number of villages (seven), but did not reveal the whole truth about their ownership: in the case of five villages, M. Sokołowski indeed stood for Mikołaj Sokołowski, but two of those villages were the property of Marcin Sokołowski.

property complexes as large on erroneous premises. Tax registers, the main source type employed for AHP purposes, do not suffice to determine whether the villages listed in 1557 as Mikołaj Sokołowski's property were in fact in his possession also in 1567. Similarly, Guldon based his calculations on 1557 ownership data and calculated the number of lans held by Łukasz Lubieński in 1567 to be twice and a half higher than our result (86.5 lans, while our result for 1557 is 35 lans).

The estates of the two larger landowners in Inowrocław Voivodeship were relatively modest in size. Małgorzata Służewska enjoyed the estates she inherited after her husband, Brześć Voivode Jan Służewski, died at the start of 1580.¹⁵³ Regrettably, the tax registers kept for Brześć Voivodeship and Dobrzyń land do not suffice to infer precise information on holdings situated in other parts of the analysed territory. We know that in 1557 Jan Służewski was the owner of Wólne Dolne (Wolne) village (Brześć district),¹⁵⁴ and at the time of his death, in 1580, held the part of Skepe (Skąpe) Town pledged to him in 1571 by Zofia Kościelecka, wife of Cracow Castellan Sebastian Mielecki.¹⁵⁵ In 1584, Piotr Potulicki took over the estates left by Służewski.¹⁵⁶ We arrived at the number of 47 serf lans by using the data on villages held by Służewski's wife; we did not include the 23 town lans for which Służew burghers had paid tax in 1581.¹⁵⁷ Another large landowner was Mikołaj Trzebieński, who held 40 lans, yet no significant position in the Polish State.

The major part of estates which we classed as large nobility property was situated in Dobrzyń land. What was characteristic of this region was that anything more than five villages and one village part sufficed to acquire the status of largest landowner. Such was the settlement tally of Chełmno Chamberlain Michał Działyński, who paid the tax on these villages consisting of 61 lans in total.¹⁵⁸ Only Brześć Voivode Grzegorz Kretkowski outdistanced Działyński with 71 lans in two whole villages and two village parts. Michał's brother Paweł Działyński, who served as Słońsk Castellan in 1564, is connected with some peculiar ownership cases – he owned one village, Działyń (Lipno district), where he paid tax on 37 lans.¹⁵⁹ An even more interesting case was that of Szczęsny Sokołowski *vel* Żelski, who in 1564 owned two large parts of the villages: Dulsko and Sokołowo (Rypin district).¹⁶⁰

Property in other parts of the Crown

The noble families who owned villages in Cuyavia and Dobrzyń land also held property in other parts of Poland: Greater Poland, and the voivodeships of Łęczyca, Rawa, and Płock.¹⁶¹ These families stemmed from Cuyavian and Dobrzyń land nobility, but also from immigrant nobility with family seats in other regions of the Crown.¹⁶² Unfortunately, we cannot give an accurate account of the property

¹⁵³ H. Kowalska, *Służewski (Służowski) Jan h. Sulima (zm. 1580)*, [in:] PSB, vol. 39, pp. 164–165.

¹⁵⁴ ASK I 29, f. 236r. S. Leitgeber, *Potuliccy*, Londyn 1990, pp. 65–66 wrote that in 1593 Piotr Potulicki gifted *i.a.* half of Wólne Dolne (Wolne) village, as well as Kijewo and Kopanie, to his son Stanisław. This could indicate that Jan Służewski held this village until his very death.

¹⁵⁵ *Materiały do dziejów rolnictwa w Polsce w XVI i XVII wieku, poprzedzone wiadomością o życiu i pismach Jana Ostroroga, wojewody poznańskiego*, comp. W. Chomętowski, Warsaw 1876, pp. 98–99.

¹⁵⁶ S. Leitgeber, *Potuliccy*, pp. 42, 62.

¹⁵⁷ ASK I 50, f. 688r. Z. Guldon erroneously identified Małgorzata Służewska as Małgorzata Brańska (Guldon, Kujawy, p. 47), and thus slightly overestimated the lan count. Having included Branno (Inowrocław district) in the Służew estates, he arrived at the result of 54 lans. This mistake reverberated across other publications (e.g. S. Paczkowski, *Służewo na Kujawach wschodnich. Zarys dziejów*, Włocławek 1999, p. 45). Małgorzata Służewska was the daughter of Chełmno Voivode Stanisław Kostka (H. Kowalska, *Służewski (Służowski) Jan*, p. 160), thus she did not hail from Branno in Inowrocław district.

¹⁵⁸ Guldon, Dobrzyń, p. 28, stated that Michał Działyński's estate comprised 85 lans. The 24 lans in Obrowo and Zębówiec (Zębówiec) villages were held not by Michał, but by Mikołaj Działyński, hence the erroneous calculation (A. Pawiński takes this information into account: P. Wielkopolska, vol. 1, p. 322).

¹⁵⁹ ASK I 30, ff. 340r (1564), 428r (1565 – 36 lans here).

¹⁶⁰ *Ibidem*, ff. 315v, 316r. Barbara Sudraska was mentioned as the owner of the other part of Dulsko, but in the following year Dulsko was ascribed to Szczęsny Sokołowski *vel* Żelski (*ibidem*, f. 368r.). It is probable that Barbara was the wife of Szczęsny; see A. Biliński, *Szlachta ziemi dobrzyńskiej*, p. 162 mentioned that Szczęsny Żelski, who later used the surname Sokołowski, was married to Barbara Dolska of Dolsk.

¹⁶¹ J. Dumanowski, *Hrabiowie na Lubrańcu*, pp. 21–22.

¹⁶² *Idem*, *Zmiany składu szlacheckiej elity władzy z terenu Kujaw w XVI–XVIII wieku*, [in:] *Elity mieszczańskie i szlacheckie Prus Królewskich i Kujaw w XIV–XVIII wieku*, ed. J. Staszewski, Toruń 1995, p. 96. T. Sławiński, *Uwagi o magnaterii*

held by specific individuals across Polish voivodeships, since the data available does not cover the same periods for all three parts of the analysed territory.

Across Kalisz Voivodeship (in Kazimierz Biskupi, Kleczew, Ruchocin and Gosławice) and Mazovia (Kutno), in various periods and under different titles (ownership, pledge, *Wiederkauf*), property was held by the Kretkowski family,¹⁶³ while the Latałski and Krotoski families¹⁶⁴ owned estates mainly in the western tips of Inowrocław Voivodeship. At the end of his life (ca. 1578), Inowrocław Voivode Jan Krotoski held property not only near Pakość in Inowrocław district and near Barcin in Bydgoszcz district, but also in Kalisz Voivodeship (in Gniezno, Kcynia, Nakło districts, *i.a.* Barcin Town and part of Łobżenica) and Poznań Voivodeship (Kiełbowo Town in Kościan district).¹⁶⁵ Some of these estates, situated in Gniezno and Kcynia districts alongside Inowrocław Voivodeship, were bequeathed to his son Jan, Inowrocław Castellan. The case of Jan is quite interesting, as he never paid tax on more than 30 lans for the villages recorded as his exclusive property in Inowrocław Voivodeship registers. And yet the estates he amassed in Greater Poland covered 85.5 lans in that period (early 1580s).¹⁶⁶ Therefore, although we placed Jan Krotowski's property on the map of large property in Greater Poland, this nobleman is not present on the maps of great landed property in Cuyavia and Dobrzyń land.¹⁶⁷ According to the traces identified in sources on Jan Sierakowski's career (1544–1589), his property was located in Brześć, Kruszwica and Radziejów districts of Brześć Voivodeship, as well as in Konin district of Kalisz Voivodeship, Łęczyca district of Łęczyca Voivodeship and in Bełz Voivodeship.¹⁶⁸ Upon his death, some of his estates were inherited by Stanisław Sierakowski, who also held property in Cuyavia and Dobrzyń land, as well as in Kalisz and Łęczyca Voivodeships. The inheritance was split between Stanisław and his brothers in 1597.¹⁶⁹ The Witosławski family owned smaller holdings on the border shared by Bydgoszcz and Nakło districts of Kalisz Voivodeship, but in the analysed period (1580s) the family split into owners of lans in Greater Poland and those who were heirs to land in Cuyavia.¹⁷⁰ After the death of Jan Służewski, in 1584 his property was incorporated into the vast estates of Piotr Potulicki in Greater Poland and the voivodeships of Płock and Rawa.¹⁷¹

Peaks and valleys

Neither line of the Kościelecki family succeeded in regaining the position it enjoyed at the close of the fifteenth century and the first half of the sixteenth century, despite the fact that its representatives still held certain higher land offices and Bydgoszcz Gord Starosty. The second half of the sixteenth century, however, witnessed fragmentation of property among successive family members and the decline of the Kościelecki family after 1600.¹⁷² The property left by Inowrocław Voivode Jan Krotoski

kujawskiej 1447–1569, PH, vol. 76, 1985, no. 2, p. 198 drew attention to the fact that wealthy noblemen from other Polish regions obtained senatorial offices in Cuyavia, which was to ease them into their careers as politicians and state officials, while Cuyavian noblemen aspiring to attain higher State positions sought office elsewhere.

¹⁶³ T. Sławiński, *Materiały do dziejów własności ziemskiej Kretkowskich*, pp. 272–280.

¹⁶⁴ J. Dumanowski, *Hrabiowie na Lubrańcu*, p. 22.

¹⁶⁶ K. Chłapowski, *Ownership affiliation of settlements*, [in:] AHP Greater Poland, in this edition III.3.3.4 (where small differences in the number of lans held by Jan Krotoski arise).

¹⁶⁷ This decision could lead to a follow-up on the discussion whether it is justified to limit property analyses to selected units of State administration; see e.g. J. Dumanowski, *Hrabiowie na Lubrańcu*, p. 22.

¹⁶⁸ We based this information on the following publications: K. Chłapowski, *Sierakowski Jan h. Ogończyk (ok. 1498–1589)*, [in:] PSB, vol. 37, pp. 264–265; E. Opaliński, *Rodziny wielkosenatorskie*, p. 171. The tax register data found in sources portray Jan Sierakowski as the owner of just two entire villages: Racięcina (Radziejów district) and Sokolnik (Kruszwica district) and part of Polanowice (Kruszwica district), with 7,5 taxable lans in total.

¹⁶⁹ A. Kamiński, *Sierakowski Stanisław z Bogusławic h. Ogończyk (1534–1596)*, [in:] PSB, vol. 37, p. 301; E. Opaliński, *Rodziny wielkosenatorskie*, pp. 171–172.

¹⁷⁰ E. Opaliński, *Rodziny wielkosenatorskie*, pp. 182–183.

was passed on to his sons, but the last of that line, Kalisz Castellan Andrzej Krotoski, failed to enlarge family estates.¹⁷³

Some noble families with property in Cuyavia and Dobrzyń land increased their wealth in the analysed period, though this was rather attained by individuals who at the time took on roles other than that of owner. After 1557, it was mainly Brześć Voivode Grzegorz Kretkowski who expanded the property held by his family. This role was then assumed by his sons, who had their ups and downs, but eventually let the situation of their family deteriorate in the first half of the seventeenth century – when compared to the previous century – and collapse around the mid-seventeenth century.¹⁷⁴ The property of Dąbski family, who held only a few fragmented villages in the early mid-sixteenth century, was systematically enlarged by Andrzej Dąbski since the 1570s.¹⁷⁵ The Sierakowski family followed the same course of action (see above).¹⁷⁶ It was sometimes the case, however, that a high number of lans did not elevate a family to a higher position. Attempts at upward mobility were thwarted by *i.a.* successive generations splitting into numerous branches, as happened in the Działyński family.¹⁷⁷

Use of royal property

Royal property grants were pivotal to the hierarchy of nobility property. Use of royal property was an important source of large income, and being granted the right to hold a gord starosty had a major effect on one's financial and social standing.¹⁷⁸ In the second half of the sixteenth century, Bydgoszcz Gord Starosty was still held by three members of the Kościelecki family, who were also the leaseholders of Gniewków Non-gord Starosty.¹⁷⁹ Jan Służewski served as Konin and Międzyrzecz Starosta and was entered into registers as the owner of several villages in Inowrocław Gord Starosty.¹⁸⁰ Inowrocław Castellan Jan Krotoski performed very briefly the function of Rogoźno Starosta, whose role was certified right before his death in early 1583.¹⁸¹ Apart from owning property of his own, Chelmino Chamberlain Michał Działyński derived benefits from the villages of Bobrowniki Gord Starosty: the tax paid on those settlements in 1565 covered 36 serf lans.¹⁸² Alongside generating income from Działyń, Paweł Działyński also earned income from Nieszawa Non-gord Gord Starosty.¹⁸³ Until the end of the eighteenth century, the royal part of Noć Town was held by the Sokołowski family, who also administered the part of Noć Town held by nobility.¹⁸⁴ Losing the right to use royal property can be construed as a symptom of family decline – the Kretkowski family ceased to hold Rogoźno Gord Starosty in the second half of the sixteenth century, and successive family members failed at making a spectacular career in amassing property¹⁸⁵ despite their important position in Cuyavia and Dobrzyń land.

¹⁸⁴ LWVK 1564, part 1, p. LIV; LWVK 1789, part 3, pp. 198–200. Of the noblemen active in the second half of the sixteenth century, it is worth mentioning Rogoźno starosta Krzysztof Sokołowski (d. 1580/1581), who garnered merit as steward general of royal property in Greater Poland and Cuyavia (since 1559), then as inspector in Ruthenia, and who was awarded the office of Kruszewica Wojski (Tribune) in 1567; G. Rutkowska, *Sokolowski (Warzymowski) Krzysztof z Warzymowa h. Pomian (zm. 1580/1)*, [in:] PSB, vol. 40, pp. 154–155.

¹⁸⁵ T. Sławiński, *Uwagi o magnaterii*, pp. 200–201.

For Cuyavia and Dobrzyń land, holding extensive royal property and leases did not always ensure that the whole family enjoyed a high position. Although Mikołaj Trzebuchowski served as Brześć Starosta and Cracow Burgrave at the start of the second half of the sixteenth century, he failed at elevating the status of the Trzebuchowski family.¹⁸⁶ Sometimes starosta's leases of royal property were granted to members of lesser families who had stronger ties with Cuyavia (Grabski, Tolibowski and Borucki families), but this did not translate into those families' higher political ranking.¹⁸⁷

Let us observe, however, that some gord starosties in Cuyavia and Dobrzyń land fell into the hands of members of families hailing from beyond the analysed region, who held few settlements in this area.¹⁸⁸ Some gord starosties remained in the hands of noble families for extended periods; e.g. the Oporowski family held Kruszwica Gord Starosty under the rule of Ladislaus Jagiello and Casimir IV Jagiellon,¹⁸⁹ and Gębice¹⁹⁰ throughout the sixteenth century, while Radziejów Gord Starosty was placed in pledge to the benefit of the Leszczyński family at the beginning of the sixteenth century.¹⁹¹

Table 3. Estates held by Catholic Church institutions in late sixteenth century

For statistical purposes, we treated village parts as halves and added them up. This table provides information on all existing settlements (towns, villages, farm and utility settlements, castles). We did not include vacant settlements.

ANNEX I ROYAL ESTATES IN THE LATE SIXTEENTH CENTURY

If the contemporary name differs significantly from the sixteenth-century designation, we give the present-day name in brackets.

Brześć Gord Starosty Brześć Voivodeship

Brześć district

Brzeście town, part of Chwaliboż (Falborz) Village, Chwalibożek (Falborek) Demesne, Gołębino Demesne, Kłobia, Kłobski Mill, Kroszyno (Kruszyn), Lekarzewice, Mnichowice (Miechowice Duże), Piaseczny Mill (Piaski), part of Sokołowo Village, part of Stare Miasto (Stary Brześć) Village, Wilcze Gardło Mill, part of Wola Rządka Village

¹⁹² The sizeable discrepancy between our findings and those of Z. Guldon concerning the number of Church settlements in Bydgoszcz district arises from the fact that Z. Guldon included the vacant settlements belonging to Koronowo Cystercians in his calculations (Guldon, Kujawy, p. 45).

Kowal Gord Starosty
Brześć Voivodeship

Brześć district

Łagiewniki

Kowal district

Diabełek Mill, Duninowo (Nowy Duninów), Grodzkie Demesne, Kowale Town, Nowa Wieś, Pełczyce, Piączny Mill, Rachutowo (Rakutowo), Słapa (Człapa) Mill, Środny (Środon), Wisłka Wielka (Wistka Królewska), Wołodrza (Zawada-Piaski) (Dobrzyń Vogt's Office)

Kruszwica Gord Starosty
Brześć Voivodeship

Kruszwica district

Chrosna, Dzierżązna, Gębice Town, Gościejewo Demesne, Grodztwo, Kruszwica Town, part of Łagiewniki Village, Łąkomierowice (Lachmirowice), Sierakowy, part of Włostowo Village

Radziejów district

Kokoszyce

Przedecz Gord Starosty
Brześć Voivodeship

Kowal district

Dąb (Dąb Wielki), Dobiegniew, Ruda ironworks

Przedecz district

Dziwie, Jarkuszewo Demesne, Głogowa, Kamieniec (Kamionka), Kłokocino (Kłokoczyn), Kobyła Jata, Kubłowo, Łążek, Nowa Wieś Demesne, Przedecz Town, Rogoźno, Rybna, Święta Katarzyna Demesne, Zalesie, Zbójno, Żarowo (Małe Żarowo)

Radziejów Gord Starosty
Brześć Voivodeship

Brześć district

ANNEX V
COMMENTARY TO MAP: LOCATION OF LANDED PROPERTY
IN CUYAVIA AND DOBRZYŃ LAND IN THE SECOND HALF
OF THE SIXTEENTH CENTURY

The 1:500,000 map of landed property depicts the spatial division into land held by owners falling within five categories: the king, institutions of the Catholic Church, towns, large noble landowners, and middle and petty nobility. Settlement points situated on the border of different ownership categories indicated mixed ownership.

We have placed the names of towns serving as property seats on the map. Other settlements we marked by means of points. Numbers denote sets of royal property, Church institutions, towns, and larger noble landowners.

The map reflects the property of the king, Catholic Church institutions and towns as at the end of the sixteenth century. As for nobility property, the source base permitted presenting ownership as at 1557 in Brześć Voivodeship, 1564 in Dobrzyń land, and 1581 in Inowrocław Voivodeship (see: commentary section on nobility property).

Defining property boundaries in less densely settled areas proved difficult. We used a geographic information system (GIS) to measure the surface of land held by different categories of owners. The high percentage shares of royal property in overall area surface, especially in Inowrocław Voivodeship, resulted from the fact that large and practically uninhabited woodlands formed part of the king's property in the second half of the sixteenth century. In Inowrocław Voivodeship, Bydgoszcz Gord Starosty, Dybów Gord Starosty and Gniewków Non-gord Starosty encompassed vast areas on the banks of Vistula River and near Bydgoszcz which were occupied by primeval forests. The forests of Kowal district were also divided between settlements belonging to Kowal and Przedecz Gord Starosty. Similarly, the bulk of Bobrowniki Gord Starosty situated in Dobrzyń land was occupied by the primeval woodlands of the right bank of Vistula River.

Some Catholic Church institutions found themselves in a similar situation. This applied first and foremost to the estates of Włocławek Bishopric situated in the Włocławek set of property to the west and south of Włocławek within Brześć district and in the Raciążek set of property on the Vistula in Inowrocław district; the estates of Włocławek Chapter situated in the north-eastern part of Brześć district, and the estates of Koronowo Cistercians situated in the northern part of Bydgoszcz district, and – to a lesser degree – the estates of Strzelno Norbertines (Premonstratensians), whose villages in the western part of Kruszwica district were located in relatively extensive forest complexes.

We drew distinct boundaries between the property based near Inowrocław, held by Inowrocław burghers.

We outlined units of property by generating Thiessen (Voronoi) polygons around each settlement (point) and combining (aggregating) the areas belonging to the same owner. We then matched these areas with the already defined borders of districts and voivodeships. It ought to be borne in mind that this method helps create a certain model of reality, and yields approximate measurements of surface area.

(2021)

Translated by Katarzyna Bartkowiak

III.3.3.7 MAZOVIA

Władysław Pałucki

The ownership affiliation of settlements, displayed on the map of Mazovia with diversified colours, emphasized the most characteristic feature of the settlement in the historical territory of Mazovia: the high concentration of rural settlements in general, and in particular of those, which belonged to the nobility. Outside of Mazovia a similar situation occurred only partially in the neighbouring areas. The density of settlement in Mazovia, twice as high as in Lesser Poland and Greater Poland¹ – especially visible in Płock and Mazovian Voivodeships – made it difficult to mark all those settlement clusters on the map with a fixed scale and was closely related to the social, demographic and ownership structure in Mazovia.

Many factors contributed to this situation, and the political autonomy of the local dukes from the Piast dynasty, which lasted almost throughout the entire Middle Ages period, and then – until the reign of Stephen Báthory – legal and governmental autonomy of the largest of the three territorial units, the Duchy and later the Voivodeship of Mazovia, had their part in the spatial arrangement and social diversity of landed property.

The ownership affiliation of settlements on the map of Mazovia, as on the map of Płock Voivodeship and Cracow Voivodeship, was presented in a traditional way, with dots. Naturally, the obtained depiction of ownership relations is simplified, as it does not show the shapes, size and territorial range of landed property of each ownership category. Unfortunately, apart from some technical difficulties, there were several obstacles – described at length in another commentary² – which prevented us from a layer indication of landed property: the longer chronological period (the second half of the sixteenth century), a time of serious shifts and changes in all ownership groups, significant fragmentation of the nobility's landed property, and finally – the lack of sources, particularly for the latter ownership category, which would allow us to determine the borders of the estates, keys of property, individual villages or parts of mixed villages (where parts belonged to the king, the Church and the nobility).

In Mazovia, the division of landed property into three main categories (as towns owned only three villages) – royal, Church and the nobility – was similar to other provinces of the Crown. The king owned the lowest number of settlements (6.5%), the Church had a little more (9%), and the vast majority of the settlements belonged to the nobility (84.5%). However, in Mazovia, the landed estates of the nobles, according to the traditional division into two groups: demesne and farm gentry (described below), show quite a different, opposite proportion in the structure of this ownership category, in contrast to other provinces of the Crown. This means that in Mazovia the poor gentry, which includes farm gentry and also the so-called partial gentry, was more numerous than the other group, called here 'demesne gentry'.

Mixed property (royal – Church or nobility, or Church – nobility) was marked in the way accepted for the entire AHP series on the map of Lublin Voivodeship. Namely, two halves of a circle (the symbol for a settlement) were filled with two respective colours. This did not, obviously, represent the actual size of particular parts belonging to a given category in this settlement. Yet the scale of the map and applied technique forbade any other solution. As such, in a case where a settlement belonged to different

¹ P. Mazowsze, introduction, pp. 20–21.

² W. Pałucki, *Na atlasowym gościńcu*, KHKM, vol. 15, 1967, no. 2, pp. 387–388.

owners or institutions from the same ownership category, e.g. in Church estates – to different bishoprics, chapters, monasteries and presbyteries, in the estates of the nobility – large, average and petty property, the estates were marked with a single, basic colour of a category. Towns were marked with a uniform colour for each ownership category, although in many of them, particularly those located in royal estates, there were houses, squares, and gardens, which belonged to the Church or the nobility.³ Still, we decided that even if it had been possible to overcome technical difficulties, the depiction of ownership relations would be incorrect given the constant changes or shifts, and would do more harm than good. Each settlement from the royal, Church or town category marked on the map was listed in the List of Settlements, so that it would be easier to find, especially given the blurred shape or colour (polygraph faults), particularly possible in case of mixed ownership. As such, all the remaining settlements, whose ownership category was not specified, belonged to the nobility.

Regarding **royal estates** in Mazovia, it must be stated that at the time, when these estates – formerly belonging to the dukes – were seized by the royal administration (in 1462, 1476, 1495, 1526) their condition was rather poor, as they had shrunk already during the ducal period as a result of their alienation (donations, pledges, sales) to the nobility and the Church. The reasons – incessant search for the money of the impoverished dukes, who had many sons in the fifteenth century and had to provide for themselves and their courts. In terms of the alienation of estates, after 1440 the dukes of Mazovia were not so limited as the kings of Poland.⁴

However, the subsequent members of the Jagiellon dynasty, despite the aforesaid limitations, often matched the Mazovian dukes in this respect. As a result, after the successive incorporations some estates – bestowed or pledged – were no longer in the hands of the Crown. Although some of these estates – bestowed or pledged in perpetuity, in Rawa and Płock voivodeships after the 1504 statute of King Alexander,⁵ and in Mazovian Voivodeship after 1529⁶ – returned to the Crown either effectively or formally (as the execution process following the enforcement proceedings in 1563–1570 continued until the 1650s), several of the more precious landed estates were irretrievably lost to the State.⁷

Royal estates were presented on the map of Mazovia not according to the state traditionally accepted in the literature on the basis of A. Pawiński's *Źródła Dziejowe*, or the inspections from 1564/65. The picture obtained would be incomplete, it would exclude these leases and individual villages, which were omitted in the first inspection only because of the old sums (which were to return to the treasury after four life-annuities), or because of the new ones, incurred by the treasury in 1565.⁸ According to the 1567 constitution the latter were also excluded from the inspection and the quarter tax.⁹ Naturally, such estates did not cease to belong to the king, and were marked on the map with the colour assigned to this type of ownership, even though many of them returned to the Crown only in the first half of the seventeenth century. In such cases we followed the rule justly accepted by the publishers of the

³ Apart from large towns, like Warsaw or Płock, Warka could set an example here – according to the 1564 inspection, for the 369 houses belonging to the king, 133 belonged to the nobility or the Church. The original document of the inspection is missing. The information about Warka see M. Baliński, T. Lipiński, *Starożytna Polska*, vol. 1, Warsaw 1885, p. 436; see also SGKP, vol. 12, p. 955.

⁴ J. Senkowski, *Skarbowość Mazowska od końca XIV wieku do 1526 r.*, Warsaw 1965, pp. 45–47.

⁵ VL, vol. 2, f. 612.

⁶ Date (1526) found in LM 1565, part I, p. XXVII, footnote 133 – is incorrect. The 1563 constitution (VL, t. 2, f. 619) clearly states that in case of Mazovia, the date after which all bestowed or mortgaged estates had to be inspected was the date of the Mazovian statute. During the Warsaw *Sejm* in 1564, Sigismund Augustus ordered this date be used in the 'revision of letters' concerning the royal estates in Mazovia 'after the date confirming the statute of the entire Duchy of Mazovia 1529, from which year and date of the privilege of the Duchy of Mazovia His Majesty the King orders execution be commenced, according to the previous constitution of Piotrków' (AGAD, the so-called Lithuanian Metrica, IV B, 7, f. 188).

⁷ These estates, appropriated by the family Wolski since the times of king John Albert, included the royal estates Oryszew – Miedniewice along with vast woodland area separated from Miedniewska and Wiskicka Forest in Sochaczew starosty. This transaction was not only 'dubious' according to the inspectors (LR XVII, p. 34; LR XVI, pp. 79–82) but also probably most harmful to the Treasury and by all means unacceptable. It was exceptional also because **royal estates** (Bronowo lease in Wizna land) **were exchanged for royal estates** (Oryszew – Miedniewice), 'which never belonged to the nobility' – like it was stated with much indignation by the inspectors in 1616, who added that the estates were usurped by the nobles (LR XVII, p. 221). The transaction was confirmed in 1567 (AGAD, Oddz. XVIII, no. 9, f. 105).

⁸ VL, vol. 2, f. 699, vol. *Nabycie pieniędzy*.

⁹ Possessors of leased estates, burdened with the 'new sums' were obliged to pay a half of the quarter tax (*dimidia*) in 1601. VL, vol. 2, f. 1496, vol. *Lustracje*.

volume of Płock, which states that the ownership affiliation is determined by the legal basis, namely the title deed, and not the temporary lease.¹⁰

The estates adjudged by royal verdicts to the treasury in the 1563–1570 proceedings were also treated as royal property on the map of Mazovia.¹¹ On the other hand, the estates finally adjudged to the nobility as a hereditary tenure, like Orzyszów – Miedniewice in Sochaczew land of Rawa Voivodeship, were omitted, even though they were described in the inspections.¹² Finally, over a dozen royal settlements, newly-founded in the second half of the sixteenth century, were also included in this group, just like those demesnes, mills and ores, which had their own names and were located outside towns and villages – provided we were able to localize them.

The lists showing the territorial layout of royal estates in each voivodeship of Mazovia were prepared by the publishers of the first inspection of these estates.¹³ We are therefore excused from repeating their localization, especially as each volume of the inspection was supplemented with a legible reference map at a scale of 1:500,000. This being the case, we provide here only the differences in the numbers of settlements in royal estates according to Pawiński, the publishers of the first inspection and our research. Obviously, these significant differences, both in absolute numbers of settlements belonging to the king, and in percentage of all Mazovian settlements, were obtained from an expanded source basis.¹⁴

¹⁰ WP, p. 44.

¹¹ Much complicated, and quite unusual, was the case of the vindication of Nieporęt estates in Wieliszewo parish, Warsaw district. Since 1484 the estates remained in the hands of the family Prażmowski (LM 1565, part I, p. XXIX), as a result of a certain transaction with Bolesław V, the Duke of Mazovia (1539 the transaction was called a purchase – MRPS IV/1, no. 6442). However, during the so-called ‘revision of letters’ in 1564 ‘the inspectors applied for the estates to be returned to the king, and the case was commenced per commissionem in Zakroczym, but no one supported it’. The king therefore ordered the matter be investigated ‘and then he will do what should be done’ (AGAD, the so-called Lithuanian Metrica, IV B, 7, f. 88). Apparently however, the Prażmowski family managed to postpone the case and it remained unsolved till the death of Sigismund August. It was not resumed during the reign of Henry of Valois, nor in Stephen Báthory’s times. Only Sigismund III turned his attention to Nieporęt and its values as a summer residence, after he moved the capital of the State to Warsaw, perhaps because of the redevelopment of the castle and the need to find a substitute residence. The court case of Nieporęt was not conducted without the objections of the family Prażmowski and the ‘entire Mazovian Voivodeship’ they incited (*Diariusze sejmowe 1597 r., w dodatkach akta sejmikowe i inne odnoszące się do tego Sejmu*, pub. E. Barwiński, Cracow 1907 [Scriptores Rerum Polonicarum, vol. 20], p. 361, par. 8). For many years the family continued to file complaints (since 1597 to 1616 subsequent petitions to the *sejmik* of Czersk concerning returning Nieporęt to Prażmowski family, or providing them with an equivalent for the estates. The Collection of Documents IH PAN in Cracow, Lauda czerskie, Teki Pawińskiego VI, pp. 28, 32, 35, 41, 52, 56). The king, however, did not retract from the vindication, and the redeveloped Nieporęt became the favourite residence of the Vasa dynasty until 1658, in which year John Casimir gave Nieporęt to the Jesuits of Warsaw. S. Załęski, *Jezuici w Polsce*, vol. 4, part 2, Cracow 1904, p. 855, footnote 1. Still, it is unclear how the estate was administered after the death of Sigismund III, what is perhaps related to the resolutions of the 1632 constitution (VL, vol. 3, f. 109, vol. *Opatrzanie Najjaśniejszego potomstwa naszego*) and to what degree the complaints of the family Prażmowski were satisfied. We can only add here that in 1642 princess Ann Catherine gave up a part of her heritage in Nieporęt, which she obtained *post Serenisimos olim Parentes suos* to her brother John Casimir (MK, 186, f. 136f). About the family Prażmowski, we know that still in 1647 the petitions to the *sejmik* (dietine) of Czersk contained the pretensions of the family Prażmowski to Nieporęt, asking the delegates to apply to the king for merciful solution. Teki Pawińskiego, p. 181.

¹² In Mazovian Voivodeship: the village Srebrowo in Wizna land inspected in 1565 was given in perpetuity to Marcin Mezeński, the subiudex of the land of Zambrów by virtue of the 1570 decree (MK 106, ff. 166–169). One half of the village Janczewo, also located in Wizna land, belonged to the family Janczewski; the decree of 1564 gave the entire village to Janczewski, the subiudex of Wizna (AGAD, the so-called Lithuanian Metrica, IV N, no. 7, f. 182). By virtue of the 1570 decree of Sigismund August the village Zblich in Ciechanów land remained in possession of Stanisław Bogacki, the castellan of Ciechanów (LM XVII, p. 76). In Rawa Voivodeship, except for the estates (see footnote 7) Oryszew – Miedniewice, the village Drzewicz, mentioned in LR XVI (map) was given to the nobility already in the fifteenth century (MK 40, f. 527). During the revision of letters in 1564 it was found that the village Głuchów situated near Rawa was exchanged with for the meadows of Sebastian Pukiński, which lay near the castle in Rawa (AGAD, the so-called Lithuanian Metrica, IV B, 7, f. 178). The transaction was unequal, as the meadows were worth 100 złoty, and the village – 600 złoty (AGAD, Dep. XVIII, 9, f. 105). The appointed inspector, Kacper Piotrowski, the canon priest from Warsaw, died. In 1569 the king appointed Łukasz Brzozowski as the new inspector (MK 106, f. 133). Probably this revision was not finalized during Sigismund August’s life, because finally the matter was settled by the 1626 decree of the *Sejm* in favour of the family Pukiński (LR XVII, p. 137).

a) Together with parts of villages.

Tables 2 and 3 show that at the close of the sixteenth century the royal estates in Mazovia were in better condition than the publishers of the first inspection from 1564/65 thought, and in much better state than in 1578, as it would appear from Pawiński's calculations: he listed 46 towns and 262 villages (4.6%) belonging to the king.

So, in Płock Voivodeship, where the estates of the monarch were the less numerous, the king owned four towns, 14 villages and three parts of villages.¹⁵ In Rawa Voivodeship: 10 towns, 73 villages and eight parts of villages.¹⁶ In Mazovian Voivodeship: 36 towns, 282 villages and six parts of villages.¹⁷ Altogether, in the three voivodeships of Mazovia at the close of the sixteenth century the Crown owned 50 towns,¹⁸ 369 villages and 17 parts in villages, which belonged to more than one owner: the king and the nobility, or the king and the Church.¹⁹ These villages, with some rare exceptions, had originally

¹⁵ Dzierżążnia, Powsino in Płock district – villages belonging to the king and the nobles, Chelpowo – to the king and the Church.

¹⁶ Czerwona Niwa, Czerwonka, Kaski Młyńska Wieś in Sochaczew district, Korzeń, Rozlazłowo in Gąbin district, and Węgrzynowice in Rawa district – villages belonging to the king and the nobility, Komorów and Regnów in Biała district – to the king and the Church.

¹⁷ Leszno and Więżowo in Przasnysz district, Perzanowo in Różan district, Siemień and Stara Łomża in Łomża district – villages of the king and the nobility, Łomżyca in Łomża district – of the king and the Church.

¹⁸ In the list P. Mazowsze, pp. 27–39, which contains 45 royal towns, Budziszewice and Wiskitki in Rawa Voivodeship were omitted, and Mszczonów – a royal estate, was listed as private property.

¹⁹ Around 25 mill settlements were excluded from the tables and the map. They were situated, perhaps, far from other settlements and we were unable to localize them.

been a property of the state: first of the dukes, and then of the king. The parts, which belonged either to the nobility, or the clergy, were usually small, measuring several lans.

Contrary to recent belief,²⁰ the highest share of royal estates in the total number of estates (9.4) in a given voivodeship occurred not in Mazovian Voivodeship, but in Rawa Voivodeship. Such state of affairs is probably, at least in part, a result of the fact that Rawa Voivodeship had been incorporated into the Crown several decades earlier, whereas in other Mazovian duchies the process of the alienation of royal estates did not encounter, unlike in the Crown, major legal obstacles.

In the largest duchy and the last to be incorporated, the later Mazovian Voivodeship, the estates of the king were quite numerous, constituting 7.1% of all settlements. This relatively high percentage of towns and villages belonging to the king in Mazovian Voivodeship should be considered owing to the following circumstances: 1) the annulment of the endowments of Duchess Anna from between 1526–1529,²¹ 2) the far-sighted actions of bishop Piotr Gamrat of Kaminiec, who was the general governor and commissioner of the royal estates in Mazovia between 1532 and 1538,²² 3) the energetic economic activity of queen Bona and her chosen governors and economists in Mazovian estates, who on behalf of king Sigismund Augustus supervised royal property after the queen left Poland in 1556,²³ and finally 3) Anna Jagiellon, who equalled her mother in economic resourcefulness after being granted her dower rights to Mazovian and Podlasiian estates.²⁴

The reference measures accepted here – the number of settlements of the king and their percentages in relation to the remaining ownership categories – have only relative value. They fail to reflect the real worth of the king's property (the size of the estate, the number of cultivated lands, the labour and means of production). However, it should be emphasized that the subject of this study is not landed property in general, but its affiliation and spatial arrangement shown on the map in a traditional way. Without further, laborious research, the results of which would still remain questionable, this is the only solution permitted by present source basis.

The actual number of settlements in Mazovia, which lay in the estates of the Crown in the second half of the sixteenth century, straightens out the incorrect opinion, well-grounded in science by Pawiński, as though the share of these settlements in the total number of Mazovian settlements, i.e. 4.6% and 5% with towns, was the lowest in Mazovia among all voivodeships of the Crown.²⁵ Although this relation, which was 6.5% in Mazovia, was lower than the average – 9% for Lesser Poland, underrated by Pawiński,²⁶ it still matched Greater Poland in its expanded borders in terms of the number of settlements per 1 km², and surpassed²⁷ Greater Poland when compared to its narrower meaning (the Voivodeships of Poznań and Kalisz), roughly equivalent in size to Mazovia.²⁸ Also, the economic value of Mazovian royal estates – contrary to Pawiński²⁹ – matched other provinces of the Crown, or even

²⁰ Noticed by the publishers of LM 1565, part I, p. XVI.

²¹ During the revision of letters in 1564 the family Druzbicz showed a decree from the Mazovian Metrica issued by duchess Ann of Mazovia concerning the tribute of 10 Chełmno lans in the village Chojny 'and His Majesty the King later stated that duchess Anna could not have given that', AGAD, the so-called Lithuanian Metrica IV, B, 7, f. 190. J. Senkowski rightly claims, *Skarbowość Mazowska*, p. 11, that the short reign of duchess Anna was only a period of robbery of estates and income of the dukes.

²² Piotr Gamrat with his vice-delegate rev. Wojsławski ruthlessly vindicated the so-called 'additions' from the Mazovian nobles from the estates neighbouring royal property. These were arable grounds or forests, sometimes covering over a dozen Chełmno lans above the bestowed area, appropriated by the nobles. See W. Smoleński, *Szkice z dziejów szlachty mazowieckiej*, Cracow 1908, p. 70. Gamrat's measurements of royal estates were cited during the revision of the privileges to utilize royal estates in 1564, AGAD, the so-called Lithuanian Metrica, IV B 7, f. 186; 8, f. 365; AGAD, Dep. XVIII, 9, f. 86.

²³ About the dower estates of Queen Bona in Mazovia see A. Sucheni-Grabowska, *Odbudowa domeny królewskiej w Polsce 1504–1548*, Warsaw 1967, pp. 144–152.

²⁴ The list of dower estates of Ann Jagiellon from 1581, see *Teki Pawińskiego*, vol. 4, Warsaw 1900, pp. 4–10.

²⁵ P. Mazowsze, p. 52.

²⁶ Ibidem; P. Małoposka, p. 65.

²⁷ Greater Poland (Voivodeships of Poznań and Kalisz) – 32,393 km², Mazovia – 33,493 km².

²⁸ J. Senkowski, *Skarbowość Mazowska*, p. 20, footnote 23, provides an average 3.7% for Mazovia. This calculation, based on the number of royal villages accepted by J. Rutkowski (*Badania nad podziałem dochodów w Polsce w czasach nowożytnych*, Cracow 1938) is too low. It does not take into consideration the royal estates which were not inspected in 1565. According to K.J. Hładylowicz (*Zmiany w rozwoju osadnictwa w Wielkopolsce od XIV do XIX wieku*, Lwów 1932, p. 83) between 1580 and 1600 there were 3,573 settlements in Greater Poland, of which 210, that is 5.8% belonged to the king – according to our calculations based on LWWK 1564.

²⁹ P. Mazowsze, p. 49.

surpassed them significantly in this respect. Already J. Rutkowski, who accepted only 269 royal villages in Mazovia, calculated the income from these estates to some 100,000 złoty in the second half of the sixteenth century,³⁰ which is double the income of the six voivodeships in Greater Poland (50.00), and 20% more than the income from the wealthy royal estates in Royal Prussia.³¹ Moreover, in terms of cultivated area and land development, Mazovian settlements almost doubled the remaining ownership categories – Church and nobility, which were equivalent in size. This situation was also visible in the number of cultivated lans, almost twice as high in royal settlements in comparison to those of the Church, and in the case of the property of the nobility – almost three times as high.³² It should also be added that the value of Mazovian royal estates did not depend solely on the number of villages. They were also superior to Church estates and particularly to the estates of the nobility, with an equivalent number of settlements, in terms of spatial and economical qualities (huge forests in Rawa Voivodeship and Mazovian Voivodeship). Apart from the valuable natural resources (wood), the conditions in many royal estates of eastern and southern Mazovia (Rawa Voivodeship) permitted the foundation of new villages, as in Ostrołęka starosta's district in the seventeenth and eighteenth centuries.³³

Church property in Mazovia consisted of landed property bestowed in perpetuity on bishoprics, chapters, monasteries and presbyteries. In general, these estates were situated in areas subject to the jurisdiction of their dioceses. The town of Biała, located in Rawa Voivodeship and belonging to the bishops of Chełm by virtue of the bestowal of King Alexander,³⁴ was an exception, just like Włoszczanowo, a village in Gostynin district, which belonged to the chapter in Włocławek.³⁵ Other exceptions from this rule concerned medieval monastery endowments, where some villages (as monastery foundations were independent from the basic Church organization) were extraterritorial already at the time of the endowment, or later, for purely economic reasons (significant distance from a monastery), were temporarily or permanently exchanged for other estates. For these reasons, four villages in the second half of the sixteenth century, property of the family Wolski in Raszyniec parish, Warsaw district (Falenty key of property) fell in the hands of the bishops of Włocławek.³⁶ Another instance, when a noble family exchanged their estates with the Church, occurred at the close of the sixteenth century near the capital city of Warsaw, namely: part of Praga, which was still a village at the time, became property of the bishopric in Kamieniec, in Kresy ('Eastern Borderlands of Poland'),³⁷ and this state of affairs survived until 1791.³⁸

³⁰ J. Rutkowski, *Badania nad podziałem dochodów*, p. 271 (table).

³¹ J. Rutkowski (ibidem) mentions an estimated sum of 81,092 złoty, while the official summary of the income from royal estates in Royal Prussia in 1565 – 84,406 złoty; *Lustracja województw malborskiego i chełmińskiego 1570 r.*, pub. S. Hoszowski, Gdańsk 1962, p. 159.

³² WP, p. 66; A. Wawrzyńczyk, *Gospodarstwo chłopskie na Mazowszu w XVI i na początku XVII wieku*, Warsaw 1962, p. 12.

³³ Noticed by A. Pawiński (P. Mazowsze, p. 49, footnote 1), who stated that the starosta's district of Ostrołęka, in the sixteenth century still in its infancy, in the seventeenth and eighteenth century expanded in Myszyniecka Forest to 67 royal villages.

³⁴ MRPS IV, no. 4017, 1521; in 1561 'Biała episcopatus Chełm' (ASK I 27, f. 281). The bishops of Chełm probably encountered serious difficulties in administering and obtaining benefices from this town, given the distance that separated the town from the capital in Chełm and the bishop's residence in Skierbieszewo near Chełm. This could be confirmed by court cases, for instance in 1557, issued by bishop Jakub Uchański and the chapter against a landholder Jan Chrzęszczewski about damages and wounding the burghers (T. Wierzbowski, *Jakub Uchański arcybiskup gnieźnieński 1502–1581*, Warsaw 1895 (Uchańsciana, vol. 5), p. 147). Given these conditions, the message included in the questionnaire „Opisanie historyczne i topograficzno-statystyczne miasta Białej w województwie Mazowieckim roku pańskiego 1820” (AGAD, Oddz. KRSW, ks. 457, no. 65) becomes clear, it said that in 1600 the town Biała was given to Aleksander Jarzyna in exchange for his hereditary village Chełm near Cracow.

³⁵ L. Żytkowicz, *Studia nad gospodarstwem wiejskim w dobrach kościelnych XVI w.*, Warsaw 1962, p. 237, footnote 263.

³⁶ *Inwentarz dóbr stołowych biskupstwa włocławskiego z 1582*, pub. L. Żytkowicz, Toruń 1953, pp. VIII–IX, footnote 12. According to this author (*Inwentarz dóbr stołowych biskupstwa włocławskiego z XVII w.*, Toruń 1957, p. VII) in the seventeenth century Falenty no longer belonged to the bishop. Anyway, in 1617 these properties were mentioned as Church properties (MK 162, f. 287).

³⁷ In 1583 the Great Chancellor of the Crown, Jan Zamoyski, bought one part of Praga from Jan Praski (MK 127, f. 235). In the same year Zamoyski exchanged this part with Marcin Białobrzezski the bishop of Kamieniec for Kaczmarzów estates in Podole (MK, 129, f. 401). *Archiwum Jana Zamoyskiego*, vol. 1, pub. W. Sobieski, Warsaw 1904, no. 64; F.M. Sobieszczański, *Rys historyczno-statystyczny... m. Warszawy*, Warsaw 1848, p. 41–42. See also below.

³⁸ T. Wyderkowa, *Z dziejów Pragi do 1658 roku*, „Rocznik Warszawski”, vol. 5, 1964, p. 23.

In Mazovia, the network of the estates belonging to the main Church institutions formed already in the eleventh–thirteenth centuries, mostly from lands donated to the Church by the dukes. The network survived almost intact until the wane of the Nobles' Commonwealth.³⁹ The characteristic feature of this network was the distance that separated most of the estates from their diocese centres (cathedral churches, chapters). Sometimes the estates were scattered or formed enclaves (traces of later changes). Only the wealthy latifundium of Łowicz and Skierniewice, and 132 villages⁴⁰ belonging to the archbishops of Gniezno, constituted a dense, closed territorial complex (around 1,100 km²), situated mostly in the western part of Rawa Voivodeship, but entering Łęczyca Voivodeship, it almost reached Łowicz. Outside archdiocese borders, the archbishop of Gniezno owned also the key of Konary – five villages in Czersk archdeaconry, near the Pilica's estuary into the Vistula.⁴¹

The situation of the estates belonging to the bishopric of Płock, the richest bishopric in all Mazovia, was quite different. Apart from the key of Górzno in Dobrzyń archdeaconry,⁴² which belonged to the bishop's pantry, of all Mazovian estates in the hands of the bishops of Płock, who owned 5½ towns and 158 villages, only the town of Raciąż and 18 villages were located in Płock Voivodeship, and four in Rawa Voivodeship.⁴³ The remaining 4½ towns (Pułtusk, Wyszaków, Brok, Andrzejów and ½ of Czerwińsko) and 138 villages stretched in a broad belt in the valley of the Rivers Narew and Bug to the border between Mazovia and Podlasie, forming three main keys of property with centres in Pułtusk (in the fifteenth century, the majority of settlements in this key were bestowed on the collegiate church in Pułtusk⁴⁴), Wyszaków, and Brok by the Bug (the key of property of Złotoryja).

The estates of the bishops of Poznań (town of Stoczek and 33 villages) were scattered over Warsaw archdeaconry (before 1406: Czersk archdeaconry) in several keys of property, of which important ones were: Kozłowo Biskupie in Sochaczew district, Żbików in Błonie district, Sobienie Biskupie and Stoczek in Garwolin district, Wrociszewo in Warka district and Łaskarzewo (eight villages outside Mazovia, situated in Steżyca land in Sandomierz Voivodeship). Most of the estates belonging to the chapter of Płock (32 of 48 settlements) lay in its closest vicinity in Płock Voivodeship. The rest – in Mazovian Voivodeship (10) and in Rawa Voivodeship (seven).⁴⁵

The collegiate church of St. John in Warsaw found itself in a more favourable situation, as its estates (the town of Tarczyn and 28 villages) were all situated in Mazovian Voivodeship, in the districts of: Warsaw, Kamieniec, Tarczyn and Warka.

The estates of the few monasteries in Mazovia were larger, although irregularly located. The estates of the wealthiest abbey in Mazovia, namely the monastery of the Canons Regular in Czerwińsko (1/2 of town and 48 villages) formed two groups: the dense closer complex, and the further one, slightly scattered in the river basin of the downstream Bug and Narew. The second in terms of wealth – the

³⁹ The location of Church estates in Mazovia was based on the following sources and studies: Łaski LB vol. II; Ulanowski, *Visitationes*; idem, *Acta capitulorum Cracoviensis et Plocensis selecta (1458–1523)*, AKH, vol. 6, 1891; idem, *Acta capituli Plocensis ab an. 1544 ad 1576*, AKH, vol. 10, 1905; idem, *Materiały do dziejów kolegiaty pułtuskiej*, AKH, vol. 10; Knapiński, *Notaty; Taryfy 1789–1790*; Tables of property on detailed maps of Rawa, Płock and Mazovian Voivodeships by K. de Perthées from 1783–1792; Czaykowski; Inventory of the properties of Płock bishopric from 1650 (MS in the Archive of Płock Chapter, we used a copy borrowed by prof. dr. L. Żytkowicz); J. Łukaszewicz, *Krótki opis kościołów parafialnych w dawnej diecezji poznańskiej*, vol. 3, Poznań 1862; M. Rybus, *Kolegiata w Pułtusku i jej kapituła*, Łódź 1933; W. Sobisiak, *Rozwój latyfundiów biskupstwa poznańskiego w XVI–XVII wieku*, Poznań 1960; Nowowiejski; J. Topolski, *Rozwój latyfundiów arcybiskupstwa gnieźnieńskiego od XVI do XVIII wieku*, Poznań 1955; J. Karwasińska, *Szpital św. Ducha w Warszawie*, Warsaw 1938.

⁴⁰ This includes Janowice and Mysłaków in Bednary parish, which belonged to the collegiate of Łowicz.

⁴¹ The key of Konary (Konary, Las, Ostrów, Podgórzycze, Przelot) was transferred in the seventeenth century to the chapter of Gniezno. J. Topolski, *Rozwój latyfundiów*, pp. 108–109.

⁴² The key Górzno in Rypin district – 10 villages and the villages Biskupice and Czernikowo in Lipno district; Z Guldon, *Mapa ziemi dobrzyńskiej w drugiej połowie XVI w.*, Toruń 1967, pp. 38–39, 46–47.

⁴³ Piaski, Głusko parish in Sochaczew district; Popłacino and Pomocna in Radziwie parish, Gostynin district; Suchodół in Zakrzewo parish, Gąbin district.

⁴⁴ Further research would be required to determine, which villages were isolated from the estates of Płock bishoprics as bestowals of Pułtusk chapter in the sixteenth century, as there are serious discrepancies between the information provided by M. Rybus (*Kolegiata w Pułtusku*) and the source entries published by B. Ulanowski (*Acta capitulorum Cracoviensis ac Plocensis; Acta capitulorum Plocensis ab an. 1514 ad 1576*, AKH, vol. 10, 1915).

⁴⁵ In Rawa Voivodeship the chapter of Płock owned the following villages: Dąbrówka in Białotarsk parish, Góry and Górki in Ciechomice parish, Pieryszewo in Trąbki parish, Radziwie in Radziwie parish – all in Gostynin district, and Mistrzowice in Mistrzowice parish, Gąbin district.

Benedictine abbey in Płock (two towns: Przybyszewo and Wyszemierzyce in Mazovian Voivodeship and 23 villages)⁴⁶ or the monastery of the Norbertine Sisters in Płock (Bodzanów town and 22 villages) had each only three villages near their respective monasteries, the rest of their estates were scattered in the neighbouring Voivodeships: Mazovian and Rawa.

The collegiate church of St. Nicolas in Płock owned eight entire villages and one part of a village in Płock Voivodeship, and one village in Mazovian Voivodeship. The Dominican Sisters from Płock owned a part of a village in this voivodeship.⁴⁷ The hospital of the Holy Spirit by the church of St. Martin in Warsaw – founded in the past by the dukes – (later the Sisters of St. Martin in Warsaw) was also well-endowed, owning 14 villages in Garwolin district.⁴⁸ Another hospital, also an old ducal foundation, dedicated to the Holy Spirit in Rawa had a village Byszewice near Rawa.⁴⁹

Also, two abbeys situated outside Mazovia owned some of their estates in our voivodeship. These were the Benedictines from Lubin (their seat in Greater Poland) had a provostry in Jeźów (a town and five villages) in Rawa Voivodeship, and the Cistercians from Sulejów (their seat in Lesser Poland) – the town of Mogilnica and four villages (the key of Mogilnica) in the same voivodeship. Finally, when it comes to monastic orders, the Jesuits, brought to Mazovia by A. Noskowski, the bishop of Płock, and settled in Pułtusk, gained only two villages from the bishop's pantry before the end of the sixteenth century, namely: Bosewo⁵⁰ in Długosiodło parish in the district of Kamieniec, and Żabikowo⁵¹ in Somowo parish, Nur district.

The key of property of Sieluń (18 villages)⁵² should be counted among the feudal and ecclesiastical peculiarities, found elsewhere in Poland only in Cracow Voivodeship (the Duchy of Siewierz, property of the bishops of Cracow). The key belonged to the rectors (provosts) of the cathedral chapter of Płock in Pułtusk archdeaconry. The villages were inhabited by petty gentry, who remained under the jurisdiction of the provosts until 1791 (The Four-Year Sejm).⁵³

We should also mention the estates bestowed on individual parochial churches, in towns and villages (provostries). In Mazovia, unlike e.g. in Royal Prussia, these bestowals were rather modest (½ to two lans). Parochial churches endowed with one part of a village, or an entire village, constitute no more than 10% of all 477 Mazovian parishes (37 villages and nine parts of villages). Also, in over a dozen cases in the sixteenth century we encounter mixed property: royal-Church (three villages)⁵⁴ or nobility-Church (six villages).⁵⁵

Villages, where one part belonged to the Church, were isolated on the basis of precise source information – subsequent inspections, inventories, visitations – until the end of the eighteenth century, and tables showing Church estates included in Perthées's maps, which offered straightforward information, whether a part of a village was the property of the Church. Naturally, following the assumptions made already in LV, the parson's lans (so-called 'poświętne') were omitted. Such lans could be found

⁴⁶ The Benedictine abbey in Płock owned also a village Makówka in the district and land of Dobrzyń. Z Guldon, *Mapa ziemi dobrzyńskiej*, p. 30.

⁴⁷ In Chełpowo, Trzepowo parish, Płock district.

a) Together with the estates separated as an endowment of the Pułtusk chapter.

in almost every village, and they constituted an insignificant percentage of cultivated land in a given settlement.⁵⁶ Therefore, such villages were not included in the mixed ownership category.

In total, the Church owned in Mazovia not 15 towns and 485 villages recorded by Pawiński,⁵⁷ but 16 towns, 588 villages and 15 parts of villages, i.e. 9% of all Mazovian settlements. The 25% higher share of royal estates (Pawiński – 307, actual – 434 settlements) changes also the percentage relation of Church estates to Crown estates. Namely, the estates owned in Mazovia by the Church did not double the number of royal estates (8.7% to 6.5%) as Pawiński believed,⁵⁸ but exceeded their number by ⅓ (9% to 6.5%).

Landed property of the nobility formed the largest ownership group in Mazovia, just as in the whole country. However, it should be noted that in the structure of the entire rural population in Mazovia the share of the nobility was four or five times larger than in other provinces of the Crown. Without towns, the amount of Mazovian nobility exceeded 27% of all population of this province,⁵⁹

⁵⁶ For example, in a parochial village of Rybno in Gostynin district there were 17 ‘partes’, which belonged to the same number of owners (partial gentry). Also, there was an eighteenth part – ‘pars plebani’ (P. Mazowsze, p. 202). In total, the nobility owned over 14 lans. The size of the parson’s part was not given. Assuming it was one or two lans, this does not change the typically nobility-type kind of affiliation of Rybno village.

⁵⁷ P. Mazowsze (introduction, p. 37–39) omitted Biała town in Rawa Voivodeship, property of the bishop of Chełm.

⁵⁸ Ibidem, p. 56.

⁵⁹ According to W. Kula’s calculations (*Stan i potrzeby badań nad demografią historyczną dawnej Polski*, RDSG, vol. 14, 1951, p. 71), around 1578 – 27.2%, including demesne nobility – 5.5%, landless and farm gentry – 21.7%.

whereas the respective percentages were: 7.6% in Greater Poland, 6.4% in Lesser Poland (within the boundaries from before the Union of Lublin).⁶⁰

Two closely related phenomena can be observed in Mazovia. They are the result of the situation, which occurred in this area already during the ducal period and was later consolidated in terms of socioeconomics by the fact that the Jagiellon dynasty favoured the moderately rich and poor nobility, who usually had many children. Therefore, on the one hand in Mazovia there was no great latifundial type of property of the type that was common in Greater Poland, and particularly in Lesser Poland, and on the other – this ownership category was much fragmented here, to an extent which did not exist anywhere outside Mazovia (or its neighbouring lands: Dobrzyń, Łuków and Podlasie). Also, the concentration of petty, serfless, impoverished gentry, called farm gentry (21% of the entire rural population) was the highest here, especially in the north-eastern borderlands.⁶¹

A. Pawiński calculated⁶² that in Mazovia serfless gentry owned 34% of cultivated lans in this district, while in Greater Poland, for instance, only 5%. This enormous property fragmentation is visible in a very characteristic way in the nomenclature and dislocation of the settlements of petty gentry in Mazovia. Namely, new settlements of the members of the same family were being created around the main, mother settlement. These new villages were given a new, two-word name, consisting of the main name – the name of the mother village, and an additional name, usually taken from the nickname of the new owner of the village. Such villages were abundant in many districts of Mazovia, causing us many difficulties (described above) with marking these ‘bunches’ on our map. The collectors also faced many obstacles while making their tax registers, just like diocese inspectors. In 1599 one of them, not without surprise, had marked the village Gadamce (Przasnysz district, Krzynowłoga Wielka parish) with the following note: ‘eleven villages of Gadamce, each house a separate village’.⁶³

The historiography of the sixteenth–eighteenth centuries often noticed this demographic and ownership phenomenon. Since A. Pawiński’s times, his Mazowsze has been the only source basis for many a study, despite the chronologically limited and unchecked tax registers published inside.

As such, it should be noted that the general character of landed property, the property of the nobility included, described by Pawiński in his extensive introduction to the sixteenth volume of *Źródła Dziejowe* persisted in the literature on the subject. However, the numbers and conclusions based on his calculations require revision, as now they cannot be accepted unquestioningly.

We should begin with clarifying that the old indicator of a nobleman’s wealth – the number of villages he owned – has this fault, that no two villages were equal. Even disregarding the fact that in Mazovia the villages of the nobility were smaller than those of the Church or the Crown, there were not many nobles who owned entire villages. Dominant were the villages belonging to several, or even over a dozen owners, and farm gentry was the most common among them. The wealthier demesne gentry had parts of various size ($\frac{1}{2}$ to several lans) in several villages. As such, the newer studies assume a different basic criteria for their calculations: the number of lans owned by one owner.

This method, successfully implemented in AHP 1958 and MRP, could not have been applied for our map of Mazovia given the different (as we constantly keep reminding), longer and later chronological period (the wane of the sixteenth century), from which the basic sources, that is the tax registers, did not survive. The lack of this type of source was not the only difficulty we encountered. Even when the registers from the last decade of the sixteenth century did survive,⁶⁴ the number of cultivated lans belonging to one owner found in the registers should be treated with much caution, if only because since 1588 the subsequent tax collection universals ordered the collection be based on the bills from 1578.⁶⁵

⁶⁰ Ibidem.

⁶¹ See above footnote 59.

⁶² P. Mazowsze, introduction, pp. 22–29, 12,031 lans of farm gentry, 23,361 serf lans.

⁶³ Viz. Dekanatu przasnyskiego, f. 6, f. 234 (ADP). To this day nine villages comprise a mini settlement cluster called Gadamce, these are: Gadamiec Barany, G. Chrzczony, G. Jebienki, G. Jędrzyki, G. Miłocięta, G. Pieronie, G. Trojany, G. Weraki, G. Zawisze; see below the List of Settlements and *Spis miejscowości PRL*, Warsaw 1967, p. 273.

⁶⁴ The surviving registers from 1583 concern only Płock Voivodeship, Nur land and Warsaw land, from 1588 – Czersk land, from 1589 – Gostynin land, Czersk land, from 1590 – the poll tax register from Warsaw land, from 1599 – Warsaw land, Zakroczym land, Łomża land. The next surviving registers start from 1652 (only Warsaw land); I Gieysztorowa, *Mazowieckie akta skarbowe XV–XVII w.*, [in:] *Księga pamiątkowa 150-lecia Archiwum Głównego Akt Dawnych w Warszawie*, Warsaw 1958, p. 216 – table.

⁶⁵ ‘[...] according to the tax bills from 1578, but without the oath’ (VL, vol. 2, f. 246), see also I. Gieysztorowa, *Źródła i szacunki w badaniach osadnictwa i demografii Polski XVI i XVII w.*, KHKM, vol. 10, 1962, no. 3–4, pp. 581–582.

It is a fact long and well known that the general number of taxed cultivated lans remaining in the hands of the nobility was much higher than the number recorded in the registers, as since 1578,⁶⁶ and in fact since the wane of Sigismund Augustus's reign, the nobility – legally (demesne fields freed from taxation) and illegally (not declaring for taxation newly located towns and villages, or abandoned lans leased to serfs from other villages, or villages newly located after a fire) – paid lan tax not even on the basis of old bills, as it was practiced for years. Good tax years (1563–1565, the result of the 1563 reform⁶⁷) were followed by permanent decrease in the number of taxed lans.⁶⁸ This means that each year the nobles declared for taxation lower numbers of lans than they really owned. This reluctance to pay taxes inclined the nobility to many tricks, all aiming at paying the least possible sum.⁶⁹ Hence the varying remedies, utilized for years – these attestations of the veracity of documents and public declarations of the number of owned lans – which were meant to lower, if not prevent, the damages these 'tricks' did to the treasury.

Even if the control of the number of villages in Płock Voivodeship conducted by the publishers of AHP 1958 and based on the registers from other years, or other sources, failed to show major changes (only 8% in the number of settlements),⁷⁰ the case is completely different with the number of cultivated lans.⁷¹

At the close of the sixteenth century, the differences between the actual state and the state depicted in tax registers chosen on the basis of old bills must have been significant, as in these years the requests for a new measure and evaluation of taxed grounds were becoming more and more frequent. This is a long known fact, and the scholars claim that since the 'reliable'⁷² – according to Pawiński – collection from 1578, with each year we can observe a decreasing number of taxed lans.⁷³

This decrease – which began after the last tax reform of 1563, ordering the tax be collected not according to old bills, but on the basis of the contemporary number of taxed lans,⁷⁴ thoroughly checked and testified under oath – reached 10% on the average in 1590.⁷⁵ Until the end of the sixteenth century it probably reached 20%.

An attempt was made to determine the level of wealth of Mazovian nobility by dividing this ownership category into groups not according to the number of villages owned – as there were very few such owners in the sixteenth century Mazovia – but basing on the number of lans recorded in tax registers, a criterion which seemed the most appropriate to us. Still, such an attempt is only of relative value, depending not only on the source basis.

Further reservations concern the division of the nobility into two groups, following Pawiński, or in fact the contemporary fiscal terminology. This division distinguishes two tax groups: the wealthy, demesne nobility (according to the tax records: mansi nobilium possessionati,⁷⁶ mansorum possessorum) and the impoverished, farm gentry (ville nobilium colonos or cmetones non habentium, propriae culturae, mansi pauperum nobilium⁷⁷). The former had serfs, who worked in their lord's demesne, the latter

⁶⁶ The decrease in the number of taxed lans between 1578 and 1590, see P. Wielkopolska, pp. 72–79. The collection universal from 1578 still ordered land tax be paid according to 'quantitatem agrorum', VL, vol. 2, p. 191.

⁶⁷ W. Pałucki, *Reformy skarbowe sejmu egzekucyjnego 1563 r.*, [in:] *Studia historyczne. Księga Jubileuszowa z okazji 70 rocznicy urodzin prof. dr Stanisława Arnolda*, Warsaw 1965, pp. 101–113.

⁶⁸ A. Wyczański (*Studia nad folwarkiem szlacheckim w Polsce w latach 1500–1580*, Warsaw 1960, pp. 48–49) based on the table prepared for 88 villages from various voivodeships of the Crown and the number of serf lans in these villages, according to tax registers from 1536–1590, He determined that already in 1576–1580 the number of taxed lans had fallen about 12% (in comparison to the period between 1563 and 1565).

⁶⁹ K. Górka, *Przyczynek do krytyki rejestrów poborowych z XVI wieku*, SŻ, vol. 1, 1957, pp. 188–189, published a very interesting document entitled 'Egzorbitancje poborowe' in which the author, perhaps one of the collectors, provided 10 most common abuses of the nobility while preparing tax registers in Kalisz Voivodeship. The publisher rightly claims that the described phenomenon (p. 186) occurred in the whole country. The document was also independently used by A. Wyczański, *Studia nad folwarkiem szlacheckim*, p. 47, who claims that it probably came from 1580.

⁷⁰ WP, p. 14.

⁷¹ Ibidem, p. 27 it was stated that the comparison of tax registers and inventories proved that the registers always recorded a smaller arable area.

⁷² P. Wielkopolska, p. 32.

⁷³ This was already noticed by A. Pawiński during the publication of the surviving summary of tax registers for Greater Poland from 1590. P. Wielkopolska, p. 77.

⁷⁷ Ibidem, pp. 150, 180, 311.

had no serfs, and worked in the fields themselves. This is quite a convenient division, perhaps that is why it was accepted in the literature. Still, it remains a simplification utilized by the sixteenth century fiscal administration for their own purposes. The first group consisted also of a significant number of noblemen residing in parts of villages (hence the name – partial gentry), sometimes these parts were no larger than those owned by farm gentry. Naturally, there was not always a demesne – in its social and economic sense – in such small parts of villages, which were sometimes smaller than 1 lan, especially as these grounds were usually cultivated by hired hortulani, landless peasants, or the members of the owner's family. To put it briefly, it would be an oversimplification to regard everyone listed in tax registers under mansi nobilium possessionati as demesne noblemen, also because even contemporary collectors did not necessarily understand predium as a demesne: in the registers the lists of taxed paid by farm gentry were entitled mansorum predialium, or even mansorum nobilium de praediis per grossos quindecim de quolibet manso soluentium once.⁷⁸ It could be guessed that in this case the predia from the tax registers mean noblemen manors, not demesnes, as noted by Pawiński, who saw there certain analogies to manors mentioned by Długosz, called predia militaria in Liber Beneficiorum.⁷⁹

However, Pawiński must have had serious doubts whether partial gentry owned any demesnes, which would require serfs and farm gentry had no serfs. Describing the predia in villages inhabited by various types of noblemen (demesne and partial gentry) he noted: 'These are not farmsteads of partial gentry, as it is a well-known fact that partial gentry had no serfs (nobiles pauperes cmetonibus carentes)'.⁸⁰ As such, there should be one more, third, group in this ownership category: partial gentry. Then the first group would only consist of demesne gentry, in agreement with the name describing this group, not mixed with many representatives of partial gentry who did not own a single demesne. In any case, these impoverished noblemen should rather belong to the group of farm gentry (from whom they often differed only in taxation), and not to the group of demesne nobility.

Let us also add here that in Mazovia minor nobility estates were constantly being absorbed by larger estates, and the fragmentation of the property of partial and farm gentry continued. Also, the members of the two groups often changed their group naturally, especially in mixed villages (in Mazovia we encounter also villages inhabited together by partial and farm gentry), for instance by marrying into another family.

As such, it would be impossible – though certainly useful – to distinguish villages of farm gentry on our map of Mazovia in the second half of the sixteenth century,⁸¹ even if such suggestions were proposed at the beginning of our work.⁸²

A broader explanation of the difficulties, which would accompany any attempt at presenting even two traditionally distinguished groups: demesne and farm gentry on the map of Mazovia, exceeds the limits of this commentary. We also refrained from describing the location of the estates of the nobility or the detailed characteristic, particularly of the wealthiest groups. Instead, we refer our readers to the studies, which offer a synthetic or analytic description of these issues in terms of all of Mazovia or of its individual parts.⁸³ We must, however, introduce some important additions to the said studies, concerning the small group of Mazovian 'feudal lords'.

Now, it was frequently noted in the literature on the subject that in Mazovia there were no great land owners, who would possess many villages. And those noblemen, who owned over a dozen whole villages, or over 100 cultivated fiefs in various villages, were extremely rare. Still, Sigismund III favoured the Mazovians for their financial support during his election in 1587.⁸⁴ So in the second half

⁸⁴ On 5 September 1587, during the general assembly near Tarczyn, the Mazovian nobility spontaneously enacted 1 złoty per one Chełmno land, and the liquor excise tax to support Sigismund Vasa; J. Gierowski, *Sejmik generalny Księstwa Mazowieckiego*, Wrocław 1948, p. 105.

of the sixteenth century, when the centre of political life (subsequent Sejms) moved to Warsaw, and at the close of the century the capital of the State was also moved there, the importance of the Mazovian nobility grew – as did naturally, their wealth.

The number of the Mazovians who owned large landed property grew as well. Stanisław Miński could be an example here: in 1588 he already owned one town (Mińsk) and 16 villages.⁸⁵ The entire property of Miński, the later voivode of Łęczyca and the Vice-Chancellor of the Crown, consisted of 241 cultivated lans, and this without the unknown number of demesne lans. The political and financial power of many other families was born at the time (the families Kryski from Drobin, or Krasieński from Krasne), and the growing wealth of many a Mazovian family was influenced by various criteria, which could not always be defined.

We wish to say here that the wealth of a given noble family was not always determined by the number of villages, or parts of villages, they owned. The situation was similar also in other provinces of the Crown (in Greater Poland and Lesser Poland) – however, in Mazovia it was the most visible. In Mazovia, noblemen constituted over 25% of the entire rural population of this province, and dominant was the impoverished gentry, so a simple calculation of probability shows us that family relations and ties rarely influenced the growth of a family's wealth. Hence, many noblemen considered holding a given lifelong, profitable post, especially royal leases and starosta's offices, the best way to increase their property and become a magnate. Much effort was applied so that a crown land obtained lay near ones hereditary estates.

The old Mazovian family Radziejowski from Radziejowice in Sochaczew land in Rawa Voivodeship provides a typical example. The family Radziejowski, rather infamous during the last years of Mazovian autonomy,⁸⁶ owned only four villages since 1497,⁸⁷ and this did not change throughout the sixteenth century.⁸⁸ However, they managed to obtain the town of Mszczonów during the reign of John Albert, and held it for 150 years, as well as the key of property of Kampinos (six villages) held as a fief,⁸⁹ and then the starosta's district of Sochaczew, the wealthiest of all starosta's districts in Rawa Voivodeship. The district neighboured on Radziejowice and remained in the hands of the family until 1637, with a several-decade break. So the family made a substantial income from three towns, 22 villages and three vast royal forests. Despite the large income, they did not increase the number of their hereditary estates (though buyouts), but at the close of the sixteenth century managed to build a large – in Mazovian terms – magnate residence in Radziejowice (a palace – castle), which to this day survives mostly intact.

As already stated, **town ownership** was barely visible in Mazovia, limited only to three villages, namely: Solec belonging to Warsaw,⁹⁰ Łabna – the property of Kolno,⁹¹ and Kozina – owned by Goszczyn.⁹² The two last villages were actually suburbs, and this is what they were called in the sources. However, we do not know if and when they had been endowed on the town, as Solec was endowed on Warsaw. Finally, we decided to regard them as villages belonging to towns, because the inspectors clearly emphasised that these villages were 'under town jurisdiction', utilize the same laws and freedoms,⁹³ and in the case of Kozina – it was subject to a separate mayor.⁹⁴

III.3.3.8 PODLASIE VOIVODESHIP

Krzysztof Boroda

In a similar way to the other earlier volumes of the AHP, equally in the Podlasie volume undertakings have been made, and at the stage of working on the source materials to allow for their presentation on the main map, to carefully distinguish between the four traditionally divided property ownership types: royal, nobility, Church and town. The same colour scheme as employed in earlier works in the series has been employed to mark them on the main map itself. In the case of royal property ownership it was the legal status of the settlement that decided as to its qualification and inclusion, and so its inclusion in a register or list of royal properties, and not the personage of the actual user or also those leasing. The establishment of nobility property relations was derived at through the information obtained from tax registers that came about post 1569, as well as the military cadastres showing military duties and military rolls organised when Podlasie belonged to the Grand Duchy of Lithuania; as equally on the basis of subject literature. It turned out to be difficult to determine the number of settlements that should be considered either wholly or partly Church in property. Problematic were the series of small Church estates located in settlements that usually constituted parish seats. Their size being often no more than 2 serf voloks together with several homesteads, or a homestead group of several persons strong, while parish priests were indicated as the owners of the said. Though without serious doubt these parish homesteads safeguarded the daily food needs of the parish clergy, such settlements have not been treated as cases of mixed nobility-Church or equally royal-Church property relations but have been presented as either nobility or royal property and as such have been marked in the List. **Table 1** presents all cases of this type noted in the taxation registers.

Even more confusion is aroused than is the case with Church property by an attempt at determining the participation of town property within the structure of land property for the Podlasie Voivodeship. This is the result of the fact that it follows in differentiating this property ownership to utilise a source content employing notions such as ‘town village’ ‘suburbs’ and also the concept of a ‘town hamlet,’ as well as basing oneself on the indicators found in the sources that point to a given settlement’s legal status and those individuals possessing cultivated land within it.

From amongst the overall number of 1,675 settlements that appear in the sources for Podlasie for the period up until the end of the sixteenth century, the most numerous are nobility held properties, these numbering 1,342 settlements (80.1%, including 10 towns), with royal properties representing 242 settlements (14.4%, including 13 towns), while Church holdings are 25 settlements (1.5%). In relation to 33 settlements (2%) there appears in the sources the designation ‘town village,’ ‘suburb’ or ‘town hamlet’. Only a few settlements were classified as being of mixed ownership: two settlements were included in royal-Church mixed property holdings (0.12%), three were deemed to be nobility-Church holdings (0.18%), while 28 settlements came under the division of mixed royal-nobility property (1.7%).

With regard to the participation of nobility held properties within the overall structure of land holding itself, and here taking its share in relation to the overall number of settlements, the Podlasie Voivodeship did not noticeably differ from that of neighbouring Mazovia, where the settlements designated to be nobility holdings was 84.5% of the locations listed.¹ However, there was a difference both with regard to Mazovia as equally to other regions of the Kingdom of Poland, in relation to the share of royal property holdings – here being relatively large, as equally those held by the Church – noticeably

In total	895	651	129	1,675

scant in comparison to other regions. When viewed from the perspective of districts (*powiats*) visible is a hugely marked disproportion across the particular regions of the voivodeship. The Bielsk and Mielnik lands are characterised by a very large share of royal property holdings (respectively 24.2% and 17% of settlements), while the Drohiczyn land are completely dominated by nobility property (98%) (see **Table 2**). However, if one were to examine the expanse of the Podlasie Voivodeship not in a division into particular lands, but as a whole, one can clearly see a marked division into two zones. One is formed by the eastern and northern part of the voivodeship and this is dominated by royal property holdings, while to the west and south nobility holdings dominate (see **Map 1**).

Map 1. The distribution of noble and royal property in the Podlasie Voivodeship in the second half of the 16th century

Royal property holdings

Sixteen organisational units entered into the composition of monarchical properties in the Podlasie Voivodeship in the second half of the sixteenth century. Eleven of these were starosty districts, often referred to by the term *włość* – ‘estate/ manor’: Augustów, Bielsk, Brańsk, Drohiczyn, Goniądz, Knyszyn, Łosice, Mielnik, Rajgród, Suraż and Tykocin; four as forestry: Bielsk, Knyszyn, Goniądz and Tykocin; as well as three leased: Kleszczele, Krzywe and Narew. These incorporated, as has been already mentioned, 14.4% of all the settlements in the voivodeship. On the level of acreage this share was even greater for it was to cover in the second half of the sixteenth century 7,998.50 voloks of land cultivated by serfs and town residents, which constituted 42% of the voivodeship’s cultivated land (in the Bielsk land a sizeable 61%) traceable in the taxation registers, inspections and inventories (see **Table 3**). The reason for such a high share of royal property in the overall structure of land property ownership for the voivodeship was the conscious and long-term policy of Sigismund I the Elder, and first and foremost that of his wife Bona Sforza: a policy continued subsequently by their son, Sigismund August. The aim of the monarchs was to create an extensive complex of properties on the border of the Kingdom of Poland and the Grand Duchy of Lithuania being the private property of the ruling family. This was an element in a broad series of undertakings aimed at restoring the ducal economic domain in the Grand Duchy of Lithuania. It was initiated with the bestowing on Bona of the dukedoms of Pińsk and Kobryń as well as the lands at Sielec in 1521. These undertakings were supported in 1528 by an act of the Lithuanian *sejm* (diet) validating the life privileges bestowed on the grand ducal lands, through the simultaneous ratification of the extraordinary tax, the so-called ‘silver’ tax with the aim of buying out those pledged for the needs of defending royal properties and lands.² The beginnings of constructing a complex of Podlasie lands was the bestowing on Bona in perpetual usufruct in 1524 of a swathe of forest stretching from the River Niemen to the River Narew, while subsequently in 1528 the lands of Dołubowo in Podlasie.³ In 1533 from the hand of hetman Jerzy Radziwiłł the Grodno estates were purchased, while Bona bought from Olbracht Gasztołd the Bielsk land together with the towns of Bielsk, Suraż, Brańsk and Kleszczele. Commenced was the process of the monarch’s regaining the huge tracts of land that at the beginning of the sixteenth century as a result of loans, pledges and endowments had passed into the hands of Lithuanian magnates. Of the greatest significance for the reconstruction of the monarchical estates in Podlasie was the obtaining of the Goniądz and Rajgród properties, which had been in the hands of the Radziwiłł family since 1494. Initially, for the years 1494–1505, they had been administered by Mikołaj Radziwiłł in his capacity as Grand Ducal governor. In 1505 it had been bequeathed to Prince Michał Gliński as a hereditary property, and following his escape to Moscow in 1509 Mikołaj Radziwiłł was to again take possession though here as a hereditary property. Mikołaj undertook the successive expansion of his estate through incorporating into it the estates and manors of minor nobility obtained by various means, through a policy of intensive internal colonisation as well as the illegal settlement of the adjoining Grand Ducal forests.⁴ It follows to consider the moment of the death of the Wilno voivode Mikołaj Radziwiłł in 1522 as the beginning the Radziwiłł family’s problems, culminating in the total loss of the Goniądz and Rajgród estates along with the feud with Olbracht Gasztołd that had preceded this. As a result of this border feud between

The process of the taking over of particular estates across the territory of Podlasie has been thoroughly described in detail by J. Maroszek, *Pogranicze Litwy i Korony w planach króla Zygmunta Augusta. Z historii dziejów realizacji myśli monarszej między Niemnem a Narwią*, Białystok 2000. There one can find earlier literature dealing with the process of transforming the monarchic estate complexes in northern Podlasie.

⁴ For the scope of this illegal colonisation act of the grand ducal forests that was in progress in 1536 and estimated at 1000 voloks; see A. Kołodziejczyk, *Z dziejów kolonizacji puszczy na Podlasiu w XV–XVI wieku*, [in:] *Szkice z dziejów kolonizacji Podlasia i Grodzieńszczyzny od XIV do XVI wieku. Prace ofiarowane profesorowi Antoniemu Czacharowskiemu w siedemdziesięciolecie urodzin i czterdziestopięciolecie pracy naukowej*, ed. J. Śliwiński, Olsztyn 2002, pp. 49–50. In relation to the act of internal colonisation for the Goniądz-Rajgród estates within the context of the colonisation of the forests of the Mazovian-Lithuanian border see eadem, *Kompleksy leśne na pograniczu mazowiecko-krzyżacko-litewskim od XV do połowy XVI w.: lasy włości rajgrodzkiej i goniądzkiej*, „Komunikaty Mazursko-Warmińskie”, 2006, no. 2, pp. 195–208.

the Radziwiłł Waniewo holdings and the Tykocin estates of the Gasztołd family, the Radziwiłł minions burnt down the Gasztołd castle at Tykocin. The accusations made by the Gasztołd family against the Radziwiłł family in the presence of Sigismund I the Elder were accompanied by accusations by the Goniądz nobility of power abuses by the Radziwiłł family, including settlement expansion onto grand ducal lands. The Radziwiłł family, fearing the negative consequences of this conflict for their line, concluded agreement with the Gasztołds allowing them access to these disputed territories. In attempting to counter the plans of Sigismund I the Elder and Bona on the matter of verification of the borders of the Goniądz-Rajgród estate and to mitigate the situation, following its division amongst the heirs of the voivode (provincial governor) Mikołaj, one of his sons – Mikołaj Radziwiłł, bishop of Samogitia – bestowed on the minor Sigismund August in 1528 his part of the inheritance (the Knyszyn estate) as a private property. This bestowal did not, however, curb the activities of the royal couple, though it did constitute the first step in the construction of a private royal domain in Podlasie. In 1536, as a result of a court case, enacted was the demarcation between the Goniądz-Rajgród estates of the Radziwiłł family and the Grand Ducal forests.⁵ As a consequence the Radziwiłł family was forced to give Bona a swathe of land 70 km in length and of a width from 12 to 21 kilometres on which several villages were situated.⁶ The subsequent stage was the taking in 1542, on the basis of escheat following the death of the heirless Stanisław Gasztołd, of the estate at Tykocin, which had been the property of the family since 1433 on the endowment of Zygmunt Kiejstutowicz. Goniądz and Rajgród were to finally fall to Sigismund August in the years 1569–1571 as his private holdings on the strength of bestowal on the part of the wife of the Vitebsk voivode Anna Kiszczyna née Radziwiłł, supported by the transfer of the estate at Sielce to the Radziwiłł family. This specific situation with regard to monarchical estates in Podlasie, ones functioning as the private property of the Jagiellonians, was to last until 1581, when Anna Jagiellonka renounced her rights to those properties belonging to her on the strength of inheritance from her mother and brother. In place of this Stefan Batory bestowed on Anna the starosty and tenancies of Bielsk, Tykocin, Rajgród and Augustów in the Podlasie Voivodeship as well as those at Łomża, Warsaw and Wizna in Mazovia. We have an almost equally large share of monarchical estates in the Bielsk land as we have across the territory of the Mielnik land. However, here they were not the private property of the monarchs, merely grand ducal estates going back to the mid fourteenth century.⁷ These were concentrated in the central part of the Mielnik land on both sides of the River Bug and organised into two administrative complexes – the Mielnik starosty and the Łosice starosty (up until 1565 as leasehold), and covering in total two towns (Mielnik and Łosice) as well as 23 villages. In the Drohiczyn land, however, settlements that were royal property did not constitute any cohesive whole being scattered across its eastern part.

The construction of this complex of private monarchical estates in Podlasie was accompanied by the action of rationalising their organisation and increasing their profitability. This involved their administrative reorganisation and a fresh measuring of lands connected with enclosure and the obligatory implementation of the three field system (the Voloč Reform), and also an exact inventory of incomes. This undertaking was conducted across the territory of the Podlasie Voivodeship chiefly in the years 1558–1562, traces of which are to be noted in the registers preserved from the Voloč Reform and their comparison with any eventual estates formerly inventoried.⁸ Its origins go back to 1537 and the personage of Piotr Chwalczewski, a Bona courtier, whom she appointed the starost of Knyszyn.⁹ The principles for its conduction were codified twice – once on the initiative of Bona in 1549 on the needs of her estate, and for a second time on Sigismund August's initiative in 1557.¹⁰ The effect of bringing to life both of these acts was, besides the increase several times over in the incomes from

these estates, also dramatic changes in the landscape and a change from the chequered pattern of cultivated fields, meadows and forests surrounding villages to a system of open fields divided into three leas with centrally located villages. A similar operation in rationalisation was conducted in relation to forestry. These were initiated in a similar way to the Volok Reform on the undertaking of Queen Bona, who was active in this area following her taking control of the Grodno Forest. On her order the Grodno steward Łukasz Hryńkiewicz Wołłowicz undertook the registration of entries into the forest (of the rights to make use of the forest resources), after which in 1538 all free entries to the Grodno Forest were abolished and its planned exploitation and settlement was started.¹¹ Direct governance over forest terrains was conducted by the foresters, woodsmen and beaver keepers subject to the starosts. We know for the first half of the sixteenth century of the following Podlasie foresters: Andrzej Łóżka (1509–1516, appearing equally as a Bielsk forester), Patiej Tyszkiewicz (1529–1542) and Iwan Lacki (1556–1563), the Bielsk forester Iwan Michajłowicz (1527), the Bielsk woodsmen Iwan Miśkiewicz (1523–1533) and Kostiuszka Federowicz (1537–1538), the Mielnik woodsmen Wasyl Kowalewicz (until 1532), Michno Szyszczyc (from 1532) and Stanisław Szkopowski (from 1559), as well as the Podlasie beaver keeper Paweł Skirmin (1513–1514).¹² In the second half of the sixteenth century Knyszyn, Goniądz and Tykocin foresters also appeared.¹³

Nobility property ownership

The nobility property ownership for the Podlasie Voivodeship is characterised by three types. Firstly, the high participation of serfless gentry. For the overall figure of 1,675 settlements (incorporating here also towns and mill hamlets), 763 were inhabited exclusively by serfless gentry, while in a subsequent 80 their estates were mixed in with the estates of nobelty possessing serfs, and sporadically with royal property. Hence this type of settlement was present in 843 places in the voivodeship. A precise evaluation of the social-ownership situation of the serfless gentry amongst the overall number of nobelty holdings in the voivodeship is, however, impossible to achieve. The widespread practice of collectively paying taxes, often conducted together by all the owners of estates in a given place, makes it impossible for one to carry out a reconstruction of the number of nobelty homesteads amongst the minor nobility, and here not only the serfless but also those in possession of peasants. However, it is possible to analyse the spatial location across the voivodeship of places inhabited by serfless gentry, as well as the proportion of fees of their own nobelty cultivation (noble lan) in relation to fields (lan) cultivated by peasants (serf lans). The settlements of serfless gentry compactly fill the areas of the sixteenth century land of Drohiczyn, the south-west part of the Bielsk land more or less up to the town of Bielsk itself as well as a part of the Mielnik land (see map *ibidem*). This area fundamentally corresponds to the scope of the historical Drohiczyn land in the fifteenth century, pointing to a close connection between nobelty settlement of this form and the activities of Lithuanian rulers in the fifteenth century.¹⁴ In relation to the proportion of fields cultivated by the nobelty themselves when compared to peasant-cultivated fields then the Drohiczyn land are extremely similar to the neighbouring territories of Mazovia. In the case of the Drohiczyn land and here within its sixteenth-century borders, the fields of serfless peasants constituted 58.1% of all taxed voloks (both serf and serfless combined), while in the neighbouring territories of Mazovia the share of serfless lans in the overall number of cultivated land taxed was from 53 to 68.5%.¹⁵ The presence within Podlasie of noble holdings of this type (and in general of noble holdings *per se*) should be tied into the broad act of settlement initiated at the end of the fourteenth century by the Mazovian Duke Janusz the Elder. He settled the minor nobility

Map 2. The distribution of settlements inhabited by serfless gentry in the Podlasie Voivodeship in the years 1578–1580

on the depopulated territories of the north-east border region of his Mazovian domain, as well as on the area of the Drohiczyń land under his authority for the years 1390–1405.¹⁶ These were to a large degree relatively small endowments (10–20 voloks of land), the main aim of which being to enlarge military potential.¹⁷ The boyars settled by the grand Lithuanian dukes in the fifteenth and beginning of the sixteenth century also played their part in this process, appearing in the taxation returns for the sixteenth century as paying taxation in a manner fitting for serfless gentry, as in the example of the inhabitants of the village Czokołdy in the northern part of the voivodeship, and also at Hryniewiczze Wielkie, Hwoźna and Ancuty lying to the east of Bielsk. Following the return of the Drohiczyń land to within the borders of the Grand Duchy of Lithuania, all the endowments performed by Duke Janusz were more than likely repeated by Witold, who conducted a policy of settling the minor knight class arriving from the Polish Kingdom no less intensely than had Duke Janusz the Elder.¹⁸ This type of endowment aimed at enhancing military resources was not merely the practice of monarchs but also was conducted by magnates, like, for instance, the Radziwiłł and Gasztold families during the course of the reclaim and development of their estates in Podlasie.¹⁹

The second characteristic feature was the strong position enjoyed by large holdings. Two criteria have been adopted for the needs of the present commentary, on the basis of which individual estates were qualified as being large scale holdings. One was the number of taxed voloks cultivated by rural and urban populations, in number at least 40. As with every distinction of this type, the criterion is relative in character. Depending on market realities and the model of economic activity adopted such the acreage under cultivation in relation to the dependent population may result in an most diverse level of income for the estate's owner. However, taking into account potential of labour power giving the possibility to create about 10 average farmsteads (*folwarks*), as well as the level of geographical concentration of manor properties, which forced not individual administration but the engagement of hired help, the size seems to justify recognition of these as the boundaries of large noble holdings.²⁰ The second criterion enabling one to view a given manor to be a large property holding – taking into consideration the possession of a taxed acreage of less than 40 voloks – was affiliation to the magnate elite of the Jagiellonian monarchy, resulting from offices held or court functions performed.

Employing the above criteria and basing oneself on the data contained in the taxation registers for the years 1576–1588, the total acreage taxed by representatives of large noble holdings on the scale of the voivodeship as a whole may be evaluated at 2,919.25 voloks, which transfers into 15.4% of the overall cultivated acreage accessible in the sources (see **Table 3**). This percentage may seem to be too high, but if we were to examine this group of noble property owners within the circle of noble holdings alone then it would increase to 27.3%. While, in the case of limiting matters to those voloks that were lands under serf cultivation, we obtain a share of already 72.7%. If we compare this data with that from other parts of the Kingdom of Poland, the Podlasie Voivodeship turns out to be a region with an exceptionally high share of large noble holdings within the circle of holdings belonging to the nobility. For even in the exceptionally well explored case of large scale nobelty holdings in the Cracow Voivodeship, estates comprising more than 40 lan under the cultivation of a dependent populace they represented only 28% of the acreage taxed by the nobility.²¹ This unusually high level of large property

²¹ *Ibidem*, pp. 156–159.

holdings across Podlasie in the sixteenth century has been noted for a long time by researchers, though not necessarily quantified.²² Basing oneself on the criteria indicated and the information contained in the registers for the years 1576-1580 one may include 19 estates within the category of large-scale holdings on the territory of the Podlasie Voivodeship. (see Table 4). Amongst these two – that of the Podlasie voivode Mikołaj Kiszka and the Duke of Słuck Jerzy Olelkowicz – had imposing dimensions being, respectively, 568.75 and 488.25 voloks under serf cultivation. Subsequent individuals, though here significantly smaller in acreage, but yet still holding very large estates within the scale of the Polish Kingdom (ones exceeding 100 voloks), were the Samogitia starost Jan Kiszka (331 voloks), the Nowogródek voivode Paweł Sapieha (268.5 voloks), the grand Lithuanian marshal Mikołaj Krzysztof Radziwiłł (173 voloks), Jerzy Kurzeniecki (157 voloks), the Mazovian voivode Stanisław Kryski (131 voloks), and also Kacper Dembieński (110.5 voloks).

Table 3. The structure of land ownership on properties with serf and own cultivation of serfless gentry (in voloks i.e., 1 volok = 16.8 hectares) in the Podlasie Voivodeship in the second half of the sixteenth century²³

Property ownership	Land			In total
	Bielsk	Drohiczyn	Mielnik	
royal (including 'town voloks')	6,816.50	204.00	978.00	7,998.50
Church	61.75	91.25	61.00	214.00
large noble properties	1,018.00	1,610.75	290.50	2,919.25
medium sized noble properties	173.25	155.00	216.50	544.75
small noble properties	226.25	201.75	123.00	551.00
serfless gentry	2,900.10	3,389.80	403.30	6,693.20
In total	11,195.85	5,652.55	2,072.30	18,920.70

Table 4. Large noble properties in the Podlasie Voivodeship around the years 1578–1580

Individual	acreage	lands in which the estate was located.
Mikołaj Kiszka, Podlasie voivode	568.75	Drohiczyn, Mielnik
Jerzy Olelkowicz, Duke of Słuck	488.25	Bielsk, Drohiczyn
Jan Kiszka, Samogitia starost	331.00	Drohiczyn, Mielnik

Józef Wołowicz, son of the Smoleńsk voivode	20.25	Bielsk

The period of the end of the fourteenth century and the first half of the fifteenth century should be viewed as the beginning of the process of forming these large noble holdings in Podlasie; with the same applying to small nobelty holdings. For besides the endowment for minor knighthood, the Mazovian Duke Janusz the Elder, as equally those who were subsequently to rule Podlasie, Witold, Świdrygiełło, Zygmunt Kiejstutowicz and Kazimierz Jagiellończyk, practiced also the bestowing of ducal estates on their courtiers and political allies. We do not possess any direct endowment documents from the time when rule over the Drohiczyn land lay with Janusza the Elder, for upon taking the territories Witold deemed all documents issues by Duke Janusz to be illegal and these were subsequently replaced by new ones issued by Witold. An example of such practice is the endowment of the villages Korczew and Szczeglacin in 1416 by Witold to Pretor of Brześć.²⁴ In turn, an example of endowments from the times of Zygmunt Kiejstutowicz are the endowments for Mikołaj Nasuty of Międzyrzec performed in 1434 of villages in the Drohiczyn land: Krzemień, Pełch, Osnówka, Czartajewice and Niemojki, as well as for Pretor of Korczew also in the Drohiczyn land: Rudki, Czarnej with surrounding villages (not mentioned in name), Czołomyj, Głuchowa, Mord and Pruszyzna.²⁵ Equally, under the reign of Sigismund Kęstutaitis, the Gasztołd family received estates in Tykocin.²⁶ In turn under the rule of Kazimierz Jagiellończyk we have in our possession a series of endowment confirmations: for Michał Kmita Sudymontowicz: the Siemiatycze estates, the possessions at Mokobody and Wyszaków for Michał Goliginowicz for life (in 1486 it was endowed to Iwazka Litawor Chreptowicz, royal vice-treasurer), the Grochów properties for Piotr Strumiłło (the progenitor of the Kiszka family), or equally the endowment for Jan Niemirowicz Bacik, of Ceranów and probably Śledzianów.²⁷ Part of the endowed estates came from properties confiscated from previous owners, though a part had been hitherto royal manors and estates. Fifteenth-century endowments most certainly created a group of wealthy nobility across the territory of Podlasie, however the proliferation of estates to the sizes registered at the end of the sixteenth century was first and foremost the effect of endowments made during the reign of Aleksander Jagiellończyk and Sigismund I the Elder. The Niemira family may serve as an example; Mikołaj Niemira Hrymalicz in 1503 received from Aleksander Jagiellończyk, Gnojno in the Mielnik district, while in 1512 from Sigismund I the Elder. A part of these endowments concerned individuals who as a result of the wars waged against the Grand Duchy of Muscovy were to lose their estates on the eastern borders of the Grand Duchy of Lithuania. An example here may be served by the Sapieha family. In 1508 as a reward for service and as recompensation for the estate losses incurred in the Smoleńsk region Iwan Semenowicz Sapieha received the Lisowski estate in the Drohiczyn land and Boćki in the Bielsk land, which were to become the basis for the family's fortunes

in Podlasie.²⁸ Sometimes the property career of a family was connected with the indirect bestowing of royal gifts, as was the case with the Kurzeniecki family. For their estate covering 157 voloks at the end of the sixteenth century, was connected with the existence at the beginning of the sixteenth century of the enormous Goniądz Rajgród properties of the Radziwiłł family. These properties, given to Mikołaj Radziwiłł in 1509 following their confiscation from Michał Gliński, were administered by the Radziwiłł family through estate stewards. One of these stewards for Mikołaj Radziwiłł was Iwachno Michajłowicz Kurzeniecki, to whom the said Mikołaj Radziwiłł gave the village of Przytulanka in 1510 and in 1519 the Kalinów vogtship, while for the years 1520-1522 the Knyszyn vogtship. The subsequent route for the Kurzeniecki family to join the ranks of great Podlasie landowners was to lead through their service at the court of Queen Bona, where Iwan became her secretary and administrator of the starostys of Pińsk, Kleck, Horodenka and Rohaczów, and later through court service for Sigismund August. The effect of this was the bestowment by the monarch in 1546 of one of the forestry blocks in the Knyszyn royal forest, where the main seat of the family was founded at Jasionówka.²⁹ In turn, the estate of Mikołaj Włoszek, who paid in 1579 tax on 62.50 of settled voloks, constitutes a case of someone who accumulated sizeable properties thanks to his career at court. For Mikołaj's father, Stanisław, was initially a courtier and lecturer for Sigismund August, subsequently the royal forester, court vice-treasurer and the Knyszyn stasrost. He received for life in 1547, and from 1549 heritably, the properties at Juchnowiec, for the years 1558–1559 holdings at Mionki, Ciekuny and Lubejki, and in 1560 a mill on the River Turośń.³⁰

Large scale land holdings exhibited notable 'mobility', often passing from one family to another as a result of marriages concluded, an example was being the properties of such families as the Wiesiołowski, Kryski, Dembiński or the Słupecki family. The Wiesiołowski family entered into Podlasie property holding through a marriage concluded in 1547 by Piotr Wiesiołowski of the royal superintendent with Katarzyna Wołłowiczówna, the Kryski family emerged because of the marriage of Stanisław Kryski, the Mazovian voivode, to Katarzyna Kosińska, the daughter of the Podlasie castellan Adam and Mikołaj Wodyński's widow.³¹ In turn, Kacper Dembiński, holding property in the Mielnik land that according to the register of 1580 included Witulin, Osówkę and Nosowo, was a courtier of Sigismund August and the son of Walenty Dembiński, the crown vice-treasurer (1561–1564) and the grand royal chancellor (1564–1576). He was to come into possession of these properties as a result of his marriage to Maryna Kopciówna.³² Also the land acquired by the Lublin castellan's wife Słupecka ended up in the hands of this family and here from the Litawor-Chreptowicz family as a result of marriage.³³

The broadly understood notion of an average property – and which for the purpose of this analysis has incorporated properties ranging from 10 to 40 voloks under the cultivation of a dependent populace, and thus in practice estates of not merely the middle nobelty but equally of the well off too – are most scantily represented. On the scale of the entire voivodeship the acreage taxed for this group constituted 13.5% serf voloks in nobelty possession. While at the same time for the Cracow Voivodeship this figure was over 39%, in Łęczyca in 1580 31.5%, while in the Płock Voivodeship in 1578 the figure was 26%, which most clearly shows the scale of estate polarisation within Podlasie nobelty possessions at this time.³⁴ For on the one hand, we have a small group of large-scale landowners who held around three quarters of the serf acreage that was in the possession of the nobelty, and on the other hand the overwhelming number of the minor nobelty were not in possession of serfs, and were subdivided in a way that made them more impoverished than was the case in other regions with regard to the average

Equally in this case the basis of his career, which was crowned by the marriage to Katarzyna Wołłowiczówna, was court service for Sigismund I the Elder and Sigismund August.

³² A. Wawrzyńczyk, *Rozwój wielkiej własności na Podlasiu w XV i XVI wieku*, Wrocław 1951, p. 54; D. Michaluk, *Ziemia mielnicka*, pp. 38–49. In the Mielnik register for the year 1580 there only figure a part of the settlements that constituted his property. A large part of the holdings were located in a part of the Brześć land, which only in the seventeenth century were added to the Mielnik land.

property size held. The distribution of estates of the average size was equally far from even here. The numbers able to maintain estates in absolute figures is almost identical for each of the three lands: in Bielsk – nine, in Drohiczyn – eight and in Mielnik – nine (see **Table 5**). However, their participation in the acreage of serf voloks differs drastically. For we may state in the case of the Drohiczyn land that the average nobelty property did not play any significant role in the local social nobelty structure, having at its disposal a mere 7.9% of the serf-tilled acreage. In the Bielsk land the share of an average property in the taxed acreage is close to the average for the voivodeship as a whole, being 12.1%. While for the Mielnik land the level of the average property share is closer to the average as noted for the Voivodeships of Cracow and Łęczycza – 34.4%. The representatives of average property holdings, owning estates within the territory of the Podlasie Voivodeship at the end of the sixteenth century and in part coming from the ranks of the local Podlasie nobelty, appear to have been strongly associated with the circle of Sigismund August's royal couriers. This concerns the families of the Hińcz, Hanna Grajewska (her father had been a courtier), Jarosz, Olbracht and the Oktawian Irzykowicz family (their father Jan Irzykowicz had been a courtier), Iwan Karp (in 1548 he had been Bona's page), or also that of Maciej Strubicz (Sigismund August's cartographer).³⁵ Besides the courtiers and their descendants we can also come across in this group the beneficiaries for services rendered in royal service as well as by way of recompensation for properties lost during the course of wars waged with the Grand Duchy of Muscovy at the beginning of the sixteenth century. Here as an example may serve the Hornowo estate given to the Suchodolski family in the second quarter of the sixteenth century, or also a part of the estate of Arnold Hlebowicz, whose father Mikołaj Hlebowicz was the son of Stanisław Hlebowicz, who died in 1513 and was the Płock voivode.³⁶

Finally, and here procured for the needs of this commentary, is the group of nobelty landowners with serfs, these being landowners with estates up to 10 serf voloks. This covers the minor (petty) nobelty (up to 5 voloks) and the bridging group from minor to middle (5–10 voloks), and so holding one, possibly two, average-sized folwark. Their participation in the taxed acreage as a whole in relation to serf voloks being 14.1%. In the overwhelming majority of cases we are dealing with extremely small scale landowners, although amongst this grouping there are to be found a few cases of wealthy individuals, with their inclusion amongst smallholders – on the basis of the acreage proclaimed for taxation – turning out to be groundless. An example of the said, for the Bielsk land, is Łukasz Górnicki. As the Tykocin and Wasilków starost, the Wasilków wojt, and the predendary of the Wielick and Kęcki parishes and of the Kruszwick canonry in 1580, he was a man more than just wealthy.³⁷ While in the tax registers for the Podlasie Voivodeship he appears as the owner of property qualifying him to the minor nobelty in terms of holdings – 2.5 serf voloks and 3 nobelty voloks leased at Tokowisko-Łopienie.³⁸ This case is obviously no indication of the widespread nature of such a state of affairs. He was rather an exception for there were few individuals nationwide of such a high material status, ones whose fortunes were based solely on the leasing of royal lands and the incomes derived from prebendaries. However, his case does illustrate one more phenomenon of an economic nature, having its implications in the sphere of property structure: the practice of leasing land from the serfless gentry on the part of the serf-owning nobelty, as equally the practice of running serfless folwarks. Instances of leasing land from the serfless gentry have been noted in relation to at least a few individuals and here the matter concerns as equally the middle nobelty as those managing large estates. Besides Łukasz Górnicki, equally Marcin Wąż (the Drohiczyn *podśędek* – deputy judge) declared for taxation purposes besides 17 voloks scattered across several locations, also had 5.5 nobelty voloks for his personal use, as well as announcing himself to be the joint holder (with a numerically unstated number of individuals) of another 16.6 nobelty voloks in several other places.³⁹ The Olelkowicz family, besides 488.25 voloks of land farmed by serfs and town burghers, also farmed 4.5 nobelty voloks in the Drohiczyn land and 7.5 nobelty voloks in the Bielsk land.⁴⁰ The Podlasie voivode Mikołaj Kiszka in the Drohiczyn land besides 568.75 voloks farmed by serfs and burghers being his subjects, had another 10 nobelty voloks under his possession.⁴¹ While Jadwiga Niemierzyna besides 75 voloks farmed by serfs also paid tax on 1.5 nobelty voloks.⁴² However, the largest group numerically was still representatives of the minor nobelty. There are noted in registers in the Bielsk land at least ten such cases, in the Drohiczyn land four, while in Mielnik two (**Table 6**). These are certainly not the only cases, for the earlier mentioned practice of the joint taxing of land owners makes it impossible to reconstruct fully the holdings of the serfless gentry and the minor nobelty in possession of serfs. Despite the absence of the relevant annotations in the registers, with all due certainty the matter here concerned leasing (or loan securing with leasing). In the case of outright ownership, then this type of land automatically would become

a folwark land holding and as such would not be subject to taxation. Generally, however, despite fairly spectacular cases of land use on the basis of nobelty rights by large property estates, the degree to which the lands of the serfless gentry was used by those with serfs was not widespread. Information contained in the registers for the years 1576–1580 confirm this practice for an acreage of 61.4 voloks, and so for a mere 2% of all the voloks cultivated on the basis of nobelty rights across the territory of the voivodeship.

Church property holdings

The property holdings in the hands of Church institutions was to represent a marginal value within the Podlasie Voivodeship. On the basis of data derived from the taxation registers for the years 1576–1588 as well as the inspections for royal properties for the years 1570, 1576 and 1602, and here in conjunction with the preserved registers for volok measurement, it is possible to evaluate the acreage of land cultivated by those subject to the clergy at 214 voloks. These are almost exclusively properties belonging at the end of the sixteenth century to the Roman Catholic Church. More or less two thirds of the taxed acreage that constituted Church holdings was the estate of the Łuck bishopric. This was comprised of a compact demesne of properties in the Mielnik land encompassing: Bonin, Litewniki Stare, Walim and Raczki (in total 57 voloks according to the register of 1580), as well as demesne in the Drohiczyn land comprising Rudniki, Skrzyszew and Wasilewo (32 voloks in total). The remaining Church properties were in character the endowments of local Church institutions. With the exception of the small village of Klizówka (3 serf voloks) being the endowment of the Drohiczyn Franciscan monks, these were exclusively parish endowments. At the end of the sixteenth century, after the Łuck bishopric, those Church institutions of notable property – if one is to adopt as the criterion the taxing of serf voloks – were the Węgrów parish (which at the end of the sixteenth century was a Calvinist

community) possessing 20 voloks (10 in Węgrów and 10 at Szaruty)⁴³ as well as the Narew presbytery also with 20 voloks of land cultivated by serfs.⁴⁴ From amongst the more modest possessions it follows to mention: the Suraż parish – 16.75 voloks,⁴⁵ the Siematycze parish – 11 voloks,⁴⁶ the Drohiczyn parish – 10.5 voloks,⁴⁷ the Brańsk presbytery – 9 voloks,⁴⁸ the Rajgród presbytery – 7.5 voloks,⁴⁹ the Mordy presbytery – 6 voloks⁵⁰ and the Knyszyn presbytery – 5 voloks.⁵¹ The remaining properties that appear in the relevant taxation registers were in possession of reduced acreages and here serf farmed, or showed up merely as the properties of minor nobelty, here as a rule in places that were parish seats. These cases show either the extremely small areas covered by these parish folwarks or that they functioned as a result of hired labour.

Town property

Work on hitherto AHP volumes has employed the principle – one never actually clearly stated in the commentaries – that as town properties considered were those settlements where in the taxation registers the indicated urban centre had been deemed the owner. In the case of doubts in this matter, the information contained in the charter (founding) document for the given centre or the subject literature was of deciding importance.⁵² That said municipal centres were never classified as town property, but always as a royal, Church or nobelty possession, something that resulted from the internal logic of the law of the day based on the norms of feudal law translating itself into the multilayered structure that were property laws. In effect Poznań or Cracow were royal towns, with the incomes derived from them placed within the inventories of royal possessions. However, the villages endowed to them in charter acts were not enumerated in registers or inventories; for the property rights to these were transferred by their owners to the towns themselves. Part of the settlements being a part of the towns – often ones strictly connected with them spatially and economically as well as fulfilling the role of being their direct specialised hinterland – were referred to in the taxation registers as ‘suburbs’.⁵³ In many cases the residents of places deemed ‘suburbs’ were subject to municipal laws when other settlements remained straightforward villages on to which municipal rights could not be extended. Admittedly their inhabitants were subject to the justice meted out by the local vogt (*wójt*) or town mayor, but this was the result of the fact that they were subject to a municipal centre as their feudal overlord. This dependence in relation to the town manifested itself in the payment to municipal authorities of rents and duties, with the exception of the tithes owed to Church institutions and the public taxes to be paid the monarch.

In the case of the Podlasie Voivodeship one is not able to differentiate town property thus defined. Taxation registers, the inventories of monarchical lands and the registers of the VoloK Rreform though admittedly distinguishing the notions ‘town villages’ and ‘suburbs’, do not in these designations related to property holding relations or equally the economic functions of these settlements in relation to urban centres. On the legal level none of these villages are classified as ‘town in the Podlasie registers, for they were not a town’s property in the way that the properties bestowed on Poznań in the year 1253 were the villages of Rataje, Wierzbice, Piotrowo or Pątków, as equally the property of Cracow was

⁴³ ASK I 27, f. 917; ASK I 47, f. 521. In the register as paying taxation Aleksander Witrelin figures for the year 1580, which points to the much earlier held position of his as minister for the Węgrów Protestant congregation than the date of around 1587 suggested in the subject literature, see: M.A. Korzo, *Jeszcze raz w sprawie nieznanego tłumacza Jana Kalwina w Polsce*, OiRwP, vol. 56, 2012, p. 194.

⁴⁴ ASK I 47, f. 261v. The payment comes from the settlement of Czowczyzna, identified with the settlement of Lachy.

Rybitwy and Krowodrza given in a charter privilege in 1257. For villages referred to as ‘town villages’ as equally ‘suburbs’ in the case of Podlasie towns were not their property but an integral component part of the towns themselves. Despite the fact that spatially they constituted independent settlements and were understood as separate settlements in taxation registers, their legal status should be viewed rather in comparison to that of town districts. First and foremost their land as such was not a part of separated legal entities but rather a part of the stock of town voloks within the framework of lands bestowed on towns as a result of charters, while the rents from these were not taken by the towns but were paid to the authorities that were the owners of the municipal centre.⁵⁴ This can be clearly seen in the bequests contained in the inventories, VoloK Reform registers and inspections of monarchical lands. In the case of Suraz, in the starost inventory drawn up in 1558 as part of the preparations for the VoloK Reforms, we find under the heading ‘The register of the first names and names of persons settled in the voloks, urban morgens’ a name list of those in possession of town voloks with a separate geographical location for the lands themselves. After the list of plot owners whose lands directly surrounded Suraz there appear the headings: ‘near Chudziasyn *s kqtha* which are called Kowale,’ ‘at Piasek with the Koscians,’ ‘beyond the Lisa River,’ ‘Dryzdzele personally abiding,’ ‘Danilowo personally abiding.’⁵⁵ In turn, in the VoloK Reform register of 1562, talk is of town voloks ‘at Danilowo’ and ‘from the Kowals,’ ‘at the Maslowcze’ and ‘on the Chruski,’ which additionally are interchangeably defined with the notion of ‘town *folwarks*’.⁵⁶ In the case of Brańsk, the inventory of 1558 informs one of a total acreage of 150 town voloks, of which 20 were located ‘in Glinnik’ referred to as a ‘town hamlet’.⁵⁷ For Kleszczele, and used interchangeably in the VoloK Reform register for 1560, and here in relation to the settlements of Nurzec, Kośna, Pohreby, Trubianka, Dobra Woda, are the terms ‘town voloks,’ ‘town *folwarks*,’ ‘town hamlets’.⁵⁸ In a somewhat later, for this being from the year 1568, document drawn up for Kleszczele by Sigismunt August, given as the area covered by municipal law is the following: the Kleszczele urban limits as well as the villages of Nurzec, Kośna, Dobra Woda, Trubiany and Babicze,⁵⁹ while the register of 1576 informs one that there belongs ‘to this little town several villages of municipal lands’.⁶⁰ In the case of the town of Narew, the following wording is to be found in the VoloK Reform register of 1560 after listing the measured voloks of the village of Makówka: ‘These voloks of the town of Narew in Makówka lie as one combining on an average field...’.⁶¹ While the register of 1576 notes under the heading ‘Incomes from the voloks of the town of Narew’: 115 voloks ‘at Kulaszów’, 33 voloks ‘at Makówka’, 2 voloks ‘at Olszanicza’ and 13 voloks ‘at Waniewa’.⁶² For the town of Augustów initially given is the collective municipal acreage (130 voloks), and later, under the heading ‘hamlets or limits of the town of Augustów’ the acreage of its ‘town villages’ is detailed: Bernatek (16 voloks), Turówki (14 voloks), Zaścianek (12 voloks) and Żarnowa (50 voloks). Wherein in the contents appears clear information that the owners of these ‘town villages’ are residents of Augustów itself.⁶³ In the bills of 1575 these villages are defined as ‘villis Ciuilibus’ and ‘villis ad ciuitatem pertinentes’, but the rents raised from them were for the king.⁶⁴ The clearest legal status for Podlasie burghers resident in ‘town villages’ was expounded in the case of the ‘town villages’ of Goniądz, defining them interchangeably with the term ‘suburb’, while their inhabitants were named ‘indirect suburbanites’ or ‘indirect burghers’. In 1573 royal commissioners – adjudicating

⁵⁴ None of the Podlasie foundation charters contain the transfer of villages to anyone whatsoever from the towns, see: W. Jarmolik, *Rozwój niemieckie prawa miejskiego na Podlasiu do Unii Lubelskiej 1569 roku*, PH, vol. 73, 1982, nos. 1–2, pp. 23–46.

a dispute between the Knyszyn and Goniądz starost Stefan Bielawski and the inhabitants of the ‘town villages’ of Goniądz – freed their inhabitants from the unjust labour dues imposed by the starost that were typical for the inhabitants of ordinary villages, confirming with the said that they were Goniądz residents and consequently subject to urban jurisdiction.⁶⁵ In relation to Bielsk, the register for 1576 initially cites a general figure of 371 town voloks for this centre, then under the heading ‘the listing of the voloks of this town and the incomes from these’ enumerates the following: Augustowo – 164 voloks, Młodzianowo – 43 voloks, Koszyno – 29 voloks, Stanisławowo – 74 voloks, Piotrowo – 45 voloks and Spiczki – 16 voloks.⁶⁶ Equally the register of 1602 places information as to royal incomes from those villages under the heading ‘A listing of voloks of this town [Bielsk] and incomes drawn from these’.⁶⁷ Additionally particularly in the case of Bielsk and its ‘town villages’ we have at our disposal two sources which in an exceptionally clear manner show the legal relation that linked Bielsk with its ‘town villages’. Namely, in a document of Aleksander Jagiellończyk’s of 1495 the inhabitants of ‘town villages’ were defined as ‘settlers of a town residing within the town limits’, while in the Bielsk eighteenth-century legal acts, given disputes over land in Augustów and Stryki (referencing there to the VoloK Reform documentation of the sixteenth century), there appears information that the ground in these villages initially was owned by the residents themselves, who gradually sold it to new arrivals (incomers) from beyond the town itself.⁶⁸

In the case of all the ‘town villages’ within the territory of the Podlasie Voivodeship the inventories, inspections and VoloK Reform records preserved leave no doubt whatsoever as to whom their inhabitants paid rents and dues for lands leased. These were always the income of the ruler and not of the towns themselves. The amount of rents collected reflected the rates established for town voloks within the regulations connected with the VoloK Reform implemented in the sixteenth century across the territory of the Grand Duchy of Lithuania, while the incomes generated in this respect constituted in the inspections the basis for the calculation of levies.⁶⁹

Everything unequivocally shows that within the Podlasie Voivodeship at the end of the sixteenth century municipal property ownership did not exist as such. The formulation of ‘town villages’ functioning in the sources from this period was the result of the difficulties that those drawing up the taxation inventories, inspections and registers encountered, in wanting to define the status of settlements located on the peripheries of town voloks. For in relation to the buildings, the spatial localiation and the specifics of the inhabitants’ occupations they looked like villages. However, from the legal point of view their inhabitants were residents subject to urban law, while the lands they cultivated had the status of being municipal holdings. The untypical nature of this situation has resulted, in the course of work on the current AHP, in the problem of how to symbolise on the maps ‘town villages’. From the formal-legal point of view it ought to be considered the property of the crown and be marked in the same colours as a town. The adoption, however, of such a solution would constitute a failure to graphically signalise the different legal status of these settlements in relation to other villages. Particularly that amongst apart of their inhabitants there lives on to this day the memory of their ‘urban’ status. Ultimately the team working on this volume of the AHP adopted a solution involving the application of the colour employed in earlier volumes of the AHP for actual municipal property holdings, combined with the explanation contained herein as to the specificity of the situation for these settlements, which despite having a form proper for a village in principle should be treated as integral parts (districts or suburbs) of their relevant municipal centres. This solution, though far from ideal, does at least allow one to differentiate matters graphically on the map and to signalise their specific nature in relation to ordinary villages.

ANNEX I

Royal property holdings at the end of the sixteenth century

In brackets have been given the present-day names if these differ significantly from their sixteenth-century predecessors or would possibly result in identification problems.

Augustów starosty

Augustów – town and suburbs: Biernatki, Turówka, Zaścianek (Uścianki), Żarnowo (Żarnowo Drugie).

Villages: Bargłowo (Bargłów Kościelny), Bargłówka, Barszcze, Brzozowa, Dręstwo, Jeziorki, Krosiowo (Kroszówka), Lipówka, Neta (Netta Pierwsza), Orzechówka, Pruska, Rudki (Rutki Stare), Tajno (in part), Woźna Wieś (in part).

Bielsk starosty

Bielsk – town with suburbs: Augustowo, Koszczyno (Szastały), Młodzianowo (Stryki), Piotrowo (Parcewo), Spiczki, Stanisławowo (Widowo).

Villages: Antonowicze (Ryboły), Bielki, Chraboły, Deniski, Grabowiec, Haczki (Haćki), Hołody, Hołowiesk, Hredele (Gredele), Hukowicze, Husakowo (Husaki), Huzyki (Użyki), Ilnatki (in part; Ignatki), Janowo, Kaczały, Knorozy, Kotły, Koźliki, Krzywiatycze (Krzywa), Porzecze (Podręczany), Łyse, Nałogi, Orechowicze (Orzechowicze), Pasynki, Pawłowicze (Pawły), Piliki, Pluczice (Plutycze), Płoski (Ploski), Piliki (Pilipki), Proniewiczze, Rajsco (Rajsk), Rakowicze, Rybołowy (Kaniuki), Saki (in part), Sobociec (Hendzel), Soce, Stecewicze (Stacewicze), Stołowacz, Stupniki, Święciciele (Cieluszki), Trościanica (Trześcianka), Trzeszczotki, Wojszki, Zubowo, Zygmuntowo (in part; Klejniki).

Brańsk starosty

Brańsk – town.

Villages: Bonowo (Bujnowo), Chojewo, Czuczerepki, Hodyszewo, Holonki, Joski, Kierznówek, Klichy, Krupki, Malesze, Oleksino, Patoki, Sielec, Świrzydy, Wolica, Załozie, Zanie.

Drohiczyn starosty

Drohiczyn – town.

Villages: Czarna Królewska, Korczówka, Rogawka, Skiwy (in part), Wólka (Wólka Zamkowa).

Goniądz starosty

Goniądz – town and suburbs: Białosuknie, Downary, Jaśki, Łupichowcy, Owieczki, Puszkarze, Pyzy, Zyburty, Żodzie.

Villages: Bagno, Ciesze (Giesze), Dudki, Dymidy (unlocated), Dzieszki, Ginie, Hornostaje, Kalinówka Wielka, Klewianka, Koleśniki, Kołodzieże (in part), Konopki (Konopczyn), Kropiwnica, Krzeczce, Oliszki, Piwowary, Potoczyna, Przytulanka, Rusaki, Smogorówka (Smogorówka Goniądzka), Szacziły, Szpakowo.

Knyszyn starosty

Knyszyn – town.

Villages: Bobrówka, Boguszewo (in part), Brzozowa, Chraboły, Czarna (Milewskie), Czechowczyzna, Długołęka, Dobrzyniewo, Dolistowo (in part), Gincze (Guzy), Gniła, Góra (in part), Grodzisko, Gurbicze, Jaćwież, Jaskra, Jaświły (in part), Kozopatry (Koziańce), Krasowo (Lewonie), Krynice, Krypno (in part), Kulikówka (in part), Letniki, Mociesze, Obrubniki (in part), Pogorzałki, Przytułki, Rekle, Romejki, Ruda, Rybaki, Trzcianne (in part), Zabiele, Zalesie, Zastocze, Zubole.

Łosice starosty

Łosice – town.

Villages: Kornica, Łepki (Stare Łepki), Olszanka, Prochenki, Rudka, Szpaki, Szydłówka.

Mielnik starosty

Mielnik – town.

Villages: Borsuki, Hołowczyce, Horoszki, Klepaczewo (Klepaczew), Mierzvice (Stare Mierzvice), Młynarze, Moszczona (Moszczona Królewska), Osłowo, Radziłówka (Radziwiłłówka), Sielpielicze (Serpelice), Zalesie, Żerczyce (in part; Żerczyce), Żurobice.

Rajgród starosty

Rajgród – town.

Villages: Chmiele, Czarny Las (Czarna Wieś), Jodziki (in part), Kosyły, Kosówka (in part), Miecze, Tworki (in part), Woźna Wieś (in part), Żrobki (in part).

Suraż starosty

Suraż – town and suburbs: Daniłowo, Hruskie.

Villages: Bielewicze (Biele), Bogdanki, Doroszki, Dupki (Dubki), Hryniewiczze, Klepacze, Oliszki, Oziabły (Baranki), Pomihacze, Repniki (Rzepniki), Rogowo (in part), Rostoły, Rymki (Rynki), Szymany, Tryczówka, Wyprotka, Zapole, Zawojki (Zawyki).

Tykocin starosty

Tykocin – town.

Villages: Brok, Broniszewo (in part), Jeżewo, Kalinowo, Kobylino-Gnatki (in part; Kobylin-Łatki), Leśniki, Lipniki, Łopuchowo, Makowo (in part), Mazury, Pajewo (in part), Radule (in part), Sanniki (in part), Sawino, Siekierki (in part), Sierki, Stelmachowo, Wólka (unknown location), Złotoria.

Bielsk forestry

Villages: Berezowo (Stare Berezowo), Czyżewicze (Czyże), Dawidowo (Dawidowicze), Dubicze (Dubicze Osoczne) Jahodnik (Jagodnik), Kamień, Kojły, Kornino (Stary Kornin), Koryciszca (Koryciski), Kuraszewo, Koszewicze, Krzywiatycze (Krywiatycze), Lada, Łoknica (Osówka), Mochnate, Morze, Stok (Istok), Szostakowo, Witułowo (Witowo), Zbucz.

Knyszyn forestry

Villages: Borsukówka, Chraboły, Leńce, Pogorzałki, Safiejewo (Zofiówka), Zabiele.

Tykocin and Goniądz forestry

Villages: Brzeziny (in part), Chobotki (in part), Trzciane (in part; Trzcianne).

Kleszczele lease

Kleszczele – town with suburbs: Babicze (Kuzawa), Dobra Woda (Dobrowoda), Kośna (Dasze), Nurzec (Czeremcha–Wieś), Trubianka.

Villages: Czochy (Czechy Orłańskie), Dubicze (Dubicze Cerkiewne), Jelonka, Obychodnik (Grabowiec), Ruda (Rutka), Sucha Wola.

Krzywa lease

Villages: Krukowszczyzna, Krzywa, Olszanka.

Narew lease

Narew – town with suburbs: Makówka, Waniewo.

ANNEX II**Large scale Church land holdings at the end of the sixteenth century****Łuck bishopric**

Villages: Bonin, Litewniki Stare, Raczki, Rudniki, Skrzyszew, Walim, Wasilewo.

Drohiczyn Franciscans

Village: Klizówka (Kłyżówka).

Augustów presbytery

Village: Borsuki (Borsuki Kościelne).

Bielsk presbytery

Villages: Pulsze, Samułki.

Bransk presbytery

Villages: Bronka, Załużie (Załuskie Kościelne).

Drohiczyn presbytery

Village: Ruda.

Goniądz presbytery

Village: Krzeczkowo.

Hadynów presbytery

Villages: Dawidy, Hadynów.

Kalinówka presbytery

Village: Kalinówka (Kalinówka Kościelna).

Krypno presbytery

Village: Krypno (Krypno Wielkie, in part).

Mielnik presbytery

Villages: Ostrowiec (in part), Wajkowo (Wajków).

Mordy presbytery

Village: Klimonty.

Narew presbytery

Villages: Czowczyzna (Lachy), Zygmuntowo (Klejniki, in part).

Rajgród presbytery

Village: Popowo.

Siemiatycze presbytery

Village: Czeczele (Cecele).

Suraż presbytery

Villages: Uhowo and Poświętne (Poświętne, in part).

Tykocin presbytery

Village: Popowlany.

Węgrów presbytery

Village: Szaruty.

Krypno presbytery

Village: Krypno (Krypno Wielkie, in part).

III.3.3.9a ROYAL PRUSSIA

Marian Biskup

Arable land and land property

The second part of the MRP consists of 10 thematic maps, which – together with a few smaller charts and sketches – highlight the most important economic and social problems of sixteenth century Prussia. The most important elements of the main map, i.e., the borders of parishes, districts and voivodeships, as well as the hydrography, served as the base maps for the preparation of the thematic maps in the 1:500,000 scale. Most of the statistical calculations were performed on a parish scale and maps for districts were additionally prepared only with regard to demographic issues.

The elaborated thematic maps can be divided into two larger groups:

- I. Maps 1–2, highlighting the problems of arable land, soil and land ownership.
- II. Maps 3–10, illustrating the problems of demographics and rural craftwork as comprehensively as possible.

The cartographic presentation of significant and wide problems of the arable land and demography of Prussia required a thorough statistical study, especially in the absence of studies on these issues. Therefore, in the commentary, a lot of space had to be devoted to the presentation of the calculation methods and their results in the form of tables, presenting the entirety of the problem. For these reasons, it was decided to present a map on land ownership first due to the close connection of this problem with the issue of arable land.

Ownership affiliation of settlements (thematic map 1)

Map one presents the distribution of land ownership of Royal Prussia for six categories of property: royal, nobility, Church, royal-town, Church-town and undefined. In the case of noble property, farm gentry was not included in the cartographic presentation, because it does not play a very important role among the entire nobility group, as well as due to the specific social status of the farm gentry in Prussia, which will be presented below. The issue of the diversity of the entire nobility group is presented graphically in map eight “Ownership and social structure of the nobility”.

The graphic design of map one also includes the centres of starostwos (*starosta's districts*) and royal leases and Church-owned clusters of property, as well as the seats of rural monasteries, to help the reader draw their own conclusions.

It should be clarified that the problem of the distribution of land ownership was regarded in the commentary together with the problem of the size of the ownership affiliation categories to address the problem quantitatively. For this purpose, it became necessary that we first address the method of calculating the area of the arable land of Royal Prussia. This problem as well as the conclusions regarding the distribution of land ownership will be discussed for individual voivodeships first, and then for the whole of Prussia.

The calculation of the size of the arable land of Royal Prussia was mainly based on the information from tax registers or the royal lands' inspections or Church inventories. These data, as we have

already indicated above, were not always complete, especially for the noble property, and sometimes required using an additional estimation method, indicating a range from 3% to a maximum of 15% of the arable land. Without going into detail, we would like to emphasize what we found most difficult was the matter of the number and size of manor demesnes, especially nobility-owned ones, which were seldom included in the source materials. The most complete data for about 40% of demesnes were obtained for Pomeranian Voivodeship; they have already been largely presented elsewhere.¹ Using the aforementioned data, the average size of the royal demesne in individual districts was calculated. It ranged from five to 36 lans. On the scale of the entire voivodeship, it was around 16 lans on average.²

Table 1. The size of royal demesnes in Pomeranian Voivodeship

district	demesnes total	demesnes covered by the sources	number of lans	assumed average lans per one demesne	approx. no. of lans	total lans of demesne lans
Człuchów	11	6	96	16	16	176
Gdańsk	4	3	35	11	11	46
Mirachowo	5	1	29	29	8	61
Nowe	4	2	43	21.5	21.5	86
Puck	5	4	75.5	19	19	95
Świecie	6	3	33	11	11	66
Tczew	26	7	115	16	16	419
Tuchola	7	2	35	17	16	115
total	68	28	461.5	16	16 ³	1,064

However, for a Church demesne, the average size is slightly lower and amounts to approximately 111.

Table 2. The size of Church demesnes in Pomeranian Voivodeship

district	demesnes total	demesnes covered by the sources	number of lans	assumed average lans per one demesne	approx. no. of lans	total lans of demesne lans
Człuchów	–	–	–	–	–	–
Gdańsk	12	2	12	6	11	122
Mirachowo	4	2	31	15	15	61
Nowe	2	1	6	6	11	17
Puck	6	2	17	8	11	61
Świecie	4	3	40	13	13	53
Tczew	25	6	69	11	11	278
Tuchola	4	2	26	13	13	52
total	57	18	201	11	11	644

For town property (townspeople and royal towns) it is similar, as it amounts to approx. 10 lans, although the data ranged considerably – from seven to 23 lans.⁴

¹ M. Biskup, A. Tomczak, *Mapy województwa pomorskiego w drugiej połowie XVI w.*, vol. 1: *Rozmieszczenie własności ziemskiej*, Toruń 1955, pp. 52–55.

² For the farms in the Mirachowo district, only eight lans were assumed due to source information stating that they were small farmsteads.

³ This number is thus lower by 3 lans than what was assumed in the initial calculation – M. Biskup, A. Tomczak, *Mapy województwa pomorskiego*, vol. 1, p. 51–52 – as a result of the inclusion of further source data.

⁴ The problem does not pertain to the territory of Gdańsk.

Table 3. Size of town demesnes in Pomeranian Voivodeship

district	demesnes total	demesnes covered by the sources	number of lans	on average lans per one demesne	approx. no. of lans	total lans of demesnes
Człuchów	–	–	–	–	–	–

Tczew	4	4	48	12	12	48
Tuchola	1	1	23	23	23	23
total	13	10	109	11	10	130

For Malbork Voivodeship, information was available for approx. 50% of royal demesnes.⁵ Their sizes range from six to 36 lans. The average is 18 lans.

Table 4. Royal demesne size in Malbork Voivodeship

demesne name	administrative unit	year	demesne size in lans	average lans per demesne
Kałdowo	W. Żuławy	1652	22	–
Kamionka		1652	17	–
Laski		1652	25	–
Mątowy Mały		1652	36	–

Nowy Dwór		1629	7	–
Dolna	M. Żuławy	1565	12	–
Piaski		1652	35	–
Markusy		1566	8	–
Straszewo	Straszewo starostwo	1565	6	–
total			181.5	18

The matter of the Church demesne in this province was practically non-existent. On the other hand, for the town property, represented mainly by the estates of the town of Elbląg, the available data on the size of the demesnes were almost complete. The size of the demesne ranged from 3 to 34 lans, and on average amounts to seven lans.

The source information concerning the size of demesnes in Chełmno Voivodeship was the scantiest. No numerical data was actually obtained for the royal property and the estimated number of 10 lans was necessarily used per such demesne. This number was adopted on the basis of information available for Church property, for which some data were obtained, covering approx. ¼ of demesnes. Their size ranges from five to 18 lans, and on average is 10 lans. Because the data for several town-owned demesnes are fragmentary, this figure was also used to calculate their total area.⁶

⁵ Admittedly, some information comes from the beginning or even the middle of the seventeenth century, however, in view of the known, poor development of the demesne economy in Żuławy and the stability of the local peasant economy, this does not seem to bear any major significance for the situation in the sixteenth century.

⁶ It applies mostly to demesnes of Chełmno bishopric.

The calculation of the arable land belonging to nobility for the entirety of Royal Prussia proved to be of the greatest difficulty. This problem was already raised when discussing the distribution of land ownership in Pomeranian Voivodeship, for which – compared to other voivodeships – information about the existence and even the size of a nobility-owned demesne is relatively most abundant.⁷

Table 5. The size of nobility-owned demesnes in Pomeranian Voivodeship

district	number of known demesnes	demesnes covered by the sources	number of lans	average lans per demesne	assumed approx. lan	total lans of demesne lans
Człuchów	50	38	316.5	8	8	413
Gdańsk	9	7	90.5	13	13	117
Mirachowo	9	7	33	5	5	43
Nowe	15	2	22	11	10	152
Puck	19	14	55.25	4	4	75
Świecie	19	1	14	14	10	194
Tczew	63	42	511.25	12	12	763
Tuchola	9	6	110.5	18	18	165
total	193	117	1153	10	10	1,922

In many cases, tax registers for this voivodeship provide not only data on peasant fields in nobility-owned villages, but also indicate the existence of a demesne, and even specify its size, which ranges from two to 36 lans, with the average for the entire voivodeship at 10 lans.⁸

The number 10 lans were thus taken as an estimated size for nobility-owned demesnes with an unspecified number of lans. However, it should be taken into account that even Pomeranian Voivodeship tax registers do not always indicate the existence of the nobility-owned demesne. 60% of the registers only list the peasant lans, which were subject to taxation, as shown in the table below.

Table 6. Number of nobility-owned villages and listed demesnes in Pomeranian Voivodeship

district	number of farming villages	demesnes listed with farming villages	demesnes with no farming villages
Człuchów	57	32	25
Gdańsk	12	4	8
Mirachowo	7	5	2
Nowe	20	3	17
Puck	22	9	13
Świecie	60	8	52
Tczew	70	42	28
Tuchola	25	6	19
total	273	109	164 ⁹

⁷ M. Biskup, A. Tomczak, *Mapy województwa pomorskiego*, vol. 1, pp. 50 f.

⁸ The data in this table differ slightly from the previous findings (*ibidem*, p. 52) due to taking into account some additional source data.

⁹ Only in the Człuchów, Mirachowo, and Tczew districts, manor demesnes were declared in over 50% of nobility-owned villages. In the Nowe, Puck, Świecie, and Tuchola districts, no manor demesnes were declared, which gives us on average, 75% of peasant villages; 60% of villages in total.

It is also known that for the above-mentioned reasons, a certain percentage of lans per demesne is usually added to the peasant lans in the estimates of the remaining Crown lands. A. Pawiński added up to even approximately 100% peasant lans to nobility-owned demesne lans. For Mazovia, this estimate has recently been lowered to 50% of peasant lans. Consequently, the acreage of a nobility-owned demesne would constitute 33% of the area of the nobility-owned land (i.e., the sum of peasants lans and the demesne arable land).¹⁰

With regard to Pomeranian Voivodeship, this method could not be fully adopted because in many cases a particular number and a specific area of nobility-owned demesnes were given. For these reasons, the known number of the total lans of noble demesnes were supplemented with about 25–50% additional lans, depending on the extent to which the source data covered the existence and area of the properties of each district, as shown in the table below.¹¹

The number of lans of the Pomeranian nobility-owned demesnes obtained this way corresponds to a total of approximately 40.5% of the total area of the noble property (i.e., peasant and demesne lans).

The above method could not be adopted in its entirety to calculate the area of nobility-owned arable land in the two other voivodeships, i.e., Chełmno and Malbork since the tax registers for these areas do not provide such detailed information about the existence or the size of demesnes for individual nobility-owned villages.

Table 7. List of additional nobility-owned demesne lans in Pomeranian Voivodeship

district	size of peasant farms in lans	size of known demesne acreage in lans	approximation of demesne acreage in lans	total acreage of demesnes in lans	ratio of demesne acreage to total cultivated land
Czuchów	1,066	413	50% = 206	619	37%
Gdańsk	223	117	50% = 58	175	44%
Mirachowo	58	43	25% = 11	54	48%
Nowe	422	152	50% = 76	228	35%
Puck	187	75	50% = 38	113	38%
Świecie	794	194	75% = 146	340	30%
Tczew	983	763	25% = 191	954	49%
Tuchola	207	165	25% = 41	206	50%
total	3,940	1,922	40% = 767	2,689	40.5%

For 30 nobility-owned demesnes in Chełmno Voivodeship included in the tax registers without specifying their size, the assumed acreage was eight lans, and for 12 nobility-owned demesnes in Malbork Voivodeship – nine lans (i.e., numbers proportionally lower than the figures for the royal and Church demesnes). However, the data covers only a small part of nobility-owned villages, especially in Chełmno Voivodeship, therefore an approximation method was used and 50% of the peasant land was assumed as nobility-owned land unlisted in the source material. For Malbork Voivodeship, which has a slightly different noble ownership structure than Chełmno Voivodeship, characterized in particular by the presence of a group of more prominent landowners and a smaller number of the middle nobility,¹² only an estimated 25% of the acreage of peasant lans was added to the nobility demesne acreage. Given the very small area of nobility-owned arable land, this difference does not play a major role here.

¹⁰ Cf. A. Pawiński's notes: *P. Wielkopolska*, vol. 1, p. 70 as well as the authors' of WP, pp. 56 f.

¹¹ Estimates for the area of Tczew and Tuchola districts, where the number of farms listed by the sources is quite high, could provoke doubts. However, in over 40–70% of the nobility-owned villages in these districts, the existence of demesnes was not declared. These are areas that are keenly interested in the export of grain and are predominantly inhabited by the middle nobility (see below). The latter consideration also determined the addition of a number – however small – of 11 lans in Mirachowo district.

¹² Cf. M. Biskup, *Rozmieszczenie własności ziemskiej województwa chełmińskiego i malborskiego w drugiej połowie XVI w. (Mapa i materiały)*, Toruń 1957, pp. 27–28. Cf. discussion on map 8.

The presentation above does not highlight further difficulties encountered in calculating the area of nobility-owned arable land. The structure analysis of noble-born landowners revealed that there was a large group among them, paying for their arable lans the rate usually paid for “farm lans” (*lany zagrodowe*) (12 grosz per lan in the Chełmno and Pomeranian voivodeships in 1570, and 15 grosz in Malbork Voivodeship in 1581 compared to the fee of 20 grosz per peasant lan in the first two voivodeships, and 30 grosz in Malbork Voivodeship). Such a fee was reserved for the lans not farmed by peasants, and remaining in the exclusive use of the nobleman owner. Thus, seemingly, a group paying 12 (or 15) grosz per lan would constitute a group of petty farm gentry. These findings, however, were undermined by a more detailed study of the structure of the group of noble landholders, which we present the comparisons given there that the size of the arable land owned by the farm gentry representative (*szlachic zagrodowy*) in Royal Prussia ranges from 0.5 to 30 lans, and on average – 3–10 lans. It is obviously not possible to categorize the entire abovementioned group as “farm gentry”. We are inclined to accept this term – as fully justified – for the most numerously represented category of owners of 0.5–3 lans, who, indeed, seem to constitute a typical “petty nobility” or “petty gentry” of Royal Prussia, dwelling especially in the area of Kashubia, and using the hired workforce to a lesser extent. On the other hand, the remaining categories of owners (3–30 lans), we should subsume under the group of the demesne nobility, who did not have peasants but cultivated the land with considerable help from the hired workforce. Let us add, moreover, that the sources themselves sometimes directly describe these “zagrodowe” [smallholders’- translator’s note] lans as “demesne lans”, while providing data on the permanently hired workforce, mainly smallholders, employed by the Prussian “farm gentry”.¹³ Consequently, their estates will constitute the area of the demesne, which uses hired workforce and must be included in the nobility-owned area, considerably reducing the acreage of actual farm gentry-owned arable land. In the area of Royal Prussia, the phenomenon of the nobility-owned demesne operating solely on hired labour, especially smallholders, according to the research of H. Plehn, already had a place in the times of the Teutonic Order.¹⁴ Also, in the other Crown lands in the sixteenth century, nobility-owned demesnes with no resident peasants, operating based solely on hired labour could be encountered.¹⁵ For the territory of Prussia, this was a widespread phenomenon, due to the specific town of their economic development, and more importantly, it could be approximately captured in numbers. Without going into detailed analysis, to which we will return when discussing the demographics of Prussia, we wish to emphasize once again that it has caused appropriate adjustments in the calculation of the nobility-owned demesne acreage, which, as a result, was significantly enlarged.

Concluding the discussion of the method of calculating the acreage of arable land, we note that the basic unit in the calculations is the 30-morgen Chełmno lan, which was commonly used in Prussia and served as the basic means of land measurement. Found in the northern regions of Pomeranian Voivodeship (Gdańsk, Mirachowo and Puck districts), an old Polish measure of a żreb (i.e. a *radło*) of 1.5–2 lans is found only sporadically and is often already identified with a lan.¹⁶

In the calculations it was also attempted to distinguish arable lans from non-settled lans, as much as possible, to illustrate the state of vacant lands in Prussia. This assumption could nevertheless only

¹³ E.g. Gogoliniec, Chełmno Voivodeship – 7,5 lans, 12 grosz each – four smallholders; Sędzice W. – eight lans 12 grosz each – 3 smallholders, 10 lans 12 grosz each – four smallholders (P. Prusy Królewskie, pp. 32, 43); cf. Klecewo, Malbork Voivodeship – 10 lans of “*propriae culturae*” – five smallholders (ASK I 120, p. 22); cf. also Gołoty, Chełmno Voivodeship – manor demesne – two florins six grosz (i.e., 5.5 lans 12 grosz each) – P. Prusy Królewskie, p. 30).

¹⁴ H. Plehn, *Zur Geschichte der Agrarverfassung in Ost- und Westpreussen*, „Forschungen zur brandenburgisch-preussischen Geschichte”, vol. 17, 1904, pp. 82 f.

¹⁵ Cf. A. Wyczański, *O folwarku szlacheckim w Polsce XVI stulecia*, KH, vol. 62, 1954, no. 4, p. 184.

¹⁶ For example, cf. M. Biskup, A. Tomczak, *Mapy województwa pomorskiego*, vol. 1, pp. 49–50, footnotes 3–6. In the calculations, the *radło* unit of land was reduced to the size of the Chełmno lan. Without questioning the validity of S. Śreniowski’s, *Uwagi o lanach w ustroju folwarczno-pańszczyńnianym wsi polskiej*, KHKM, vol. 3, 1955, no. 2, pp. 301 f., notes on lans in the manorial economy system of the Polish countryside that in the sixteenth century the lan was rather a unit (a local unit of measurement) of land owned by peasants, but did not represent a specific geometric measure, it should be noted that this statement cannot be fully applied to Royal Prussia, which adopted its system of measurement from the Teutonic Prussia period. The method of precise measurements of the land, especially in Teutonic domains, by special surveyors using the Chełmno lan as the unit of measurement, was widely adopted there; see H. Mendthal, *Geometria Culmensis*, Lipsk 1886, pp. 4 f. In tax registers, taxes levied on morgen owned by millers or innkeepers can sometimes be found. However, their number never exceeds 30; cf. P. Prusy Królewskie, p. 118 – Pomyje, Tczew district – “5 iugera cauponis”, p. 185 – Kozłowo, Świecie district – “2 mansi possessi ad 20 gr 5 iugera ad 2 solidos”.

be implemented for the area of Pomeranian Voivodeship, as the information for the remaining voivodeships is too fragmentary.

As already mentioned above, in the second half of the sixteenth century, in the territory of Royal Prussia, there were six basic types of land ownership: royal property, noble property, Church property, town-royal and town-Church property. The remaining, sixth type is, however small, a group of estates with an unspecified – for the period in question – owner in the Chełmno and Pomeranian Voivodeships. In Chełmno Voivodeship within Church property, a group of settlements, in use of the so-called vassals of the Chełmno bishops (i.e., the users of the bishop's landed estates who were of noble status) were also distinguished, more on this topic will be discussed below. Town property was divided into the category of royal towns and owned by burghers who inhabited them, and the category of towns belonging to the Church – namely to the Chełmno bishopric (private towns). It should be noted that the Prussian townspeople, especially the bourgeoisie of big towns, had the full right to buy and sell land on an equal footing with the nobility. From 1598, only the estates of the burghers (the so-called *bona civilia*) were not subject to the amended provisions of the Chełmno law, limiting the right of inheritance in the female line, applicable from that time on to noble estates (*bona terrestria*).¹⁷

The distribution of land ownership in individual provinces has already been analysed in more detail in the previous monographs. For these reasons, we will limit ourselves only to general comments and syntheses.

Chełmno Voivodeship

The division of land ownership in this voivodeship in terms of owned rural settlements was as follows:

Table 8. Land ownership in Chełmno Voivodeship according to the number of rural settlements

district – administrative unit	total rural settlements	royal property		noble		Church		town-Church		town-royal		unspecified ownership	
		settl.	%	settl.	%	settl.	%	settl.	%	settl.	%	settl.	%
Chełmno	323	116	36.0	166	51.4	24	7.4	–	–	13	4	4	1.2
Michałowó	145	53	36.6	74	51.1	14	9.7	–	–	2	1.3	2	1.3
territory of the Chełmno bishop	121	–	–	–	–	112	92.6	9	7.4	–	–	–	–
territory of the town of Toruń	33	–	–	–	–	–	–	–	–	33	100	–	–
total	622	169	27.2	240	38.6	150	24.1	9	1.4	48	7.7	6	1

In terms of their economic nature, these estates were divided as follows:

Table 9. Economic category of rural settlements in Chełmno Voivodeship

ownership affiliation	farming villages	demesnes			demesne nobility-owned settlements and owned by farm gentry	milling settlements	settlements of unspecified economic category	total
		together with farming villages	standalone settlements	total				
royal	109	4	35	39	–	25	–	169
noble	152	?	?	?	48 ¹⁸	3	37	240
Church	110	9	24	33	–	15	1	150

¹⁷ W. Brüneck, *Zur Geschichte des Grundeigentums in Ost- und Westpreussen*, vol. 1, Berlin 1891, p. 92 f.

¹⁸ The number of independent noble demesnes has not been identified, as they are also located in the villages of the farm gentry and in the villages of the larger farm gentry (more than three lans). Only 14 settlements constitute only noble demesnes (excluding the farm gentry over three lans and the peasants' lans).

ownership affiliation	farming villages	demesnes			demesne nobility-owned settlements and owned by farm gentry	milling settlements	settlements of unspecified economic category	total
		together with farming villages	standalone settlements	total				
town-Church	6	–	2	2	–	–	1	9
town-royal	34	5	9	14	–	5	–	48
unspecified	1	–	–	–	–	–	5	6
total	412	18	70	88	48	48	44	622

The table below, which illustrates the size of the arable land for individual categories of land ownership supplements the lists above.

Table 10. Arable land in Chełmno Voivodeship

ownership affiliation	peasants' [lans]		demesne [lans]		demesne using hired labour [lans]		total demesne [lans]		lans of farm gentry		lans of unspecified ownership		total arable lans		percentage of individual landholders
		%		%		%		%		%		%		%	
crown	4,582	92.2	390	7.8	–	–	390	7.8	–	–	–	–	4,972	31.8

Thus, while rural estates predominated among noble property, the royal property comes first in terms of the area of arable land. However, noble and Church properties match it to a large extent. Royal town-owned property occupies a further place, although its share is relatively large (approximately 8%).

The royal property consists of nine clusters of property, constituting starostwos (in this case district's lands with no gords) and individual leases. There were 116 royal settlements in Chełmno district, concentrated in seven starostwos: Golub, Grudziądz, Kowalewo, Lipieniec, Pokrzywno, Radzyń and Rogozin.¹⁹ In the Michałowo district, 53 royal settlements are concentrated in two starostwos: Bratian and Brodnica (from which a cluster of property was temporarily separated near Lidzbark Welski and constituted Lidzbark starostwo) and in three villages belonging to the Radzyń starostwo (later Łąkorz starostwo). Thus, royal estates are found both in Chełmno district, where they are concentrated mainly in the central, northern and south-eastern regions and in Michałowo district, mainly in the southern and north-western parts.

The table shows a significant number of 109 royal settlements with an area of 4,582 lans (on average approximately 43 lans per one settlement). Thirty-nine demesnes are concentrated mainly in the western part of the voivodeship, i.e., in Chełmno district (Grudziądz, Lipieniec, Radzyń and Golub starostwos). Although there are on average 3.6 peasants' settlements per one demesne, the demesne's acreage (390 lans) in relation to the total arable area of the crown (4,972 lans) is only 7.8%. A fairly significant number of independent milling settlements (25 out of a total of 169 settlements) is striking.

¹⁹ In more detail M. Biskup, *Rozmieszczenie własności ziemskiej województwa chełmińskiego i malborskiego*, pp. 16 f.

The noble property is represented by 240 settlements, located mainly in the southwest reaches of Chełmno district (166) and in the western part of Michałowo district (74) near the Lutryna river and the eastern part in the belt adjacent to the Wel river.

Referring to the observations presented above regarding the farm gentry landowners, with more than three peasant-less lans, whom we recategorized as demesne gentry, the acreage of the actual farm gentry's land is relatively low (233 lans), as most 12 grosz lans (i.e., 967 lans) is moved to the category of demesne lans. Compared to the peasant lan acreage, amounting to 2,125 lans, the total acreage of the demesne is 2,285 lans (nobility with peasants estimated to own approximately 1,318 lans and peasant-less nobility – 967 lans). The average size of a farming village here is approximately 16 lans. The ratio of the arable land in the demesne per se to the total arable land belonging to the demesne nobility in Chełmno Voivodeship is thus 49.2%. Compared to the ratios prevailing at royal (as well as Church) property, these numbers are very high, although we must make a reservation that of the above 49.2% as much as 20.8% lans lay in the demesne belonging to the demesne gentry, who did not own any peasants.

Church property is represented in three ways: as the property of Chełmno bishopric, other Church institutions, and parish churches. The estates of Chełmno bishopric constitute – as already mentioned – separate administrative districts. They include a total of 112 rural settlements and four towns. The town of Chełmno with its nine rural settlements should also be included in these figures. The entirety of this great cluster of property was divided between the bishop and the chapter. The main complex of the bishopric estates was located in the eastern part, forming two large clusters of property: Lubawa (bishop's) and Kurzętnik (chapter's). A smaller concentration of episcopal estates was located in the western part around Chełmża (chapter property), Papowo Biskupie and Starogród (bishop's property: Papowo cluster and Starogród cluster) and Wąbrzeźno (bishop's Wąbrzeźno cluster) and Płowęż (bishop's Płowęż cluster). The bishops also owned the town of Chełmno with its vast territory with nine settlements and the towns of Lubawa, Chełmża and Wąbrzeźno; only the lesser town of Kurzętnik was subject to the chapter.

It should be noted that some villages in the bishop's or chapter's estates, especially in the Kurzętnik and Lubawa clusters of property, were handed over by the bishops or the chapter to use for a longer period to representatives of the nobility, usually petty gentry. These petty nobles were considered the bishop's vassals, and their estates – vassal estates. The institution of episcopal vassals dates back to the Teutonic period, and its origins undoubtedly lay in the need to provide the bishop with an armed force needed in case of a muster by the Order. The obligations of the vassals consisted of paying an annual fee in grain, the so-called *plużne*, five bushels of rye and wheat from each property (settlement), a pound of wax and five denarii as a recognition rent (*czynsz rekognicyjny*, a small complimentary feudal fee to the local lord, according to the provisions of the Chełmno law). In addition, on request, an individual vassal had to provide a horse and a soldier. For any changes, e.g., transactions in owned goods, the consent of the bishop or the chapter was required.²⁰ Bishop's vassals, whose assigned lands were usually 3–4 lans, appear in the number of approximately 95 families in 25 villages of Chełmno bishopric, having their own peasants to a small extent, and mainly farming in the demesne using the wage labourers. The position of the bishop's vassals – as it seems – largely corresponds to the position of the remaining nobility of the voivodeship, owning over three lans without peasants.

The entire arable area belonging to the demesne of the Chełmno bishops amounts to (excluding the territory of the town of Chełmno) 3,250 lans, of which 425 lans remain in the use of the episcopal vassals. The number of peasant villages (not owned by the vassals) is 81, and their total acreage is 2,586 lans (approximately 321 per village). The number of demesne farms (excluding vassal ones) amounts to 24 with a total area of approximately 239 lans (101 per demesne on average). Thus, for one bishop's demesne there are approx. 3.4 farming villages. The ratio of the demesne area to the total arable area in the bishop's estates is approximately 8%, similar to crown property. However, out of 425 lans used by vassals, about 55 lans are cultivated by peasants, and 370 lans are cultivated by the vassals themselves. Thus, the total area of peasant lans in the property of Chełmno bishopric is 2,641 lans, the demesne – 609 lans, compared to a total of 3,250 lans. The ratio of the demesne acreage to the total arable area amounts to approximately 18.7%.

²⁰ Cf. *Inwentarz dóbr biskupstwa chełmińskiego z r. 1614 z uwzględnieniem późniejszych do r. 1759 inwentarzy*, pub. A. Mańkowski, Toruń 1927 (Fontes Towarzystwa Naukowego w Toruniu, vol. 22), p. 61; W. Brünneck, *Zur Geschichte des Grundeigentums*, vol. 1, p. 102.

The property of other Church institutions consists of 38 rural villages, including 24 in Chełmno district and 14 in Michałowo district. In Chełmno district, the largest share is the Benedictine monastery in Toruń (10 settlements) and Chełmno (nine settlements), concentrated in the south-western part of the district around both towns. Włocławek bishopric has three villages in Chełmno district, which are part of the Ciechocinek estate cluster (in the Dobrzyń region). The parish churches in Toruń (St. John's church) and Grudziądz have one settlement each. In Michałowo district, the main role belongs to the property of the Płock bishops, adjacent to the Kurzętnik estate cluster of the Chełmno bishops on the left bank of the Drwęca River, and constituting part of the Górzno cluster of estates (in the Dobrzyń region). Also, the parish church in Brodnica and the local Hospital of the Holy Spirit (*Szpital św. Ducha*) own one village each. In terms of the size of the arable land, the distribution of the remaining Church property is as follows:

Benedictine monastery in Chełmno	201 lans
Płock Bishopric	197 lans
Benedictine monastery in Toruń	121 lans
Włocławek Bishopric	72 lans
St. John church in Toruń	54 lans
Hospital of the Holy Spirit in Brodnica	32 lans
Parish church in Grudziądz	25 lans
Parish church in Brodnica	10 lans

Of this number, there are 681 peasant lans (26 villages with the average size of a village at 22 lans). The acreage of the three demesne farms is 31 lans. There are approximately nine villages per a manor demesne.

The last category among Church property is the land belonging to the 119 parishes. In essence, in the entire area of Royal Prussia, it amounts to four lans per one parish on average. In the area of Chełmno Voivodeship, this average is slightly higher due to the reclaiming of property of dozen-or-so parishes liquidated in the fifteenth century by the remaining parishes and amounts to approximately five lans. The total property of the parishes in the voivodeship is therefore 599 lans, of which 517.5 lan belongs to rural parishes and 81.5 lan – to town ones. It should be noted that due to both significant areas of parish lans, which actually constitute small demesnes, and the fact that the parish priests cultivated them themselves (which seem to have been a common practice), the entirety of these lans were classified as demesne lans. Of course, this does not exclude the fact that they could have sometimes been leased by the parsons to local peasants.²¹ In any event, however, it seemed necessary to include this category in the group of non-peasant lans.

The entire arable acreage owned by Church institutions in Chełmno Voivodeship was 4,561 lans, of which 3,322 lans were the peasant ones, while demesne (or more precisely: non-peasant lans) account for 1,239 lans. The ratio of demesne lans (non-peasant) to the total arable land is therefore approximately 27.2%. In addition, one should take into account the numbers concerning the town property belonging to Chełmno bishopric, i.e., mainly the town of Chełmno; see below.

Town property is presented as the property of royal towns and their burgers as well as clergy centres, i.e., towns belonging to Chełmno bishopric. Among the nine royal towns, six of which are in Chełmno district (Golub, Grudziądz, Kowalewo, Łasin, Radzyń, Toruń), and three in Michałowo district (Brodnica, Lidzbark Welski, Nowe Miasto), the town of Toruń played the most important role. Its extensive territory with 33 settlements,²² included 23 peasant villages with an acreage of 794 lans (approximately 34 lans per one village) and the 10 demesnes, with an acreage of approximately 100 lans. Hence, the total arable land of the Toruń territory is approximately 894 lans, while the ratio of demesne acreage to the total area reaches 11%. Undoubtedly, one should also take into account a certain part of the extensive Toruń patrimony, which, however, to a large extent consisted of forests, meadows and pastures.

²¹ This problem for the area of Chełmno and Pomesania bishoprics, due to the lack of sixteenth century visitations, is not very clear, in Pomeranian Voivodeship (Pomeranian Archdiaconate) likewise.

²² The administrative division of the settlements: Bierzgowy cluster (16), Mlewo cluster, also known as eastern (14); 3 settlements were not included in any property cluster – cf. M. Biskup, *Rozmieszczenie własności ziemskiej województwa chełmińskiego i malborskiego*, pp. 22, 47.

Of the remaining royal towns, Grudziądz, Łasin and Radzyń have one to three settlements each. In Michałowo district, Brodnica and Nowe Miasto have one village each.

The estates of townspeople, mainly Toruń patricians, in the number of seven villages, were located in Chełmno district, next to the territory of the town of Toruń.

Five towns of Chełmno bishopric (Chełmno, Chełmża, Kurzętnik, Lubawa, and Wąbrzeźno) constitute the Church-owned town property. The first on the list plays a slightly different role due to the considerable extent of its territory. In its area, there were a total of nine settlements, including seven peasant villages and two demesnes (Gogolin and Sztynwag). The latter were handed over to the Chełmno Academy for use. The entire arable area in the Chełmno territory was approximately 150 lans, of which about 20 lans were demesne acreage. It should be noted that each of the voivodeship's towns has a patrimonial area, partially appropriated for arable land. However, the size of the arable land is known only in sporadic cases and sometimes reaches up to 77 lans.²³ Due to the lack of necessary data for most urban centres, the problem of patrimonial areas could not be fully included in the statistical calculations.

Summarising, it should be stated that the entire arable area of the voivodeship (excluding patrimonies) is approximately 15,659 lans. Peasants' lans constitute 11,262, (71.9%), demesnes – 4,089 lans (26.1 %), farm gentry (0.5–3 lans) – 233 lans (1.5%), unspecified – 75 lans (0.5%). Despite the relatively high percentage of demesne lans when it comes to noble and Church property, the advantage of the peasant acreage in the entire arable area is apparent.

Rounding the figure of the voivodeship's arable acreage to 16,000²⁴ lans (due to the hypothetical patrimonial lans of towns) and converting them to km² (assuming 16.8 ha per one km²) we arrive at the number of 2688 km². Since the entire area of the voivodeship was 4,654 km², there are approximately 1,966 km² of forests, meadows and fallow lands, i.e., 42.2%, while arable land constitutes 57.8%, so 3/5 of the entire territory of the voivodeship.

To compare the sizes of individual categories of land ownership, the size of individual territorial complexes (including forests and vacant land) was also calculated using the planimetric calculations on the basis of the land ownership map. Compared to the figures of the arable land, these calculations are as follows:

Table 11. Comparison of the arable land of Chełmno Voivodeship to the entire area belonging to particular categories of land ownership

ownership affiliation	arable land acreage			total	area
	lans	km ²	%	km ²	%
royal	4,972	835.3	31.9	1,733	37.3
noble	4,643	780.0	29.6	1,240	26.7
Church	4,561	766.2	29.1	1,068	22.9
Church-owned town	150	25.2	0.9	150	3.2
crown-owned town	1,244	209.0	7.9	447	9.6
unspecified	89	15.0	0.6	16	0.3
total	15,659	2,630.7	100.0	4,654	100.0

This comparison shows that the share of royal property more than doubled due to the significant stretches of its forested areas. Similarly, the share of towns' estates increased due to the vast territory of Toruń (forests) and Chełmno as well as the patrimonial areas of individual towns. While emphasizing the hypothetical nature of the above calculations, especially regarding the entire area belonging to individual ownership categories, it should be noted that they seem to illuminate even more clearly the structure of the voivodeship's ownership relations.

²³ It is known that, according to the data from tax registers and bishop's inventories, Radzyń has 38.5 lans of arable land, Lidzbark Welski – 34 lans, Chełmża – 75 lans, Kurzętnik – 23 lans, Lubawa – 77 lans, Wąbrzeźno – 62 lans. It should be noted that in the sixteenth century the town of Chełmża also used the village of Sugajenko, located in the Kurzętnica estate cluster of Chełmno bishopric.

²⁴ For patrimonial lans there were six towns known (approx. 309.5 lans), an average of approx. 50 lans per one town.

Malbork Voivodeship

The division of land ownership in Malbork Voivodeship in terms of the number of rural settlements is presented in the table below.

Table 12. Land ownership of Malbork Voivodeship according to the number of rural settlements

administrative unit	total rural settlements	royal property		noble property		Church property		town property -crown	
		settl.	%	settl.	%	settl.	%	settl.	%
voivodeship without the town of Elbląg	221	143	64.6	74	33.4	2	1	2	1
territory of the town of Elbląg	63	–	–	–	–	–	–	63	100
total	284	143	50.2	74	26.0	2	1	65	22.8

In terms of their economic character, the rural settlements of Malbork Voivodeship were as follows:

Table 13. Economic categories of rural settlements in Malbork Voivodeship

ownership affiliation	peasant villages	demesne settlements			settlements owned by demesne nobility	milling settlements	pasture, fishing and ferry villages	settlements of unspecified economic category	total
		by peasant villages	standalone	total					
royal	112	2	17	19	–	5	6	3	143
nobility	38	?	?	?	19 ²⁵	–	1	16	74

²⁵ The number of standalone demesnes of the nobility has not been specified due to being present also in the settlements of the peasant-less gentry with more than 3 lans. Only eight gentry settlements constitute just demesnes (without the peasants' lans and farm gentry with over 3 lans).

Regarding the number of settlements, royal and noble property come first, however, the table of arable land shows the advantage of town over nobility property, confirming the unquestionable primacy of the crown property.

Among the royal properties (143 rural settlements), the estates of the Malbork economy established in 1511 constitute its core, covering Wielkie and Małe Żuławy stretching between the Leniwka River, the Elbląg Vistula River and Lake Drużno with the Malbork castle as the seat of the Malbork economy administration. In the area of Wielkie Żuławy there are 46 settlements, and in Małe Żuławy there are 30. In the northern area of Wielkie Żuławy, three housing settlements form a separate so-called Berwałd lease (today's Niedźwiedzica), and 12 – the so-called Nowy Dwór lease – established in the mid-sixteenth century with royal pledges for the Loytz banker family from Gdańsk.²⁶ The remaining royal estates are concentrated in four starostwos: Sztum, Dzierzgoń (usually granted to Malbork voivodes), Straszewo and Tolkmicko, separated from the rest by a complex of Elbląg estates. Three villages located to the east and south of Sztum constituting single leases. Royal property overwhelmingly predominates in the western and central parts of the voivodeship.

The figures concerning the arable land in the royal property show the unquestionable lead of the peasant's acreage, which covers 4,408 lans out of the total 4,710.5. The number of peasants' villages is 112 (on average, approximately 38 lans per village). The number of demesnes is negligible and amounts to only 19, with an area of approximately five lans (average size of demesnes is 16 lans). There is only one demesne per 16 villages: the ratio of the demesne acreage to the total arable land area amounts to approximately 6.4%.

The obtained figures, therefore, show the overwhelming lead of the peasant farms, especially in Żuławy, strongly developed in terms of commodity production and constituting the closest supply base for the neighbouring big towns, i.e., mainly Gdańsk and Malbork. Royal demesnes are usually found in the area of the Malbork economy in Wielkie and Małe Żuławy, in other starostwos we usually find one, except for the Sztum starostwo (3). It should be emphasized that these farms are characterized by a highly developed system of employing hired labour (see below) with very poorly developed peasant manorial servitude.²⁷

The noble property comprises 74 settlements in total, concentrated mainly in the south-eastern part of the voivodeship, in the Dzierzgoń and Sztum region, wedged between the royal estates; only the Kadyny estates in the Tolkmicko region form a larger enclave. Without analysing the structure of the Malbork nobility at the moment, we can only state that there are no farm gentry owners among them with less than 3 lans (*propriae culturae*). Consequently, in this voivodeship, the farm gentry is not actually encountered, and the entire field of *propriae culturae* should be considered as demesne lans.

The entire arable area of the noble property is 1,287 lans. The peasant lans belonging to the nobility amounts to 743 lans (38 peasant villages in total, so one village on average = approximately 19 lans). The number of known nobility demesnes is 19, which equates to about 134 lans (the average is nine lans per demesne). We add 224 lans *propriae culturae* to this number, i.e., a leased demesne and an estimated 1/4 of the peasant land (for the demesne not listed in the registers of farm gentry), amounting to 186 lans. Thus, the total acreage of the noble demesne is 544 lans. The ratio of the demesne lans to the total arable area approximately 42.3%, so it is only slightly lower than in Chełmno Voivodeship.

Church property is represented very modestly in Malbork Voivodeship. It is situated in the eastern part, on the border of the Tolkmicko region, in the form of two villages belonging to the Brigid Sisters' monastery in Gdańsk (99.5 peasant lans and eight demesne lans). The property of 62 parish churches, an average of four lans, amounts to a total of 248.5 lans (of which 9.5 lans belongs to town parishes). Thus, the percentage of non-peasant lans is as high as 72.1%.

²⁶ P. Czapiewski, *Senatorowie świeccy, podskarbiowie i starostowie Prus Królewskich 1454–1772*, Toruń 1919–1921 (RTNT, vol. 26–28), pp. 48, 146; for more details M. Biskup, *Rozmieszczenie własności ziemskiej województwa chełmińskiego i malborskiego*, p. 25 f.

²⁷ Cf. J. Rutkowski, *Pańszczyzna i praca najemna w organizacji folwarków królewskich w Prusach za Zygmunta Augusta*, RH, vol. 4, 1928, p. 42.

Town ownership is represented to a very large extent, first of all, by the vast territory of the town of Elbląg (63 rural settlements). This territory was divided into four administrative districts: the so-called external bailiffs (*Aussenkämmeramt*), the office of the land judge (*Landrichteramt*), the fishing office (*Fischamt*) and the hospital office (*Hospitalsamt*),²⁸ to which the goods of the town hospital of the Holy Spirit were subject, scattered in the enclave near Tolkmicko and in two further enclaves in Royal Prussia. Some of the town property east of Elbląg was leased to patrician families. Altogether, out of 63 settlements in this territory, 32 are large peasant villages with an area of 1,177 lans (approximately 36 lans per village). The acreage of 19 demesnes is 216 lans (approximately seven lans per demesne), however, it should be noted that these demesnes are almost entirely in the hands of the lessees – patricians of Elbląg. The entire arable acreage of the territory of Elbląg (after adding 22 lans for two settlements of undefined economic nature) is 1,415 lans.

Of the remaining five royal towns (Dzierżoń, Malbork, Nowy Staw, Sztum and Tolkmicko), the last two have one village each (acreage 39.5 lans). Each town has patrimonial areas, but their size, especially farmland, could not be determined.²⁹ The entire arable area of town property (excluding patrimony) amounted to 1,454.5 lans, of which 1,216.5 lans constituted peasant lans, and 216 lans were demesne area. The ratio of the latter to the total cultivated area is 14.9%.

The cultivated area of the entire Malbork Voivodeship is (without patrimonies) approximately 7,808 lans. The number of peasant lans is 6,467 lans (82.8%), demesne (including also 248.5 lans belonging to parishes) – 1,319 lans (16.9%), undefined – 22 lans (0.3%). Thus, the percentage of demesne lans (i.e., non-peasant lans per se) is much lower than in Chełmno Voivodeship.

Rounding the size of arable land in the voivodeship to approx. 8,000 lans (due to the hypothetical cultivated area of patrimony) we get approximately 1,344 km², 64.1% of the total area of the voivodeship, leaving approximately 752 km² of fallow land (35.9%). Thus, farmland area covers over 3/5 of the entire area of the voivodeship, which is even slightly more than the area of Chełmno Voivodeship.

Analysing the arable land, including fallows, in terms of the ownership groups (based on the map of land ownership distribution), we arrive at a table below:

Table 15. Comparison of the size of Malbork Voivodeship arable land to the total acreage belonging to individual categories of land ownership

ownership affiliation	arable land			total area in km ²	
	lans	km ²	%	km ²	%
royal	4,710.5	791.4	60.3	1,188	56.7
noble	1,287	216.2	16.5	293	14.0
Church	356	59.8	4.6	71	3.4
town-royal	1,454.5	244.3	18.6	544	25.9
total	7,808	1,311.7	100.0	2,096	100.0

This comparison shows, first of all, a certain decrease in the share of royal, noble and Church property in favour of town property, which increased by almost a half, constituting 1/4 of the total area of the voivodeship. This occurrence is understandable, taking into account the fact that the entire territory of Elbląg is occupied by farmland in only approximately 46%. At the same time, these figures confirm even more vividly the land ownership structure in the voivodeship.

²⁸ In more detail M. Biskup, *Rozmieszczenie własności ziemskiej województwa chełmińskiego i malborskiego*, p. 29.

²⁹ The gathered information dating back to the fifteenth and sixteenth centuries concerns mainly the size of the patrimony (not necessarily cultivated lans) of the towns of Dzierżoń (in 1466 – 72 lans), Nowy Staw (in 1570 – 37.5 cultivated lans), Sztum (in 1565 – 57 cultivated lans) and Tolkmicko (in 1664 – 61.5 lans). It is known that the town of Malbork also had a patrimony (in 1276 – 49 lans).

Pomeranian Voivodeship

The division of land ownership in the voivodeship in terms of owned settlements is presented in the table below.

Table 16. Land ownership in Pomeranian Voivodeship according to the number of rural settlements

district – administrative unit	total rural settlements	royal property		noble property		church property		town-royal property		unspecified ownership	
		no	%	no	%	no	%	no	%	no	%
Czuchów	120	45	37.5	72	60	2	1.7	1	0.8	–	–
Gdańsk	100	14	14.0	31	31	43	43.0	11	11.0	1	1
Mirachowo	81	29	35.8	39	48.2	12	14.8	–	–	1	1.2
Nowe	49	12	24.5	32	65.3	4	8.2	1	2.0	–	–
Puck	114	37	32.5	46	40.3	31	27.2	–	–	–	–
Świecie	127	44	34.6	73	57.5	8	6.3	1	0.8	1	0.8
Tczew	285	92	32.3	117	41.0	67	23.5	7	2.5	2	0.7
Tuchola	111	50	45.1	53	47.7	6	5.4	1	0.9	1	0.9
territory of the town of Gdańsk	76	–	–	–	–	–	–	76	100.0	–	–
total	1,063	323	30,4	463	43,5	173	16,3	98	9,2	6	0,6

In terms of the economic nature, the rural settlements of Pomerania were divided as follows:

Table 17. Economic categories of rural settlements in Pomeranian Voivodeship

ownership affiliation	peasant villages	belonging to peasant villages	standalone demesne settlements	total	villages belonging to demesne and farm gentry	milling villages	fishing and inn villages	villages of unspecified econ. character	total rural settlements
royal	241	33	35	68	–	15	11	21	323
noble	273	?	?	?	161 ³⁰	1	–	28	463
Church	121	17	40	57	–	1	3	8	173
town-royal	54	5	10	15	–	1	18	15	98
unspecified	–	–	–	–	–	–	–	6	6
total	689	55	85	140	161	18	32	78	1 063

Table 21 shows that in terms of the number of rural settlements, the nobility-owned property outweighs others, followed by royal, Church and town property. This order does not change even if one takes the farmland acreage under consideration.

³⁰ The number of standalone nobility-owned demesnes has not been specified since they are located also in the villages belonging to farm gentry and peasant-less gentry with over 3 lans of land. Only 19 nobility-owned settlements are decidedly demesnes (without farm gentry with more than 3 lans).

Table 18. Arable area of Pomeranian Voivodeship³¹

ownership affiliation	peasant lans		demesne lans		demesne using hired labour [lans]		total demesne lans		farm gentry lans		unspecified ownership in lans		total cultivated land in lans		share of individual types of ownership
		%		%		%		%		%		%		%	
royal	7,816	88.0	1,064	12.0	–	–	1,064	12.0	–	–	–	–	8,880	36.6	
noble	3,939	43.6	2,689	29.8	1,786	19.7	4,475	49.5	630	6.9	–	–	9,044	37.3	
Church	2,956	68.0	1,392	32.0	–	–	1,392	32.0	–	–	–	–	4,348	17.9	
town-royal	1,755	91.5	162	8.5	–	–	162	8.5	–	–	–	–	1,917	7.9	
unspecified	–	–	–	–	–	–	–	–	–	–	75	100	75	0.3	
total	16,466	67.9	5,307	21.9	1,786	7.4	7,093	29.2	630	2.6	75	0.3	24,264	100.0	

Therefore, the nobility-owned property would still remain in the first place, and royal property is only slightly lower. However, these numbers do not fully correspond to the actual relations of types of ownership in Pomerania, if we take into account the barren (fallow) lans, the existence of which could be largely observed this time, mainly on the basis of the tax registers and lustrations. The following list further supports that claim:

Table 19. Comparison of arable and non-arable lans in Pomeranian Voivodeship in the years 1564–1571

ownership affiliation	arable lans	barren/fallow lans	total lans	property share
royal	8,880	1,370	10,250	38.0
noble	9,044	710	9,754	36.1
Church	4,348	605	4,953	18.3
town-royal	1,917	49 ³²	1,966	7.3
unspecified	75	–	75	0.3
total	24,264	2,734	26,998	100.0

The tally shows that the fallows cover an area equal to at least 10% of the arable land in the entire voivodeship. It bears mentioning that, the available source materials only provide solid grounds to capture the minimum of the unused land. The size of the fallow fields in Pomerania, therefore, does not correspond to the average number of 30%, adopted for all Polish lands at the beginning of the sixteenth century.³³ However, it should be noted that apart from the incompleteness of the source material, it is necessary to take into account the fact that the fallow areas were in constant use from the first half of the sixteenth century, which is clearly reflected in the Pomeranian source material from the years 1564–1570.³⁴ These fallows are mainly a result of the Polish-Teutonic wars in the fifteenth century or

³¹ Numbers in the table slightly differ from those initially drafted as in the works of M. Biskup, A Tomczak, *Mapy województwa pomorskiego*, vol. 1, p. 56, which was a result of the following factors 1) using a broader spectrum of source material, 2) assuming an additional estimation for noble demesnes; 3) a shift in the numbers concerning parish property to general Church property, 4) adding the numbers concerning the territory of the town of Gdańsk and 5) taking into account only the lans being settled and cultivated, without fallows and barren land, as specified below.

³² This data does not include the territory of the town of Gdańsk, for which there is no source material available.

³³ Cf. S. Mielczarski, J.R. Szaflik, *Zagadnienie lanów pustykh w Polsce w XV i XVI w.*, SMDWP, vol. 1, 1956, no. 2, pp. 67 f.

³⁴ It is especially visible in the property of Tuchola starostwo in the years 1565–1570 as well as Gniezno archbishopric (inspection of Kamiński estate cluster from the year 1565).

the war with Albrecht Hohenzollern in the early sixteenth century. They are the most numerous among royal and Church property, and slightly less so among noble and town property. Most of the fallows in royal property are found in the Człuchów, Świecie, Tczew and Tuchola districts, while in nobility-owned property in the Człuchów, Gdańsk, Puck and Tczew districts, and for Church property in the Gdańsk, Puck and Tczew districts. Mostly, the fallows are found in the southern and eastern (around the Vistula River) parts of Pomerania, and, to some extent, also in the northern area (Puck district).

It should be emphasized that in Pomerania, unlike in other parts of the Crown, the fallows were rarely occupied by peasants for additional farming. Numerous data show that those voids, the existence of which are often marked by tax registers, and on which no tax was collected (*lanei vacui*), lie fallow for years, overgrown with bushes, etc.³⁵ At the same time, the very size of these fallows indicates that they cannot be fully developed by the existing peasant population. The fallows in individual villages would cover about 1/3 of the lans, but sometimes they would amount to 80–90% of the area of the entire village.³⁶ In the rare cases where there was evidence that these fields were used by peasants, they were classified as arable fields.³⁷ Without denying the possibility of sporadic use of some further fallows by the peasants (despite the sources being silent on the issue), it should be stated that, in general, Pomeranian fallows were indeed uncultivated. At the same time, this fact explains the partially intensive process of the so-called second German colonization in Pomerania, which was just beginning in the discussed period, and which will largely encompass the above-mentioned unused areas. Similarly, in Crown-owned estates, attempts would be made to create demesnes from the fallow lans.³⁸ Undoubtedly, fallows of this type existed in the remaining areas of Prussia, to which the wave of Olander colonization was also going to occur in the near future, but the source material did not capture this phenomenon as clearly as for the Pomeranian region.³⁹

The above comparison also shows that in terms of the area of land owned, the royal property occupies, after all, the first place, moving noble property to the second place. This advantage of the royal property will be – as we will see – even greater if we take into account the fact that it includes vast forested areas (especially Bory Tucholskie). For these reasons, while still using the figures relating only to fully cultivated fields, we will treat the royal property as predominant.

The royal property covers a total of 323 rural settlements and 16 urban estates. Rural estates are concentrated in 19 starostwos and in many smaller leases in the form of the bishop's lands. There are from one to nine starostwos in each of the districts, except for Gdańsk, where only individual leases are found. In the Mirachowo, Puck and Tuchola districts, each has only one cluster of estates with the name coined from the name of the district. There are two starostwos (Nowe and Osieck) in Nowe district, similar in Świecie district (Świecie and Jasiniec starostwos), and in Człuchów district – three (Białobór, Człuchów and Czarne starostwos). The largest number of starostwos, as many as nine, can be found in the Tczew district (Borzechów, Gniew, Kiszewa, Kościerzyna, Skarszewo, Sobowidz, Starogard,

³⁵ Cf. e.g. ASK XLVI 28, p. 20 – year 1564 – Bysław, Tuchola district and starosty – for every 100 lans – 55 fallow or overgrown lans, in 1570 – 62 „vacui” lans; P. Prusy Królewskie, p. 200; cf. also *ibidem*, p. 152 – year 1570 – Skrzydłowo, Tczew district – the property of Wrocław Bishopric – 40 lans, out of which 32 empty lans („vacui”). In 1582 an inventory of the Bishopric's property notes the number of 40 lans, out of which „many have overgrown”; Inw. 1582, p. 297. Data from royal property illustrations from 1564 and tax registers from 1570 oftentimes confirm the same area as fallow or differ very slightly.

³⁶ Especially vivid cases are the fallows in the villages of: Prusinowo, Człuchów district and starosty (out of 84 lans even 49 fallow lans); P. Prusy Królewskie, p. 223; Kiełpin, Człuchów district, nobility-owned (out of 60 lans – 31 fallow lans); Pietrzykowo, Człuchów district, noble property (out of 80 lans even 70 were fallow) and Zalesie, Człuchów district, noble property (out of 59 lans 55 were fallow); *ibidem*, pp. 225, 228, 239. Kozielec, Nowe Miasto district, noble property (out of 40 lans – 36 fallow); *ibidem*, p. 174; Tuchom, Gdańsk district, Church property (28 fallow lans out of a total 40); *ibidem*, p. 251.

³⁷ There are, however, sporadic cases, encountered mainly in the territory of Mirachowo starostwo, where fallows were not of significant sizes. The most prominent exception is 25 fallow lans, used by peasants in the village of Ciechocin in Tuchola district and Tuchola starostwo; ASK LVI 1, p. 53.

³⁸ Cf. Borzechowo, Tczew district, Borzechowo starostwo, where a part of the 45 fallow lans was turned into demesne property, while the leftover part remains a fallow; P. Prusy Królewskie, p. 126; Semlin, Tczew district, Kiszewa starostwo – in 1570 out of 50 lans –27 fallow; *ibidem*, p. 134. In 1624 a royal inspection states that after 1615 a 14-lan demesne was established in place of the fallow lans; ASK, Section 33, p. 551. Cf. also A. Mączak, *Folwark pańszczyźniany a wieś w Prusach Królewskich w XVI–XVII w.*, PH, vol. 47, 1956, no. 2, p. 356.

³⁹ In the territory of Chełmno voivodeship, the fallows are known in a few cases to be in some villages in the Grudziądz and Rogozin starostwos.

Tczew starostwos, and the so-called inter-Łęsk lease area).⁴⁰ Royal property is of greatest significance in the Człuchów, Puck, Świecie, Tczew and Tuchola districts, i.e., in the southern, eastern and central part of Pomerania, where, in addition to a significant arable land, it also includes vast forests.

The entire cultivated area of the royal property amounts to 8,880 lans, of which 7,816 are peasant lans, concentrated in 241 villages (on average about 321 per one village). Sixty-eight royal demesne farms occupy by acreage of up to 1,064 lans (an average of 16 lans per one demesne). Thus, there is one demesne for approximately 3.5 peasant villages. The ratio of the demesne area to the total arable area is approximately 12%. Royal demesnes are most densely located in the Człuchów district (11 for 34 peasant villages) and Tczew district (26 for 73 peasant villages). It should be emphasized that the figures concerning the number of demesnes and their acreage show only the initial stage of demesne development in royal estates; development increased significantly in the following decades.

Noble property is represented by 463 rural settlements. They are grouped in each of the districts, although the most densely in the districts near the Vistula River and the western part of the voivodeship (Człuchów district),⁴¹ dominating the area over the royal and Church estates (except for the small Gdańsk district). Leaving the discussion on the structure of the voivodeship nobility for the next part of the commentary, we would only like to note that among the Pomeranian nobility there are a considerable number of farm gentry, owning from 0.5 to 3 lans of land, especially petty Kashubian gentry. However, in this group we also find a significant percentage of larger landowners (more than 3 lans taxed 12-grosz per lan), the fields of whom, consequently, must be included in the category of demesne lans.

The number of lans belonging to the farm gentry (having 0.5–3 lans) is 630. The area of nobility-owned peasant lans (after a slight addition, on average of 5%) reaches 3 939 lans (in 273 villages, an average of 14 lans per village). The demesne acreage consists of 2,689 lans in peasant villages and 1,786 lans of farm gentry farmsteads (owners of more than 3 lans), i.e., demesne using paid workforce, so 4,475 lans in total. This accounts for 49.5% of the total nobility-owned lans, so similarly as in Chełmno Voivodeship.

Church property is represented in two forms: as the property of individual Church institutions (monasteries, bishoprics and Gdańsk hospitals) and parish churches. In total, it covers 173 rural settlements, with their densest concentration in the north-eastern part of Pomerania (Gdańsk, Mirachowo, Puck and Tczew districts), and to a very low degree in the south-western part (Człuchów, Tuchola, Świecie and Nowe districts). They belong to the following Church institutions:

Monastery in Pelplin	35 settlements
Monastery in Oliwa	33
Włocławek Bishopric	29
Monastery in Kartuzy	19
Monastery in Żuków	17
Monastery in Żarnowiec	9
Gniezno archbishopric	9
St. Elizabeth's Hospital in Gdańsk	6
Monastery of Bridgettines in Gdańsk	5
Monastery in Łąd (Greater Poland)	4
Monastery of Benedictine Nuns in Chełmno	3
Hospital of the Holy Spirit in Gdańsk	2
Parish church in Tuchola	1
Parish church in Kościerzyna	1
Total	173 ⁴²

⁴⁰ For more detail, see: M. Biskup, A. Tomczak, *Mapy województwa pomorskiego*, vol. 1, pp. 31 f.

⁴¹ Cf. *ibidem*, pp. 35 f

⁴² In comparison to the data given previously (*ibidem*, p. 41) two further settlements were identified: Pierszczewko in Mirachowo district, belonging to the parish church in Kościerzyna (previously mistakenly presented as nobility-owned) and Zakoniczyn, Gdańsk district – property of the St. Elizabeth's Hospital in Gdańsk.

The property of the great Cistercian monasteries in Pelplin (35 settlements) and Oliwa (33) occupies the most prominent position, along with the Carthusians in Kartuzy (19), the Norbertine nuns in Żukowo (17) and the Benedictine nuns in Żarnowiec (9), concentrated in Gdańsk and Mirachowo, Puck and Tczew districts.⁴³ The property of Włocławek bishopric (29), concentrated in two large sets: Komorsk (Nowe and Świecie districts) and Subkowy (Tczew, Gdańsk and Puck districts) and the Gniezno archbishopric (9) in the Człuchów, Tuchola and Świecie districts, plays an equal role. Out of other Church institutions, we should point out the property of the Bridgettines' monastery in Gdańsk and two local hospitals (Gdańsk and Tczew districts) and the Benedictine nunnery in Chełmno (Świecie district).

In terms of arable land, the ownership of the above institutions is presented in the following table:

Monastery in Oliwa	805 lans
Włocławek Bishopric	736 lans
Monastery in Pelplin	684 lans
Monastery in Kartuzy	368 lans
Monastery in Żuków	294 lans
Gniezno Archbishopric	210 lans
Monastery in Łąd	134 lans
Monastery in Żarnowiec	106 lans
St. Elizabeth's Hospital in Gdańsk	79 lans
Monastery of Bridgettines in Gdańsk	61 lans
Hospital of the Holy Spirit in Gdańsk	50 lans
Monastery of Benedictine Nuns in Chełmno	35 lans
Parish church in Tuchola	20 lans
Parish church in Kościerzyna	15 lans
Total	3,597 lans

This table, therefore, shifts to the fore the properties of the monastery in Oliwa (805 lans) before the property of the Włocławek Bishopric (736 lans) and the Pelplin monastery (684 lans). It should be noted that the total property of the Włocławek Bishopric in the entire Royal Prussia, including its estates located in Chełmno Voivodeship, amounts to 32 settlements with 808 lans (and thus equal to the monastery in Oliwa); similarly, the Benedictine nunnery in Chełmno had a total of 12 settlements, covering 236 lans. Also, the property of the Bridgettines' convent in Gdańsk, if we include its estates in Malbork Voivodeship, amounts to a total of seven estates with an area of 160.5 lans.

Out of 3,600 cultivated lans, owned by the larger Church institutions in Pomerania, the peasants' acreage is 2,956 lans, located in 121 villages (approximately 24 lans per one village). The area of 57 demesnes is approximately 644 lans (about 11 lans per one demesne), which is around 18% of the total arable land area. There is one demesne for every 2.1 peasant villages. Both the number of Church demesnes and their acreage is quite high in comparison with royal demesnes. The second group among the Church-owned estates is the property of 197 parish churches, which is slightly less than four lans each. In total, the Church property amounts to 748 lans, 685 of which belongs to rural parishes, and 63 lans to town parishes. The total number of parish-owned lans, due to the fact that they usually were independent farms of the parish priests, is also listed among the demesne lans, which consequently increase to the figure of 1,392 lans (against 2,956 peasants' lans), making up approximately 32% of the total Church-owned farmland.

Town ownership is generally divided into two categories: the property of the town of Gdańsk (including the town of Hel) and the property of the remaining 14 royal towns and burghers. In the territory of the town of Gdańsk, which was a separate administrative unit, there were 76 rural settlements⁴⁴ most densely concentrated in Żuławy Steblewskie and the Gdańsk Upland. The entirety of

⁴³ Cf. *ibidem*, pp. 40 f.

⁴⁴ An increase in the number of rural settlements belonging to the territory of the town of Gdańsk, previously established as 75 settlements (*ibidem*, pp. 30, 44), by one settlement has been due to the partitioning of today's Olszynka (Walddorf) into Olszynka Mała and Olszynka Wielka, according to the factual state as of sixteenth-seventeenth centuries.

their acreage was approximately 1,549 lans (not taking into account the unknown area of the Gdańsk patrimony's arable land). Far ahead of the others among arable land is that cultivated by the peasants, covering 1,512 lans, concentrated in 43 peasant villages (Żuławy, Gdańsk Upland), with an average area of 34 lans. Demesnes are encountered in negligible numbers (3) and cover only 32 lans. On the other hand, a significant number of settlements (at least 20) are small fishing and inn settlements, located especially on the Vistula Spit (from Wisłoujście to Narmeln on the border of the Duchy of Prussia) or on the Hel Peninsula (Jastarnia Gdańska).

Of the remaining 14 royal towns, Tczew, Starogard, Świecie, Nowe and Czarne have one village each. 17 settlements, located mainly in Gdańsk and Tczew districts, belong mainly to wealthy patrician families from Gdańsk and the Loytz banker family, who also settled there. The size of the peasants' farmland area of the remaining town property is 238 lans (11 peasant villages), the demesne – 130 lans, a total of 368, while the percentage of the demesne area is approximately 35%. This proves that there is a significant percentage of demesne lans among this part of town property. Taking into account the entire arable area of town property (and thus together with the Gdańsk territory), this ratio drops significantly. The total number of peasant lans belonging to the town property is 1,755 lans, to lying in the demesnes – 162 lans, in total – 1,917 lans, while the ratio of the demesne area to the latter figure is only about 8.5%.

The above figures do not include arable land located in patrimonial areas of individual urban centres. It is only known that for the 12 smaller Pomeranian towns the total number of patrimonial lans is 675.

The arable acreage of the entire Pomeranian voivodeship is (without patrimonies) approximately 24,264 lans. There is 16,466 (67.9%) peasant lans, for demesnes (including 748 lans of the parish property) – 7,093 lans (29.2%), farm gentry – 630 lans (2.6%), undefined – 75 lans (0.3%). Thus, the percentage of demesne arable land is the highest in comparison with other voivodeships, as is the percentage of farm gentry's lans, but it is consequently the lowest for peasant lans.

By rounding the size of the region's arable land to around 25,000 lans (due to the arable lans of patrimonies), we arrive at 4,200 km². Comparing this figure with the size of the entire voivodeship, amounting to 12,907 km² it should be stated that the arable area covers only 1/3 of the total area (exactly 32.5%), while forests and fallows cover as much as 8,707 km², i.e., 2/3 (67.5%). These numbers clearly show the significant size of the forested areas in Pomerania and the poor agricultural development in its area compared to the other Prussian voivodeships.

Calculating the extent of individual clusters of property and taking into account forested areas and fallow lands, the following figures were obtained, which we compare with the figures for just the arable land in individual categories of land ownership in Pomerania:

Table 20. Comparison of the size of Pomeranian Voivodeship farmlands to the total acreage belonging to individual categories of land ownership

ownership affiliation	arable land			total area	
	lans	km ²	%	km ²	%
royal	8,880	1,491.8	36.6	7,075	54.8
noble	9,044	1,519.4	37.3	3,409	26.4
Church	4,348	730.5	17.9	1,454	11.3
town-royal	1 917	322.1	7.9	947	7.3
unspecified	75	12.6	0.3	22	0.2
total	24,264	4,076.4	100.0	12,907	100.0

The table clearly speaks of the considerable share of royal property, which dominates over all other types. The shares of other types of ownership are significantly lower, with the exception of town property, which is held up by the patrimonial areas and the territory of Gdańsk. This table shows the leading position of royal lands in Pomerania.

For the entire area of Royal Prussia, we obtain the following breakdown of land ownership by their types.

Table 21. Land ownership of Royal Prussia according to the number of settlements

voivodeship	town settlements	rural settlements	royal		noble		Church		town-Church	town-royal	unspecified ownership
			urban	rural	urban	rural	town	rural	urban	rural	rural
Chełmno	14	622	9	169	–	240	5	150	9	48	6
Malbork	6	284	6	143	–	74	–	2	–	65	–
Pomeranian	16	1,063	16	323	–	463	–	173	–	98	6
total	36	1,969	31	635	–	777	5	325	9	211	12
%	–	100	–	32.2	–	39.5	–	16.5	0.5	10.7	0.6

In the entire Royal Prussia, there is a predominance of estates belonging to the nobility over those of royal and Church property. The latter also includes five towns out of a total of 36 urban centres (i.e., 13.9%). What is striking is the significant percentage of settlements belonging to towns.

The above sequence changes when we consider the size of the total arable land of Royal Prussia.

Table 22. Arable land in Royal Prussia

voivodeship	crown property [lans]					property of nobility [lans]						
	peasant	%	demesne	%	total	peasant	%	demesne	%	farm gentry	%	total
Chełmno	4,582	92.2	390	7.8	4,972	2,125	45.8	2,285	49.2	233	5.0	4,643
Malbork	4,408	93.6	302.5	6.4	4,710.5	743	57.7	544	42.3	–	–	1,287
Pomeranian	7,816	88.0	1,064	12.0	8,880	3,939	43.6	4,475	49.5	630	6.9	9,044
total	16,806	90.5	1,756.5	9.5	18,562.5	6,807	45.5	7,304	48.8	863	5.7	14,974
%					38.9							31.4

Table 22 cont.

Malbork	1,216.5	83.6	216	14.9	22	1.5	1,454.5	–	–	–	–	–	–	–	7,808	
Pomeranian	1,755	91.5	162	8.5	–	–	1,917	–	–	–	–	75	100	75	24,264	
total	4,060.5	88.0	533	11.5	22	0.5	4,615.5	14	8.5	–	–	150	91.5	164	47,731	
%							9.7								0.3	100

Thus, in fact, in the entire area of Royal Prussia, there is a clear predominance of royal property (38.9%) over noble (31.4%) and Church (19.4%) property. The status of the town-owned property is relatively high, being around 10% (without taking into account patrimonial areas).

The percentage of demesne lans is the highest for the nobility (48.8%) and Church (31.2%) property, and the lowest for royal (9.5%) and town property (11.5%).

The above conclusions are supplemented by the summary table of the peasant property acreage, demesne property acreage and the farm gentry's property acreage.

Table 23. Peasant, demesne and farm gentry's property acreage in Royal Prussia

voivodeship	peasant lans	%	demesne lans	%	farm gentry lans	%	unspecified lans	%	total arable lans
Chełmno	11,262	71.9	4,089	26.1	233	1.5	75	0.5	15,659
Malbork	6,467	82.8	1,319	16.9	–	–	22	0.3	7,808
Pomeranian	16,466	67.9	7,093	29.2	630	2.6	75	0.3	24,264
total	34,195	71.6	12,501	26.2	863	1.8	172	0.4	47,731

In the whole of the arable area of Royal Prussia, the peasant lans are definitely predominant. With 34,195 lans, they constitute 71.6%, which is over 7/10 of the total area. The area of manor demesnes, with a total area of 12,501 lans, covers only 26.2%, i.e., approximately 1/4 of the entire area. The actual fields of the farm gentry accounted for only 863 lans, i.e., 1.8%.

By rounding the above figures for individual provinces to the general figure of 49,000 lans (and taking into account the patrimonial arable areas in this way) we get approximately 8,232 km². A comparison with the general area of Royal Prussia (i.e., 19,657 km²) shows that the arable area of the Prussian lands constitutes only 41.9%, while forests and fallows cover 11,425 km², i.e., 58.1% of the total area. This result was undoubtedly affected by the numbers of Pomeranian Voivodeship, the most extensive and least cultivated and developed one.

When calculating the size of individual ownership categories, taking into account forested and fallow areas, we obtain the numbers for the entire Royal Prussia, which we compare with the figures for the arable land.

Table 24. Comparison of the Royal Prussia arable land to the total acreage belonging to individual categories of land ownership

property of	size of farmland			total area	
	lans	km ²	%	km ²	%
crown	18,562.5	3,118.5	38.9	9 996	50.9
nobility	14,974	2,515.6	31.4	4,942	25.1
Church	9,265	1,556.5	19.4	2,593	13.2

property of	size of farmland			total area	
	lans	km ²	%	km ²	%
town-Church	150	25.2	0.3	150	0.8
town-royal	4,615.5	775.4	9.7	1,938	9.8
unspecified	164	27.6	0.3	38	0.2
total	47,731	8,018.8	100.0	19,657	100.0

The above list shows that the royal property covers exactly half of the area of Royal Prussia, making it unquestionably the most prominent. Property of the nobility only covers $\frac{1}{4}$ of the area. The ownership of town property has hardly changed as a result of taking into account the entire vast territory of large towns and patrimonial areas of smaller urban centres.

It should be added that the research carried out to determine the percentage of the manor demesne lans within individual parishes allowed for the formulation of several conclusions concerning the territorial development of the manorial economy (*gospodarka folwarczna*). It was found that Chełmno Voivodeship shows a clear predominance of areas with an average percentage of demesne lans (10–40% of lans within individual parishes). The manorial economy developed the least in the central part of the Michałowo district, and in the southern part in the property of the Płock bishops. The most significant development of the manor demesne (over 40%) is observed in the western part of the Chełmno district, especially between Chełmża and Grudziądz, i.e., in areas owned by the demesne nobility, largely peasant-less.

The area of Żuławy stands out in Malbork Voivodeship as the area of the weakest development of the manorial economy. A more considerable exception are the parishes of Malbork, Matowy and Zwierzno (by Drużno Lake), where most of the Malbork economy (*ekonomia malborska*) demesnes are concentrated. Of the remaining regions, the demesnes in the vicinity of Sztum and Dzierzgoń, which are a concentration of middle and greater demesne nobility, show medium and larger development.

In Pomeranian Voivodeship, the areas with the weakest manorial economic development are significantly in the minority. These are mainly the territory of the town of Gdańsk and the southern part of the Człuchów district. Basically, the parishes with an average percentage of demesne lans are predominant. The exceptions are areas with a higher density of manor demesnes, which lay in the northern part of the Człuchów district, in the central and southern parts of the Tuchola district, as well as several parishes in the western and central parts of the Tczew and Gdańsk districts. This phenomenon is understandable, taking into account the fact that the majority of the above-mentioned areas are inhabited by the middle-class demesne nobility with or without peasants. Also, the existence of manor demesnes in royal estates in these areas (established on fields that had been empty until recently) increases the percentage of manor demesne lans in several, especially in the Borzechów starostwo.

Soil diversity and agricultural use of land (thematic map 2)

This map illustrates the degree of land use in agriculture (i.e., by rural population) of Royal Prussia. It was developed based on data on the size of the arable land converted into km² and the total area of each parish. The obtained results were presented on a base map containing the soils to make it easier to draw conclusions, although for proper interpretation it is also necessary to use the main map showing the extent of forests and wetlands as well as geomorphology.

The base map with soils was elaborated on the basis of a map by J. Tomaszewski enlarged from a scale of 1:1,000,000 to 1:500,000. For a proper understanding of the content of map number 2, we present below a short sketch of the distribution of soils in the area of Royal Prussia.⁴⁵

⁴⁵ The works of S. Lencewicz, *Geografia fizyczna Polski*, Warsaw 1955; M. Kielczewska-Zaleska, *O powstaniu i przeobrażaniu kształtów wsi Pomorza Gdańskiego*, Warsaw 1956 (Prace Instytutu Geografii PAN, no. 5); *Wstęp*, [in:] *Słownik geograficzny państwa polskiego*, ed. S. Arnold, Warsaw 1932.

In Prussia, some soils can be classified depending on their fertility as follows: 1) poor soils, i.e., dune sands, sandy soils and sandy loams 2) medium soils, i.e., podzolic soils and sandy clay loams, and loamy clays, 3) good soils, i.e. clay, loamy clays, chernozemic soils, and alluvial soils.

Almost all over the discussed area there are deposits of glacial origin. The exceptions are the Vistula valley and its delta.

Large areas, especially in Pomeranian Voivodeship, are covered with poor sandy soils, either in the form of sands or in the form of loamy sands. The latter, lying on a clay soil base, are quite fertile (medium) soils.

We see sands along almost the entire Baltic coast, where they appear in the form of dunes, mostly preserved by their forest cover. In the coastal lowlands belt, more fertile soils are associated with the presence of ground moraines. Thus, almost all coastal vegetation clusters will have good clay soils with high agricultural intensification. South of Gdańsk, on the ground moraine, there is a strip of fertile, clumpy soils, breaking off below Nowe by the sands of Pomeranian outwash plains. Particularly fertile areas are located south of Tczew and extend to Gniew, near which there are patches of oily loamy clay and even chernozem. Further south, in the Świecie district, there are patches of medium clay soils, as well as podzolics and loamy sands on a clay base. Finally, the third area of fertile clay soils occurs in the ground moraine near Tuchola, Chojnice, Człuchów and Debrzno.

The main embankment of the Pomeranian Lakeland will be quite diversified in terms of soil. Here, next to huge heaps of gravel, sand and boulders, there are, for example, in the vicinity of Goręczyno, inlays of red clumpy clays, further to the north, even loamy clays. Also, the vicinity of Raduńskie Lake abounds in small patches of clay soils, e.g., near Stężyca. In general, however, the majority of soils are light, sandy, and of poor or moderate fertility. South of the lake embankment there is the domain of barren outwash plains, the domain of sand and gravel. Here and there insular deposits of soils with different composition appear, associated with smaller chains of terminal moraines or patches of a ground moraine. These patches form large clearings among the great outwash plain forests and are of particularly agricultural nature. The largest of these clearings are in the vicinity of Brusy, Wiele, and Czersk.

To the east of the Vistula, soils on the glacial substrate occur in the Elbląg Upland. These will usually be medium podzolic soils and sandy clay loams. The areas of Malbork, Sztum and Dzierzgoń are more fertile, where fertile clays appear, and only in the vicinity of the Vistula valley sandy soils are found along with associated forest area.

Chełmno Voivodeship is a fertile area, especially its western part. Good clay soils, known for their fertility, prevail here. In its eastern part, i.e., in the area of Brodnica and Lubawa, podzolics and sandy clay loams predominate. There are no major outwash areas in this voivodeship, their small patches are only found south of Wąbrzeźno, slightly above the Drwęca River, east of Biskupiec and in the vicinity of Lidzbark Welski.

The sandy soils in the Vistula valley are of a different nature. Apart from the river alluvial, infertile sands in the form of dunes appear here. They can be seen near Toruń, Unisław and Grudziądz. Among them, there are wetlands and peatlands.

The soils of the downstream Vistula and Żuławy valleys are of a completely different origin, not related to their glacial substrate. These are loamy clay sediments of the Vistula, characterized by great fertility, known as fluvisols. For a long time, the settlement of the Vistula delta could only develop with great difficulty, because most of it was composed of wetlands and endangered by constant flooding. However, as the wetlands were drained (on a large scale by the Teutonic Knights in fourteenth century), the number of settlements began to increase rapidly and their network became denser.

Of the three voivodeships of Royal Prussia, Malbork Voivodeship had the highest percentage of fertile soils thanks to the Vistula delta, which was largely within its borders and in the vicinity of Malbork and Sztum.

In Chełmno Voivodeship, the western part was among the most fertile, with a large majority of clayey soils. The central and eastern parts had medium soils, mainly composed of podzolics and loamy sands.

The least fertile soils were found in Pomeranian Voivodeship. Its entire central part was filled with sand and gravel as well as weak soils of the former lake coastline. The more fertile soils were distributed peripherally, stretching from the coast to the south along the Vistula River and along the southern border of the voivodeship. The areas of Tczew and Gniew and a part of Żuławy are counted among the most fertile.

With the above data in mind, we will now take a look at the table showing the percentage of agricultural land use in individual voivodeships on a parish scale:

Table 25. Share of agricultural land use in the parishes of Royal Prussia

voivodeship	ratio					total number of parishes or equivalent administrative unit
	0–30%	30–50%	50–70%	above 70%	unknown	
Chełmno	11	29	26	52	3	121 ⁴⁶
%	9.1	24.0	21.5	43.0	2.4	100
Malbork	3	3	9	32	–	47 ⁴⁷
%	6.4	6.4	19.1	68.1	–	100
Pomeranian	58	45	30	54	1	188 ⁴⁸
%	30.9	23.9	16.0	28.7	0.5	100
total	72	77	65	138	4	356
%	20.2	21.6	18.3	38.7	1.2	100

The figures show that for the whole of Royal Prussia there is a predominance of parishes with an average ratio, in which the degree of agricultural land use is 30–70%, although a significant proportion (38.7%) are parishes exceeding the upper limit.⁴⁹ Parishes with the lowest ratio (less than 30%) constitute only 20.2% of the total area of Prussia.

However, these results are very different in each voivodeship. The table shows that Malbork Voivodeship has the highest percentage of parishes with maximum agricultural land use (68.1%), followed by Chełmno Voivodeship (43%). Pomeranian Voivodeship comes last, with parishes with the lowest percentage (30.9%) playing an important role.

The map shows that the centre of the most extensively cultivated land is in Żuławy Wielkie in the area of Malbork Voivodeship, and the strip of land stretching from Malbork to the southern border of this voivodeship. Therefore, these are forestless areas with the best alluvial or clay soils in Żuławy Wiślane. The least used agricultural areas of the voivodeship include – despite the best soils – wetlands by Drużno Lake and the territory of the town of Elbląg, which, as mentioned, will become the subject of intensive colonization only from the end of the sixteenth century. On the other hand, a serious reduction in the ratio in the Sztum region is influenced by the weakness of sandy soils, largely forested (Puszcza Sztumska, *Sztum Forest*).

In Chełmno Voivodeship, the centres of the maximum use of land for agriculture are parishes in Chełmno district, stretching from the north of Toruń to the northern border of the voivodeship in the vicinity of Łasin. This rather compact strip is characterised by the best clay soils and podzolics in the whole voivodeship, in addition to being very slightly forested. The only exceptions are the areas around Chełmża, Wąbrzeźno and Golub with weak sandy and loamy sandy soils, largely forested, especially in the vicinity of Golub and Wąbrzeźno. In the eastern part, parishes south of Brodnica and the Lubawa region, except the Lidzbark Welski area, show the highest ratio of arable land. These are,

⁴⁶ This number encompasses 119 parishes of the voivodeship and two parishes in Dobrzyń land, which had property in the territory of the voivodeship (Ciechocin and Grążawy).

⁴⁷ This number encompasses 44 parishes of the voivodeship (without the territory of Elbląg), the vicinity of Tolkmicko, Nowy Dwór lease and the territory of the town of Elbląg; three latter administrative units are taken as an equivalent to a large parish.

⁴⁸ This number encompasses 181 parishes and includes six parishes from outside the voivodeship's territory as well as from the territory of Gdańsk, being treated as an equal administrative unit (large parish). The above number of parish units or their equivalents were assumed for all following tables.

⁴⁹ In some cases, the ratio is 90% and slightly higher. Obviously, we should be aware that this high outcome is sometimes subject to methods of interpolation, used because of the necessity of outlining parish borders. Apart from some exaggerations these figures present the basic tendency of the phenomenon well. The high ratio for neighbouring parishes is also striking, which would suggest a high degree of development of the area and a lack of meadows, pastures and forests of greater sizes.

without exception, forestless areas of medium podzolic soils.⁵⁰ The least developed areas in the entire voivodeship are parishes in the Toruń, Golub and Nowe Miasto vicinity. These are entirely forested areas with weak sandy soils (or non-colonized stretches of Vistula River's alluvial wetlands). Less developed areas also include parishes in the vicinity of Grudziądz and Lidzbark Welski (weaker sand soils and richer forest cover).

In Pomeranian Voivodeship, the parishes with the highest percentage of agricultural land development are concentrated mainly in the Vistula belt, stretching from Nowe, through the vicinity of Starogard and Tczew to the Gdańsk region, with the most developed part between Gdańsk and Tczew. These parishes occupy the most fertile lands in the entire voivodeship (clay soils and even fragments of chernozem near Gniew), most of which are poorly forested. On the other hand, the territory of the town of Gdańsk, despite the high quality of soil, shows – similarly to the territory of the town of Elbląg – a lower percentage of agricultural land development (except for enclaves belonging to Church institutions or nobility). This state of affairs is undoubtedly influenced by the development of the wetland areas of Szkarpa river (in the vicinity of the Wisła Elbląska) and the long dune belt of the Vistula Spit, as well as the presence of meadows. Undoubtedly, in the case of being in possession of detailed source data for each of the individual parts of the territory, it would be possible to distinguish areas with a high percentage of agricultural utilization. Such were undoubtedly Żuławy Steblewskie or the Gdańsk Upland.

In the northern part of the voivodeship, parishes in the Puck region also show the highest ratio, especially in Kępa Pucka and Kępa Swarzewska, which are rich in good clay soils. The third cluster of the greatest agricultural land development are parishes located south of Człuchów, Chojnice and Tuchola (the southern part of the Człuchów and Tuchola districts), abundant in medium podzolic soils, and the Chojnice region, with good loamy clays. The parishes in the Świecie region also show an average percentage of land development. In contrast, most lands in the western and central parts of the voivodeship and some coastal parishes are less cultivated. This phenomenon is fully understandable, taking into account that these areas include mainly forested areas, occupying the worst sandy soils in the entire Royal Prussia, especially in the following districts: Tuchola, Człuchów, Świecie, Tczew and Mirachowo, or wetlands (as in the Puck district).

The above results allow for the conclusion that, basically, the areas with good or medium soils are the most utilised. However, an account should always be taken of the existence of other physiographic elements, such as forests or wetlands, which are factors that reduce the degree of agricultural land use.

(1961)

Translated by Paulina Waclawik

⁵⁰ The parish of Lubawa is seemingly an exception that shows a lower ratio. This is caused by the town not having its own farmland, which, in accordance with previous assumptions, could not be included in the calculations.

III.4 GEOGRAPHIC NOMENCLATURE

III.4.1 CRACOW VOIVODESHIP

Jerzy Duma

The names of villages and hamlets in the territory of Cracow Voivodeship presented in this volume of the *Historical Atlas* were recorded in the sixteenth century. The nomenclature is non-uniform from both: the historical and etymological point of view, as the names formed in the sixteenth century accompany those of earlier origin.¹ Here we can also find names dating back to pre-Slavic period (from before the sixth century of our era), e.g. the names of mountain chains: *Tatry*, *Karpaty*, perhaps *Beskidy* and *Bieszczady*, etc. However, pre-Slavic site names mostly belong to repeated and adapted river names, e.g. s. n. *Dunajec*: r. n. *Dunaj*; s. n. *Pilica*: r. n. **Pilca*, later *Pilica*; s. n. *Rabka*, *Sucharaba*: r. n. *Raba* (from the root **or-* ‘dig’, see *orać*, *radło*, ‘plow’, ‘plough’); *Skawa*: r. n. *Skawa* (if not from Slavic **sьk-/suk-* ‘to turn’); *Wiercica*: r. n. *Warta* (Slavic, or pre-Slavic origin); (*Wielki* and *Mały*) *Wieprz*: r. n. *Wieprz*; *Wisła*: r. n. *Wisła*, etc. The origin of river names was described in details in various studies on hydronymy and toponymy.²

Slavic early Medieval names appear with the arrival of the Slavs to the territory of the later Lesser Poland, perhaps at the end of the fifth and in the sixth and seventh centuries. Together with the pre-Slavic nomenclature, they often remain an etymological mystery to researchers, like the name *Bawól* (*Bamuol* 1198), *Wawel*: **vqvol-*, **vqvьlb* ‘a place by the water, surrounded by water’, *Skrzynka* (*Krzyinka*): **krin-* > **kryn-* ‘a lowered place’, see *krynica* ‘zdrój’. The etymology of these names is still disputed, yet they form the oldest layer of site and topographical names.

The old layer of Slavic site names consists mostly of archaic possessive forms, derived from Slavic names by means of the suffix **-jb*, and of patronymic names, especially those derived from compound Slavic personal names, e.g. possessive s. n. *Pękosław*, *-wia* (from p. n. **Pikoslav* + *-jb*); patronymic s. n. *Sulisławice* (from p. n. *Sulisław* + *-ici*, later *-icę*). Possessive names with **-jb* are much less frequent in our area than patronymic, e.g. s. n. *Będzin* (*Biden* 1299, *Banden* 1301): p. n. **Będzan*: *Będzimir*; s. n. *Biecz* (*Beyech* 1123–1125): p. n. *Biejek*: *Bezdział*; s. n. *Będusz*: p. n. *Będuch*; s. n. (Stary, Nowy) *Sącz* (*Sandech* 1163): p. n. **Sądec*, **Sądek*; s. n. *Podlubomierz*: p. n. *Lubomir*; s. n. *Siepraw*, **-wia*: p. n. *Siepraw*; s. m. *Skarbimierz* (*Scarbimir* 1242 – today *Skalbmierz*): p. n. *Skarbimir*; s. n. *Wilgo-szcza*: p. n. **Wielegost*; s. n. *Wo-dziszław*, **-wia* (*Włodzisław* 1370): p. n. *Włodzisław* (*Władysław*); s. n. *Wojnicz*: p. n. *Wojnic* or **Wojnik*, etc. A site name *Siewior* (*Seuor* 1125 – today *Siewierz*) is related to this type of site names, though originally it was derived from the word **sěverь*, meaning ‘north, northern wind’, or ‘snowstorm’, with later palatalization of the last syllable as in possessive names and the loss of ablaut **e* into *o*.

Possessive names with suffixes **-ov-/*-ev-* and **-in-* are more frequent, though also more chronologically diversified. The names with the first suffix are especially numerous, e.g. p. n. *Krak* (: *krakać*),

¹ Abbreviations: s. n. – site name, p. n. – personal name, r. n. – river name, Germ. – German, pie. – Pre-Indo-European, suf. – suffix. Reconstructions were marked with an asterisk.

² For instance, in the part devoted to Lesser Poland, see particularly K. Rymut, *Gewässernamen im Flußgebiet der oberen Weichsel von der Quelle bis zur Soła und Przemsza*, „Hydronymia Europaea”, vol. 9, 1993; idem, *Rechte Zuflüsse zur Weichsel zwischen Soła und Dunajec*, „Hydronymia Europaea”, vol. 12, 1996; K. Rymut, M. Majtán, *Gewässernamen im Flußgebiet des Dunajec*, „Hydronymia Europaea”, vol. 13, 1998; K. Rymut, *Gewässernamen im rechten Zuflußgebiet der Weichsel zwischen Dunajec und Wisłok*, „Hydronymia Europaea”, vol. 15, 2000; idem, *Gewässernamen im linken Zuflußgebiet der Weichsel zwischen Przemsza und Pilica*, „Hydronymia Europaea”, vol. 16, 2001.

or – from a word now unknown in Polish **krak*, meaning ‘an arm of a river’, see *krok* (‘stride’) and *pokraczny* (‘grotesque’); s. n. *Baranów* p. n. *Baran*, or from *baran* (‘ram’); *Bierków* (*Byrkow* 1343 – today *Biórków*): p. n. **Birek* (with a change **ir > er > or*); *Czaczów* (originally a patronymic name *Chacheuici* 1174–1176, today in a Mazurian form *Caców*): p. n. *Czacz*: *cacko* ‘toy’; *Gdów* (*Kdow* 1272): p. n. *Gda* (: *gdakać < *kǫdakati* ‘to speak a lot’); *Miechów*: p. n. *Miech*, etc. Newer names are created from foreign roots, e.g. *Giebułtów*: Germ. P. n. *Gebelt*.

Possessive names with **-in-* are a little less frequent than those with **-ov-/*-ev-*, but much more frequent than those with *-jb*. Here we could mention, for instance, s. n. *Baczyn*: p. n. *Bacza*: *baczyć* ‘to look’; s. n. *Biadolin*: p. n. *Biadoła*: *biadolić*; s. n. *Będziszyna*: p. n. **Będziesza*; s. n. *Muszyna* if it comes from p. n. *Mucha*; s. n. *Rzeplin*: p. n. **Rzepla*: *rzepa*, etc.

Patronymic names also reach far into the past. Originally they denoted names for the people, who inhabited a particular village. Later they were transferred, and used as the name of this village. Older forms were created from compound Slavic personal names with a suffix **-ici-* (<**-itjo*) in the Nominative Case of Plural, and later in Accusative **-icě*, often with a suffix *-ov-/*-ev-*, e.g. *Boguchwałowice*: p. n. *Boguchwał* + *-ov-icě*; s. n. *Dobieszowice*, *Dobiesławice*: p. n. *Dobiesz*, *Dobiesław*; s. n. *Lusławice* (*de Ludslauicz* 1388): p. n. **Ludslaw*; s. n. *Proszowice*: p. n. *Prosz* (: *prosić* ‘to ask’); s. n. *Wojślawice*: p. n. *Wojślaw*, etc. Patronymic names are also derived from shortened Slavic names, e.g. s. n. *Włostowice*: p. n. *Włost*: *Włoscisław*, or nicknames, e.g. s. n. *Wadowice*: p. n. *Wada* (*wadzić*, *zwada*, ‘to disturb’, ‘an argument’); type of subjects, e.g. from a bishop (‘biskup’), or ‘podstoli’ (deputy of a pantler), see s. n. *Biskupice*, *Podstolice*, from a name of inhabitants of a given region, e.g. *Zagorzyce* (‘on the other side of the mountains’). Some patronymic names were also derived from foreign roots, e.g. *Wilamowice*: Germ. p. n. *Wilhelm*.

Stanisław Rospond analysed the occurrence of patronymic names in the territory of present day Poland, and was able to distinguish three areas of their highest accumulation: Lesser Poland, Silesia, and Greater Poland with Cuyavia.³ These could be the three oldest centres of Slavic settlement in our country. For instance, in Western Pomerania patronymic names appear in a specific layout: the older and more numerous occur in Szczecin Pomerania, especially around Wolin, and near Pырzyce, Stargard Szczeciński, on the site of old arable grounds along the sea, from Trzebiatów until Darłowo, whereas the newer and less frequent names appear to the east and south of these centres.⁴ Given the disappearance of Pomeranian language features, which occurred in this direction, this could mean that the old Slavic settlement, inhabiting this part of Pomerania, moved this way, from the west to the east.

Family names resemble patronymic names. They occur in the Plural form of a name. e.g. s. n. *Bodaki*: p. n. **Bodak* (: *bodeę* ‘to hit with something sharp’); s. n. *Dębniiki*: p. n. **Dębnik* (if it is not a topographic name in Plural, or a subservient form of *dębnik* ‘an oak forest’, ‘oak bark used for tanning’, and perhaps earlier ‘a person who tans leather with oak bark’, see below about service-related names); s. n. *Kijany*: p. n. *Kijan*; s. n. *Kózki*: p. n. *Kózka*; s. n. *Liski*, *Liszki*: p. n. *Lisek* (: *lis* ‘fox’, in the past also *liszka*); s. n. *Wawrzki*: p. n. *Wawrzek*. In the sixteenth century, the majority of family names was created in Mazovia. In Lesser Poland they were less frequent.

The so-called ethnic names, derived from various nations and tribes, appeared along patronymic and family names in Lesser Poland, e.g. s. n. *Pieczynięgi*: ethnic group *Pieczynięgie*; s. n. *Podolany*: *Podole*; s. n. *Pomorzany*: *Pomorze*; s. n. *Skawce*: r. n. *Skawa*; s. n. *Węgrce*: *Węgier*, *Węgry*, etc. Sometimes they mixed with the structure of patronymic names, e.g. s. n. *Cyganowice*: *Cygan*, or family names, e.g. *Ślęzany*, see *Ślęzak*. Ethnic names with suffixes *-ice*, and *-any* are particularly numerous in the area of old settlement in Lesser Poland.⁵

The so-called service-related names, numerous in the past in Lesser Poland, were not created after the thirteenth century. They referred to occupation and duties of subjects to their superior, located in some town,⁶ e.g. s. n. *Jadowniki*: **jadownik* ‘wizard, poisoner, a person who prepares poison ‘*jad*’

³ S. Rospond, *Stratygrafia słowiańskich nazw miejscowych. Próbnny atlas toponomastyczny*, vol. 1: *Formacje na *-itjo*, Wrocław 1974.

⁵ D. Podlaska, *Nazw etniczne z sufiksami -any i -ice na terenie Polski*, „Onomastica”, vol. 17, 1972, pp. 65–82.

⁶ In Lesser Poland the names focused mostly around Cracow, Wiślica and Sandomierz, cf. K. Rymut, *Służebne i zawodowe nazwy miejscowe w Małopolsce*, „Onomastica”, vol. 20, 1975, pp. 143–168.

for arrows'; s. n. *Konary* and *Kobylniki* (*Cobelnic* 1253): *koniarz*, *kobylnik* 'a person who breeds horses'; s. n. *Korabniki*: **korabnik* 'a person who makes boats'; n. m. *Kuchary*: *kucharz* ('cook'); s. n. *Łagiewniki*: *łagiewnik* 'a person who makes 'łagwie' – pots, barrels, or who brews beer, and prepares mead'; s. n. *Piekary*: *piekarz* ('baker'); s. n. *Psary*: *psiarz* 'a person who watches over the dogs, especially hunting dogs'; n. m. *Sokolniki*: *sokolnik* 'a person who breeds and trains hunting birds'; s. n. *Szczytniki*: **szczytnik* 'a person who makes shields, or a shield bearer'; s. n. *Złotniki*: *złotnik*, etc. Later, site names related to occupation were created alike, see s. n. *Kowale* and *Kowary*: *kowal* 'smith'.

The next large group of site names consists of topographic names. Among them, we can find names derived from field objects, e.g. s. n. *Błonie*, *Brzezinka*, *Brzeźnica* (: *brzeźnica* 'birch forest'), *Brzeście* (: *brzost*, **brzeście* 'kind of elm'). *Dąbrowa*, *Góra*, *Górka*, *Grabiny*, *Las*, *Laski*, *Łęg*, *Łęgi*, *Mogila* (: *mogila* 'hill'), *Niwki*, *Rzeka*, *Skala*, *Skalka*, *Staw*, etc. Some site names were transferred from other objects, e.g. s. n. *Biała* from r. n. *Biała*, s. n. *Bieliczna*: r. n. *Bieliczna* (: *bielica* 'swamp', suff. *-na*), s. n. *Śreniawa* from r. n. *Szreniawa*, etc. At times, site names were derivatives of river names, e.g. s. n. *Bielsko* from r. n. *Biała*. The etymology of s. n. *Morawica* near Cracow raises some doubts, see identical name of a village situated by the River Nida. Stanisław Rospond assumed there was a word **morawa* 'a waterlogged area, covered with grass', incorrectly linking it with *murawa* 'grass' (different origin – from **muravъ*, 'dark green').⁷ It seems we are dealing here with the case of a movement of a word derived from a name of the river and land *Morawa*,⁸ *Morawy* > *morawa* 'river, boggy area', to which a suffix *-ica* was added. Similar process, when a specific name of a river becomes a common name, could be found in *Dunaj*, *Wisła*, *Pisa*, names, which were turned into common words *dunaj*, *wisła*, *pisa*, *pisia*, meaning 'stream, river'.⁹

Topographic names could also take a form of an adjective, see s. n. *Czermna*, *Czermno* derived from a lost word **czermny* 'red'; s. n. *Czarna* 'black'; s. n. *Długie* 'long'; *Mszana*: **mszany* 'covered in moss'; s. n. *Wysoka* 'tall', etc. Names in form of a participle are rare, e.g. *Śmierdząca* ('smelling', probably from a name of a rivulet, or spring).

When a site name is formed from adjectives and nouns, various derivative form are created, e.g. s. n. *Brzeżek*, *Brzesko*: *brzeg* 'bank'; s. n. *Grabowa* (: *grab* 'hornbeam' or p. n. *Grab* – then it is a possessive name); s. n. *Gromnik*: *grom* 'thunder'; s. n. *Piaseczno*: *piasek* 'sand'; s. n. *Szczawnica*: *szczaw* 'mineral water spring, also a name of a plant'; s. n. *Świdnik*: if from *świda* 'water plant'; s. n. *Trzcienica*: *trzcina*; s. n. *Trzetrzewina*: *cietrzew* 'black grouse'; s. n. *Wietrznica*, *Wietrzno*: *wiatr* 'wind', etc.

The so-called culture names, related with names of object made by men, and with social relations, are of similar origin. These are the names like *Chamrzyska* (today *Homrzyska*): Germ. *Hammer* 'hammer, smithy'; s. n. *Huta* 'glassworks'; s. n. *Lgota*, *Wola*, *Wólka* and *Wolica* from *ulg* 'relief' and *wolność* 'freedom' from obligations; s. n. *Miastko*: **miastko* 'place of settlement'; s. n. *Podgrodzie*; s. n. *Poręba*; s. n. *Tyniec*: *tyn* 'wall'; s. n. *Ujazd* see *zajazd*, etc.

Compound names belong to a separate group. Also here, several subtypes could be found, e.g. prefix names like *Zakrzów* (: *za krzami* 'behind the bushes'), *Podgórze*, *Podłęże*, *Zaborek* and *Zaborze*, etc. When a village was divided into several hamlets, they had to be distinguished, see *Mochnaczką Niżną* and *Mochnaczką Wyżną*, *Lipnica* (*Lipnica Murowana*), *Lipnica Dolna* and *Lipnica Górna*, *Nowy Sącz* and *Stary Sącz*, etc. Villages surrounding a bigger town often lost their independence, also in nomenclature, e.g. *Dąbrowa Górnicza- Będów – Łosień – Strzemieszycze Małe*; *Kraków-Krowodrza – Mogiła*, *Mydlniki*, etc.

Compound names of various origin could also be distinguished, e.g. *Krowodrza* (*Crowodra* 1257): *krowa* and *drzeć* 'to fleece'; *Koziegłowy* (de *Cosseglow* 1326): p. n. **Kozia Głowa*; *Dwiekozy* (*Dwie Kozy*); s. n. *Zimnowódka* (*Zimna Wódka*): *zimna woda* 'cold water'; s. n. *Zimnodół*, etc.

German names are the main testimony for foreign influences in the nomenclature of Lesser Poland. They could be found in toponyms, e.g. in the names of peaks *Giewont*, *Gerlach*, of mountain forests,

⁷ S. Rospond, *Słownik etymologiczny miast i gmin PRL*, Wrocław 1984, p. 233; W. Boryś, *Słownik etymologiczny języka polskiego*, Cracow 2005.

⁸ The name of this river is of Old-German origin, Pre-Slavic, from **mar-ahva* 'boggy water', see Germ. *Meer* and *Moor* 'deep water, still water, sea, swamp' and Germ. *Au(e)* 'land on the water', cf. F. Kluge, *Etymologisches Wörterbuch der deutschen Sprache*, comp. E. Seebold, 23rd edition, Berlin–New York 1995.

⁹ Compare with the names of two streets in Warsaw *Szeroki* and *Wąski Dunaj*, where the water used to flow.

e.g. *Regle*, and in site names, e.g. *Frywald*: niem. *Frei* ‘free’, and *Wald* ‘forest’; *Kleparz* (*Clapers* 1389): if from Germ. p. n. *Klapper* with a German ending *-s*; s. n. *Lanckorona*: Germ. *Land* ‘country’ and *Krone* ‘crown’ – here it could mean ‘property of the Crown, that is of the king’, etc.

Sometimes, the nomenclature of Lesser Poland bears traces of various phonetic changes, which occurred in local Polish dialects, e.g. the change from **xv-* into *f-* is well represented, like in s. n. *Faliszowice*, *Faliszówka*: p. n. *Chwalisz*: *Chwalimir*; s. n. *Faściszówka* (*Chwaściszówka*): p. n. *Chwast*; s. n. *Falkowa*: p. n. *Chwałek*, etc. Mazuration is less visible, e.g. changes *cz*, *ź*, *sz* into *c*, *z*, *s*, like in *Zania* and at the same time *Żania*; *Zendowice* and *Żędowice*; *Złosieniec* and *Złożeniec*; *Żelików* and *Zelków*, etc. Some of these fluctuations result from the fact that in the sixteenth century the spelling of site names had not yet been stabilized. In order to determine the origin of a name precisely, one must often reach available older records, which were here given in brackets.¹⁰ The names, which lost their connection to their roots (personal names, or common words), have many variants of spelling in particular.

Traces of later settlement of the Lemkos (eastern-Slavic) in mountain areas, were difficult to find in the sixteenth century nomenclature of Lesser Poland. The same is true for the penetration of Vlach shepherders, the traces of which can still be found in the vocabulary used by the highlanders.

This chapter is a brief summary of the sixteenth century nomenclature of Lesser Poland. Many names were left without a detailed commentary, only basic nomenclature types were described. The rest must wait for the completion of *Nazwy miejscowe Polski* (see footnote 10), a dictionary that is being published in Cracow.

*

In determining the sixteenth century names of settlements and physiographic objects in Cracow Voivodeship we followed the same rules, which were applied in previously published volumes of the *Atlas*. Stanisław Trawkowski’s commentary on Sieradz and Łęczyca Voivodeships could be an example here.¹¹

(2008)

Translated by Agata Staszewska

III.4.2 SANDOMIERZ VOIVODESHIP

Władysław Pałucki

Accurate wording of site names – names of settlements and places – in Sandomierz Voivodeship in the second half of the sixteenth century was determined using the same method applied to the maps of Lublin Voivodeship and Mazovia in the sixteenth century. The most important aspect comes down to the rule that **names of settlements** put on the map should be given in their sixteenth century wording and contemporary literary language, but modern spelling. In this way we are close to the opinion of a toponymist, who demanded the forms of site names and physiographic structures be congruent with language reality,¹ especially that we are keeping the old spelling when it is consistent with the nature of the Polish language and survived to this day. Variants of names (when one version dominates, or when various dialectic types appear rarely), if they had left their trace in sources, were shown in the list, which lists basic variants of sixteenth century spelling. As a result, the rules applied for the map of Mazovia and described in the commentary to this map, were not changed.² The same applies to lists of settlements and natural landscape elements.

In the case of high vowel reduction, occurring in the entire ethnic territory of Poland, so also in Sandomierz Voivodeship, namely: change er–ir or i–y (e.g. Sieradowice – Szyradowice, Wierzbica – Wirzbica, Zbigniew – Zbygniew, Nida – Nyda) we decided – as in the case of the map of Mazovia – to accept the present-day form, already becoming more common at the end of the sixteenth century.

However, our approach to the aforementioned assumptions was not strict. It is a well-known fact that both: in nature and in the living language there appear many exceptions from general rules, and in toponymy the number of such exceptions depends on, among others, the range of a dialect. That is why the name of the village Świrna (Sandomierz district, Szewna parish) was treated differently. It appears in the sources in alternate versions: Świerna, Świrna. The local version Świrna won and survived to this day, and it was put on the map, and the form Świerna – as a variant in the list.

This assumption influenced our **methodology**, and in many cases, when for a given settlement the sixteenth century sources provide several variants of its name and spelling, the priority was given to the form: (1) which appears in different, non-correlative types of sources, (2) prevalent in records from the second half of the sixteenth century.³

In more difficult cases, e.g. alternative spellings, we took into consideration (when it was possible) the origin or meaning of the name, as well as the name of the family, which came from these settlements. For instance, for the numerous settlements deriving their name from oak (‘dąb’) we typically used the form Dąb, Dąbrowa, Dębiany. However, once – for the village Dembiany (Wiślica district) – we departed from this rule, because this village was the seat of the family of Rawicz-Dembiński; in the second half of the sixteenth century it was owned by the distinguished Great Chancellor of the Crown Walenty Dembiński, whose name was always spelled this way in numerous private and official documents, including the Act of the Polish-Lithuanian Union from 1569, which he formulated.⁴

¹ M. Karaś, *Językoznawstwo a kartografia*, „Onomastica”, vol. 7, 1961, p. 25.

² W. Pałucki, *Geographic nomenclature*, [in:] AHP Mazovia, in this edition III.4.7.

³ *Ibidem*.

⁴ *Akta unii Polski z Litwą, 1381–1791*, pub. S. Kutrzeba, W. Semkowicz, Cracow 1932, p. 340; A. Tomczak, *Walenty Dembiński, kanclerz egzekucji (ok. 1504–1584)*, Toruń 1963, p. 144, the photography of the document issued by the chancellery

In this form the name of the family survived to this day. For similar reasons, we kept the name Ossolin – spelled like today, with double s – for the seat of the powerful family Ossoliński in Sandomierz land, against the suggestions of linguists. Records found in tax registers often provide poor, wrong or distorted spelling. This forced us to conduct additional source research, and for this reason the reconstruction of the exact wording of site names was one of our more laborious tasks.

It must be remembered that tax collectors, assigned one for each voivodeship or land, or the assistants they hired, did not bother much with contemporary rules of orthography, in fact not completely settled back then. Neither did they feel any need to write down carefully the name of a village for which tax was paid in the records. The payment was done by the owner of a village, but often it was peasants who were sent on behalf of their lords and the lords' neighbours. The collector, if he had not prepared a form before (sometimes with old, incorrect, or not careful spelling), wrote the name of a village the way he heard it. It did not matter to him, whether it was given in a local dialect, and in faulty pronunciation (caused, e.g. by lack of teeth): Zbygniew or Zbigniew,⁵ Poizdów or Pogwizdów, Ubenice or Hubenice, Szolec or Solec. Anyway, in numerous surviving fiscal (tax) sources there was no complaint about incorrect spelling of a village name or a lost receipt of paid tax.

Apart from the dissimilations found in: Gortatowice – Gotartowice, Wronów – Wnorów, Pobroszyn – Pogorszyn, the name Krzykosy (Sandomierz district, Pokrzywnica parish), which became Trzykosy through the change of first sound from K to T,⁶ should perhaps be treated as one of such mistakes or slips of the tongue. It is difficult to determine today what influenced the change not only in form, but also in the meaning of the name: whether it was a result of a competition with a name of a nearby village Dwikozy, formerly spelled: *Dwyecosy* (Dwiekozy, Dwiekosy)⁷ – and let us add that there was also a village called Śniekozy situated in the area in Goźlice parish, in 1565 listed as *Znyekozy*⁸ (another village also called Śniekozy lay over the Vistula in Lublin Voivodeship, Zaleszany or Wrzawy parish)⁹ – or just an incorrect pronunciation, later grounded in spelling.

Finally, talking about source basis for the nomenclature, we should mention another issue, important for the correctness of spelling. This time it refers to the nature of the sources, which – due to their purpose – could provide more or less careful records of site names. Already during the work on the map of Mazovia, we noticed that for nomenclature the most important sources were those in which – because of the formal or procedural duty – site names were given in their proper wording,

with Dembiński's own signature, p. 96, photography of the text on the cover of Crown Metrica 104: 'ad relationem Magnifici alentini Dembiński de Dembiany, Poloniae Cancelarii etc.'

⁵ For settlements called Zbigniew (Zbygniew) and its derivatives: Zbigniewice (Zbygniewice), Zbydniów, I was able to gather a significant number of records, including the name of a noble family from Sandomierz Voivodeship: Zbigniewski. These records settled the issue and the form shown on the map was Zbigniew, and in the index the variant Zbygniew, etc. Even if, as P. Galas believes (*Ze studiów nad nazwami miejscowymi południowej Małopolski*, „Onomastica”, vol. 7, 1961, p. 104) Zbydniów is 'as slightly changed form of and Old-Polish name Zbigniew, which later, due to Latin influences, became Zbygniew', we stick to our solutions (for villages in Sandomierz district): Zbigniew and Zbigniewice. It is also important, that the first of Polish dukes, son of Władysław Herman, Zbigniew was recorded in this form in the oldest manuscript of the Chronicle of Gallus Anonymus (MS Zamoyskich from the sixteenth century, pub. J. Krzyżanowski, Warsaw 1948). Also, we did not change the name of the bishop of Cracow, Zbigniew Oleśnicki, who appears frequently in the sources, nor the name of the diarist from the sixteenth and seventeenth century – Zbigniew Ossoliński, who signed himself always in this form.

⁶ Krzykosy: 15th c. – Długosz LB, II, p. 320; y. 1508 – P. Małopolska, p. 457; y. 1529 – LR, p. 11; y. 1578 – P. Małopolska, p. 166; y. 1674 – ASK 167, f. 320. Trzykosy (zy): LS 1564/1565, p. 321; y. 1786 – F. Czaykowski, map of Sandomierz Voivodeship; y. 1788/1791 – Perthées, *Mappa szczególna woj. sandomierskiego*, J. Kolberg, *Mapa Król. Polskiego*, 1830; map by Kwatermistrzostwo WP. The villages called Krzykosy appear also in other regions of Poland. A change or incorrect deciphering K – T was quite possible. For instance, gord documents of Pyzdry from 1393 mention Trzicosy, and it concerned the village Krzykosy situated near Sulec and Sulęcín, L. Callier, *Powiat pyzdry w XVI stuleciu*, Poznań 1888–1891, p. 286.

⁷ 15th c. – Długosz LB, II, p. 312: *Dwiekozy*; Długosz, *Historia*, V, p. 284: *Dweykosy*; LR 1529, p. 388: *Dwyecosy*; LS 1564/1565, p. 321: *Dwyekozy*; y. 1662, ASK I 67, f. 112: *Dwie Kozy*.

⁸ LS 1564/1565, p. 326.

⁹ Śniekozy in Zaleszany parish: Długosz LB, II, p. 462; LR 1529, p. 356, 'tota villa post Istulam'; in Wrzawy parish: y. 1531, P. Małopolska, p. 356; y. 1565, LL 1565, p. 45; Parishes Zaleszany and Wrzawy bordered on each other near the mouth of the San into the Vistula. The lower San frequently changed its channel, flooded and destroyed nearby villages. That is why Śniekozy 'post Istulam' could sometimes belong to Zaleszany parish, and sometimes (for the longest period) to Wrzawy parish. In the second half of the sixteenth century they ultimately disappeared. For an attempt at explaining the name Śniekozy ('to eat goats') see P. Smoczyński, *Nazwa miejscowa Śniekozy*, „Prace Filologiczne”, vol. 25, 1975, pp. 347–357.

and correct Polish spelling. These types of sources consist mainly of court books,¹⁰ then royal universals and some legal acts and regulations, inventories, etc. Crown Metrica should also be mentioned here. The spelling of site names was treated more rigorously in legal proceedings (suit, joinders during property arguments, purchases, sales, liens and distribution of property), especially in criminal cases. We could provide here two cases from the neighbouring Cracow Voivodeship as a proof. In the first case, Mikołaj of Kurozwęki (in Sandomierz Voivodeship), the castellan of Sieradz, was sued in 1457 by Jan of Czulice, for abducting a peasant from Czulice and bringing him to Łuczanowice in Proszowice district. He stated that this ‘concittacio defectuosa est in eo, quia ea concittatione non stant Czulicze sed Culicze’.¹¹ In the other case Stanisław of Zagajów, sued in 1498 in an argument about the village Ostrężnice, also refused, through his representative, to participate, ‘quia in citatione stat Osthrasznycza et in concitatione stat Osthranznycza nomen ville, pro qua causa ad presens vertitur’.¹²

We had to broaden our source basis in an interesting case concerning the correct sixteenth century name of a village, later: town, which belonged to the Cistercians. Army inspections for Sandomierz Voivodeship took place there, it was Pokrzywnica (Koprzywnica). Until the 1450s it was usually called Koprzywnica in the sources. Thorough source query has shown that in the sixteenth and seventeenth centuries the spelling ‘Pokrzywnica’ is almost exclusive, in Sejm constitutions,¹³ *sejmik* (dietine) lauda,¹⁴ carriage and station universals,¹⁵ inspections and inventories of royal property,¹⁶ correspondence,¹⁷ historiography,¹⁸ or even Polish and foreign cartography from this time.¹⁹ So, in this period there was a change (a phenomenon that occurs in the Polish language) in the sequence of sounds in the first syllable: Kop-Pok. As a result, the village’s name changed to Pokrzywnica; when it comes to koprzywa-pokrzywa (‘nettle’) in other regions of Poland also pronounced alternatively, did not matter much.

In the case of Pokrzywnica in Sandomierz Voivodeship, the original form Koprzywnica – still used today – was brought back in the eighteenth century, although Pokrzywnica appears even in the first quarter of the nineteenth century.²⁰

In the sixteenth century, the Latin alphabet was not yet fully adapted to denote Polish sounds. Additionally, the aforementioned disregard for correct record of site names in tax registers led to some ambiguities in recreating the soft consonants: ś, ć, dź, which were then spelled with diphthongs sz, cz, dz (e.g. *Olyesznycza* – Oleśnica). This, like the latinization of site names in sources written

¹⁰ Unfortunately, all registers (town, land and of the subcamerarius) of Sandomierz Voivodeship, except for Pilzno district, were destroyed; see A. Wolff, *Akta partykularne przedrozbiorowe Archiwum Głównego 1381–1835*, [in:] *Straty archiwów i bibliotek warszawskich w zakresie źródeł historycznych*, Warsaw 1957, pp. 195, 200 f., 203–205, 208.

Marchwiński, Olsztyn 1977, p. 57 – ‘Koprzywnica czyli Pokrzywnica’; B. Paprocki, *Herby rycerstwa polskiego*, Cracow 1584, p. 159; S. Starowolski, *Polonia* (from 1632), in all later editions (1652, 1656, 1662) wrote ‘Pocrivnicam dittisimam Abatiam’. The last edition of Starowolski’s *Polonia*, prepared by A. Piskadło (idem, *Polska albo opisanie położenia Królestwa Polskiego*, Cracow 1976), translated into Polish, despite the publishers reassurances in the introduction that ‘the translation tried to stay as faithful to the original as possible’, and the editorial rules, corrected Starowolski: ‘przepiękne koprzywnickie opactwo cystersów’. Mikołaj Rej of Nagłowice in Lesser Poland (Cracow Voivodeship) or of Szumsk (Sandomierz Voivodeship) called the weed ‘pokrzywa’, not ‘koprzywa’: ‘Baczny człowiek ma uważać co łopian, a co pokrzywa’ (Zwierzyniec).

¹⁹ Maps of Poland by W. Grodecki from 1562; by A. Pograbka from 1570; by J. Speede, *A New Mape of Poland* 1627.

²⁰ In 1811 Pokrzywnica was visited and described U. Niemcewicz, *Podróże historyczne po ziemiach polskich*, Paryż 1858, pp. 80 f.

in Latin, convinced us to consider the seventeenth century sources, especially to reach again for the surviving poll tax registers from 1662–1676, which we had also used for other purposes. In these registers phonetic distinction appears as a rule – ą, ę, l, ł, o, ó, s, ś, sz, c, ć, cz, z, ź, ż; site names were spelled according to the contemporary language reality, so: Łętowice, not *Lantowice* like in 1581, and Łukanowice, not *Lukanowice*, and so on.

The records from the seventeenth century were given precedence, even when the present-day form would support the sixteenth century wording. The contemporary name of parochial village Lisia Góra (Pilzno district) could be an example. In the sixteenth century it was spelled *Lissegory* (1508), *Lysagora* (1525), *Lisza Gora* (1576, 1577), *Lyssa Gora* (1581), etc., but then *Łyssagora* (1589), *Łysagora* (1629, 1662, 1673); as such, we recreated the sixteenth century name in the form: Łysagóra.

Settlement names which appear in partially latinized version in our basic sixteenth century sources (tax registers, Church visitations), had to be verified on the basis of well-attested Polish source records. This usually applied not to an entire name, but only a part of it; a prefix, or more often: a suffix. In the latter case the name created from a common word was frequently given in plural (pluralization) instead of singular. The name of an old parochial village Gołąb in Stężyca land could provide an example here. We managed to find over 40 versions of the name of this village from between the fifteenth and eighteenth centuries. In Latin texts (Crown Metrica, Church visitations) or Latin-Polish (register books from the sixteenth century) they usually appear in two forms: *Golembye*, *Golombye*,²¹ that is: Gołębie (Gołąb – ‘pigeon’, Gołębie – ‘pigeons’). Texts written entirely in Polish (inventories, inspections of royal property,²² constitutions, *sejmik* (dietine) lauda,²³ seventeenth century poll tax registers, referendary court books²⁴) provide this name in singular – Gołąb.

The majority of settlements in Sandomierz Voivodeship, but for small local dialect variations, maintained their names from the moment of their creation to this day. Only the names of a few settlements underwent a complete change.

Quite early, prior to the second half of the seventeenth century, due to the change of one consonant the name of Głowów town, founded in 1570 by Krzysztof Głowa in Pilzno district, changed into Głogów, today: Głogów Małopolski. It happened probably because the new name was easier to pronounce than the old one, in which two similar labial consonants appear too close to each other in the suffix.²⁵

The name of one of the three old towns with characteristic names: Odrzywół, Ryczywół and Łysobyki (which in fact are a proof of brisk economic relations on trade routes running through these towns), was changed in 1970 to Jeziorzany. Finally, the name of the village Życ (Sandomierz district, Samborzec parish), formerly a mixed property: royal and Church, was changed in the Interwar Period to Polanów Samborzecki in order to avoid unpleasant jokes and biting remarks. Probably for similar reasons the name Wieprzki, also in Sandomierz district, was changed to Wierzby after 1952.

In our work on the nomenclature in Sandomierz Voivodeship we used old, or even – as for Radom district – very old, dictionaries,²⁶ as well as modern detailed indexes. So far, there have not been many toponymy works created on a broader source basis concerning Sandomierz Voivodeship.

²¹ P. Małopolska, p. 360, y. 1531: parochia Golambia (Golabye); ASK I 33, f. 394, y. 1552: Golambye; ibidem, f. 414, y. 1563: Golambye.

²² LS 1564/1565, pp. 244–246; LS 1660/1664, vol. 2, p. 165; LS 1789, I, p. 269 n, 275–278 (*goląbskie*, not: *gołębiowskie* starosta’s district, ‘w Gołębiu’, not: ‘w Gołębiach’).

²³ VL, vol. 5, ff. 88 f., f. 226; Biblioteka PAN Cracow, MS 8338, Teki Pawińskiego 21, p. 429, y. 1672: ‘obóz konfederacji założyć między Gołębiem a Borową’.

²⁴ *Księgi referendarskie*, vol. 1: 1582–1602, pub. T. Baranowski, Warsaw 1910, p. 63: ‘przyszli do nas poddani nasi ze wsi Gołębia i Woli Gołąbskiej’. Similarly in decrees for other villages: from Rajsko, Jaktorów, etc.

²⁵ A. Orzechowska, *Nazwy miejscowe dawnego pow. pilzneńskiego oraz prawobrzeżnej części dawnych pow. sandomierskiego i wiślickiego*, „Prace Onomastyczne”, vol. 22, 1975, p. 22, does, in fact, quote the record from 1581 she took from Pawiński (P. Małopolska, p. 265) ‘Głowów (! pro Głogów)’, but she accepted it and added (unnecessarily) the etymology from the noun *głóg*. For groundless reasons the post-war linguistic works on Sandomierz toponymy assume the Vistula for the borderline of their studies, which actually did not always overlap with administrative division, and neither was it a border for toponymy of dialects.

²⁶ F. Siarczyński, *Opis powiatu radomskiego*, pub. T. Lipiński, Warsaw 1847, prepared in territorial order in the end of the eighteenth century, when Rev. Siarczyński was a parson in Kozienice.

Only in the last two decades were there three such works published, encompassing particular parts of this Voivodeship.²⁷

The files containing the materials for the historical-geographical dictionary of Medieval Poland and the pre-War (prepared on the basis of the sources which do not exist today) files for the dictionary of Sandomierz Voivodeship in the second half of the eighteenth century proved much more useful.²⁸

Some settlements, for various reasons (e.g. floods of the Vistula, war damages), disappeared, were moved, or – as already mentioned – changed their name partially or completely. In order to identify such settlements and their names we used, among others, the list of towns and villages in Cracow diocese from 1787 published by J. Kleczyński,²⁹ as well as a similar, although handwritten register from 1783–1784 by F. Czaykowski.³⁰ Older cartographic works were also used for this purpose. These were works by K. Perthès, F. Czaykowski, the Topographical Map, works by M. v. Heldensfeld, and for the part of the voivodeship situated on the other bank of the Vistula – Mieig's and Liesganig's. Naturally, we did not omit the voluminous, monumental *Słownik Geograficzny Królestwa Polskiego* published in 1880–1902, although the information obtained from this source was treated with necessary caution.

The modern spelling of site names presented in the List was based on the complete *Spis miejscowości PRL* published in 1967 (carefully, due to numerous misprints).³¹ For the districts, which were prepared by Komisja Ustalania Nazw Miejscowych i Obiektów Fizjograficznych (The Committee of Determining Site Names and Physiographic Structures) we used published volumes of *Urzędowe nazwy*.³²

Names of physiographic structures marked on the map of Sandomierz Voivodeship (mountains, waters, forests) were determined according to the rules assumed for the map of Mazovia in the sixteenth century. Besides, in this respect it could not be otherwise. The same word formation factors, which influence common names, also influenced the creation – as well as wording and spelling – of physiographic names, especially in the case of **bodies of water**. Any deviations from the correct form of these names, or instances where a name was moved due to the change of a stream channel, occur only exceptionally in Sandomierz Voivodeship. We paid much attention to these exceptions, because careful analysis of source records allowed us to determine not only the correct name of a river, but also, in several cases, solve our doubts concerning borders of administrative-political divisions, the localization of settlements and ownership relations.

Names of major rivers in Sandomierz Voivodeship did not raise any doubts, and the spelling was based on relatively numerous records found in written and cartographic sources, most importantly in Długosz's *Chorografia*. For the remaining rivers and larger streams we used various sources, and the precedence was given to those, which originated from the chronological period of this series of AHP. The information gathered was compared with the results described in *Hydronimia Wisły*.³³

While using the valuable and quite detailed cartographic sources from the second half of the eighteenth century in order to determine the names of average size rivers, we were able to discern some ambiguities, or obvious mistakes in the works of Rizzi-Zannoni, K. Perthès and F. Czaykowski. For instance, in the map *Polonia* by K. Perthès the right tributary of the River Czarna, which flows into the Vistula near Połaniec, is called Zachodnia, on Zannoni's map – Schodnia, and on Perthès's

³¹ See W. Pałucki, *Geographic nomenclature*, [in:] AHP Mazovia, in this edition III.4.7. We no longer had access to the issued by the Ministry of Administration, Local Economy and Environmental Protection and by the Central Statistical Office *Wýkaz urzędowych nazw miejscowości w Polsce*, vol. 1–3, Warsaw 1980–1982.

³² For the territory of the former Sandomierz Voivodeship 38 issues of *Urzędowe nazwy miejscowości i obiektów fizjograficznych* in years 1964–1972.

³³ *Hydronimia Wisły*, part 1, ed. P. Zwoliński, Wrocław 1965, rev.: B. Dunaj, „Onomastica”, vol. 13, 1968, pp. 294–296, points to the deficiencies of the sources for this work, based mostly on SGKP and military tactical maps at a scale 1:100,000.

‘szczegulna’ map from 1788–1791 – Wschodnia. The Vistula’s right tributary, called Wisłoka, was confused on *Polonia* with Wisłok – the left tributary of the River San. Lower Nida is called Wiślica on Perthèes’s *Polonia*. Such inaccuracies are rare, but not uncommon. For instance, the detailed ‘Mappa części województwa Sandomierskiego... aż do rzeki Ławy’ by F. Podolski from 1790, shows the river name Ława instead of Nidzica (both on the map, and in the key), probably taken from the village Ława, situated near the mouth of the Nidzica into the Vistula, where a toll was paid.³⁴ In 1564 the toll house inspectors³⁵ stated that the lower Nida ‘tore apart’ into two arms near its mouth flowing into the Vistula near Nowe Miasto Korczyn. Perthèes calls this fragment of the Nida ‘Wiślica’ on his 1770 map, and it is not an ordinary mistake – in fact, it could be deemed understandable, similarly to the old, second arm of the Oder, from the mouth of the Warta near Kostrzyń, until Cedynia – called Odrzyca on old maps. This way the name of the ancient gord Wiślica, the subject of many year’s research of historians, ethnographers and linguists, would find a natural explanation.

As in the remaining territories of Poland and other Slavic countries, rivers took their names from names of settlements through which – or near which – they flowed. Or, the other way round – more frequently in fact – the name of a river, especially larger one, was older than the name of a settlement founded in the vicinity. This situation – when settlements take their names from rivers – is dominant in Sandomierz Voivodeship, e.g. Bobrza by the River Bobrza, Bystrzyca by the Bystrzyca, or Czarna by the Czarna. Let us add here, that the name Czarna, and similar: e.g. Czarna Nida, was given to nine different rivers in our voivodeship. Let us finally add that some rivers had two or three names, different for their different reaches; lower, middle or upper, e.g. Czarna, Kocielna, Kocielkowa – today: Zagożdżonka. The names of three rivers appear with dissimilation: Koprzywnica-Pokrzywnica.

Only rarely did river names change; they were fixed since the moment of their creation in local pronunciation, and then in source records. It happened more often later, due to rapid industrial and settlement development of the country. Probably in such conditions the name of the Bobrza’s left tributary – Łopienica was changed to Sufraginiec. Its right tributary – Łęg, which flows into the Vistula near Gorzyce, bears the name Fantazja on Perthèes’s 1791 map – taken from the village Fantazja founded in the area in the eighteenth century. The name (actually in harmony with its meaning: ‘fantasy’) was not grounded in hydronymy.

The last change of a river name in the former Sandomierz Voivodeship worth mentioning concerns Łososina, a left tributary of the Nida. In order to honour the great prose writer born in the area, the author of *Wierna Rzeka*, the river was called Wierna Rzeka.

The map of Sandomierz Voivodeship shows only those lakes, whose names were attested to in the sources, such as Łuże (1510). There were no lakes in the upland areas of Sandomierz Voivodeship. They were a bit more frequent in the Powiśle, especially in the southern part of the voivodeship, over the Vistula. Over the ages they gradually deteriorated,³⁶ and – not only in terms of their names – not much of them remains. We were unable to mark on the map only one larger lake – ‘Czartoria’, mentioned by Długosz³⁷ as a ‘perpetual lake’, situated near Nowe Miasto Korczyn, because it either disappeared early,³⁸ or – as is more likely – was not a lake, but another, circular arm of the Nida.³⁹

³⁴ See H. Rutkowski, *Źródła kartograficzne*, [in:] AHP Sandomierz; W. Pałucki, *Borders of state territorial units*, [in:] AHP Sandomierz, in this edition III.2.1.2.

³⁵ *Lustracje ceł 1564/1565*, p. 204.

³⁶ In the inspection of the starosta’s district of Wiślica in 1660 it was stated that ‘some ponds and lakes overgrew’ – LS 1660/1664, vol. 2, p. 101.

³⁷ Długosz, *Annales*, I, p. 91 stated that this lake, made by Casimir the Great, was created by joining the stream channels of the Vistula and the Nida. It should be assumed, that the lake was artificially feed with water from the Vistula and the arm of the Nida. This closed area appears on *Karta dawnej Polski* by W. Chrzanowski from 1859.

³⁸ According to the inspection Korczyn starosta’s district from 1663–1664 the described state of affairs had existed much earlier: ‘meadows on the arm of the River Nida – Czartorya called’ – LS 1660/1664, vol. 2, p. 206.

³⁹ ‘Molendium prope Nowa Civitas Corczin in fluvio Czartoria’, MK 199, ff. 77–77v, y. 1579; in 1776, during the demarcation of the first Austrian Partition it was stated: ‘downstream of N. Miasto, where the River Nida flows in three arms, the first one just by the thicket near the town, cut from the town by the River Nida, and upstream the arm of the Vistula, which never dries up, from the stories of the inhabitants, this loop is around a mile long, and only then flows into the Vistula’; AGAD, Arch. Kor. Warsz., 31/C/1, p. 74.

When it comes to the mountains – only names of the highest peaks were marked on the map: Łysica, Łysa Góra, which were attested to in the sources. Names of woodland areas in the area of Sandomierz Voivodeship were limited to forests attested to in the sources.

In conclusion it must be emphasized that names of physiographic structures were (in terms of numbers) an important factor in creating settlement names. It is interesting, that similar to Mazovia, and also other territories, in Sandomierz Voivodeship quite a few names were formed by means of affixes: ‘pod’ or ‘za’: Podborze, Podgaje, Podlesie, Podole, Podwierzbie, Zabłocie, Zagaje, Zagość (gozd), Zagórze, Zakrzów, Zalesie, Zarzecze, Zanidzie,⁴⁰ Zajezierze, Zawisłocze, Zawisłe or Zawichost.

(1993)

Translated by Agata Staszewska

⁴⁰ Zanidzie – pastureland in Nowy Korczyn starosta’s district, mentioned in LS 1660/1664, vol. 2, p. 202, is a topographical name, like Pnidzie – a name still used today, denoting a larger area by the River Nida.

III.4.3 LUBLIN VOIVODESHIP

[In this volume there was no chapter dedicated to geographic nomenclature.]

(1966)

III.4.4 GREATER POLAND

Paweł Swoboda

The geographical names of the former Poznań and Kalisz Voivodeships during the time period we are interested in has been the subject of many onomastic studies, including Daniela Podlawska's *Nazwy miejscowe z terenu XVI-wiecznego województwa poznańskiego*¹ and Jerzy Majchrowski's unpublished PhD thesis *Nazwy miejscowe dawnego województwa kaliskiego*.² Among the works on physiographic nomenclature, we must mention the study of the names of rivers in the Warta basin conducted by Janusz Rieger and Ewa Wolnicz-Pawłowska³ along with a two-volume dictionary of hydronyms of the middle and lower Warta basin (with the exception of the Noteć River basin) by Jerzy Duma.⁴ In addition, there have been numerous works written on particular aspects of the toponymy of Greater Poland, including some that cover the period we have been researching. Among monographs about regional nomenclature, we must also mention the books by Małgorzata Rutkiewicz⁵ – concerning toponymy of the central-western part of the Greater Poland Voivodeship – and by Józef Chojnacki,⁶ who addressed the subject of microtoponymy of the north-western part of the Konin Voivodeship (within its borders at that time) and of the Greater Poland-Kuyavian border. Notable studies dedicated to the topic of word formation include: works by Adam Demartin⁷ about *-ov-* : *-'ev-* and *-in/-ino* variance, Piotr Bąk's text⁸ about the word formation of place names in Greater Poland, Franciszek Nieckula's research⁹ about oconyms with *-ov-* and *-in-* suffixes, Ewa Rzetelska-Feleszko's work¹⁰ about toponyms with *-ica* suffixes in Greater Poland until the sixteenth century, Karol Zierhoffer's research¹¹ about *o* : *ó* variance in names ending in *-owiec*, *-owce* or the article by Ewelina Zajac¹² on word formation of one-component place names in the Turek district. In his oeuvre, Hubert Górniewicz focused on the issue

of family names in Greater Poland, Lesser Poland and Mazovia.¹³ The toponymy of Greater Poland has also been addressed in several books dedicated to the study of the entire territory of Poland, such as the works of Henryk Borek¹⁴ and Stanisław Rospond¹⁵ or the dictionary *Nazwy miejscowe Polski. Historia, pochodzenie, zmiany* edited by Kazimierz Rymut (continued by Barbara Czopek-Kopciuch and Urszula Bijak) at the Institute of Polish Language in the Polish Academy of Sciences in Cracow (from 1996; the fourteenth volume until the letters *Sn-* was published in 2017).¹⁶ Besides these more recent publications, older texts, such as Stanisław Kozierowski's research on the toponymy from the area of the Gniezno and Poznań archdioceses and from western, central and eastern Greater Poland, should equally be mentioned.¹⁷ Even though Kozierowski's works should be viewed through a critical lens, particularly in regard to the source materials they were based on and the etymological explanations they proposed, they still remain a useful source of information about geographical names of Greater Poland.

Before we discuss the toponymy of Greater Poland in the field of semantics and word formation, we will briefly examine the issue of regional variation in the number of names. Table 1 shows information on the number of names of settlement units of each type (information on the number of alternative names or variations of the name noted in the sources has been added in parentheses).

Table 1. The number of settlements and names in the Kalisz and Poznań Voivodeships in the sixteenth century (the number of additional names of particular settlements has been added in parentheses)

voivodeship / district	total	village	town	mill settlement	demesne	empty	forge settlements	other
Kalisz Voivodeship	2,136 (476)	1,940 (443)	93 (15)	36 (5)	33 (11)	19 (1)	7	8 (1)
Gniezno district	491 (77)	455 (73)	22 (2)	5	2 (1)	6 (1)		1
Kalisz district	414 (164)	383 (152)	16 (6)		13 (6)	1		1
Kcynia district	288 (75)	248 (66)	13 (1)	15 (5)	6 (3)	1	4	1
Konin district	314 (67)	294 (65)	14 (1)		1 (1)	4		1
Nakło district	216 (15)	185 (14)	10 (1)	12	3		3	3
Pyzdry district	413 (78)	375 (73)	18 (4)	4	8	7		1 (1)
Poznań Voivodeship	1,462 (258)	1,283 (230)	66 (11)	43 (9)	17 (5)	26 (1)	9 (1)	18 (2)
Kościan district	636 (82)	564 (74)	25 (3)	8 (2)	10 (2)	19 (1)	1	9
Poznań district	722 (130)	625 (114)	34 (5)	35 (7)	7 (3)	7	8 (1)	6 (1)
Wąlczyk district	60 (34)	53 (32)	4 (1)					3 (1)
Wschowa land	44 (12)	41 (10)	3 (2)					
total	3,598 (734)	3,223 (443)	159 (26)	79 (14)	50 (16)	45	16	26 (3)

The AHP includes 5,308 names that referred to 3,783 settlements from both historical voivodeships. As the table demonstrates, the various districts differed from each other in terms of the density of the settlement network, thus also in the number of toponyms, which should be taken into account

when examining the regional nomenclature, because in sparsely populated areas there was a lower probability of certain name types occurring. The numbers for the Poznań Voivodeship (2,091 names referring to 1,528 settlement points) should be compared with the data compiled by Podlawska in the study mentioned in the introduction to this chapter. The author noted 2,112 names tied to 2,072 settlements.¹⁸ As we can see, these figures differ significantly. These discrepancies may be the result of several factors. When it comes to the number of settlements, Podlawska takes into account the names of settlements that might not have survived until the sixteenth century (e.g., Adamowice, Grodowo), names of missing settlements and names of settlement sections that are not the subject of this study. Since the publication of her work in 1990, more missing names would have been identified, which would have prompted the reduction of the number of settlements. Nonetheless, in the case of the relation between the number of names and the number of settlements, the AHP demonstrates that the percentage of settlements with two (or more) names¹⁹ is much higher (27%) than in the study done by Podlawska (2%). This is the case because in the AHP different/additional names are not only the ones that differ diametrically in terms of form and origin (e.g. *Jastrowie* : *Witunk*, *Mialla* : *Chelst*), but also the ones that are a diverging graphic, phonetic or word formation variant of the name (e.g. *Kobylnica* : *Kobelnica*, *Krapsko Male* : *Krampsko Male*, *Stęszewo* : *Stęszew*) and which other onomastic research does not treat as additional names. All this has caused the numbers of settlements and names in the AHP to differ greatly from the number proposed by Podlawska.

As in the case of other Polish lands, also the toponymy found in the Poznań and Kalisz Voivodeships is not homogeneous from the point of view of its history and origin. Many of the toponyms occurring in the sixteenth century were a continuation of the names from earlier times, including the pre-Slavic period. There are many names found in the areas we have studied, which generate interest and controversy among the scholars researching linguistics on Polish territories. Many toponyms, particularly hydronyms (proper names of bodies of water), were believed to be relics from the pre-Slavic era, though these theories – as was later established – were not always correct. In his work from 2001, which focused on the oldest layer of names on Polish lands, Zbigniew Babik conducted a thorough review of the existing positions concerning alleged pre-Slavic names.²⁰ Out of hundreds of names suspected of such origin, he distinguished approximately 190 toponyms, which, in his opinion, can be included in the layer of pre-Slavic names. This number is also made up of a dozen or so names from the area of the former Kalisz and Poznań Voivodeships that have been included in this atlas, viz. **Gąsawa** (river – *Ganzaua* 1136 – copy, village – *Gassavam* 1145, copy from the thirteenth century, *Ganzava* 1251), **Gwda** (river – *Chuda* 1260, *Kudda* 1312, *Gwda* 1349), **Kalisz** (*Καλισία* second century, *Kalis* 1107, copy),²¹ **Kiekrz** (village – *Kerz* 1387, *Kerz*, *Kekrz*, *Kecrze*, *Kekers*, *Kekrsz* 1391, *Kyerz*, *Kyekyerz* 1432, *Kyekrzsky*, adjective 1471, *Kiekrz*, *Kierskiego* 1580; believed to be pre-Slavic, though due to the chronology of the records was connected to Old Polish. *kierz* ‘bush, shrub’), **Mosina** (river – *Mosinam* 1292, town – *Mosznia* 1247, copy from the fourteenth century, *Mosina* 1292, *Mossina* 1298), **Noteć/Noteś** (river – *Nothes* 1234, *Notes* 1243, *Netza*, *Neza* 1251; most commonly connected to Indo-European. **not-* ‘wet’), **Obra** (river – *Obra* 1231; most likely with Indo-European. **ab-* ‘river’, possibly connected to Latvian *abra* ‘basins’, Gothic: *abrs* ‘silny’), **Oćwieka/Oczwieka** (river – *Oczwezca* 1373, *Oczwyek* 1511 – 23 and village – *Othvecam* 1145, copy from the thirteenth century, *Oczweca* 1357, copy from the fifteenth century, *Oczweka* 1368), **Ołobok** (river – *Oloboc* 1136; Old Germanic name, compare with Germanic **bak-* ‘potok’, Germ. *Bach* – the same), **Oskobłok** (river, obecnie *Flinta* – *Osobłok* 1408, copy from 1553, *Woskobłok* 1514–1523, *Woskobłok* 1515, *Osobłok* 1516; connected to the Silesian *Osobłoga*), **Panienka** (originally *Pan(i)ęka*, river – de *Panøky* 1390, *Panøka* 1398, *Panięka* 1422), **Prosna** (river – *Przosna* twelfth century, *Prosna*, *Przosna* 1209), **Swędrnia** (river – *Zuandri* 1136, *Swandram* ca. 1271, copy from 1357, *Svandrnnya* 1298, copy; perhaps in connection to Indo-European **k'wendhr-* ‘reed (grass-like wetland plant)’), **Śrem** town – *Zrem* 1136, *Srem* 1212 and village, presently

¹⁸ D. Podlawska, *Nazwy miejscowe*, part 2, p. 361.

¹⁹ In onomastics, the phenomenon of the parallel occurrence of several names in relation to one settlement is called polyonymy.

²⁰ These names are sometimes called “Old European”, see Z. Babik, *Najstarsza warstwa nazewnictwa na ziemiach polskich (w granicach wczesnośredniowiecznej Słowiańszczyzny)*, Cracow 2001.

²¹ The identification of Kalisz with *Καλισία*, which appears on Ptolemy’s world map from the second century, is debatable, however no firm evidence against it has been put forward.

a hamlet – *Srem* 1395), **Trląg** (lake – *Tirlang* 1249, *Tralang* 1374, *Tralng* 1379, *Trlang* 1384, *Thrlang* 1386, *Trlank* 1394, *Trlang* 1580; believed to be Old Germanic), **Trzek** (village – *Trsek* 1349), **Warta** (river – *Vurta* 972, *Vartam* 1145, *Warte* 1239, *Warta* 1232; often it is reconstructed as **V̥rta* < Proto-Slavic **v̥rtěti*, Polish *wiercić* (*się*) ‘to drill; to wriggle’, which is confirmed by the many toponyms created from the name of the river, just as *Powiercie* included in AHP, as well as *Zawiercie*, *Wiercica*, *Wiercina*, *Przywiercie*, however, due to the isolation of this name on Polish and Slavic grounds, one should be careful with these assumptions), **Wonieść** (village – *Wanesch* 1181, copy from 1258, *Vanesc*, *Wanesech*, *Woneszcz*, *Wonesecz* 1258, *Vanesc* 1277, *Wonesecz* 1388, lake – *Woneszcz* 1296). In this oldest layer, Babik also included names that were not mentioned in the AHP due to their lack of documentation in the AHP sources – this includes the lost village of *Warta/Warla* (*Varla* 1181, copy 1258, *Warla* 1561) and names that appear later in written sources: *Nielba*, river, tributary of Wełna (*Nieglba* (1498)XIX, in *Nielba* 1782), *Sława* (1793), river, tributary of Mała Wełna near Skoki and *Szywra*²² (river, tributary of Warta near Miłosław).

As we can see, most of the listed names refers to bodies of water (particularly rivers), with only a few referring to settlements, although in their case their names were probably based on earlier names of bodies of water or terrain (as is believed in the case of *Kalisz*, *Kiekrz*, *Trzek*, *Wonieść*).

The aforementioned archaic names constitute, of course, only a small number of the toponymy of Poznań and Kalisz Voivodeships in the sixteenth century. Its basic core are names created in what already was Slavic territory (these may have been derived from the oldest names, such as *Obrzyca*, *Obrzycko* or the aforementioned *Powiercie*). They will be discussed in the manner previously implemented in other AHP volumes.²³ Place names can be divided into two large groups, i.e. associated with people and their activities (anthroponymic names or those derived from descriptions of people and cultural names) and topographic names.

The oldest Slavic names were created with the use of the no longer productive suffix **-j̥b/-ja/-je*. These were predominantly **possessive forms** created from anthroponymic roots. This included toponyms derived from Old Polish compound personal names (p. n.) such as *Bogusław* (*Boguslaw* 1396) : p. n. *Bogusław*,²⁴ *Miłosław* (de *Myloslave* 1314) : p. n. *Miłosław*, *Lutogniew* (*Luthognew* 1329) : p. n. *Lutogniew*, *Kazimierz*, presently *Kazimierz Biskupi* (*Kazimir*, *Kazimierz* 1237, copy from the fifteenth century) : p. n. *Kazimi(e)r*, *Włocibórz* (*Wlosczybore* 1432, *Wlosczyborz* 1498) : p. n. *Włocibor*, *Milogoszcz* (*Mylgast* 1331) : p. n. *Milogost*, *Radgoszcz* (*Radgoszcze* 1378) : p. n. **Radogost*, as well as abbreviated forms of the personal names (created from Old Polish compound p. n.), e.g.: *Chodecz*, presently *Chocz* (*Chodecz* 1294, copy from 1537) : p. n. *Chodek*, *Czacz* (*Cadce* (?) 1273, *Czacje* 1352) : p. n. **Czadek*, *Gostom*, dziś *Gostuń* (: *Gostom*, *Gosthom* 1470) : p. n. **Gostom* (< *Gost-*), *Lubasz* (*Lubasz* 1392) : p. n. *Lubach*, *Milcz* (*Milcz* 1403) : p. n. *Milek* or **Milec*, *Naclaw* (*Natslave* 1298, copy from fifteenth century) : p. n. *Nac(s)ław*, *Naczęslaw*, *Ociąż*, originally *Ociąsz* (de *Oczansz* 1402) : p. n. *Ociąch(a)* (< *Ocięslaw*), *Otusz* (*Othuze* 1284) : p. n. **Otuch* (< *Otjęslaw*, *Ocięslaw*, Germ. p. n. *Ot*, *Ota* or word *otucha*), *Przeclaw* (de *Przeczlaw* 1449) : p. n. *Przec(s)ław*, *Radzicz* (*Radzicze* 1383) : *Radzik* (: *Radosław*). Furthermore, in Old Polish anthroponymy, there are single-element personal names, from which place names are derived: *Czarnom* (*Czarnom* 1430) : p. n. **Czarnom* (< *Czarny*), *Poznań* (civitatibus... *Poznani* (X)XII, *Posnan* 1252) : p. n. *Poznan* (< *poznać*), *Pruszcz* (*Pruschze* 1368, *Pruszcz* 1390) : p. n. *Prus(e)k* (< ethnic name *Prus*), *Tlukom* (*Tlucoma* 1399, *Tlukom* 1427) : p. n. **Tlukom* (< *Tluk*), *Wyskocz* (de *Wiszocz* 1350) : p. n. (heraldic) *Wyskota* (< Old Polish *wysk* ‘wołanie, krzyk, wycie’, Proto-Slavic **viskati*, **viščati* ‘to shout, to call, to yell’).

These types of names appear about 100 times in the studied region, though it must be noted that some of the toponyms were initially names of a different type, which only later came to resemble the **-j̥b/-ja/-je* names. For example, the settlement *Przeclawie* (currently *Przeclaw* near *Szamotuły*) initially carried the patronymic name *Przeclawice* (*Przeczlawicze* 1384) : p. n. *Przec(s)ław*. It is

²² The connection of this name with the oldest layer of names has recently been questioned based on an analysis of sources by the author of this chapter, who considered it an adaptation of Germ. name *Schieferbach*; P. Swoboda, *Hydronim Szywra – efekt polsko-niemieckich kontaktów językowych*, „Onomastica”, vol. 60, 2016, pp. 273–285.

²³ Cf. J. Duma, *Geographic nomenclature*, [in:] AHP Cracow, in this edition III.4.1.

²⁴ Some names created with the help of the suffix **-j̥b* (ending with *w* or *m*) are identical to the personal name from which they are derived (*Bogusław* : *Bogusław*, *Lutogniew* : *Lutogniew*). The old soft ending can be seen in modern oblique cases, so for example: z *Bogusławia* (from *Bogusław*) instead of *Bogusława*, z *Radomia* (from *Radom*) instead of *Radoma*, etc.

also worth signaling, that in the sixteenth century, names derived from personal names ending in *-om* (*Czarnom*, *Czatom*, *Gostom*, *Skokom*, *Tłukom*) only appeared in the former Kalisz Voivodeship (other forms ending in *-om* also were found there – *Trzuskołom* and *Łukom* were probably obtained from the adjective **łukomy*), while in the Poznań Voivodeship, names such as *Bytom* (*Bitom* 1105?) and *Lubom(ie)* (*Lubome* 1318, *Lubom* 1386) at the time had a different form – *Bytyń* i *Luboń*.

As in the case of the remaining Polish lands, the most common were possessive forms of names created with the continuator forms of suffixes **-ov-/*-ev-* and **-in-*, viz. *-ów*, *-owa*, *-owo* / *-ew*, *-ewa*, *-ewo* oraz *-in*, *-ina*, *-ino*, less often also *-sk-*. These names constitute almost 40% of the studied territories in the sixteenth century.²⁵ The most common ones are the **-ov-/*-ev-* ones, e.g. *Malechowo*, presently *Małachowo* (*Malechowo* 1310) : p. n. *Malech* (: *mały*, *Małomir*), *Godziszewo*, previously also *Godzieszewo* (*Godzeszevo* 1398) : p. n. *Godzi(e)sz* (: *Godzislaw*, *Godzimir*), *Sieraków*, originally *Sirakowo* (*Syracowo* 1388, *Szyrakow* 1405) : p. n. *Sirak* (: *Siroslaw*) (they make up about 2/3 of all those created with the use of possessive suffixes). This is due to the fact that continuator forms of suffixes **-in-* were added to the bases with a feminine declension paradigm and these are less common among personal names influencing place names (which usually refer to males), e.g. *Jarocin* (*Iaroczino* 1324) : p. n. *Jarota* (: *Jaromir*, *Jarogniew*), *Borucin* (*Borucino* 1411, *Boruczyn* 1579) : p. n. *Boruta*, *Koźmin* (*Cosmino* 1232, *Cosmin* 1291) : p. n. *Kosma*, *Koźma*. Moreover, among the names ending in **-ov-/*-ev-* in both voivodeships during the sixteenth century, the majority of names ended in *-owo/-ewo*, while there were only a few dozen masculine names ending in *-ów/-ew*, though even these were often created through the use of the suffix *-owo/-ewo*, e.g. *Brudzew* (1579) < *Brudzowo* (*Brusovo* 1252), *Grzymiszew* (*Grzymissew* 1579) < *Grzymiszewo* (1411). The same is true for names with the suffixes *-in* and *-ino*, compare with the aforementioned *Jarocin* < *Jarocino*, *Borucin* < *Borucino*, *Koźmin* < *Koźmino* czy *Barcin* < *Barcino* (*Barthcino* 1215–1233).

Interestingly, the opposite change took place later, namely in the southeastern part of the studied area (especially in the Kalisz Voivodeship), the neuter names ending in *-owo/-ewo* and *-ino* changed their paradigm to masculine and gained endings with *-ów/-ew* and *-in* (often also *-iń*). Let us take a closer look at the spatial distribution of these types of names. In the modern Polish place names, a fairly clear boundary can be set in terms of geographical distribution of possessive (and pseudo-possessive) names ending in *-owo/-ino* (*-yno*) and *-ów/-in* (*-yn*). The first type is dominant in the northern part, including Greater Poland, with the exception of its southeastern part, where names ending in *-ów/-in* dominated. This applies to the present-day Jarocin, Pleszew, Krotoszyn, Ostrów, Kalisz, Turek and Kępno districts as well as the southern part of the Koło district. However, this division was invisible in the sixteenth century. As already mentioned, both in the former Poznań and Kalisz Voivodeships the vast majority of names ended in *-owo/-ino*, while only several dozen names ending in *-ów/-in* were noted. In the sixteenth century, the aforementioned division in the spatial distribution of possessive names also occurred, but its border ran slightly differently. In the case of the region we are interested in, it coincided with the border of the Kalisz and Sieradz Voivodeships.²⁶ The later shift of this border was probably related to the change in the administrative affiliation of the former Kalisz Voivodeship and the structural assimilation of the names in order to match the trends in its new eastern territory. About 175 names, mainly from the former Kalisz, Konin and Pызdry districts, which in the sixteenth century ended in *-owo/-ewo*, currently end in *-ów/-ew*, for example *Brdowo* > *Brdów*, *Kowalewo* > *Kowalew*, *Wszółowo* > *Wszółów*, *Czyżewo* > *Czyżew*, *Złotowo* > *Złotów* etc. The change of the suffix *-ino* to *-in* had an even wider reach and affected over 200 names in the Kalisz Voivodeship and in the Poznań and Konin districts in the Poznań Voivodeship, e.g., *Wilczyno* > *Wilczyn*, *Karmino* > *Karmin*, *Pszczółczyno* > *Pszczółczyn*, *Głupczyno* > *Głubczyn*, *Pelczyno* > *Palczyn*, *Dupino* > *Dubin*, *Bobolczyno* > *Bobulczyn* etc.

Another group of old names, derived from personal names, are patronymic names, which can be identified by the suffix *-ice* (sometimes expanded with the suffix **-ov-/*-ev-*); originally, in many cases these names were created from personal names with the suffix *-icy* (< **-ici* < **-itjo*), referring to family members (descendants) of the person to whom the given personal name referred (hence the

²⁵ In some cases, it is difficult to establish whether the name in question is a possessive form, derived from an anthroponymic basis or an adjectival topographic name derived from a common noun that referred to some feature of the settlement.

²⁶ As for other parts of Poland, while the names ending in *-ów/-in* were not predominant in the sixteenth century, they certainly occurred in Cuyavia and Gdańsk Pomerania (nowadays, the *-owo* / *-ino* type dominates there).

term *patronymic*). Examples of such toponyms in Greater Poland in the sixteenth century are primarily derived from Old Polish personal names, such as *Sulmierzyce* (*Sulmiricze*, *Sulymyrzycze* 1427) : p. n. *Sulimir*, *Iwanowice* (*Iwanouicz* 1392) : p. n. *Iwan*, *Domaradzice* (*Domaradzicz* 1393) : p. n. *Domarad*, *Więckowice* (*Wanczovice* 1387) : *Więcek*, *Wiącek* (: *Więcesław*, *Więcimir*), but also Christian, like *Pawłowice* near Poznań (*Pawłowicze* 1366) : p. n. *Paweł*, *Piotrowice* near Słupca (*Petrovize* 1340) : p. n. *Piotr*, *Pietr*, and those of German origin, such as *Hetmanice*, dawniej *Hertmanice* (*Hertmanicze* 1407) : p. n. *Hertmann* or *Kurnatowice*, also *Kunratowice*, *Kondratowice* (*Kurnatouicze* 1391, *Cunrathouice* 1418, *Kondratowicze* 1469) : p. n. *Kurnat*, *Kondrat*. These types of names were created not only from anthroponymic bases, which were personal names, but also from the names of functions and titles. In these cases, we are dealing with names of settlements, which were originally inhabited by people subject to, for example, a *bishop* or a *podstoli* (deputy of a pantler), as in the case of the name *Biskupice* (nine such names are noted in the AHP), *Podstolice*, *Postolice* (*Podstolice* 1430).

The geographical distribution of patronymic names is uneven. There are none in the Wałcz district (however, this district has the sparsest settlement network in general) and in the western part of the Poznań and Kościan districts (beyond the line marked by Zbąszyń, Trzciel and Międzychód), while occasionally appearing in the Nakło district. They are also very rare in the eastern part of the Gniezno Voivodeship, which is in stark contrast to their prevalence with the large number of these types of names in the neighbouring Cuyavian districts to the east: the Kruszwica, Inowrocław and Radziejów districts. The densest clusters of patronymic names can be found in the following districts: Wschowa, Pyzdry and western parts of Gniezno, Kościan (southern and northern areas) and in the central part of Poznań.

Another category of toponyms based on personal names found in the Kalisz and Poznań Voivodeships are **family names**, usually in the plural form of the anthroponym from which they are derived, for example *Czachory* (*Cachori* 1403) : p. n. *Czachor*, *Sobiejuchy* (*Sobeiuchi* 1414–1419) : p. n. *Sobiejucha*, *Szamotoły* (*de Samotul* 1305, *de Schamotuli* (1308)XV) : p. n. *Szamotoła* lub **Samotula*, *Wronki* (*de civitate Fronich* (1251)XV, *Vronki* 1298) : p. n. *Wronka*, *Wronek*. There are about 100 names of this type in the material we have studied,²⁷ although providing a precise estimate of their number and establishing their geographical distribution would require in-depth research of the source material of each name, as they may coincide with the plural topographic names derived from the base of a common noun identical to anthroponyms, e.g., *Sroki* (*Sroky* 1398): p. n. *Sroka* or word *sroka*. Furthermore, as in the case of earlier groups, some of the names, which were formally identical to family names, had a different form in the sixteenth century, e.g., *Broniki* < *Bronikowo* (1560) < *Bronkowo* (1296) or *Zielniki* < *Zielnice* (*Zelnicze* 1304). When determining whether a particular name belongs to the group of family names (created since the thirteenth century), the chronology of the records should be taken into account, because their productivity, as well as that of patronymic names, significantly decreased from the fifteenth century onwards.²⁸

Formally similar to family names are the so-called **ethnic names**, which indicate the origin of the people who originally lived in a given place. Besides toponyms derived from well-known ethnic groups such as the *Czechs*, e.g. two villages in the Gniezno district (*Czechy* 1418) and in the Poznań district, presently *Czechyń* (*Czech*, *Czechy* 1600), *Węgry* (*Wangri* 1411) or *Sarby*, presently *Sarbia* (*Sarb* in the sixteenth century), two villages in the Poznań district: near Czarnków (*Szarbi* 1393) and Buk (*Sarbi* 1394) : ethn. n. *Sarb* ‘Sorb’, there are also several characteristic word-formation structures, involving the *-any* suffix based on the names of specific settlements or regions, from which the inhabitants originated, e.g. *Kaliszany* (*Calissani* 1253) : s. n. *Kalisz*, *Pomorzany*, currently *Pomorzany* (1256)XV) : n. of region *Pomorze*, but simply also a special configuration, which was occupied by the inhabitants or from which they originated, e.g. *Dolany* (*Dolan* (1145) 1795, *Dolane* 1289, *Dolani*, *Dolany* (1325)) : word *dół*, *Jezierzany*, currently *Jeziorzany* (*Iezerzani* 1357) : word. *jezioro* (these names initially described the people living by lakes – *jeziora*), *Stawiany* (*Sthavany* (1298)1546) : word *staw*. Podlawska²⁹ also included in this group names with a different structure such as *Jezierzyce* (*Gieszierzicze* (1356)XV), a name that was created with the suffix *-ice*.

²⁷ In the case of the Poznań Voivodeship, D. Podlawska counted 46 such names (eadem, *Nazwy miejscowe*, part 2, p. 392). Therefore, over double the number found in the Poznań and Kalisz Voivodeships seems reasonable.

²⁸ Ibidem pp. 361–362.

²⁹ Ibidem, p. 397.

The **service-related and occupational names** did not differ formally, although onomastic and historical studies do utilize these different terms to differentiate between the names referring to the settlements (inhabited by people bound by their occupation and duties to their superior), which served princely courts, and the names of settlements derived from other occupational titles. We can, therefore, only speak about service-related names in reference to settlements created (and named) until the thirteenth century.³⁰ According to Urszula Wójcik, 219 out of 572 service-related names recorded in the current territory of Poland can be found in Greater Poland and Kuyavia, making this region their largest concentration.³¹ In the AHP, we have noted 94 settlements with service-related names. They can predominantly be found around three towns: Gniezno, Kalisz and Poznań. None have been located in the Nakło, Wałcz and Wschowa districts. The most common are the following names:³² *Lągiewniki* (eight times) : *lægiewnicy* ‘people who make flasks, flagons, or who brew beer, and prepare mead’, *Żerniki* (7) < **Żerdniki*, **Żyrdniki* : *żerdnicy*, *żyrdnicy* ‘people who build tents for the prince and his court during their travels’, *Złotniki* : *złotnicy* ‘craftsmen, who make items of gold and other metals’. Four of each of the following names have been recorded: *Kobylniki* : *kobylnicy* ‘horse herdsman’, *Kuchary* : *kucharze* ‘those who cooked meals and ran the kitchens’, *Mączniki* : *mącznicy* ‘people in charge of grinding the grain into flour with querns’, *Sokolniki* : *sokolnicy* ‘the population in charge of guarding falcon nests and hunting young falcons, and participating in hunting with falcons’, *Strzelce* : *strzelcy* ‘archers, crossbowmen’, *Świątyniki* : *świątynicy* ‘persons obliged to perform church services’, *Szczytniki* : *szczytnicy* (derived from *szczyt* ‘shield, buckler’). Other service-related names include: *Cieśle*, *Sierniki* (: *sirznicy* < **sirznik* ‘person hunting deer’), *Winiary* : *winiarze* ‘winemakers’, *Zduny* (: *zduni* ‘potters’) (three cases of each), *Bartodzieje* ‘beekeepers’, *Jastrzębniki* (: *jastrzębnicy* ‘persons preparing hawks for hunting’), *Komorniki* (: *komornicy* ‘officials’), *Konary* (: *kon(i)arze* ‘people in charge of horse breeding’), *Piekary* (: *piekarze* ‘bakers’), *Podstolice*, currently *Podstolice* and *Postolice* (: **podstolicy* ‘assistants of the *podstoli*’), *Rybitwy* (: *rybitwi* ‘fishermen’), *Szewce* (: *szewcy* ‘shoemakers’), *Świniary* (: *świniarze* ‘pig breeders’), *Woźniki* (: *woźnicy* ‘people who build carts’) (two cases of each), *Bednary* (: *bednarze* ‘coopers’), *Bobrowniki* (: *bobrownicy* ‘persons dealing with beavers’), *Grotniki* (: *grotnicy* ‘arrowhead makers’), *Jadowniki* (: *jadownicy* ‘poisoners’), *Kurnik* (previously *Kurniki*), currently *Kórnik* (: *kurnicy* ‘people who raise chicken’), *Łosośniki* (: *łosośnicy* ‘salmon fishermen’), *Oborniki* (: *obornicy* ‘caretakers of cattle barns’), *Płowce* (cum *Plawcis* (1103) 1198, *Płowcze* 1363; from the word *plawca* ‘sailor; the one who lets things run down the river’), *Rudniki* (: *rudnicy* ‘ore miners and smelters, steel workers’), *Sanniki* (: **sannicy* ‘sleigh-makers’), *Skotniki* (*skotnicy* ‘cattle herders’), *Wodniki* (: *wodnicy* ‘those who perform duties related to water’). Moreover, we have noted four settlements in the AHP, which carried occupational names *Rataje* (: *rataj* ‘feudally dependent peasant who, in return for a loan for development, was obliged to work on the land of the feudal lord’) and one named *Powodowice* (also *Podoboice* and *Podwójcie!*), currently *Podobowice* (: *powodowicy*, derived from the word *powód*, *podwoda* ‘the obligation to provide means of transport to the ruler and his officials’). While these names were formally and semantically close to the service-related names, they were not, however, related to service organization.

Despite formal similarities, the names *Duszniki* (used in relation to settlements donated to the Church along with their inhabitants to ensure the peace of the donor’s *soul* = Polish *dusza*) and *Dziedzice* (: *dziedzic* ‘a person who has the right to inherit, the heir’) were not occupational, family or patronymic names. They belong to the category of **cultural names** related with names of man-made items and with social relations. This is quite a broad category, in which we can follow the word-formation criterion to a lesser degree than in the case of anthroponymic names, as there are both primary names (i.e., transferred directly from common lexis), and secondary names (created through word-formation, e.g. affixes). Within it, we can distinguish several motivational groups, including names related to settlements, e.g. *Lgota* (1394) : (*lgota* ‘a settlement temporarily exempt from paying rents and levies’), *Siedlec* (four settlements) : **siedlec* (< *siodło* ‘village, settlement’), *Siedlnia*, dziś *Silnia* (*Szyedlnya* 1475) : *siodło*, *Przedmiejska Wieś*, previously also *Pakoska Wieś*, *Przedmieście* (*Pakoszkawyesch*

³⁰ U. Wójcik, *Polskie toponimy związane z organizacją gospodarczą państwa wczesnopiastowskiego. Nazwy miejscowe motywowane antroponimami zbiorowymi*, Cracow 2013, pp. 47–49.

³¹ Ibidem, pp. 167–169.

³² Due to the large number of occurrences, I will not cite the source material (with a few exceptions).

1475, *Przedmyeszczycze* 1534, *Przedmiejska wieś* 1564), *Nowe Miasto*, *Stare Miasto* (: *wieś* ‘village’, *przedmieście* ‘suburb’, *miasto* ‘city’) (five settlements); names related to forest management, e.g. np. *Łazy* (w *Laszach* 1467, *Łazy* 1511–23), *Łaziska* (*Łazisko* (1553) : *laz* ‘arable land in place of cleared forest’), *Trzebiec*, currently *Czepiec* (*Thrzebiecz* 1565), *Trzebinia*, three villages, currently *Trzebania* (*Trzebinia* 1388), *Trzebin* (ville *Trzebini* 1381), *Trzebiny* (*Trzebino* 1360, *Trzebina* 1462) : *trzebić* ‘to clear (a forest)’; connected to agriculture: *Niwka* (*Niwy* (1302)XVII) : *niwa* ‘farmland, ploughland’, *Sady* (*Sadi* (1288)XVII), *Sadowie* (*Sadowo* 1401, *Sadowye* 1498), *Sadowo* (*Zado* (1251)XVI, *Szadow* 1337) : *sad* ‘orchard’; referring to buildings and man-made objects, e.g. *Hamer* (several settlements, also with additional terms), *Hamrzysko*, *Hamerski Młyn* : *hamer* < Germ. *Hammer* ‘ironworks’, *Borowy Młyn* (*Borowy Molendinum* 1508), *Młynowo* (*Mlynkowo* 1403) : *młyn*, *młynek* ‘mill’, *Pila* – town (*Pyla* 1451), saw (*Od Mlyna* al. *Pily* 1595) : *pila* ‘sawmill’; referring to sacred buildings and spiritual culture: *Paradyż*, currently *Gościkowo* (videlicet *Paradiso* sancte Marie 1230, *Paradisus* 1236) : Lat. *paradisus* ‘paradise’ (the name referred to the monastery and estate in *Gościkowo*), *Cerekwica*, three villages (near *Žnin* – circa *Cirekvicham Martini* (1265) XVIII, near *Koźmin* – *Czirekquicza* 1397, Czech *Mrowina* – *Czirekwicza* 1388) : *cerekiew* ‘temple, church’, *Święty Jan* (a *sancto Johanne* circa *Poznaniem* 1387); or names derived from social institutions, e.g. *Targowisko* (*Targowiszce* 1355), *Targownica* (*Cebar cum foro* (1145), in *Zbar forum cum villa*, *Targownicza* 1388) : *targ* ‘market, fair’, *Środa* (*Srzoda* (1253)XV), *Sobota* (*Sobotha* 1367) : *środa* ‘wednesday’, *sobota* ‘saturday’ (names of the market days), *Ujazd*, three villages, e.g. *Ujazd* near *Skoki* (*Ugasd* (1243)XVII, *Wiasd* 1294) : *ujazd* ‘an area enclosed by a delimited and delineated boundary by a tour of someone’s property in order to demarcate its boundaries’. It must be noted that in the case of smaller and more recent structures, such as forges or forge settlements, their names almost always contain a clear reference to their character (*Hamer*, *Młoty*, *Ruda*), which, for example, is not a rule in the case of mill settlements (their names were often derived from the name of the owner, a nearby town or topographical characteristics). It is impossible to discuss the geographical distribution of cultural names in such a brief text as this one, however, it is worth mentioning that we can clearly tell the boundaries of the occurrence of certain names derived from specific bases. For example, names linked to the word *hamer* (predominantly referring to forge settlements) were mostly found in the *Kcynia* and *Nakło* districts, as well as in northern (and western) parts of the *Poznań* district in the sixteenth century (this was also the case in the context of the entire territory of the Crown).

Topographic names constituted an extensive semantic group among the site names we have studied. Toponyms of this type reflect the topographical characteristics accompanying the creation of or the functioning of the settlement. Such names may be equal to the common names, from which they were derived (onymization, i.e., the transition of a word from a common noun to a proprial form), however more often we find secondary names created with the help of various word-formation formants (particularly productive ones include suffixes *-ica*, **-ov-/-ev-*, *-k-* and *-sk-*) and names created from prepositional terms. Often these names are of a metaphorical nature. Among topographic names, we can also distinguish several semantic groups, including names related to plants: *Borek*, *Borki* (several settlements), e.g. the town *Borek Wielkopolski* (*Boreg* 1394, *Borek* 1429) : *bór*, *borek* ‘coniferous forest’, *Buk* (*Buk* 1257) ‘beech’, *Dąbrowa*, *Dąbrówka*, *Dąbrowica* (several settlements), e.g. present-day *Dąbrówka Kościelna* (*Dambrowa* (1348) 1555) : *dąbrowa* ‘deciduous forest with a predominance of oaks’, or the numerous names tied to the appellative *brzoza* ‘birch’: *Brzoza*, *Brzezcie*, *Brzezna*, *Brzeźno*, *Brzeźnica* (several settlements); names associated with topography: *Garby*, two villages – near *Środa Wielkopolska* (*Garby* (1304)XVIII) and *Swarzędz* (*Garbi* 1387) : *garb* ‘hummock’, *Góra*, *Góry*, *Górka*, *Górki*, several settlements, e.g. *Góry* near *Kleczew* (*Gora* 1399, *Gori* 1401, *Gorky* 1420, *Gory* 1461), *Krzywa Góra* (*Krzywagora* (1360)XVI, *Crziwa Gora* 1392) : *góra* ‘mountain, hill’, *Kępa*, four villages, e.g. village near *Ślesin* (*Campa* 1390) : *kępa* ‘a hill in a meadow; river or lake island’ or *Koryta* (*Koritha* (1337)XV) : *koryto* ‘river bed, ravine, ditch’; names related to the nature of the substrate: *Lysina* (*Lyssiny* 1438, *Lychina* 1439) : *lysina* ‘a place with sparse vegetation’, *Blotnica* (*Blothnicza* 1395) : *bloto* ‘mud’, *Bagienica* (*Bagnitz* 1432, *Bagenicza* 1446) : *bagno* ‘swamp’, *Glinno*, currently part of *Biedrusk* (*Glinno* 1387) and a village near *Skoki* (*Glinno* 1470) : *glina* ‘clay’, *Suchodół* (*Suchodol* (1378)XV) : *suchodół* ‘ravine, valley without water’, *Suchary* : dialectal *suchar* ‘dear tree’, *Łęg* (*Lang* 1252), *Łęgowo* (*Langowo* (1319) 1782), *Łężyno*, currently *Łęzyn*, part of *Konin* (*Lansyno* 1252), *Łęże* *Wielkie i Małe*, currently *Łęże* and *Łęczeczki* (de *Lanczecz* 1394, *Lözce* 1398) : *łęg*, *łęczec* ‘flood-meadow,

riparian woodland', *Kaława* (*Kalawa* 1436) : *kał* 'mud, sludge' etc. Additionally, attention must be given to names formed from prepositional terms, which indicate the location in relation to a terrain configuration, including *Międzyrzecz* (*Meserici* 1005) : *między rzekami* 'between rivers', *Międzyborze*, currently *Międzybórz* (from *Medziborza* 1394, *Miedzyborze* 1449) : *między borami* 'among forests', *Podgór* (*Podgor* 1445) : *pod górą* 'under the hill', *Podrzecze* (*Podrecze* (1330)XVII) : *pod rzeką* 'under the river', *Zakrzewo*, several village, e.g. present-day *Zakrzewko* (*Zakrzewo* 1422) : old Polish *za krzem* 'behind shrubs, bushes', *Zastruże* (*Zastrosze* 1472, *Zastruze* 1492) : *za strugą* 'behind a stream' etc.

The abovementioned names such as *Międzyrzecz*, *Podgór*, *Zalesie* resemble the final semantic type in toponymy that we will discuss – **relational names**. These names are derived from other toponyms, pointing to various types of relationships that took place between settlement of such name and other geographic features. As in the case of names derived from common nouns, we can distinguish several ways of forming them. They can simply be repeated names of another (neighbouring) features, e.g. place name *Gąsawa* : river name *Gąsawa* (see above), *Linie* (*Line* 1397) : n. of lake *Linie* (*Lynya* 1260, *Lynye* 1546; most likely derived from the fish species name *lin*), place name *Przysieka Polska*, formerly *Przysieka* (*Przeschekam* (1356)XVII) : place name *Przysieka*, later *Przysieka Niemiecka* (*Prisseca* 1278; from Old Polish 'a defensive strip created by cutting and knocking down trees on a certain section; the obligation consisting in taking part in the creation of a clearing'). More often though, among relational names, there are names created with the use of appropriate word-formation means. Differential names can contain elements differentiating them from the name-forming root in the form of an affix, e.g. *Bielsko* (*Belsco* 1280) : river name *Biała*, tributary of *Warta* near *Międzychód* (super *Balam* 1288), *Drawsko* (1298) : river name *Drawa* (*Draua* 1237; most likely in connection to Proto-Slavic **dъravъ*, *dъrava* 'one who tears, pulls'), *Głomsk* (*Glumszk* 1491) : river name *Głomia*, *Głumia* (*Glomia*, *Glumia* (1436)XVI; unclear name)³³ or an additional element (usually an adjective) of antonymic character, e.g. indicating the size of the town, the time of its establishment, geographic conditions, their location in relation to each other or ownership relations: *Godzieszewy Małe* and *Wielkie*, currently *Godziesze Małe* and *Wielkie* (ville dicte *Godessewo* (1295)XV, *Godzieschewy Maior*, *Godzieszwy Minor* 1507 – neighbouring villages of the same name *Godzieszewo*, eventually gained the differential element *Małe* 'small' and *Wielkie* 'great'), *Grojce* (*Grodźce*) *Nowe* 'new' and *Stare* 'old', currently *Grójec Mały* and *Wielki* (*Groc* 1338, duplex *Grodzce* 1438, *Nova Groycza* 1489, *Antiqua Grodzecz* 1510, *Groicze Stare*, *Groicze Nowe* 1571); *Dakowy Mokre* (mill *Dokoffkij* 1399, *Mocre Dokowo* 1415) : *Dakowy Suche* (*Docowo* 1388, *Suche Docowo* 1409) (*mokry* 'wet', *suchy* 'dry'), *Biała Górna*, currently *Biała* (*Bela* 1298, *Byala Wyszoka* 1508, *Bialla Gorna* 1563) : *Nadolna*, currently *Miały* (*Biala Nadolna* 1464) : *Biała Pośrednia*, currently *Mężyk* (*Byala Media* 1508, w *Posredniei Bialej* 1564–1565) (the basis of the name came from the name of the River *Biała*, compare with *Bele* 1402-08; differential elements are from *górnny* 'upper', *nadolny* 'lower', *pośredni* 'middle'); *Ślugocino Mniskie*, currently *Ślugocin* (*Ślugocino* 1278, *Szlugoczynno mnyskye* 1511–1523) : *Ślugocino Pańskie*, currently *Ślugocinek* (*Ślugoczynno* (1302), *Ślugoczynno panskyye* 1511–1523) (adjectives *mniski* and *pański* refer to – respectively – monastic and lord's ownership). However, we do not always deal with a pair of antonymic elements, compare with, e.g. *Murzynowo Kościelne* (in *Murinov ecclesiae* 1231, *Murzinowo* 1339, *Maior murzynowo* 1491, *Murzinowo koscielne* 1578), *Murzynowo Leśne* (*Murzinowo* 1389, *Lesznye Murzinowo* 1471), *Murzynowo Borowe*, currently *Murzynówko* (*Murzinowo* 1391, from *Murzynowo Borowe* 1431–1436). Relational names also include toponyms with localizing elements in relation to another building – they can be, for example, composite names (as in the case of names with differential elements), e.g. *Drawski Młyn* (*młyn Drawski* 1564–1565) : place name *Drawsko* (see above), *Margońska Wieś* (*Margonino* 1364, *Margonska Vesz* 1423) : n. of town *Margonino*, currently *Margonin* (*Margonino* 1454, *Margonyn* 1510) (after its location, the village received a composite name). A common occurrence was the change (resulting from univerbation) of the original compound name into a suffix name, e.g. *Ujazd Mały*, later *Ujazdek* (*Minus Vyasd* 1436, *Ugasdek*, *Uyasdek* 1496) : n. of village *Ujazd*, temporarily *Ujazd Wielki* (*Uiadz* 1280, in *Maiori Wyast* 1418, *Vyasth* 1510; after the creation of the n. *Ujazdek* from *Ujazd Mały*, the differentiating element *Wielki* became redundant and was omitted). However, there are also numerous names formed from prepositional phrases, where

³³ It should be noted that in the region we have studied, site names ending in *-sk* (besides *Głomskiem* and *Suchorębsk*, *Mąkowsark*, currently *Mąkowsarko*, and *Wersk*) appear only in the northern part of the Nakło district during the sixteenth century.

the location in relation to another geographic feature is expressed directly, e.g. *Powiercie* (*Pouirdz*, *Pouercze* 1388) : *po Warcie* ‘along the Warta River’, *Podgórzyno*, currently *Podgórzyn* (*Podgorino* (1136), *Podgorzino* 1339) : *pod* ‘under’ + place name *Góra*, part of Żnin city (*Gora* 1301),³⁴ *Podbiele*, currently *Podbiel* (*Polyebyele* 1445, *Podbiele*, *Podlyebyelye*) : *podle Białej*, *pod Białą* ‘neat to/under the Biała River’ (currently Czarna Struga, tributary of Bawół near Zagórowa – *Bala* 1283).

When discussing the toponymy of Greater Poland, we also have to mention the German influences on the local names. Besides Germanism (older or more recent ones), found in Polish toponymy, as evidenced by the aforementioned examples of names derived from the word *Hamer* or names created from German anthroponyms, which were adapted to Polish, e.g. *Gotartowo* : personal name *Gotart* (< Germ. *Gothard*), *Guncerzewy* : p. n. *Guncerz* (< Germ. *Günther*), *Goczalkowo*: p. n. *Goczalek* (< Germ. *Gottschalk*) as well as names which initially seem Polish, e.g. *Hetmanice*, originally *Hertmanice* (*Hertmanicze* 1407; from the p. n. *Hertmann*), there are also names that appear in the territory we have studied, which were originally German. They can be found mainly in the Wałcz and Wschowa districts, while individual cases have been attested in the western part of the Poznań district and in the Nakło district. A few of them have succumb to gradual Polonization in the sixteenth century, such as *Błękwił* (*Vlugfelth* 1432–1440, *Bløqweth* 1453, *Blankfelt* 1511–1512, *Bląkwiet* 1580, *Blekuid* 1593, *Błękwid* 1604; from Germ. *blank* ‘naked, clean’ and *Feld* ‘field’); *Bukwolt*, currently *Bukowo* (*Buchholz* 1534, *Bukhloth* 1560, *Bukwolt* 1580; from Germ. *Buch* ‘beech’ and *Holz*, Low Germ. *holt* ‘forest, wood’), *Frydland*, *Fredlądek*, currently *Mirosławiec* (*Nuwe Vredeland* 1314, *Frydlanthek* 1462, *Fredlądek* 1582; probably a n. copied from n. of town *Friedland* in Mecklenburg); *Braksztyn*, currently *Dobino* (ad campum *Bretenstensem* (1251) 1364, *Braxtin* 1570, *Braxtyny* 1622–1624; from Germ. *breit* ‘wide’ and *Stein*, Middle Low Germ. *stên* ‘stone’) or *Drahim*, previously *Draheim*, *Drageheim* (*Draheym* 1368, *Drageheym* 1402–1408; from river name *Drage* = Polish *Drawa* + *Heim* ‘land’).³⁵ Nonetheless, most names in the sixteenth century retained their German form, e.g. *Knakendorf*, currently *Rzeczyca* (*Knokendorp* 1314; derived from the name of the founder *Knake* + appellative *Dorf*, Low Germ. *dorp* ‘village’); *Kunersdorf*, *Kunsdorf*, currently *Konradowo* (*Conradisdorf* 1307, *Cunersdorff* 1470; from p. n. *Konrad*); *Heinrichsdorf*, also *Hendestorp*, currently *Siemczyno* (*Heinersdorff* (1251), *Hennerstorp* 1513, *Heinrichsdorf* 1553, in *Henrichstorffu* that is *Andrichowej wsi* 1564–1565; from p. n. *Heine*, *Heinrich*); *Stralemberg*, currently *Strzaliny* (*Straliemberch* 1306; from Germ. *strahlen* ‘to radiate, shine’ and *Berg*, Middle Low Germ. *berch* ‘mountain’). There are also examples in the AHP of Germanized names of Slavic origin, e.g. *Sempolbork*, previously *Sępolno*, currently *Sępólno Krajeńskie* (*Sampelno* 1350, *Sampolno*, *Sempelborg* 1360, *Sempolbork* 1578; from Old Slavic **sopolbje* ‘a place located on the border of two fields’).

* * *

This chapter has outlined the toponymy of the Kalisz and Poznań Voivodships in the sixteenth century in an observational and non-exhaustive manner. It has delineated the most crucial issues related to toponymy, especially place names, mainly focusing on semantic properties, and – to a lesser extent – on the formal ones. Particular issues related to word-formation, phonetic phenomena or inflection have only been signaled here, they can also be observed in the sources cited, but many of them have already been extensively discussed in the onomastic studies referenced in the opening of this text, available to all interested parties.

(2017)

Translated by Karolina Frank

³⁴ Due to the chronology of the records, it is equally possible that the n. *Podgórzyno* was directly connected to the word *góra*.

³⁵ In the case of n. *Drahim*, however, we must be careful. Admittedly, *Drahim* functioned later in the Polish language (German variant *Draheim*), but the ending *-him* was the result of the Low German implementation of the diphthong *ei* as [i], and as such was adopted into Polish. The methods of adapting German place names into the Polish language is discussed in detail by B. Czopek-Kopciuch, *Adaptacje niemieckich nazw miejscowych w języku polskim*, Cracow 1995.

III.4.5 SIERADZ AND ŁĘCZYCA VOIVODESHIPS

Stanisław Trawkowski

The names put on the map of Sieradz and Łęczyca Voivodeships in the second half of the sixteenth century render the then form and sound of those names. They were given, however, in the notation according to present-day orthographical rules (if they do not change the old sound of the name) and the rules for publishing modern-age sources. This was the principle assumed from the very beginning of the publishing of this series of the Historical Atlas of Poland, resulting from the endeavour to obtain chronological accuracy between the reconstructed state of the settlement network and the correlated nomenclature.¹

Numerous examples of possible ways of transcribing place names in obtained sixteenth century sources show that also in the cases of Łęczyca and Sieradz Voivodeships ‘in the course of the entire sixteenth century a visible language process of changing old names to new ones was happening. As such, a strict general rule could not be applied here to automatically keep older forms or introduce new ones’.² As during the work on previously published maps, an assumption was made to: ‘in numerous cases, when for a given place sixteenth century sources provide a name in different sound and transcript, the priority would be given to the form: (1) spread in various types of sources, independent from each other, (2) dominating in records from the second half of the sixteenth century’.³ However, in the list of records from this period the dominating versions are those we took from tax registers. Frequently, in case of lack of parochial visitations documents, they were the only second half of the sixteenth century basis for determining a name of a village belonging to the nobility. At the same time, as was convincingly proven by Irena Gieysztorowa, ‘tax collectors or scribes could not have paid that much attention to the form of transcription of place names and their administrative categorization, that is now paid by researchers of the source they created’. Indeed ‘distortions of place names that had been copied from earlier registers in the form based perhaps only on their phonetic record, or from recognition, in which those names were given in any form, often different, and the way they had been written by the taxpayers, could have presented no difficulties to collection scribes, usually coming from land court chancery, so well-oriented in the area due to their office and local origin’.⁴ Modern researchers find themselves in different situation.

We used earlier and later records (especially from the beginning of the seventeenth century, the time when the place names stabilized) as a form of control of determined names. From earlier records Łaski’s *Liber beneficiorum* was particularly important, due to its chancery origins being different from tax registers and royal property inspections. However, when Łaski’s record fails to find proof in the obtained source material from the second half of the sixteenth century, we assumed a tax register record as an entry name, but marked the name provided by Łaski in the list. We did so even when an earlier version corresponded with the present-day name, e.g. in Łaski – Liekaszyno, in the registers – Niekaszyno, nowadays – Lekaszyn; the form ‘Niekaszyno’ was marked on the map.

³ W. Pałucki, *Geographic nomenclature*, [in:] AHP Sandomierz, in this edition III.4.2.

⁴ I. Gieysztorowa, *Źródła pisane*, [in:] AHP Mazovia.

When in a compound name one of the elements appeared in the sixteenth century sources only in Latin, we gave it in Polish. For instance, the epithets *maior*, *minor*, *inferior* were translated as Wielki, Mały, Dolny. However, if in later Modern Age records (from seventeenth–eighteenth century) the Latin term was translated in a different way, this was the version we adopted, so e.g. Górki Mniejsze, Górki Większe. In exceptional cases, when the Latin, or latinized, element of a name became established, we gave it in this later-established form. Łubna Jaroslai, according to the registers, was put on the map as Łubna Jaroslaj, because this is the present name of the village. Similarly, Wierzbowa Derslai is Wierzbowa Derszej, the way it was called in the middle of our century.

In sixteenth century form compound names such as Kozuby prope Dobrogosty, Kozuby prope Topole were left unchanged. This descriptive pattern of a place name was subject to quite rapid schematization,⁵ so leaving it in its original form seemed intentional, as it presented one of the elements of change in nomenclature.

Names consisting of a noun and an adjective were spelled separately, e.g. Wielga Wieś. Spelling joining two such elements was used when the adjective did not show gender agreement with the noun. In such cases we treated the written form only as a variant, included in the list (e.g. Kamionomostek, variant – Kamiony Mostek, present-day name – Kamostek).

Patronymic, family possessive forms of the same name quite commonly appeared interchangeably, in relation to the decline of semantic conformity of these forms with social character of a given settlement. The map gives the form dominant in the second half of the sixteenth century, or the one that stabilized in the end of this century, other forms were included in the list. Suffix alternations: -ewo, -ew, -ów, -owo was dealt with in a similar manner. Suffix -ice was sometimes spelled as -icze, usually we kept the former variant. In exceptional cases the -icze form was left, if it remained in use in the later part of the Modern Age, e.g. Jedlicze, which is still used today.

Consonants – especially coronal and palatal – that do not appear in Latin were written in a quite arbitrary way, even by the same scribe, in the sixteenth century. And so *s* was spelled as *s*, *ss*, *z*, *sz*, whereas *sz* was spelled as *s*, *ss*, *sz*, *sch*, just like *ś*. Examples: Szwieta Katarzina = Święta Katarzyna, records Sobothka and Szobothka relate to one village – Sobótka, and Wozniki/Wosniki both mean Woźniki. In reconstruction of the sound we took into consideration records from the seventeenth and eighteenth centuries, especially when they differed from present-day spelling. And so, we kept Krzesłów (as it was still spelled in the nineteenth century), even though today this name is spelled Krześlów, similarly – Ossendowice (nineteenth century spelling), and Osędowice today. ‘Rz’ in sixteenth century records may often mean two consonants: *r* and *z* or *r* and *dz*, as suggested by variants of the same name, or by its etymology. So, Smarzów is Smardzów, as indicated by etymology, while Barzemino is also spelled as Bardzenino. Thus, we can assume that in this case *rz* means *rdź*; in other cases it might mean also *rdź*, as seen in variant forms: Skarzyno – Skarschino (today: Skarżyn). In spelling alternations of the consonant *ż*, written *z* or *rz*, we reconstructed the spelling according to the established form of the name of the family coming from this village. With *th* meaning both *t* and *d*, we were led either by the meaning of the name, e.g. Buthki was read as Budki, or by later records, e.g. Thuschin, Thussin, Thuszin was accepted as Tuszyn, the way it is now.

In determining the physiographical names we assumed the same method we used for place names. As during the work on Mazovia maps, Lublin and Sandomierz Voivodeships, we took into consideration not only names appearing in sixteenth century sources, but also late-medieval and from the seventeenth and eighteenth centuries century, assuming they were up-to-date in the sixteenth century. If we were unable to determine a late-medieval or early-Modern Age name of a middle-sized river, we consulted later sources; nineteenth century names were marked with a special symbol.

In the lists, after main entry – the name placed on the map – we listed in brackets the most common alternative names, appearing in the sixteenth century, and then the present-day name (in italics), if it was different from the sixteenth century name on the map.

III.4.6 CUYAVIA AND DOBRZYŃ LAND

Paweł Swoboda

For unknown reasons, the geographical nomenclature of the area discussed in this AHP volume has failed to kindle intense interest in onomasts. Although it is hard to believe, the last monograph or even a scientifically-sound dictionary which would document and describe the development, structure and origin of individual geographical names of Cuyavia and Dobrzyń land was published by Stanisław Kozierowski in the first decades of the twentieth century. The volumes of his *Research on Topographic Names* compile, document and provide some explanations for the toponymy of Cuyavia¹ and Dobrzyń land.² Thus, it is safe to state that the geographical nomenclature of Cuyavia and Dobrzyń land still fails to attract any greater interest in scholars. Kozierowski's work continues to be the only rather complete source of information. Nevertheless, we must bear in mind that it is slightly outdated, and must be approached with prudence and a more critical approach – in terms of source attestation and etymological explanations alike. Aleksandra Galasińska's doctoral dissertation entitled *The Site Names of Cuyavia* (supervised by Kazimierz Rymut) was successfully presented in 1993, but never appeared in print and can only be accessed at the Institute of Polish Language of the Polish Academy of Sciences (IJP PAN).³ It also follows from the information available to me that a master's thesis bearing the same title was written in the 1960s by Czesław Kempniński (supervised by Tadeusz Milewski) and defended at the Higher Teacher Training College in Cracow (current name: Pedagogical University of Cracow). For legal reasons, it is not possible to access the thesis.

This painful gap in Polish onomastics is filled by the sparse papers and articles which venture into sixteenth-century nomenclature. To date, the only publication to attempt synthesising the toponymy of the analysed territory is Zygmunt Zagórski's 1965 article on the site names of the former Brześć Voivodeship.⁴ Several papers were also written on detailed toponymy-related issues. Of those, I ought to start by mentioning Hubert Górniewicz's work on family names, understood as place names derived from the surname of the family holding a given settlement, in the area of *i.a.* Cuyavia (within Greater Poland) and Dobrzyń land.⁵ Łucja Maria Szewczyk⁶ authored several articles on the word-formation

¹ S. Kozierowski, *Badania nazw topograficznych dzisiejszej Archidiecezji Gnieźnieńskiej*, Poznań 1914; idem, *Badania nazw topograficznych na obszarze dawnej zachodniej i środkowej Wielkopolski*, vol. 1–2, Poznań 1921–1922.

of names in Dobrzyń land, while Piotr Bąk⁷ approached Cuyavian nomenclature from this perspective. The recently published article by Adam Wróbel is noteworthy, even if it is popular science. Among other things, the author presents a semantic classification, and collates documentation and etymological explanations for dozens of names in Cuyavia and Dobrzyń land.⁸ Dobrzyń land nomenclature became the basis for Kinga Zawodzińska-Bukowiec's theoretical considerations on toponymic classification and typology.⁹ Microtoponymy (field names) in the Greater Poland-Cuyavia borderlands was the subject of Józef Chojnacki's work.¹⁰ Naturally, the toponymy of Cuyavia and Dobrzyń land was not overlooked in monographs on individual name forming models. Much like Górniewicz's book on family names, however, Cuyavian and Dobrzyń land toponyms were treated *en bloc* with those of Greater Poland. In other cases, as in Franciszek Nieckula's paper on place names with *-ov-* and *-in-* suffixes, the discussion covers toponyms of the whole region encompassing the so-called central provinces and Wieluń, Sieradz, and Łęczyca lands.¹¹ Such collective analyses cripple any attempts to isolate toponymy trends typical of Cuyavia and/or Dobrzyń land, divergent of developments in other parts of Poland.

However, it is not the objective of this text to provide a comprehensive, synthetic study on the structure and semantics of sixteenth-century toponymy in Cuyavia and Dobrzyń land, as that would extend far beyond the formula of a commentary. I would like to focus only on selected characteristics of Cuyavia and Dobrzyń land nomenclature, which display a peculiar spatial distribution—possibly brought about by both linguistic and non-linguistic factors.

Similarly as in other regions of contemporary Poland, the place names of Cuyavia and Dobrzyń land vary in terms of origin and formation time. To a large extent, the toponyms used in the second half of the sixteenth century perpetuate the nomenclature of earlier centuries;¹² the high number of archaic forms certainly merits attention. About a dozen pre-Slavic toponyms survived until the sixteenth century, whereby 'pre-Slavic' refers to the definition formulated by Zbigniew Babik in his work on isolating the oldest naming layer in Polish lands (within the boundaries of Early Medieval Slavdom). By 'pre-Slavic', Babik means toponyms which cannot be explained by any language used in a given area in the Middle Ages and Early Modern Period, leading to the interpretation that they were earlier word formations.¹³ I list the following selected names in alphabetical order, and specify the character of a given referent and source records: **Drwęca** (:IE **drew-* 'dash, run, make haste'), river: *drwancam* 1203, *Drewanza*, *Dreuanza*, *Drewanza* 1222, *Drvancha* 1230; **Gopło** (unclear, probably of Germanic origin), lake: *Gopło* (1318) 1578; *Gopło* 1470–1480; **Gwda** (**Kvьda* :IE **k'weyd-* 'shine, white'), river: *Chuda* (1260) fourteenth century, *Kuddam* fluvium (1311), *Gwda* 1349; **Koluda** (unclear), village: *Coluda* 1250, *Coluda* 1357; **Krzewęt(a)** (unclear), lake: on the bank of *Krzewoncze* 1381–1408, *Krzewyatha* 1455–1480, *Krzewyantha*, *Krzewiatka*, *Krzewiantka* XV, *Crzewenantha* 1527, on the bank of *Krzewętha*, *Krzewęta* 1564–1565 (*Krzewent* – secondary name of village, does not appear in sources until the seventeenth century); **Mień** (:IE **meyn-* 'pass by, walk by', **moyno-*, **moyni-* 'that what is walked past' > *mud*), river: *Mene* 1233, *Mew* 1350, *Mien* 1371; **Noteć** (**Notьsbь*, gen. **Notьsi*, probably related

¹⁰ J. Chojnacki, *Nazwy terenowe na pograniczu wielkopolsko-kujawskim*, Poznań 2002.

¹¹ '[–]' was limited to Greater Poland, Lesser Poland, and the so-called central provinces (Wieluń, Sieradz, Łęczyca, Dobrzyń lands and Cuyavia), treated as a separate region. Sometimes these areas are classed as part of Greater Poland. For the purpose of onomastic studies, however, it seems advisable to consider this territory as a separate unit. This approach is justified by the fact that this area is the point where trends emerging in different historic regions clash with each other (Lesser Poland, Mazovia, Greater Poland)', F. Nieckula, *Nazwy miejscowe z sufiksami -ov-, -in- na obszarze Wielkopolski i Małopolski*, Wrocław 1971, p. 8.

¹² Pursuant to Galasińska's calculations for Cuyavia, sources mention approx. 54% of all identified names until the end of the fifteenth century, whereby it ought to be borne in mind that this includes the names of settlements founded after the sixteenth century, until the very twentieth century. Therefore, it ought to be assumed that the percentage of names recorded until the close of the fifteenth century should be even higher than the percentage which survived until the end of the sixteenth century.

to IE **not-* ‘wet’), river: *Nothes* 1234, *Notes* 1243, *Neza* 1251, *Netza* (1251) 1364; ***Pilawa*** (unclear, maybe related to IE **pel-* ‘field’), river: *Pila* 1224; *Pilo* 1251, *Pilawe* 1286; ***Ptur*** (unclear), village: *Ptur* 1369, *Ptur* 1489, *Pthvr* ca. 1475; lake: *Thvr*, *Pthvr* ca. 1475; ***Sablóg*** (unclear), since nineteenth century *Sadlug*, village: *Sablog* 1399–1407, *Seblog* 1418, *Sablog* 1489; ***Str(z)kwa*** (**Strǫky*, gen. **Strǫkǫve* < Gmc **strukō* ‘brook, river’), present-day *Skrwa*, river: *Strzqua* (1202), *Strqua* (1248), *Strkwa* 1379, *Strqua* 1383, *Sztrzkwa* 1461; ***Wisła*** (unclear, probably related to IE **weys-* ‘flow’, **(s)wit-* ‘bright’, **(s)weyd-* ‘dampness; to meander’), river: *Vistlam*, *Vistula*, *Visculus* sive *Vistla* first century; ***Zbłag*** (*Śćbładz* < **Stǫbłędz’b* < Gmc *Stiblinga-*), present-day *Zbłęg* (originally probably *Śćbładz*), village: *Soblacz* 1232, *Stiblandz* 1258–59, *Deschblaz* 1288, *Sceblanz* 1288, *Scheblencz* 1320, *Sczeblancz* 1335, *Sczblandz* 1424, *Sczblandz* 1424, *Zblancz* 1489, *Sbliąg* 1566; ***Zgłowiączka*** (*Zgowiądź*, gen. *Zgowiąędzi*, n. unclear), village: *Segovend* 1155, *Zgouendie* (gen.) 1250, *Zgovendiae* (gen.) 1252, *Zgovetka* 1282, *Sgouyanthka* 1346, *Zgowanthka* 1423; river: *Zgoendia* 1250, *Zgovendia* 1252, *Sgoventka*, *Sgouentka* 1255, *Sgouendia* 1262, *Zgovetca* 1282, *Sgowentkam* 1297.

Most of the onyms listed above are river names (potamonyms), which is typical of this chronological layer in Polish toponymy. Only *Kołuda*, *Sablóg* and *Zgłowiączka* are names of settlements, yet even those could have been derived from an earlier hydronym (not recorded for the first two). Obvious examples of borrowings are *Mień*, the name of a mill settlement formed on the banks of an eponymous river, which does not appear until the sixteenth century, and *Notes/Noć Town* (*Notesz* 1418, *Nothesz*, *Nocz* 1598)¹⁴ situated on the banks of Noteć River.

In the sixteenth century, a lot of archaic names used in Cuyavia and Dobrzyń land were already being derived from the native, Slavic language. Alongside Greater Poland, Cuyavia has the largest cluster of settlements bearing service-related names.¹⁵ This name type was connected with the institution of servitude, which ceased at the turn of the fourteenth century, and was no longer the source for this category of toponyms.¹⁶

In the material analysed for the purpose of this AHP volume, 26 such names have been identified: *Bartdzieje* < *bartdzieje* ‘apiarists, keepers of wild bee hives’; *Bobrowniki* < *bobrownicy* ‘keepers of beavers’; *Kob(i)elniki*, *Kobylniki* < *kobielnicy* (: **kobielnik* ‘weaver of *kobiel* baskets made from phloem or bark’, cf. OP *kobiel* ‘kobiałka, basket with cover’, also ‘bag-like fishing net’); *Konary* (2x) < *konarze* ‘breeders of royal horses’; *Korabniki* < *korabnicy* (: **korabnik* ‘maker of boats’, cf. OP *korab* ‘ship, boat’); *Kowale* < *kowale* ‘blacksmiths’; *Lagiewniki* (3x) < *lagiewnicy* ‘makers of containers for liquids or brewers of beer or mead for the royal court’ (cf. OP *lagiew* ‘wooden, leather, etc. container for liquid’); *Psary* (2x) < *psarze* ‘keepers of hunting dogs’; *Rybitwy* < *rybitwi* (: OP *rybitw* ‘he who catches fish, fisherman’); *Skotniki* (2x – *Królewskie* and *Zabłotne*) < *skotnicy* ‘cattle herders’ (cf. OP *skot* ‘horned cattle, animals’); *Sokolniki* < *sokolnicy* ‘falconers’; *Strzelce* < *strzelcy* ‘hunters’; *Szewce* < *szewcy* ‘shoemakers’; *Świątniki* (3x) < *świątnicy* ‘those who are committed to ecclesiastic service’; *Złotniki* < *złotnicy* ‘those who make items from gold and other metals’; *Żerniki* (2x) < *żyrdnicy*, *żerdnicy* ‘those whose duty it is to set up tents for the duke and his court as they travel the country’. Several names found in the material resemble service-related names in terms of formal criteria, e.g. *Zduny* (main n. *Zdunowo*) or *Zaduszyniki*, but these fall into different categories of toponyms.¹⁷

Kruszwica marks the centre of the most pronounced concentration of service-related names. In the twelfth century, it was the main gord and most important settlement in the region. Settlements with service-related names surrounding former castellan’s gords – Wyszogród (present-day Fordon, a quarter of Bydgoszcz), Włocławek, Inowrocław, and Dobrzyń.

¹⁴ The same applies to *Krzewent* settlement, which is not discussed in this volume, as it was established near a lake bearing the same name only in the seventeenth century.

¹⁵ U. Wójcik, *Polskie toponimy związane z organizacją gospodarczą państwa wczesnopiastowskiego. Nazwy miejscowe motywowane antroponimami zbiorowymi*, Cracow 2013, pp. 47–49.

¹⁶ Ibidem, pp. 47–49.

¹⁷ *Zduny* is the sixteenth-century alternation of the possessive name *Zdunowo* (cf. *Zdunowo* 1473, *Szdunowo* 1527, *Zduni* 1577) derived from the personal name *Zdun*, created by assimilation with family, or even service-related names. Over time, this form supplanted the original one and prevails until today. Although *Zaduszyniki* and the more frequent *Duszyniki* may seem semantically linked with such service-related names as *Kościelniki* or *Świątniki*, they were derived from the words *duszynicy*, *zaduszynicy*, which denoted the people who lived on land gifted to the Church in return for the grantor’s peace of soul (*dusza*), and thus formed part of the donation; see: W. Taszycki, *Pierwiastek chrześcijański w polskich nazwach miejscowych*, [in:] idem, *Rozprawy i studia polonistyczne. I. Onomastyka*, Wrocław–Cracow, p. 275.

As no centres of ducal powers were situated in the northern parts of Dobrzyń land, names of this type were absent in this area.¹⁸ Another old name-forming model consists in creating possessive forms by means of the *-jb/-ja/-je suffix. In most cases, this suffix was added to anthroponymic stems to express possession, ownership.

Almost 50 such names were identified to have been used in the analysed area in the sixteenth century: *Borzygniew, Borzymie, Bronisław, Bycz, Bydgoszcz* (former *Bydgoszcza*), *Bytom (Bytoń), Choceń, Chodecz, Chotel*,¹⁹ *Ciepień, Ciechrz, Dobięgniew, Dobrcz, Dobrzyń, Gądecz, Gorzeń, Gościeradz, Grodzień, Inowłocław* (nowadays *Inowrocław*), *Kazom // Kazum // Kazon, Kotomierz(a), Krzywosądza, Kuc(z)erz, Lubień, Lutobórz, Łoskoń* (former *Łoskuń*), *Łowicz, Modlibóź, Niemcze, Ostrowąż* (main n.: *Ostrowąs*), *Przedecz, Przybysław, Przyłub, Raciąż, Redecz Wielki, Sikorze, Stalmierz, Szymborze, Ściborze Wielkie, Świętosław, Świętosławie, Trzebiegoszcz, Ugoszcz, Unimierze, Wieluń, Witowąż, Włocław* (nowadays *Włocławek*), *Zakrocz*.

While names of the discussed type appear in all three main administrative units of the examined area in the sixteenth century, their concentration is varied. They are absent from Kruszwica district, and appear only in the northern part of Bydgoszcz district. Dobrzyń land boasts some only in the strip between Lipno and Rypin (*Dobrzyń* is the only name identified in Dobrzyń district itself).

Two significant urban settlements of Cuyavia merit a more detailed commentary: *Włocławek* and *Inowrocław*. Despite modern differences, these names share common origins. Moreover, they reflect a certain chronological relation. Initially, both settlements were named *Włodzisław* (> *Wloc(s)ław*) (from OP p.n. *Włodzisław, Wloc(s)ław* with suff. *-jb) with the Latinised form *Wladislavia* most frequently used in documents. From the very outset, however, medieval sources add *iuvenis* ‘young’, less often *novus* ‘new’ to differentiate between Inowrocław, which was founded later (and which may stand proof to the use of an existing town name), and the older Włocławek described as *senex, senis* and *antiquus* – ‘old’ (*Antiqua Wladislavia* was quite frequently used even in the sixteenth century). The Latin composite *Juniwladislavia* started replacing *Iuvenis Wladislavia* already in the thirteenth century, and was the term customarily used in sixteenth-century sources. Onomasts generally construe this as the Old Polish adjective **juny* ‘young’ (cf. *juniec* ‘young ox’, *junosza* ‘groom’) < PS **junъ* (i.e. **Juny Włodzisław* ‘Young/New Włodzisław’).²⁰ Still, it cannot be ruled out that the *Juni-/Iuni-* component is not a derivative (contracted) form of the Latin *iuvenis* > *iunis*.²¹ Irrespective of *Juniwladislavia*’s actual origins, vowel raising occurred over time (*Ju-* > *Ji-* > *I-*) to create *Inowłocław* (the -o- infix may indicate that this name is derived from the aforementioned **juny* adjective, similarly to such names as *Starokrzepice* < *Stare Krzepice, Staropole* < *Stare Pole*). Already at the turn of the seventeenth century, *Inowrocław* was gradually shedding the *l-l* > *r-l* dissimilation (or assimilation with names such as *Wrocław*) from its name. *Włodzisław*, later *Włocław* – the names with longer track records – started becoming diminutivised to *Włocławek* in the seventeenth century, a change possibly brought about by either the necessity to distinguish the settlement from (*Ino*)*włocław*, or the gradual degradation of the town.

The archaic *-jb/-ja/-je affix was used not only to create possessive names, but also to form toponyms and topographic appellatives which reflected the natural features of a given settlement, e.g. *Brześć* (initially also *Brzeście*, cf. *Bresce* 1250, *Bzesche* 1288, *Brezt, Brezte* 1289), *Brzeście*, present-day *Brześć* (: PS **berstъje* ‘Wych elm, Wych elm forest’), *Brzezje* (< PS *brzezje* ‘birch forest, grove’, PS *berzъje* ‘id.’), *Lipie* (< OP *lipie* ‘las lipowy’), *Nadróż // Nadroże* (: *na* ‘on’ + *droga* ‘road’, earlier also *Nadrożne*), *Osiecz* (: OP *osiek* ‘meadow on fertile land, situated lower; forest cutting, abattis’) or *Wanorze // Wąnorze // Wonorze*.²²

¹⁸ See: K. Modzelewski, *Organizacja gospodarcza państwa piastowskiego: X–XIII wiek*, Poznań 2000 (map).

¹⁹ This toponym, however, could have been a borrowing of a lake name.

²⁰ Cf. S. Rospond, *Słownik etymologiczny miast i gmin PRL*, Wrocław 1984, p. 114; *Nazwy miejscowe Polski*, vol. 3, p. 531.

²¹ Cf. *Słownik łaciny średniowiecznej w Polsce*, vol. 5, Wrocław 1983, p. 1121.

²² According to M. Rudnicki, the original form of this name is **van-or-ъje*, where the **van-* stem denotes something wet, damp, water; idem, *Prasłowiańszczyzna – Lechia – Polska. I. Wylonienie się Słowian spośród ludów indoeuropejskich i ich pierwotne siedziby*, Poznań 1959, p. 107. It seems that in this case, however, *Wąnorze* is more likely to be the original name, derived from the prefix **q-nor-* (: **nora* ‘burrow, hole (in ground), depression’) with suf. *-ъje and prothetic v- (cf. e.g. *wądół* < *qdolъъ* ‘depression in ground, burrow, pit, basin, valley’, *Wąsosze* < **qsošъje* : PS *socha* ‘something forked, branching stick’; W. Boryś, *Prefiksacja imienna w językach słowiańskich*, Wrocław 1975, pp. 160–163).

Alongside the original names created by means of the discussed affix, the sixteenth-century material also contains names which seemingly resemble such a structure, but have in fact emerged earlier as a result of different name-forming models. The following are examples of such toponyms: *Dobrogoszcz*, an alternation of the n. *Dobrościce*, earlier also *Dobrogostowicy* (*Dobrogostouici* 1238, *Dobrogoszczyce* 1415, *Dobrogoscicze*, *Dobrogoszcz* 1582), *Książ*, earlier *Knięginice* and probably **Księginice* (*Knaginice* 1215 > *Xyansch* 1418).

As the **-jb/-ja/-je* name-forming model ceased to be productive already at the turn of the fourteenth century,²³ the sixteenth-century nomenclature of Cuyavia, Dobrzyń land and other regions of Poland alike, expressed the possessive much more frequently by suffixes which continued the pre-Slavic affixes of **-ov-* and **-in-* (the latter was affixed mainly to feminine nouns), namely *-ów* // *-ew*, *-owo* // *-ewo*, *-in* // *-yn*, *-ino* // *-yno*, whose productivity (as the first identified forms) did not wane off until the sixteenth century.²⁴ Naturally, just like the archaic names starting with **-jb*, etc., these suffixes could be used to create topographic and cultural names, but the majority of identified names are possessive names. Oeconyms of the discussed type account for the vast majority of the analysed area, as they refer to almost 600 settlements, which corresponds to approximately 38% of all settlement units covered by this volume of AHP (and the same percentage of all identified names).

Most names end with *-owo* // *-ewo* (411 settlements, main names for 369 settlements), while *-ino* // *-yno* rank second (147 settlements, including 134 main names). The cause for this disproportion is the fact that the suffixes continuing **-in-* are added mainly to feminine stems or stems with a feminine inflection paradigm, and such personal names which motivated the formation of site names are fewer in number. Male names, which have a masculine inflection paradigm and refer to males, are dominant here.

Although widespread across the analysed area in the sixteenth century, names with the *-ów* // *-ew* and *-in* // *-yn*, suffixes are much less numerous; they amount to 73 (18 main names) and 67 (28 main names), respectively. In later centuries, the *-owo* variant to a large extent replaced *-ów* in the analysed area (currently, there are only 28 *-ów* names, as compared to more than 800 *-owo* names), which is related to the emergence of a clear *-ów/-owo* isomorph cutting Poland in half: *-owo* occurring in the north, and *-ów* in the south.²⁵ The *-ino* and *-in* suffixes met a different fate. Only three *-ino* oeconyms can be found in Cuyavia and Dobrzyń land of the sixteenth century, in contrast to 254 *-in* names of the masculine gender.

Although not as clear-cut as the divide described above, variants of the suffixes continuing **-bn-*, that is *-no*, *-na* and the more recent *-ne* (most often incorporated into topographic names) have also drawn a characteristic line across Poland. As Henryk Borek wrote in his monograph on this name-forming model, Cuyavia and Dobrzyń land, along with other north-western regions, belong to the main zone of high productivity of the *-no* affix (Pomerania, Greater Poland) – the further south, the weaker this feature becomes. The *-na* type is very rare in Chełmno land, Dobrzyń land and Kashubia, and is in a substantial minority in Cuyavia.²⁶ All in all, the situation in the sixteenth century corresponded to the above description – within the discussed model, *-no* names are dominant across the analysed area (about 70 settlements), e.g. *Chojno*, *Czermno*, *Dźwierzno*, *Glinno*, *Górzno*, *Widłno*, etc., while names with the *-na* affix amount only to about 10, mainly near the southern border with Greater Poland, cf. e.g. *Chrosna*, *Dzierżazna*, *Rożenna*, *Siedluchna*, *Telązna*. This state continues to date. In the second half of the sixteenth century, a slightly younger and generally rarer²⁷ *-ne* name type occurred only in a few instances, exclusively in Dobrzyń land, in Rypin district on the border with Mazovia (*Plonne*, *Rudne*, *Blizne*). It was not until the following centuries that these *-ne* names spread to the borderland with Greater Poland, but still belonged to a marginal minority of toponyms.

The geographical distribution of names formed by means of the **-bšk-* affix, used mainly to create possessive and topographic names, in most cases replaced by generic variants *-sk* and *-sko* (also expressed as *-ck-*, *-dzk-*), is also interesting. Despite some divergence in affix form in the second half

²³ S. Rospond, *Słowiańskie nazwy miejscowe z sufiksem -jb*, Wrocław 1983, p. 6.

²⁴ F. Nieckula, *Nazwy miejscowe z sufiksami -ov-, -in- na obszarze Wielkopolski i Małopolski*, pp. 347–351.

²⁵ Of the few *-ów* names, most are situated in the territory of the former Brześć Voivodeship and Dobrzyń land, while only one such name was identified in the former Inowrocław Voivodeship – *Aleksandrów Kujawski* – yet this settlement was founded much later, in 1834.

²⁶ H. Borek, *Zachodniosłowiańskie nazwy toponimiczne z formantem -bn-*, Wrocław 1968, pp. 403–407.

²⁷ *Ibidem*, pp. 407–408.

of the sixteenth century, cf. e.g. *Gośck*, *Gójsk* : *Goścko*, *Siewiersko* : *Siewiersk*, *Siewiorsk*, the spatial distribution of individual generic variants is very distinct. Inowrocław Voivodeship has practically only *-sk* names, save for the villages of *Sławsko Wielkie* and *Sławsko Małe* situated on the border with *Brześć* Voivodeship and referred to temporarily also as *Sławsk*. Remaining areas also saw some discrepancies in affixes in the sixteenth century, yet generally the dominant names of *Brześć* Voivodeship were *-sko* (*Koneck*, present-day *Konecko*, was the only name ending with *-sk* and devoid of a *-sko* variant). The majority of names in *Dobrzyń* land ended with *-sk* (*Głowieńsko*, present-day *Głowińsk*, was the only main name exception; in the sixteenth century this name too did not have a masculine variant). The reason behind this state of affairs can be traced back to the impact of Mazovian influences on the toponymy of *Dobrzyń* land. Mazovia's most prevalent suffix at the time (and at present) was *-sk* (e.g. *Czersk*, *Grodzisk*, *Płock*, *Płońsk*, *Pułtusk*), while *Brześć* and Inowrocław Voivodeships shared certain traits with Greater Poland, where *-sko* names were more frequent (e.g. *Głębocko*, *Grodzisko*, *Radecko*, *Policko*). As Stanisław Rospond points out, Mazovian linguistic features fell on fertile ground in *Dobrzyń* land, as this region belonged to a Mazovian Duke until the thirteenth century.²⁸ It follows from Rospond's analyses that *-sko* was more frequent in *Dobrzyń* land up to the fifteenth century, until a breakthrough occurred in the sixteenth century. In the course of time, this distribution underwent certain changes. Today, *-sk* names are dominant not only in former *Dobrzyń* land (having completely replaced *-sko* names), but also in *Brześć* Voivodeship. This does not apply solely to *Kruszwica* district, where one can hardly find any names other than those ending with *-sko*, as is the case in the neighbouring Inowrocław Voivodeship.

The sixteenth-century distribution of diminutive names, conveying smallness or endearment, formed by means of the *-(ów)ko* // *-(in)ko* suffix and its generic variant *-(ów)ek* // *-(in)ek*. Like in the above-discussed cases, generic fluctuations occurred in the names of some settlements, e.g. *Gąbinek* : *Gąbinko*, *Oporówko* : *Oporówek*, *Kłoniewek* : *Kłoniewko* // *Kłonówko* (main n. *Kłonowo Małe*), *Łążynek* : *Łążyńko*, yet *-ko* names are clearly dominant in Inowrocław Voivodeship and the western districts of *Brześć* Voivodeship, while the two variants competed against each other in its eastern districts and in *Dobrzyń* land. In the following centuries, *-ek* names spread westwards, across *Brześć* Voivodeship, supplanting almost all neutra (probably influenced by the toponymy of eastern Greater Poland), while the two variants co-existed in remaining areas, although *-ek* is more common.

When discussing diminutive names with the *-ek* affix, it is worth mentioning certain innumerable names which reflect a feature typical of northern Polish dialect, *i.e.* the non-alternating *e*, meaning that the *-ek* affix used across Poland became *-k*; similarly, *-ec* (understood both as the possessive and the diminutive, depending on context) became *-c*. We identified 11 such names in the material gathered for the purpose of drafting this volume: *Chodorążk* (also *Chodorąsk*, present-day *Chodorążek*), *Giżynk* (: *Giżynek*), *Mieszczk*, *Półwiesk*,²⁹ *Samociążk* (: *Samociążek*), *Siernieczk* (: *Siernieczko*, present-day *Siernieczek*) and *Babc* (present-day *Babiec*), *Bocheńc* (: *Bocheniec*), *Lubowc* (present-day *Lubówiec*), *Makowc* (present-day *Makówiec*), *Wagańc* (: *Waganiec*, main n. *Wagańce*). These forms occurred exclusively in the northern part of the analysed area.

The formal difference concerned not only the grammatical gender of the names. Another phenomenon frequently encountered in the source material is variation in grammatical number (especially in names ending with *-owo*) – initially singular names such as *Nieszczewo*, *Sierzchowo*, and *Witowo* became plural names at the turn of the sixteenth century: *Nieszczewy*, *Sierzchowy*, and *Witowy*, which is followed by further fluctuation in grammatical number throughout the sixteenth century (this applies to *Dobrzyń* land in the smallest degree). In some cases, this change could have resulted from e.g. a settlement splitting up into two or more parts. Nevertheless, it seems that plural names became widespread irrespective of non-linguistic factors.³⁰

²⁸ S. Rospond, *Słowiańskie nazwy miejscowe z sufiksem -sk-*, Wrocław 1969, p. 331.

²⁹ S. Rospond (ibidem, p. 215) argues that although this name contains the *-sk* suffix, it is more likely to be a derivative of the word *połwsie* meaning 'buildings located outside of the village proper, but belonging to that village; a hamlet' (*Słownik polszczyzny XVI wieku*, vol. 27, ed. M.R. Mayenowa, comp. K. Wilezewska, L. Woronczakowa, Warsaw 1999, p. 80) with the north Polish *-k*, which is indicated by the *Półwiosek* variant recorded in 1789, see: *Nazwy miejscowe Polski*, vol. 9, p. 227.

³⁰ For more on toponym pluralisation, see: A. Bańkowski, *Zmiany morfemiczne w toponimii polskiej*, Wrocław 1982, pp. 49–52.

Fluctuations in grammatical gender and number are only the most apparent changes to name forms in the sixteenth-century toponymy of Cuyavia and Dobrzyń land. The aforementioned Zygmunt Zagórski discussed the changes in word formation, morphology and phonetics in detail on the example of the toponymy of Brześć Voivodeship.

Various cultural and linguistic influence, coming mainly from Greater Poland and Mazovia (especially in the case of Dobrzyń land; ties with Chełmno land are also strong here), shaped the specific distribution of the name-forming and/or semantic types.³¹ Nonetheless, one can generally agree with Rospond that this distribution is the outcome of general dialect variation between north-eastern and south-western dialect types.³²

Dobrzyń land clearly differs from the remaining area in terms of non-possessive names derived from anthroponyms, *i.e.* patronymic names. This variability is the outcome of strong neighbourly Mazovian influence on Dobrzyń land names. Nonetheless, in this case I believe that this differentiation is based not only on linguistic factors, but also on societal ones. Patronymic names are the second largest group of names identified in the materials for this AHP volume. They account for 10% of overall settlement number, the majority of which are main names. It is possible to identify them by the *-ice* suffix (sometimes preceded by the *-ow-/-ew-* component) added to the name of the person whose descendants inhabited a given settlement. With a count of more than 90, *-ice* names are most numerous in Brześć Voivodeship. The total for Inowrocław Voivodeship is lower by half, whereby there is a staggering disproportion between individual districts – most are situated in Inowrocław district, while only seven can be found in Bydgoszcz district. Except for four settlements surrounding Bydgoszcz, the three remaining patronymic toponyms lay at the very border with Inowrocław district. In the east, past Vistula River, patronyms are literally a marginal fraction of all names. Dobrzyń land has only seven patronymic names, all of which – except for *Warpalice* near Rypin – are located on the borderland with Cuyavia (*Dobrzejowice, Malszyce//Maliszyce, Myślborzyce, Radomice, Suszyce, Więclawice*).

Patronymic names hold a small share in Dobrzyń land oconyms, because this region had been witnessing the conversion of patronymic and possessive names into family ones since the fourteenth century.³³ Of course, this process occurred also in other regions, as well as in Cuyavia and Greater Poland, which according to Hubert Górniewicz underwent even more intense conversion.³⁴ Still, the greatest increase in family names in Mazovia (and Podlasie) took place at the turn of the sixteenth century, which impacted oconyms in Dobrzyń land, where this element of nomenclature has absorbed Mazovian influence since the sixteenth century.³⁵ In the case of family names, however, this influence does not boil down to adopting linguistic or name-forming habits. Family names referred mainly to minor nobility, which was not a numerous estate in Cuyavia and Greater Poland – contrary to Dobrzyń land. What is more, a large part of Dobrzyń land nobility was of Mazovian lineage.³⁶

These relations become even more distinct once one takes note of such compound names as *Paprotki-Bielasy, Paprotki-Bryski, Paprotki-Głogoły* and *Kłobukowo-Karasia, Kłobukowo-Lyszcze, Kłobukowo-Molendy*, which in the sixteenth century were present only in Dobrzyń land. These name forms are typical of Mazovia (and Podlasie, its toponymic extension); they refer to parcels of villages held by minor nobility.³⁷ The area which initially bore a general, usually single-element name, would split up into separate units, which then acquired additional names in the form of a second component

³¹ Z. Zagórski, *Nazwy miejscowe dawnego województwa brzesko-kujawskiego*, pp. 173–174; H. Górniewicz, *Rodowe nazwy miejscowe ziemi dobrzyńskiej*, p. 115.

³² S. Rospond, *Słowiańskie nazwy miejscowe z sufiksem -bisk-*, p. 331. Of course, this does not apply to service-related names whose distribution relies heavily on the location of ducal gords, not on linguistic influence. Nor does this concern the substantial share of archaic possessive names with the **-j-* affix, scores of which appeared in Cuyavia with early settlement.

³³ This term, introduced to Polish onomastics by W. Taszycki, is arbitrary. These names, which emerged relatively late, have nothing in common with family structure, which had long become outdated.

³⁴ H. Górniewicz, *Rodowe nazwy miejscowe Wielkopolski, Małopolski i Mazowsza*, p. 52.

³⁵ Idem, *Rodowe nazwy miejscowe ziemi dobrzyńskiej*, p. 126.

³⁶ R. Kukier, *Pogranicze etnograficzne dobrzyńsko-mazowiecko-płockie*, „Notatki Płockie” vol. 26, 1981, pp. 13–17.

³⁷ This naming model has been discussed in detail by U. Bijak, who describes their origins after W. Pałucki: “[t]he emergence of names with such structure is connected with the specific social structure of Mazovia. Nobility landed property was the largest category of ownership on Mazovia. This state of affairs, forged as early as in ducal times, was reinforced by the Jagiellons’ favouring of middle-income and impoverished Mazovian nobility, who had a high »breeding rate«, which triggered two coupled developments in this area. First, high fragmentation of property in this ownership category, not observed anywhere

(while the first component became the name of the area surrounding the nobility settlement). The new element was usually a family name, as illustrated by the examples above.

The issues discussed above concern a small section of the toponymy of Cuyavia and Dobrzyń land, and by no means exhaust this broad subject. As I've already remarked in the introduction, the aim of this text is not to provide a comprehensive description of the sixteenth-century toponymy of the analysed area. First and foremost, it was my intention to present certain characteristic features of the said toponymy, and the spatial distribution of selected name types, in the context of different circumstances which determined its evolution at the time, and which have prevailed to this day.

Lastly, I ought to share a few remarks on how the nomenclature material was analysed for this AHP volume. In general, the main name, *i.e.* the name placed on the map which constitutes the title of the relevant List entry, was determined based on the frequency criterion. This means that the main name is the name form most often mentioned in sources dating to the second half of the sixteenth century. If several variants were used equally frequently to refer to the same settlement, we selected the name form which appeared in sources before the second half of the sixteenth century or the name form which stabilised after that period.

As in previous AHP volumes, all sixteenth-century names listed in the List have been adjusted to modern spelling, e.g. <Othorowo>: *Otorowo*, <Soliecz>: *Solec*, <Szniechi> *Śniechy*. Latin differentiating components, such as *magnus*, *maior* 'great, larger', *parvus*, *minor* 'small, smaller' were, in keeping with previous AHP volumes, consistently replaced with Polish equivalents *wielki* 'great', *mały* 'small', e.g. <Koluda Maior>: *Koluda Wielka*, <Zrzodla Minor>: *Źródła Małe*. Compound names referring to villages situated near nobility property are spelled with a hyphen, in line with modern spelling rules, e.g. *Paprotki-Bielasy*, *Kłobuki-Molendy*. Please bear in mind that this is not the spelling used in historical sources.

(2021)

Translated by Katarzyna Bartkowiak

beyond Mazovia (and the neighbouring Podlasie [...]), led to the creation of a characteristic naming system', eadem, *Nazwy zestawione typu Boguty-Augustyny na Mazowszu i Podlasiu*, „Onomastica”, vol. 35, 1990, p. 33.

III.4.7 MAZOVIA

Władysław Pałucki

The map of Mazovia was meant to provide **names of settlements** in their wording from the second half of the sixteenth century. The majority of our time and care was devoted to the identification and localization of settlements, or determining the proper sound and spelling of their names. The nomenclature itself, given the specific toponymy of Mazovia,¹ is a problem which required a long time spent on deliberations and consultation with many specialists – historians, geographers and linguists.

Although certain toponymic phenomena can be found in the entire territory of Poland, but nowhere else are they so common, sometimes dominant, or even exceptional in their curious forms as in Mazovia. The topographic and possessive names in sixteenth century Mazovia appear with the suffixes *-ino*, *-ewo*, *-owo* (*Gumino*, *Milewo*, *Karwowo*), then patronymic ending with *-ice*, and typically Mazovian equivalents ending with *-ęta* (*Janowięta*),² as well as family³ or heraldic⁴ names – uncommon anywhere else in such numbers, perhaps except for Podlasie and Łuków regions. Mazovia, particularly the more remote territories, had a concentration of compound names: two-word, with various order of the elements, written together or separately (*Białystok*, *Zareby-Romany*, *Dąbrowa-Modzele*), three-word (*Krzyżewo Stare Jurki*), and even four-word (*Kossaki Ciepłystok Nabelne*).⁵

Finally, limiting ourselves only to the most important matters, in Mazovia still in the sixteenth century the onomastic forms were fluid and changeable, or perhaps parallel, changing for instance from patronymic to possessive (*Budziszewice – Budziszewo*) or family (*Idzikowice – Idziki*)⁶, related partially to the change in the ownership type (e.g. from partial into petty gentry).

Changes of onomastic forms were sometimes only apparent, created from incorrect or careless spelling in various sources. Removing these mistakes or simple spelling errors⁷ – which often were difficult to discover – consumed much of our time, especially in the case of compound names (where there was the problem of the order of words), and the results of such, often strenuous, research are more certain, when we had access to a higher number of entries, from various, independent sources.

The aforesaid deliberations and consultations persuaded us to keep the assumptions accepted already in Płock, and then in Lublin volume. Therefore, the names of settlements were recorded on

¹ Apart from the attempt at classification of settlement names made by Taszycki (*Słowiańskie nazwy miejscowe – ustalenie podziału*, Cracow 1946 (Prace Komisji Językowej PAU, vol. 29)) the entire Mazovian toponymy was contained in: Wolff 1955–1956; Zierhoffer; extensive reviews of the work in P. Smoczyński („Onomastica”, vol. 5, 1959, pp. 463–493) i J. Wiśniewski (ibidem, pp. 494–520).

² W. Taszycki, *Patronimiczne nazwy miejscowe na Mazowszu*, Cracow 1951; rev. W. Pałucki, KH, vol. 59, 1952, pp. 134–140; A. Wolff, *Nazwy miejscowe na Mazowszu*, pp. 63–104.

³ Zierhoffer, pp. 89–99; P. Smoczyński, rev. pp. 481–482; H. Górniewicz, *Rodowe nazwy Wielkopolski, Małopolski i Mazowsza*, Gdańsk 1968.

⁴ A. Wolff, *Nazwy miejscowe na Mazowszu*, pp. 69–83. W. Taszycki opted against separating this heraldic group of site names, W. Taszycki, *Dwa studia z polskiej toponomastyki*, „Slavia Occidentalis”, vol. 20, 1960, no. 2, pp. 173–176.

⁵ According to J. Wiśniewski 1959 (rev., p. 512), the formation of these names is connected to the specific social structure of Mazovia.

⁶ A. Wolff, *Nazwy miejscowe na Mazowszu*, pp. 105–116; Zierhoffer, pp. 21–84.

⁷ Some errors – claims A. Wolff (idem, *Nazwy miejscowe na Mazowszu*, p. 121) – are not necessarily results of the scribe’s carelessness, but of incorrect etymology.

the map in their sixteenth century pronunciation, but modern spelling. There were some exceptions from this rule in the following cases:

Latin forms in compound names: *Major*, *Magna* were written in Polish – *Wielki(a)*, and *Parva* – *Mały(a)*, except for those names, in which the second, identifying, element written in Latin in polonized form (*Sadkowo Maior*) survived to this day.

But when the names of a given settlement appeared in a diminutive form, this was the form recorded (e.g. *Dylewko* instead of *Dylewo Parva*), but the name of the neighbouring settlement remained *Dylewo*, and the entries mentioning *Dylewo Magna* were disregarded.

Interesting Latin forms in compound names in Mazovian toponymy: *a Wissa* (from *Wissa*), *a Brok*, *a Magna Brok*, *vertice Kołomyja* were kept, except for those cases where there was a Polish equivalent of a name (*Wierzch Prądnika*).⁸

Names, surnames or rank of the owners which appeared in compound names were not shown on the map, or – when identification required them to be included – were given in the form of possessive adjectives, compatible with Polish geographical nomenclature (e.g. *Zalesie Machnackie*, *Smoniewice Zawiszowe*, and not *Zalesie Machnackich*, *Smoniewice Zawiszy*). Also in the List of Settlements, where these names appear more often as variants of main entries (names shown on the map), we usually accepted the said adjectival form. Latin possessives in compound names (*Smoniewice Episcopi*, *Grodkowo Judicis*) were given in their Polish version (*Smoniewice Biskupie*, *Grodkowo Sędzicowe*), or in a polonized form, if it was confirmed by the sources, e.g. in the eighteenth century (*Nagórki Judyce*, *Smarzewo Judyce*).

Identical names of two sixteenth century settlements situated in one parish were, when possible, supplemented with an additional epithet based on the sources from the fifteenth–eighteenth centuries. In case there was no such epithet, the names were marked with Roman numerals, e.g. *Boguty I*, *Boguty II*.

When different versions of a name appeared in the sixteenth century, the priority to be shown on the map was given to: a) names consisting of more elements, b) names appearing in various types of sources, c) names used in the middle of the sixteenth century. Points b and c applied also when we tried to determine the order of elements in compound names.

Given the aim of the map, the names were transcribed from the sources, even though the reconstruction of their old wording posed a relatively high risk of error. We cannot provide here, or by other findings, any detailed documentation in the form of a full list of name records, as our study is not intended as a basis for special toponymic research.

The old orthography allowed for various pronunciations of a given names. As such, we based on the name's origin, therefore accepting *Luby* (from *Lubicz* coat of arms) unlike modern *Luby*, *Bożejewo* (from the name *Bożej*), although now it is *Borzejewo*. We also aimed at reconstructing the proper version of names, without any regional deviations, such as mazuration or *szadzenie* (hypercorrection). For instance, we accepted *Czekanowo Ślasy*, not *Cekanowo Szlasy*. Apart from the name's origin, its newer forms and surnames derived from a settlement name and attested to by the sources helped us to determine the appropriate wording. For example, we accepted *Lychowo*, not *Lichowo*, as today it is called *Lychów*, *Ulatowo* not *Ulotowo*, as since the fifteenth century the family from this village called themselves *Ulatowscy*.

Names consisting of an adjective and a noun were usually written together, in agreement with the observed tendency to form compound words, much stronger in the northern areas of Poland.⁹ In this case, we were driven by the distribution of accented syllables in pronunciation. Namely, if in a compound site name there was only one accent, on the penultimate syllable,¹⁰ such names were written together (e.g. *Białystok*). This mostly refers to topographic names, in which the first element is an opposite adjective: *Mały* – *Duży*, *Dolny* – *Górny*, *Ciepły* – *Zimny*, *Suchy* – *Mokry* (e.g. *Białystok*, *Cieplystok*).

The names whose nominal forms had long lost their original meaning – as proven by the accent balling of the penultimate syllable (*SaDYkierz*, *WilCZYtarg* – were also treated as compounds, similar in

⁸ The formation of such names was influenced by the Latin terminology of tax registers (A. Wolff, *Nazwy miejscowe na Mazowszu*, p. 72, footnote 19) and official records – copying documents from the fifteenth and sixteenth century in mortgage books, up to our times (J. Wiśniewski, rev., p. 514).

⁹ W. Mańczak, *O zasięgu typów polskich nazw miejscowych w XVI w.*, „*Język Polski*”, vol. 35, 1955, pp. 29–35.

¹⁰ J. Gołaski, *Opracowanie nazw na mapach wielkoskalowych*, *Toponomastyka kartograficzna*, Warsaw 1967, p. 114.

their form and origin to those listed above. Typical examples of such compound names in our toponymy are the Podlasiian *Białystok* and *Krasnystaw* in Red Ruthenia. The names written separately were listed when the second, indicative element denoted a product of material culture – *Wieś* ('a village'), *Młyn* ('a mill'), or of social culture – *Wola* ('a newly-founded village'; e.g. *Nowa Wieś*, *Dzika Wola*, *Stary Młyn*). Additionally, when there were two strong accents in a compound name,¹¹ e.g. *Czerwona Niwa*, *Sokola Łąka*.

We deviated from these assumptions when the majority of records from various sources proved that, regardless of the meaning of the second element, some compound names were long written together (e.g. *Supiestany*), and others – separately. Naturally, compounds like *Białobrzegi*, *Długoląka*, *Nowogród* – were written together.

In Polish lands, so also in Mazovia (unlike in Ruthenian territories) we always used the suffix *-ice*, not *-icze* in patronymic names.

Several names, recorded in the sixteenth century sources as: *Chrczony*, rarely *Chrczony*, *Chrczonka* (*Chrczonka*), and *Trcianka* (often *Trzcianka*), *Trciniec* (*Trciniec*) posed serious difficulties. Accepting the possibility of an alternative pronunciation and even more the fact that the orthography had not yet been settled at the time, we agreed on the form *Chrczony*, *Chrczonka*, *Trzciana*, *Trzcianka*, used consistently since the eighteenth century, and the variants *Chrczony*, *Chrczonka* and *Trciana*, *Trcianka* were listed in the list after the main entry.

Phonetic alternation made it difficult for us to determine the sixteenth century form of some names (*Morawy* – *Murawy*), particularly for an interesting group of names with a prosthesis *h* before *o* and *u* (*Holdaki* – *Oldaki*, *Humięcino* – *Umięcino*, *Holtowo* – *Oltowo*) or *j* before *a* (*Jabramy* – *Abramy*, *Jadamy* – *Adamy*, *Jadamowice* – *Adamowice*). In such cases the more literary form was used as the main entry, appearing in written and cartographic sources since the wane of the eighteenth century and the variants were given in the list the way it was done in *Słownik Staropolski Nazw Osobowych*.¹²

The names: *Śrzedni* – *Średni*, *Śrzebna* – *Śrebrna*, *Szronka* – *Szronka* were treated in a similar manner.

The names with lowered articulation typical to Polish: *-ir*, *-er* (*Siraków* – *Sieraków*, *Wirzbica* – *Wierzbica*) were recorded on the map and in the main entry of the list as: *Sieraków*, *Wierzbica*.

Unlike in Płock volume, in all instances where *ó* was introduced in some Polish words, which became established in the literary language, e.g. *króle* – *króle*, *gora* – *góra*, *o* was changed into *ó*, and in some cases *u* into *ó*, when this version was dominant in the later sources (e.g. *Królewo* – *Krolewo*, *Góra* – *Gora*, *Stróżewo* – *Struzewo*). Similarly, *l* was changed into *ł*, *z* into *ż*, *s* into *ś* (*Laziska* – *Łaziska*, *Zukowo* – *Żukowo*, *Swierczyno* – *Świerczyno*), also because the sixteenth century sources, including tax registers, often provide names in Latinized version (e.g. *Malachowo Utraque*).

The List of Settlements included in this commentary lists the names shown on the map (the main entry), the more important variants of the name given in brackets and the modern name, if it differs from the historic one. In our selection of provided variants we disregarded: a) elements of compound names which appeared on their own, or differed from the main name only in their order, b) the differences in the endings: *ów* – *owo*, *ew* – *ewo*, *in* – *ino* (*yno*), c) mazuration: *c* – *cz*, *s* – *sz*, *z* – *ż*, and hypercorrection (*szadzenie*): *cz* – *c*, *sz* – *s*, *ż* – *z*, d) transitory variants between two other versions (e.g. we list *Malesze* and *Maliszewo* and omit *Maleszewo*; *Żerowa* and *Żyrowa* but without *Żerowo*), e) forms not used, the results of a scribe's mistake.

In certain justified cases, particularly when the differences were significant, variants of names from the first half of the sixteenth century and the beginning of the seventeenth century were also included (e.g. the name *Grochy* appears in the chronological period of the map, whereas in the first half of the sixteenth century we find *Śmierdziagrochy*).

When the name of a settlement was changed when the settlement was granted town rights, the List depicts this fact in the following way: *Stanisławów* (until 1523 *Cisek* village).

It should also be mentioned here that even though all names of settlements were treated with equal diligence, including the names of the smallest villages, consisting of one or two manors, such

¹¹ J. Gołaski (ibidem, p. 114) rightly adds that use of the accent criterion is limited, as it concerns two-word compound names, made of an adjective and a noun, or two nouns.

¹² Ed. W. Taszycki, vol. 1–2, Wrocław 1965–1967.

as mill hamlets, over a dozen Mazovian settlements were given extra attention due to their size, character, importance and numerous derivations of the sound or wording of their name. This group of names was assessed by a group of historians, geographers and linguists during a specially called meeting. In several cases the differences of opinions were clearly visible. The dispute concerning the name *Warszawa* (Warsaw) was particularly prolonged, which should not be surprising as it was the capital city. The scholars argued as to which variant should be used as the main entry: *Warszawa*, *Warszowa* (in Latin texts, always *Varsovia*), or perhaps *Warszewa*. These are all forms found in the sixteenth century sources.¹³ This reignited the old dispute on the subject, initiated years ago and carried on mostly by linguists, yet without the use of official sources: State sources (MK, Akta Skarbowe, Księgi Referendarii Koronnej, constitutions, journals, *Sejm* chronicles, etc.)¹⁴ and town records from Warsaw.¹⁵ In the end, *Warszawa* remained, supported among others by linguists: Prof. W. Doroszewski, Prof. W. Taszycki, and Doc. K. Zierhoffer.

While working on the map of Mazovia and the List of Settlements, our difficulties did not end with the sound and spelling of the sixteenth century settlement names. Their identification with settlements existing today was equally important, as many old villages were lost over the centuries, or changed their name – partially or completely, and sometimes also their location in the field. Here the difficulties grew, because as in the sixteenth century – the chronological period of our map – there were many discrepancies in written and cartographic sources (official registers of settlements and maps at a scale of 1:100,000), essential in order to determine modern names of settlements. Random field research also brought different data concerning the number or names of present-day settlements, such as: a) other names apart from the names listed in the registers and on the maps, b) instead of compound names – single names, or the other way round, c) instead of one settlement – two, marked with a common name, d) more often – one settlement appearing under two names.

Aware of such a state of affairs, we made *Skorowidz miejscowości Rzeczypospolitej Polskiej*, which was then the most complete publication obtainable, our source basis for the sound and spelling of modern names of settlement. It was prepared on the basis of the 1921 record,¹⁶ and we knew that it was probably out-of-date at the time our work commenced. That is why we greeted the publication of *Spis Miejscowości Polskiej Rzeczypospolitej Ludowej* in 1967 with great relief, as it provided us with a complete list of settlements as of 1 April 1966. The *Spis* was accepted as the basis for our work (mostly for the List of Settlements). However, we must say that the publication failed to satisfy all our expectations.¹⁷ Although it remains the fullest up-to-date list of all settlements in the People's Republic – which constitutes its value – it contains many printing errors, unacceptable in this type of handbook, as well as other unwanted mistakes and inconsistencies¹⁸ in comparison to the pre- and post-war maps at a scale of 1:100,000.¹⁹ Finding these errors was not always possible, as the modern maps, prepared in fact on the basis of photographs and records made in the field, also contain some

¹³ Supporters of using the form *Warszowa* for the sixteenth century, enchanted by the Latin of the sources (*Varsovia*), quoted the Henrician Articles, which were written in Latin, issued on 12 May 1573 'in comitiis generalibus electionis sub Varsovia as villam Kamień'. However, it turns out that in the Polish version of this document, brought to Paris along with the Latin version by the Polish delegates, it was clearly states: 'na sejmie pospolitym electionis pod Warszawą przy wsi Kamieniu', *Diariusz poselstwa polskiego do Francji po Henryka Walezego 1573 r.*, comp. A. Przyboś, R. Żelewski, Wrocław 1963, pp. 142, 181.

¹⁴ Entries from these sources gathered by the Department of the Historical Atlas of Poland were provided to all participants of the meeting.

¹⁵ Entries from the town books of Warsaw were collected by W. Szaniawska MA.

¹⁶ For the historical territory of Mazovia vol. I, the capital city of Warsaw, Warsaw Voivodeship (1925), and some of the districts from vol. 2 (Łódź Voivodeship – 1925), 3 (Kielce Voivodeship – 1925), 4 (Lublin Voivodeship – 1924), 5 (Białystok Voivodeship – 1924). J. Wiśniewski (rev., p. 502) justly emphasized the values of the *Skorowidz*. SGKP, however valuable, played here only an auxiliary part.

¹⁷ Even though it resembles an official study, it is in fact anonymous (see below footnote 18), made by laics. As such, the work does not reflect the real state, just like it was expected by M. Karaś (idem, *Językoznawstwo i kartografia*, „Onomas-tica”, vol. 7, 1961, p. 27).

¹⁸ Z. Brocki wrote a crushing review of this publication in „Rocznik Gdański”, vol. 28, 1969, pp. 343–347; see also W. Dzikowski in „Przegląd Geodezyjny”, vol. 39, 1967, p. 490 (list of mistakes and error for Kielce Voivodeship).

¹⁹ *Pajki*, a village situated in Krzynowłoga Wielka parish in Przasnysz district, could be an example here. After the First World War the name of the village was changed into *Piastowo*, and this is how it was recorded in the *Skorowidz* from 1921 and on topographic maps of WIG. *Spis miejscowości PRL* lists two villages in the group Krzynowłoga Mała: *Pajki* and *Piastowo*.

toponymic inaccuracies. Therefore, we accepted the *Spis* as our basic source for the sound and spelling of modern names, but departed from it in the following cases: where there were differences between the *Spis* and other modern sources (the 1:100,000 maps above all, and the *Skorowidz 1921*),²⁰ in such cases we accepted the version from the map. If each source provided a different, or distorted, version of a given name, then we followed the same pattern while determining the sound and spelling of a sixteenth century name which appeared in different variants in the sources. This means that using various, independent sources (maps at a scale of 1:100,000, district maps at the same scale, registers and official names of settlements and physiographic objects,²¹ field data), we chose the name which appeared in the sources repeatedly.

In the commentary and in the List the adjective forms of two district capitals appear in their historical version: Gostynin – gostyński (and not ‘gostyniński’ as it is used today, because this was the dominant form in the sources); Kamieniec by the Bug – kamienicki, not kamieńczykowski (today: Kamieńczyk), in this case the written and cartographic sources from the eighteenth century know only Kamieniec. Also, two other names of districts appear only in their sixteenth century form, different from the modern form, in the List: grodziecki (grójecki) and sieprcki (sierpecki).

Names of **physiographic objects** were determined on the basis of the same assumptions as settlement names. In this case, however, our task was a bit more difficult, because unlike settlement names, apart from large rivers the names of small rivers, lakes and swamps rarely appear in the sources, circumstantially or even purely accidentally. The map of Mazovia shows not only lakes and rivers whose names were confirmed by the sources, but also many other, smaller ones, which fit the scale of our map, but their names remain unknown.

Minor bodies of **water** were chosen on the basis of utilization. Even small rivulets or streams were depicted, provided that they were mentioned in economic sources (inspections, revisions, inventories) in order to determine the location of a settlement or its economic values (mills).

Naturally, we tried to avoid these names, which were anachronistic already in the sixteenth century. In case we lacked direct sixteenth century records, we assumed that the fifteenth century names, particularly those denoting bodies of water, were still used in the sixteenth century, and the names which appeared in the seventeenth century were probably already known in the previous century. In the latter event, we accepted even written and cartographic records from the eighteenth century, analysed them thoroughly and compared them against earlier materials.

Even despite these methodical and methodological efforts there remained a small group of rivers, for which we were unable to determine names earlier than the eighteenth century. These rivers were given names found in later sources from the eighteenth–nineteenth centuries, modern topographic maps, the *Hydronimia*,²² and the *Urzędowe nazwy miejscowości i obiektów fizjograficznych*. The rivers from this group were written in Italics in the List. However, we believe that even when a name marked on our map came from nineteenth century sources it does not mean that the name itself was so young. It is a well-known fact that names of physiographic objects, and bodies of water in particular, are among the oldest.

Several times, the analysis of source records on physiographic elements saved us from mistakes in labelling certain lakes or rivers with the wrong names. At the same time it revealed some interesting and characteristic features of Mazovian hydronymy.

What we found was a tendency, still visible in the fifteenth–eighteenth centuries, to call fragments of one river by a name taken from settlements through or near which the river flowed (e.g. *Nida – Działdówka – Wkra*). On the other hand – the name of the upper course of the river was transferred to the entire river, up to its estuary (rarely, the other way round).

Both these effects, particularly the latter, would appear proper for the Polish hydronymy, if not for the fact that in Mazovia they sometimes occur both at the same time for one river. Finding these changes and determining whether a given name denoted a specified fragment of a river, or its entire

On request of the ZBHG the matter was solved by the Prezydium of GRN in Krzynowłoga Mała, which claimed that there is only one village *Piastowo* there, which was called *Pajki* before the First World War.

²⁰ For a substantial part of Mazovia we use the study prepared by a former notary of Warsaw: A. Jarzęcki *Spis miejscowości woj. warszawskiego na dzień 1. II. 1963* (MS in collection of ZBHG).

²¹ Only 17 issues were published so far for Mazovia in the series *Urzędowe nazwy miejscowości i obiektów fizjograficznych*. See I. Gieysztorowa, *Źródła pisane*, [in:] AHP Mazovia, footnote 30.

²² *Hydronimia Wisły*, part 1, ed. P. Zwoliński, Wrocław 1965.

course depended on the number and nature of source entries, taken from different, completely unrelated sources.

A typical example of such changes in a river's name can be found in one of Bzura's right tributaries. Since the eighteenth century the whole river was called *Pisia*. This river flows in two arms in its upper course up to the village Gągolina (hence the name of its lower course). The left arm – called *Pisia* today, was called *Radziejówka*²³ between the fifteenth and the eighteenth centuries, rarely: *Gągolina*. The name was taken from the village Radziejowice,²⁴ situated in the river's upper course. The right arm – called *Tuczna* today – had five or six different names between the fifteenth–eighteenth centuries. Apart from the name *Tuczna*,²⁵ borrowed from a miller's name,²⁶ this arm was also called *Gągolina*,²⁷ *Kamionka*, *Petrykosa* (*Petrykowska*), or *Piotrówka*,²⁸ and most often – *Kuklówka*.²⁹ All these were adopted from the names of settlements near which the river flowed in its upper course.

Let us also add here that a rare hydro- and topographic situation made it difficult for us to ascribe proper names to both rivers, joining in their lower course near Gągolina. The springs of both rivers lie nearby (4 or 5 km from each other), the rivers flow in the same, north-western direction, their channels were of similar length, and finally, after joining and becoming one near Gągolina they separated again shortly afterwards into two streams encircling an island, on which the village Strumiany was located. The arms ultimately joined behind this village, and the river flowed towards Bzura. This situation near Gągolina (Kaski) was not overlooked by the inspectors from Sochaczew starosta's district, who in 1510 in the description of the three villages recorded under a common name *Kaski* (*Kaski Wyczółki*, *Kaski Gągolina*, *Kaski Młyńska Wieś*), called the streams *Wiskicki* or *Jaktorowski*,³⁰ depending on the more important settlement or the direction from which these two streams, joining near Gągolina, flowed.

The limited supply of sources sometimes prevents us from determining which of several, and sometimes simultaneously used, names of a given river denoted only a fragment, and which meant the whole river. However, as shown by the above example, in Mazovia it was a natural and common phenomena that names of rivers and streams formed in their upper course and were next transferred to the entire course of a river, despite the local trend to call fragments of rivers by their own names.

In case of *Radziejówka* (called *Pisia* since the nineteenth century), such a situation was confirmed, in a quite illuminating manner, by two independent authors from the sixteenth and the eighteenth centuries. The first – a Mazovian estate administrator Wojciech Boguski in an inventory of Sochaczew starosta's district, written in 1561 after the death of starosta Stanisław Borek, noted under *Wiskitki*: 'molendium cum piscine... fluvio isto cui transit a Radzieiowicze'.³¹ The other scribe – the parson of Wiskitki, rev. Adam Markiewicz noted in 1792 in the description of Wiskitki: 'two ponds by the River Radziejówka, because from Radziejowice the water goes to the mill Ruda, Szyszka, and then to the parsonage in Wiskitki... to Oryszew... Drzewicz and Kaski'.³²

²³ LR XVI, pp. 42, 44, 173; LR XVII, pp. 19, 84, 179; LR 1789, p. 93.

²⁴ In 1438 for the fragment Wiskitki–Drzewicz, in the document of Rev. Siemowit quoted in the border document from 1527 (MK 43, f. 229). In 1510 for the entire river (ASK LIV 9, f. 35).

²⁵ Year 1533 'Jaktorów villa super fluvium Thuczna', ASK LVI S. 4 (I), f. 25.

²⁶ Year 1452 'Dux donat providio Stanislaio Thuczny molendina: minere et aliud farine Nova minera super fluvium Cuclowka inter Jactorow et Cuclowka bonorum' (MK 337, f. 62). J. Wiśniewski pointed recently to the common practice of naming mills after the surname (nickname) of the miller or after names of rivers and streams (idem, *Nazwy młynów w Polsce*, KHKM, vol. 18, 1970, no. 3, pp. 449–455), who stated, on the basis of evidence he collected, that 'sometimes the name of the mill ousted the old name of a rivulet, which could nowadays bear the mill's name'. The name *Tuczna* confirms Wiśniewski's example, as it ultimately ousted *Kuklówka* and its forerunners. See below footnote 28.

²⁷ Year 1504, the entry about the spring of the river 'molendium in fluvio Gogolina in bonis Gnoyna penes Sbyroza', MK 18, f. 214; 'Molendium Ogigiel seu Thuczny in fluvio Gogolina sub villa Jactorow', year 1606, MK 133, f. 17.

²⁸ In 1510, by the inspection of the starosta's district of Sochaczew it was stated under the village *Jaktorów* that: 'Jaktorów... ubi est minera in fluvio Kamionka seu Petrikoska dicta', ASK LVI 9, f. 32. In 1528: 'molendium Colaczek iuxta Jactorowo super fluvium Petrykowska', MRPS IV/2, 15412. Several villages were located in the close vicinity of the spring of both tributaries of *Gągolina*: *Radziejowice*, *Kamionka*, mentioned above (see footnote 27) *Gnojna* and *Zbierzka*, *Petrykozy* and *Piotrowice*. *Piotrowice* gave its name to the river: *Piotrkówka* (*Petrykowska*).

³² K. Perthées, *Geograficzno-statystyczne opisanie parafii Królestwa Polskiego*, vol. 9, p. 98 (microfilm in the library of IH PAN).

There were some minor difficulties caused by another, larger right tributary of the Bzura – the one called *Mrowa*,³³ in the fifteenth–eighteenth centuries, rarely *Rnowa*,³⁴ and *Utrata*³⁵ since the wane of the eighteenth century. The river flowed from the same geographic region as *Radziejówka* and *Kukłówka* (in the forests near Skuły, east of Mszczonów). In this case, the usual obstacles (name changes) were accompanied by additional problems resulting from an incorrect identification of the nineteenth century and modern studies. *Mrowa* has a tributary in its middle course on the left side (on the nineteenth century maps) called *Kur* in the upper course near Grodzisk, *Kłodnica* in the middle course near Kłodno, and *Rokitnica* in the lower course near the village Rokitno. This tributary of the *Mrowa*, a half shorter than the remaining – upper and middle course of the river, was quite unexpectedly called *Mrowa* in official registers and on the maps.³⁶

Another characteristic feature of Mazovian toponymy and hydronymy concerns names derived from river names, consisting of one or two elements. The first group contains both names of settlements derived from the names of rivers, streams or lakes (*Rawa – Rawa*, *Biała – Biała*, *Skroda – Skroda*, etc.), and the other way round: names of rivers taken from settlement names (*Działdówka*, *Radziejówka*, *Kukłówka*, etc.). Given the bilateral relationships of these names, it is difficult to tell, which came earlier – the name of the river or the name of the village. However, in Mazovia – in contrast to other Polish lands – the share of such names is much greater than it would appear from A. Wilkoń's calculations.³⁷

There was a purely Mazovian type of language formation, consisting of quite a few names appearing in several combinations in the north-eastern part of Mazovia, characterized by the following features: 1) names of rivers and streams taken from names of physiographic objects, often kept in the first case (*Dąb*, *Jabłoń*). 2) A concentration of site names unparalleled anywhere else consisting of two or even three words, of which the last element is a name of a river, stream or slope (*Wiśniewo-Dąb*, *Konopki-Jabłoń*, *Cedry-Złotystok*). 3) Forming names for settlements located *in summitate* (*vertice*), at the 'summit' of a river (*Carvovo summitate Cubra – Karwowo Wierzch Kubra*, now: *Karwowo Kubrzane*; *Wiśniewo Vertice Colonia*, now: *Wiśniówek Wertycze*).³⁸

Z. Gloger first noticed these phenomena, common in Łomża and Wizna lands,³⁹ and A. Wolff listed around 30 settlements in the district of Zambrów alone, which is a typical example of the formation of these kinds of names.⁴⁰

The formation of these types of site names, dating back to the colonization period, has recently been explained by J. Wiśniewski, who rightly stated that 'the name of a river was often used as the first element in describing the location of a settlement. It frequently became a village's name, either temporarily, or permanently'.⁴¹ J. Wiśniewski's methodological remarks helped us solve the problems with several such names of rivers and villages.⁴² Let us finally add here that this typically Mazovian

³³ 'Theloneum pontalium in fluvio Mrowa', MK 106, f. 155, year 1570.

³⁴ In the fifteenth century *Rnowa*, in the sixteenth century – *Mrowa*, in the eighteenth/nineteenth century (on the maps by Perthées, Giilly-Cron and the Quartermaster's map) alternatively *Mrowa-Rnowa-Utrata*. A change like *Mrowa – Rnowa* is not isolated. *Bzura*, attested by numerous source records, was called *Mzura* by an 1508 entry; ASK LVI S. 4 (I), f. 4.

³⁵ The name of this River, *Utrata*, appears relatively late. It came in use in the second half of the eighteenth century, first alternatively: *Mrowa-Utrata*, then only *Utrata*. The name probably originates from a meaningful name of an inn – *Utrata*, situated by a highway near Błonie, between the villages Radzikowo and Kopytów, where the bridge toll was collected. See above footnote 33.

³⁶ On the 1:100,000 maps from 1914, 1934, 1951 the left tributary of the *Mrowa* (*Utrata*) was called *Mrowa*. In the *Hydronimia*, p. 572, *Mrowa* or *Mrowna*, or *Rnowa*, or *Rokitnica*, or *Kur*. In the *Urzędowe nazwy miejscowości i obiektów fizjograficznych*, no. 216 (the district of Grodzisk Mazowiecki) – *Mrowna*.

³⁷ A. Wilkoń, *Polskie nazwy miejscowe od nazw rzek*, „Onomastica”, vol. 8, 1963, no. 1–2, pp. 87–124.

³⁸ For a broader commentary on this type of names see A. Wolff, *Nazwy miejscowe na Mazowszu*, part 1, p. 89, footnote 12; J. Wiśniewski, „Onomastica”, vol. 9, 1959, pp. 504–505. Three curious names formed in this way, namely: *Werchrata*, *Wierzchrachanie* and *Wierzchrzeczyca* (the Rivers Rata and Rachanka) in the previous land, later Voivodeship, of Bełsk, are probably Mazovian toponymic formations from the period when this land was ruled by the Mazovian dukes between 1387 and 1462.

³⁹ Z. Gloger, *Dawna ziemia Łomżyńska*, „Biblioteka Warszawska”, 1876, vol. 2, pp. 579–595.

⁴⁰ A. Wolff, *Nazwy miejscowe na Mazowszu*, part 2, pp. 91–92.

⁴¹ J. Wiśniewski, „Onomastica”, vol. 9, 1959, pp. 504–505.

⁴² For instance, two rivulets with an identical name *Gręzka*, separated from each other by some 20 km and flowing into the Wissa. One flows from Brzeźna and flows into the Wissa in Wąsosz, the other – from the village Supa and near Łoje-Awissa, *ibidem*, p. 503, footnote 44.

group of water names consists also of river names in which the latter element is a name of a stream, commonly called 'stok' ('a slope') in Mazovia (*Białystok, Ciepłystok, etc.*), and which were wholly incorporated into names of villages situated by these 'slopes'.⁴³

It is a well-known fact that physiographic elements influence the formation of site names. It is also known that topographic names constitute an important group of Polish geographic names. Among them, names derived from prepositional phrases with the use of the suffix *za* form a separate group: *Zagórze, Zakrzewo, Zalesie, Zabłocie, Zarzecze, Zastruże* – they appear quite evenly in all Polish lands. However, another interesting sub-group of territorial and site names could be isolated here, these would be the names derived from river names, which distinguish Mazovia from other lands of the Crown: *Zawkrze*,⁴⁴ *Zapilcze*,⁴⁵ *Zawiśle*,⁴⁶ and settlement names: *Zaliwie, Zamienie, Zaorze, Zarusie, Zasonie, Zaskrodzie*.⁴⁷

Finally, when it comes to the **forests**, we can say that there were no major difficulties in this field, as only large woodland complexes were depicted on the map of Mazovia. These complexes belonged to the Crown and were called 'puszcze' (Latin: *desertum*, a large uninhabited forested area) in the sixteenth century sources. The source basis (mostly inspections of royal property) was enough for us to establish the range of these forests and their names, accepted in their historical wording, only with modernized spelling. Other Mazovian woods and coniferous forests belonging to the wealthier nobility and larger Church estates (e.g. the forests in Łowicz-Skierniewice estates, the property of the archbishops of Gniezno) were not marked on the map, as they were subject to constant deforestation (clearings) and the source information on their names is only random, and does not encompass the entire territory of Mazovia.

(1973)

III.4.8 PODLASIE VOIVODESHIP

Paweł Swoboda

Amongst those experts in the field of onomastics involved in researching the nomenclature indigenous to the region of Podlasie, the area that has garnered the most attention is the study of anthroponymy (proper names), a subject that has resulted in a dozen or so monographs and studies of a lexicographic nature, as well as numerous articles. In contrast the toponymic output is more modest in volume. In a 2018 article dealing with the state of onomastic research into the Podlasie region, Leonarda Dacewicz¹ mentions but two monographs on the topic of geographical nomenclature, both written by Michał Kondratiuk – *Nazwy miejscowe południowo-wschodniej Białostoczczyzny*² from 1974 as well as *Elementy bałtyckie w toponimii i mikrotoponimii regionu białostockiego*,³ published eleven years later. It is important to also mention Irena Halicka's two-part *Nazwy miejscowe środkowej i zachodniej Białostoczczyzny*,⁴ and published in the years 1976–1978, and which for unknown reasons was omitted by Dacewicz in her review. However this was incorporated in an older review article by Kondratiuk on the state of onomastic research within the Białystok region.⁵

The aforementioned studies of place names written by Michał Kondratiuk (1974) and Irena Halicka cover just a part of the area occupied by the Podlasie Voivodeship in the sixteenth century as discussed in this volume. This is due to the fact that the cited authors were not really discussing the historical nomenclature of Podlasie as such; instead they were focusing on the area of the Białystok Voivodeship within its borders prior to the 1975 administrative reform. The boundaries of the south-western, central and western Białystok lands encompassed the entirety of the sixteenth century Bielsk district but included only fragments of the districts of Mielnik and Drohiczyn, the border of which was naturally created on the southern and western fronts by the course of the Bug River. At the same time it is important to note that the nomenclature collected and discussed in the aforementioned works does not solely pertain to the area covered by the Podlasie Voivodeship in the second half of the sixteenth century, but also to that occupied by the Brześć Litewski Voivodeship (areas occupied in part by the present-day district of Białystok and Hajnówka) as well as the Voivodeship of Mazovia (currently the Zambrów, Łomża, Kolno and Grajewo districts).

When reviewing the list of toponymy-centered works devoted to Podlasie which taking into account the historical angle (including the period that is of most interest to us) one has to include works dedicated to the research of word formation processes occurring in the place names of the area in question, such as Hubert Górniewicz's⁶ works on family names, Urszula Bijak's⁷ research into

⁵ M. Kondratiuk, *Badania onomastyczne w regionie białostockim (stan i perspektywy)*, „Rocznik Białostocki”, vol. 14, 1981, pp. 305–323.

⁶ H. Górniewicz, *Rodowe nazwy miejscowe Podlasia*, „Onomastica”, vol. 12, 1967, pp. 5–69.

⁷ U. Bijak, *Nazwy zestawione typu Boguty-Augustyny na Mazowszu i Podlasiu*, „Onomastica”, vol. 25, 1990, pp. 31–54.

composite names such as *Boguty-Augustyny* and Leszek Bednarczuk's paper on the subject of settlements that end in the suffixes *-ęta / -enięta*.⁸ The nomenclature of the Podlasie region has also been the focal point of several papers revolving around the subject of word formation in a wider geographical context, looking at it from a national or even pan-Slavic point of view. Amongst these works was Aleksander Wilkoń's article on place names such as *Tyszowce, Witoszyńce*⁹ as well as two monographic studies – one by Halina Safarewiczowa, written on the subject of place names such as *Mroczkowizna, Klimontowszczyzna*¹⁰ and one by Henryk Borek, centred around Western Slavic toponyms bearing the *-bn-* affix.¹¹ However, searching for Podlasie-related material in canonical studies of the remaining word-formation types, such as the works of Stanisław Rospond (names with the suffixes **-jb-* i **-bsk-*), Kazimierz Rymut (patronymic places names bearing the suffixes *-(ov)itjo-*) and Ewa Rzetelska-Feleszko (names with the suffix *-ica*) is, with only a few exceptions, completely futile.

Apart from monographic works there exist many articles devoted to the details of various toponymic issues. It is important to first enumerate the multiple works written by the aforementioned Michał Kondratiuk, many of which were assembled in the book entitled *Nazwy geograficzne i osobowe Białostoczczyzny*,¹² a volume that additionally contains a full bibliography of works for the period 1962–2016, created by this eminent Polish researcher of Podlasie place names. Additional note needs to be given to the extensive article by Piotr Złotkowski, dedicated to the names of mills and milling settlements in the old Brańsk starosty.¹³ The names of the villages and towns of Podlasie are also described in the multi-volume dictionary entitled *Nazwy miejscowe Polski*,¹⁴ compiled at the Polish Academy of Sciences Institute of Polish Language.

The academic works presented above, though both territorially and thematically covering the onomastics of Podlasie in its entirety, present a general image of the subject. A curious reader will find them a source of both etymological explanations and source documentation for many of the names presented in this volume of the AHP series. This present commentary has not set itself the goal of describing the sixteenth-century nomenclature of Podlasie in its entirety. Rather I intend to focus on those most characteristic features that distinguish it from other historical Polish lands, as well as to highlight its internal diversity, one induced by both language-related and extra-linguistic factors.

The fringe nature of Podlasie, which for many centuries was the meeting ground for tribes of both Slavic and Baltic provenance and from the fourteenth century onwards became a place where predominantly Polish, Ruthenian and Lithuanian settlers mingled (these groups differing from one another not just in an ethnic sense, but also in the societal),¹⁵ is clearly reflected in its diverse toponymy. The sixteenth-century toponymy of this area is characterized by the presence of various linguistic influences, both in the case of the pronunciation and linguistic provenance of the place names, but equally in the processes of word formation and the way these names have been recorded in the relevant documents. This is borne out by the visible distribution of names bearing particular linguistic characteristics, as well as the commonly occurring phenomenon whereby many simultaneous name variants are used in reference to one specific settlement. This name variation phenomenon (if not even its polynormality) of settlements in Podlasie was not caused solely by its peripheral placement and multicultural character, but also as a result of that mass settlement was a relatively late phenomenon, only really taking its initiation in the period between the fourteenth and fifteenth centuries.¹⁶ The names of many of the settlements featured in the present AHP volume, especially those founded in the sixteenth century,

¹⁶ *Ibidem*, p. 116.

were at the time far from fully crystallised and fixed. The late arrival here of established permanent settlement structures most naturally influenced, resulting in the younger place-name formations dominating in Podlasie toponymy.

Due to the absence of settlement network continuity, and here mainly caused by the ravaging of Podlasie by wars that occurred in previous centuries, few toponymic relicts have survived from ancient times. In his paper dedicated to exposing the oldest layer of Polish geographical nomenclature (within the bounds of early medieval Slavdom), the 'pre-Slavic' layer, as the author Zbigniew Babik notes, contains just a couple of names (and these referring solely to rivers in the area), amongst which are: *Biebla*,¹⁷ *Brok*, *Bug*, *Dybla* (marginally, as it joins the Biebrza River to the north of Goniądz), *Elk*, *Golda*, *Krzna*, *Liw* (known today as *Liwiec*), *Liza*, *Mień* (present-day *Mianka*), *Narew*, *Strabla* (present-day *Strabelka*). According to this researcher these aforementioned designations were unmotivated by the languages existing in this area during the medieval and early modern period,¹⁸ which means that they must have been created prior to these time periods. Ascertaining their ethnolinguistic provenance has, however, proved to be quite a challenge. Only in the case of the *Krzna* River has there been any resolution; according to some researchers the name refers to the Baltic word **kirsna*, meaning 'black'.¹⁹ All the aforementioned names, as mentioned earlier, are exclusively potamonyms (the names of rivers), something characteristic for this early linguistic layer. Some of them – *Brok*, *Liza*, *Narew*, *Strabla* – additionally refer to settlements bearing the same name, but as oeconyms these constitute descriptors of a secondary nature, being derived from the original hydronyms and at a later point in time.

Additionally, few names belonging to the structural or semantic types usually found in other historic Polish regions can be uncovered in Podlasie, as their use universally declined before the local settlement initiatives had time to properly establish themselves. This is especially true for one of the oldest Slav-originating toponymical formations present in Poland: owner-designated villages bearing the **-jb // -ja // -je* suffixes (a naming method whose prolificacy was to wane sometime between the thirteenth and fourteenth century),²⁰ something practically non-existent in the region of Podlasie. By referring to just a select few toponyms we can safely say that they represent the aforementioned type: *Goniądz* (*districtus Gonondzendzis* in 1358, *Gonyadz* in the fifteenth century) < personal name *Gonięda*, as well as *Lubowic*, currently *Lubowicz Wielki* (*Lubowyc* in 1240, *Lubowicz* in 1416) < personal names **Lubowit* (in both cases the **-jb* suffix is present), *Dobrogoszcz // Dobrogoszcze* (currently known as *Dobrogoszcz*) < personal name *Dobrogost* and *Suraż* < personal name **Sgrad*.²¹ In the case of the names of two villages- *Wyszemierz(e) // Wyszomierz* (present-day *Wyszomierz*) as well as *Wyszemierz(e)* (currently *Wyszomierz*) we are dealing with a designation that was transferred from the village of *Wyszemi(e)rze* (present-day *Wyszomierz Wielki*) located in the Mazovia Voivodeship.²²

Another structural type that is present to a marginal extent in Podlasie are the toponyms created using the affixes **-bsk-* (continued as *-sk*, *-sko*, *ska*) as well as **-bn-*, an affix that also belongs to an archaic category of word formation structure.²³ In Podlasie in the sixteenth century, names containing the *-sk(o)* suffix refer to a handful of settlements: *Bielsk // Bielsko* (*Byelsko* in 1391; named after the *Biała* River), *Brańsk // Brańsko* (*Bransko* in 1430; named so due to the proximity of the *Bronka* River, from the proto-Slavic **brьna*, meaning 'wetland, bog'), *Holowiesk* ('[z] folwarku *Holowieska*' in 1576, *Holowiesko* in 1602; from the Ukrainian word *holovycia*, *holova*, meaning 'spring, river source'²⁴),

¹⁷ Given the scant and late (first half of the twentieth century) source documentation for the name *Biebla*, it follows to exert extreme care in including it within this layer.

²⁴ Kondratiuk, p. 69.

Rajsk || *Rajsko* (*Raysko* in 1576; a derivative of *raja*, meaning ‘mud’, from the Latvian *raja*, meaning ‘stagnant, putrid, rusty water’²⁵), *Święck* || *Święcko* (*Swantsk* in 1203; a derivative of the adjective *święty* (‘holy’), a name most likely motivated by religious reasons). Although the *-sk-* affix could be added to an anthroponymic base, in the case of the Podlasie region most of the place names are constructed as derivatives of the appellatives and, with the exception of *Święcko*, connected to the topographic properties of the terrain. Names ending in *-no* / *-ne* are equally scarce – *Gnojno* (*Gnoyno* in 1503), *Granne* (*Granne* in 1453; derived from the appellative *grań*, meaning ‘border’, as the settlement is located by the Bug River), *Krypno* (*Kripno* in 1569; a derivative of *krypa*, meaning ‘manger’), *Lipno* (*Lipno* in 1567), *Wykno* (*Wykno Kuljeszi* in 1528; presently known as *Stare Wykno*; a derivative of the personal name *Wyka* and the term *wyka* motivating it).

A similar situation occurs in relation to service-related names, which were tied to the idea of institutionalized service providers, a concept which became increasingly less common at the end of the thirteenth and beginning of the fourteenth centuries, which caused the loss of productivity amongst such toponyms. According to Karol Modzelewski just a handful of such names existed by the sixteenth century for the area concerning us. These were the following: *Rudniki*, *Świniary* and *Tokary* located in the vicinity of Drohiczyn as well as *Sanniki* located near Tykocin (though this settlement was actually subject to the town at Wizna).²⁶ These names derived from the designations attributed to the employment of those that inhabited them: *rudnicy* (*rudnik* ‘a person who extracts ores and extracts iron, a miner or smith’), *świniarze* (*świniarz* ‘swineherd’), *tokarze* (*tokarz* ‘a person that manufactures rounded objects from wood’) as well as *sannicy* (**sannik* ‘sledge-maker’).²⁷ Modzelewski in his commentary to the map depicting the network of service settlements points out that due to the limited number of consulted sources, this list may be incomplete. Furthermore, the aforementioned researcher has placed the north-eastern border of the Piast kingdom on the Narew River as well as the stretch between the settlements of Wizna and Drohiczyn, while Aleksander Gieysztor on the contrary claims that this territory could have stretched as far as present-day Brześć Litewski.²⁸ Given this information, one may cautiously extend the list so as to include four more names recorded in the sixteenth century: *Bartniki*, *Stadniki* (Drohiczyn district), *Woźniki* (Mielnik district) and *Złotniki* (Bielsk district), which can all be traced back to the names of those providing particular goods and services: *bartnicy* (*bartnik* ‘beekeeper’), *stadnicy* (*stadnik* ‘horseherd’), *woźnicy* (*woźnik* ‘he who makes carriages and carts, he who transports, carries’) and *złotnicy* (*złotnik* ‘he [goldsmith] who crafts objects from gold and other metals’).²⁹ The remaining few toponyms from the Podlasie region, though similar to the service-related names in both form and semantics, should be classified as names relating to trades and artisan communities (under the condition that they are not derived from anthroponyms, that is to say): *Koleśniki* (*koleśnik* ‘a craftsman who produces carriages, a wheelwright’), the thrice-occurring *Leśniki* (*leśnik* ‘he who protects the forest, forester’³⁰), *Odźwierniki* (derivative of *odźwierny*, *ianitor*; doorman³¹), *Ogrodniki* (*ogrodnik* ‘gardener’³²), *Piwowary*³³ (*piwowar* ‘brewer’³⁴), *Brzozowo-Solniki*

³³ The matter of whether brewers belonged to the ranks of servants is questionable. U. Wójcik (eadem, *Polskie toponimy*, pp. 64, 73, 139) interprets the hypothetical name of the ministerials *piwowarzy* on the basis of a single Podlasie toponym *Piwowary*. According to M. Danielewski the names *Piwowary* are connected with urban craft/trade and not with service; cf. idem, *O osadach służebnych. Uwagi historyka i archeologa na marginesie książki Iwony Nobis*, „Historia Slavorum Occidentis”, 2016, no. 1(10), pp. 276–277.

³⁴ *Słownik staropolski*, vol. 6, no. 2, ed. S. Urbańczyk, Wrocław 1970, p. 146.

(*solnik* ‘salt merchant; he who deals in salt’³⁵),³⁶ *Żeleźniki / Zieleźniki* (derivative of *żelaźnik* ‘he who forges iron’,³⁷ Old Polish *żelazo, zielazo*³⁸).

The nomenclature of the Podlasie region is characterized by a high percentage of toponyms created on the basis of personal names (anthroponyms). Amongst these the most numerous group in the sixteenth century (constituting over 30% of total place names in the region) were family or house names, the intricacies of which have been covered in detail by the aforementioned Hubert Górniewicz. These are names that ‘in their most primal stage of development were used to describe the inhabitants of a particular settlement according to the personal name that was used by members of this family as a means of identifying themselves and being identified by others around them’.³⁹ These names take on the plural form of the anthroponym they are derived from, e.g. *Boguszki, Chodory, Kulesze*, which were created on the basis of the already existing names of *Boguszko, Chodor* and *Kulesza*. Górniewicz, though mentioning ‘house (*kith/kin*) names’ (a phrase first coined by Witold Taszycki), a term universally accepted by the world of Polish onomastics remarks that it would be more appropriate to instead employ the term ‘family names’, as the aforementioned toponyms were created at a time (as late as the fifteenth century in Podlasie) when if the house/kith/kin dynamic was not already an outdated classification system, as Górniewicz considers, then it was for certain in decline.⁴⁰ Other regions of Poland have records of these types of names appearing as early as the twelfth century (Lesser Poland), but the biggest increase in new examples could be noted between the fifteenth and sixteenth centuries.⁴¹ In both the Lesser Poland and Greater Poland voivodeships such toponyms were, both in the past as in present times, fairly rare, though they were however the dominant type of nomenclature in the Mazovia region. Their popularity in the Podlasie lands is bound to the input of the petty Mazovian nobility in the process of colonising these areas in the fifteenth century, making them by proxy a linguistic and cultural extension of eastern Mazovia. Many toponyms, especially in the Bielsk district, were created on surnames endemic to the Mazovia Voivodeship, while others were created on the basis of other names taken eastward by Mazovian settlers. An example of such a transfer is the existence of the settlement unit of *Grochy* (earlier *Śmierdzigrochy*), located near Łapy, which was founded by colonists originating from *Grochy* (*Śmierdzigrochy*) located in the proximity of Nasielsk,⁴² possibly also *Sobieszczki* (present-day *Sobieski*), established more than likely by settlers originating from a village bearing the same name, located in the environs of Płońsk (today also *Sobieski*).⁴³ There are also plenty of names created on the basis of anthroponyms of Ruthenian (e.g., *Chodory, Hawryłki, Ihnatki*) or Baltic origins (e.g. *Ciekuny* < personal name **Tekūnas*, from the Lithuanian *tekūnas*, meaning ‘messenger, errand-boy’; *Jaświły* < Lithuanian personal name *Jāsvilas*; *Romejki* < Lithuanian personal name *Romeika*),⁴⁴ which can be found most frequently in the Mielnik land as well as in the eastern lands of the Bielsk region, in many cases mimicking the word formation process implemented by the Mazovian settlers. Although family names are abundantly present in both Belorussian and Ukrainian toponymics, analogous word formation processes (personal name in its plural form, without the suffix) are an alien concept in both Lithuanian and Prussian toponymy.⁴⁵

However, without a doubt Mazovian colonisation was the sole contributor in the process of forming the two- or (less often) three-part structural module characteristic for place names in this region. These

composite names, e.g. *Koce-Piskuly*, *Rożki-Chrzczony*, *Olszewo-Walachy*⁴⁶ often featured a ‘family name’ of some sorts or another anthroponymic derivative (either a patronymic or one implying ownership) as one of its modular components. As quoted from Władysław Pałucki, Urszula Bijak states in her article dedicated to nomenclature of the aforementioned type:

‘The creation of such names is firmly tied to the particular social structures present in Mazovia. The most prevalent type of property present in the area were various lands belonging to nobility. This state of affairs, which came to be in the principedom era and was encouraged in the sixteenth century by the Jagiellonian dynasty in a process of favouring low and medium income nobility from the Mazovia region, a social group characterized by its high ‘reproduction rate’, resulted in the appearance of two interlinked phenomena in the area. Namely, the existence in the Mazovia region and adjacent Podlasie (which, due to the process of colonisation constituted a sort of extension of Mazovia in terms of name-formation morphology) lands of an otherwise unheard of fragmentation of nobility-owned estates, resulting in the creation of a very specific naming system.’⁴⁷

The author demonstrates in her work illustrative models of such name formations. In territory covered primarily by a general usually one-component name *A* separate parts formed, which later accumulated additional name modules, e.g. B_1, B_2, B_3, B_4 etc. ($A \rightarrow A - B_1, A - B_2, \dots$), which could also function as independent entities, especially when the said unit became an independent village. The name *A* could be an anthroponymic derivative descriptor of a nobility owned unit (e.g. *Dmochy-Mingosy*, *Dmochy-Rętki*, *Dmochy-Rozumy*), as equally originate from the name of a river, forest or other geographical object (such as *Porośla-Głuchy*, *P.-Wojślawy*, *P.-Mędle*; *Moczydły-Pszczółki*, *M.-Stankowięta*, *M.-Pidaje*; *Długa Dąbrowa-Dworaki*, *D. D.-Kaski*, *D. D.-Kamień* etc.). The other, far less common method employs a reverse order ($D \rightarrow C_1 - D, C_2 - D$) in which the second module of the phrase is shared (e.g. the neighbouring settlements of *Brzozowo-Chrzczony* and *Roszki-Chrzczony*). In our findings it is easy to note the irregularities in the construction of these double-barrelled place names or the existence of one of the components as an independent name itself.

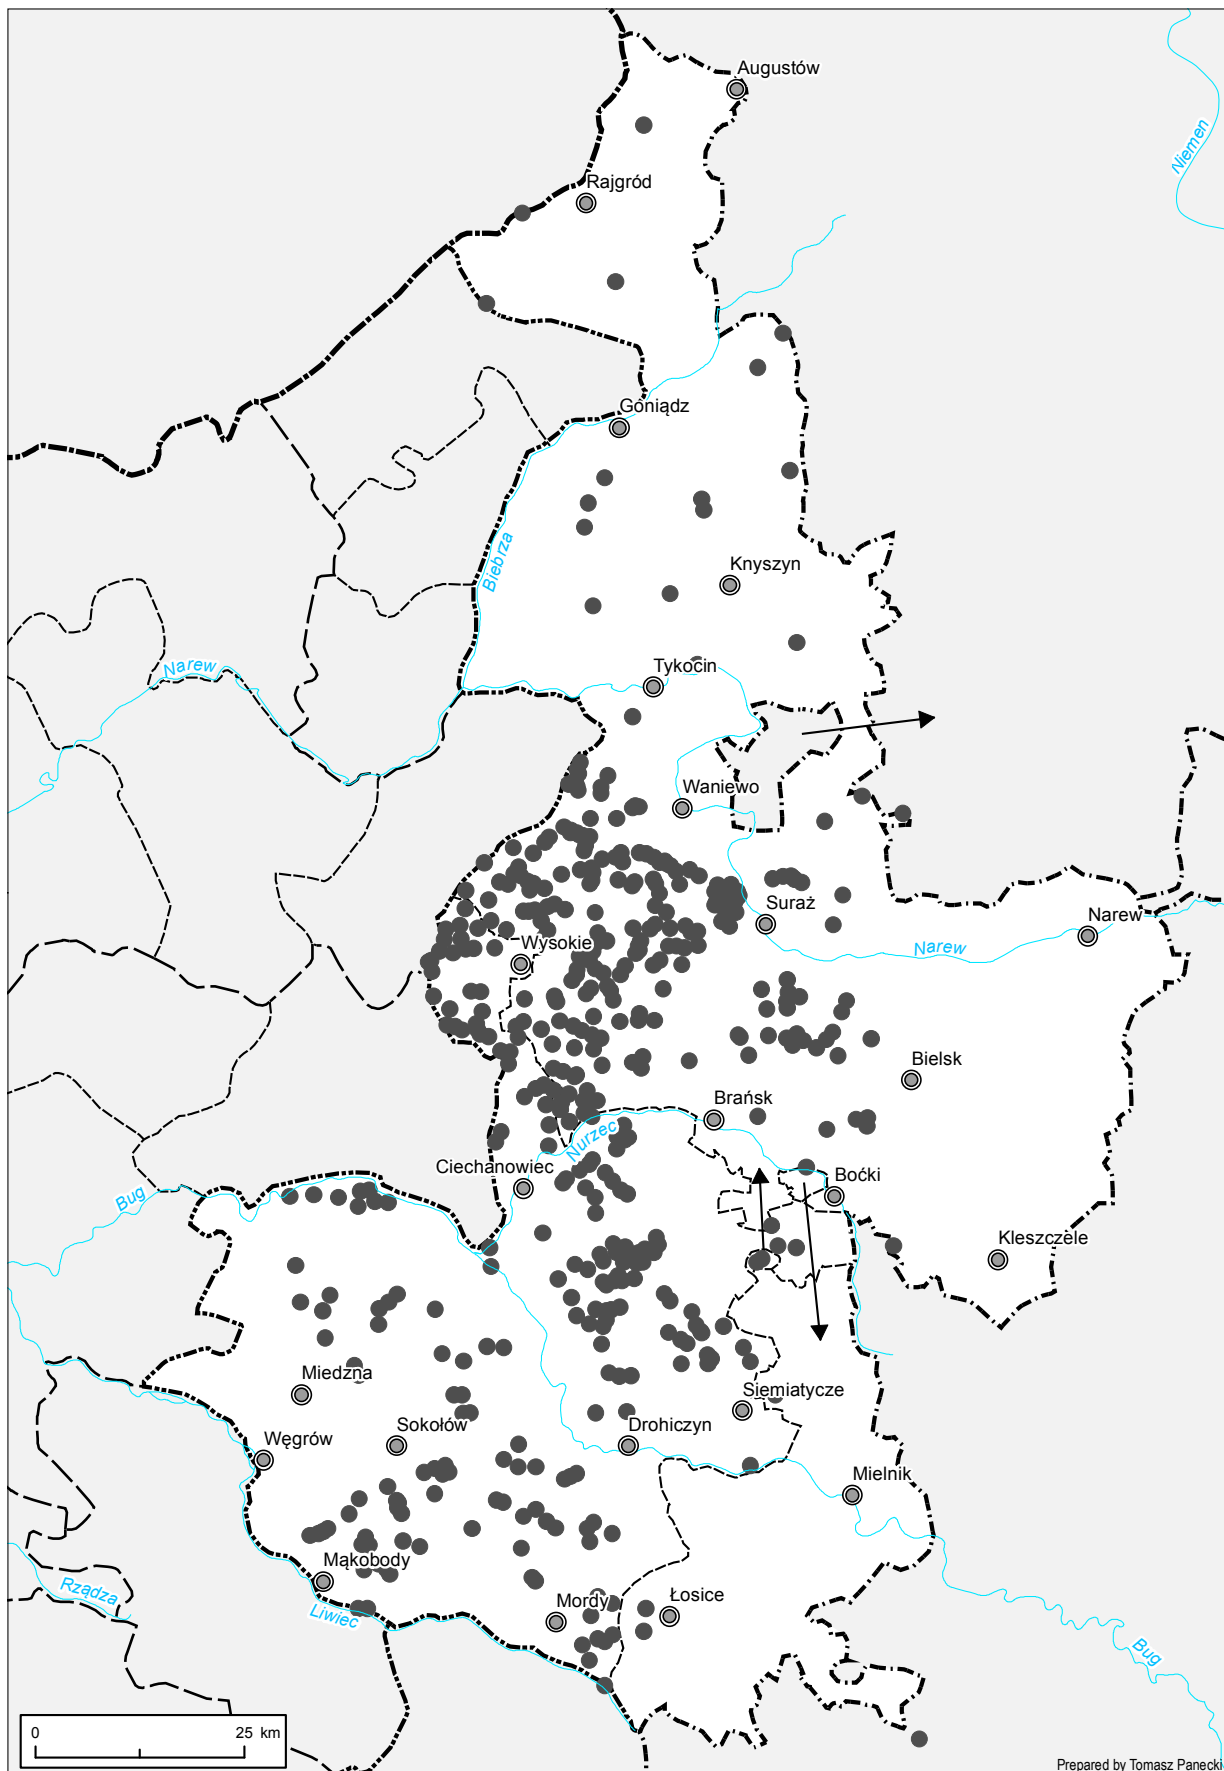

Such names were present in the sixteenth century in around 33% of all settlements (560 out of an estimated 1,670 units). Their special distribution in the topography of sixteenth-century Podlasie clearly shows, that they existed exclusively in areas of Polish colonisation, particularly the Mazovian.⁴⁸ The greatest concentration of such a nomenclature exists in the south-west part of the Bielsk district as well as in areas of the district of Drohiczyń, especially on the right bank of the Bug River. In the northern part of the Bielsk district (from the Tykocin starosty onwards) they appear sporadically, while to the east of Bielsk there are no examples whatsoever. Though in the Mielnik district three composite settlement names of this type have been noted (*Biernaty-Rudniki*, *Biernaty-Świrzbły*, *Baciki-Trzcieniec*), these all relate to settlements lying right on the district boundary with Drohiczyń or Bielsk (see Map 1).

As mentioned earlier, personal names indicating possession that are formed using the archaic suffixes **-jb // -ja // -je* are a rare occurrence in the Podlasie Voivodeship. In general, the possessive function of the descriptive noun in Podlasie ownership-implying names in the sixteenth century finds its realisation chiefly through the addition of affixes such as *-ewo// -owo, -ów* oraz *-ino// -yno, -in// -yn*. These forms are not specific to this region alone – in the category of possessive nomenclature constructions of this type also predominate in other regions of Poland. It is important however, to pay attention to the well-known phenomenon of the geographic distribution of these types of names in Polish toponymics. The isomorph limiting the appearance of variations of these suffixes divides Poland into two zones – the northern part, where the *-owo* suffix dominates, and the southern one, characterised by its use of forms ending in *-ów*. In the region of Podlasie this division runs along the course of the Bug River and is very apparent – to the north only a handful of settlements bearing the *-ów* suffix are present and vice versa. In the second half of the sixteenth century this division was also visible, though not as pronounced. Names ending in *-ów* did admittedly exist almost exclusively to the south of the Bug River (with the

⁴⁶ We have employed for the sake of clarity and here in the List, the commentary as well as on the maps lettering of names of this type with a hyphen, and here being in keeping with previous volumes of AHP. In source manuscripts, however, in printed editions they appear almost always separated.

⁴⁷ U. Bijak, *Nazwy miejscowe typu Boguty-Augustyny*, p. 33.

⁴⁸ Its eastern border demarcated the Samułka – Boćki – Drohiczyń line, which corresponded to the boundary of the districts of Drohiczyń and Mielnik; see J. Wiśniewski, *Rozwój osadnictwa*, p. 124.

Map 1. Distribution of composite names of the *Biernaty-Rudniki*, *Kocę-Piskuly* type in Podlasie Voivodeship in the 16th century

exception of *Augustów*,⁴⁹ located in the far North, as well as *Ostów* and *Śledzianów*, which were both located on the right bank of the river), but did so in the company of numerous names ending in *-owo*, which only later switched their suffix to *-ów*. It is important to note that it is the dominant (principal) names of particular settlements that are being discussed. Taking into consideration the variants that are less frequently mentioned in sources, we can observe an oscillation of sorts in the names of settlements located further north, for example in the area of the Bielsk district located by the Narew River: *Kurowo* || *Kurów*, *Pietkowo* || *Pietków*, *Pietkowo* || *Pietków* or on the Drohiczyn-Bielsk boundary *Dołobowo* || *Dołobów*, *Widźgowo* || *Wydźgów*. A similar phenomenon can be observed in the case of the *-ino*, *-in*⁵⁰ suffixes, however this is not nearly (and here equally today) as pronounced.

When discussing possessively indicative places names in the Podlasie region, it is impossible to overlook the matter of names that were created using the suffixes *-(ow)izna*, *-(ow)szczyzna*, *-(ow)czyzna*. This topic has been extensively covered by Halina Safarewiczowa in her aforementioned published research. Though this affix is used in the creation of topographic, cultural and relational names, in the field of toponymy its main function is the expression of possession by its addition to a surname, first name or the name of a trade or institution. These are not always, as Safarewiczowa writes, 'normal' possessive descriptors, for they were often created on the bases of the aforementioned words when a particular individual or institution's proprietorship over the object in question had ceased, and their occurrence was tied to the transferring of ownership in cases of inheritance, acquisition, donation or division/entitlement.⁵¹ Source materials from the sixteenth century provide numerous examples confirming the fact that many of these designations were of an exclusively lease-orientated nature, as they often existed as parallel variants of possessive descriptors ending in **-ov-/-in-* or family names. For example, the settlement of *Kierzki* was also less frequently referred to as *Kierzkowo* or *Kierzkowizna* compare equally: *Kobyłino-Pieniążki* || *Pieniążkowizna*, *Łapy-Wągle* || *Łapy-Wąglówka* || *Wąglewiczna* || *Wąglowizna*, *Sikory-Janowięta* || *Sikory-Janowizna* or *Stożnow(sz)czyzna* || *Stożnowo* || *Tużnowczyzna* etc. It is important to note that available source materials suggest all the three forms mentioned above (that is *-owizna*, *-owczyzna* and *-owszczyzna*) were equivalent to each other and could be used interchangeably in names that referred to a single subject matter, e.g. *Czechowizna* || *Czechowszczyzna* || *Czechowczyzna* or *Krukowizna* || *Krukowczyzna* etc.

Names of the category discussed above are present in the main for the part of Poland which during the Partitions fell under Russian rule with the majority of them concentrated in the lands of Mazovia and Podlasie. In the sixteenth century there existed in the Podlasie Voivodeship over 30 settlements with names like *Czechowizna*, *Krukowczyzna*, *Woroszyłowszczyzna*. Worthy of note is the fact that such names existed almost exclusively in the territories of the Bielsk district (see Map 2). In both the Drohiczyn⁵² and Mielnik districts such examples were to appear sometime later and in limited number; while to this day across the area that once lay within the borders of the old Drohiczyn district, on the right side of the Bug River such names do not feature whatsoever.

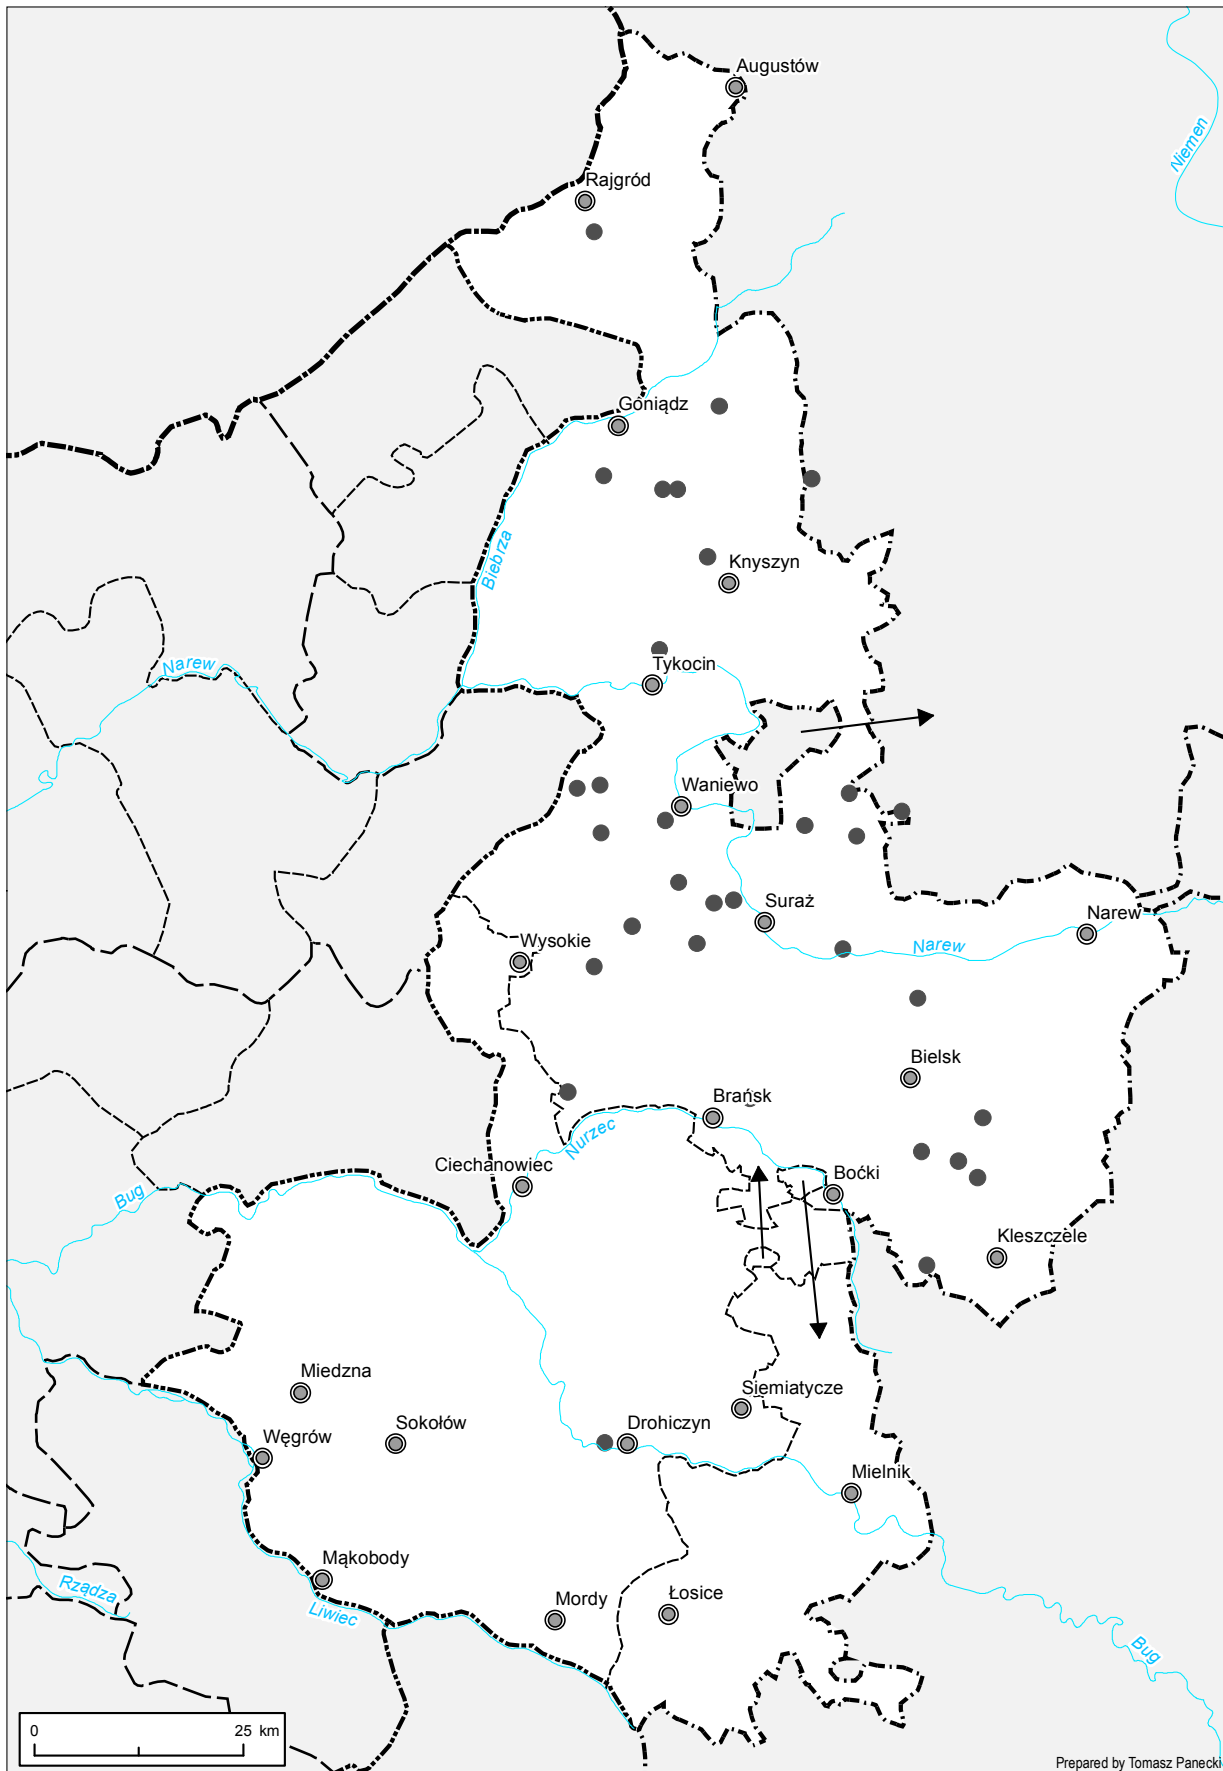

The distribution of other toponyms derived from personal names, that is to say patronymic toponyms, is equally interesting. They are generally associated with names created using the suffixes *-(ow)ice* || *-(ew)ice* which are added to the name of the individual whose descendants inhabited the same settlement. However, in Podlasie, aside from this structural type, the patronymic function was also expressed by the addition of the *-ęta* and *-(ow)ce* suffixes. More so, in the toponymics of the Podlasie region the affix *-ice* (e.g., *Dziadkowice*, *Smarklice*, *Żurobice*) has a variant, spelt *-icze* (e.g., *Falatycze*, *Molawicze*, *Siematycze*), which was the direct result of the eastern Slavic equivalent *-iči* (which exists in sources in the form of *-iczy*, for example *Żeguniczy*, *Burkatowiczy*, *Jakubowiczy*) mingling with the

⁴⁹ Such a form dominates in the second half of the sixteenth century, more rarely is also noted the form *Augustowo*.

⁵⁰ The continuing suffixes **-in-* were given first and foremost to personal names of a feminine inflection paradigm, more rarely occurring amongst the personal names of men, which in the main had motivated possessive names, as a rule relating to a founding person or the owner of a settlement.

⁵¹ H. Safarewiczowa, *Nazwy miejscowe typu Mroczkowizna, Klimontowszczyzna*, pp. 20–21.

⁵² An exception in the Drohiczyn district are *Budkowszczyzna*, and lying on the border with the Bielsk district *Oczkowizna* (also *Piętki-Oczkowizna*, *Żebry-Oczkowizna*), as well as the unidentified *Klimuntowszczyzna*. In turn the second element of the name of the village *Długa Dąbrowa-Buczewizna*, equally situated on this border (although it has not been possible to locate it exactly), rather is derived from the word *buk* and is topographic in character.

Map 2. Distribution of names bearing the suffixes *-(ow)izna*, *-(ow)czyzna*, *-(ow)szczyzna*

Polish affix *-ice*.⁵³ Due to the lack of orthographic stabilisation prevalent in the sixteenth century and the resulting interchangeable usage of certain characters it is often quite hard to differentiate whether one is dealing with names ending in *-ice* or *-icze*, as the character group of <cz> could equally signify the consonant /c/ as /č/. While in the case of other Polish regions names ending in <-icze> are assumed to have the suffix *-ice*, in the region of Podlasie the matter is not quite so straightforward. The source materials used in the creation of this AHP contain names ending both in <-ice> and in <-icze>, so as a rule the only names presented as ending in *-ice* were those that were recorded in relevant sources in such a manner. Another issue is the case of whether names ending in *-ic(z)e* are always of a patronymic variety, or whether they are simply family derivative names, created on the basis of surnames ending in *-ic(z)*.⁵⁴

Maps 3–6 depict the distribution of those patronymic names in the sixteenth century that bear the suffixes *-ice*, *-icze*, *-ęta* or *-(ow)ce*. It soon becomes apparent that names ending in *-ice* can be found only in the south of Podlasie, especially in the Drohiczyń district and, more seldom, in the Mielnik district. In these territories such names coexist with those formations bearing the suffix *-icze*, competing in a certain sense for dominance, which is backed up by the duality of certain place names, such *Chrołowice* || *Chrołowicze*, *Dziadkowice* || *Dziadkowicze*, *Starczewice* || *Starczewicze*. The areas under the jurisdiction of the Bielsk district, or its eastern part to be more precise, contain settlements whose names end exclusively in *-icze*, which is connected to the high percentage of people of Ruthenian descent living in these areas.

Only the Bielsk district additionally features a couple of names bearing the suffix *-(ow)ce*, for example *Bogdańce* || *Bohdańce*, *Piotrowce*, *Stankowce* or *Wojeńce*. Their presence is also explained by Slavic influences from beyond the eastern border. Such linguistic forms are almost exclusively encountered on the Polish-Ukrainian border in the stretch from Tomaszów Lubelski to Lesko as well as in the region of Podlasie, a matter cartographically illustrated by the earlier referenced Aleksander Wilkoń paper dedicated to this model of name formation.⁵⁵

The Bielsk district stands out as the one containing the highest concentration of names formed using the *-ęta* affix, though this phenomenon is endemic to its mid-western part only, mostly occurring between the Nurzec and Narew Rivers. Additionally, several such formations can also be found in the Drohiczyń district.

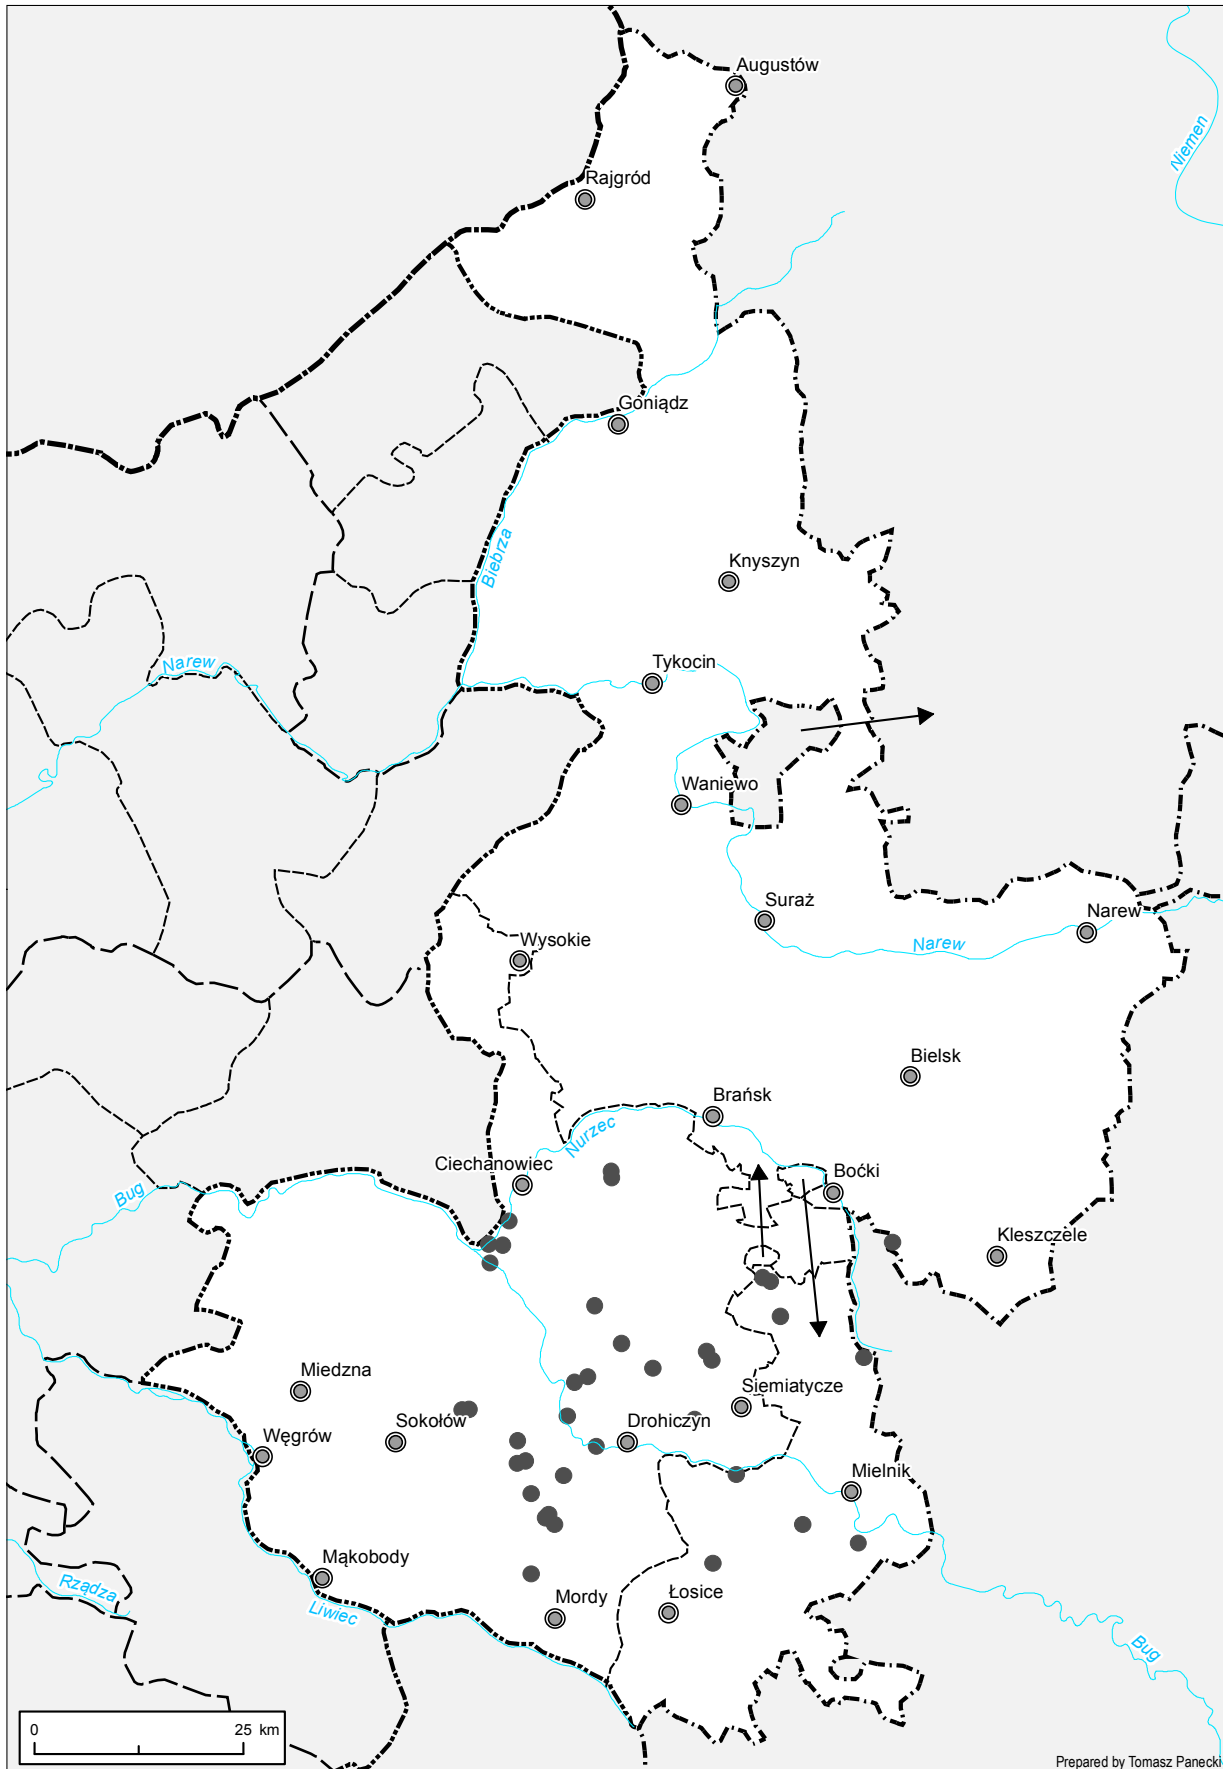

To the north of the Narew River only one such name has been noted – *Niereśla-Waskowięta*, and to the south of the River Nurzec two more have been marked – *Brzeziny-Janowięta* and *Siedlec-Miklaszowięta*. The Drohiczyń district features only three such toponyms: *(Kobylany-)Kościęta*, *Skorupy-Kościęta* as well as *Kłopoty-Stanisławowięta*. Such formations are completely absent in the Mielnik district. This makes it easier to spot the fact that their spatial distribution is nearly identical to that of the aforementioned composite names connected to the Mazovian settlement. The patronyms ending in *-ęta* can also be traced back to their roots in northern Mazovia, where to this day, alongside the region of Podlasie, they appear with the highest frequency. It is important to additionally note that this structural type appears exclusively in the north-east part of Poland.

Worthy of mention is the fact that, despite all the reviewed patronymic groups having central points of accumulation, source materials indicate that these names had multiple variants that were in use throughout their existence (a phenomenon which was remarked upon earlier in this text when discussing the *-icze*//*-ice* suffixes). Such is the case of the villages of *Piszczaty-Piotrowięta* and *Sikory-Piotrowięta*, the second component of which functioned in the sixteenth century simultaneously in the forms of *Piotrowce* and *Piotrowicze*. This aforementioned widespread tendency for variation is not limited to a specific section of semantics – many times during the time period in question (a mere half a century) an oscillation between not just the choice of patronymic suffix could be noted, but also a dynamic passing of names from category to category (e.g. possessive || familial || patronymic) was

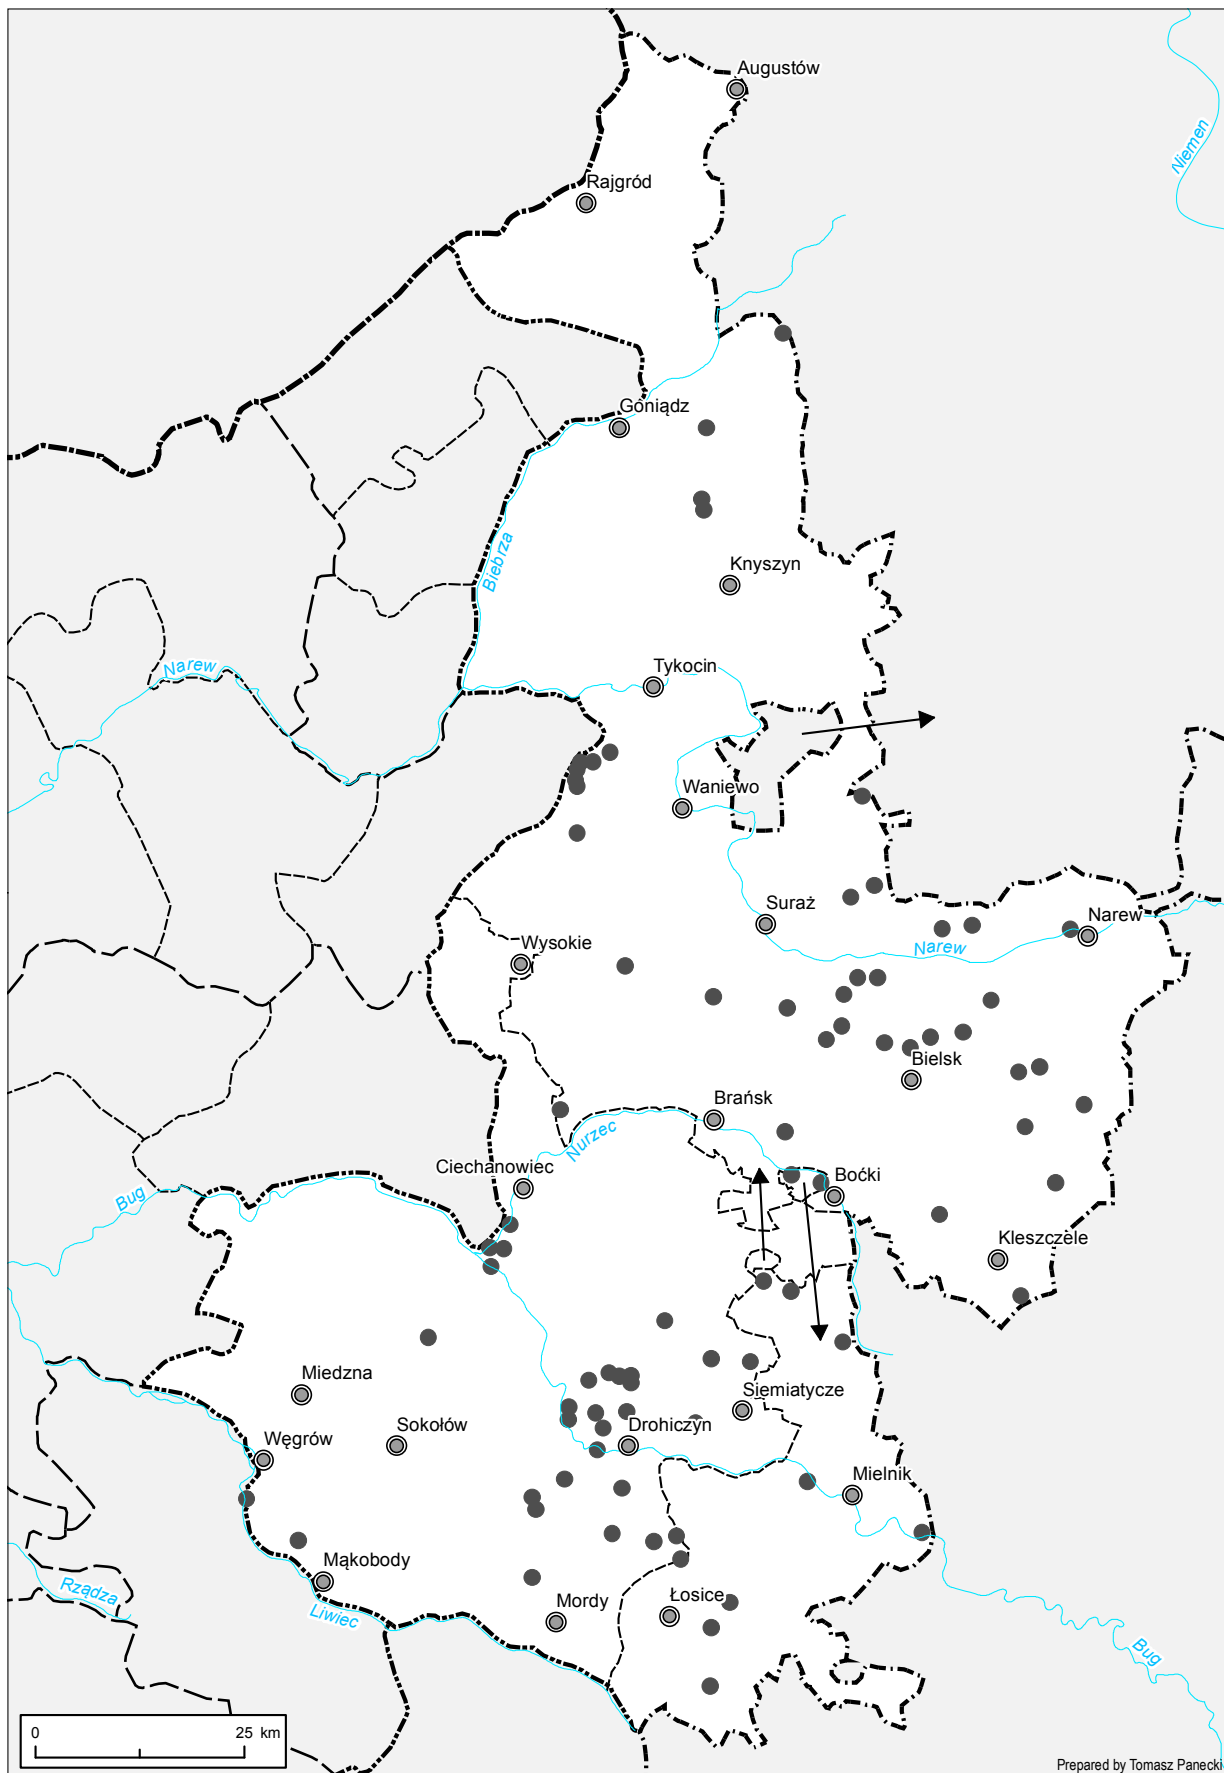

⁵³ Kondratiuk, p. 272.

⁵⁴ M. Kondratiuk included within kith names (family) only the names of those settlements in which formerly or at present there occurred surnames with *-ic* || *-icz*. As an example the village *Jacewicze* in the light of source materials is known to have been inhabited by millers of the surname *Jacewicz* (*Jaczewicz* 1576), hence justified is recognising this toponym as a family (surname) name and not that of a patronymic; *ibidem*, p. 236.

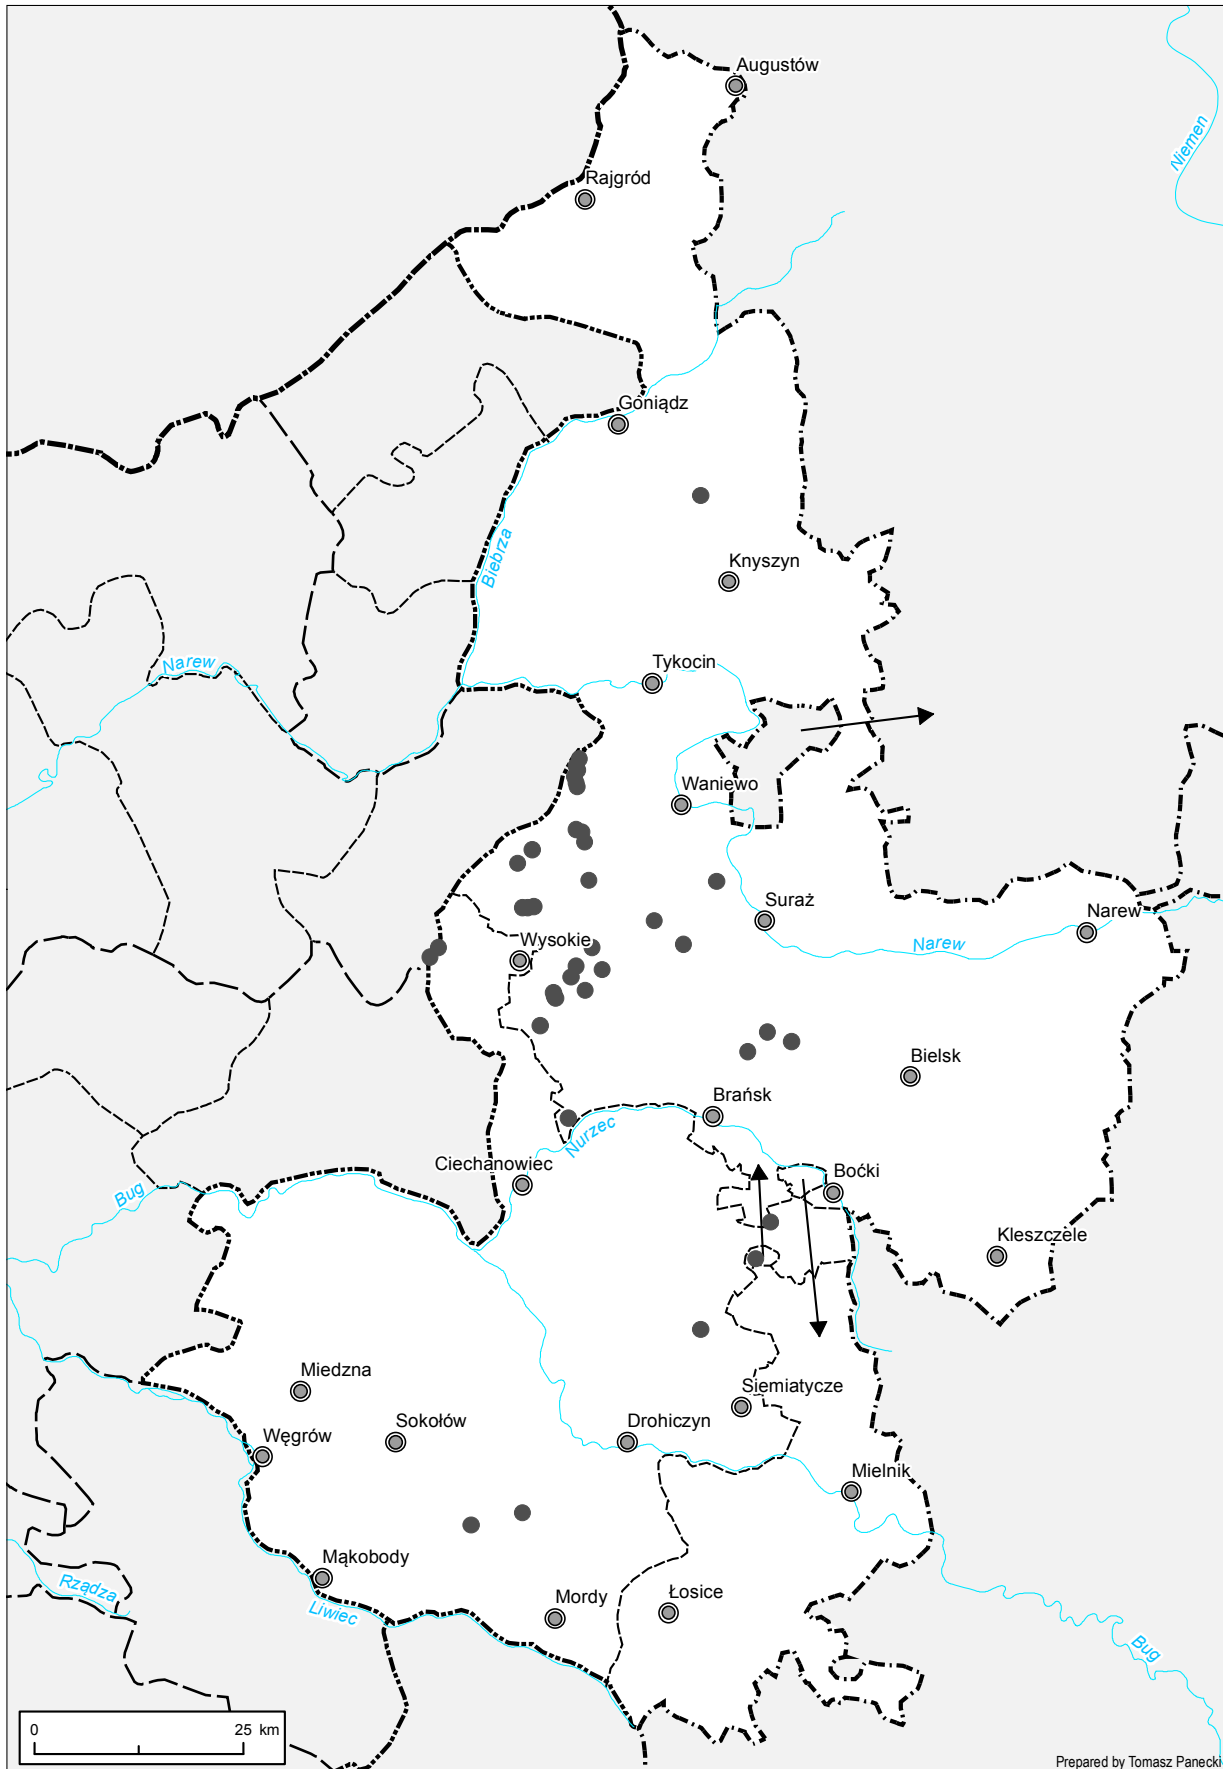

⁵⁵ A. Wilkoń, *Nazwy miejscowe typu Tyszowce, Witoszyńce w języku polskim*, pp. 80–81.

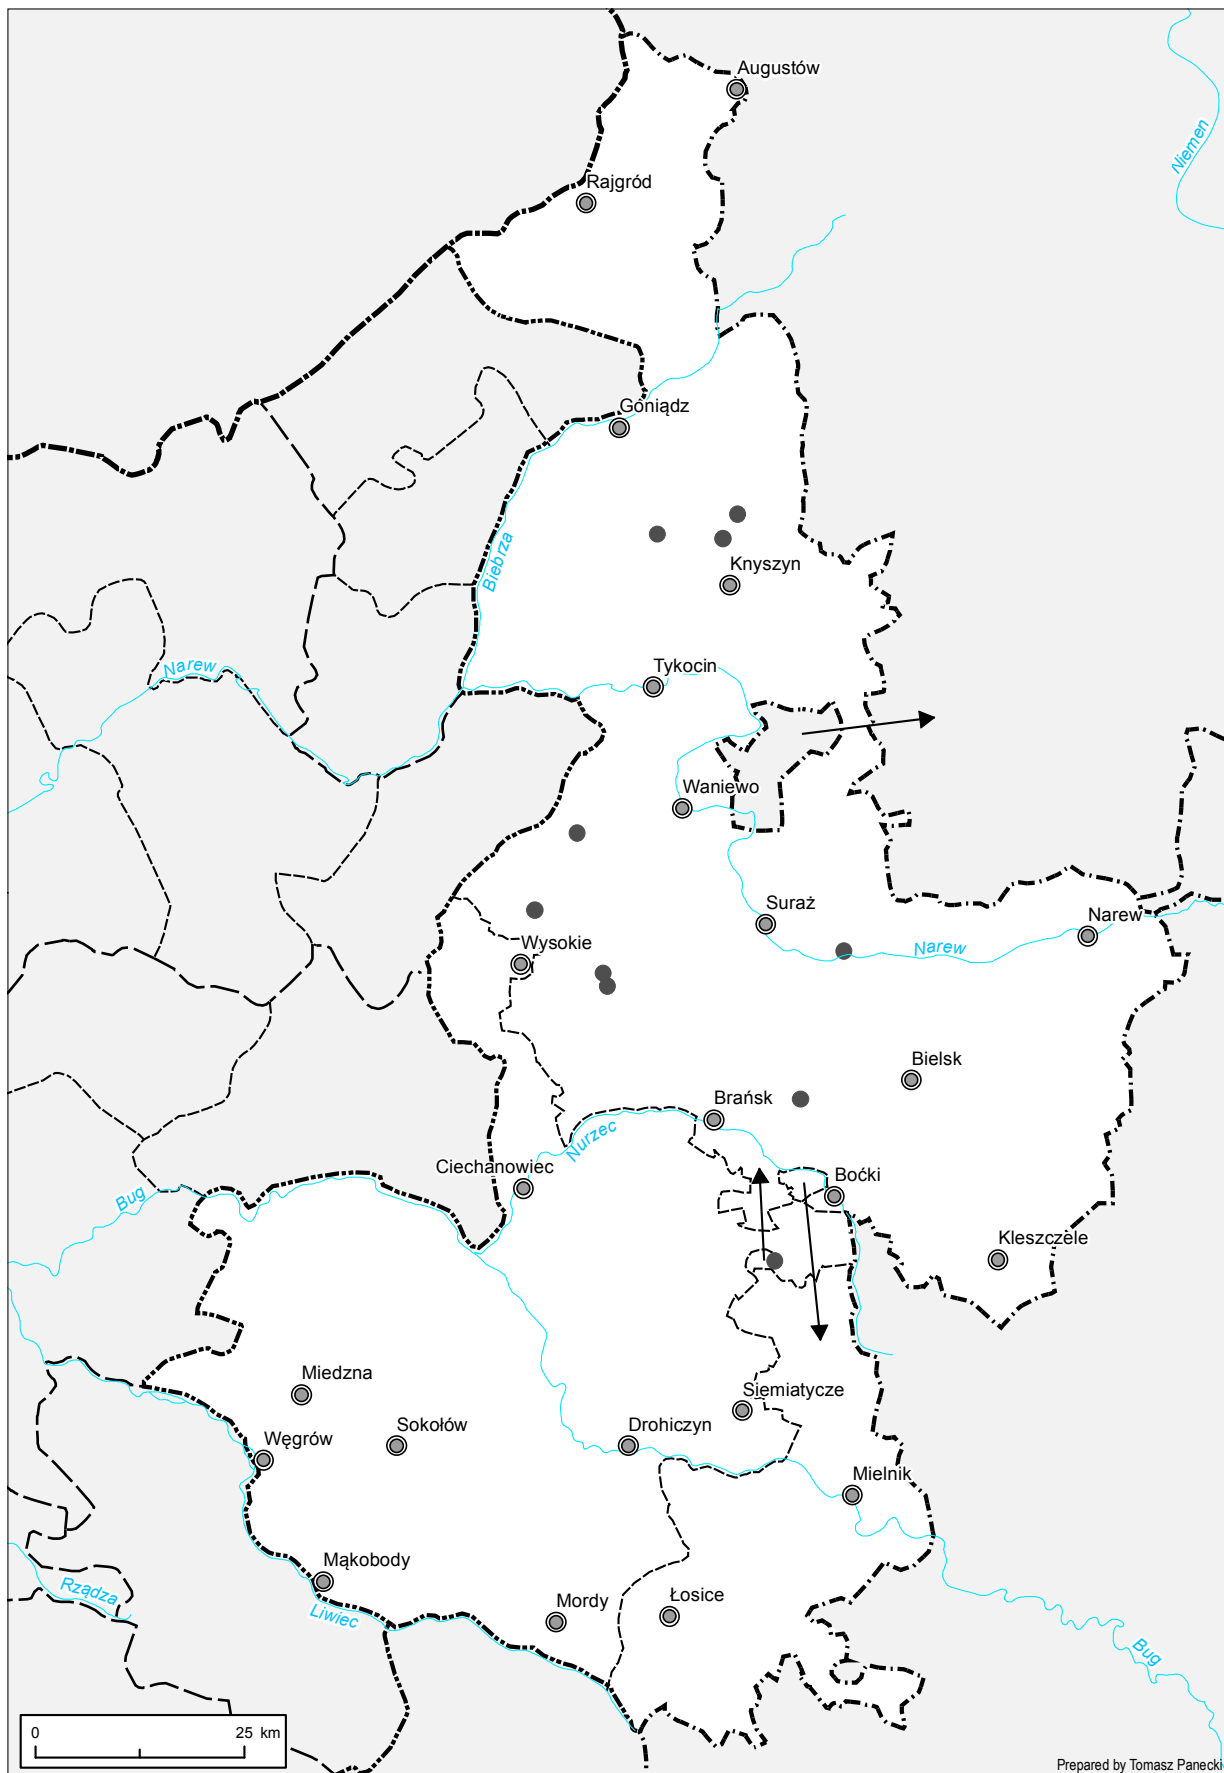

Map 3. Distribution of patronymic names bearing the *-(ow)ice* suffix

Map 4. Distribution of patronymic names bearing the *-(ow)icze* suffix

present. This phenomenon is illustrated by the following examples: *Sikory-Pawłowięta* || *Pawłowicze* || *Pawłów* or *Chojane-Stankowięta* || *Chojane-Stanki* || *Chojane-Stankowce*.

The points connected to the word formation structure of place names discussed so far, which illustrate the process of ethnolinguistic exchange in the region of Podlasie, are naturally not their sole visible result. The Polish-Ruthenian linguistic relations reflected in Podlasie's nomenclature were presented in depth by Michał Kondratiuk,⁵⁶ however this text will focus on a couple of choice key issues.

Ruthenian influences in the nomenclature of Podlasie, apart from the aforementioned *-icze* (or *-iczy*) affix, are visible in the phonetics of select toponyms. The most prevalent are place names containing the fricative consonant *h* (a laryngeal spirant), which is a continuation of the proto-Slavic sound of **g* (which in Polish equates to *g*), present in names such as: *Bohy*, *Czahy*, *Horodniany*, *Hołowiesk*, *Hruszewo*, *Pohreby*, *Siehenie* or *Uhowo*. These formations occurred mainly in the eastern parts of the Bielsk, Drohiczyn and Mielnik districts and appear to a limited extent to the west of the Tykocin–Drohiczyn–Międzyrzec Podlaski line (see Map 7). Source materials provide many more examples of the adaptation of such names to fit Polish phonetics, whether by substituting the sound *h* with *g*, as can be observed in examples such as *Hornowo* || *Górnowo*, *Horodniany* || *Grodzieńskie*, *Hruszewo* || *Gruszewo*, *Hryniewicze* || *Gryniewicze*, or by using the sound *ch*: *Smoluhy* || *Smoluchy* (present-day *Smolugi*; a derivative of the settlement name *Smoluha*), *Czahy* || *Czachy* (a derivative of the settlement name *Czaha*).

Another Eastern Slavic characteristic that is bountifully reflected in sixteenth-century toponymic sources dedicated to the region of Podlasie is the existence of pleophonic⁵⁷ forms. Names like *Hołowienki*, *Hołowiesk* (: appellative *hołowa* = Polish *głowa*), *Horodczyno* (: *horod* = Polish *gród*), *Korowice* (: personal name *Korowa*, Polish *Krowa*; present-day *Kurowice*), *Mołoczki*, *Woronie* (: personal name *Worona*, Polish *Wrona*), similarly to the toponyms discussed earlier, were present both in the sixteenth and in modern times, mainly in the eastern part of the territory in question, especially within the Bielsk district (see Map 6). However, contrary to names containing the laryngeal spirant *h*, with the exception of two cases (*Horodniany* || *Grodzieńskie*, *Horodzisko* || *Grodzisko*) the source materials reveal no examples of polonization occurring in names containing pleophonies.

An evident Ruthenian influence is the presence of Belarusian and Ukrainian common nouns and anthroponyms that constitute the basis of many place names, such as the aforementioned *Chodory*, *Woronie* or *Korowice*, but also *Bojary* || *Bojarewo* (: *bojar*), *Istok* || *Stok* (derived from the Old Ukrainian *istok*, meaning 'spring', Polish *stok*) or *Kołodzieże* (from the Belarusian *kałodzież*, meaning 'well').

Another lexical testimony of Polish-Ruthenian proximity are composite names containing a part deriving from either the adjective *lacki*, meaning 'Polish' or *ruski* 'Ruthenian'. Apart from the conjunctive pairs of neighbouring villages, such as *Boratyniec Lacki* – *Boratyniec Ruski*, *Jabłonna Lacka* – *Jabłonna Ruska*, *Skwierczyn Lacki* – *Skwierczyn Ruski*, *Twarogi Lackie* – *Twarogi Ruskie* or those located at a slightly further distance from each other like *Kamianka Lacka* (present-day *Kamianki Lackie*) : *Kamianka Ruska* (present-day *Kamianka*), in the sixteenth century there are records of the following settlements: *Milkowicze Ruskie* (present-day *Milkowice-Mački*) and *Sawicze Ruskie* (present-day *Sawice-Wieś*). All of the mentioned settlements were located in the Western part of the Drohiczyn district,⁵⁸ that is to say within the border territories of the Mazovian and Ruthenian settlement.

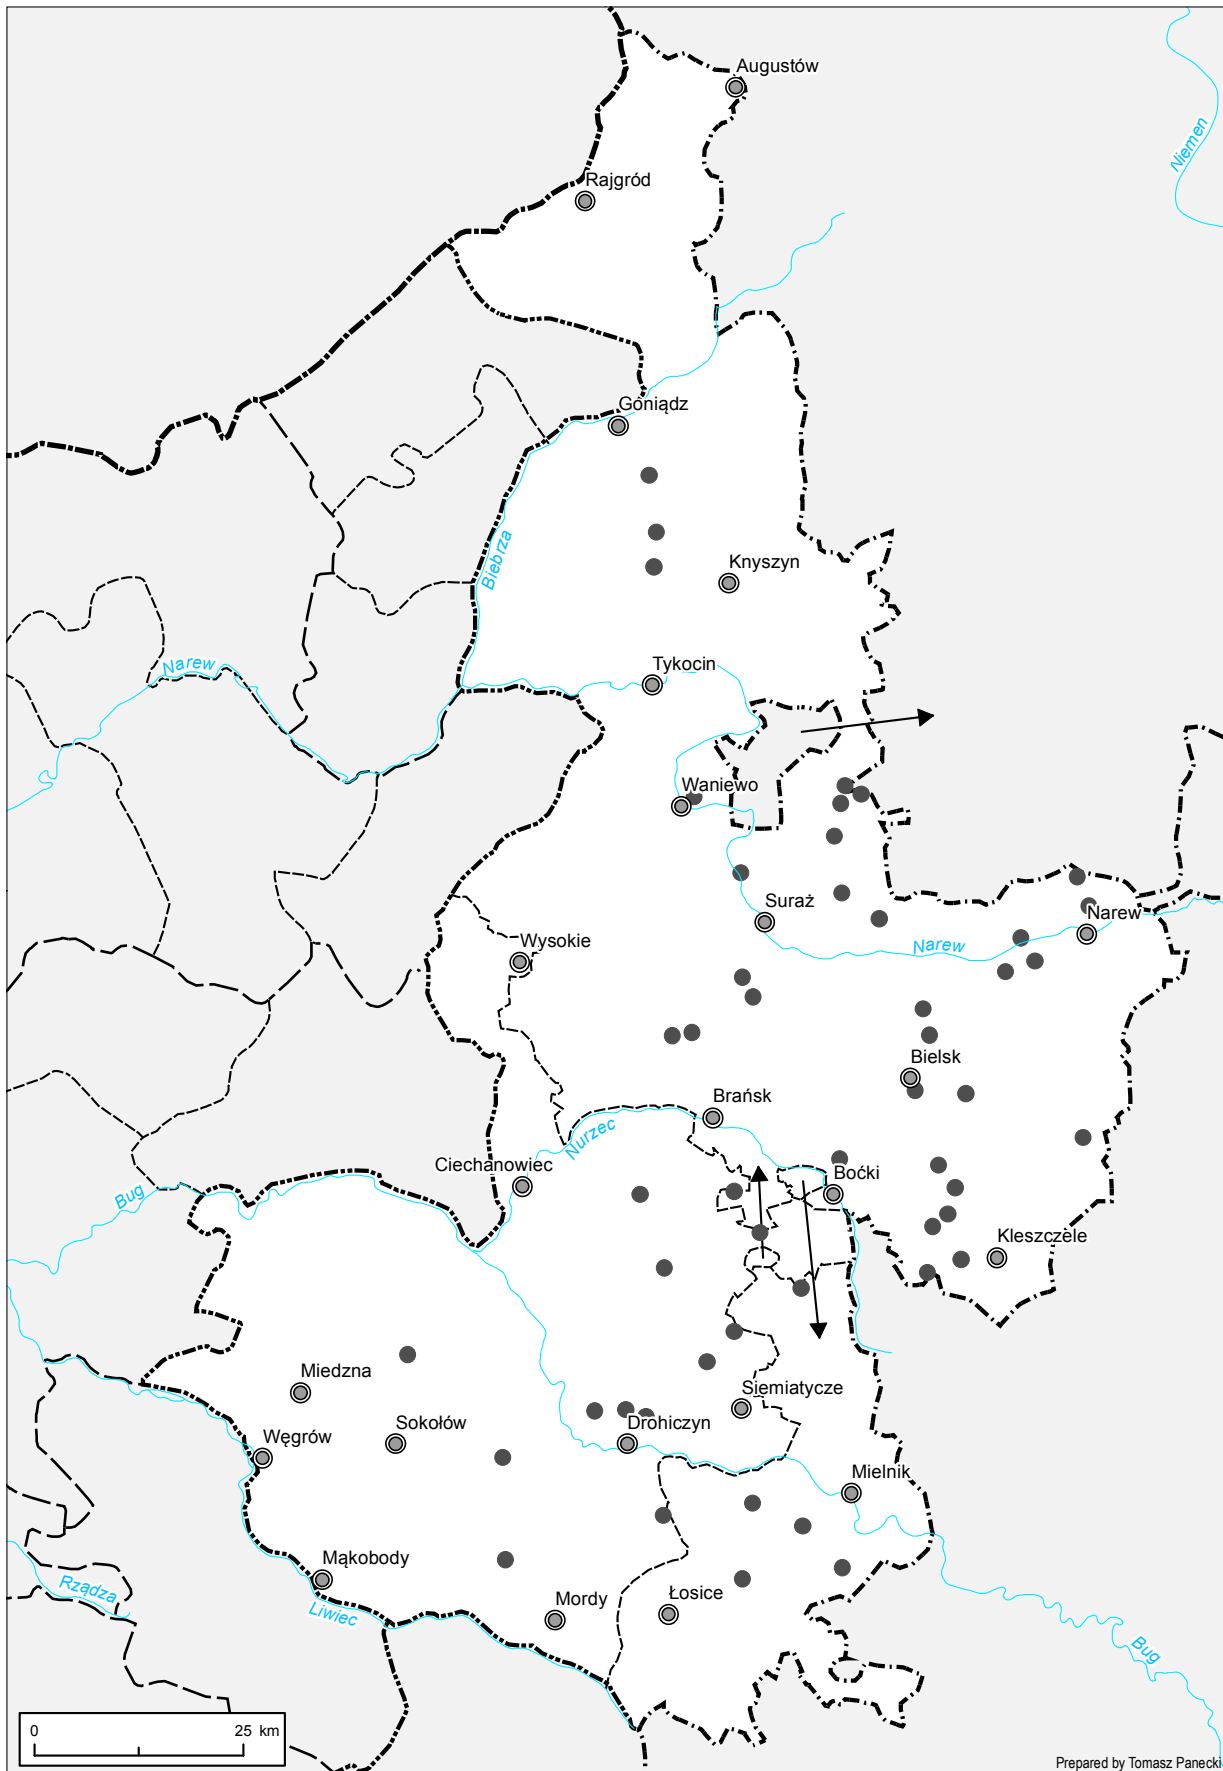

The nomenclature containing Baltic influences has been, as was mentioned in the introduction to this chapter, covered in an extensive monograph by Michał Kondratiuk. The highest density of Baltic (mainly Lithuanian) influenced names can be found, according to the author, in the area between the Rivers Narew and Supraśl, the majority of Lithuanian-sounding settlements were founded in the sixteenth and seventeenth centuries.⁵⁹ This researcher has uncovered a total of 176 place names (both current and ones no longer in existence) containing Baltic influences in the territories belonging to the

⁵⁶ Kondratiuk, pp. 269–277.

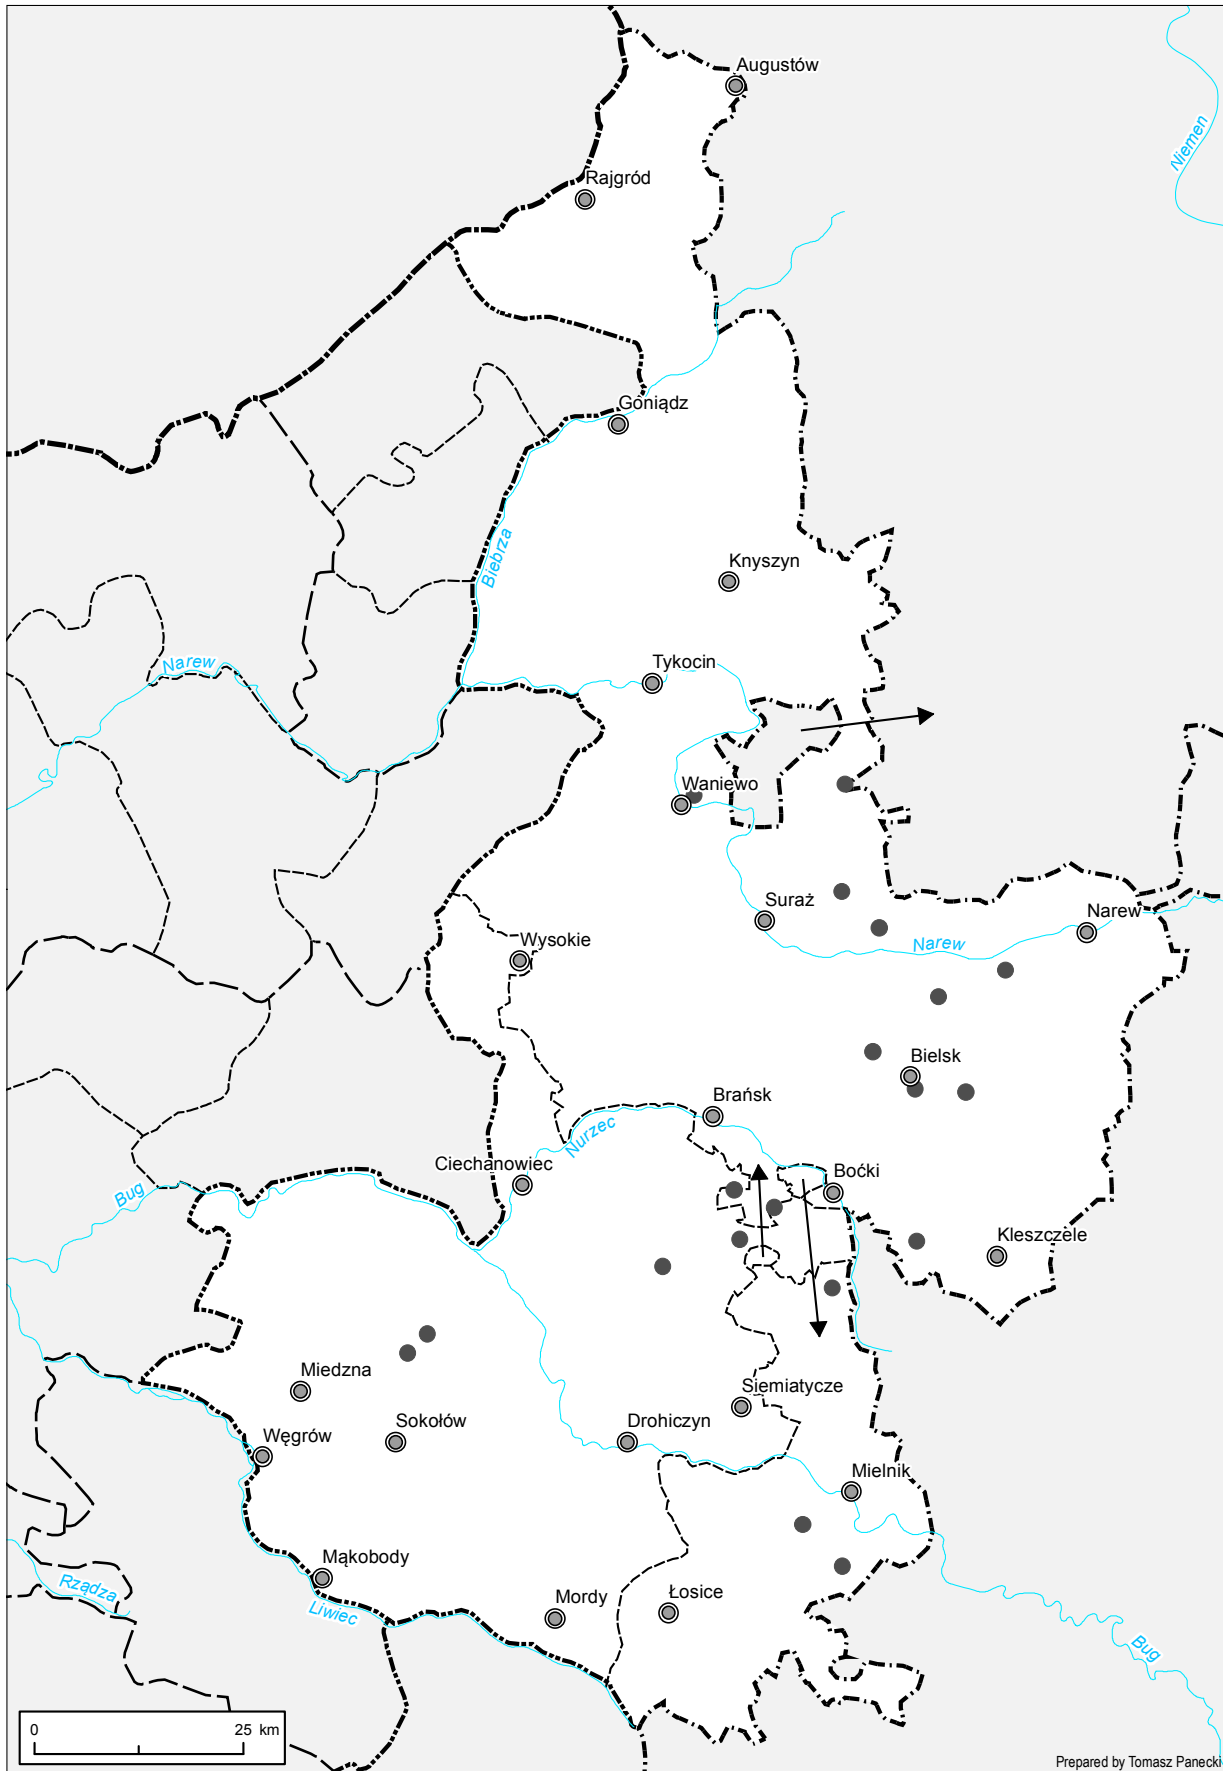

⁵⁷ The phenomenon of full vowels articulation typical for Eastern Slavonic languages involves the realisation of the proto-Slavonic group of **TorT*, **TolT*, **TerT*, **TelT* (where *T* represents a consonant) as *ToroT*, *ToloT*, *TereT*, *ToloT*, while in Polish it finds its realisation as *TroT*, *TloT*, *TreT*, *TleT*, cf. for example proto-Slavonic **gordъ* > Polish *gród*, Russian. *город*, **bolto* > Polish *bloto*, Russian *болото*, **dervo* > Polish *drzewo*, Russian *дерево*, **melko* > Polish *mleko*, Russian *молоко*.

⁵⁸ With the exception of *Boratyniec Lacki*, lying in the Mielnik district, yet here right on the border with the Drohiczyn district, beyond which lies *Boratyniec Ruski*.

⁵⁹ Kondratiuk, p. 277.

Map 7. Distribution of place names containing the sound *h* (< **g*)

Map 8. Distribution of place names containing pleophonies

old Białystok Voivodeship (within its 1975 boundaries), a couple of which were located in the perimeter of the Podlasie Voivodeship, which is the focal point of our research. Their identification unfortunately is made more difficult by the fact that these names in a Slavic setting were Polonized or adapted to Belarusian fairly quickly, which is why this volume of the AHP does not feature any purely Lithuanian nomenclature with the provenance of all the existing names only possible to be uncovered following thorough philological analysis. The cores of many of the names in question contain Lithuanian appellatives and personal names,⁶⁰ as is the case with the following names: *Klewianka* (taken from the river bearing the same name, derived from the Lithuanian *klėvas*, meaning ‘maple’, *klevinis* ‘maple-like’),⁶¹ or the earlier mentioned family toponyms of *Ciekuny*, *Jaświły* and *Romejki*. The last of the mentioned names, alongside toponyms such as *Romejki*, *Rumiejki*, *Lubiejki* (which can be encountered exclusively on the eastern and northern borders of Podlasie), belongs to a group of Lithuanian-derived names containing the element *-ejki*, which could have acted as a substitute for the Lithuanian endings *-eikai*, *-eikos* or been a result of the pluralisation of Lithuanian anthroponyms bearing the suffixes *-eikis*, *-eika*.⁶² Similarly, certain names ending in *-ele* (: from the Lithuanian *-eliai*), cf. *Hredele* (present-day *Gredele*), *-ule* (: from the Lithuanian *-uliai*), cf. *Dzidziule* (present-day *Dydule*), *Oks(z)tule*, or *-uny* (*Ciekuny*) reveal their Lithuanian roots,⁶³ however all attempts at interpreting other, similarly-sounding names as Lithuanian in provenance should be done with a great deal of caution. Similar sounding suffixes could equally have Slavic origins, so the determination of a name or a name fragment’s linguistic origin should be conducted with caution and on a case-to-case basis.

The matters discussed in the above refer to a small sample of the nomenclature present in Podlasie and in no way constitute a full a comprehensive examination of this extensive topic. As was mentioned in the introduction, the aim of this text is not to attaining a complex description of sixteenth-century toponymy in the region of Podlasie, but rather to showcase its most characteristic traits (while taking into consideration the spatial distribution of selected name types) in the context of the extra-linguistic factors that directed their course and shape – a process still visible in many place names today. It is imperative to make a few more remarks in reference to the method of transforming source materials for the use of this volume of AHP. The principal name which has been marked on the map and constitutes the principal headword in the List, was chosen on the basis of its frequency of use, that is to say the form that appeared most frequently in sources from the second half of the sixteenth century. Exceptions to this rule occurred occasionally when the settlement in question was one belonging to a noble’s environs. This was the course of action taken in the case of the village *Długa Dąbrowa-Cherubiny* – though this settlement does not appear under this name configuration (appearing six times as *Cherubiny*, once as *Długodąbrowa-Cherubiny*) in any records, for the purpose of clarity the main name of this village was adjusted to match the names of other villages situated within the environs of Długa Dąbrowa (also known as Długodąbrowa). In a case where several alternant names appear for a single settlement with the self-same frequency, then the principal name is deemed that form which has appeared in the sources before the second half of the sixteenth century or that which has stabilised after this period.

Alternative names of settlements (variants) have been placed by the List headwords in brackets, adjacent to the principal name, simultaneously acting as the titles of referential headwords. Present-day forms, if different to the principal ones used in the sixteenth century, have been presented in italics.

It is important to mention the manner in which names were marked on the maps and in the List. Due to the fact that the literate quality of sixteenth-century documents was inconsistent (characterised by the interchangeable use of many characters and their variants) it has not always been entirely possible to ascertain the proper name of the settlement in question. In cases of ambiguity, two or more functional forms have been recorded. For example, the headword *Ciszewo* features the variant *Czyżewo*, as alongside the forms <*Cziszewo*> and <*Ciszewo*>, which verify both the historically principal and the

⁶⁰ It follows here to have in mind that many names of places in which there is clearly visible a Baltic element were created from Lithuanian words or the personal names adopted earlier into Polish or Belarusian and which *de facto* founded place names already as words independently functioning within these languages.

⁶¹ M. Kondratiuk, *Elementy bałtyckie*, pp. 27, 42. It follows to note though that the names *Romejki*, *Romiejki* could have as equally well been created from the Polonized personal names *Romejko*, *Romiejko*; NMPol, vol. 11, p. 73.

⁶² M. Kondratiuk, *Elementy bałtyckie*, p. 205.

⁶³ *Ibidem*, pp. 203–204.

present-day place name, there exist a handful of recorded instances of the use of the form <Czyzewo> (the character <sz> used in the previous form was also often used to illustrate the /ż/ sound). Similarly, in the case of the village of *Biszewo* the variant *Byszewo* has been included— alongside forms containing the onset (anlaut) *Bi-* (such as <*Biszjewo*>, <*Biszewo*>) there existed forms containing the grapheme *y* (e.g. <*z Byszewa*>, <*Byssewo*> in 1588), which could have equally represented the phoneme /i/ or /y/.

In the case of the aforementioned patronymics ending in *-icze* (a typical form for this region of Poland) and *-ice*, the notation containing *c* was used only in those cases where written sources confirmed its usage in such a form. For example, the village of *Chrołowice* was recorded simultaneously as <*Chrołowicze*>, <*Chroliowicze*>, as well as <*Chrołowice*>, <*Chrołowice*>, which implies that it could have operated under the form *Chrołowice* (in which case <*-icze*> should be interpreted and read as /-ice/) and the possible variant form of *Chrołowicze*. On the other hand, the village of *Dubicze Cerkiewne* in the sixteenth century, as later (as equally today) has been consistently recorded as <*Dubicze*> (see also the locative form <w *Dubiczach*> from 1532), which excludes any possibility of interpreting <*-icze*> as /-ice/. An additional pointer favouring the form with *-icze* was the joint coincidental appearance within the source material of forms with *-iczy* (cf. <*Padkowiczi*> 1567, <*Pathkowicze*> 1577, <*Padkowicze*> 1588).

Similarly to the conjugated names featured in previous volumes of the AHP series that relate to villages included within the scope of noble estates, the individual components have been written down in accordance with contemporary orthography (e.g. *Dmochy-Rogale*, *Dmochy-Rozumy*). However, it is important to note that historical sources do not adhere to this manner of presentation (e.g. *Dmochy Rogale* 1569, *Dmochi Rogalie* 1580 etc.).

III.4.9b ROYAL PRUSSIA

Paweł Swoboda

The study of the names of the lands of Royal Prussia in the second half of the sixteenth century, which is the focus of the present volume of the AHP, has largely been completed in the past. The series 'Pomorskie Monografie Toponomastyczne' (PMT), featured monographic studies of the former areas (usually referring to the borders from the 1970s) of the districts of Kościerzyna, Puck, Malbork, Sztum and Kwidzyn (Powiśle Gdańskie), Gdańsk and Tczew, Starogard, Świecie, Bytów, Wejherowo, and Tuchola.¹ This series featured also works devoted to individual derivational forms distinguishable in the study of the names of Gdańsk Pomerania: names with the suffix *-ov-* were investigated by U. Kęsikowa,² while I. Łuczyńska dealt with forms using the suffix *-in*.³ The remaining derivational forms (names with *-ec*, *-ica*, **-jb*, *-bn-*, **-bšk-*, names such as *Podlas*, *Międzyłęże*) were presented in separate articles in an extensive cycle by H. Górniewicz.⁴ This scholar left also numerous works which discussed the linguistic origins or Polish-German-Prussian interferences in the place names of Pomerania and Powiśle Gdańskie.⁵ Patronymic names were the object of study of B. Siciński.⁶

More recently, A. Chłudziński has published monographic studies into the toponomastics of the present-day districts of Gdańsk (with the capital town Pruszcz Gdański) and Nowy Dwór,⁷ which fill in the gaps in the aforesaid PMT series.

As shown by the list above, the names of the area of the sixteenth century voivodeships of Pomerania and Malbork – with rare exceptions, such as the districts of Chojnice, Człuchów, Kartuzy,⁸ or the vicinity of Elbląg – have been investigated comprehensively. The situation is less favourable with it comes to the Chełmno Voivodeship. The geographic names from this area were subjected to analysis in a selection of works devoted to some issues in the Polish toponymy in general, or names of Prussian origin;⁹ names of individual settlements were also studied in entries of the dictionary *Nazwy miejscowe Polski*,¹⁰ but we are lacking a more recent monographic study or even articles which would focus exclusively on the names in this area. The only elaboration in this respect is still, it appears, the nineteenth century work by W. Kętrzyński on the Polish population in the former Teutonic Prussia, which covers the Polish populations of the lands of Chełmno and Lubawa, addressing the topic of place names in quite a detailed manner.¹¹ The scholars' lack of interest in the study of the names of this area can be related, among other things, to the problems posed by its analysis, because like the whole area of Royal Prussia, it is linguistically non-homogeneous (reflecting its former non-homogeneous ethnic structure), making it necessary for the scholar to have an equal background in Slavonic, Germanic and Baltic studies.

One characteristic feature of the names in Royal Prussia in the sixteenth century is their bilingualism – there were Polish and German names functioning simultaneously, often in relation to the very same object. And there is even more because the toponomastic complexity of this region is further reinforced by the chronologically diverse build-up of Slavonic, (Old-) Prussian and German names, which – apart from their internal dialectal differentiations – also interfered with each other, giving rise to numerous substitutive names. In this commentary, I shall focus mainly on this aspect of the toponymy of the sixteenth century Royal Prussia.

Although during the Roman period as well as the early Middle Ages, all of the lands which we are interested in in the present study were inhabited by Slavonic tribes – as scholars of history and onomastics unanimously claim – the expansion of the Baltic Prussians into the Pomesania region started already in the fifth century to stop only at the verge of the eleventh century, or a bit later, supposedly at the turn of the twelfth and thirteenth century, at the Vistula line, thus covering the entire Powiśle Gdańskie.¹² One obvious consequence of the presence of Prussians was the appearance of Prussian names next to Slavonic toponyms. It was also not uncommon for the Slavonic names (and people) to get Pruthenised; this also happened the other way round – Prussian names were adapted in the Polish and German language systems. Until the sixteenth century, the Prussian names were only preserved in German or Polish substitutive forms.

The broader appearance of German names, including Germanised Slavonic and Prussian forms, in the area under discussion is strictly related to the beginning of the activity of the Teutonic Knights, who after location in 1226 in the land of Chełmno, immediately started their conquest of Pomesania and in the early fourteenth century had seized control of the entire Gdańsk Pomerania.¹³ According to

⁷ A. Chłudziński, *Nazwy miejscowe powiatu gdańskiego (pruszczańskiego)*, Pruszcz Gdański 2017; idem, *Nazwy miejscowe powiatu nowodworskiego (województwo pomorskie)*, Pruszcz Gdański 2020.

⁸ The work entitled “Toponimia byłego powiatu kartuskiego” written in 1981 by K. Makowska under the supervision of H. Górniewicz did not get published, just like the work by M. Michalczyk-Xaxha on the toponymy of the Lębork district, which, however, remains outside the scope of interest of this AHP. When it comes to the Człuchów district, so far there has only been an article published on the local names of the Człuchów commune, see A. Chłudziński, *Nazwy miejscowe gminy Człuchów*, part 1: B–K, [in:] *Ziemia człuchowska – Kaszuby – Pomorze. O dziejach, kulturze i ludziach. Materiały z sesji 8–9 IX 2006 r.*, ed. C. Obracht-Prondzyński. Człuchów–Gdańsk 2007, pp. 261–288.

H. Górniewicz, inside the conquered territories, the Teutonic Order state gave land mainly to German knights, who were followed by German peasants. The ones who settled in the southern part of the future Royal Prussia came in majority from regions in which the Middle High German language was spoken; the ones who ultimately settled in the northern part, on the other hand, spoke instead the Middle Low German language, which is the source of one of the particular difficulties when investigating German substitutions of the Polish and Prussian names.¹⁴ Be that as it may, the Teutonic Knights gave land not only to Germans but also to the conquered Poles and Prussians, which led to the extension of Prussian names or names with Prussian elements outside the area of the previous Prussian settlements. The appearance of names of Prussian origin to the west of the Vistula line can also be related to the fact that in the second half of the thirteenth century, small numbers of Prussian knights left Pomesania, seeking refuge from the Teutonic Knights with the Polish dukes in the area of Gdańsk Pomerania.¹⁵

Map 1 shows the names inside the territory of the sixteenth century Royal Prussia which are believed to be genetically Prussian, in accordance with the H. Górniewicz's¹⁶ division into: 1) (Old-) Prussian names (i.e. names with a Prussian stem and morphology), 2) names derived from Prussian stems (mainly personal names), but using the morphology of Polish or German, and 3) names directly or indirectly related to the ethnonym *Prus* [*Prussia*, *Prussian*], which can (but need not) give us some hints as to the range of the Prussian settlements.

Clearly, the vast majority of the original Prussian names occur in the area of the Malbork Voivodeship, in the land of Lubawa and in the area between Grudziądz and Łasin, i.e., in the areas inhabited by the Prussian population already before the Teutonic conquest. These include, for example, names of settlements in the Malbork Voivodeship: *Kikojty*, originally Prussian **Kikoitai* (*Kykoiten* 1398–99) < Prussian personal name *Kikaitis*; *Labuń*, originally **Labūns* (*Labune*, *Labun* approx. 1399) equal to the personal name derived from the Prussian *labs* 'good' with the affix *-ūn-*; *Sztum*, Prussian **Stumis* // **Stume*, from the Prussian personal name **Stumis* (cf. Prutenus *Stumo* filius Grasute 1314); *Telkvice*, Prussian **Tūlekoitai*, formerly also **Azinūtai* (*Azinithen* ... heredes ipsius *Tul(e)koite* et Bute 1302, *Tulkoyte* 1354), family name derived from the personal name **Tūlekoit(i)s* (: Prussian. *tūlan* 'much, many'); as well as names taken over to refer to settlements, such as the Prussian river name **Ilawings*, Germanised as *Elwing*, *Elbing*, now *Elbląg* (*Ilfing* 890, *Elbing* 1234), in connection with the Baltic **il-* 'black' > place name *Elbląg* (*Elbinc* 1238, in *Elbingo* 1239, de *Elvingo* 1293, *Olbyąq* 1410, *Elbiąq* 1570), or **Zirgūns*, now *Dzierzgoń* (*Sirgune* 1234, *Sirgun* 1294), perhaps in connection with the Prussian common noun *zirgis* 'stallion' > place name *Dzierzgoń* (*Dzirzgo* 1410, *Dzyrgon* 1454, *Dzierzgon* 1466, earlier mentioned only under the German name *Christburg*).¹⁷

To the west of the Vistula line, three names can be considered 'purely' Prussian, and only with caution: *Labunki*, German *Labunken* (one of the interchangeable names of the village Trzcіńsko), Prussian **Labūnkai* (*Labunkin*, *Labunekin* 1334, *Labuniken* 1408, *Sczienisko* 1534; *Szczinski* alias *Labunki* 1570) from the personal name *Labūnk(i)s* (see above); *Pomyje*, originally **Pameins* (*Pomyn* 1278, *Pomie* 1281) from the personal name **Pameins* (the Prussian prefix *pa-* regularly Polonised and Germanised as *po-*); *Wiąg*, Prussian **Wings* (*Ibin* 1338, *Ibing* 1414–1438, *Iwing* 1430, *Iwyng*, *Ewigen* 1434, *Iwiąg* 1534, *Viąg* 1565) from the common noun **wings* (cf. the Lithuanian word *vingis* 'bend', *vingrūs* 'bending, winding') – in the Germanised form *b* used interchangeably with *w* (similarly to *Elwing* : *Elbing*) and *i-* inserted in the word-initial position; *Żuława*, Prussian **Sulōwō* (*Solow* 1401, *Solaw* 1414–38, in *maiori Żuława* 1583) from the same stem as in the Lithuanian word *salà*, in the Latvian *sala* 'island' (the name has the same origin as the name of the region *Żuławy Wiślane*).¹⁸ The

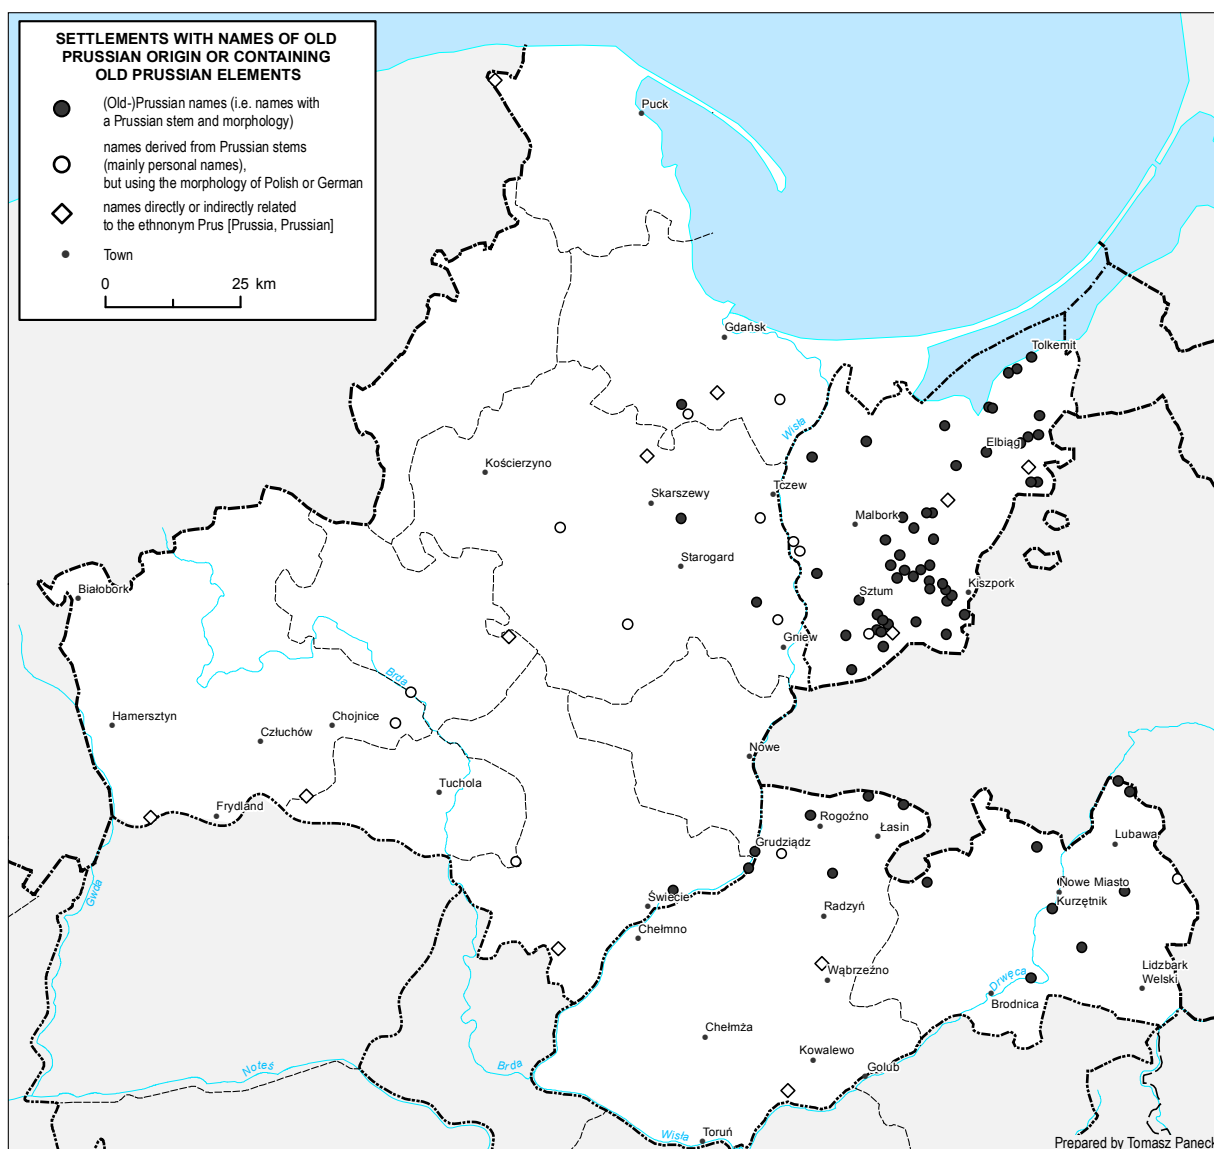

¹⁴ H. Górniewicz, *Toponimia Powiśla Gdańskiego*, p. 18.

¹⁵ H. Górniewicz, *Nazwy geograficzne pruskie i polskie*, p. 19.

¹⁶ *Ibidem*, pp. 20–21.

¹⁷ *Nazwy miast Pomorza Gdańskiego*, pp. 199–205; H. Górniewicz, *Toponimia Powiśla Gdańskiego*, pp. 73, 86, 166, 275.

¹⁸ H. Górniewicz, *Nazwy geograficzne pruskie i polskie*, pp. 21–26; contrary to Górniewicz's suggestion, I do not include the name *Rytel* in this name group, even though he reconstructed the Prussian form **Retils*. Here, however, the word refers to the inn called *Retil*, for which a privilege was obtained in 1430 by Merten *Retil* (cf. "wir dem woltechtigen und fromen Merten *Retil*, darzu allen seinen rechten erben und ehelichen nachkommelingen, geben und vorliehen den kretzim *Retil* geheissen", P. Panske, *Urkunden der Komturei Tuchel. Handfesten und Zinsbuch*, Danzig 1911, p. 154, no. 135), so in this case we are dealing, true enough, with the transfer of a personal name of Prussian origin to the inn, but it has nothing to do with Prussian invention of names. One can also doubt the derivation of the original form **Labūnkai* from the German substitutive form

Map 1. Settlements with names of Old Prussian origin or containing Old Prussian elements

remaining names in the area of the sixteenth century Pomeranian Voivodeship have been derived from Prussian forms using the rules of the Polish morphology (alternatively, German), e.g. *Jadotowo* (now Jagatowo), originally *Jodotowice* (*Jodothowicz* 1414–38, *Iodethowo* 1534, *Jadotaw* 1570), from the Prussian personal name **Jōdōtis* (cf. *Jodothe* 1276) with the Polish suffix *-owo*; *Trutnowo*, later *Trutnowy* (*Trutenaw* 1334, *Trutenow* 1399, *Trutnaw* 1534, *Trutnowy* 1583), from the Prussian personal name **Trutnā* or **Truten(i)s*, with the suffix *-owo*,¹⁹ most likely also *Sprudowo*, now *Szprudowo* (*Sprudoho* 1245, *Sprudowe* 1258, *Sprudow* 1279, *Sprauda* 1534, *Sprudow* 1534, *Sprudowo* 1565).²⁰

Labunken, because the German *-en* was used for substitution of family names and other plural names – both Prussian and Polish. Górniewicz maintains that the Polish name of this place from the very beginning was exclusively *Trzczińsko* (*Nazwy geograficzne pruskie i polskie*, p. 22), but in another place, he himself quotes the phrase “*Szczinski alias Labunki*” from 1570 (*Toponimia powiatu starogardzkiego*, p. 43), which shows that the Polish name *Labunki* was also in use (although it cannot be excluded that this is a subsequent polonisation of a Germanised Prussian name, so I leave it in the first group).

¹⁹ According to Halina Bugalska (*Nazwy miejscowe byłych powiatów gdańskiego i trzeńskiego*, p. 104), the German *-au*, *-ow* renders the Prussian affix *-āw-*. To support this view, the author refers to the opinion by F. Lorentz, who writes in general that in this case we are dealing with a Prussian name, but says nothing of its derivation (F. Lorentz, *Preußische Ortsnamen und Appellative in Namen im Raum links der unteren Weichsel*, „*Zeitschrift für Slavistik*”, vol. 11, 1966, p. 246).

²⁰ H. Bugalska, *Toponimia byłych powiatów*, pp. 47, 95, 104; H. Górniewicz, *Nazwy geograficzne pruskie i polskie*, pp. 26–30. It is still debated whether the oeconym stem *Biotowo*, now *Bietowo* (*Byothin*, *Byechyn* 1402–1415, *Biuthowo* 1534,

When it comes to the German names inside the territory of the sixteenth century Royal Prussia, two areas of its dense occurrence can be distinguished, as shown clearly on map 2, marking the settlements which in the period under discussion had a German name (or a name produced by adapting a Polish or a Prussian name). One of them covers the Chełmno Voivodeship, the Malbork Voivodeship and the adjacent eastern part of the Pomeranian Voivodeship, or more specifically the eastern parts of the districts of Gdańsk and Tczew. The second one is contained in the south-western part of the district of Człuchów, as delimited by the line of the Brda on the one side and the borders of Greater Poland and Western Pomerania on the other.

As already mentioned, the origins of the German names in the area under discussion are related to the settlement activities carried out by the Teutonic Order, and the occurrence of the German place names in the sixteenth century in the Chełmno and Malbork Voivodeships as well as in the eastern part of the Pomeranian Voivodeship continues the naming situation from the previous centuries there. The functioning of the German names in the district of Człuchów, on the other hand, should be linked not only to the Teutonic reign, it appears, but also to the influence of the German colonisation from the western direction, affecting, among others, Greater Poland and the Duchy of Pomerania. In the neighbouring Greater Poland, as indicated in the volume of the AHP devoted to that region, German names were clustered largely in Wałcz and Nakło districts, adjacent to Pomerania.²¹ The long and intense German colonisation and culture-shaping processes in Western Pomerania, which continued uninterruptedly since the thirteenth century,²² obviously had an impact on the names at the western reaches of Gdańsk Pomerania.

The number of German names in the sixteenth century in the area between the Brda and the Wierzyca is, on the other hand, very modest. The scarcity of German names which had been used there earlier were Polonised in the period from the fourteenth century to our point of interest, or even totally replaced with Polish ones. To illustrate this case, let us consider the oldest names of villages in the vicinity of Tuchola traced by M. Milewska-Stawiany: *Liebenau* (*Lybenow* 1343), *Schönenberg* (*Schonenberg* 1349) or *Butelersdorf* (1346), which by the fifteenth and sixteenth centuries had been completely replaced with the Polish variants: *Gostycyn(o)*, *Łyskowo* and *Welpin* (*Wołpin*); now, in the Polonised village name *Kaldowo*, mentioned for the first time only in the sixteenth century, we can retrace the unrecorded original name *Kalthof*.²³ The lack of German (or Germanised) names in this area is related not only to the sparse settlement network (these were largely unavailable forest or swamp areas) but generally, the impact of the German language was much weaker inside this belt (which can be seen on the example of the district of Świecie, which at that time was much more densely populated). It should also be remembered that in this area, the Teutonic Knights typically located villages under the German law at the sites of previous Polish villages, and only seldom *in cruda radice*.²⁴

In general, some 33% of the settlements in Royal Prussia in the sixteenth century had German or Germanised names. At the same time, it should be noted that map 2 shows also the settlements which in the sixteenth century used an alternative Polish name or whose German name was a substitutive name for a Polish or Prussian one. If we impose a stricter limit by considering only those settlements which in the sixteenth century sources had just a purely German name (see map 3), we will see that the number of such settlements was rather low (slightly above 140) and they were grouped mainly in

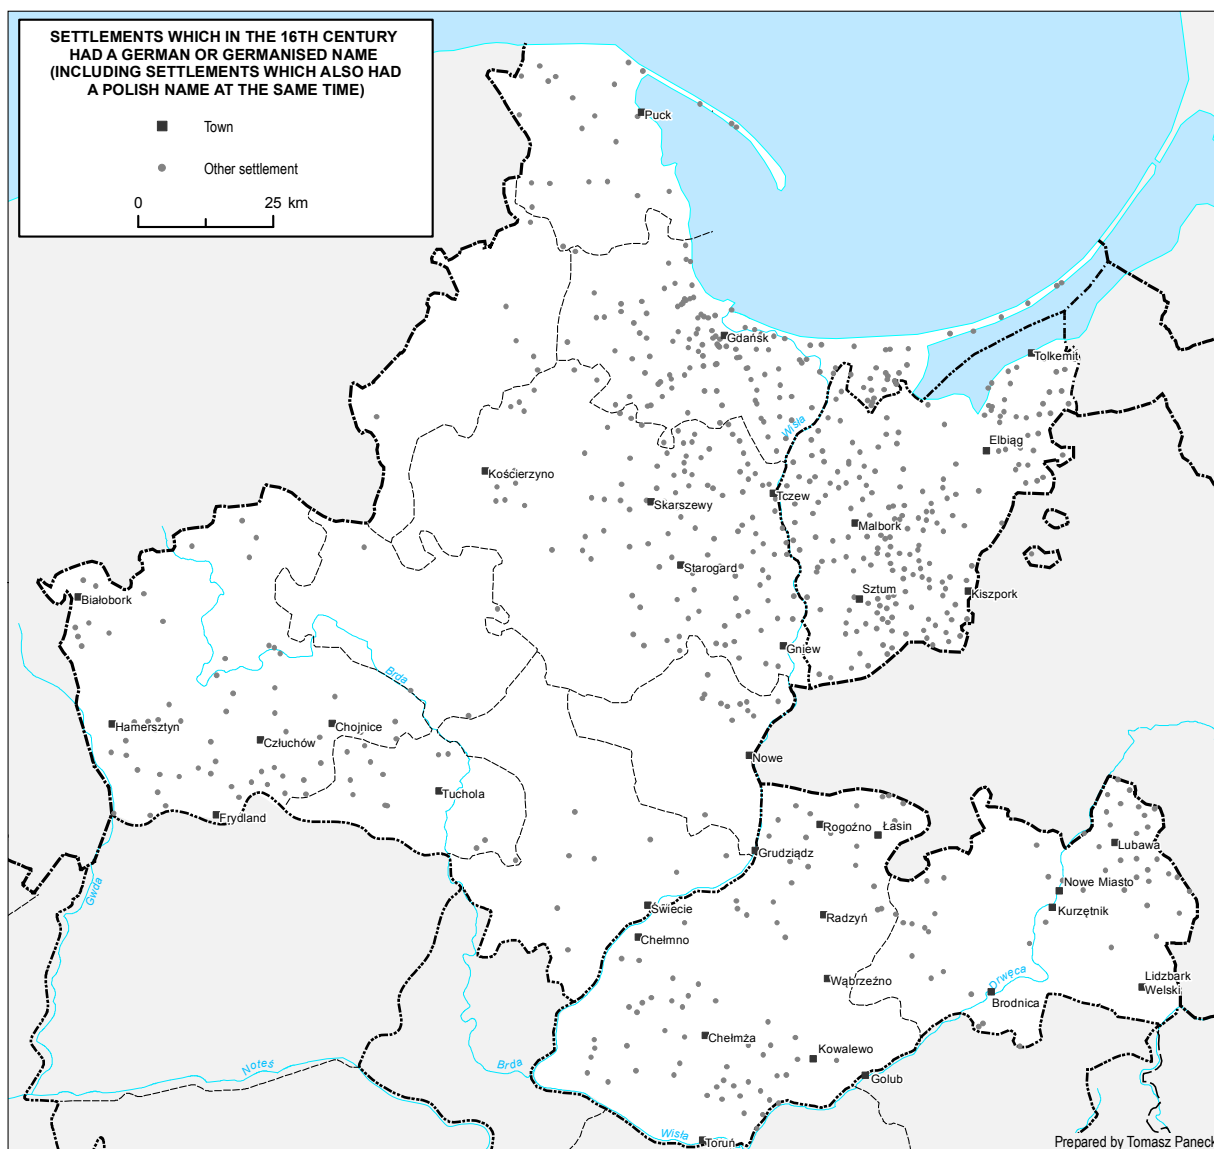

Biotowo 1570), in the sixteenth century Tczew district is really of Prussian origin. Górniewicz takes the original form *Bijocin(o)* with the suffix *-in-*, further assuming that the stem is the Prussian personal name **Bijōtis* (referring to the formulations of the Prussian anthroponym *Byot*, *Byote*, *Beyotte* cited as German, cf. R. Trautmann, *Die altpreußischen Personennamen*, Göttingen 1974 (2nd edition), p. 18, and the Lithuanian place name *Bijotai*). This view is not held by W. Makula-Kosek, who is more willing to derive the name from the German anthroponym *Bet*, later Polonised as *Biet*, *Biot* (*Nazwy miejscowe Polski*, vol. 1, pp. 195–196).

²¹ P. Swoboda, *Geographic nomenclature*, [in:] AHP Greater Poland, in this edition III.4.4.

²² J.M. Piskorski, *The Medieval Colonization of Central Europe as a Problem of World History and Historiography*, „German History”, vol. 22, 2004, no. 3, p. 338.

²³ An analogous substitution is visible in the case of the village *Kaldowo* near Malbork, cf. *Kaldenhove* 1378, *Kaldenhof* 1412–1420, *Kaldenhouff* 1449, *Caldau* 1510–1529, *Caldow*, folwarku *Caldowa* (literally ‘of the *Caldow* demesne’, the form *Caldowa* resulting from the necessary declension – genitive case), *Caldowo*, w *Kaldowie* (literally, ‘in *Kaldowo*’, the form *Kaldowie* resulting from the necessary declension – locative case) 1565, do *Kaldowa* (literally ‘to *Kaldowo*’, the form *Kaldowa* resulting from the necessary declension – genitive case) 1590 (*Nazwy miejscowe Polski*, vol. 4, p. 274).

²⁴ H. Górniewicz, *Toponimia powiatu starogardzkiego*, p. 202.

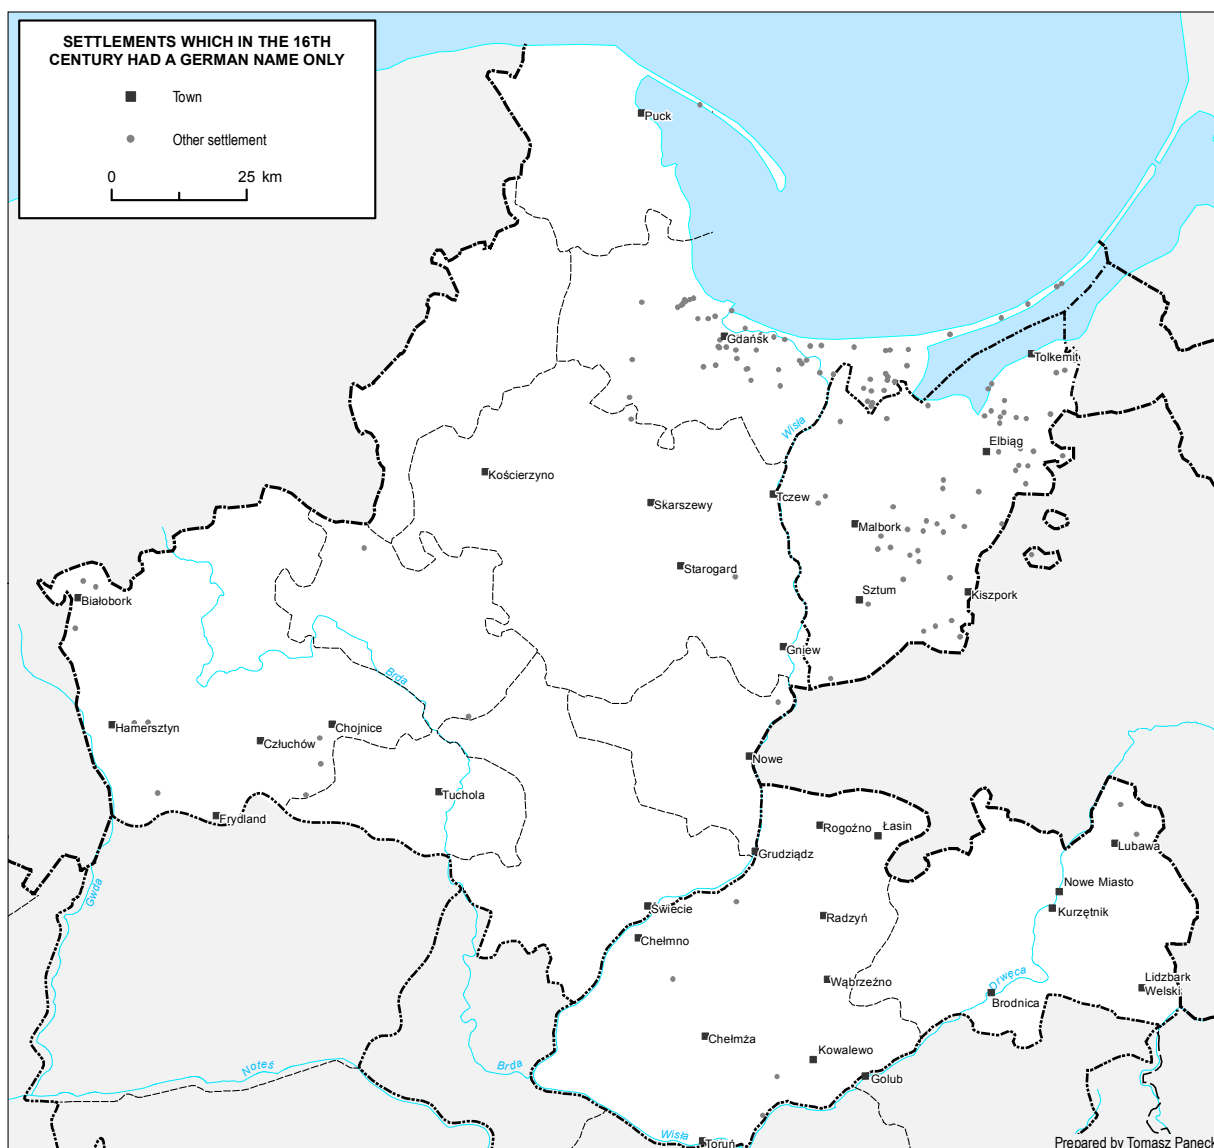

Map 2. Settlements which in the 16th century had a German or Germanised name (including settlements which also had a Polish name at the same time)

the eastern part of the Malbork Voivodeship and in the narrow seaside belt stretching from the Vistula Spit to Gdańsk. These constitute 6.5% of all the settlements covered in this volume of AHP.

The most characteristic type of word formation among the German toponyms are compound names, and this applies equally to toponyms of various semantic categories – topographical, cultural or possessive (usually, personal) ones. A typical possessive name is composed according to the pattern *anthroponym + identificatory element*, which often (but not always, see below) identifies the nature of the object named, e.g. *Dietrichsdorf*, *Ernsttal*, *Hansfeld*, *Lobeckshof*, *Petershagen*, *Schusterkrug*, *Thomaswalde*, in each of which the first element comes most likely from the name of the settler,²⁵ while each of the second elements is derived from such words as: *Dorf* ‘village’, *T(h)al* ‘valley’, *Feld* ‘field’, *Hof* ‘mansion’, *Hagen* ‘fenced area’, but also ‘thicket’, *Krug* ‘inn’, *Wald* ‘forest’. These elements

²⁵ At this place, it should be mentioned that inside this and other areas formerly occupied by the Teutonic Knights, the names which in the anthroponymic part contain the element *Marie* usually carry cultural importance and make a reference to the patron of the order, the full name of which is The Order of Brothers of the German House of Saint Mary in Jerusalem. Inside the territory of Royal Prussia in the sixteenth century, such names included *Marienburg* (now Malbork), *Marienuw* (now Marynowy), *Mariensfeld* (now Mszano) or *Mariensee* (now Przywidz). The neighbouring town of Kwidzyn was also renamed *Marienerwerder* by the Teutonic Knights. This group of toponyms includes also such ones as *Jungfer* (Junkrowy) and *Jungferberg* (Marzęcino), deriving from the German *Jungfer*, *Jungfrau* – maiden, virgin (referring to Virgin Mary).

Map 3. Settlements which in the 16th century had a German name only

(-dorf, -feld(e), etc.), however, do not necessarily carry a real semantic value in this case. According to A. Bach, in the area of the eastern colonisation, they often served a purely structural function, so in reality, they can be ascribed one common meaning of ‘settlement’.²⁶

Similarly, topographic names typically consist of two elements, an adjectival and a nominal one, for example, *Grünhain* (literally ‘green grove’), *Kahlberg* (‘bald hill’), *Rehwalde* (‘roe deer wood’), *Schönwalde* (‘beautiful forest’), *Steinborn* (‘stone spring’), *Reichenfeld* (‘rich, fertile field’); less common were single-element names, such as *Bruch* (‘swamp, mud’), *Linde* (‘lime tree’). Many such names can reflect the natural conditions at that time,²⁷ but in some cases, the relationship between their meaning and the real features of the settlement or its location should also be treated as a hypothetical one – especially with names containing positive judgements (e.g. referring to the landscape, soil fertility), such as the aforementioned *Schönwalde* or *Reichenfeld*, which in the period of colonisation could function as an advertisement of sorts, encouraging newcomers from the far German lands to settle there.²⁸

²⁶ A. Bach, *Deutsche Namenkunde*, vol. 2: *Die deutschen Ortsnamen*, Heidelberg 1953, p. 255.

²⁷ For example, the village name *Buchwalde* (*Buchwalde* 1378; now Bukowo, to the north-east of Sztum) was coined after the name of a forest, cf. *silvam Buchwald*, meaning literally ‘beech forest’ (*Nazwy miejscowe Polski*, vol. 1, p. 455).

²⁸ On such practices in the Czech Silesia region, see J. David, *Paměť města – názvy míst. Havířov*, Ostrava 2012, p. 27.

Definitely, some of the German toponyms in Pomerania can also be names transferred from the places of origin of close-knit groups of settlers.

Apart from the genetically German names, the collected source material also contains a vast number of Germanised forms of Slavonic or Prussian names which became popular and were commonly used. The substitutive forms can be divided into several groups according to the type of changes which affected the original name, i.e., phonetic changes, phonetic-derivational changes and calques.²⁹ Phonetic substitutions consist in the adjustment to the phonetics of the target language without engaging word derivation mechanisms and without visible consequences to the toponymic-derivational system, e.g., Polish *Kołoząb* > *Kalsam*, *Kolsam*; *Pluskowąsy* > *Plauskewantz*; *Sobowidz* > *Sobowitz*; *Wocław* > *Wotzlaff*; Prussian **Daubels* > *Daubel*; **Pasulōwō* > *Posilge*.³⁰ Phonetic-derivational substitutions consist of adding a subsequent derivational affix to a phonetic substitute. Both Prussian and Polish family names and other plural (sometimes also singular) names were commonly acquired by adding the plural morpheme *-en*, e.g. Polish *Dębice* > *Dembitzen*; *Krag* > *Krangen*; Prussian **Kikoitai* > *Kykoiten*; **Mareins* > *Morainen*. Another example of this type of adaptation is the regular change of Polish suffixes: with the basic *c* (*-ica*, *-ice*, *-ec*) > *-itz* (e.g. *Krępiec*, *Krępc* > *Krampitz*; *Prątnica* > *Prantnitz*; *Laskowice* > *Laskowitz*); *-no* > *-en*, *-in* (e.g., *Chełmno* > *Culmen*, *Dzieżno* > *Dzeschen*); *-ewo* // *-owo* > *-au* (e.g. *Kiszewo* > *Kieschau*, *Sarnowo* > *Sarnau*), *-sk-* (also realised as *-dzk-*, *-ck-*) > *-zig* (*Puck* > *Pautzig*, *Gdańsk* > *Danzig*). In general, any suffix could be replaced with an element such as *-dorf*, *-feld*, *-au* or *-hof* (e.g., *Czyżykowo* > *Cziszkendorf*), although by this, we mean rather the extension of any phonetic substitute with such a compositional element (e.g., Prussian **Grenai* > *Grenen* > *Grün(en)feld*). So-called calques consist in establishing a semantic link with the original name, usually through translation (e.g. *Biskupia Góra* : *Bischofberg*, *Czyrwony Dwór* : *Rothof*, *Pucka Wieś* : *Pautzkerdorf*, *Wielka Wieś* : *Grossendorf*).

In the sixteenth century in the whole area of Royal Prussia, the most widely represented names are of Slavonic – Polish – origin, but their geographic distribution is not even. Naturally, the fewest Polish names are recorded in the areas in which we noted the greatest groupings of German names related to more intensive German colonisation. Moreover, many sixteenth century Polish names – even though formally indistinguishable from genetically Polish names – are in fact adaptations of foreign names. A precise description of the mechanisms of substitution, primarily in respect of the acquisition of names from German, can be found in the works cited in the introduction and in the comprehensive monographic study of this issue by B. Czopek-Kopciuch.³¹

When it comes to Polish names, the dominant position is clearly occupied by forms derived using suffixes: *-owo* // *-ewo* (also *-owa*, *-ewa* and in the plural *-owy*, *-ewy*; approximately 500 settlements with such names in total³²) and *-in(o)* (approx. approximately 230 settlements), which usually marked the possessive function, giving possessive names with an indication of a person, e.g. *Borzęcín* (*Borrentin* 1224; from personal name *Borzęta* + *-in*), *Maćkowo*, from the sixteenth century also *Maćkowy* (*Maczkowo* 1286; from personal name *Maciek* + *-owo*, subsequent pluralisation to *-owy*), *Smażyno* (*Zmasino* 1346; personal name *Smaga* + *-ino*), *Żelistrzewo*, originally *Żelistryjewo* (*Zelystryewo* 1277; from personal name *Żelistryj* + *-ewo*, haplology affecting *-yj-*).

Nearly 33% of all the settlements covered by the present volume of AHP had a name containing one of the aforesaid affixes. It should be remembered, however, that in addition to the numerous originally Polish names, they were also used very often to Polonise German names. This applies to the affix *-owo*, which regularly substituted the original German names, in particular ending with *-au* or *-hof*, but also others, e.g., with *-dorf*. In addition to the aforementioned example of the name *Kaldowo* (< German *Kalthof*), we can consider, e.g., *Elznowo* (now *Olszanowo*) < German *Elsenau* (Middle Low German *else* ‘alder’ + *Au(e)* ‘meadow’), *Ferstnowo*, *Furstenowo* (now *Gwieździn*) < niem. *Fürstenau*

²⁹ H. Górniewicz, *Rodzaje niemieczenia*, pp. 83–95; idem, *Toponimia Powiśla Gdańskiego*, pp. 301–302.

³⁰ In the case of Prussian names, phonetic substitutions additionally involve the discarding of the male singular ending *-(i)s* (e.g. **Daubels* > *Daubel*) and the replacement of the female endings with a homogeneous *-e*.

³¹ B. Czopek-Kopciuch, *Adaptacje niemieckich nazw miejscowych w języku polskim*, Cracow 1995.

³² It is worth noting that in Pomerania and generally in the northern part of Poland, both in the past and at present, there are almost no names derived using the suffixes *-ów* // *-ew*, which are another grammatical gender variant of names ending with *-owo* // *-ewo*. The forms ending with *-ow* in the source material of this volume of AHP should, in general, be treated as German substitution forms.

(*Vurstenow* 1376, *Furstenaw* 1437, *Chwirstnowy* 1474, *Fersthnowo* 1511/12, *Furstenowo* 1570; from German *Furst*, Middle Low German *vurste*, *vorste* ‘prince’ + *Au*); *Wielbrądowo*, *Wielbłądowo* (now *Wielbrandowo*) < German (*H*)*elbrandsdorf*, from the previous form *Hildebrand(es)dorf* (*Hildenrandesdorff* 1414–38, *Elbranczdorff* 1476, *Wyelblodowo* 1507, *Wielbrądowo* 1534; from German personal name *Hildebrand*), or *Rychnowo* < German *Reichenau* (*Richeno* (1404)1650, *Reichenau* 1414, *Richenau* 1415; Middle High German *rīche*, *rich*, German *reich* ‘rich, fertile’ + *Au*). In the Malbork Voivodeship, apart from the originally Polish names *Jerzewo*, *Orłowo* (*Orlow* 1292) and *Palczewo* (*Palsschow* (1344)1405, *Palczaw* alias *Palczewo* 1565), all names ending with *-owo* in the sixteenth century are substitutions of German names.

The great share of the names ending in *-owo* // *-ewo* and *-in(o)* is further supported by the fact that in terms of productivity, in the studied names the affix **-bn-* (continued by the variants *-no*, *-na*, *-ne* for the grammatical genders) is noticeable in some 120 sixteenth century settlements, which makes up only above 5.5% of all the settlement units. This suffix, which is one of the oldest Slavonic affixes, created mainly topographic names; in fact, in many cases, we are dealing with names coined based on names of physiographic objects (mainly lakes and rivers). According to H. Górniewicz and H. Olewniczak, „the Pomeranian typology, productivity and relationship with hydronyms support, in the first place, the affiliation of Pomerania with the fore-fatherland of the Slavs”.³³ In this context, the lack of names ending in **-bn-* in the Malbork Voivodeship (with the exception of the village *Trzcian(n)a*) in the sixteenth century is quite telling, especially given that their distribution in the other two voivodeships is even. In some cases, the element *-no* could have appeared later as a result of the adaptation of a foreign name, as in the names *Szonborno*, *Szomborno* (now *Szymborno*) < German *Schönborn* (reinterpretation of the *n* in the morpheme *-born* as a suffix) or *Meldno* // *Melno* < German *Malden*, *Alden* (substitution of *-en* as *-no*); typically, however, the suffix **-bn* appears in names which are originally Polish and only later does it get Germanised as *-en* (*Chelmno* > *Culmen*, *Rybno* > *Reyben*, etc.).

The spatial distribution of toponyms with other, less productive Slavonic affixes than **-bn-* is similar. From among several dozen names with the continuant suffix *-sk(o)* (e.g., *Bielsk*, *Gdańsk*, *Skąpsk*, *Smogorsk*, *Wąpiersk*, *Kack(o) Komorsko*) and *-ica* (e.g., *Brodnica*, *Brzeźnica*, *Opalenica*, *Pokrzywnica*, *Stężycza*), none has been recorded in the Malbork Voivodeship, while from among the names with the suffix *-ec*, there is only one toponym – *Kościelec*. It would seem that the situation is slightly different when it comes to the names with the affix *-ice* (which most often yields patronymic names), nine of which have been recorded in the Malbork Voivodeship (so we must exclude the name *Dębice*, derived from the personal name *Dębica*); however, five of them are considered substitutions of Prussian names (or their Germanised forms): *Warglewice*, *Barglewice* (now *Barlewice*) < *Warles* 1391, *Wargles* 1394, *Wargelis* 1416, *Wargels*, *Wargils* 1419 (from the Prussian personal name *Wargel*, **Wargelis*); *Pierzchowice* < *Parswit*, *Parsowite* fourteenth century, *Parswiten* 1399, *Pers(ch)weiten*, *Parschweiten* sixteenth century; *Telkwice/Tolkwice* < Prussian **Tūlekoitai*: *Tulekoyte* 1354, *Tulekoytendorff* 1384, *Tulekoytendorff* 1400, *Talkoyten dorff* 1437 (see above); *Trankwice* < Prussian **Trankoitai*: *Trankoiten* 1303, *Trankoten* (1321) fifteenth century, *Trankotin* (1336) fifteenth century, *Trankotin* 1354, *Trankwitz* 1402 (from the Prussian personal name *Trankot*, *Trankoite*, *Trankote* TöppenPP 107), most likely also *Uźnice/Uśnice*, German *Wosnitz*, *Wüsnitz*: *Wuschycz* 1391, *Wossicz* 1399, *Wusitcz* 1422, *Wusenitcz* 1498, *Wusznitz* 1508 (Prussian suffix *-īt-*, cf. also Lithuanian *ušis* ‘thistle’). As for the remaining cases – *Polkowice*, *Watkowice*, *Weklice*, *Leźwice* (previously *Lasowice*) – we are dealing with originally Polish names, however, the chronology of the forms and their substitutive forms can sometimes hinder unanimous conclusions. Obviously, in the remaining two voivodeships, the names ending in *-ice* are often pseudo-patronymic forms too, for example: *Hangowice* and *Jankowice* < German *Henningsdorf*; *Babalice* < German *Paulisdorf*, Low German *Puwilisdorf*, *Pauelsdorf*; *Jarantowice* < *Arnold(i)sdorf*; *Pilewice* < *Philisdorf*, *Pfylesdorf*, *Pfeilsdorf*; *Kończewice* < *Kunzendorf*; *Kulice* < *Kulendorf*; *Mikołajki* < *Niclasdorf*; *Wytramowice* (now *Wytrębowice*) < *Witt(e)ramsdorf*, etc. But there are also old patronymic names, such as *Główczewice*, *Bedzimierowice*, *Szydlice*, *Piechowice*, *Warszewice*, etc. In some cases, it cannot be settled for sure which of the names – Polish, German, or Prussian – was the original one.³⁴

³³ H. Górniewicz, H. Olewniczak, *Nazwy geograficzne Pomorza Gdańskiego z formantem -bn-*, p. 83.

³⁴ This issue and previously discussed ones have been presented in detail by B. Siciński (*Patronimiczne nazwy miejscowe*, pp. 47–51).

As we could see, the adaptation of foreign names to Polish was as common as to German. The examples presented above covered mainly phonetic-derivational substitutes; in fact, purely phonetic substitutions or as common (if not more). They are characteristic especially of names with elements such as *-wald(e)* > *-wałd*, *wold* // *wold* (e.g. *Ichwald* < *Eichwald*, *Szynwald* < *Schönwalde*, *Pruswold* < *Preuschwald*, *Walkiemwold* < *Falkenwald*), *-berg*, *-burg* > *-bark*, *-bork* (e.g. *Malbork* < *Marienburg*, *Rychembork* < *Reichenberg*, *Szylbark* < *Schiltberg*, *Szonberg*, *Szymbark* < *Schöneberg*), *-see* > *-za*, *-ża*, *-ze* (e.g. *Kromża* < *Krommesee*, *Bajerze* < *Bayersee*, *Tamza*, *Tanza* < *Tansee*,³⁵ *-stein* > *-sztyń* (e.g. *Hamersztyń* < *Hammerstein*, *Blumsztyń* < *Blumstein*, *Lubsztyń* < *Lobstein*), *-wiese* > *-weza* (*Szonweza*, *Szynweza* < *Schönwiese*).

The issues discussed above obviously pertain to just a tiny fragment of the complex problem of the sixteenth century toponymy of Royal Prussia. As indicated above, the aim of this text was to present some characteristic features connected with the linguistic diversity in the history of names. Readers interested in the problems of the toponymy of Gdańsk Pomerania and the land of Chełmno are invited to consult the works listed in the introduction, in which the issues touched upon in this commentary are presented in detail in addition to other problems connected with names in the area under discussion.

Lastly a few remarks have to be made concerning the manner in which the source material for the study of names was treated in this volume of AHP.

All the historical names included in the AHP are transliterated and adjusted to the present-day orthographic rules. The main name which is marked on the map and functions as the entry name in the index has in general been established based on the criterion of the frequency – it is the most frequently used one in the sources for the second half of the sixteenth century, regardless of whether it is in Polish or in German. In the case when several interchangeable names for one settlement were used with a similar frequency, the main one was assumed to be the form which appeared in the sources before the second half of the sixteenth century or the one which got stabilised after that period.

Interchangeable names of settlements (variant names, *odmianki*) have also been placed in the main entries of the list in brackets after the main name; they are also given as reference entries. Contemporary names, if different from the sixteenth century forms, are given in italics in the list.

(2021)

Translated by Paulina Waclawik

³⁵ The name *Tanza* is a good example of a resubstitution of a former Slavonic name filtered through German. Its original form, according to H. Górniewicz (*Rodzaje zniemczenia*, pp. 84–85), was **Sącz*, cf. *Czans*, *Czansz* 1318, *s-* used interchangeably with *ts-*, the nasal *q* rendered as *a*); in the sixteenth century, there was a change *Ts-* > *T-*, perhaps as a result of adideation to *Tanne* ('spruce') with the end-word *-s* getting reinterpreted as *-see* ('See' meaning 'lake'). In the same century, we witness the Polish substitutive forms *Tamza*, *Tanza*. The present-day name *Świerki* refers semantically to the form *Tannsee*, which was used again starting from the eighteenth century. as the German official name.

III.5 ROADS

III.5.1 CRACOW VOIVODESHIP

Małgorzata Wilska

The main map of Cracow Voivodeship presents major roads in the area in the sixteenth century. The reconstruction of the road network was based on similar principles as in previous volumes of the Atlas.¹ The source material allowed us to show on an additional map of roads (map 5) those sixteenth century customs houses (in broad understanding, i.e. including places where toll was collected) and those inns, which formed separate single farmstead settlements, situated outside villages and towns (and having their own name). They were not included in previous volumes of the Atlas.

Of all studies on the road network of Cracow Voivodeship, the findings of Bożena Wyrozumska, Andrzej Jureczko, Stefan Weyman (even though his work ends at the fourteenth century) and studies of Jacek Laberschek were particularly valuable.²

The information found in sixteenth century written sources was compared with maps from the eighteenth and nineteenth centuries. Public roads (highways) appear in Latin sources as *via or strata magna, publica, regia, via communis et antiqua, via mercatoria or mercatorum*. These terms applied both to far-reaching trade routes, and more important local routes. The density of road networks is closely related to the development of settlements, towns, and local trade. In Cracow Voivodeship, the road network is particularly dense around Cracow, which was the capital of Poland at the time, and a large town.

There were two types of roads: waterways and land routes, called ‘drogi ziemskie’ in the sixteenth century. In the Middle Ages, the rulers had an exclusive right to mark out new public highways, on which safety was granted. In exchange for safety of passage, traders were not allowed to bypass marked roads. The road obligation was related to the location of customs houses, where payment was collected. When a trader bypassed customs houses, the State lost money. The rulers had also the right to organize transportation on major rivers. In the Middle Ages this was one of the privileges of a duke.³ In the sixteenth century, towns and land owners were obliged to repair public roads running through their estates. According to the reports of royal inspectors, whose duty it was to control the state of roads in the country, this obligation was often neglected.

The two most important sources for our purpose were the 1564/1565 customs inspection: ‘Myta i cła na wodzie, jako promy, mosty, a na ziemi, jako groble, gaci, burki i naprawowanie dróg miastom i pewnem osobom, abo communitatibus vel collegiis nadane’, and the inspection of roads in Cracow Voivodeship conducted in 1570 and published by B. Wyrozumska.⁴ Unfortunately, the 1570 inspection did not survive intact, and – according to B. Wyrozumska – it lacks information about some 20–25% of roads in Cracow Voivodeship. We do not know, whether this was a result of some oversight of the inspectors,

⁴ Lustracja ceł 1564/1565; LDK.

who did not describe the roads at all, or whether there are pages missing from the surviving copy. The missing information pertains mostly to the southern part of the voivodeship. In general, the inspectors controlled public roads, and the selection of described roads did not always consist of the most important highways. Even though, all connections recorded in the inspection were included in our road network. In 1569, the Lublin Sejm appointed three officials for each voivodeship: the subcamerarius, the chorąży, and the wojski. They were ordered to inspect all customs and tariffs levied after the death of Ladislaus II Jagiello, as well as the state and size of highways, which had to be 10 ells wide, that is around six metres, at the most.⁵ The inspectors assigned for Cracow Voivodeship were: subcamerarius Stanisław Cikowski of Wojślawice, Radwan coat of arms, chorąży Marcjan Chełmski, Ostoja coat of arms, and wojski Stanisław Przypkowski, Radwan coat of arms. Already on 18 March 1570 the land bedel proclaimed the commencement of the inspection of the market square in Cracow.⁶

The inspection of customs and tariffs covered three Voivodeships: Cracow, Sandomierz, and Lublin, and was conducted along with the first inspection of royal estates in 1564/1565. However, according to Karol Buczek and Henryk Rutkowski, it was far from complete.⁷

The gaps can sometimes be filled in with information provided by other written sources. Royal itineraries help us determine the course of the routes. For instance, in the beginning of Casimir the Great's reign the road from Cracow to Greater Poland and Silesia was in use, it ran through Mstów, Wierzchowisko, Kłobuck and Krzepice, namely, north from the future town of Częstochowa. Ladislaus Jagiello advised travellers in 1400 to drive through Częstochowa on their way to Greater Poland.

This change was probably a result of Casimir the Great's successful location of a town by the Warta. J. Laberschek thinks that the construction of a crossing over the Warta was connected with a project of locating a royal town in that place, situated on the left bank of the river. The construction was costly, because the area was swampy and waterlogged and the river created many marshes. The road from Olsztyn through Częstochowa made the journey from Cracow to Greater Poland shorter, as it went around the monastery in Mstów.⁸

As in previous volumes of AHP, the method used in determining the course of roads was retrogression. The course of major roads, which appear in the sixteenth century sources, was reconstructed on the basis of detailed maps from the eighteenth and nineteenth centuries. It was based mainly on the aforementioned inspections and Liber beneficiorum by Jan Długosz, and documents. Various historical studies, which describe old trade routes, were also used, for instance, the latest research on towns, especially those, whose plans can be found in this volume.

Karol Perthées's map, created in 1787 and published in Paris in 1793 at a scale of 1:225,000, was particularly valuable, just as was the map drawn in Austria in 1772–1774 by Józef Liesganig. The former covers the northern part of the old Voivodeship of Cracow, and the latter – the southern part, taken in the First Partition. Liesganig's map, which shows Galicia, was based on field measurements at a scale of 1:72,000 and after some changes it was published in 1790 at a scale of 1:288,000. According to H. Rutkowski, the next publication of the map, from 1824, introduced some changes in the presented course of the roads.⁹

Fryderyk von Mieg's map of the same area, created in Austria and drawn at a scale of 1:28,800 is much more detailed. Antoni Mayer von Heldensfeld prepared his map of Western Galicia at the same scale, and based it on good mathematical and topographical foundations.¹⁰ The Topographical Map of the Kingdom of Poland (Quartermaster's Map) at a scale of 1:126,000 was used only for the roads in the northern part of the voivodeship, because it did not cover the rest of the territory of the voivodeship.

The course of some routes presented on our map is hypothetical to a large degree, even though the cartographic material from the end of the eighteenth century and the first half of the nineteenth was verified against the data from the sixteenth century sources.

⁹ H. Rutkowski, *Źródła kartograficzne*, [in:] AHP Sandomierz; also see above.

¹⁰ Both maps in Kriegsarchiv in Vienna, and photocopies in IH PAN in Warsaw.

The places, where the roads touched Sandomierz and Sieradz Voivodeships were copied from the published volumes of the AHP.¹¹ The following road maps were very helpful: of Sandomierz Voivodeship prepared by Henryk Rutkowski, of Sieradz and Łęczyca Voivodeships by Małgorzata Wilska, and the map of roads of Cracow Voivodeship by Bożena Wyrozumska, included in her monograph, and in the published 1570 inspection.¹² The latter map shows the connections between settlements in the area, but does not cover the detailed course of the road network. The 1570 inspection lacks the entire Silesian district. Also, the descriptions of the following roads did not survive: Cracow–Sącz through Czchów, Tarnów–Działoszyce–Lelów, Bochnia–Koszyce–Jędrzejów, Miechów–Jędrzejów. What is more, the description of Cracow–Krzepice route is divided: the road from Cracow to Ogrodzieniec was recorded in one place, and the road from Ogrodzieniec to Krzepice in another.

Written sources inform us, more or less precisely, through which settlements ran a given road. Still, the reconstruction of a detailed course was possible only after the information from the sources was compared with cartographic material. For instance, the 1570 inspection states that the road from Olsztyn to Częstochowa ran through a forest, but only the maps allowed us to determine its exact course. This was an important road from Cracow to Silesia, going through Olkusz, Ogrodzieniec, Kromolów, Olsztyn, Częstochowa, and Kłobuck. In Krzepice it split off to Wieluń, and Greater Poland, and Silesia. A document from 1529 described this route as ‘royal road’. At the end of the sixteenth century, the connection from Lelów and Częstochowa to Silesia became more and more important (1598 it was called ‘public road’). The travellers going to Silesia could use the road to Żarnowiec, and then through Pilica, Kroczyce, and to Lelów. The 1564/1565 inspection tells us about a highway running from Lelów to Mstów, and farther on through Rząsawe, Wierzchowisko, and to Kłobuck, where it met ‘a royal road’.

The inspection conducted in 1564/1564 claims that the road from Wieliczka to Bochnia ran in three variants: one towards Boner’s hill to the inn in Kołaczkowo, second from the new shaft towards Liekarcza, and the third – from Zabawa. They were all maintained by the salt mine. Roads running in different directions met in Wieliczka: to the north, apart from the Cracow road, the so-called ‘prasółka’, salt road¹³ with a crossing over the Vistula from the village Przewóz to Mogiła; to the east through Łapczyca to Bochnia; to the south towards the valley of the River Rabka through Dziekanowice and Dobczyce; to the west on the brows of Podgórze, through Kosocice and Korabniki, where customs houses were situated, to Skawina, and then through Zator and Oświęcim, to Silesia.¹⁴

Perthées’s map shows us the course of many side routes, e.g. in the vicinity of Cracow: Cracow, Łagiewniki, Wróblowice, Świątniki, Zawada, Myślenice. Regarding Silesian district, which was not described in the surviving 1570 inspection, the map informs us about an important road from Kęty, through Piskarzowice, to Biała. Mieg’s map, on the other hand, shows another connection from Biała, through Kozy, Andrychów, Wadowice, Brzeźnica, Skawina, and to Cracow. Also, the many customs houses in Wadowice, Wioska, Brzeźnica, Zelczyn, Borek, Skawina prove there was a road there. Both these routes were shown on the map.

Cracow was the capital of the State, and as a result major connections with neighbouring countries and states ran through the voivodeship: with Ruthenia (which belonged to the Crown, and with its further lands), with Hungary, with Bohemia, and with Germany.

The connection with Bohemia probably changed through the ages. It remains unclear, how the road ran in the sixteenth century. Royal itineraries suggest various routes were used: through Żywiec, Nowy Sącz, Wrocław.¹⁵ Stanisław Porębski’s map from 1563¹⁶ places four bridges near Oświęcim, leading to Silesia, Greater Poland, Lesser Poland, and Bohemia.

¹³ Długosz LB, vol. 1, p. 107.

¹⁴ S. Weymann, *Clia i drogi*, p. 113.

¹⁵ Ibidem, LDK, p. 3, footnote 2.

¹⁶ S. Porębski’s map, see above about cartographic sources. In 1558 Sigismund August confirmed the right to collect toll on a bridge over the Soła in Oświęcim, on the bridge the village Zabrzeg, on a bridge in Bobrów, and by Zator gate granted to the burghers of the town; MRPS V/1, no. 2317.

The highway connecting Cracow with Oświęcim ran through Kobierzyn, Skawina, Borek, Zelczyn, Brzeźnica, Spytkowice, Zator, Włosienica, and from Oświęcim the highway went abroad.¹⁷ In many places the inspectors noted the poor condition of the highway, or that it was too narrow. This route also had an alternative variant. It left Cracow and ran through Wola, Chełm, Liski, Kaszów, and then crossed the Vistula and reached Spytkowice, where it met the previous route. An important tract along the River Soła, south of Kęty and Żywiec, ran from Oświęcim. In the sixteenth century there was a direct connection from Żywiec, through Andrychów, Wadowice, Wioska, Brzeźnica, and further on a common road to Skawina and Cracow. In Zator, one could leave the Cracow–Oświęcim road and go directly to Kęty and Żywiec.

The oldest road to Silesia ran from Cracow through Olkusz, Sławków, Będzin, and further on through Bytom, Opole, and to Wrocław. Between Cracow and Olkusz the customs houses were particularly numerous in the sixteenth century. They were located in Wielga Wieś, Biały Kościół, Czajowice, Olkusz, and Sieniczno village.

Another route connecting Cracow with Silesia ran through Brzozówka, Skała, and to Ogrodzieniec, and then from Kromolów, Włodowice, and Żarki. In Żarki the road split – one arm turned west and went through Koziegłowy, Lubliniec, to Opole, and the other led north through Olsztyn, Częstochowa, Kłobuck, Krzepice, to Wrocław.¹⁸

Another road, called *strata magna* in the sources, ran from Cracow through Miechów, Żarnowiec, Małoszyce, Rokitno, Kaszczor, Witów, Lelów, Krzepice, to Greater Poland and Prussia, or from Krzepice to Silesia. According to Długosz, Ladislaus Jagiello and Casimir IV Jagiellon travelled this road. The earlier variant of this route bypassed Częstochowa and led through Mstów, Rędziany, Wierzchowiska (where a toll was collected), Kłobuck. In the sixteenth century, due to the growing cult of Our Lady of Częstochowa (also called Black Lady of Częstochowa), the importance of the road from Lelów through Olsztyn and Częstochowa grew, and the 1570 inspection lists both roads.¹⁹ The route through Olsztyn, Częstochowa is attested to in 1598 and 1599. At one time it is called a public road to Silesia from Lelów, to Częstochowa, at another – a highway from Lelów to Częstochowa.²⁰

Important trade routes ran through the Duchy of Siewierz, from the south to the north, and from the west to the east. This was the result of the favourable geographical location of this land. Already in the fifteenth century, Ladislaus Jagiello travelled from Cracow through Rabsztyn, Sławków, and Chruszczobród to Siewierz, and then through Koziegłowy, Częstochowa, to Greater Poland. From Siewierz the routes to Silesia ran through Warężyn, Będzin, and further on to Oświęcim, or the connection Siewierz–Czeladź through Przeczyce, Toporowice. There was also a Lelów–Włodowice–Mrzygłód road to Siewierz, as well as a connection from Siewierz to Ogrodzieniec and Żarnowiec.²¹ In the northern part of the duchy, the road in the sixteenth century led from Lelów through Żarki, Koziegłowy, Woźniki, and further on to Lubliniec.

The connection Cracow–Miechów ran through a customs house in Kończyce, and reached Słomniki. We cannot be certain, how the road led later on to Miechów, where there also was an attested customs house. After Mstyczów the road to Greater Poland and Prussia split. One route continued to the north through Chlewice to Kossów, and the other ran through Słupia, Chebdzie, Mękarzów, Ojsławice to Secemin.

There was also another important route (not included by B. Wyrozumska) shown on our map. It ran from Częstochowa through Lelów, Szczekociny, and further east to Jędrzejów. In Szczekociny the track crossed with the highway running from the southwest to Ogrodzieniec. There was a connection

¹⁷ About exits streets in Cracow see below J. Laberschek's commentary on Cracow, in this edition III.6.15a.1.

²⁰ A fragment of this road was mentioned already in 1378 r., between Potok and Olsztyn, see J. Laberschek, *Rozwój osadnictwa*, p. 55.

²¹ *Siewierz, Czeladź, Koziegłowy. Studia i materiały z dziejów Siewierza i księstwa siewierskiego*, ed. F. Kiryk, Katowice 1994.

from Cracow to settlements situated in Sandomierz and Lublin Voivodeship, it ran through Bieńczyce, and Proszowice, from where one could go to Wiślica or Skalbmierz.

Travellers going from Cracow to Ruthenia could choose several routes. One road ran along the left bank of the Vistula, through Wiślica, Połaniec and Sandomierz. From Cracow it led towards Mogiła, Igołomia, Cło, Wawrzeńczyce, and was called *via magna, via publica* in the sources.²² In 1566 Koszyce was granted the right to collect a bridge toll by king Sigismund August, ten grzywna from the toll was to be paid to the Treasury, and the rest was to cover the expenses of repairing roads and bridges in the town. There were many customs houses around these towns. Along the highway, which continued on the left bank of the Vistula, they could be found in Filipowice, Rachwałowice, and Ławy. Towards the northeast, the road ran through Pasimiechy, Bełzów, and Boszczyń through Skalbmierz, and to the south to Ujście Solne, and farther on to Bochnia.

There was also a road from Cracow through Staniątki and Chełm to Bochnia, and then to Lipnica Murowana. Here the roads split, one led to Hungary through Iwkowa, and Nowy Sącz, and the other through Melsztyn, Zakliczyn, Ciężkowice, Gromnik, Biecz, Dębowiec, Żmigród, and Dukla led to Ruthenia.²³ The road through Ciężkowice is called *strata publica* in the inspection. It had many variants, as one could drive from Bochnia through Dębno, Wojnicz, Tarnów, Jasło (or from Pilzno through Krosno). The accumulation of toll points between Biecz and Zakliczyn suggest this was probably the most popular route to Ruthenia.

The main highways from Cracow to Hungary led from later Podgórze, and then went south in three variants: a) through Nowy Sącz, Stary Sącz, Rytro, Piwniczna, to Lubowla; b) through Biecz, Gorlice, Ujście, to Bardiów; c) through Wieliczka, Dobczyce, Nowy Targ, and Czorsztyn.²⁴ One could go to Orawa from Cracow, precisely south of Myślenice, and then through Jabłonka.

Every connection had different variants. From Nowy Sącz the route ran through Rytro, Piwniczna, the valley of the River Poprad, and to Muszyna, where three roads from Hungary met: from Kieżmark, from Przeszów, and from Bardiów, through the valley of the River Topl'a.²⁵ There was another connection from Lubowla, to Nowy Targ through Kamionka, Wielki Lipnik, Czorsztyn, and further on along the Dunajec. This road led then through Muślenice, to Cracow, connecting Spisz with Podhale. There was a direct route from Nowy Sącz to Bardiów, through Tylicz Pass. There was also a variant running parallel to the aforementioned road, leading through Czchów, and Grybów to Hungary.²⁶

In the sixteenth century, the importance of Biecz is growing. It successfully competed with Sącz, and had several routes leading to Hungary.²⁷ One of them was the above-mentioned road through Gorlice, Klimkówka, to Ujście and Bardiów. In 1557, Stanisław Gładysz, the owner of Ujście, obtained the right to collect a toll in exchange for the duty to repair the road described as *via strataque publica*.²⁸ From Biecz one could also enter the older tract in Dębowiec, the tract ran from Sandomierz to Hungary. It led from north through Pilzno and Jasło, and then through Żmigród, Stary Żmigród, Dukla, and Dukla Pass.²⁹ There was also another connection, described by the inspectors in 1570. They travelled from Cracow through Bochnia, Zakliczyn to Biecz, and further on through Harkłowa, Dębowiec, the valley of the Wisłok to Żmigród. Next, they went from Zborów Pass and reached Bardiów.

The reconstruction of roads in Cracow Voivodeship met with some difficulties in precise location of crossings over the Vistula, as the river channel underwent some changes, and the eighteenth

century maps fail to mark crossings properly. A. Jureczko's work³⁰ on medieval bridges and crossings proved really helpful here. It allowed us to localize the places where tract routes led properly. Several crossings near Ujście were particularly problematic, as they changed both due to geographic conditions, as well as the importance of individual roads. That is why the course of some of them is hypothetical. There was no permanent bridge east of Cracow, in the crossing over the Vistula in Mogiła, Niepołomice, Ujście, and Koszyce. In Koszyce there was a wooden bridge, we know that from the 1564/1565 customs inspections, but the bridge was destroyed by flood, and in 1570 the inspectors had to be carried over the Vistula.³¹ Similarly, in the same year they found 'a good ferry, quite long and broad'³² in Ujście.

There were several permanent bridges west of Cracow. The one in Spytkowice was built in 1532 by the owner, Wawrzyniec Myszkowski, to whom the king granted the right to collect bridge toll. This bridge was marked on Porębski's map. There were also bridges: in Zator over the River Skawa, three near Oświęcim – two over the Vistula (in Harmężę, and near Bobrowniki, called Bobrkowski bridge), and one over the Soła. The overflows of the Dunajec caused many problems, and forced the owners to rebuild crossings. The inspectors recorded that the bridge in Melsztyn, made of huge wooden poles, was being rebuilt.³³ Over Dunajec, there were also bridges in Wojnicz, Zakliczyn, and Nowy Sącz.³⁴

Written sources, the sixteenth century inspections in particular, mention bridges in many other settlements located on important roads:³⁵ in Będzin (over the Przemsza), Biecz (over the Ropa), Bochnia (over the Babicza), Brzesko (over the Uswiwa), Chełmek (over the Przemsza), Częstochowa (over the Warta), Ciężkowice (over the Biała), Gromnik (over the Biała, and over the Rzepionka), Jasło (over the Wisłoka, Ropa, and Jasiołka), Kazimierz (Skawina bridge), Krzepice (over the Warta), Mogiła (over the Dłubnia), Mstów (over the Warta), Proszowice (over the Szreniawa), Sławków (over the Biała), Włosienica (over the Włosiennica). We know bridge toll was collected in small villages Borek and Zelczyn, located on the main road from Skawina to Oświęcim. The inspection informs us about small bridges there, over now non-existent rivulets, which were still shown on Mieg's map.

The state of bridges, crossings and roads was particularly good, and the inspectors frequently ordered the inhabitants to broaden, or build dykes, or to repair flood damages, as a result of negligence. B. Wyrozumska describes this subject in detail.³⁶

On our map, we tried to show all customs houses operating in the sixteenth century mentioned in written sources.³⁷ S. Weyman's belief concerning the connection between customs houses and main road network seems justified.³⁸ The accumulation of customs houses along some communication routes suggests the traffic was busy there. And so, for instance, the four customs houses in Wielka Wieś, Biały Kościół, Czajowice, and Sieniczno, on a relatively short fragment from Cracow to Olkusz, are a proof of the high rank of this route to Silesia.

The location of inns along the roads, which had their own names and were situated outside towns and villages, often deep in the forest or wilderness proves that a given trade, or communication route was important in the sixteenth century. Travellers stopped in such places not only to spend the night there, or to eat, but also to buy goods, mend something, and exchange money. Sometimes, where no more suitable place could be found in the vicinity, customs houses were set in inns, and toll was collected there.³⁹

³⁰ A. Jureczko, *Średniowieczne mosty i przewozy*, p. 7.

³¹ *Lustracja ceł 1564/1565*, p. 259–260; LDK, p. 28.

³² LDK, p. 29–30.

³³ Customs inspection 1564/65, p. 212 mentions a solid, oak bridge, and LDK, p. 50 says this bridge was destroyed.

³⁴ The bridge over the Dunajec situated near Nowy Sącz is mentioned in MRPS IV/1, no. 6931; another one, over the Kamienica – see LDK, p. 36.

³⁵ See *Lustracja ceł 1564/1565*, p. 211, 212, 218, 219, 232, 243–246 f. And LDK, and the list of documents no. 3, 5, 10, 13, 14, 16, 17, 20, 21, 24, 26, 33, 37, 49.

³⁶ B. Wyrozumska, *Drogi w ziemi krakowskiej*, chapter *Stan dróg*, pp. 36–43.

³⁷ The list of customs houses, based on *Lustracja ceł 1564/1565* and LDK can be found in the Annex.

³⁸ S. Weymann, *Cła i drogi*, p. 90. This belief of S. Weyman was partially questioned by H. Samsonowicz, who believed that the customs houses were often placed on side roads; see H. Samsonowicz, *Sieć drożna Polski w średniowieczu*, PH, 1973, no. 4, p. 705.

³⁹ B. Wyrozumska, *Drogi w ziemi krakowskiej*, p. 34.

The juxtaposition of written sources, like the road inspection from 1570, studies (e.g. B. Wyrozumski, *Drogi w ziemi krakowskiej do końca XVI wieku*; *Słownik historyczno-geograficzny województwa krakowskiego*), and cartographic sources (Perthées, Quartermaster's Map) allows us to determine the location of such places with a high degree of probability, and to locate them on the map of roads. The comparison of the fifteenth and sixteenth century inns with later source records shows us that small hamlets formed around many inns, and shortly, sometimes within less than twenty years, they became villages.

Main routes, of nationwide importance, led through Cracow Voivodeship. They connected Cracow with the most important centres, and ran farther on, to Vilnius, Budapest, Vienna, and Prague. The accumulation of roads around the capital is clearly visible on the main map and the map of roads.

Current research allows us to list the most important connections running through Cracow Voivodeship and Siewierz duchy.

1. Cracow–Poznań:
 - a) Olkusz or Skała–Ogrodzieniec–Żarki–Częstochowa–Krzepice–Wieluń;
 - b) Skała–Wolbrom–Pilica or Żarnowiec–Lelów–Konięcpol–Pławno–Radomsko;
 - c) Słomniki–Miechów–Żarnowiec–Lelów and then like 1b.
2. Cracow–Toruń:
 - a) like 1b;
 - b) Słomniki–Miechów–Mstyczów–Secemin–Kurzelów.
3. Cracow–Warsaw:
 - a) Słomniki–Miechów–Książ Wielki–Jędrzejów–Małogoszcz;
 - b) Proszowice–Wiślica–Busko.
4. Cracow–Lublin:
 - a) like 3b;
 - b) Brzesko Nowe–Koszyce–Opatowiec–Nowe Miasto Korczyn.
5. Cracow–Lwów:
 - a) Bochnia–Wojnicz–Tarnów–Pilzno–Dębica;
 - b) Bochnia–Lipnica Murowana–Zakliczyn–Gromnik–Ciężkowice–Biecz–Dębowiec–Krosno–Sanok;
 - c) to Gromnik like 5b and then Olszyny–Jasło–Krosno–Sanok.
6. Cracow–Wrocław:
 - a) Olkusz–Sławków–Siewierz–Koziegłowy–Lubliniec;
 - b) Olkusz–Sławków–Będzin–Bytom.
7. Cracow–Ołomuniec: Skawina–Zator–Oświęcim–Pszczyna–Ostrawa.
8. Cracow–Ostrzyhom:
 - a) Skawina–Wadowice–Żywiec–Żylinia;
 - b) Myślenice–Twardoszyn.
9. Cracow–Koszyce:
 - a) Wieliczka–Dobczyce–Nowy Targ–Podoliniec–Lewocza;
 - b) Bochnia–Lipnica Murowana–Nowy Sącz–Piwniczna–Lubowla;
 - c) to Biecz like 5b and then Gorlice–Ujście–Bardiów.
10. Lwów–Wrocław:
 - a) Wiślica–Działoszyce–Miechów–Wolbrom–Olkusz–Sławków–Będzin–Bytom;
 - b) Wiślica–Pińczów–Jędrzejów–Szczekociny–Lelów–Częstochowa–Krzepice–Kluczbork;
 - c) Chęciny–Małogoszcz–Secemin–Lelów, and then like road 10b or Żarki–Koziegłowy–Lubliniec.
11. Lwów–Koszyce:
 - a) Sanok–Krosno–Dębowiec–Gorlice–Ujście–Bardiów;
 - b) Sanok–Krosno–Dębowiec–Grybów–Nowy Sącz, and then like 9b.
12. Warsaw–Koszyce:
 - a) Brzostek–Jasło–Dębowiec–Żmigród–Krempna or Dukla–Bardiów;
 - b) Frysztak–Krosno–Dukla–Bardiów.

ANNEX CUSTOMS HOUSES AND INNS

Customs houses

Bełzów, Będzin, Biecz, Bięczyce, Bobrek, Bobrowniki, Bochnia, Borek, Boszczyń, Brzeźnica, Brzozówka, Charmęzy, Chełm, Chrzanów, Cieszkowice, Cło, Cło (par. Biały Kościół), Cło (par. Chełm), Czajowice, Czasławice, Czchów, Czeladź, Częstochowa, Czorsztyn, Dębno, Dębowiec, Długoszyń, Dobczyce, Dukla, Działoszyce, Filipowice, Gorlice, Gromnik, Iwkowa, Jasło, Kaszczor, Kaszów, Kazimierz, Kęty, Kłobucko, Kobierzyn, Korabniki, Koskowice, Kosocice, Koszyczyki, Koziegłowy, Kroczyce, Krzepice, Kuchary, Kuńczyce, Lelów, Liski, Ławy, Łobzów, Melsztyn, Miechów, Mogiła, Mstów, Mstyczów, Myślimice, Niegostawice, Nowy Targ, Ociec (Ojców), Ogrodzieniec, Olkusz, Oświęcim, Pasimiechy, Piwniczna, Proszowice, Rachwałowice, Raciborsko, Rajsko, Rozemberg, Rytter, Sądecz Nowy, Sądecz Stary, Sieniczna, Siewierz, Sitnica, Skała, Skarbimierz, Skawina, Sławków, Słomniki, Spytkowice, Sucha, Taszyce, Uście, Wadowice, Walenczów, Warężyn, Wawrzyńczyce, Wąsosze, Wielga Wieś, Wieliczka, Wierzchowiska, Wietrzno, Wioska, Włosienica, Wojnicz, Wola, Wolbram, Zakliczyn, Zator, Zelczyn, Zendek, Żarnowiec, Żmigród, Żywiec.

Inns, which formed separate settlements

Barycz, Bodzanów parish, Szczyrzyc district
Borowa, Chechło parish, Proszowice district
Borowa, Mstyczów parish, Silesian district
Brzozówka, Wojakowa parish, Nowy Sącz district
Budy, Oświęcim parish, Silesian district
Celna (Na Czele, Czło), Zwierzyniec parish, Proszowice district
Chajduga, Pobiodr parish, Proszowice district
Chełm, Rudawa parish, Proszowice district
Chochół, par. Luborzyca, Proszowice district
Cianówka, par. Smarowice, Proszowice district
Cło, par. Chełm, Szczyrzyc district
Cło, par. Biały Kościół, Proszowice district
Czecheł (Chochół), Giebułtów parish, Proszowice district
Gajowa, Sędziszów parish, Książ district
Gliniana, Więclawice parish, Proszowice district
Grzybowa, Bieżanów parish, Szczyrzyc district
Jasińska, Rzezawa parish, Szczyrzyc district
Jelitowa, Raciborowice parish, Proszowice district
Kamienna, Cracow parish – St. Nicolas, Proszowice district
Kleszczyńska, Skarbimierz parish, Proszowice district
Lipka, Bolechowice parish, Proszowice district
Podborna, Krzeszowice parish, Proszowice district
Podchełmie, Rudawa parish, Proszowice district
Prądnicka, Cracow parish – St. Nicolas, Proszowice district
Pultowska, Brzeźnica parish, Szczyrzyc district
Rudawa, Rudawa parish, Proszowice district
Samostrzelna, Kazimierz parish – St. Jacob, Proszowice district
Szulierz (Szuler?), Jangrot parish, Proszowice district
Tira, Giebułtów parish, Proszowice district

Uswica, Uszew parish, Szczyrzyc district
Zybr (Zubr?), Gołaczów parish, Proszowice district

All inns listed appear on the map of roads, but were not shown on the main map, or listed in the List.

III.5a.1 SPISZ STAROSTA'S DISTRICT

Jarosław Suproniuk

On 8 November 1412 in Zagreb Sigismund of Luxemburg, as King of Hungary, 'gives 16 towns in the land of Spisz, with affiliated territories, as a pledge for the borrowed sum of 37,000 threescores of Prague groschen, determining the conditions of the pledge, and its possible buyout'.¹ The document lists: 'our castle Lubowla with town, and the town Podoliniec with a stronghold and villages, which belonged to it, yet with cities and towns listed below, located in our land of Spisz, Ostrzyhom diocese, namely: Gniazda, Biała, Lubica, Wierzbów, Twarożna, Poprad, Straże, Wielka, Włochy, Podegrodzie, Nowa Wieś, Ruskinowce, Matjaszowce, and Sobota, with all their affinities, rents, benefices, incomes, benefits, secular jurisdiction, estates [...]'.²

Already before the document of the pledge was issued in 1412 Gniazda, Lubowla, and Podoliniec (with castles in Lubowla and Podoliniec) formed a separate royal dominion, which did not belong to the union of 24 towns of the Saxon community.³ These three cities, together with their lands, were territorially connected with Poland. The remaining part of the pledged territory was described by the sources as 13 towns of the Saxon province in Spisz.⁴ Mostly, these were agricultural towns, which held weekly markets. Six enclaves could be distinguished from this area:⁵

- Biała Spiska, a town with lands stretching towards the Tatras, situated on the left bank of the River Poprad,
- East and southeast of Kieżmark: four villages Lubica, Ruskinowice, Twarożna and Wierzbów. 'The territory of Lubica was, in fact, connected with the district of Lubowiec on the watershed running along the peaks of Lewockie Mountains, between the stream Lubica, and the stream Jakubiański, belonging to Lubowla. However, the junction is narrow, inaccessible, and the connection is blocked. As such, Lubica can be considered a separate enclave';⁶
- Southwest of Kieżmark, upstream of the Poprad, there was another enclave, with the town of Poprad, and Sobota Spiska with surrounding villages: Matiaszowce (Maciejowice), Straże, and Wielka (Fylka);
- Nowa Wieś Spiska lay south of Lewocza, together with the territory stretching from the River Hornad to the River Hnilec;
- East of Nowa Wieś Spiska, by the River Hornad, there was yet another enclave around Włochy Spiskie, with area on both banks of the Hornad;

Map 1. Spisz starosta's district in the second half of the 16th century

- Northwest of Włochy Spiskie, near the stream of the River Torysa lay Podegrodzie Spiskie, but without Spisz castle, which was excluded from the pledge, and remained on the Hungarian side.

This territory remained in Poland (under Polish administration) until 1769, as unpaid debt.⁷ Spisz starosta's district was a non-gord starosta's district (*sine iurisdictione*) – Polish administration was meant to be temporary. The castles in Lubowla and Podoliniec became seats of Polish starostas, and Nowa Wieś Spiska became the main centre of the 13 towns of Spisz.

Lubowla dominium (districtus Lublouiensis) consisted of the following towns: Lubowla with castle, Gniazda (*alias Knyszyn*), and Podoliniec with castle. The towns owned castle demesnes in Lubowla and Podoliniec, as well as eight villages: five under Magdeburg law (Družbark Niżny with a mill, Družbark Wyżny with an inn and a mill, Forbasy, Nowa Lubowla, Obgart [Hobgart] and three Vlach villages (Jakubiany, Jarzembina, and Kamień).⁸ To this we must add the inn Krempak with mills in Gniazda and Lubowla, and the village Litmanowa, recorded since 1570.⁹ The division into Lubowla dominium (Gniazda, Lubowla, Podoliniec) and the 'community of 13 towns pledged to Poland as Spisz starosta's district' survived until the second half of the eighteenth century;¹⁰ the remaining 11 towns of Spisz (from the province of 24 towns of Spisz) remained under the authority of the Crown of Hungary.

The Polish nobility did not possess any hereditary estates in Spisz starosta's district, and the kings of Poland legitimized and guaranteed town privileges. Since the sixteenth century the vice-starostas of Lubowla and Podoliniec, with help of the burgraves, supervised the administration in the starosta's place. The starosta, on behalf of the king, had authority over the 13 towns of Spisz. The 1271 privilege granted the 13 towns the right to elect their common graf and judge ('rychtarz') in each of the towns; against the decisions and verdicts of the judge one could appeal to the graf of 13 towns, and against his decisions, to the starosta himself, or to the king.¹¹

The matter of the starosta's district of Spisz, which legally and territorially did not cease to belong to the Kingdom of Hungary, changed hands between Poland and Hungary. Constant border conflict resulted in frequent gatherings of the border committees, which became more active in the sixteenth century. One of the largest border committees was 'Ruberiana' from 1580.¹²

Spisz starosta's district, given its favourable and strategic location, significant income, and military importance of the castles in Lubowla and Podoliniec, was 'clearly outstanding in terms of prestige, and symbolism'.¹³

III.5.2 SANDOMIERZ VOIVODESHIP

Henryk Rutkowski

Our map, just like the map of Mazovia, presents **the more important roads**, which existed in the second half of the sixteenth century. Our purpose was not to mark all public roads, i.e. highways, but only to include some of them of our choosing. This assumption is related to the insufficient number of sources: only small fragments of the road network can be drawn on the basis of the sixteenth century materials. That is why, given the fact that the course of the roads until the beginning of the nineteenth century shows much stability, our main method was retrogression. Our choice was made from highways appearing on the maps from the turn of the eighteenth and nineteenth centuries. It was made with regard to information on public roads found in the sixteenth century sources, the results of studies of contemporary trade routes and itineraries. Location of towns was also taken into consideration; in the period of our study it was almost identical to the situation at the end of the eighteenth century. It should, however, be noted that the network of the more important highways is one of the more hypothetical elements of our map, both in terms of the choice of particular roads, or the assessment of their importance, as well as in terms of their course (although the course of many fragments, e.g. near towns, is certain). We are unable to describe the course of all roads in the commentary, nor can we provide the degree of its probability; along with general information about the sources and methods of conduct, we can present only selected detailed examples.¹

The source which was especially important to us was the inspection entitled: 'Myta i cła na wodzie, jako promy, mosty, a na ziemi, jako groble, gaci, burki i naprawowanie dróg miastom i pewnem osobom, albo communitatibus vel collegiis nadane'.² This inspection was conducted simultaneously with the first inspection of royal property in 1564/1565, and the surviving inspectors' protocol covers three voivodeships of Lesser Poland: Cracow, Sandomierz and Lublin. The inspectors checked legal bases for the collection of tolls and tariffs, that is they conducted a revision of privileges, and controlled the state of ferries, bridges, weirs, cobbles, and other means of transportation on which the king's bestowal of toll income was granted. It should be noted that toll was frequently collected without necessary privilege, or investments in roads. Only public roads lay within the range of the inspectors' interests.³ The result of the inspectors' proceedings was far from complete, the number of tolls covered in the inspection certainly did not reach even a half of all tolls collected in Sandomierz Voivodeship, just as in Cracow Voivodeship.⁴ From our point of view, the source described is a register of quite accidentally chosen highways, defined by their relation to only one settlement, or their role in pointing the further course of the road. Despite these flaws, the inspection of tolls and tariffs provided the basic resource of information about road networks in the area of our interest in the sixteenth century. All highways

¹ See for more information of this subject, H. Rutkowski, *Roads*, [in:] AHP Mazovia, in this edition III.5.7.

² *Lustracja ceł 1564/1565*, p. 199.

³ Fragment of the description of roads near Skawina, a town belonging to Tyniec abbey in Cracow Voivodeship: 'Item pokazywano też od ks. opata wedla przywileja naprawowanie drogi ab oppido versus villam Radzieszow, od pirszy brany eundo versus Lanczkoronam, sed quia non est via publica, telko ludzie wiescy tamtędy jeżdzą, tedy nie jest oględowana'; *ibidem*, p. 205; cf. LDK, pp. 6–7, 79.

⁴ K. Buczek, *Wstęp historyczny*, [in:] LDK, pp. XI f.; B. Wyrozumska, *Drogi w ziemi krakowskiej do końca XVI w.*, Wrocław 1977, pp. 12 f.

indicated by this source were included in our map. The information about ferries and bridges in royal estates was supplemented by the inspection of royal property.⁵

As was already mentioned in the chapter on cartographic sources, the **map of Andrzej Porabka from 1570** shows several roads running through Sandomierz Voivodeship. These were (in the range of our interest):

1. Cracow–Miechów–Secemin–Kurzelów–Przedbórz–Żarnów–Opoczno–Inowódz–Rawa;⁶
2. Cracow–Proszowice–Wiślica–Szydłów–Opatów–Zawichost–Urzędów–Lublin;
3. Cracow–Korczyn–Połaniec–Osiek–Koprzywnica (name on map: Pokrzywnica)–Sandomierz–Zawichost, etc.;
4. Cracow–Bochnia–Tarnów–Pilzno–Dębica–Sędziszów–Rzeszów–Jarosław.⁷

A detailed picture of the roads – but two centuries later – comes from the maps from the turn of the eighteenth and nineteenth century: Polish maps by K. Perthès and Austrian maps by Heldensfeld, Liesganig and Mieg. Major roads marked on these maps (highways, routes, mail routes) served as a base for retrogression combined with selection. Detailed courses of roads was determined according to those maps on the foundation of the maps at a scale of 1:100,000 from the first half of the twentieth century. Given the significant differences in the maps from the eighteenth and nineteenth centuries, as well as the fact that no source could be granted precedence in the range of our interest, we assumed various solutions. In reconstruction of the sixteenth century road network we, in fact, disregarded variants of highways, that is when there were two or three connections shown on the maps, we chose just one of them. For instance: of two roads Drzewica–Końskie we chose the one leading through Gielniów (this road is presented on Perthès's map), and decided to omit the road surrounding the town (shown on Perthès's and Heldensfeld's map). The highway Iłża–Wąchock went through Mirzec (as in Heldensfeld), and the road through Małyszyn was omitted (in Perthès). The connection between Opatów and Tarłów went through Ćmielów (Perthès, Heldensfeld), and the one through Gliniany (Perthès) – which became a town in 1595 – was omitted. However, sometimes we abandoned our rule, and marked variants of roads. For instance, the highway Kozienice–Oleksów went both through Sieciechów, and around this town; both roads are presented by Perthès and Heldensfeld, but the former was described as 'Low Route' by Perthès.

The aforementioned solutions are, naturally, only probable for the sixteenth century, unlike those, which could be based on sources from the period. For instance, the highway running from Cracow to Mazovia through Końskie was doubled in the area by the road running through Modliszowice, mentioned on this route in tariffs inspection.⁸ This inspection describes a highway near Sandomierz, which used to run through Ocinek, but was moved to the nearby Góry Dolne.⁹ In the eighteenth century Perthès put the road through Góry, and Heldensfeld through Ocinek. Our map shows both variants.

Treating our eighteenth century sources as a whole, we can say that the 1564/1565 tariffs inspection shows a high degree of accuracy, that is it mentions only few highways, which either have a different course than the one marked on one of the maps, or does not appear on the maps at all. Beginning

⁵ LS 1564/5.

⁶ Part of the same road appears already on Erhards Etzlaub's map from 1501: Cracow–Miechów–Kurzelów–Przedbórz–Piotrków. The copy of this map of Middle-European roads in an unfinished publication from 1939: *Monumenta Poloniae Cartographica*, tabl. 1; cf. K. Buczek, *The History of Polish Cartography from the 15th to the 18th Century*, Wrocław 1966, pp. 25 f.

⁷ Pograbka's map was used by Michael von Eitzing, the author of the *Itinerarium Orbis Christiani*, pub. 1578–1580 in Amsterdam or Cologne. He marked two of the three roads listed – the second and the third – on his map of Poland in the area of the Sandomierz Voivodeship. U. Puckalanka, *Szesnastowieczna mapa polsko-litewskich szlaków podróżnych*, „Zeszyty Naukowe UAM w Poznaniu”, no. 54: Biblioteka, no. 4, 1964, pp. 183–200.

⁸ Lustracja ceł 1564/1565, pp. 290 f.

⁹ *Ibidem*, p. 257. This was a highway from the crossing in Sandomierz, running from Ruthenia to Greater Poland and Mazovia, 'on which oxen walk, as well as carters and peddlers. On this highway a River Lukawa runs through this village [Ocinek], from Opatów, through the mountains.' The valley of the Łukawa 'cannot be crossed without a bridge or a dyke in the autumn and in the spring. Now there is no bridge of dyke there, because the highway was led over the river in the village Góry'. In Góry there were two bridges, and the third was to be built, but 'Mr. Stanisław Lypnyczky want to bring this highway ex villa Gori ad villam Ocinek, to its old place, and built the bridge and the dyke where they had been before, and for which place the privilege had been granted'. Mikołaj Lipnicki was awarded in 1528 by privilege for this place (,in villa Oczyn sive Kuchary super fluvio Lukawa'); MRPS, IV, no. 15406. River Łukawa was separating the village Ocinek, owned by Lipnicki family, from the village Ocinek, which belonged to the vogtship of Sandomierz.

with the first group, we list all modifications in the course of the roads taken from later maps made on the basis of the sixteenth century data (not only from tariffs inspections). The road Tarnów–Pilzno went via Gumniska, Skrzyszów, Łęki Górne, and not through Pogórska Wola, as Liesganig and Mieg did, because the tariffs inspection lists Łęki along this route.¹⁰ Similarly, the road Sędziszów–Trzciana went through Będziemyśl, not Kłęczany.¹¹ The Rudnik–Krzeszów road was changed near Kopki, where the toll was paid before 1564/1565, which was next moved to Rudnik;¹² our map, unlike Liesganig's, shows both Rudnik, and Kopki by the highway. These modifications were introduced on the basis of the inspection of tariffs, two next – on the basis of other sources. The course of the highway going from Sandomierz to the crossing, and further on to Strachocin on the right bank of the Vistula was also modified; the owners of this village situated in Lublin Voivodeship had been granted a privilege for this crossing.¹³ Strachocin is a lost village, its approximate localization influenced the reconstruction of the course of the road.¹⁴ The highway Oleszno–Przedbórz avoids Żeleźnica on Perthès's map (it is not shown on Heldensfeld's map), but we put the road through the village.¹⁵ Żeleźnica appears in Sigismundus the Old's itinerary, and besides, it is known that in 1511 there was a bridge over the River Czarna here, from which the toll was taken by the local parson and the owner of Oleszno.¹⁶

Supplements were introduced to the basic map of Sandomierz Voivodeship in relation to the road network presented in cartographic sources. Firstly, we will list all **roads attested to for the sixteenth century**. The highway from Inowódz to Odrzywół, absent from Perthès's and Heldensfeld's maps (only the later Topographical Map shows a route here), was added because the tariffs inspection describes Odrzywół as situated on the road from Lublin to Poznań.¹⁷ The road Inowódz–Drzewica–Skrzynno is attested to in the king's itinerary.¹⁸ Also, the highway Strzałków–Konary–Rzuchów–Kadź, parallel to the road Radom–Odrzywół via Przytyk was included, although in it was not so frequently used in 1564/1565 as before.¹⁹ A short connection between Wola Zadybska and Zadybie was introduced as a fragment of the road from Kozienice to Łuków, which was frequently used by kings.²⁰ Cartographic sources from the turn of the eighteenth and nineteenth centuries do not mark the highway connecting Gołąb with the Sieciechów–Janowiec road through the Vistula, although the crossing near Gołąb, open in the sixteenth century, proves that the road existed.²¹ Also, there are no doubts that there was heavy

¹⁰ *Lustracja ceł 1564/1565*, pp. 270–273.

¹¹ *Ibidem* p. 342.

¹² *Ibidem* pp. 365–369. Customs house in Kopki operated already in the fourteenth century; F. Bruns, H. Weczerka, *Hansische Handelsstrassen. Textband*, Weimar 1967, p. 696.

¹³ *Lustracja ceł 1564/1565*, pp. 287 f.

¹⁴ The location of Strachocin in AHP Lublin, the map, is incorrect. In 1369 Strachocin was a field in Pniów village, in the fifteenth and the sixteenth century it appears as a village by the Vistula in Wrzawy parish, and in 1612 as a field in Wrzawy; S. Kuraś, *Słownik historyczno-geograficzny woj. lubelskiego w średniowieczu*, Warsaw 1983, p. 223. This, and the name of the River Strachocka allow us to localize Strachocin in approximation in the area of the present-day mouth of the San, where there are villages: Dąbrówka (part of Pniów) and Pasternik (part of Wrzawy). On his map Perthès marked a crossing through the Vistula from the left bank of the Dąbrówka.

¹⁵ Żeleźnica by the Czarna, a royal village in Przedbórz starosta's lease, initially it was called Żelazne Nogi, like the forest surrounding it. In 1511 there was a village Żelazne Nogi, which consisted only of a wooden parochial church and iron-works under construction, and the original village of this name, 3 km away, was called Stara Wieś then. Later this Church settlement developed into a small village, which got the name Żeleźnica. According to the tradition recorded in the nineteenth century, probably reliable, the church in Żeleźnica was built at the spot of Casimir the Great's accident in 1370. Łaski LB, I, pp. 612–614; SGKP, vol. 14, pp. 767 f.; J. Wiśniewski, *Dekanat konecki*, Radom 1913, pp. 321–324; H. Rutkowski, *Pomnik wypadku Kazimierza Wielkiego*, „Roczniki Humanistyczne”, Lublin (in print).

¹⁶ Łaski LB, I, pp. 612–614; A. Gąsiorowski, *Itineraria dwu ostatnich Jagiellonów*, „Studia Historyczne”, vol. 16, 1973, no. 2, p. 263.

¹⁷ *Lustracja ceł 1564/1565*, p. 293. Also, the course of the Lublin–Poznań road via Przytyk, Odrzywół, Inowódz is attested in the documents from the second half of the fifteenth century; S. Weymann, *Ze studiów nad zagadnieniem dróg w Wielkopolsce od X do XVIII w.*, „Przegląd Zachodni”, vol. 9, 1953, no. 2, pp. 222–224; K. Myśliński, *Lublin a handel Wrocławia z Rusią w XIV i XV w.*, „Rocznik Lubelski”, vol. 3, 1960, pp. 15–20; F. Bruns, H. Weczerka, *Hansische Handelsstrassen*, p. 648. The road from Poznań to Lublin via Inowódz, Przytyk, so undoubtedly also through Odrzywół, is mentioned by M. Grycz on the basis of Poznań archival documents, M. Grycz, *Handel Poznania 1550–1655*, Poznań 1964, p. 82.

¹⁸ Mentioned were: Szydłowiec, Krajów, Drzewica, Inowódz; A. Gąsiorowski, *Itineraria*, p. 267.

¹⁹ It is proven by the description of Konary, where bridge toll was paid: ‘... since 20 years they take nothing, and they pass Przytyk, and these bridges they built only for the mills’; *Lustracja ceł 1564/1565*, p. 293.

²⁰ A. Gąsiorowski, *Itineraria*, pp. 259–269.

²¹ *LS 1564/1565*, p. 244.

traffic on the crossing through the Vistula near Sandomierz, specifically between Kamień Mściowski and Gorzyce;²² only Liesganig's map shows a major road here in the eighteenth century, but this road runs mostly beyond the range of this Austrian map, which influences the value of this record. That is why we mention the connection between Sandomierz and the road Trzeźnia–Gorzyce. Part of the road from Sandomierz to Koprzywnica was supplemented with a parallel highway Złota–Zajezerze–Skotniki–Zarzecze, mentioned in Zajezerze by the tariffs inspection.²³ The fragment between Hubenice and Otfinów, part of Tarnów highway, which ran from Nowe Miasto Korczyn, well-attested to in the sixteenth century sources,²⁴ was not shown on later maps.

The fact that not all public roads known from the sixteenth century sources appear on the eighteenth/nineteenth century maps allows us to suspect, that some highways were not mentioned in any of the two categories of sources. As such, in several places the road network was supplemented with **short hypothetical routes**. On the road Klwów–Przytyk, which was led according to Perthès from Grabowa, and according to Heldensfeld from Wrzeszczów, the two aforementioned villages were connected (the Topographical Map shows a tract here). There is a fragment along the road Szydłowiec–Gowarczów which is not attested to in the sources; this road constituted a part of a great route for driving oxen.²⁵ Maciejowice is connected with the left bank of the Vistula on our map, i.e. with the road near Mironice, which led through Jedlnia to Radom. In the sixteenth century there certainly was a crossing here, having long tradition in the neighbouring Świerże Górne,²⁶ and then appearing on Heldensfeld's map as a crossing on an ordinary country road, not a tract. A place on the highway Ciepielów–Siemno, where the eighteenth century maps mark Rozdroże, was connected with Lipsko (on the Topographical Map – tract). We added short fragments of roads: near Falisławice along the Małogoszcz–Mniów highway, and near Sarnia Zwola on the Słupia Nowa–Waśniów highway (a tract on the Topographical Map). The last position of this list is the connection of the road Osiek–Połaniec with the crossing through the Vistula, that is the road through Tursko Wielkie and Niekurza to the river; the crossing and the highway on the right bank of the Vistula appear in our cartographic sources.

The inspection of tariffs from 1564/1565 mentions numerous **bridges** over small and medium rivers, over the Wieprz in Stężyca and Bobrowniki, and between Drażgów and Baranów, in Łysobyki among others.²⁷ However, these records are far from complete, the records of crossings over major rivers look much better. It should be emphasized here that both: bridges and crossings could be found not only on highways, but also on country, local roads. A meaningful example was noted in the inspection of Sandomierz Voivodeship: in the village Przekop on the right bank of the Vistula there was a crossing 'not on the highway, only on a simple road from neighbouring villages to Osyek'.²⁸ We list all **crossings** which appeared in both inspections from 1564/5. Over the Vistula these were the crossings in: Przemękowska Wola,²⁹ Hubenice,³⁰ Przekop (aforementioned), Kamień near Sandomierz,³¹ Strachocin,³² Zawichost,³³ Linów and Łęg,³⁴ Kolczyn,³⁵ Janowiec,³⁶ Kazimierz,³⁷ Gromki near

³⁷ Ibidem, p. 301.

Wólka Gołębska and Gołąb,³⁸ Stężyca,³⁹ Kozienice.⁴⁰ Several other crossings over the Vistula were also marked on the map, which certainly, or only probably existed in the sixteenth century, namely: two crossings near Opatowiec, near Pacanów, near Osiek (aforementioned in Niekurza), the crossing between Sandomierz and Nabrzezcie, in Solec, in Zajezerze, and near Maciejowice. The following crossings were attested to over the San: Nisko, Pławo, Jastkowice, Rzeczyca Długa (Rzeczyca Większa in the sixteenth century) and Kamień Łukawski.⁴¹

The rules for the reconstruction of the road network in Sandomierz Voivodeship in the second half of the sixteenth century were similar to those applied to the roads on the maps of Lublin Voivodeship and Mazovia. The fact that we were able to use the tariffs inspection for Sandomierz Voivodeship (only fragments of a corresponding inspection survived in Mazovia) made a significant difference. Inconsistencies which emerged in the picture of the road network on the borderlands between Sandomierz Voivodeship and the two aforementioned territories come down to the following supplementations: on the side of Lublin Voivodeship we added a highway on the right bank of the San, leading through Radomyśl among others, then in the roads Kazimierz–Gołąb, Bobrowniki–Końskowola, the connection between Łysobyki with Michów, Kock and Serokomla, connection between Serokomla and Okrzeja and Wojciechów, Żelechów with Tuchowicz;⁴² in the Mazovian borderlands we added the roads Korytnica–Garwolin and Łaskarzew–Wilga.

We know that in the sixteenth century the traffic on the roads was seasonal to a large degree, dependent upon the current season of the year and weather conditions. Crossing clay terrain, or loess soils, covering large areas of our territory, must have been very difficult during rainy periods. Połaniec provides an example of seasonal use of a bridge, the bridge was used only during floods, because otherwise it was always possible to ford the river.⁴³ Apart from periodical differences, other changes in the use of the highways depended on the current season. Mostly these were the results of destruction and lack or repairs of transporting devices, what made crossing difficult, or even impossible, and forced travellers to choose other roads. Small changes, like shifting the traffic to the road leading through a neighbouring village was probably more common than establishing further routes. The aforementioned shift of the road from Ocinek, running through the River Łukawa, was related to the damages of the bridge and embankment ('gaci'). Sometimes even the owner refrained from collecting tolls in order to avoid the costs of maintaining the road, just as in the case of the highway running from Stężyca and Sieciechów to Zwoleń through the forest belonging to Sieciechów abbey in Ławy (the name meaning footbridge). This road, lined with pine timber and fortified with brush, required repairs during the inspection in 1564/5. The monastery had been granted privilege in 1549 to collect 'bridge' toll, but they announced to the collectors 'that for the large costs of building the bridge, the monastery does not want this toll anymore, and wants to return to the Szym the letter given by His Majesty'.⁴⁴ Such a position was exceptional. However, collecting tolls without conducting necessary reparations was common. The inspection of customs provides many examples of an unsatisfactory state of highways, positive descriptions, like the one concerning the weir in Wiślica, were rare: 'Cracow weir, widely known, long and high, which starts in Konyeczmosty, and reaches the gate itself, wide and tall, lined with timber, studded with stakes, and cobbled with rocks. On this weir there are six bridges over muds and river before the city'.⁴⁵

Well preserved roads attracted traffic, but they could also discourage many travellers, when the tolls were high. In the sixteenth century, the medieval road obligation was already practically

The state of the roads is described by Wyrozumska on the basis of the inspections from 1564–1570, B. Wyrozumska, *Drogi w ziemi krakowskiej*, pp. 36–43; cf. J. Baszanowski, *Z dziejów handlu*, pp. 173–176.

non-existent. On the one hand, the localization of custom houses was being adjusted to the traffic,⁴⁶ but on the other, the traders and carters avoided, when it was possible, driving through these settlements where tolls and tariffs were too high.⁴⁷ The range and intensity of the traffic were decisive, when it came to the importance of particular highways. Naturally, it varied, depending on the highway. For instance, political activity of noblemen could be one reason for travelling. In this aspect, places where the nobility gathered (like Opatów or Koprzywnica), became centres which attracted traffic. It must be added that the Mail, created in the second half of the sixteenth century, connected Cracow with Warsaw and Vilnius through the area of Sandomierz Voivodeship.⁴⁸

Looking from a broader perspective on our area, it must be stated that in some territories natural environment was a source of obstacles for the roads, but to a limited degree. Świętokrzyskie Mountains, the highest rise in the historical territory of Poland except for the Carpathians and Sudetes, was not a barrier. The mountains, neighbouring on the regions of old, dense settlement, were early cut by roads, usually along river valleys, like: Łagów–Słupia Nowa (eastern foothills of Łysogóry), Kielce–Bodzentyn (west of Łysogóry) and Kielce–Zagnańsk, Kielce–Mniów. More intense traffic, and especially the transport of goods, probably took place on the roads which went around the highest parts of the Świętokrzyskie Mountains, bending south and east (Chęciny–Daleszyce–Łagów–Opatów–Kunów).⁴⁹ In the southern area of Sandomierz Voivodeship the roads ran along rivers, towards mountain passes Zborowska and Dukielska. One of the main roads cutting through our territory was the road running along the Carpathian edge, through Tarnów, Pilzno, Dębica, Ropczyce; this time the lay of the land influenced the course of the road the same way rivers did in other places. Roads not only surrounded, but also cut through the largest forest complex in the Voivodeship: Sandomierz Forest, provided our reconstruction of highways is correct. The network of land routes presented on our map connected with waterways in places where river ports were situated – mostly with the Vistula and the San, on which crops and forest goods were transported.

The road network presented on our map highlights **the most important roads**, main roads which connected large economic, political and cultural centres of the country. Even Sandomierz could not be counted among such centres, they are located outside our territory. The choice of main roads was easy in case of some highways, and very difficult in case of others. On the basis of present state of research, the following roads were considered the most important in Sandomierz Voivodeship.⁵⁰

⁴⁶ For instance, the Radom tariff in 1564/1565 was paid in Stężycza, Zwoleń, Kozienice and Gzowice, and until the second half of the seventeenth century these places still changed; LS 1564/1565, p. 164; LS 1660/1664, I, pp. 92 f., 124, 163 f., cf. B. Wyrozumska, *Drogi w ziemi krakowskiej*, pp. 19–35; J. Baszanowski, *Z dziejów handlu*, pp. 27–57.

⁴⁷ Radom customs house was avoided through Kunów, Iłża, and Solec, and similar complaints about avoiding customs houses were recorded in Chęciny, Ropczyce and in other places; LS 1564/1565, pp. 164, 287; *Lustacja ceł 1564/1565*, pp. 275 f. We quote several complaints of oxen traders from Poznań, in order to present the stand of the other side: ‘They take toll in Kopki, 4 denarii for 1 ox, and they force us to drive the oxen on a bad, road, narrowed by fields, and do not allow to travel through the forest, like in the past, if we do not pay 4 grosze for every 100 oxen. [...] Toll for Opatów is paid in Sandomierz, what has never happened before, because the common road does not get any closer to the borders of this jurisdiction. [...] Bałtów, village. Although we do not reach it, they demand 2 denarii of bridge toll for 1 ox’. The translation from the Latin original was provided by J. Leitgeber, *Z dziejów handlu i kupiectwa poznańskiego*, p. 152. Dated around 1519, according to J. Baszanowski, *Z dziejów handlu*, p. 54.

⁴⁸ The burghers of Jędrzejów complained that the burghers of Chęciny shun from their duty to carry the post, and so they have to deliver it to Radoszyce. In 1581 the king ordered the inhabitants of Chęciny to fulfill their duty; P. Dąbkowski, *Zbiór dokumentów do historii urzędzeń pocztowych w Polsce*, Lwów 1928, p. 17; cf. *400 lat Poczty Polskiej*, Warsaw 1958, pp. 20 f., 26; K. 1. Cracow–Poznań or Toruń:
 - a) Miechów, Secemin, Kurzelów, Przedbórz, Piotrków;⁵¹
 - b) same to Przedbórz, then Żarnów, Opoczno, Inowłódz, Rawa.
2. Cracow–Warsaw:
 - a) Miechów, Jędrzejów, Małogoszcz, Radoszyce, Końskie, Opoczno, Odrzywół, Nowe Miasto, Mogielnica;
 - b) Proszowice, Wiślica, Busko, Szydłów, Łągów, Opatów, Kunów, Iłża, Skaryszew, Radom, Jedleńsko, Warka.
3. Cracow–Grodno or Brześć:
 - a) like road 2b to Radom, then Jedlnia, Kozienice, Korytnica, Żelechów, Tuchowicz, Łuków;⁵²
 - b) same to Radom, then Zwoleń, Sieciechów, Stężycza, Żelechów, etc.
4. Cracow–Lublin:
 - a) like road 2b to Opatów, then Zawichost, Urzędów;
 - b) Koszyce, Opatowiec, Nowe Miasto Korczyn, Pacanów, Połaniec, Osiek, Koprzywnica, Sandomierz, Zawichost, Urzędów.
5. Cracow–Lwów: Bochnia, Wojnicz, Tarnów, Pilzno, Dębica, Ropczyce, Sędziszów, Rzeszów, Jarosław.
6. Lublin–Wrocław:
 - a) Wąwolnica, Kazimierz, Janowiec, Zwoleń, Radom, Skrzywno, Gielniów, Opoczno, Żarnów, Przedbórz, Radomsko;
 - b) same to Opoczno, then Sulejów, Piotrków.
7. Lublin–Poznań or Toruń:
 - a) like 6b;
 - b) same to Radom, then Przytyk, Odrzywół, Inowłódz, Budziszewice or Rawa;
 - c) same to Odrzywół, then Nowe Miasto, Rawa;
 - d) same to Radom, then Jedlińsk, Białostrzegi, Mogielnica, Rawa.
8. Lublin–Warsaw:
 - a) Kazimierz, Sieciechów, Kozienice, Ryczywół, Magnuszew, Czersk;
 - b) Końskowola, Gołab, Stężycza, Maciejowice, Wilga;
 - c) Baranów, Drażgów, Okrzeja, Żelechów, Garwolin, Osieck.
9. Lublin–Koszyce:
 - a) Urzędów, Zawichost, Sandomierz, Koprzywnica, Osiek, Mielec, Rzochów, Dębica, Pilzno, Brzostek, Jasło, Żmigród, Krempna or Dukla;⁵³

Samsonowicz, *Handel Lublina na przełomie XV i XVI w.*, PH, vol. 59, 1968, pp. 612–626; A. Gąsiorowski, *Itineraria*, pp. 249–275; H. Samsonowicz, *Przemiany osi drożnych w Polsce późnego średniowiecza*, PH, vol. 64, 1973, pp. 697–716; J. Baszanowski, *Z dziejów handlu*, pp. 90–101, 114–142; B. Wyrozumka, *Drogi w ziemi krakowskiej*, pp. 51–57, 65–68, 79 f.

⁵¹ This was an old Hungarian-Prussian road. Its course through Secemin and Kurzelów, and not through Jędrzejów and Małogoszcz is attested by: Etzlaub's map from 1501 (see footnote 6), a 1510 document concerning bridge privilege (MRPS IV, no. 9446), the inspection of the roads in Cracow Voivodeship from 1570 (LDK, p. 68). Also, this road appears in royal itineraries more often than the connection via Małogoszcz (A. Gąsiorowski, *Itineraria*, pp. 259–271). I have already accepted the course of the road through Secemin before, see H. Rutkowski, *Wstęp do historii dróg w województwie kieleckim*, [in:] *Konferencja naukowo-techniczna „Kieleckie Dni Drogowe”*, Kielce 1963, pp. V–VI. Other authors repeat the hypothesis of S. Weyman (idem, *Cła i drogi handlowe w Polsce Piastowskiej*, Poznań 1938, p. 104 and map), and claim that this road led through Małogoszcz. Cf. F. Bruns, H. Weczerka, *Hansische Handelsstrassen*, pp. 650–652; B. Wyrozumka, *Drogi w ziemi krakowskiej*, p. 67 (the author's opinion is not entirely clear). The fact that our map shows also the road running through Małogoszcz, Oleszno and Przedbórz does not change the issue of the course of the great trade route.

⁵² This was the road to Lithuania taken by the last Jagiellons. It ran through Wola Paprotna (today: Paprotnia), among others, where there was a bridge, or rather: a dyke, leading through the swamps between this village and Wola Życka. In the bridge privilege of Sigismundus Augustus granted to Anzelm Gostomski, concerning Wola Paprotna (1553) there appear the words: 'quem pontem nos ipsi vidimus per eumque in Magnum nostrum Ducatum Lithuaniae proficisci solemus', *Lustracja ceł 1564/1565*, pp. 288 f., see MRPS V, no. 6145. Wola Paprotna does not appear amidst the places where the last of the Jagiellon dynasty stayed, A. Gąsiorowski, *Itineraria*.

⁵³ A highway 'to Podgórze, to Hungary' is attested near Rzemień, *Lustracja ceł 1564/1565*, p. 267. See also F. Bruns, H. Weczerka, *Hansische Handelsstrassen*, pp. 652–654; K. Pieradzka, *Krosno centrum handlu winem węgierskim w XVI wieku*, [in:] *Krosno, Studia z dziejów miasta i regionu*, vol. 1, ed. J. Garbacik, Cracow 1972, pp. 171–181; O.R. Halaga, *Košice –*

- b) same to Brzostek, then Frysztak, Krosno, Dukla.
10. Lwów–Wrocław:
- a) Jarosław, Rzeszów, Sędziszów, Ropczyce, Dębica, Pilzno, Tarnów, Żabno, Nowe Miasto Korczyn, Wiślica, Działoszyce, Miechów;
 - b) Jarosław, Leżajsk, Rudnik, Pławo, Sandomierz, Koprzywnica, Osiek, Połaniec, Pacanów, Stopnica, Wiślica etc.;
 - c) same to Pacanów, then Nowe Miasto Korczyn, Wiślica, Pińczów, Jędrzejów, Lelów;
 - d) same to Osiek, then Staszów, Raków, Pierzchnica, Chęciny, Małogoszcz, Secemin, Lelów.⁵⁴
11. Lwów–Poznań or Toruń:
- a) like 10b to Sandomierz, then Opatów, Kunów, Iłża, Szydłowiec, Gowarczów, Opoczno, Sulejów, Piotrków;
 - b) same to Opoczno, then Inowłódz, Budziszewice or Rawa;
 - c) same to Iłża, then Skaryszew, Radom, Przytyk, Odrzywół, Inowłódz, Budziszewice or Rawa;
 - d) same to Radom, then Przytyk, Odrzywół, Nowe Miasto, Rawa;
 - e) same to Radom, then Jedleńsk, Białobrzegi, Mogielnica, Rawa.
12. Lwów–Warsaw: like 11e to Jedleńsk, then Warka, Czersk.
13. Warsaw–Koszyce:
- a) Czersk, Warka, Jedleńsk, Radom, Skryszew, Iłża, Kunów, Opatów, Koprzywnica, then like road 9a;
 - b) same to Brzostek, then like 9b.

Some of the listed main roads were marked by Pograbek on his map (see above). These most important highways interchanged both: in biggest cities in Sandomierz Voivodeship (Sandomierz, Radom, Opoczno, Opatów), and in small towns (Odrzywół, Żelechów, Małogoszcz). The division into major and minor roads was not shown on the main map, but on the additional map repeating the picture of the road network at a scale of 1:500,000 (map 6).

⁵⁴ Roads 10c and 10d were used for driving oxen to Silesia, their course is uncertain, cf. J. Baszanowski, *Z dziejów handlu*, pp. 92 f. (map), 95–97.

III.5.3 LUBLIN VOIVODESHIP

Stefan Wojciechowski

The sources from the sixteenth century do not allow for a complete reconstruction of the road network, but we know roads must have connected all settlements. Also in this case, as with the reconstruction of the forest cover, we had to resort to later sources, to the oldest cartographic presentations of this element. This time we based on the eighteenth century map by Perthées. The undoubtedly conservative approach to the course of roads, especially prior to the introduction of hard-surfaced roads, allows us to assume that the road network from the end of the eighteenth century was usually similar with the one from the sixteenth century.

The map does not show all communication routes, which could be hypothetically reconstructed. It is only a selection of the most important roads, and as such it was based on the network of highways and post routes in the eighteenth century.¹ However, we did not follow Perthées's map strictly, but took account of records mentioning the importance of particular routes in the sixteenth century, as well as the situation of settlement in this period. This way we aimed at presenting the state valid in the period presented on our map.²

Lublin was the most important transport node of the voivodeship. Its size, economic and in fact political (place of gatherings) significance reached far and maintained heavy traffic on routes which led to the city. Two of the crossing directions were particularly important: the road from Cracow to Vilnius going through Sandomierz, Zawichost, Urzędów, Bełżyce, Lublin, Ostrów, Parczów, Brześć, and the road from Poznań to Lwów through Radom, Kazimierz, Wąwolnica, Lublin, Piasek, Krasnystaw. Additionally, several other important routes led from Lublin, which created a complex communication node in the city.

Łuków should be listed in the second place, as several important communication routes met in this town. Then we must also mention other towns, like Siedlce, Radzyń and Kock in Łuków land, Parczów and Ostrów situated on the road to Lithuania, Kurów and Kazimierz, and then two pairs of towns competing with each other for the position of an important transport node: Urzędów and Kraśnik, and Piasek and Biskupice. This is not a full list of all towns, small towns and villages of importance in the communication network.

It must also be added that the Rivers Wieprz, San and Vistula in particular were important waterways. Kazimierz played the main role in connecting land and water routes in Lublin Voivodeship. The town's busy port on the River Vistula was the place where grain from large, fertile fields of the voivodeship and even Ruthenia (Chełm land, etc.) was loaded on ships and sent to Gdańsk. Kazimierz owed its growth in the sixteenth century to the grain trade.

III.5.4 GREATER POLAND

Tomasz Związek

The maps contained in this section shown a selection of the major roads (highroads), whose location and layout in the second half of the sixteenth century has been reconstructed based on our analysis of written and cartographic sources. This transport network is shown in the main map (scale 1:250,000) as well as in the separate thematic map (1:500,000). In the latter, the roads are classed (in line with the AHP series principle) into main and secondary highroads.¹ The issues touched upon in this chapter are related mainly to the methodological issues concerning the reconstruction of the road network and the methods of presentation of roads in the map, rather than to enumeration of individual connections and their detailed (by-section) description.² The present study widely draws upon Geographic Information Systems (GIS).³

The major cartographic sources of use in the research into settlement in the Voivodeships of Kalisz and Poznań are discussed in one of the preceding chapters.⁴ Let us however remind that the resource of Greater Poland maps ranks among the richest among the regions covered by the AHP series so far. The earliest historical cartographic record that has been intensely used in our work was the mid-seventeenth-century map by Georg Freudenhammer, providing data on river-crossing facilities/passages (Fig. 1). Along with the information on bridges in Krakow Voivodeship, they became an essential element that enabled us to complement the road network under reconstruction.⁵ In the course of our work, the 1802 map by David Gilly was also used, as were two manuscript maps by Karol de Perthées (Voivodeships of Poznań and Kalisz). The *Quartermaster's Office Map* (also known as *A Topographic Map of the Kingdom of Poland*) has not been referred to, owing to its unsatisfactory coverage of the territory under study. For the northern areas – that is, the land of Wałcz and the district of Nakło – the available useful historical records and sources were rather modest; the Friedrich Leopold von Schrötter map and the fragmentarily preserved UMTB sheets have primarily been used.

Fundamental for the setting out of the roads was, in the first place, to gather the data allowing to plot within the area of our interest the nodal points, being the places at which several main roads converged.⁶ Hence, our search mainly focused on records with a possibly extensive territorial range. These have included Church visitation records related to royal demesnes and dating to 1564–5,⁷

⁷ LWVK 1564, passim.

1569,⁸ and 1616–20;⁹ customs duty and toll privileges and bestowals, as per the *Metrica Regni Poloniae*;¹⁰ revisions of roads, customs duties, and toll collection points in Voivodeship of Kalisz, dating to 1571;¹¹ and, a breakdown of fairs held at the Silesian-Greater Polish borderland in the middle of the sixteenth century.¹² Of use have also proved the relevant normative acts, including the ‘Law for the frontier store-houses and fayres’,¹³ and, ‘On store-houses and old roads’¹⁴ from 1565. Among the documents of primary importance for this chapter, early sixteenth-century files enumerating the roads and places traversed by merchants moving from Silesia and Brandenburg (1513)¹⁵ and a breakdown of inland customs-houses and guardhouses/watchtowers (*custodiarum*) on the borderland of Greater Poland and Silesia (1524) should primarily be mentioned.¹⁶ Fiscal records has also been used; they included, in the first place, tax registers from the second half of the sixteenth century for Voivodeships of Poznań and Kalisz, as the source of information on inns or taverns (or rather, ‘propination (liquor production and selling) points’). The two-volume dissertation on the economy of the sixteenth-century Polish-Lithuanian Commonwealth penned by Roman Rybarski (published before the Second World War) has been an invaluable source of data from the lost accounts of Greater Polish inland customs-houses.¹⁷ This body of information has been complemented by the accounts issued for Międzyrzecz (1581; four fascicles (‘sewn documents’)), Wschowa (1581; four fascicles), Kęblowo (*Kieblów*) (1585; one fascicle), Obornik (1585; one fascicle), and Wronki (1585; one fascicle), all preserved at the State Archives in Poznań¹⁸ mentions or notes picked out in the file of the Section for the Historical-Geographical Dictionary of Greater Poland, Institute of History, Polish Academy of Sciences (IH PAN), have been (fragmentarily) used as well.

Following the series’ guidelines, no dedicated query was carried out into Greater Polish court registers; excerpts from these registers were mainly obtained from the thitherto-published fascicles of the *Słownik historyczno-geograficzny województwa poznańskiego w średniowieczu*. The chamberlain registers (*księgi podkomorskie*) have not been used; this pretty abundant source of knowledge on roads in the preindustrial period (as attested by experience)¹⁹ has not proved sufficiently useful for the present purpose, based on an initial exploratory query.²⁰ Site inspections carried out by chamberlains at the contact points of the period’s estates or demesnes tended to focus on a complete description of the dispute in question and, most frequently, on bringing about an amicable settlement based on the

¹⁸ Rach. kom. cel., sign. C1–C11. Under sign. C12 comprises an *Inquisicia przemithow przy panu Thilyczkim i Roszcziszowskim* from 1583. The fascicles of customs-house accounts were published in March 2017 in Szymon Kazusek’s edition (*Księgi celne Korony z drugiej połowy XVI wieku*, pub. S. Kazusek, Kielce 2017). As the latter study was issued as this text was being completed, and since it contains a wealth of errors (T. Związek, *Uwagi w związku z edycją „Ksiąg celnych Korony z drugiej połowy XVI wieku”*, pub. Szymon Kazusek, Kielce 2017, RDSG, vol. 78, 2017, pp. 395–420), the collection of fascicles related to the operation of inland customs-houses, kept at the State Archives in Poznań, are hereinafter quoted based on the original source (at the said storage location).

¹⁹ Cf. A. Janeczek, *Osadnictwo pogranicza*, p. 64, footnote 5, with a wealth of useful information found in the Bełz Voivodeship’s chamberlain registers.

²⁰ Reviewed have been Kalisz Voivodeship’s chamberlain registers, sign. P. Kalisz 1, 2, and 3. Poznań Voivodeship’s chamberlain register, sign. P. Poznań 1, has also been checked up, mainly through SHGPoz.

Figure. 1. Detail of the map by Georg Freudenhammer, representing the river-crossing passages in the western part of the former Voivodeship of Poznań

existing border mounds.²¹ Information on roads or passages appeared in those registers sporadically and normally with respect to the local space, which is out of the scope of reconstruction maps published in this series. Hence the legitimate concern that a complete query through the series of the said registers would have yielded results incommensurate to the effort expended.

This chapter does not embark on an extensive toponomastic analysis of settlements and water-courses, whose names are interpretable as derived from the appellatives such as *kamień* (stone), *bród* (ford), or *most* (bridge),²² along with names of older origin, to mention *clo* (customs duty).²³ There is namely a need to examine this issue in a separate article that would discuss individual appellative/onomastic groups based on concrete examples.²⁴ The accumulating difficulty in this respect is well illustrated by the case of Brody, a parochial village situated in Kościan district. Its name seems to have been based on the aforesaid appellative *bród* (ford) but might equally well be a linguistic relic originally derived from the personal name 'Broda' (which basically means 'beard', in plural), or, perhaps, the family name of 'Brody' (*de armis Brodi*).²⁵ The authors of the dictionary of Poland's place-names

²¹ On the type of settlement landscape rendered by records of this sort, see, inter alia, R. Jop, *Uwagi o piętnastowiecznej terminologii granicznej w lubelskich i sandomierskich księgach sądowych*, „Res Historica”, vol. 32, 2011, pp. 14–15.

²² Cf. E. Kowalczyk-Heyman, „Kamień”, „Kamienne Brody”. *Przyczynek do organizacji szlaków drogowych w średniowieczu (na przykładzie Mazowsza)*, „Archaeologia Historica Polona”, vol. 15, 2005, no. 2, pp. 364–384.

Wołowik, *Nazwy przewozowych opłat celnych w polskiej toponimii*, „Acta Universitatis Lodzianensis. Folia Linguistica”, vol. 27, 1993, pp. 349–354.

²⁴ Owing to the scarcity of relevant records, water transport, which must have been essential in the preindustrial period, has not been taken note of; see, for example, Z. Kurnatowska, S. Kurnatowski, *Znaczenie komunikacji wodnej dla społeczeństw pradziejowych i wczesnośredniowiecznych w Polsce*, [in:] *Słowiańszczyzna w Europie*, vol. 1, ed. Z. Kurnatowska, Wrocław 1996, pp. 117–123; T. Baranowski, *Komunikacyjna rola Prosnny we wczesnym średniowieczu*, [in:] *O rzecze i wodzie w życiu codziennym człowieka średniowiecza*, ed. S. Moździoch, K. Chrzan, Wrocław 2015 (Spotkania Bytomskie, vol. 8), pp. 77–92.

²⁵ *Słownik staropolskich nazw osobowych*, vol. 1, no. 2, ed. W. Taszycki, Wrocław–Warsaw–Cracow 1966, pp. 246–247; cf. *Wielkopolskie rotty sądowe XIV–XV wieku*, vol. 3: *Roty kościańskie*, comp. H. Kowalewicz, W. Kuraszkiewicz, Wrocław–Warsaw–Cracow 1967, no. 196, 1128.

(*Nazwy miejscowe Polski*) vaguely remark that ‘the village is located by the river’.²⁶ The interpretive difficulty is further intensified by another settlement situated beside Brody, which in the latter half of the sixteenth century was called Bródki (the varieties include: *Brody Nova*, 1553; *Brodi Nowe*, 1563; *Brodi Male*, 1567; and, *Brodki*, 1577), which evidently doubled the name of the elder village. The spatial context would suggest that both names be interpreted as derived from the appellative *bród*, but this assumption cannot be taken as certain. It seems that we have to do with a place-name derived from a person’s name, as is seemingly suggested by a note in the earliest court register of Kościan, compiled in 1403.²⁷ There are many more such examples,²⁸ whereas no onomastic analysis of the names related to the aforementioned appellatives can be carried out without the details of the chronology of settlement in Greater Poland. River-crossing facilities have also been regarded as points of importance to the development of the road network. Taking advantage of the fact that the SHGPoz takes note of fords and bridges with their names proper, it has been resolved that the map will only feature those crossing passages which were strictly related to the presented highroad network, possibly without local passages, as between fields or villages, being plotted. Some of the reflected fords are items with uncertain localisation, as the mentions about them are based on court registers and there is no other material that would enable us to situate these names in space. Such structures or facilities have only been marked for the district of Wałcz, the northern part of Poznań district, and in Kościan district. The items of this kind were, particularly in the north of Poznań Voivodeship, approached as an important element of the road network; they have made it feasible to set out a road between Człopa and Czarnków, or to set out a branch of *Margrabska Droga*, a route that was set through Kozi Bród toward Złotów (Złotowo) and Łobżenica in the district of Nakło. In Kościan district, setting out roads was a high-priority task, owing to the area’s high hydration.²⁹ The fords and bridges shown on the map helped to identify the busiest roads, among which was certainly the route from Silesia via Wschowa, Śmigiel, Kościan, and Czempin, up to Poznań and further on northwards.

Public roads or highroads (*viae publicae*) were also described, in mediaeval and modern-era records, also as ‘great’ or ‘large’ (*via magna*), or royal (*via regia*). During the centuries, they linked the most essential administrative and commercial centres. Hence, they had as if an institutional role, which enabled a broad economic and cultural exchange between the Crown and the neighbouring countries.³⁰ These roads were under special care of the ruling monarch; in order to gain a possibly

²⁸ An issue that calls for addressing as a special focus is the settlements whose names are derived from the appellative *kamień* (stone). For instance, the name of the ironworks settlement of Kamiennik (*Hamer Kamiennik*) in Poznań Voivodeship was probably re-conceived after that of the nearby pond (LWVK 1564, Part 1, p. 193: “in the voide by this realms are two pitches wherein tarr is burned, a pitt is at Kamieniecz”; p. 198: “the pond Kamieniecz upon this same streame also proveth to be empty”). The ironworks is attested in RPWP, pzn, 1580, no. 780; RPWP, pzn, 1581, no. 771; RPWP, pzn, 1583, no. 784. In the sixteenth-century territory of Kalisz and Poznań Voivodeships, less than forty examples have hitherto been identified of the names derived from the appellatives *kamień*, *most*, and *bród*, which ought to be analysed for their origins and, possibly, for their functioning in the context of development of roads and trade routes in the mediaeval and early modern age.

high income from them, the king would develop the system of royal customs duties and tolls, whilst in parallel running the commercial traffic through the staple/storage right and development of the market network.³¹ Therefore, the highroads were as if in opposition to the local (rural) roads, the latter being directly managed by landowners who were bound (at least theoretically) to render them available to all travellers.³²

The naming of roads in the records related to Greater Poland's territory is in line with the terms encountered at the time in the other areas of the Crown. For example, the way set through Gniezno was called 'great' (*magna via*),³³ as per a document dated 1394; the way from Koło to Brudzew, a locality situated at the border of Konin and Kalisz districts, set 'versus terras Poloni[a]e, S[i]lesia[e]', was called 'public' (*via publica*).³⁴ Another high road that led from Koło toward Sieradz is mentioned in a 1422 document issued by King Władysław II Jagiełło, just as a *via*.³⁵ The way linking Środa and Pyzdry was referred to in 1390 as a *strata publica*;³⁶ a dozen years later, the trackway leading from Środa to Poznań was described as a *via publica*.³⁷ Such Latin descriptions functioned also in Polish, as is made clear in a demarcation preserved in the land register of Kalisz from 1518, reading: 'usque ad viam magnam, que vadit per medium borre [i.e., through the middle of the *bór*=(basically, coniferous) forest], que via vadit circa villas alias Ninyno, Roszdzyalovo et Nandzerzewo ex Calysch in Coszmynek, que voactur wyelga droga [i.e., *the greate roade*] et ab eandem wyelga droga [*ditto*] vadunt scopuli circa borram Dampsky [=name of the forest] alias nad borem dampskym [a Polish equivalent of the foregoing phrase]'.³⁸ The highroad from Kobylin to Zduny is attested also in the subsequently compiled land register of the district of Kalisz, 1593.³⁹ The phrase *wielka droga* ('great road') was used for the route leading from Głogów to Poznań via Śmigiel, Glińsko, and Czacz;⁴⁰ the same name described the way from Gniezno to Poznań, set via Pobiedziska and Biskupice (1394).⁴¹ In 1591, upon demarcation of the estates between Dachowa and Szczodrzykowo in Poznań Voivodeship, a *wielka droga* was mentioned, set through the local forests and going from Nowe Miasto nad Wartą, in Pyzdry district, up to Poznań.⁴² Attested (thrice) for the former half of the sixteenth century is the route going from Borek in Pyzdry district to Dolsk.⁴³ A mention from 1595 refers to a public road from Poznań to Pszczew via Pniewy, Lewice, and Silna.⁴⁴ As is known, the bridge toll (*mostowe*) was collected also at Pawłów near Jutrosin. A *strata publica* was set through these localities, which 'tendit Posnania,

Vratislaviam et in Silesiam’;⁴⁵ its condition left much to be desired, as is stated not only by the said document but also by the *Akt rewizorów ziemskich* (hereinafter, Akt rew.), compiled in 1571.⁴⁶ Apart from the mentions of highroads, there is a note from 1429 on a ‘straight and accustomed way’ (*via recta et solita*) leading from Żnin to Toruń ‘per Labiszyn, Lisowo, Myslowice, Loiewo et Blinno’.⁴⁷ Another known example is that of a route named after the direction of commercial exchange, set through the Land of Wałcz and linking Brandenburg with Gdansk. Called Margrabska Droga (*via Marchionalis, Preusnische Weg, Markgrawen Weg*), the route was one of the major East-West transport arteries in the region, in the Middle Ages as well as in the modern period.⁴⁸

Facing the existing research experience was part of our task. The highroad network shown in this AHP volume is not the first historiographical attempt at creating an image of Greater Poland’s roads in the preindustrial era. We have two, now classical, elaborations that portray, in a simplified fashion, the courses of traffic routes in the seventeenth and eighteenth centuries – namely, the study by Stefan Weymann⁴⁹ and the map attached to Zbigniew Góralski’s edition of the inspection of roads, tariffs, and bridge toll of 1767.⁵⁰ The Weymann article collects a number of mentions of roads from scattered records, including diplomatic codices, published studies on the history of law, or copies/excerpts from now-inexistent pre-war files, kept at the Central Archives of Historical Records [AGAD] and the Krasieński Library. The method of cartographic presentation of the layout of roads shown in the map attached to Weymann study basically shows the main directions of trade, rather than a real courses of the roads concerned, which is of essential importance to our proposed reconstruction – primarily, in terms of compliance in the matching of the plotted course of a road between the atlas map and the background content. The layout attached to the Góralski article has a similar function as it represents important traffic arteries along with the side courses.⁵¹ In spite of a considerable lapse of time from the dates of their publication, both studies have still been approached as a point-of-departure for the research into sixteenth-century roads in view of this AHP volume.

It has to be remarked, though, that the maps by Weymann and Góralski depict the road network up to the line of the River Noteć. Their reconstructions do not cover the roads in the northern territory of the sixteenth-century district of Poznań and the entirety of Nakło and Wałcz districts. In Weymann’s article, the limit line beyond which no roads are shown is Nakło – Białośliwie – Ujście – Piła – Trzcianka (Trzciana Łąka) – Czarnków – Wieleń; in the Góralski edition, the line is Nakło – Białośliwie – Ujście – Wałcz – Człopa – Wieleń. These obvious gaps are explainable by several factors. One is the poorly preserved and dispersed records for those areas, covering the fifteenth and sixteenth centuries. The other is a rather weak economic position of the centres situated in this area, which largely tended to be omitted by long-distance and far-reaching trade operations, extending from Frankfurt, Krosno, Żagań, Zgorzelec, Szczecin, toward Toruń and Gdańsk. The main freight traffic went via Poznań and Kalisz, moving toward the north-east through Kalisz Voivodeship, including via Gniezno, Konin, Koło, and Pызdry.⁵² Only one of the branches of the Frankfurt-Pomeranian route led through the land of Wałcz – namely, the aforementioned *Margrabska Droga*, which was handled by the inland customs-house

⁴⁵ MK 108, ff. 440v.

⁴⁶ See Akt rew., p. 44: “As we were there, we could see that in a drie seasons [one] may circumvent the bridges with no damage. But we have the concern that in the springe on the melte and thawe the crossing would be bad and difficult. And it was apparent to uss that the dutie could remain without complaints amongst the people shouldst it be provided that the dutie never be taken [=collected], save at the [time of] bad roads, if the bridges may not be circumvented, and [this] for the sake that the old road be spoyled not by meanes of no artifice”. Cf. MK 31, 238: “multa loca esse paludiosa in via publica”.

⁴⁷ KDW V, no. 504. In this atlas, the road is marked only partly; cf H. Rutkowski, *Roads*, [in:] AHP Sandomierz, in this edition III.5.2.

in Wałcz, attested as of 1524,⁵³ with contribution from the fairs, of which four were held locally at the century's end.⁵⁴ Wałcz is known to have been the major urban centre in its namesake district. The other West-to-East towns of importance were Łobżenica and Nakło nad Notecią (Nakiel), situated in Nakło district.⁵⁵ In Nakło itself, like in Wałcz, customs-houses, attested as of 1524, are known to have functioned.⁵⁶ The Nakło fair is known from 1520 onwards.⁵⁷ Akt rew. tells us moreover that highroads were available in Nakło 'that goe to Gdańsk, to Łobżenica, to Bydgoszcz, to Gniezno'.⁵⁸ The brevity of mentions traceable in the records goes hand in hand with scarcity of cartographic sources: the only map that depicts the concerned area fairly well was conceived by Schrötter.

Particularly helpful in our reconstruction of the network of border-area connections in the west of Greater Poland were, among others: the monograph on Hanseatic roads edited by Hugo Weczerka,⁵⁹ lists of thirteenth- to fourteenth-century customs-houses in the Lower Silesia, compiled by Janina Nowakowa in the 1950s;⁶⁰ Kazimierz Ślaski's article on early mediaeval inland trade routes;⁶¹ and, the atlas of the eighteenth-century Silesia, prepared by a team of Polish scholars.⁶² The *Historische Handatlas von Brandenburg* has been used as a reference.⁶³

At the end of the discussion of introductory issues, let us mention that the Geographical Information Systems (GIS) software and the source data amassed and compiled into databases, in line with the source code and object code models, has enabled to efficiently gather and use complete sets of source material, plot them on the geographical space and subject them to applicable analyses.⁶⁴ It is probably this method of operation that is responsible, at least partly, for the depiction in this volume of a denser network of roads, as compared to the preceding volumes. This approach has moreover led to a major complementation of the legend of the thematic map, scale 1:500,000, with addition of information on fairs/markets, customs-houses and toll collection points, and on the settlements whereat intense sales or propination of spirits was carried out.

The roads shown on the maps in this volume make up a static image of transport connections between individual points, which might misleadingly suggest that the (high)roads, regardless of their status or category, never altered their course in the realities of their time.⁶⁵ This illusion might be based on the

⁵³ MK 36, f. 357: "Loca in quibus thelonea debent exigi, et nomina theloneorum. Maior Polonia [– –] Versus Saxoniam: Miedzyrzecz, Skwirzyna, Szyraków, Wronki, Walcz, Wielen, Naklo, ubicumque sunt regalia thelonea".

⁵⁴ A corroboration of the document from the 1570s is contained in: MK 135, ff. 512v–513. No search has been carried out in the registers from King Stephen Báthory's time. For the course of the road, cf. the version in *Hansische Handelsstrassen: Atlas*, Kart. VII.

⁵⁵ Nakło [nad Notecią]/Nakiel underwent a dynamic development in the sixteenth century, compared to the preceding century. The tax registers from the second half of the sixteenth century repeatedly note down that the number of local craftsmen exceeded 100 – in 1565 (RPWK, nkl, 1564, no. 190: 164), 1578 (RPWK, nkl, 1578, no. 254: 139), 1581 (RPWK, nkl, 1581, no. 246: 121), and 1582 (RPWK, nkl, 1582, no. 225: 114); see M. Bogucka, H. Samsonowicz, *Dzieje miast i mieszczaństwa w Polsce przedrozbiorowej*, Wrocław 1986, pp. 106–118, and a polemic essay by M. Słoń in idem, *Miasta prywatne w sieci miejskiej Wielkopolski XV–XVI wieku*, RDSG, vol. 77, 2016, 93–123. Detailed data for the categories of artisans are only specified in the 1582 tax register, i.e. butchers – 22, tailors – 10, shoemakers – 21, and [female] bakers – 20. Food and textile manufacture was thus dominant in Nakło, which was probably strongly associated with the trade routes set through the town. (Łobżenica had a one-wheeled fulling mill operating, as mentioned since the late 1570s; see RPWK, nkl, 1578, no. 254).

⁵⁶ See footnote 16.

⁶⁵ For more on the condition of roads in the period concerned, see, inter alia: H. Rutkowski, *Roads*, [in:] AHP Sandomierz, in this edition III.5.2; T. Čelkis, *Stan dróg lądowych*, pp. 47–52; O. Toda, *Evidence on the Engineering and Upkeep of Roads in*

idea of paved roads based on today's perception, with once-set direction remaining mostly unaltered in its material form. It is worth reminding at this point that in the preindustrial age, highroads or routes could have their course altered along individual sections, be it due to adverse weather factors such as flooding or excessive snowfall.⁶⁶ It is this nature-related aspect that would explain the functioning of wintertime and summertime routes as shown in the Perthées maps, among others. Also the ownership relations and neighbour relationships might have affected the courses of roads. As an example, let us quote the locality of Lubstów in Konin district, where, resulting from an argument between two local noblemen, the toll collection place, together with the main traffic route, was moved quarter a mile away from the previous road. The old highroad was no more in use and was too far away from the local community, as the change remarkably hindered reaching the district's central area.⁶⁷ Similarly, the road from Koło to Toruń was moved owing to the damage caused by the carters travelling the section between the arable fields in Osiek Mały village. Stanisław Wysocki, the village's owner, permitted the merchants to 'travell to Budziszlaw, which allso is mine propertie, as the distance is shorter and the road better, for more of it be made through the forest than through the field'.⁶⁸ The protestation was concluded by the request that 'Y[our] H[onours] [i.e., the landed inspectors] have entered in their files also the road that I have released through the other land of mine, [and] admitted through the apparitor that [this option] be published'.⁶⁹

Public roads could, at various sections, function as local roads – as 'mass' (*meszne*) roads used by local church-goers and routes leading to mills or inns.⁷⁰ Among other functions, highroads enabled to efficiently manage a given territory. Antoni Gąsiorowski showed it in his research years ago, noting that the highroads had an essential role in the management of Greater Poland by *starostas*-general. As part of their routine duties, they would pay visits to the most populated parts of the two voivodeships, most frequently moving along the routes from Poznań through to Środa, Pyzdry, and Kalisz; Poznań to Kościan; or, Poznań to Gniezno, combining these itineraries with accepting transactions in real properties (so-called resignations, Latin *resignationes*).⁷¹ Not much can be added to these observations based on sixteenth-century Jagiellon itineraries. King Sigismund I the Old (Zygmunt I Stary) visited Greater Poland only once, in the late 1512 and early 1513;⁷² his son Sigismund II Augustus (Zygmunt II August), involved in other affairs, would never visit the area.⁷³ Otherwise, we know that in 1556, Princess Sophia Jagiellon (Zofia Jagiellonka) on her way from Warsaw to Wolffenbüttel to her nuptials

Late Medieval Transylvania, „Annales Universitatis Apulensis Series Historica”, vol. 17, 2013, no. 2, pp. 173–200; M. Szilágyi, *On the Road*, pp. 32–52. This to be juxtaposed with the archaeological research into rural 'rough roads' (*drożyskos*); cf. K. Fokt, *Późnośredniowieczne osadnictwo wiejskie na Dolnym Śląsku w świetle badań archeologicznych*, Cracow 2012, pp. 170–178 and, with the potential offered by laser scanning technology that enables non-invasive tracing of the development of road networks – as in, e.g., M. Szilágyi, *On the Road*, pp. 32–52; J. Matinek, A. Létal, J. Peška et al., *Identifikace starých cest a dalších objektů za pomoci LLS*, [in:] *Archeologie a letecké laserové skenování krajiny*, ed. M. Gojda, J. John, Plzeň 2013, pp. 228–239.

⁶⁶ For the seasonal dependence of road traffic, see H. Rutkowski, *Roads*, [in:] AHP Sandomierz, in this edition III.5.2; cf. R. Klimek, *Ślady średniowiecznej granicy Warmii między Reszlem a Świętą Lipką*, SG, vol. 4, 2016, ryc. 15, p. 45. Some interesting examples in this respect are provided by the inspection record re. tolls and 'dyke duties' (*grobelne*) in the Ruthenian Voivodeship area, stating that the bridge toll collection in Łopacino "seemeth to be right, as grand bridges are being built there by Lord the *Starosta* of Busk through two swampes, which no carter from Volhynia can circumvent not whilst on his way. Of one bridge, in the likeness, there is six furlonges, of the second circa vel ultra through three furlonges"; AGAD, [so-called] *Metryka Litewska IV B*, f. 415; see also A. Janeczek, *Staropolski układ komunikacyjny*, pp. 18–20.

⁷¹ A. Gąsiorowski analyses in his book the itineraries of *Starostas*-General Andrzej Ciołek of Żelechów (1434–5), Wojciech Masalski (1443–7), Stanisław Ostroróg (1448–51), Piotr Świdra of Szamotuły (1471), and Maciej Mosiński of Bnin (1478); for more, see idem, *Urzednicy zarzadu lokalnego w późnośredniowiecznej Wielkopolsce*, Poznań 1970, pp. 248–260; cf. M. Gochna, *Borders of state territorial units*, [in:] AHP Greater Poland, in this edition III.2.1.4.

⁷² The king's personal visits are atested for Piotrków Trybunalski, Kalisz, Poznań, Środa, Konin, and Koło; A. Gąsiorowski, *Itineraria dwu ostatnich Jagiellonów*, „Studia Historyczne”, vol. 16, 1973, no. 2, pp. 260, 274.

⁷³ Ibidem, p. 275; A. Sucheni-Grabowska, *Zygmunt August król polski i wielki książę litewski 1520-1562* (Warsaw 1996), 185–1; T. Ratajczak, *Podróże władcy i architektura. Przebudowa królewskich rezydencji za panowania Zygmunta Starego*, „Artium Quaestiones”, vol. 17, 2006, pp. 31–35.

ceremony with Henry II, Duke of Braunschweig, travelled through Greater Poland, stopping on 1st February in Koło, on 2nd in Kleczew,⁷⁴ on 3rd in Września, on 4th in Poznań, on 5th in Kościan, and on 6th in Wschowa. After a day's rest, the princess arrived in Głogów on 8th February and set off on her journey again.⁷⁵

Let us remark that in the course of our reconstruction work, we have abandoned the idea of looking through a number of volumes of diaries and inspection registers or visitation records. Leaving aside the question of maps' target scale (1:250,000 for the main map of settlement and 1:500,000 for the thematic map focus on roads), tackling such records would primarily call for developing a theoretical model of cartographic representation of itineraries, as the existing representation methods left at times much to be desired.⁷⁶ A map of travel ought to combine spatial and temporal attributes.⁷⁷ It should moreover be designed so as to present uncertain source data and be able to comment, in a defined fashion, on the events occurring at the given travel's background. A separate issue is the selection of an appropriate cartographic background whilst suggesting to the reader a specified interpretation in the form of network (and, here or there, significance) of the roads, related forest areas, hydrographic features, settlement network, and so on.⁷⁸ Due to their character, the data would mostly show the general travel route, going from one point to the other along, basically, the local roads which were excluded from the AHP series' maps. In any case, the data from visitation records and tax registers would spatially coincide with parish churches or towns in a given area.⁷⁹ These topics goes much beyond the limits of this chapter.

In spite of the use of so large a body of sources, the data so obtained have not enabled us to draw a precise road network for the late sixteenth century, similarly as in the preceding AHP volumes. Hence, the reconstructed map of the major roads is the most hypothetical one of those comprised in this series.⁸⁰ The basic way to enable the setting out the highroads was the use of the retrogressive method. It primarily takes advantage of a possibly fullest set of source data and available technical aids, enabling to determine that a given road might have been frequented in the period of our focus. Retrogressive analysis thus consisted in an appropriate selection of roads from the old maps and, as

⁷⁴ Erroneously referred to as 'Kleczów' in *Royal Marriages of Princes and Princesses in Poland and Lithuania c. 1500–1800. Companion Guide to the Exhibition*, ed. A. Bues, Z. Krysiewicz, Warsaw 2016, p. 86.

⁷⁵ I owe gratitude to Dr Almut Bues of the German Historical Institute in Warsaw for sharing with me the notes from her archive search in Wolfenbüttel available.

⁷⁶ The extreme examples illustrating these problems are, for one thing, the recently published itinerary of King Casimir IV Jagiellon (Kazimierz IV Jagiellończyk) (G. Rutkowska, *Itinerarium króla Kazimierza Jagiellończyka 1440–1492*, Warsaw 2014) and a digital map showing the 1440–1493 travel itineraries of Emperor Frederick III (J. Laczny, *Friedrich III. (1440–1493) auf Reisen. Die Erstellung des Itinerars eines spätmittelalterlichen Herrschers unter Anwendung eines Historical Geographic Information System (Historical GIS)*, [in:] *Perzeption und Rezeption. Wahrnehmung und Deutung im Mittelalter und in der Moderne*, ed. J. Laczny, J. Sarnowsky, Göttingen 2014 (Nova Mediaevalia Quellen und Studien zum europäischen Mittelalter, vol. 12), pp. 33–65).

⁷⁷ Cf. *Uproszczony schemat podróży wizytacyjnej po archidiecezji pomorskiej zimą 1686 i wiosną 1687 r.*, cartographic comp. T. Związek, [in:] T. Nowacki, *Podróż wizytacyjna archidiecezji pomorskiej w 1686 i 1687 r.*, SG, vol. 3, 2015, p. 118.

⁷⁸ This is why presentation of Sophia Jagiellon's itinerary from the mid-sixteenth century against the background of a hundred years later map is definitely unjustifiable; see footnote 74, and, J. Laczny, *Friedrich III. (1440–1493) auf Reisen*. Another erroneous practice is to show one beside the other a historical (e.g., mediaeval) content and information on today's highway and airport network.

⁷⁹ The dates appearing against the entries marking the paid tax in the tax registers is an issue that calls for a dedicated elaboration. Based on the observations, in most cases the expected picture that would altogether form a picture of tax collectors' travels would not be produced. This is so due to the character of collection of tax benefits in the late mediaeval and early modern period in Poland, with the collector not moving across the district but the peasants or noblemen personally delivering benefits to the district's central town. However, this issue calls for further study and a much wider recognition of tax records.

⁸⁰ The lack of a sixteenth-century records of revision (inspection) of roads, bridges, and customs duties from areas within Poznań Voivodeship is distinctly noticeable. An analogous historical record is fortunately surviving for Voivodeship of Kalisz, in MK, dz. XVIII, Lustracje, sign. 4, ff. 300–309 (see also Akt rew., passim). Cf. the commentaries in AHP Cracow, M. Wilska, *Roads*, [in:] AHP Cracow, footnote 4, in this edition III.5.1, and AHP Sandomierz, H. Rutkowski, *Roads*, [in:] AHP Sandomierz, footnote 2, in this edition III.5.2, where the material related to roads and customs duties from a manuscript book kept at the National Archives in Cracow, Branch of the Sanguszko Archive, MS ASang 19, has been used. Interestingly, Stefan Wojciechowski did not use this source in compiling the atlas volume on Voivodeship of Lublin; cf. AHP Lublin, in this edition III.5.3, and ASang 19, pp. 297–340, 361–369. Also, see H. Rutkowski, *Roads*, [in:] AHP Mazovia, in this edition III.5.7; A. Janeczek, *Staropolski układ komunikacyjny*, pp. 18–22.

a subsequent stage, drawing its possibly earliest, i.e. sixteenth-century, courses.⁸¹ The final stage consisted in a categorisation of the set-out roads so that a scale 1:500,000 map could show their courses while also facilitating to the reader the interpretation of the courses of trade routes, transport/traffic routes, and/or other socioeconomic phenomena.

It has to be remarked at this point that, compared to the preceding volumes, the 1:500,000 map of roads has been compiled in a somewhat different way. Apart from the broader thematic scope signalled in the legend (see below), the map features the forest network from the main map. Earlier, this operation was difficult due to technical constraints.⁸² Insertion of the forest network into a map of roads helps to better understand the highroad network layout. This move has made clear the reasons behind no highroads present between Chodecz, Zagórów, and Rychwał, and rather sparse road network in the northern part of Poznań district, in the area of the Notecka Primeval Forest.

The adopted point-of-departure for the work done so far on the reconstruction of the road network was the network of roads as recorded in the maps from the late eighteenth and early nineteenth centuries. As far as possible, the maps whose cartographic content did not display the effects of the industrialisation unfolding in Central Europe were used in the first place. These phenomena are observable, for instance, in the *Quartermaster's Office Map* or in the UMTB series' maps. One illustrative examples is the vicinity of Wschowa, for which the sheet UMTB no. 2339, drawn up in 1824, features a planned arterial road set through Dębowa Łęka, traversing Długie Nowe and Długie Stare, and finally reaching Leszno (see Fig. 2, with the planned road marked salmon pink). The road was indeed constructed during the nineteenth century, as is testified (for instance) by the WIG sheet of more than a hundred years later.

Figure 2. Detail of UMTB sheet no. 2339 showing a design of the arterial road to Leszno via Dębowa Łęka, Długie Stare, and Długie Nowe

Table 1. Source-based categorisation of topological objects related to the transport network in maps of Greater Poland used in the AHP-series Greater Poland volume

Perthées (1804)	Gilly (1802)	Schrötter (1804)	UMTB (1818/1820–1876)
postal roads	Fahrende Posten, Reitende Posten, Kariol Posten, Boten Posten, Besondere Extra Postwege	Land und Poststrasse	–
–	–	–	Stein Chausseen
routes/roadways, i.e. public roads, highroads	Hauptstrasse von einer Stadt zur benachbarten	Gewöhnliche Wege	Gewöhnlich Chausseen, Landstrassen
ordinary roads	Dorfwege, Nebenwege	Fussteig	Gewöhnlich Feldwege, Fussteig

[Compiled by T. Panecki, based on own material.]

⁸² I owe this information to Henryk Rutkowski.

Mention is moreover deserved of the dissimilar methods of road classification reflected in the maps concerned (Table 1). A breakdown of the data for the four most important maps has led to the observation that the categorisation of roads in the late eighteenth and early nineteenth century significantly deviated from the practice applied a few centuries earlier. This was so mainly due to the intense development of the postal system, economic change, and gradual development of rural colonisation in the areas under analysis.⁸³ The degree of change is well illustrated by the classification of roads in the maps by Perthées, where highroads and routes or roadways were secondary to postal roads. This observation implies that retrogressive use of the road network depicted on old maps should basically consist in redrawing (copying) the road's course with use of an appropriate base map, rather than attributing to it the status of main or side road, merely implied by its declared classification.⁸⁴

Another issue requiring explanation is the shifts between the overlapping sheets of the maps used for the present purpose. The use of the GIS software has enabled to equip the maps with appropriate spatial reference, which enabled simultaneous analysis of the maps, regardless of their scale or degree of accuracy. Apart from the exact and accurate UMTB, *Quartermaster's Office Map*, and WIG maps, spatial reference was also given to the less precise maps (Gilly) as well as to those whose accuracy ought to be regarded as, basically, accepted (Freudenhammer, Perthées).⁸⁵ Consequently, in the course of the drawing of roads, one had to make certain whether a given road could be regarded as valuable in terms of the present reconstruction, and whether it is definitely identifiable in the reference (WIG) map. In case of a difficulty occurring, it was necessary to identify the reason for any possible difference.⁸⁶ To give an example, when drawing a road in Kcynia district, to link Żnin, Sobiejuchy, and Kowalewo, the Gilly map showed a road going along the Gaśawka, whereas the much later WIG sheet featured a railroad line along this route. In spite of considerable differences in the shifts of localities between Gilly's map and the WIG map in that area (i.e., approximately 550 m for Brzyskorzystewko, 750 m for Sobiejuchy, 1,050 m for Dąbrówka Słupska, 850 m for Dobrylewo, 250 m for Wąsosz, and 550 m for Żędowo), the course of the sixteenth-century road follows Gilly's map, assuming that the railway line has replaced the transport route once set along the river (see Fig. 3).

Yet another problem encountered while drawing the network of sixteenth-century roads was that a number of settlement accretions and influences characteristic of the subsequent centuries were taken into account. Along with a bigger number of new demesne farmsteads, manorial settlements, ironworks, glassworks, the *Olęder* (i.e., mainly, Dutch) colonisation expanded, reaching its peak in Greater Poland between the late seventeenth century and the collapse of Poland-Lithuania at the end of the following century.⁸⁷ One example to illustrate this issue is the connection between Trzciel and Międzyrzecz via the villages of Rybojady, Siercz, and Bobowicko. The route probably went in the sixteenth century along the Obra River, as shown on this volume's map. Based on the WIG map sheet, the road to Międzyrzecz might have been drawn along the roadway set approximately 5 kilometres west of the Obra. This solution seems to be suggested by a map from pre-war time and the much older map by

⁸³ For a broader account, see A. Janeczek, *Staropolski układ komunikacyjny*, pp. 12–18.

⁸⁴ *Ibidem*, p. 21, importantly remarking, following H. Rutkowski's observations, that the eighteenth-century road network is a starting point for – rather than the actual purpose of – retrogressive research into the earlier periods.

⁸⁵ See T. Panecki, *Cartographic sources*, [in:] AHP Greater Poland, in this edition II.2.4, with precise calculation of the root-mean-square error (RMSE) for the three most important maps used in the preparation of this atlas.

⁸⁶ Of the recent studies exploring this topic, see J. Wolski, *Błędy i niepewność w procesie tworzenia map numerycznych*, [in:] *Źródła kartograficzne w badaniach krajobrazu kulturowego*, ed. J. Plit, J. Nita, Sosnowiec 2012 (Prace Komisji Krajobrazu Kulturowego, vol. 16), pp. 15–32; T. Figure 3. Exemplary localisation errors: WIG background map vs. Gilly's map (1802) [compiled by T. Panecki]

Gilly. However, the roadway was formed in late modern period and should be associated with local foundations under the Dutch settlement law, which is clearly visible already on Perthées's map, with two colonies plotted – Hollendry Eschenwaldzkie and Hollendry Siereckie.⁸⁸ We consequently believe that there is little probability that a sixteenth-century road connecting Trzciel and Międzyrzecz could be set through an area that was inaccessible at that time, so the route has finally been set out closer to the Odra line.⁸⁹

One of the reasons behind the lack in the sixteenth century of roads at the borderland between the districts of Poznań and Kościan, within the area delineated by Trzciel, Lwówek, Opalenica, Grodzisk Wielkopolski (Grodzisko), and Zbąszyń, is that fact that the terrain had been overgrown by forest probably since the mediaeval age, until the final decades of the seventeenth century. In spite of periodical exploitation of forest resources by glassworkers⁹⁰ and probably of the bog iron (morass ore) by ore miners from the nearby ironworks in Kuźnica Zbąska (*Hamer*), the area became permanently

⁸⁸ W. Rusiński, *Osady tzw. „Olędrow”*, pp. 133, 139. One of those *Olędry* (Dutch-type) settlements is said to have been set up ca. 1722 in a wasteland area.

⁸⁹ Taryfy 1767, p. 243, mentions routes leading from Trzciel to Frankfurt, Lwówek, and Międzychód; they are moreover confirmed by early cartographic records. The road going through Rybojady was described as an 'ordinary road' (*droga zwyczajna*).

⁹⁰ Narodowy Instytut Dziedzictwa, *Archeologiczne Zdjęcie Polski, obszar 54–21*. In the vicinity of Sątopy and Bukowiec villages, a glassworks is attested, which probably functioned in the seventeenth century. An area frame survey has found numerous fragments of sinters, clumped glass fragments, parts of glass objects and modern ceramics items, and pieces of brick. The approximate area across which these finds were scattered, was approx. 10 ha. The earliest cartographic confirmation of a glassworks in that area is known from the printed map by Gilly ('Vw. Glasshütte'); UMTB features the same description ('Vw. Glashütte'). Unfortunately, the Perthées map is corrupt in this place, which makes it pretty difficult to state whether the structure was known to the cartographer from the descriptions of the local parish. For associations/correlations between industrial operations and the forest complexes, see A. Wyrobisz, *Warunki rozwoju przemysłu w Polsce w XVI i pierwszej połowie XVII w.*, [in:] *Studia nad produkcją rzemieślniczą w Polsce*, ed. Z. Kamieńska, Wrocław–Warsaw–Cracow 1976 (*Studia i Materiały z Historii Kultury Materialnej*, vol. 51), pp. 214–215; E. Černá, *Středověké sklárny v severozápadních Čechách: přínos archeologie k dějinám českého sklárství*, Most–Praha 2016, pp. 193–209.

populated only at the time of the Dutch settlers.⁹¹ Apart from wetlands, appearing a great deal in the area,⁹² another hindrance must have been its numerous geomorphological ridges (see Fig. 4). The eighteenth century, with its practice of founding settlements and settlers under the Dutch law, finally brought about a change in the local landscape. The forest was cleared, the wetland dried, and local roads were punched through the sandy embankments to enable transport and communication with the earlier-founded settlements.

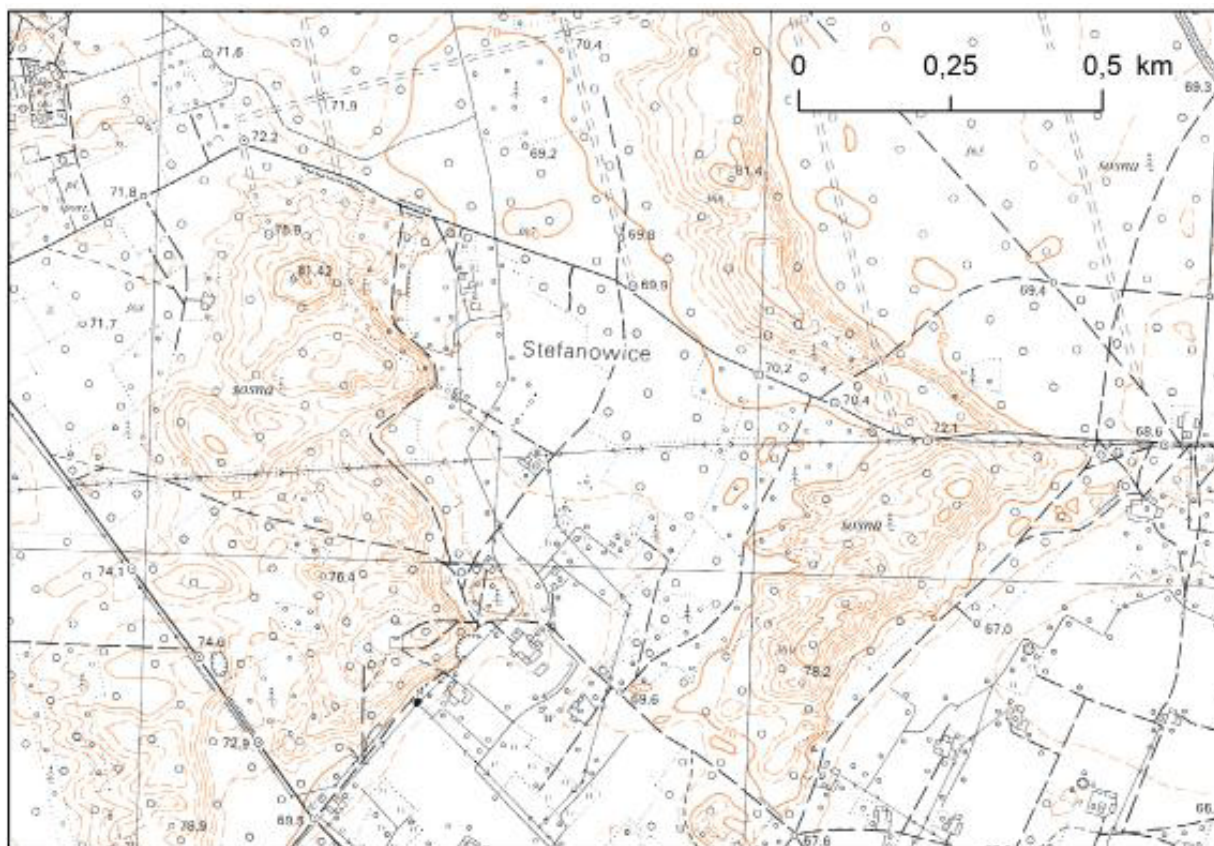

Figure 4. Geomorphological ridges in the area of the road between Chrońnica village of former Dutch colony in Jastrzębsko Stare (scale 1:10,000, coordinate system 65; www.geoportal.gov.pl)

As part of her reconstruction work on Cracow Voivodeship's roads, Małgorzata Wilska observed that inn settlements are of particular importance to the subject-matter.⁹³ The records we have analysed

⁹¹ T. Panecki, T. Związek, *Materiały do badań nad rekonstrukcją zalesienia na Równinie Nowotomyskiej w XVI w.*, „Atlas Źródeł i Materiałów do Dziejów Dawnej Polski”, www.atlasfontium.pl (access 21.03.2016); iidem, *Osadnictwo ołędzkie w badaniach nad rekonstrukcją szesnastowiecznego zalesienia na przykładzie okolic Nowego Tomyśla*, SG, vol. 5, 2017, pp. 29–62. The onomastic material for this territory confirms moreover that a settlement called Budy temporarily existed in a forest clearing a few kilometres west of Łomnica upon Wielka Samica; see J. Luciński, *Chrońnica*, [in:] SHGPoz, part I, pp. 223–224: “[In] 1582 a trial over damage violently committed in Chrońnica: a meadow mowed down at the site called Tążyń and 100 carts of hay taken off, 46 oaks and 150 other trees logged in Tążyń woods, 60 carts of hay taken off from the place called Buda, 40 carts from the place called Tążyń, and 50 carts from the place called Chojennik”.

⁹² W. Matuszkiewicz, J.B. Faliński, A.S. Kostrowicki, J.M. Matuszkiewicz, R. Olaczek, T. Wojterski, *Potencjalna roślinność naturalna Polski. Mapa przeglądowa 1:300 000*, IGI PAN 1995.

⁹³ Classing a settlement as an ‘inn’ (*resp.* ‘tavern’) one has been based on two basic factors: a name proper and location outside the main village abode or outside the town's limits; M. Wilska, *Roads*, [in:] AHP Cracow, in this edition III.5.1. On inns/Caverns as such, see I. Cieśla, *Taberna wczesnośredniowieczna na ziemiach polskich*, „Studia Wczesnośredniowieczne”, vol. 4, 1958, pp. 159–225; A. Wędzki, *Rola przejść przez środkową Obrę w kształtowaniu sieci miejskiej południowo-zachodniej wielkopolski*, [in:] idem, *Ze studiów nad procesami osadniczymi*, pp. 12–13; H. Zaremska, *Miejsca spotkań kultury masowej: karczmy i łaźnie*, [in:] *Kultura Polski średniowiecznej XIV–XV w.*, ed. B. Geremek, Warsaw 1997, pp. 240–249; T. Lalik, *Karczma*, [in:] *Encyklopedia historii gospodarczej Polski do 1945 roku*, vol. 1, ed. A. Mączak, Warsaw 1981, pp. 296–298.

for the present purpose do not offer a considerable number of such sites, though.⁹⁴ As at present, only two localities are known to have had such a function in Greater Poland in the latter half of the sixteenth century. The first was probably Górkę in Kościan district, located on the route from Silesia to Poznań;⁹⁵ the other was Bełzant in Wałcz land, founded in 1593.⁹⁶

Looking for other methods supporting the reconstruction of the road network, it has been decided that as nodal points recognised should also be the settlements with three or more inns, regardless of their ownership status. Adoption of this limit is basically grounded in the difficulty of analysing the available data. As Krzysztof Boroda has recently observed, inns or taverns specified in the tax registers might have had nothing to do with buildings with ‘food-serving and hotel’ functions; they might have merely been outlets distributing beer among the locals.⁹⁷ Alternatively, the spirits propination might in itself have been subject to taxation.⁹⁸ This issue is illustrated, for instance, by the resolution of a ‘universal proclamation on tax collection’ adopted at the 1493 diet (*sejm*) assembly in Piotrków. Whereby ‘as part of the *lan*-based collection, liable to taxation were only those inns whose owners traded in beers manufactured by someone else. As for the on-licence retail sale of self-made beers, the innkeepers were obligated to pay the liquor excise tax (*czopowe*)’.⁹⁹

There are no more detailed mass-scale records available with respect to the area under discussion; even the available ones are incomplete. The propination outlets mentioned in the registers were often described as void (*desertae*), usually without giving the reason.¹⁰⁰ Very few registers or lists offer somewhat more precise information, for example referring to a fire of a site or facility as the reason for failing to pay the tax.¹⁰¹ Some innkeepers might have not paid a benefit due to the release period (*wolnizna*) received because of having constructed the inn or tavern.¹⁰² Yet, such issues are detailed to the extent not to be encountered in the historical material.¹⁰³ Otherwise, it is impossible to grasp the picture of an exact and permanent network of roads for each of the decades concerned, since the roadways might have their courses altered, as repeatedly mentioned above. Because of these remarks, we have decided to break down, for each of the districts of sixteenth-century Greater Poland, or the registers taking note of the area’s inns/taverns, in order to mark and control the course of the highroads of our interest. This has enabled us to, among other things, set out the roads through the Mogilno

⁹⁴ There were as many as thirty such units within Cracow Voivodeship alone; M. Wilska, *Roads*, [in:] AHP Cracow, in this edition III.5.1.

⁹⁵ The former area of Górkę settlement is today probably a part of Pecna village. The settlement is identified based on the 1526 demarcation stating that the demesne farmstead and arable fields in the village of ‘Peczna’ were partly situated *versus tabernas Gorky*; see SHGPoz, Part I, p. 645. W LBP, p. 133: “in villa Gorki tres taberne, braxant cervisium, et duo ortulani”. Górkę is mentioned as a *villa* in all the Kościan district tax registers; RPWP, ksc, passim. Having regard to the information on manufacture and sale (‘propination’) of alcoholic beverages recorded for Górkę at the beginning of the sixteenth century in 1563 (RPWP, ksc, 1563, no. 265), and in the 1580s, with specifications of local craftsmen and quarters of inn *lans* (RPWP, ksc, 1580, no. 267; RPWP, ksc, 1581, no. 337; RPWP, ksc, 1582, no. 34 (breakdown of *retentias*, i.e. ‘retained’/unpaid debt amounts)), Górkę have been classed as an autonomous inn settlement, as opposed to the SHGPoz interpretation.

⁹⁶ See A. Borek, M. Słomski, *Location of settlements*, [in:] AHP Greater Poland, in this edition III.3.1.4.

⁹⁷ K. Boroda, *Geografia gospodarcza Królestwa Polskiego w XVI wieku*, Białystok 2016, pp. 720–726, 736–737. This to be juxtaposed against G. Woliński’s observations based on one of mediaeval Teutonic commandries: idem, *Karczmy wiejskie na terenie komturstwa tucholskiego w XIV i XV w.*, „Zeszyty Chojnickie”, vol. 31, 2015, pp. 13–51. Archaeological research has not been much supportive in this respect; see, inter alia, M. Pytlak, P. Pytlak, *Domniemana średniowieczna karczma w Strzelcach Kujawskich. Materiały z badań archeologicznych*, „Archeologia Środkowego Nadodrza”, vol. 11, 2014, pp. 107–145; W. Chudziak, M. Weinkauff, E. Siemianowska et al., *Domniemana karczma z wczesnośredniowiecznego zespołu osadniczego w Kaldusie na Pomorzu Nadwiślańskim*, „Przegląd Archeologiczny”, vol. 64, 2016, pp. 133–172.

⁹⁸ RPWK, kls, 1563, no. 54: “tabernator Futhek non solvit. Item at the parsones the [female] cooke selleth liquor as well as beere, non solvit”.

⁹⁹ K. Boroda, *Geografia gospodarcza*, p. 722; see VC, vol. 1, no. 1, p. 57: “Item tabernae que non solvebant *czopowe* [=liquor excise tax] aut nihilominus braxant cervisiam, sed solum braxatam per alios propinatores in villis consistentes, solvant per sex grossos” (quoted after K. Boroda, *Geografia gospodarcza*).

¹⁰⁰ For instance, RPWP, ksc, 1576, no. 306; RPWP, ksc, 1563, no. 343; RPWK, pzd, 1577, no. 3. Instead of *taberna deserta*, other phrases/descriptions would appear: RPWK, kls, 1552, no. 704: “[taberna] non propriant”; RPWK, kls, 1563, no. 3: “a taberna non dedit iuxta registra”.

¹⁰¹ RPWP, pzn, 1563, no. 326: “item taberna propter conflagracionem ignis nihil dedit”; *ibidem*, no. 192: “item taberna propter conflagracionem ignis deserta”.

¹⁰² RPWK, kls, 1563, no. 119: “alius tabernator Sobek noviter locatus a duobus annis libertate gaudet”.

¹⁰³ Cf. *Księgi sądowe wiejskie*, vol. 1, pub. B. Ulanowski, Cracow 1921 (Starodawne Prawa Polskiego Pomniki, vol. 11), no. 4585, p. 110, and other supplications to the Chapter, as published therein.

monastery estate, complete the road network around Lwówek in Poznań district, and lay out routes in the areas of Nakło and Wałcz districts proving the least represented in the available records.

We have used in our work the registers from the 1560s and 1570s (see Figure 5). The selection was primarily based on the residual condition of the surviving tax inventories from the fifties and took into account the change in the taxation of inns brought about in the late seventies. By that time, inns and taverns were obligated to pay a flat-rate tax of 20 grosz per hereditary inn and 12 grosz per annual inn.¹⁰⁴ The taxation pattern was altered in 1578, with the flat-rate tax being replaced with the ‘inn *lan*’ assignable to each single inn as the tax base.¹⁰⁵ Therefore, of use have been the tax registers from the 1580s as well. When compared, the data for the districts of Kalisz Voivodeship have shown that most of the outlets of our interest were listed in the 1565 and 1577, as far as the two respective decades are concerned (see Figure 5). Hence, these two fiscal years have been the most broadly used in our road network reconstruction exercise (cf. Figure 6).

In sum, setting out the network of roadways based solely on strictly economic data (inns declaring their payment of the rural liquor excise tax) could have erroneously depicted the transport connections as the nodal point would render the production/manufacture-related importance for a given place whilst not referring to flows of people. Let us remark, though, that the adopted perception as nodal points on the map of those rural settlements whereat three or more inns/taverns were taxed is only to serve as a suggestion whether the locality concerned was associated with the supra-local transport (and communication) system or not.¹⁰⁶

Figure 5. Statistics of all the inns/taverns identified for Voivodeship of Kalisz, second half of the sixteenth century. [Author’s own compilation, based on relevant tax registers (www.atlasfontium.pl)]

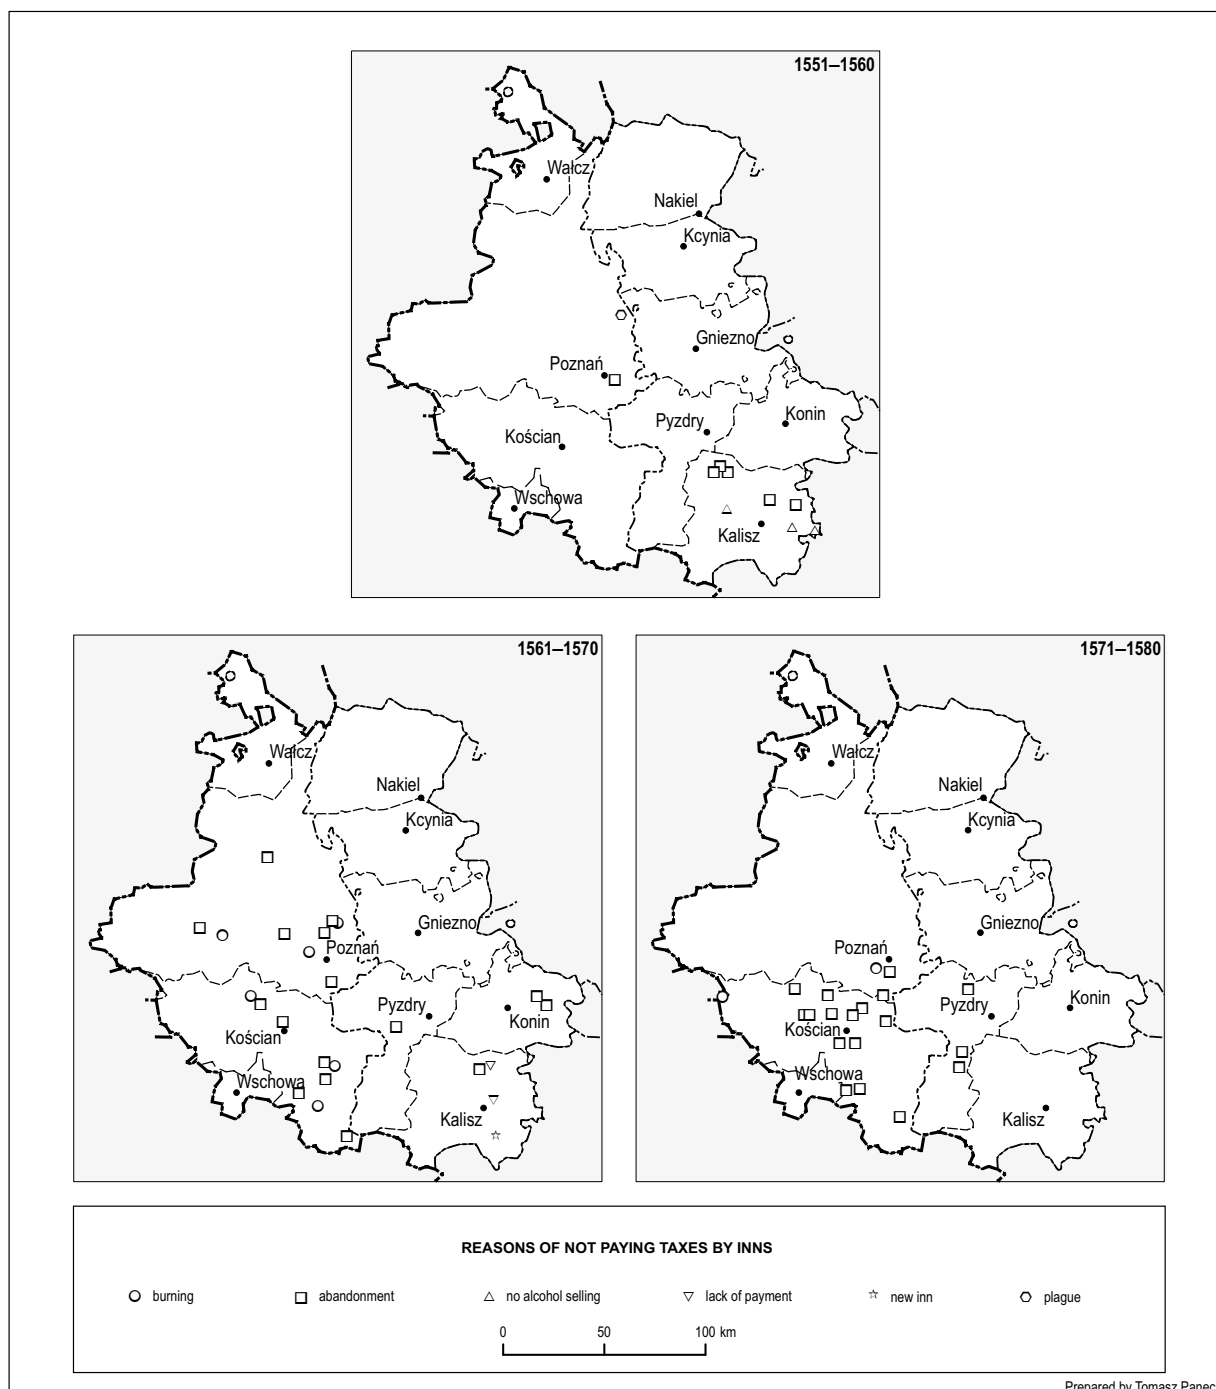

Like the above-discussed fords and inns, one of the most crucial nodal points of essential importance to the reconstruction of the road network were the places at which cash benefits were collected from wayfarers.¹⁰⁷ Hence, the detailed map of roads features localities as to which it is known that customs duty, toll, or both benefits, was/were collected in them in the sixteenth century (reference:

¹⁰⁴ VC, vol. 2, fasc. 1, p. 207.

¹⁰⁵ Ibidem, p. 424.

¹⁰⁶ RPWK and RPWP. Analysis is quite difficult given the lack in these editions of Greater Polish tax registers of any of breakdowns of the liquor excise tax (*czopowe*), which formed a cohesive whole together with the feoff (‘*lan*-based’) tax collection.

¹⁰⁷ H. Rutkowski, *Roads*, [in:] AHP Mazovia, in this edition III.5.7: “Also the convenient passageways through the other natural obstacles contributed to the unchangeability of the roads and durable ways of their use. The well-functioning accommodation and supply places had a similar influence, as did the customs-houses, which the merchants were not supposed to steer clear of”. Cf. A. Janeczek, *Staropolski układ komunikacyjny*, pp. 21–22; see also D. Cyngot, *Komory celne we wczesnym średniowieczu. Możliwość identyfikacji archeologicznej na przykładzie szlaku bużańsko-wiślanego*, „Acta Archaeologica Pultuskiensia”, vol. 5, 2016, pp. 65–77.

Map 1. Spatial distribution of Greater Poland's inns/taverns not paying taxes in the second half of the 16th century (based on relevant tax registers; www.atlasfontium.pl)

‘customs-houses and toll collection points’). The use of one sign for fees for transported goods (duty) and for the transport itself (toll) is based on their frequently having been referred to, in the Old Polish period, jointly as ‘[customs] duty’ (*clo*).¹⁰⁸ Thus, it has sometimes proved hardly possible to differentiate

¹⁰⁸ For more on this topic, see Rybarski, *Handel*, pp. 295–313; A. Manikowski, J. Łukasiewicz, M. Kaliszuk, *Cło*, [in:] *Encyklopedia historii gospodarczej*, vol. 1, pp. 103–105; S. Russocki, *Myto*, [in:] *ibidem*, p. 572; *Cło*, [in:] *Słownik staropolski*, vol. 1, ed. S. Urbańczyk, Warsaw 1953–1955, pp. 313–315, quoting the two basic meanings, i.e.: ‘*myto* is a fee charged for the passage, crossing, transit, or transport [i.e., equivalent of toll]’, and ‘the place at which customs duty is collected, customs facility’. Cf. *Myto*, [in:] *ibidem*, vol. 4, ed. S. Urbańczyk, Wrocław–Warsaw–Cracow 1963–1965, pp. 378–379: ‘levies and fees of diverse kinds; also, the place at which the same are collected; *vectigal, tributum, portorium vel teloneum*’, ‘fee charged for the passage, crossing, transit, or transport (by road, bridge, or river); *portorium pretium quod ab transgredientibus viam,*

between these two types of fee. The possible separate presentation of customs-houses and toll collection points (stations), and the places where both benefits were collected, could have proved misleading to the reader; therefore, we have decided that a safer solution, and one that reflects the current state of research on the topic in question, would be to inform that the given collection facility functioned in the related locality in the sixteenth century and has been taken into account upon the marking out of individual routes.¹⁰⁹

The largest body of information on the customs system has been preserved till our day among the Crown Treasury Archive materials.¹¹⁰ Some of the customs-houses were directly referred to in the records as ‘royal [customs] houses’ (*camere regales*),¹¹¹ though some of them were described as ‘border’ or ‘frontier’ ones (*camere finitimes*).¹¹² The royal customs were administered by revenueurs who, according to Antoni Gąsiorowski, reported directly to the royal court.¹¹³

The largest numbers of customs-houses within Greater Poland appeared in the Polish-Silesian and Polish-Brandenburg border area, handling the North-South and East-West commercial traffic. Well apparent is the distribution of these facilities along the lines of the major rivers: the Warta (in Skwierzyna, Międzychód, Sieraków, Wronki,¹¹⁴ Oborniki,¹¹⁵ Poznań, Śrem, Pogorzelica, Pyzdry, Konin, and Koło), the Noteć (in Wieleń and Nakło),¹¹⁶ the Odra (in Międzyrzecz, Brójce, Grójec Wielki (Grójce Stare, Grodziec), Zbąszyń, Kopanica, Kębłowo, Kościan, Krzywiń, Dolsk, and Jaraczewo), and the Prosna (in Kalisz¹¹⁷ and Ołobok). These places had been important river crossing points since the Middle Ages. For instance, Śrem was referred to as ‘privileged in the macro-scale by its location on the Central Poland’s gap of the Warta, which was pivotal in terms of transport, at the crossroads of important routes, a water and a land one, linking the country’s central area and its capital towns (Poznań, Gniezno) with southern Greater Poland, Silesia, Bohemia ... The impact of the state administrative factor on the form and development of the ecumene is extremely clearly observable on the example of Śrem, and this for four specific reasons: a castellany burg-city maintained between in the tenth/eleventh to end twelfth centuries, a customs-house fixed above the passage, a left-bank ducal fair settlement founded in 1253 r. (Stare Miasto), and the town’s removal to the right bank of the river by way of a royal deed dated 1393 (Nowe Miasto)’.¹¹⁸ That the place was a very important transport hub is also mentioned in

pontem, fluvium solvebatur. E.g., LWWK 1569: “of the excisse [= customs duty] or the brigde-taxe, 6 fl. cometh in everie yeare” (ff. 42v); Akt rew., passim.

¹⁰⁹ The same is true for the *przykomoreks (przykomóreks)* – lower-tier customs-houses affiliated to the ‘major’ houses (see below for more).

¹¹⁰ An extremely large collection of customs-house accounts regrettably perished in fire during the Warsaw Uprising of 1944 (*Księgi celne Korony*, p. VII).

¹¹¹ Rach. kom. cel., sign. C10, f. 2: the title of fascicle reads, [Oborniki:] “A regester of the royall excisse that hath been commenced since the Epiphanie untill the Whyte Sunday [= Whitsun] in the year 1585”, and C11, f. 1: “Anno domini 1585. A regester of the collectyon of the HRM excisse at the [customs] house of Wronki”; also, see J. Rutkowski, *Skarbowość polska za Aleksandra Jagiellończyka*, KH, vol. 23, 1909, no. 1–2, p. 32.

¹¹² The name was applied to the customs-houses in Poznań, Skwierzyna, Międzyrzecz, Zbąszyń, Brójce, Kopanica, Kębłowo, Wschowa, Śrem, Poniec, and Dybów; ASK I 124, ff. 11v–14, ‘Descriptio camerarum finitimarum contributionis quartii grosi pro anno domini 1583 in conventionibus particularibus ac generali in Colo laudate’. R. Rybarski remarks that the houses thus named collected the so-called ‘new’ customs duty (Rybarski, *Handel*, p. 18).

¹¹³ A. Gąsiorowski, *Urzednicy zarzadu lokalnego*, p. 214.

¹¹⁴ MK 36, f. 857 (MRPS IV/2, 13852); CMP, 151: “[camera] versus Saxoniam”.

¹¹⁵ The Poznań duty was collected thereat: “from Oborniki doe they take the excisse to the castel from those who passe bye Poznan bye waye of this same practice bye waye of this same practice [*sic*] as [the one applied] in Posznan [= Poznań], off which there cometh to the yeare circa vel ultra 4 fl. 12 gr[osz]” (LWWK 1569, ff. 1–1v).

¹¹⁶ The trade in the border area between Poznań district and Wałcz land was probably associated with the functioning of Margrabska Droga, and this is probably the reason why toll was collected in Ujście. LWWK 1569, f. 9: “Of the bridge-tolle which the Jewe of Pila [Piła] is holding ratione arendae payeth he per 19 fl. 6 gr of his owne annuati”. Ujście 1627, f. 1: “This towne hath considerable onera in the construction and repaire of the bridge over the Noteś [Noteć] and Głda [Gwda] rivers, which it is with a greate burden and cost that they are bounde to renovate, this same as for the repaire of the fascine for the mille. Supplicated have they to Her Maiestie the Queene so that the excisse from that same bridge, whose circa vel ultra fl. 16 cometh, be mercyfully allowed”. In this context, no wonder that Jastrowie the village turned into a town in the seventeenth century, where collection of toll was also allowed (Ujście 1627, f. 3).

¹¹⁷ The annual income from the castle duty 16 fl. (LWWK 1569, ff. 59v).

¹¹⁸ J. Fogel, A. Sikorski, S. Bakiera, *Uwagi na temat relacji wybranych elementów średniowiecznej aglomeracji śremskiej (gród – miasto – przeprawa warciańska)*, „Fontes Archaeologici Posnanienses”, vol. 36, 1987/1988, p. 137. From more on the passage facility, its throughput and functioning in general, see *ibidem*, pp. 154–156.

a 1398 document issued by King Władysław Jagiełło, which ordered the merchants and residents of Greater Poland to head toward Wrocław and Silesia along the old road going via Śrem and Poniec.¹¹⁹ Along with the changes occurring in the trade routes in the Middle Ages, a decreased importance of the significance of the passage in Śrem should be noticed, as the mainstream commercial traffic moved at that time into the routes leading via Poznań or Kalisz.¹²⁰ The movement at customs-houses was also period-dependent, basically related to the dates of fairs in Greater Poland and its adjacent regions. Understandably enough, other economic circumstances also had an impact, such as the supply of salt in Bydgoszcz,¹²¹ let alone warfare.¹²² As a result, some roads were busier whereas others were less intensely frequented in a given quarter of the year.¹²³ Let us note, though, that the quality of the data contained in the customs-house' accounts was affected by numerous royal bestowals exempting the burghers in the specified towns from payment of duties within the Crown territory.¹²⁴ Moreover, the nobles were basically exempt from customs duties at the time.¹²⁵

It is worth mentioning that customs duty revenues could be leased. Instances of leasing the income, for example, to Jews have been reported for Ujście¹²⁶ or Gniezno.¹²⁷ Otherwise, land officials are known to have often hold customs income.¹²⁸ For example, Kalisz Castellan Andrzej of Szamotuły transferred in 1498 his right to customs income at Kalisz, Konin, and Kleczew to his daughter Katarzyna for a period of three years.¹²⁹ The 1569 record of an inspection of the *Starosta's* District of Rogoźno has it that 'in [...] Skoki doeth Lady Liathalska the Castellanness of Łąd a halfe of the excise [= customs duty][,] this not being knowne upon which righte that, for none righte hath been showne therefor, that they are now collecting from her. Every thinge which allwayes bellonged toward Rogozno[,] thus the accounte was given.'¹³⁰ However, the payments on that duty had been bestowed to her husband Jerzy Latalski by King Sigismund the Old in 1539.¹³¹ On top of that, the customs-based income was distributed among the king's trusted men. In 1553, Maciej Mokronowski received an annual salary of 100 *grzywnas* from Greater Polish customs;¹³² 1555 saw royal courtier Jakub Kosmowski receive an annual salary (*stipendium, pensium*) of 100 florins from Poznań customs

¹¹⁹ KDW III, no. 1988: "quod omnes et singuli mercatores, cives, oppidani et incole civitatum et oppidorum nostrorum regalium in terra nostra Maioris Polonie consistentium, cum rebus et mercibus ipsorum quibuslibet volentes versus Vratislaviam proficisci, eisdem antiquis viis, quibus tempore serenissimi principis domini Kazimiri regis Polonie illustris bone memorie videlicet versus Silesiam transire et theloneare consueverunt, scilicet per Szrem et per Poniec transire debeant et omnimodo teneantur".

¹²⁰ I. Skierska, *Śrem**, [in:] SHGPoz, part V, pp. 34–35 and footnote 4, p. 72, where we read that "the privilege in question already upon its issuance in 1398 did not fully correspond with the changes in the commercial traffic on the roads in southern Greater Poland; consequently, it was renewed unaltered and approved in the years 1441, 1504, 1578, 1601, and 1633 for Poniec only, where the customs-house played an essential part also in the following centuries – on the way from Poznań, via Kościan, to Wrocław". Also, see Chart no. 2 herein, showing that the revenue from the Śrem customs-house ranked among the lowest attested by the surviving records.

¹²¹ LWWK 1569, ff. 86v: "And this excise [= from Rogoźno] doeth more at the tyme when there is suffycient salte at the bydgoszcz house".

revenue;¹³³ in 1557 the like benefactor was Piotr Rozbicki, the royal cavalry commander.¹³⁴ Annuities or life pensions drawn from Poznań customs revenues were granted in some cases, as with Mikołaj Djatkowski in 1534, for instance.¹³⁵ Examples of this sort were numerous; in any case, customs-based income contributed, as well, to the personal policy pursued by the monarch, as broad concept. Very importantly, Greater Polish *starostas*-general did not take advantage of the customs income.¹³⁶

Based on the material available, it is difficult to unambiguously estimate the amounts of income received by the Crown treasury from customs incomes of diverse provinces. In 1564, the king jointly leased out the customs of Lesser Poland and those of Greater Poland to Stanisław Spławski, the then-Castellan of Krzywiń, and Jakub Rokossowski, Deputy Judge of Poznań, later Treasurer of the Crown,¹³⁷ at 45,000 *florins per annum*, for the period of January 1564 until end of 1566.¹³⁸ Then, in 1566, the income from water customs duty at Włocławek was leased for three years to Jan Leśniowski, Cup-bearer of Lwów and secretary to the king, at 7,000 *florins per annum*.¹³⁹ To compare, based on the fascicle kept at the Crown Treasury Archive [ASK], listing the payments received from Voivodeship of Poznań in 1583 – the Crown treasury's is estimated at 3,748 florins.¹⁴⁰

Figure 7. Annual income from the frontier customs-houses as of 1583. [Compiled by the Author based on ASK I 124, k. 11v–14. Poznań is not specified owing to the enormous amount of its revenue (almost 80,000 grosz). The asterisk stands for the house situated in Cuyavia.]

In our work on the reconstruction of Greater Poland's roads, we have moreover used the available fascicles of customs-house accounts. The information regarding the customs-houses as such was partly obtained from the pre-war study by Roman Rybarski and from the residually preserved files kept at the State Archives in Poznań. Having access to the entire ASK resource, Rybarski described before the Second World War how the accounts were constructed, namely: 'in the detailed registers, usually the duty payment date and the amount of duty, the commodity and its quantity; also, the origin

¹³⁸ MK 96, ff. 212v–214v (MRPS V, no. 9299). In 1565, the amount was raised to 48,000 florins; MK 96, ff. 437v–441v (MRPS V, no. 9494); cf. MK 110, ff. 395v–400 (MRPS V, no. 10576).

¹³⁹ MK 100, ff. 124bv–126v (MRPS V, no. 9692).

¹⁴⁰ ASK I 124, f. 14. For an initial estimate of the income arguably yielded by the country's entire customs system in the Jagiellonian age, see P. Guzowski, K. Boroda, *From King's Finance to Public Finance. Different Strategies of Fighting Financial Crisis in the Kingdom of Poland under Jagiellonian Rule (1386–1572)*, [in:] *The Financial Crises, Their Management, Their Social Implications and Their Consequences in Pre-Industrial Times*, ed. G. Nigro, M.T. Bartoli, M. Boddi et al., Firenze 2016, p. 456.

and, possibly, the name of the merchant transporting the goods. Oftentimes, along the name of such merchant, the name of the carter carrying the merchandise; or, elsewhere, just where he came from'.¹⁴¹ Referring to the customs accounts' details of the merchant's 'origin', the author probably had in mind the fact that the sources would not directly point to the place from which he had arrived and where he was going to. The individuals mentioned in any such record have their first name, surname, and – quite probably – birthplace (and, possibly, the abode) specified.¹⁴² We would not be told the merchant's itinerary, last stopover, or the town he was heading for. All in all, the usefulness of those accounts in the reconstruction of the road network has proved to be much limited. They enabled us to, above all, get a picture of the specificity of the superregional and local trade between the Crown of the Kingdom of Poland and the involved parts of the German dominions. At the customs house in Międzyrzecz, for example, subject to the duty were most frequently the cereals (rye, oats), cloth, wool, barrelled herrings, cowhides/oxhides, iron goods, butter, or honey.¹⁴³ The vast majority of goods handled at the peer facility in Wschowa included millstones, swine, oxen, grain, cowhides/oxhides, Silesian beer, and cloths.¹⁴⁴

In our work on Greater Poland's roads, we did not have at our disposal a substantial resource of revisions and inspections of roads, customs, and tolls, comparable to that available for Lesser Poland.¹⁴⁵ The data were gathered from dispersed records, sometimes quite enigmatic.

Babimost was a special case as regards the houses handling the royal customs, which were situated in towns – mostly, though not only, royal ones. Babimost was first mentioned in 1513, among the localities through which merchants reportedly travelled and duties were collected.¹⁴⁶ Then, the town's name is noted among customs-houses in 1519;¹⁴⁷ then again, in 1524, as a place of duty collection *versus Silesiam*, alongside Paradyż, Zbąszyń, Kopanica, Wschowa, and Sulmierzyce.¹⁴⁸ No later reference has been encountered regarding Babimost; instead, as of 1535, a customs-house is seen operating in the nearby village of Grójec Wielki (Grójce Stare; Grodziec). Roman Rybarski's comprehensive study quotes details of this particular house for the years 1535–82.¹⁴⁹ The house's unique location is confirmed by the recently published list of fairs and customs-houses related to the trade in oxen.¹⁵⁰ The enumeration of a total of eight localities, from Sulmierzyce to Zbąszyń, appearing six times in the study, points to one direction of moving forward.¹⁵¹ It can be presumed that the customs-house was moved in between 1524 and 1535 from Babimost to Grójec as the topography of the latter location facilitated the control of road traffic.¹⁵²

For this particular reason, we have resolved to mark on the road map, depicting the control points over the entire sixteenth century, the uncertain character of the Babimost house, and the rather uncertain character of the Grójec Wielki house.¹⁵³

¹⁴¹ Rybarski, *Handel*, pp. 17–18.

¹⁴² See, for example, Rach. kom. cel., sign. C1, ff. 5v: "Opcz the baker from Miedzirzecz [= Międzyrzecz] theloneum finitum solvit upon one horse"; *ibidem*, f. 4: "Jurga civis with his companyon [from] Zielona Gora [Góra] upon carrying rye by 4 horses in 2 cartes abroad solvit"; cf. H. Samsonowicz, *Handel na pograniczu polsko-śląskim w świetle danych komory celnej w Częstochowie z 1584 r.*, KH, vol. 99, 1992, no. 4, pp. 9–10.

¹⁴³ Rach. kom. cel., sign. C1–C4.

¹⁴⁴ *Ibidem*, sign. C5–C8.

¹⁴⁵ M. Wilska, *Roads*, [in:] AHP Cracow, in this edition III.5.1.

¹⁴⁶ *Corpus iuris Polonici*, vol. I/3, no. 130, pp. 263–264: "Via et loca eundi mercatoribus. ... Nakell; Posnania camera; custodia Medzirecz, Babimost, Przemundt, Obra, Keblow; Frankfordt". According to Oswald Balzer, the editor, the term *custodia* (watchtower) referred not only to Międzyrzecz but also to the subsequently named towns, except of Frankfurt (situated outside Poland).

¹⁴⁷ MK 33, p. 432 (MRPS IV/2, no. 12351).

¹⁴⁸ MK 36, f. 857 (MRPS IV/2, no. 13852); CMP, no. 151.

¹⁴⁹ Rybarski, *Tabele*, pp. 118–135. Two mentions dated 1583 can be added at this point: 'camera Grodziensis' (ASK I 124, ff. 12v), and 'camera Grodziecensis' (Rach. kom. cel., sign. C12, ff. 12v–13).

¹⁵⁰ *Spisanie jarmarków*, p. 158: "Pro Margarete [13 VII] the faire at Gostin main[ly] for oxen. There in the faire-place diligent observation must needs be done, it being written where, who, and wherefrom he shall buy the oxen. From that Gostin, one must arrive at the customes-houses, commencing [with] Sulmierzyce, Zduny, Jutrossyn, Poniecz, Wschowa, Kopanicza, upp to Groicz [Grójec], Zbassyn [Zbąszyń] so that the oxen bee calculated".

¹⁵¹ The edition erroneously identifies Grójec Wielki with the village of Brójce (*ibidem*, footnote 21), located north-west of Zbąszyń; Brójce was a town in the sixteenth century.

¹⁵² The section on the customs-house in Grójec Wielki is written by Henryk Rutkowski.

¹⁵³ Owing to the confusion as to records, the house in Grójec Wielki was erroneously identified as the town of Brójce, which was situated between Babimost and Międzyrzecz (T. Związek, *Uwagi w związku z edycją*, pp. 406–407).

Two more uncertain structures are plotted on the map of roads: the customs-house in Paradyż and the toll collection station in Strzyżewek (Strzeszew). The former locality only appears in a 1524 document.¹⁵⁴ No mention confirming the Paradyż facility functioning in the later periods has been found, though. Having regard to the incomplete surviving data and the lack of basic records such as completely preserved customs-house accounts, it has been decided that inserting a reference to a customs-house that existed in the first quarter of the sixteenth century should be a better solution than merely ignoring it. The toll collection facility in Strzyżewek (Pyzdry district, Cerekwica parish) has been treated in the same way. The known fact is that the locality was only mentioned as *deserta* in the 1552 tax register;¹⁵⁵ apart from that, Strzyżewek is mentioned in Sigismund II Augustus's document dated 9 January 1562, whereby the monarch granted Baltazar Jaraczewski the right to collect the bridge toll (*mostowe*) in *oppido Strzeszewo*.¹⁵⁶ The latter mention is so far the only known piece of information that confirms the status of Strzyżewek as a town.

Apart from customs-houses, a network of so-called lower-tier customs-houses, called *przykomoreks*, functioned.¹⁵⁷ Their purpose was to seal the existing customs-house network and thereby to contribute to increased income of the royal treasury.¹⁵⁸ Those facilities were not often mentioned in the sources, and therefore – given the current status of research – exact examination of their geographic density is not possible. An idea of how they functioned is suggested by the watchtowers deployed between Poniec, Jutrosin, and Sulmierzyce, for they were installed on all the clear roads leading from Silesia deeper into Greater Poland.¹⁵⁹ A similar *przykomorek* system functioned in the Starosta's District of Rogoźno estate, with fees collected in Gościejewo, Owczegłowy, Skoki, and Tłukawy – that is, along the trade routes leading from Pomerania, south-eastwards toward Poznań, Frankfurt, Głogów, and Wrocław.¹⁶⁰

Of the twenty-two *przykomoreks*, four were only confirmed in 1513 – namely, the facilities in Górka,¹⁶¹ Obra, Przemęt, and Szymanowo (*Szymunowo*) localities. Due to this reason, they are marked on the map in a different way. It however sometimes happened that a watchtower or guardhouse, so called at the century's beginning, was described in the later sources as a royal customs-house. Międzyrzecz is one such example: mentioned as *custodia Medzirecz* in 1513,¹⁶² the town appeared in a 1524 list of places where customs duties were collected. However, the context of the record suggested that a fully-fledged house rather than a *przykomorek* functioned there,¹⁶³ which is confirmed in the surviving customs-house accounts from the State Archives of Poznań, where four fascicles, dated 1581, have been preserved.¹⁶⁴ Consequently, the places for which no later-date mentions have been found as to a house or *przykomorek* functioning have been marked in the main map as watchtowers.

¹⁵⁴ See footnote 114; cf. KDW I, no. 227.

¹⁵⁵ RPWK, pzd, 1552, no. 59. A similar opinion is expressed by L. Polaszewski (Polaszewski, *Własność*, p. 144), the locality being described as an unlocalised void rural area.

¹⁵⁶ MK 95, ff. 570v–571. Baltazar Jaraczewski reappears in the records, notably as the owner of Jaraczewo in the tax register from 1577 r.; RPWK, pzd, 1577, no. 119. A namesake person appears in court records from the 1540s; see, e.g., Teki Dworzaczka, 2751 (no. 172) 1546.

¹⁵⁷ By all indications, such facilities should rather be identified with the Latin term *custodia*, which stood for a “defensive border watchtower, at which duties were collected from the through-farers” (after the entry in *Słownik łaciny średniowiecznej w Polsce*, www.scriptoros.pl, access 17.03.2017).

¹⁵⁸ These terms were introduced into the literature and academic exchange by B. Wyrozumska, who differentiated in her book between *strażnica* (watchtower, guardhouse) and *przykomorek* (lower-tier customs-houses affiliated to the major ones), giving no explanation, however, as to the characteristics of both types of facility. Based on the proposed argument, both terms seem to refer to a watchtower or guardhouse, whose purpose was to seal the customs network and collect the fees receivable from the merchants travelling by. A *przykomorek* was dependent on the main house which was the basic unit of account with the fiscal apparatus; the records described them as adjacent sites; eadem, *Drogi w ziemi krakowskiej*, pp. 21–24.

¹⁵⁹ A surviving breakdown of smuggling provides some more information on the functioning of customs-houses and *przykomoreks*; as, for instance, in Rach. kom. cel., sign. C12, f. 14: “Die Julii 1583 anni, having with them from the othere customes-houses [and] from guarde[-house]s numero 20 of horses behind Miedzyrzec[z] and Skwierzyzna there I tooke from the clothieres from Francffort with three carts of clothe from whome I tooke fl. 70”.

¹⁶⁰ Also, see K. Górka-Gońska, *Rogoźno*, [in:] SHGPoz, part IV, p. 112.

¹⁶¹ Identified after Weymann, *Drogi*, p. 220.

¹⁶² *Corpus iuris Polonici*, vol. I/3, no. 130.

¹⁶³ MK 36, f. 857.

¹⁶⁴ Rach. kom. cel., sign. C1–C4. Before the Second World War, accounts for the period from 1507 until the 1580s were moreover known; Rybarski, *Tabele*, pp. 46–159.

An additional element appearing in the map of roads are the attached notes informing on fairs held in the urban centres hosting them. As the functioning of annual fairs in a given place was characteristic of urban areas, this is rendered by highlighting the town's name rather than marking separate points: with a pretty large number of individual references, the latter solution would have made the reading of the map's content less convenient.

As no studies have hitherto addressed Greater Poland's mediaeval and modern-age fair network, the map depicts the fairs attested based on the sixteenth-century material.¹⁶⁵ The basic source which has enabled us to identify the localities is *Spisanie jarmarków wielkopolskich*,¹⁶⁶ a paper document kept at the AGAD, whose precise date of compilation is not established; its editors have dated it at between the first and the third quarter of the sixteenth century.¹⁶⁷ The manuscript is probably partly corrupted as it lacks the dates of December fairs.¹⁶⁸ It has to be remarked, with a hint of uncertainty, that the manuscript is probably the one of the many such copies that circulated across the country in that time.¹⁶⁹ A valuable contribution to the image of the fairs is the aforesaid *sejm* constitution of 1565. No less valuable in this respect is the annex to the monograph penned by Agnieszka Bartoszewicz,¹⁷⁰ with extract specifying the dates of annual fairs in towns and cities across the Crown, from the fourteenth and fifteenth centuries to the end of the first quarter of the sixteenth century. Information in this respect has moreover been obtained from excerpts contained in the Poznań dictionary file and from paper and parchments documents browsed through at the AGAD. This still-incomplete picture will need to be complemented as the work on the fair network in Greater Poland and the entire sixteenth-century Kingdom of Poland progresses.¹⁷¹

In line with the binding assumptions of the AHP series, we have attached (below) a breakdown of highroads being the main 'connections between the country's large economic, political, and cultural centres'.¹⁷² These roads are featured on the map, scale 1:500,000, as main roads. Owing to variants characteristic of individual roads, the alternative connections going through localities are marked with square bracket. The list of transport routes opens with Poznań, which was definitely the most important Greater Polish urban centre of supra-regional significance, Another essential point in the economic map of the sixteenth century, Kalisz has been made part of a broader context of the layout of major highroads (see item 4 below). Wherever possible, additional lists of road connections related to the Kalisz junction (items 9–12).¹⁷³ Let us finally add that the localities situated right behind the border, in the area marked with prevalent influence of the German language (i.e. Silesia, Brandenburg, and Duchy of Pomerania), at which the plotted roads arrived, have been given their present-day names in the reconstruction maps. Their sixteenth-century names, identified based on the NMP material, are given in parentheses. The road network extending beyond the limits of Greater Poland's voivodeships toward North-West has been reduced to the necessary minimum, owing to the scarcity of studies on the roads in the Brześć Kujawski and Inowrocław Voivodeships.¹⁷⁴

¹⁶⁵ For two localities, no mention has hitherto been found that would attest to fairs held in the second half of the sixteenth century – namely, Barcin (confirmed 1472; MRPS I, no. 933) and Benice, attested 1510 (MRPS IV/2, no. 9395).

¹⁷³ For more on the importance of Kalisz in the map of roads, see the commentary to the city's map (U. Sowina, T. Związek, T. Panecki, *Kalisz in the middle of the sixteenth century*, [in:] AHP Greater Poland, in this edition III.6.13.4) and oraz Weymann, *Drogi*, pp. 241–249.

¹⁷⁴ The land of Dobrzyń (H. Bartoszewicz, *Drogi handlowe ziemie dobrzyńskiej w XV–XVI w.*, „Miscellanea Historico-Archivistica”, vol. 4, 1994, pp. 155–171) and the land of Chełmno (idem, *Drogi handlowe ziemie chełmońskiej w XV–XVI w.*, „Miscellanea Historico-Archivistica”, vol. 6, 1996, pp. 43–64) have so far been covered. The historical roads in Cuyavia will be covered in the next volume of our atlas.

1. **Poznań – Gdańsk:**
 - (a) Poznań – Oborniki – Ryczywół – Chodzież – Nakło nad Notecią (Nakiel) – Mrocza – Więcbork – Sępólno Krajeńskie (Sempolbork) – Kamień Krajeński (Kamień);
 - (b) as in **1(a)** up to Nakło nad Notecią; subsequently, Łobżenica – Złotów (Złotowo) – Lędyczek;
 - (c) Poznań – Oborniki – Rogoźno – Wągrowiec – Łekno – Kcynia – Nakło nad Notecią, further on as **1(a) & 1(b)** roads;
 - (d) Poznań – Murowana Goślina (Goślina Kościelna) – Skoki – Mieścisko – Janowiec – Żerniki – Żnin – Kcynia – Nakło nad Notecią, further on as **1(a) & 1(b)** roads;
 - (e) Poznań – Murowana Goślina further on as **1(d)** road, up to Żnin, then Szubin – Rynarzewo – Bydgoszcz.
2. **Poznań – Toruń:**
 - (a) Poznań – Murowana Goślina jak as **1(d)** road, up to Żnin, then Barcin – Gniewkowo;
 - (b) Poznań – Pobiedziska – Gniezno – Trzemeszno – Wylatowo (Wielatowo) – Kwieciszewo – Strzelno – Kruszwica.
3. **Poznań – Warsaw:**
 - (a) Poznań – Pobiedziska – Czarniejewo (Czerniewo) – Powidz – Kleczew – Ślesin – Brdów (Brdowo) – Kłodawa;¹⁷⁵
 - (b) as **3(a)** road, up to Ślesin, and then Licheń Stary (Lichyń) – Koło;
 - (c) Poznań – Kostrzyn – Września – Słupca – Golina – Konin – Koło – Dąbie;
 - (d) Poznań – Środa Wielkopolska (Środa) – Miłosław – Pызdry – Zagórow – [or, optionally, Łądek – Golina –] Konin – Koło.
4. **Poznań – Cracow:**
 - (a) as **3(c)** road;
 - (b) Środa Wielkopolska – Miłosław – Pызdry – Chodecz – Stawiszyn – Koźminek – Warta – Sieradz;¹⁷⁶
 - (c) as **4(b)** road, up to Chodecz, and then Kalisz – Opatówek – Staw – [Warta]¹⁷⁷ – Sieradz;
 - (d) as **4(c)** road, up to Kalisz, then Ołobok – Grabów;
 - (e) Poznań – Kórnik (Kurnik) – Bnin – Nowe Miasto nad Wartą (Nowe Miasto) – [Jarocin] – Pleszew (Pleszów) – Kalisz, then as **4(d)** road.
5. **Poznań – Wrocław:**
 - (a) Poznań – Kórnik (Kurnik) – Nowe Miasto – Jarocin – Koźmin – Krotoszyn – Zduny – Milicz (Militsch).
6. **Poznań – Głogów:**
 - (a) Poznań – Mosina – Czempin – Kościan – Śmigiel – Wschowa – Głogów (Gross Glogau);
 - (b) Poznań – Buk – Opalenica – Grodzisk Wielkopolski (Grodzisko) – Wolsztyn – Kontop (Kontopp).
7. **Poznań – Frankfurt (Oder):**
 - (a) Poznań – Buk – Lwówek – Trzciel – Brójce – Świebodzin (Schwiebus);
 - (b) Poznań – Pniewy – Lewice – Pszczew (Pczew) – Międzyrzecz – Sulęcín (Zielenzig).
8. **Poznań – Szczecin:**¹⁷⁸
 - (a) Poznań – Pniewy – Kamionna (Kamiona) – Międzychód – Skwierzyna – [Santok (Zantoch)] – [Deszczno (Dechsel)] – Gorzów Wielkopolski (Landsberg);
 - (b) as **8(a)** road, up to Międzychód, and then Drezdenko (Dreisen);
 - (c) Poznań – Szamotuły – Ostroróg – Sieraków – Drezdenko;
 - (d) as **8(c)** road, up to Ostroróg, then Wronki – Wieleń – Człopa – Tuczno – Mirosławiec (Frydland) [– Pożrzadło Wielkie (Gross Spiegiel) lub Kalisz Pomorski (Kallies)];
 - (e) as **1(a)** road, up to Ryczywół, then Czarnków – Człopa, and then as **8(d)** road;
 - (f) as **1(a)** road, up to Chodzież, then Ujście – Piła – Wałcz [– Czaplinek – Gawroniec (Gersdorf)] – Złocieniec (Falkenburg).

¹⁷⁵ Further on, as in: M. Wilska, *Roads*, [in:] AHP Sieradz, in this edition III.5.5.

¹⁷⁶ M. Wilska's map of highroads does not feature this road; eadem, *Ważniejsze drogi województw sieradzkiego i łęczyckiego*.

¹⁷⁷ Eadem, *Roads*, [in:] AHP Sieradz, in this edition III.5.5.

¹⁷⁸ As regards these roads, their connections with Margrabska Droga were of enormous importance.

9. **Kalisz – Toruń:**

- (a) Kalisz – Stawiszyn – Rychwał – Konin – Kazimierz Biskupi (Kazimierz) – Wilczyn (Wilczyno) – Strzelno – Kruszwica;
- (b) Kalisz – Morawin (Morawino) – Turek – Brudzew – Koło – Brdów (Brodowo) – Izbica Kujawska.

10. **Kalisz – Warsaw:**

- (a) Kalisz – Morawin – Brudzew – Koło [– Grzegorzewo – Kłodawa lub Dąbie];
- (b) Kalisz – Koźminek – Dobra – Uniejów.

11. **Kalisz – Wrocław:**

- (a) Kalisz – Ołobok – Grabów;
- (b) Kalisz – Kwiatków (Kwiatkowo) – Ostrów Wielkopolski (Ostrów) – [Odolanów (Odalanów)] – Sulmierzyce (Sulimierzyce) – Milicz;
- (c) Kalisz – Raszków (Raszkowo) – Krotoszyn – Zduny – Milicz.

12. **Kalisz – Głogów:**

- (a) as **11(c)** road, up to Raszków (Raszkowo), then Kobylin – Miejska Górka (Górka) or [Krobia – Poniec – Góra] – Głogów;
- (b) Kalisz – Dobrzyca – Koźmin – Pogorzela – Gostyń – Leszno – Wschowa – Głogów;
- (c) as **12(a)** road, up to Górka, then Sarnów (Sarnowo) – Wąsosz (Herrnstadt).

Translated by Tristan Korecki

III.5.5 SIERADZ AND ŁĘCZYCA VOIVODESHIPS

Małgorzata Wilska

The rules applied while working on the map of important roads of Sieradz and Łęczyca Voivodeships in the sixteenth century were similar to those applied for previous volumes of the AHP.¹ We do not possess many sources directly related to roads in our area in the sixteenth century. These materials allow only for a partial reconstruction of the road network. Comparing them with eighteenth and nineteenth century maps, we can see, how permanent was the network in the course of centuries, until the nineteenth century. Various factors contributed to this situation, the lay of the land and the development of the settlement among others.

Sixteenth century sources mention two types of roads: highroads, i.e. public roads (called *viae* or *stratae publicae, magnae, communes* or *regiae*)² and local roads, described as ‘straight’ or common roads. Our map shows chosen public roads – highroads. They were under the protection of a lord.³ In the Middle Ages traders had to stick to certain dedicated routes, later the road obligation was not strictly obeyed, but still in the sixteenth century some roads were recommended in royal documents. For instance, in 1566 traders travelling from Warsaw to Wrocław were advised to take the road through Piotrków, Radomsko, Wieluń, Bolesławiec, Baranów, and further on through Syców, in Silesia.⁴

We have used the retrogression method: the map of Sieradz and Łęczyca Voivodeships shows a selection of highroads presented on maps from the turn of the eighteenth and nineteenth centuries. Sources from the sixteenth century were taken into account while making this choice. These are, above all, inspections, Łaski’s *Liber beneficiorum*, documents and also royal itineraries and trade routes reconstructed in historical studies.⁵ The results of studies on towns have been included as well. All sixteenth century towns are situated by highroads marked on our map.

For Sieradz and Łęczyca Voivodeships there are no customs inspections, such as exists for Sandomierz Voivodeship. We had to rely on brief information, such as on customs houses listed in the 1564/65 inspection in Łęczyca, Żychlin, Zgierz, Łódź, Ujazd, Wolbórz, Krośniewice, Dąbie and Ostrów village.⁶ There were few remarks on roads in Łaski’s *Liber beneficiorum*, but sometimes they contained precious information. For instance, thanks to the remark on the road leaving Łęczyca due east we could follow the road through Góra Świętej Małgorzaty and further on to Piątek.⁷ Data from

written sources informs, which villages the road crosses, but only after confronting the data with cartographical materials were we able to determine its precise course in the area.

Gilly's map, presenting the course of main highroads, is particularly important for the described territory. There is no special Karl Perthées's map for Sieradz Voivodeship, the maps of neighbouring voivodeships have been used. Sometimes we had to accept a fragment of a road from the Topographical Map of the Kingdom of Poland. Detailed courses of roads were determined in accordance with those maps on the basis of 1:100,000 maps from the first half of the twentieth century.⁸

The use of maps from the end of the eighteenth century and the first half of the nineteenth century makes the course of roads on our map hypothetical to a large degree, even though the data was verified against sixteenth century written sources. It is possible, that a road barely marked on an eighteenth century map was an important route 200 years earlier, and vice versa.

The points in which the roads entered Mazovia and Sandomierz territory were taken from the published volumes of AHP.⁹ Especially useful were: map of roads of Cracow Voivodeship, prepared by Bożena Wyrozumska on the basis of the 1570 road inspection, map of roads in Wieluń and Ostrzeszów lands made by Ryszard Rosin, and – above all – map of Poznań and Kalisz junction prepared by Stefan Weymann. (on scale of 1:1,800,000).¹⁰

Roads around Piotrków were prepared by Henryk Rutkowski. Piotrków was the most important interchange in the territory of Sieradz and Łęczyca Voivodeships. In the sixteenth century *Sejms* (Diets) and bishop synods gathered there, as well as – from 1578 – Tribunal conventions.¹¹ The majority of highroads have already been described by Ryszard Rosin, mostly for the Middle Ages, but using sixteenth century sources.¹² As in other places, here the detailed course of the roads was reconstructed on the basis of Gilly's map, and partly based on Perthées and Brodowski's maps (adequately to their range); where the above-mentioned cartographical sources proved insufficient, we resorted to the Topographical Map. The following roads were added to those appearing in Rosin's studies: Piotrków–Bujny–Siomki–Bogdanów–Borowa–Zdzieszulice–Grocholice, with the variant: Siomki–Wroników Mały (Laski)–Borowa (this road led further on via Kaszewice, Szczerców, and Osjaków to Wieluń); Piotrków–Borowa (like previous road)–Zawadów–Uszczanowice (Łuszczanowice)–Pajęczno (from there to Radomsko–Wieluń road);¹³ Piotrków–Rokoszyce–Gomolin–Suchcice–Widawa, from which one could go to Sieradz and Slesia;¹⁴ Piotrków–Bugaj–Uszczyn–Barkowice–Błogie (and further on to Opoczno)¹⁵.

Wieluń was an important communication centre in the southern part of our territory. In this area we were basing mainly on R. Rosin's studies,¹⁶ with only occasional changes based on cartographical sources. A road via Niedzielsko–Staw–Stawek–Gromadzice was placed from Wieluń north, according to Rosin, not Gilly, who in this place draws the road through Bieniędzice to Czarnożyły. On the other hand, the road Walichnowy–Naramice–Czarnożyły–Niemierzyn, not included in Rosin's studies, was placed according to Gilly's map. It was the continuation of the Niemierzyn–Konopnica fragment, where a customs-house was situated.¹⁷ Like Perthées, we made a change and led the trail from Jaworzno

⁸ See H. Rutkowski, *Źródła kartograficzne*, [in:] AHP Sieradz, in this edition II.2.12357.

¹³ The Piotrków–Pajęczno road is attested in corresponding part by two Perthées's maps (of Sandomierz and Cracow Voivodeships). Moreover, part of both roads mentioned appear on Gilly's and Brodowski's maps (here only the Piotrków–Bujny part), and the gaps can be filled by the Topographical Map. The fact that the road through Bujny and Borowa (and not only through Rokoszyce) was used by travellers going to Silesia is proven by the emergence of Wrocław suburb by this road. See the plan of Piotrków and the commentary, in this edition III.6.21.5.

¹⁴ The Piotrków–Widawa road is presented on Perthées's and Gilly's maps. In the seventeenth century it constituted a part of the main trade route between Warsaw and Silesia, and a mail route as well. M. Wolański, *Związki handlowe Śląska z Rzeczpospolitą w XVII w. ze szczególnym uwzględnieniem Wrocławia*, Wrocław 1961, pp. 49 f. and map.

¹⁵ Major road on Perthées's and Brodowski's maps

¹⁶ Rosin, *Ziemia wieluńska*, pp. 218–225.

¹⁷ VL, IV, p. 41; cf. S. Weymann, *Ze studiów nad zagadnieniem dróg*, p. 232.

through Dzietrzniki, Pątnów to Wieluń. This road was connected to Krzepice–Kłobucko and was a part of the Cracow–Kalisz road.

In Ostrzeszów district the road from Silesia was placed (following Rosin) from Ligota via Kobyła Góra, not through Myślniew (as on Gilly's map) to Ostrzeszów, while in the northern part of this territory, the road to Kalisz was based on Gilly and Weyman – through Biskupice, not Strzyżew, as in Rosin. Following Gilly and Perthées, a parallel road Grabów–Mikstat was led to Odolanów, this road is a continuation of the Sieradz–Grabów road. Also after Gilly and Perthées a connection Baranów–Kępno–Myjomice–Doruchów to Grabów was marked, it constituted a part of a Silesian road from Namysłów to Kalisz. A road from Praszki was drawn via Stradziec–Jaworzno–Parzymiechy to Działoszyn, and its branch to Danków. These are old routes used during Middle Age gatherings in Danków. They connected Cracow with Silesia, running through Radomsko–Pajęczno–Działoszyn: three towns that were still important in the sixteenth century. Warężak's materials prove the rank of those towns and roads in the seventeenth and eighteenth century.¹⁸

A road from Częstochowa and Mstów was marked through Rędziny–Mykanów–Cykarzew to Brzeźnica and its continuation in the north-eastern direction via Kłomnice–Pławno to Radomsko, where it joined the road to Piotrków. Its course in the area of Mykanów was placed based on Perthées, not Gilly, who saw the track from Biała, via Radostków–Lubojna. The road through Kościelec–Rędziny we present is also based on Warężak's notes.¹⁹

There was a ford on the Warta, south of Brzeźnica, near a tributary of the rivulet Pisia, and the road reached the town from the side of Stare Miasto village, as was shown by Perthées, not as Gilly wanted. He led the main road from the east, creating a bend reaching the road from Jedlno.

While marking the roads in the area of Łódź, we were basing on Rosin's studies (Piotrków–Łęczyca track via Łódź and Zgierz, and also the Zgierz–Brzeziny road).²⁰ The Zgierz–Stryków part was placed following Gilly, and the part from Zgierz to the West, to Lutomiersk, after Gilly-Cron.²¹

Natural environment influenced the course of the roads, especially in places, where it caused serious obstacles. In our territory, such obstacles were great strips of swampy river valleys in the northern part of Łęczyca Voivodeship.²² Since the early Middle Ages until the fall of the Commonwealth, there were three passages through the floodplains and marshes of the River Bzura and the drainage basin of Ner River with the Warta.

The most important of those passages was the Łęczyca–Topola connection, a section of around 2 km, called *pons* or *vadum* (ford) in sixteenth century sources. Hence, there is Topola *zabrodnia* ('beyond a ford'), and the villages lying north of the marsh and mud strip were called *villae transpontanae* in the 1576 register.²³ We can only imagine, what the crossing looked like. It was a dyke, running through higher and dryer spots in the marshes, reinforced with sand or covered with wood. Probably, bridges were built over more wet and muddy crossings. The passage was neither easy nor comfortable, as confirmed by the 1791 inspection that calls it 'from the city (Łęczyca) on the Greater Poland road, a broad ford runs as far as Topola, difficult and dangerous old route'.²⁴ Despite these difficulties, routes from Cuyavia to Lesser Poland, from Toruń to Lwów and from Poznań to Ruthenia led through Łęczyca. Many sixteenth century records mention the customs-house in Łęczyca. From the fifteenth century we know about the course of a road leading towards Ruthenia through Łęczyca, Stryków, Brzeziny and Inowłódz.²⁵ Another road went from Mazovia through Bielawy, where a bridge was built by Alexander Jagiellon's permission 'per viam seu stratam publicam de Masovia versus

²⁵ VL, vol. 2, p. 59.

Lanciam per fluvium dictum Mroga euntes' (1505).²⁶ The same road is also mentioned by Łaski: 'per viam que ducit ex eadem villa Chroslin in Byelawy'.²⁷ From Topola ran two variants of the road to Koło: the old road along the marshes and the River Ner and via Kłodawa. In the south-eastern direction from Łęczyca led a road through Tum and Góra Świętej Małgorzaty – as recorded in Łaski: 'in Gora iacentes, ab... videlicet circa ipsum praedium et eodem usque ad viam, quae vadit de Lancicis in Pyathek'.²⁸ From Piątek to Łowicz, this road was reconstructed on the basis of the maps of Gilly and Cron – through Bielawy and Chruslin. Road to Uniejów left Łęczyca to the south-west, south went the roads to Szadek, Sieradz, Lutomiersk and Piotrków, and the roads to Stryków and Brzeziny ran in the south-eastern direction.

Another passage through the marshes went along the downriver course of Gnida, along the River Ner, to the broad floodplain of this river with the Warta. This passage is marked by two settlements: Dąbie and Sobótka. In this place Łęczyca Marshes become narrower, the left bank was grown with forests visible on Gilly's map, whereas arms of the River Warta – which had two beds here: western and eastern – flowed from the West. In the sixteenth century, a road from Uniejów went across this area, reaching the Łęczyca – Koło route. The sources mention a customs-house, operating in Dąbie since the thirteenth century, and a road led from there through Uniejów, and further on through Dobra to Kalisz. In Dobra it joined the road to Warta, Sieradz and further south.

The third passage through the Bzura marshes led from Sobota to Walewice. The bridge over the River Bzura was situated on this road, which is mentioned by Łaski: 'cum prato circa pontem in littore fluvii iacente' next to the description of the benefices of Sobota parish.²⁹ On Perthées and Gilly's map a track is shown, running south and drawn on our map through Walewice, Bielawy, Bratoszewice. There crossed the route leading through Stryków, Zgierz, Lutomiersko, Szadek, Sieradz. In Szadek the route branched out to Warta–Kalisz.³⁰

Sieradz was an important communication centre in the central part of our territory. In this city busy roads, running from the north to the south and from the west to the east, met. In the sixteenth century new centres, like Zgierz, become very significant, and in the following centuries – Łódź (then Łodzia). In this area we based our reconstruction of the road network on Rosin's studies, e.g. including the Brzeziny–Lutomiersk route through Łódź among important roads. On our map it was placed according to Gilly. A Lublin road, that marked the border between Będzeliń and Koluszki, Długie and Redzeń (Długie and Redzeń lay in Rawa Voivodeship) is mentioned in 1598.³¹ As such, the course of the Brzeziny–Budziszewice road was shown differently than in the Mazovia map.

Important routes of nation-wide importance ran through Sieradz and Łęczyca Voivodeships. On the basis of the present state of research, the following connections can be listed as the most important roads in this area:

Cracow–Poznań:

- a) through Koniecpol–Pławno–Radomsko–Szczerców–Widawa–Burzenin–Sieradz–Warta–Dobra–Turek–Konin,
- b) through Częstochowa–Kłobuck–Krzepice–Jaworzno–Wieluń–Złoczew–Sieradz and further through Warta (like in variant a) or Błaszki–Staw–Kalisz,
- c) through Częstochowa–Kłobuck–Krzepice–Sokolniki–Wieruszów–Grabów–Ołobok–Kalisz.

Cracow–Toruń:

- a) through Przedbórz–Piotrków–Tuszyn–Łódź–Zgierz–Łęczyca–Sobótka–Kłodawa,
- b) through Pławno–Radomsko–Kamieńsk–Piotrków – and further like in the previous variant.

Cracow–Płock: through Pławno–Radomsko or Przedbórz and further through Piotrków–Tuszyn–Łódź–Zgierz–Łęczyca–Kutno.

Warsaw–Poznań:

- a) through Łowicz–Pniewie–Kutno–Krośniewice–Kłodawa–Koło,

b) through Łowicz–Bielawy–Piątek–Łęczycza–Topola–Dąbie–Koło.

Warsaw–Wrocław:

a) through Głowno–Stryków–Zgierz–Lutomiersk–Szadek–Sieradz–Grabów–Ostrzeszów–Syców,

b) from Sieradz through Złoczew–Sokolniki–Wieruszów–Kępno–Syców,

c) through Piotrków–Kamieńsko–Radomsko–Brzeźnica–Działoszyn–Toporów–Wieluń–Bolesławiec–Kępno.
Lublin–Poznań:

a) through Inowódz–Lubocheń–Brzeziny–Stryków–Łęczycza–Sobótka–Kłodawa–Koło,

b) through Inowódz–Stryków–Łęczycza–Dąbie–Koło.

Toruń–Wrocław: through Konin–Kalisz–Ołobok–Grabów–Ostrzeszów–Syców.

Płock–Wrocław: through Gostynin–Kutno–Łęczycza–Wartkowice–Uniejów–Turek–Kalisz–Grabów–
Ostrzeszów–Syców.

Lublin–Wrocław through Przedbórz–Radomsko–Brzeźnica–Działoszyn–Toporów–Wieluń and from there:

a) through Sokolniki–Wieruszów–Kępno–Syców,

b) from Wieluń through Skomlin–Bolesławiec–Opatów–Baranów–Kępno–Syców.

III.5a.5 MAP OF THE ŁÓDŹ AREA

Henryk Rutkowski

The map of the Łódź area on a scale of 1:125,000 is a twice-enlarged fragment of the main map. Its purpose is to provide a more detailed sixteenth century picture of the area that today constitutes a part of one of the Polish metropolises. At that time Łódź (as it was called) was a small town that, together with some of the surrounding villages, belonged to the Włocławek bishopric. District border ran through this area (Łódź belonged to Brzeziny district, and Bałuty village to Łęczyca district), as well as the border between Sieradz and Łęczyca Voivodeships (in the former also a fragment of the border between Piotrków and Szadek districts).

Materials gathered and studied by K. Chłapowski, A. Dunin-Wąsowiczowa, E. Rutkowska and M. Wilska contributed to the creation of this map, according to the division of work between the authors of the main map.¹ However, the twice-enlarged scale required a more-detailed marking, especially in the cases of the localization of settlements and the course of roads and borders. To achieve this, maps and plans included in the monograph on the history of Łódź were used, apart from cartographic sources used in the work on the whole territory of Sieradz and Łęczyca Voivodeships.²

The river network on the map of the area of Łódź was supplemented in relation to the main map with four streams. These are: Jamnica (Bałutka), Karolewka, Dąbrówka and Czerniec.³ Apart from important roads, presented on the main map, several other roads were marked, chosen on the basis of cartographical sources from the turn of the eighteenth and nineteenth centuries. Present city borders constitute a particular addition to the map. They were added to help orientation, on the basis of the map of Łódź published in 1997.

III.5.6 CUYAVIA AND DOBRZYŃ LAND

Tomasz Związek

In accordance with the principles adopted in the AHP series, the road network depicted on the road map includes both major routes (highways) and secondary roads, but not local roads.¹ Although the road network's development has always been and still remains closely related to transport and economy, the functions of roads are not limited to these two aspects only. Consequently, research concerning the history of roads is by no means easy to perform, as it requires not only collecting a large amount of data, but, more importantly, requires one to cope with temporal and spatial variability of old roads. No sixteenth-century inspection records of the movement in inland customs houses have survived for Cuyavia and Dobrzyń land, and it was not possible to reconstruct the network of toll collection points. Inspections of royal estates, mainly from the sixteenth and seventeenth centuries, also provided very few details concerning the state of roads. However, some valuable large-scale historic cartographic objects have been preserved (Perthées's maps – known from their glass photocopies, as well as maps of Textor, Gilly, Schrötter, and von Pfau).² Hence, the reconstruction of the road network of sixteenth-century Cuyavia and Dobrzyń land was prepared, as was the case in the earlier volumes, using the retrogression method.³ The relative shortage of written materials that could be used for the reconstruction of the road network is not surprising considering the fact that the Vistula was the vital thoroughfare in the territory of Cuyavia. Goods from the entire territory of the Crown were transported *via* the river to Gdańsk. Initial analyses of sources suggest also that Cuyavia should be considered as part of the Greater Poland customs province, which means that the road network system should be more closely connected with the network of customs houses and lower-tier customs houses (*przykomorki*) described in the Greater Poland volume.⁴ The roads in question are also a continuation of the network analysed in the Mazovia⁵ and Łęczyca-Sieradz⁶ volumes. The volume devoted to Royal Prussia presents only the eighteenth-century road network, which also needed to be updated.⁷

As in the previous volumes, an important step was to create a list of nodal points, which included a network of customs houses, fairs, inn settlements and villages with at least two inns.⁸ Other useful sources of information included two articles written by Henryk Bartoszewicz,⁹ in which the author reconstructed the network of trade roads in Dobrzyń and Chełmno Lands. The edition of the bridge

and dyke toll rates from part of Cuyavia which was published years ago by Zbigniew Góralski¹⁰ is also useful. The proposed sixteenth-century road network was developed to reflect the state of roads not as of the last decades of the century (mainly the 1580s), as was the case in the Greater Poland volume, but for ca. 1564–1565. This different approach is motivated mostly by the lack of relevant data from the second half of the sixteenth century concerning the region's towns and difficulties in developing their exact categorisation.¹¹ The amounts of paid liquor excise tax were treated as the basic data indicating the economic strength of individual urban centres.¹² They were obtained from the surviving summaries of tax registers from 1564, 1565, and 1569.¹³

In the literature on the subject, there is a belief that the areas in question were located off the main transport routes (Dobrzyń land) and that they constituted transit areas, connecting the main economic centres of a more-broadly-understood region (Toruń and, further, also Gdańsk) with other parts of the State by means of land routes (primarily, Greater Poland and Mazovia) and the most important waterway – the Vistula River.¹⁴ However, the region should be analysed in a more holistic manner and placed within the broader context of the operations of the Crown's economy.¹⁵ The available 1564, 1565 and 1569 data concerning liquor excise tax prove that, apart from Toruń, Nieszawa (Nowa Nieszawa) and Bydgoszcz were the region's crucial economic hubs. They probably had their own local markets and maybe even exported goods to areas outside of Cuyavia.¹⁶ A comparison of the data from the available years (see: Maps 1–3) highlights the natural fluctuation in the payments of liquor excise taxes, resulting not only from changes in grain markets,¹⁷ but also extraordinary crises affecting individual towns. It is easily noticeable, for example, in Nieszawa, whose economic activity decreased by half (from over 10,000 to 5,000 grosze) when comparing 1564 and 1569 as a result of the plague raging in the town.¹⁸ It can be also assumed that Nieszawa was closely related to other Cuyavian towns, which formed its natural supply base.¹⁹ This is evidenced by the spatial distribution of nearby fairs.²⁰ In the sixteenth century, Inowrocław (r),²¹ Kruszwica (r)²² and Chodecz (n)²³ reportedly had four fairs every year, while Sompolno (Sąpolno, c),²⁴ Lubraniec (n),²⁵ Kowal (Kowale, r),²⁶ Dobrzyń

Map 1. Amount of liquor excise tax paid in 1564 based on data from summaries of tax registers

(Dobrzyń-upon-Vistula, r)²⁷ and Skępe (Skępe, n)²⁸ had three. The annual fairs were geographically arranged in the shape of a horseshoe that surrounded Nieszawa from the west, south, and east (see: Map 4). The importance of Nieszawa as an urban centre must have also been caused by the fact that the salt storage of Lesser Poland's salt mines was located in this town.²⁹ The dynamic development of this part of Cuyavia was probably also driven by the fact that a water customs house was opened in Włocławek (Włocław, c) as early as in the 1660s. The annual income from the customs house amounted at that time to approximately 96,000 grosze.³⁰

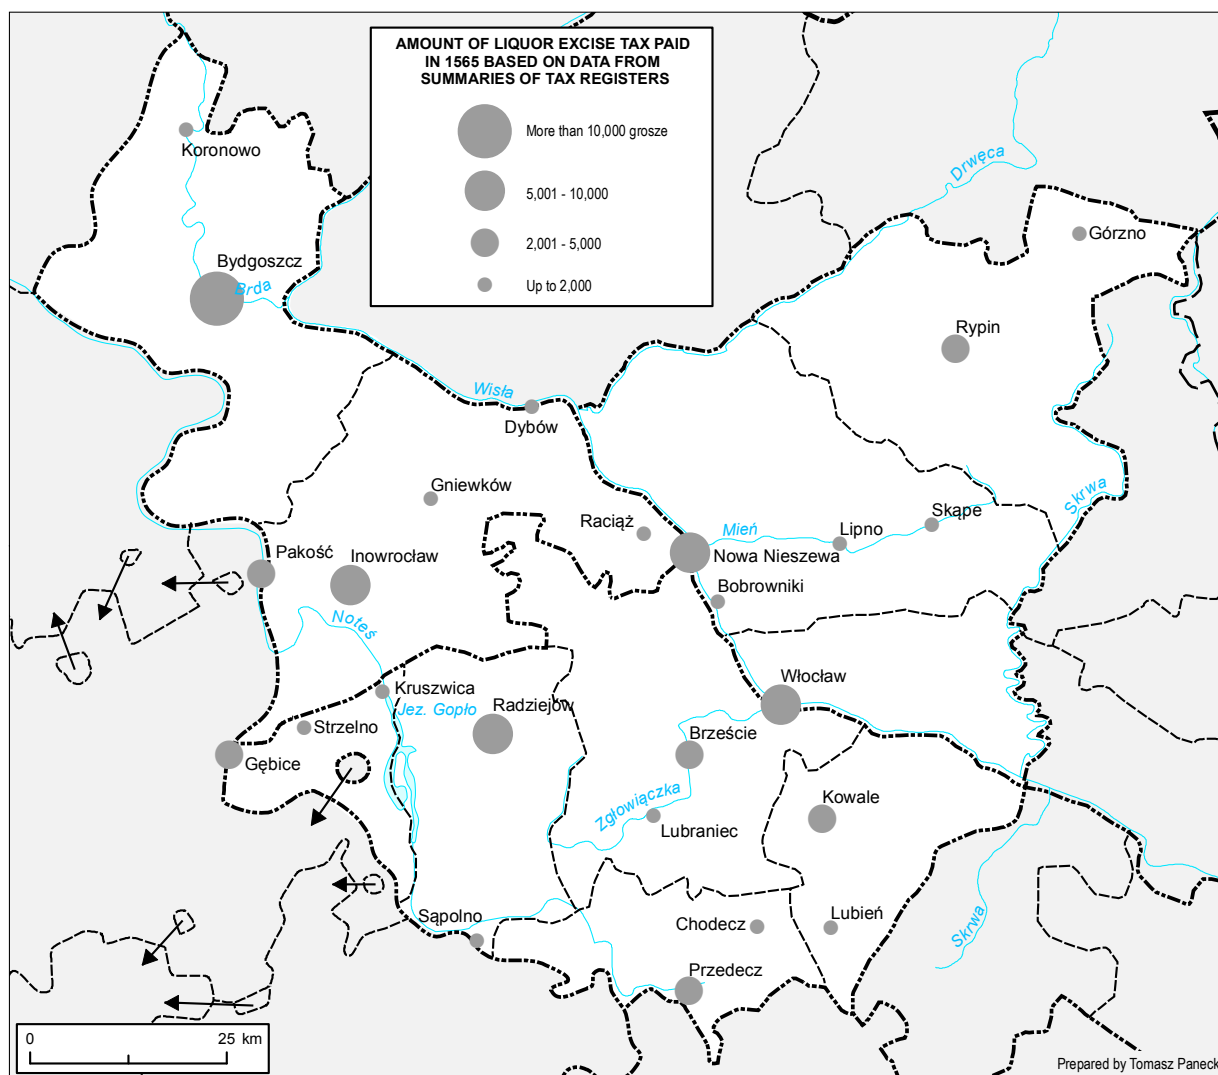

Only a few customs houses were identified for the sixteenth century, mainly the ones scattered around the most important towns of the region. The search of the Crown Metrica revealed no source references to toll collection points in this area. The main known inland customs houses in the second half

Map 2. Amount of liquor excise tax paid in 1565 based on data from summaries of tax registers

of the sixteenth century are associated with Brześć Kujawski (Brzeście, r),³¹ Radziejów (r),³² Przedecz (r),³³ Dybów (r),³⁴ and Inowrocław (r).³⁵ The Przedecz toll was collected in Kłodawa and Dąbrowice, both located in Łęczyca Voivodeship.³⁶ A comparison of revenues obtained from these customs houses over the course of 30 years indicates that the traffic on this route decreased significantly over time, as the revenues from the customs house in Kłodawa at the end of the 1530s exceeded 500 florins, and, in the inspection period of 1564–1565, amounted to only 150 florins. In addition, in Przedecz, toll was collected in 1660s only from those carters that were going south, not from the ones heading north.³⁷ This should be interpreted not only as information about the likely volume of traffic, but also as an indication that the vast majority of goods travelling north were transported *via* the Vistula.

³¹ MK 110, ff. 176–176v (=MRPS V, no. 10725); LWWK 1564, part 2, p. 208.

³² LWWK 1564, part 2, p. 230.

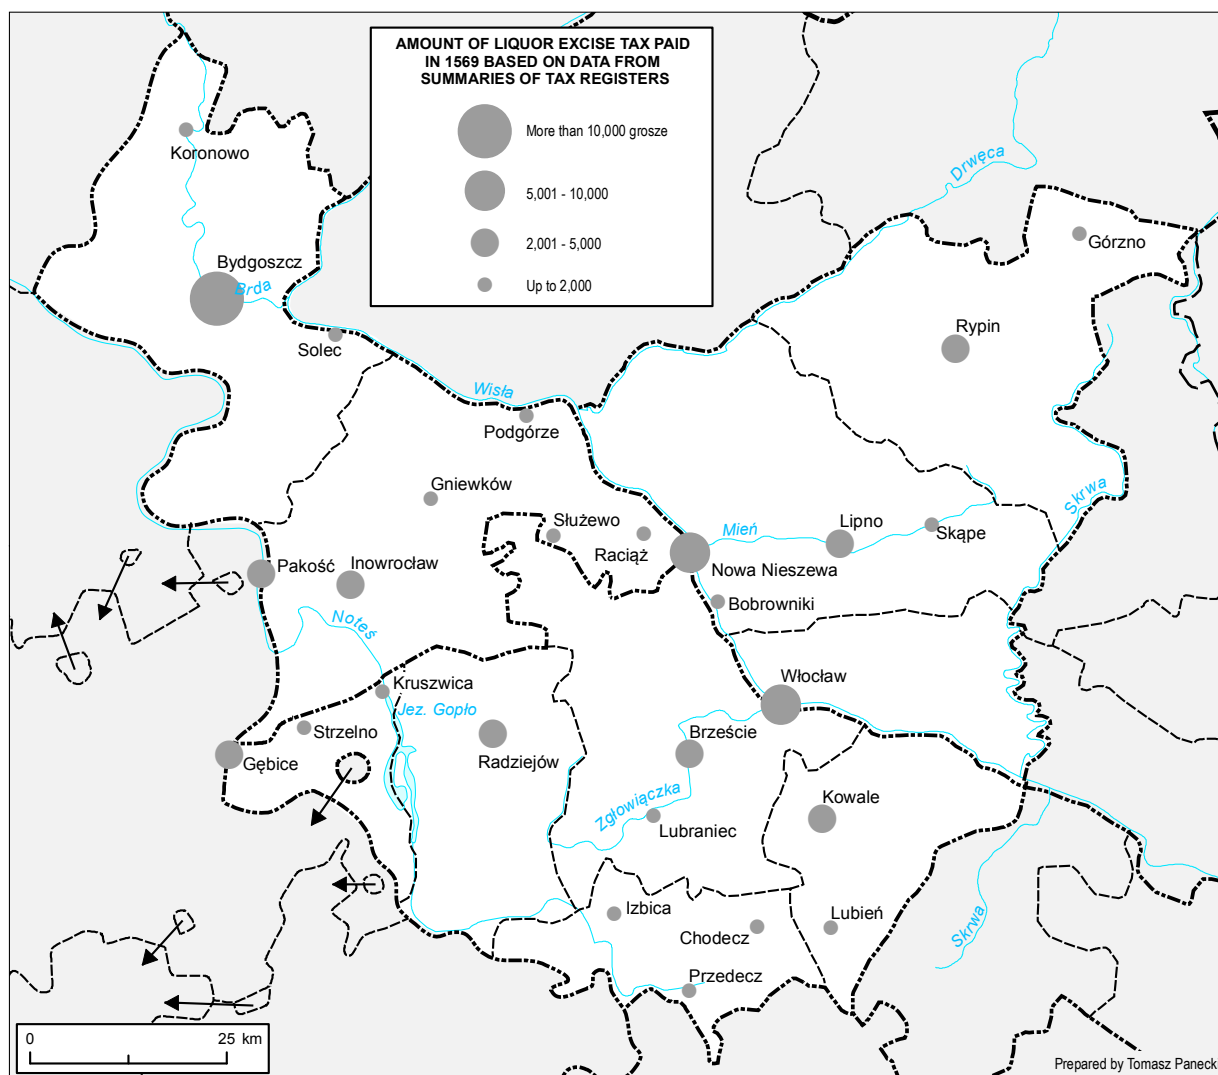

³³ *Ibidem*, p. 168. The description of the inspection states that ‘there are no markets or fairs in this town’. It is known, however, that a town fair was recorded in 1544 (MK 66, f. 209) and, later, only in 1615 (MK 156, f. 41). Most likely, the annotation in the inspection of royal estates resulted from the temporary economic crisis and weakening of both local and regional trade.

³⁴ The Dybów customs house was, however, classified as one of the Greater Poland customs houses; ASK I 124, 13v.

³⁵ MK 78, f. 454v (=MRPS V, no. 1087); LWWK 1564, part 2, p. 243.

³⁷ LWWK 1564, part 2, p. 168.

Map 3. Amount of liquor excise tax paid in 1569 based on data from summaries of tax registers

The older (medieval) toll collection points which are worth mentioning include customs houses in Dobrzyń, Michałów (n), Rypin (r), Księża (n), Bobrowniki (r), Lipno (r), and Słońsk (r).³⁸ The scant amount of available data on annual revenues from municipal tolls from Brześć, Radziejów (r), Przedecz (with lower-tier customs houses), and Bydgoszcz indicate that the majority of traffic (transport of goods) in this area was conducted along the north-south and north-south-west lines. The high income from the customs house in Kłodawa (4,500 grosze) suggests that around 1564 the route through Kłodawa was the main land thoroughfare between Lesser Poland and the central provinces and Cuyavia and Toruń.³⁹ On the other hand, the high income generated by the customs houses in Radziejów (12,000 grosze) and Inowrocław (6,600 grosze) was related to important Gniezno fairs, as well as Silesian and Poznań trade.⁴⁰ The income in the amount of 60,000 grosze recorded in Bydgoszcz can probably be explained not only by the town's beneficial geographical conditions, but also by the fact that it had a salt storage house.⁴¹

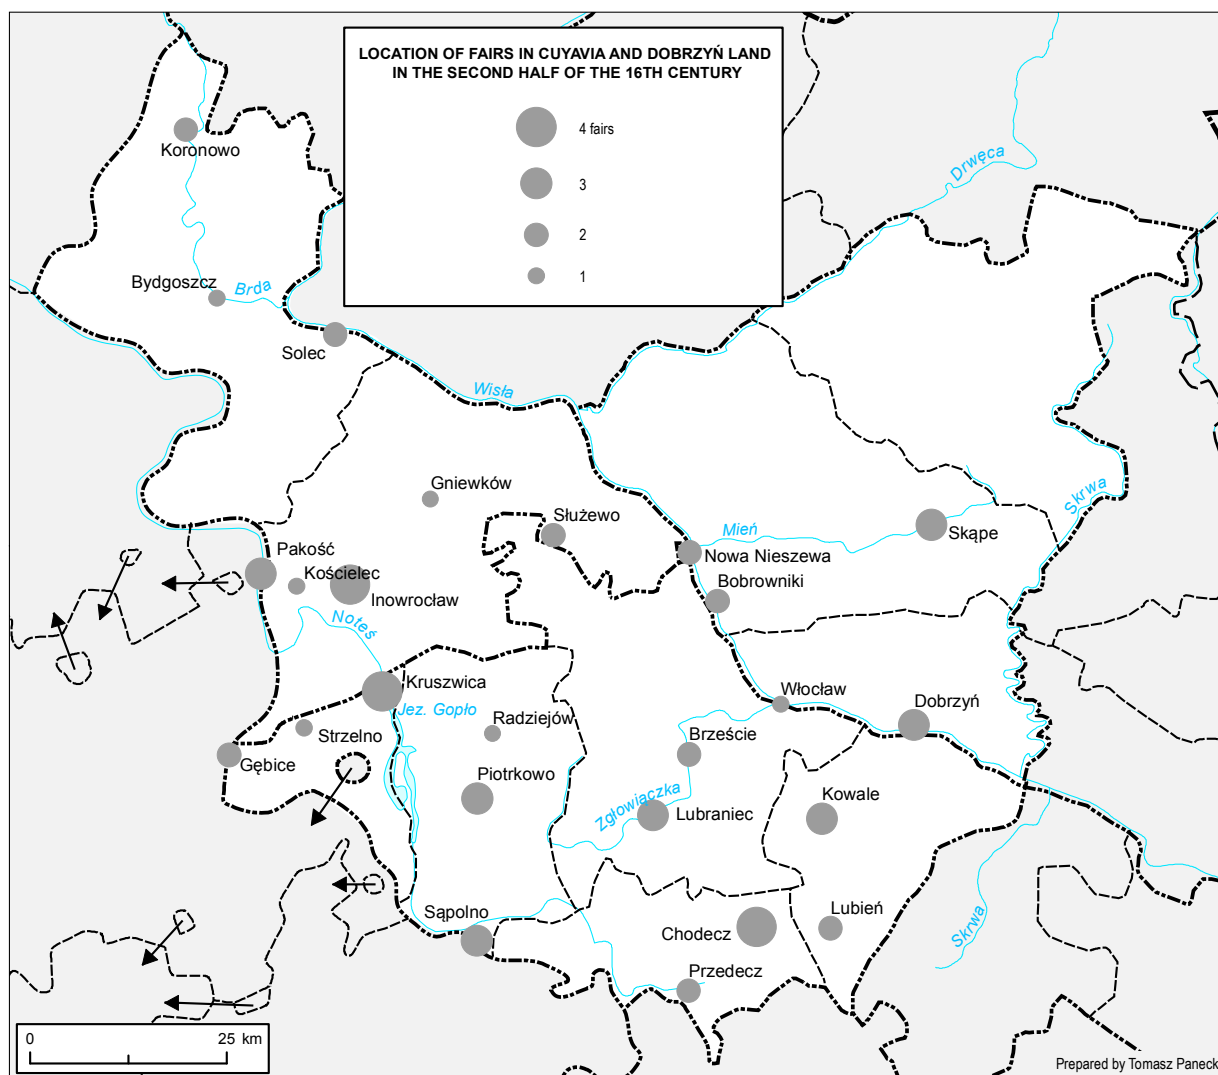

There was only one settlement – Dunaj, located in Brześć District – which was classified as an inn settlement. The tax registers from the end of the fifteenth century do not report anything aside

³⁸ H. Bartoszewicz, *Drogi handlowe ziemi dobrzyńskiej*, pp. 160–161.

³⁹ LWWK 1564, part 2, p. 161.

⁴⁰ Ibidem, pp. 230, 243.

⁴¹ Ibidem, p. 258.

Map 4. Location of fairs in Cuyavia and Dobrzyń land in the second half of the 16th century

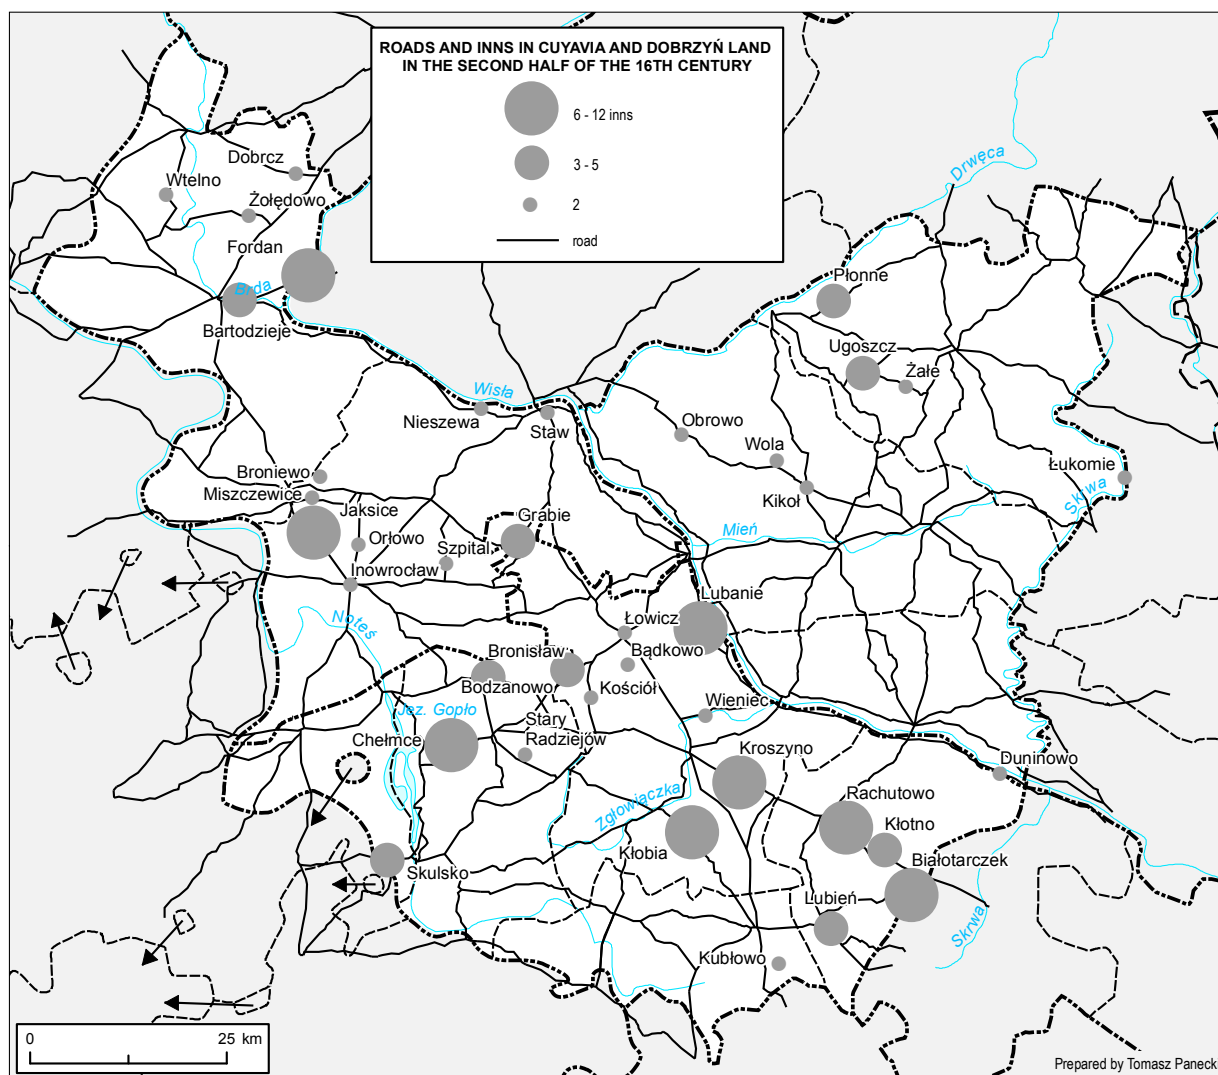

from inns for this settlement, of which there were six at that time.⁴² In the second half of the sixteenth century, the traffic on the road running through Dunaj had to decrease significantly because taxes from only two annual inns and one craftsman are recorded in the tax register for 1567.⁴³ A one-lan unit of a noble-held parcel was also mentioned in the tax register for that year, and for that year only. Its presence was not confirmed in later years and did not influence the classification of the settlement status of the place. Ten years later, there was only one inn in Dunaj;⁴⁴ in later years, the registers recorded only payments from a single craftsman there.⁴⁵ The network and classification of roads in Cuyavia and Dobrzyń land were also based on villages where two or more inns were declared for tax purposes. Data from the 1577 tax register, including 32 mentions of inns, were used for the analysis of Inowrocław and Brześć Voivodeships. On the other hand, data from 1564, which mentioned seven settlements with inns, were used for Dobrzyń land. The villages in the south-east of Cuyavia – near Kowal, Brześć and Lubraniec – contained the highest number of inns. Other important transport nodes included Fordon (Fordan, r), as well as the village of Płonne (n) located in Dobrzyń land on one of the roads between Warmia and Toruń (see: Map 5).

⁴⁴ Ibidem, ff. 427r.

⁴⁵ Cf. ibidem, ff. 627r.

Map 5. Roads and inns in Cuyavia and Dobrzyń land in the second half of the 16th century

The above-discussed economic factors were taken into account in the development of the classification of roads. As main highways, we classed those connections which were most likely to have been vital trade routes and generally important transportation trails. As already mentioned, the shape of the proposed road network of Cuyavia and Dobrzyń land is based largely on the road system adopted in previous AHP volumes, and complements previous works. In this case, however, their chronology is more important, because the assumptions adopted for reconstruction of the importance of individual roads could not be fully universal, as shown in the volume on Greater Poland. Nieszawa, Toruń and Bydgoszcz were considered the main transport nodes of the region. Our road categories maintain continuity of the vital transportation routes to Gdańsk, which is considered to have been the most important economic hub in northern Poland. One example which illustrates how the previous volumes were additionally supplemented with new information is the road from Włocławek to Płock which was not depicted in AHP Mazovia. Its importance in the sixteenth century is confirmed by the fact that in 1577 there were two inns serving people engaged in the local transport of goods, both *via* land and water.⁴⁶ Similarly, the importance of the roads leading south to Łęczyca Voivodeship through Chodecz and Przedecz also had to be verified. According to the data on the amounts of payments collected in the Przedecz customs houses, the route was in constant use. Travellers probably used it not only to reach the Włocławek customs house, but also as one of the routes which allowed them to reach Toruń.

⁴⁶ Ibidem, ff. 429v.

Compared to AHP Greater Poland, the road network in the south-west of Cuyavia in the vicinity of Skulsko, Gębice, Strzelno, and Kruszwica, is also presented with greater degree of density. In turn, due to the lack of relevant early modern data, all river crossings were represented in accordance with the eighteenth-century information on their condition.⁴⁷ The most important crossings included the ones in Włocławek, Nieszawa, near Toruń, and in Fordon. Two additional Vistula crossings were marked at the level of Dobrzyń and Bobrowniki, reflecting information presented in Gilly. However, they were treated as factors which complement the already existing road network. There is also evidence of eighteenth-century water transport on Lake Gopło,⁴⁸ which also had to play an auxiliary role in relation to the existing land routes.

Environmental conditions, in particular hydrographic ones, had great influence on the transport routes of Cuyavia and Dobrzyń land. A comparison of Perthées's maps with the content of later cartographic works, e.g. Gilly, reveals the changes that took place in Cuyavia in the late early modern era and the beginning of industrial times. Two closely related phenomena illustrate the reasons behind changes in groundwater level at the turn of the nineteenth century – the intense influx of new settlers and the development of new villages, which changed the existing landscape. At the end of the eighteenth century, Cuyavia was subject to intense Dutch colonization.⁴⁹ The new land management model led to deforestation and construction of drainage channels, thereby reducing groundwater levels.⁵⁰ Although there were only a few Dutch-type settlements identified in Cuyavia in the sixteenth century,⁵¹ there was a significant increase in the number of Dutch colonies in the late eighteenth and early nineteenth century.⁵² The greatest environmental changes in the here-described area should also be associated with the policy adopted by Prussia towards its newly annexed lands.⁵³

As has been emphasised in previous AHP volumes, some roads in the pre-industrial era were also seasonal in nature.⁵⁴ This means that their course was somewhat arbitrary and could be subject to various changes over the course of a year. Perthées marked mudlands in Cuyavia both on his sketches⁵⁵ and detailed maps. These were wetlands, which – on the one hand – could be inaccessible during periods of intense rainfall, overflows, and flooding, etc., but which – on the other hand – could also periodically disappear during hot summer months.⁵⁶ For example, in the vicinity of Izbica Kujawska (Izbica, n), in the south of the town, there were 'great marshes outside Grochowiska',⁵⁷ while in the north, there were 'Piwno marshes', and, to the east of the town, there were boggy meadows. The situation

⁴⁷ See *Taryfy mostowego i grobelnego*, pp. 221–276 and according to Gilly's map.

⁴⁸ *Taryfy mostowego i grobelnego*, p. 243; 'From this place, over the border of Kalisz Voivodeship, I went through the more public forests and an ordinary road towards the tracts, and reached a village called Mały Przewóz of His Excellency Lord Wysocki located on Lake Gopło. After crossing the lake, I headed towards the inn called Mielnica, a hereditary ownership of High Right Hon. Lord Dzieścielski, where the innkeeper controls the water transport on Gopło Lake, whose width amounts to, in a straight line, 150 Warsaw ells. The innkeeper uses four joined-together boats for transport. At most, they can carry a half-covered coach with 4 horses, and not one that can be loaded with a lot, because these boats, or barges, are very old and weak'.

⁴⁹ Degórska, *Transformacja krajobrazu*, pp. 66–78.

⁵⁰ Compare with a similar situation in Greater Poland described in: A. Kaniecki, *The Influence of Anthropopressure on Water Relations in the Wielkopolska Lowland*, „Geographia Polonica”, vol. 68, 1997, pp. 65–80; see also Degórska, *Transformacja krajobrazu*, pp. 66–90.

⁵¹ For more information on this subject, see: W. Duży, *Character and size of settlements: Rural settlements*, [in:] AHP Cuyavia, in this edition III.3.2a.6.

⁵² The number of settlements whose names are derived from the appellatives *rumunek* and *buda* was also growing at that point. These phenomena should also be associated with the progressive changes occurring in land development at the beginning of the nineteenth century in Cuyavia; cf. K. Zawodzińska-Bukowiec, *Nazwy części wsi, przysiółków, osad i rumunków – nazwy terenowe czy miejscowe? (na podstawie toponimów ziemi dobrzyńskiej)*, [in:] *Mikrotoponimia i makrotoponimia. Problematyka wstępna*, ed. A. Gałkowski, R. Gliwa, Łódź 2014, pp. 279–288.

⁵⁵ *Szkice Perthéesa*, vol. 9, microfilm no. 97.

⁵⁶ *Ibidem*, f. 9.

⁵⁷ *Ibidem*, ff. 9v: 'A stream from Przędzkie Lake flows through a forest into boggy meadows outside the field of the village of Ciepliń, which cannot be entered during wet summers. Along the length, they stretch almost half a mile in width, but unevenly, in another place, the width will be six staję. When the water pools, the water from these meadows forms a stream that goes to Komorowski Lake, outside a small ford, near Choczyszewo'. Cf. *ibid.*, 'Zdary, boggy meadows, where you can travel only on the edges, between the fields of villages [– –]. A stream from Błęńskie Lake runs through these meadows, and

was similar in the area surrounding Sadlno Parish. Still, the inspection of bridges and causeways from 1767 mentioned that there was a river outside the village of Patrowa in Kowal District, through which ‘the water flows from the upper fields in spring and is sometimes an elbow deep or shallower’.⁵⁸ Thus, the roads in this area ran through dry crossings where there was as little chance of flooding as possible. Therefore, the changing hydrological conditions could have had a significant impact on road passability. For example, the road located in the vicinity of Świątkowice Village was muddy in spring or whenever it rained, and, ‘in the village itself, a 2-ell wide stream crosses the road, which, in the spring, becomes wider, that is, has the width of 3 Warsaw ells’.⁵⁹ Roads in Cuyavia and Dobrzyń land ran also along the Vistula, constituting alternative land arteries to the river transport route. However, despite their importance, these roads were difficult to pass because of their poor condition, and the fact that they were overgrown and cramped with people.⁶⁰

Transport routes were often marked out by fords, bridges and weirs, which in this context should be treated as important transport junctions.⁶¹ The roads running southwards from Toruń to Gniewkowo, Inowrocław and Służewo are a good illustration of this. The map of von Pfau has the highest number of routes as at the end of the eighteenth century, showing several almost equal-ranking roads starting from Podgórze. Among other things, it shows a water reservoir near Branno (n), which was not depicted on later maps (including Perthées’s map). The road starting from Służewo, which runs across a causeway (bridge?) on an unknown watercourse right next to Dulewski Młyn (Mill) was identified as the main road on the north-south route.⁶² The fact that there were inn settlements, specifically Pieczonka, Kuchnia Królewska, and Dziwak, and a chapel on this road in the eighteenth century provides a further proof of its significance. The starting point of the second important road passing through the forest complex was designated as Gniewkowo, in accordance with the assumption that this town should have had a direct connection with as important a town as Toruń. However, the issue of the connection between Gniewkowo and Bydgoszcz remains unclear. Although there is a connection of this type (through the forest) on Gilly’s map, the absence of a strongly developed sixteenth-century settlement structure in this area suggests that one ought to be very cautious before drawing any conclusions.

The list below presents the most important highways of the area.

1. **Brześć Kujawski (Brzeście) – Toruń:**
 - a) Łowiczek (Łowicz) – Koneck – Stawki (Staw);
 - b) like road 1a to Łowiczek and further: Nieszawa (Nowa Nieszawa) – Raciążek (Raciąż) – Ciechocinek (Ciechocino) – Czerniewice.
2. **Brześć Kujawski – Warsaw:**
 - a) Kowal (Kowale) – Dąb Wielki (Dąb) – Nowy Duninów (Duninowo) – Gąbin – Sochaczew – Błonie;
 - b) Kowal – Gostynin, and further on to Gąbin.
3. **Brześć Kujawski – Łęczyca:**
 - a) Kazanie (Kazom) – Marysin (Szych) – Szczytno – Chodecz – Psary – Dąbrowice – Krośniewice;
 - b) Sokołowo-Parcele (Sokołowo) – Humlin (Chomlino) – Jarantowice (Jaruntowice) – Chodecz and, then, like road 3a.
4. **Brześć Kujawski – Kalisz:**
 - a) Lubraniec – Janiszewo – Skaszyn (Skaszyno) – Izbica Kujawska (Izbica) – Świętosławice – Brdów (Brdowo) – Koło – Brudzew (Brudzewo) – Turek.
5. **Brześć Kujawski – Poznań:**
 - a) Osięciny – Radziejów – Kruszwica – Strzelno – Trzemeszno – Pobiedziska.

one half of it spreads through a ditch outside Obałka, and goes through the other ditch through the Obałka’s lands to the small pond of Karbanów.’

⁵⁸ *Taryfy mostowego i grobelnego*, p. 237.

⁵⁹ *Ibidem*, p. 237.

⁶⁰ *Ibidem*, p. 249: ‘I have not established any dyke toll on this route, which, either from Warsaw, or when turning to Toruń or Brześć, is closer for carters and merchants, but is extremely difficult due to narrow roads which were broken and cut by springs’. See other mentions on the same page.

⁶¹ *Szkice Perthéesa*, vol. 9, f. 29: ‘here is the Gąsiorek ford, 4 staje from the mill. Across this ford, the road to Brześć’.

⁶² On the map created by von Pfau, it is indicated as Maciejowy Mill (Matschewer Mühle), and on the map created by Perthées as Maciejów Mill.

6. Dobrzyń – Toruń

- a) Dobrzyń – Suszyce – Bobrowniki – Stare Rybitwy (Rybitwy) – Nowogródek (Nowogród Sumińskich) – Złotoria;
- b) like road 6a to Stare Rybitwy and, then, Nieszawa, and further like road 1b;
- c) Strachon – Dyblin (Dyblino) – Kisielewo – Nowa Wieś – Lipno – Kikół (Kikoł) – Dobrzejewice;
- d) like road 6c to Strachon and, then, Głowczyn (Głowczynno) up to Nowa Wieś and further, again, like road 6c;
- e) Mokowo – Będzeń (Będzenie) – Skępe (Skąpe) – Chodorążek and, then, like road 5c.

7. Dobrzyń – Warsaw:

- a) Wyszyna – Uniejewo – Płock (Płocko) – Wyszogród – Sochaczew – Błonie.

8. Inowrocław – Toruń:

- a) Szadłowice (Szawłowice) – Gniewkowo (Gniewków) – Podgórz (Podgórze);
- b) Jacewo – Marcinkowo – Brudnia (Brodnia) – Zduny (Zdunowo) – Opoki – Grabie – Chrusty (Dulewski Młyn) – Stawki (Staw).

9. Inowrocław – Gdańsk:

- a) like roads 8a and 8b, and further: Chełmża (Chełmża) – Grudziądz – Sztum – Malbork;
- b) Złotniki Kujawskie (Złotniki) – Nowa Wieś Wielka (Nowa Wieś) – Bydgoszcz – Kusowo – Gniew – Tczew.

Translated by Katarzyna Bartkowiak

III.5.7 MAZOVIA

Henryk Rutkowski

Before we present the method used to prepare and present the road network on the map of Mazovia, we wish to provide some valuable general information on old roads, as in the literature on this subject certain issues were left without necessary clarification.

There were two categories of roads in sixteenth century Poland, just as in the earlier period and the following century: highways and other roads, which could be called local. We accept the division used in the sources, yet in historical studies one can find more categories, differentiated particularly on the basis of the significance to trade of a given road.¹

Local roads were used for communication within a single settlement and also connected it with the mill and neighbouring villages, the church, the closest city or town. These roads could be generally accessible, but also could be closed for strangers by the owner of the estates through which they ran.² This important difference between local roads and highways was reflected in the terminology, both Latin and Polish.³

The **highways**, that is public roads, were open to everyone and used for long distance communication. They connected trade and administration centres, namely towns, which functioned as market and fair sites, centres of large estates, capitals of voivodeships, lands and districts, seats of bishoprics and archdeaconries. It was the starostas' duty to protect the general accessibility of roads and the safety of travellers. Road robbery was one of the so-called 'four gord articles'.⁴

The highways were to be twice as wide as normal roads, so that carts could pass by. The constitution of the *Sejm* of Lublin from 1569 determined the width of highways at 10 ells, i.e. almost 6 m.⁵ However, the inspection of the roads in Cracow Voivodeship, conducted on the basis of this constitution in the following year, shows us that in many places the highways were narrower. It is unlikely that the inspectors' directives could have changed this. The roads led through waterlogged areas required padding with fascine, tree trunks or stones, or even building an embankment. Usually, this duty was imposed on the owners of the area through which the highway ran, but in reality many proprietors evaded this responsibility, and public roads became impassable in places. Some highway fragments – also outside royal estates – were maintained by royal customs officials.⁶

¹ For instance, 1565 there appears an opposition: highway–simple road. LS 1564/1565, p. 107. About the division of roads in Polish historiography see e.g. Szulist, *Ważniejsze szlaki handlowo-komunikacyjne północno-zachodniego Pomorza Gdańskiego w XVI–XVIII w.*, ZH, vol. 35, 1970, no. 3/4, p. 102.

² In the privileges of Mazovian Voivodeship from 1576 there is a decision that according to the old tradition, each nobleman should allow everyone a free passage through his property 'to the church, market, mill, crossing and a highways, if they needed', VL, vol. 2, p. 170; cf. S. Russocki, *Uwagi o polityce targowej ksiąząt mazowieckich w XIV i XV w.*, PH, vol. 51, 1960, no. 2, p. 281.

³ Cf. *Słownik staropolski*, vol. 2, Wrocław 1956–1959, pp. 182–187, 470–471; M.S.B. Linde, *Słownik języka polskiego*, vol. 2, Warsaw 1951, p. 104.

⁴ *Historia państwa i prawa Polski*, ed. J. Bardach, vol. 1, Warsaw 1964, pp. 478, 513; vol. 2, Warsaw 1966, pp. 151, 337.

⁵ VL, vol. 2, pp. 97–98.

⁶ LDK, *passim*. In Łomża land, the nobles from four parishes were obliged to repair the bridge over the river and swamp called Gać, so outside their property; in 1538 this old duty was cancelled. AGAD, dok. Perg. no. 656, 1537 (according to the Kartoteka SHGM); J.W. Bandtkie, *Ius Polonicum*, Warsaw 1831, p. 469; LM 1565, vol. 2, p. 72.

When the construction, or preservation of an embankment, a bridge, etc. required higher expenditures, the king granted a toll privilege. Sometimes such a privilege was granted in advance, but this did not always lead to the realization of the announced investment. Despite frequently repeated orders forbidding the unjustified collection of tolls, such instances were very common. Together with public and private customs houses, they posed a severe impediment to the trade.⁷

The highways differed in terms of their importance, i.e. range, and the intensity of traffic varied. Some public roads served international trade, others only connected neighbouring parochial centres.⁸

Before we move to the roads presented on our map, we should mention that the scale of 1:250,000 would have allowed us to include not only all highways, but also the majority of local roads. Yet given the fact that roads connected all settlements, **showing local roads on our map would have purpose only if we could mark their course exactly**, with precision close to the one of modern topographic maps. It was impossible, so we decided that local roads should be left out completely.

Highways are a different case, as their reconstruction, even only in approximation, should prove useful. Unfortunately, **because of the insufficient source basis, it is impossible to show all sixteenth century Mazovian highways**. The 1564–1565 inspection of customs and tolls did not survive for Mazovia,⁹ neither did the public road inspection conducted around 1570. In fact, these sources, an even relatively thorough inspection, failed to present a complete layout of the highway network.¹⁰

We have only partial information concerning the public roads of Mazovia in the sixteenth century, as well as in the adjacent centuries. These are usually mentions allowing us to mark a more precise course of a road in the vicinity of one or several settlements, often revealing the destination of the road to us. Still, it is not enough to obtain a proper sixteenth century highway network on the map of our scale. More importantly, as all these records are quite random, it is justified to believe that not all highways were recorded in the surviving sources.¹¹

An example, referring to Ciechanów land, was provided by A. Borkiewicz-Celińska. Although her study focuses on an earlier period (prior to 1526), the issue of the road network remains exactly the same as in the second half of the sixteenth century. Research based on all surviving source materials revealed fragments of 18 highways. The author guesses that there were several more public roads.¹² So, even a full query of all surviving sources would not result in a complete depiction of the road network. This proves we were right to follow a different path.

For the aforesaid reason, the map of WP shows roads according to the state recorded by the cartography at the turn of the eighteenth and nineteenth centuries. The direction of the routes was based on Perthées's map (all maps shown on this map were transferred), whereas the course of the routes was based on Textor's and the Quartermaster's maps.¹³ Disregarding the issue of the thoroughness and completeness of the reality depicted by these maps, we should consider, whether the state from the close of the eighteenth century bears any resemblance to the situation two centuries earlier. We thus reach the problem of the changeability of roads, which requires us to draw a distinction between two phenomena: the changes in the course of roads, and the changes in the use of roads.

We observe a long-lasting constancy in the course of all roads. The main reason behind the stability of communication routes is the fact that the changes in the settlement network are very rare

⁷ LDK, pp. IX–XI; S. Weymann, *Ze studiów nad zagadnieniem dróg w Wielkopolsce*, „Przegląd Zachodni”, vol. 9, 1953, no. 2, pp. 197–199, 203–204.

⁸ Cf. A. Wolff, *Ziemia zakroczyńska za książąt mazowieckich*, [in:] *Szkice z dziejów Nasielska i dawnej ziemi zakroczyńskiej*, Warsaw 1970, p. 50.

⁹ Only fragments survive, see footnote 47.

¹⁰ LDK, especially pp. XII–XVI, XX. J. Senkowski, on the other hand, believes that this inspection covered all highways. Review in KHKM, vol. 20, 1972, pp. 348–349.

¹¹ WP, p. 36.

¹² A. Borkiewicz-Celińska, *Osadnictwo ziemi ciechanowskiej w XV wieku (1370–1526)*, Wrocław 1970, pp. 134–142. On pp. 136–138, in the list of source entries, entry no. 9 refers to the fragment of the highway under no. 18. Entries no. 10 and 18 are mixed (road Ciechanów–Nasielsk mentioned in the last entry from no. 18). No. 17 mentions two roads, the second of which is either identical with the road no. 6, or is a connection between Przasnysz and Maków through Bogate. It could also be added that in the files of SHGM there are many entries concerning roads in Zakroczym land, while the data about other territories is much more limited.

¹³ WP, p. 36.

and slow. Particularly in earlier times, when no major hardened roads were being built and their direction was not straightened, the course of the roads remained mostly unchanged.

Although the usage of individual connections, that is the range and intensity of traffic display higher changeability, from our point of view the course of the roads remained stable.

Many roads led to remote settlements, and the choice of the route depended on various factors, as for instance terrain conditions of climate (season), which could prevent travellers from passing clayey areas during the rainy season, or allow them to drive carts and sledges on frozen waters in winter. However, natural conditions usually played an opposite, preservative role, especially when they were connected with artificial devices. This can be clearly seen in the example of crossings on large rivers, where fords, landings or even bridges were built. Other convenient passages through various natural obstacles contributed to the stability of routes and their use. The same could be said about well-organized lodgings and supply bases, as well as customs houses, which could not be by-passed.

Apart from the seasonal changes described above, there were also other changes in the use of highways. Mostly, these were the results of devastation and neglecting necessary repairs, which forced the travellers to choose other, better roads. Minor shifts of traffic, for instance to the road running through a nearby village, occurred probably more often than permanent modifications of routes.¹⁴ Various changes in the use of roads were temporary and partial. In such cases different tracks functioned between two settlements. Instances, when another road assumed the role of the old highway permanently, that is the category of both roads changed – one of them stopped being considered a highway, and the other one gained this status – were probably rare. It should be noted that all changes in the connection between towns meant that the traffic was moved to another existing road, not that new roads were being built.

The eighteenth century brought relatively greater changes in the public road network. The development of the post led to a new category of roads being isolated: post roads. In some places, certain fragments of highways were being straightened, more roads were being hardened (these were still, however, short fragments in the vicinity of towns).¹⁵

In the end, we can assume that in **the eighteenth century the state of road network was largely similar to that in the sixteenth century**. We can therefore base our study on the maps from the turn of the eighteenth and nineteenth centuries, from the period before the great agrarian reforms and the popularization of hardened highways.¹⁶ However, it seems that the solution presented on the map of Płock Voivodeship (AHP 1958) was not the best choice possible, as it excludes the changes which must have accompanied the change of the significance of towns in certain areas.

In this case we decided to reconstruct the network of major roads in the second half of the sixteenth century (our starting point was the highway network at the close of the eighteenth century). As such, the depiction of the road network on the map of Mazovia resembles the one shown on the map of Lublin Voivodeship.¹⁷ We refrained from marking all highways, but limited ourselves to those which probably played an important role in the sixteenth century.

Our point of departure – the situation at the turn of the eighteenth and nineteenth centuries – is quite well-known, but still not completely so. Significant discrepancies can be found in the presentation of major roads between Perthées's map and the maps prepared by the partitioning countries (maps by Textor, Gilly, Heldensfeld – Benedicti). This could only be a partial reflection of actual changes in the road network, caused mainly by the partitions. Mostly, these differences occurred because the authors of the maps lacked precise information or made mistakes in their cartographic

¹⁴ Cf. LDK, pp. 5, 31 and other; H. Rutkowski, *Wstęp do historii dróg w województwie kieleckim*, [in:] *Konferencja naukowo-techniczna „Kieleckie Dni Drogowe”*, Kielce 1963, pp. I–XII.

¹⁵ In 1782 'beaten highways' are mentioned: Warsaw–Jabłonna and Praga–Grodzisko. *Rozrządzenia y pisma pasterskie za rządów J. O. Xięcia Imci Michała Jerzego Poniatowskiego biskupa płockiego do diecezji płockiej*, Warsaw 1785, pp. 150–151. Contemporary suggestions to flatten the roads were mentioned by I. Turnau, *Przegląd zagadnień transportu i komunikacji w polskiej literaturze gospodarczej okresu Oświecenia*, KHKM, vol. 13, 1965, no. 2, p. 379; cf. J. Wiśniewski, *Dzieje osadnictwa w powiecie augustowskim od XV do końca XVIII wieku*, [in:] *Studia i materiały do dziejów Pojezierza Augustowskiego*, Białystok 1967, pp. 253, 281–282. W. Szulist rightly emphasizes (*Ważniejsze szlaki*, pp. 100, 105, 110) that not every post road was important for other types of traffic, particularly for trade.

¹⁶ Cf. S. Weymann, *Ze studiów nad zagadnieniem dróg*, pp. 196–197, 205, 208.

¹⁷ AHP Lublin, map and commentary, in this edition III.5.3.

drawings or engravings. Surviving materials on tracts and crossings from around 1767 seem to support this thesis.¹⁸

The reconstruction of major roads in the second half of the sixteenth century was conducted in two stages: first the selection of highways, and then the determination of their course.

In the first stage the importance was assumed of those roads, which connected cities and towns of some economic or administrative significance.¹⁹ Additionally, we referred to data on the sixteenth century trade routes and some travel journals (particularly those of kings).²⁰ Our choice of post roads and highways (tracts) shown on the maps from the turn of the eighteenth and nineteenth centuries was made on the basis of these records.²¹

The picture obtained that way still required certain additions, for instance of the roads which probably played an important role in the sixteenth century, but lost it when the towns these roads connected lost their importance. The road from Czersk leading to Biała through Grójec is a good example here. It connected the land capital with a subordinate district town, but also connected Czersk and Grójec with the centre of the next district, situated in another voivodeship, i.e. with Biała. Truly, this was a small town, but the road through Biała ran to Rawa, the capital of the voivodeship. As such, the entire highway should be counted among major roads.

In such cases, when a highway did not appear on the maps from the turn of the eighteenth and nineteenth centuries, any record from the fifteenth–sixteenth century, confirming that this public road existed, was particularly important. For instance, the said road from Czersk to Biała is attested to (as a highway Grójec–Rawa) in 1436 near the villages Cychry and Wiatrowiec.²²

Inside Ciechanów land the results of our research on the road network bear much resemblance to the study by A. Borkiewicz-Celińska, who based her presentation of roads mostly on the maps by Perthées and Textor. Records found in written sources from the studied period served only as supplementary information, and in fact were not fully utilized. Still, the author did not limit herself to highways.²³ Our map shows almost all highways attested to in the sources quoted by A. Borkiewicz-Celińska.²⁴ We included the majority of the remaining roads marked by this author, and also four highways excluded from this study on Ciechanów land.²⁵

For the sake of simplicity, we decided not to include **variants of roads** on our map. When the old maps showed two or three connections between two settlements, we chose one of them. For instance, according to Perthées's map, the road connecting Sochaczew with Błonie split into two tracks: one went through villages (e.g. Paprotnia), the other only through inns (e.g. Wymysłów). Our maps shows

¹⁸ *Źródła i metoda*, [in:] MWK, pp. 32–33, 82–84; WP, pp. 36–37; Z. Góralski, *Taryfa mostowego i grobelnego województwa płockiego z 1767 r.*, „Teki Archiwalne”, vol. 9, 1963, pp. 9–30; idem, *Materiały dotyczące traktów i przepraw od 1767 roku z zaginionych akt Komisji Skarbu Koronnego*, KHKM, vol. 13, 1965, no. 2, pp. 369–376, map.

¹⁹ S. Weymann, *Ze studiów nad zagadnieniem dróg*, pp. 202–206. Compare with the term used in the legend to Gilly's map: 'Hauptstrasse von einer Stadt zur benachbarten.'

²⁰ Useful information about important roads based on the sources and studies on trade and travelling can be found on the maps: S. Herbst, W. Trzebiński, *Drogi w Polsce około 1500 r.*, Warsaw 1947, Studium Planu Krajowego, Główny Urząd Planowania Przestrzennego (copy); S. Herbst, *Drogi na obszarze Rzeczypospolitej około 1650 r.*, Warsaw 1947, Studium Planu Krajowego, Główny Urząd Planowania Przestrzennego (copy).

²¹ Of the 18 highways confirmed in the fifteenth–sixteenth century sources in Ciechanów land, seven appear of Perthées's and Textor's maps (disregarding some minor differences in the course), six only on Perthées's map, two on Textor's map, and three are not marked on these maps. A. Borkiewicz-Celińska, *Osadnictwo ziemi ciechanowskiej*, pp. 136–138, and the following corrections: roads 9 and 11 appear also on Perthées's map (no. 9 as Karniewo-Maków), mention no. 14 concerns the highway through Wągry marked by Perthées, and not by Textor, the road no. 13 (through Sobanice and certainly Żukowo) does not appear on any of the two maps. Cf. WP, p. 36.

²² 'publica strata seu via Rawska, que vadit de Grodzec in Rawam,' MK 3, ff. 183v.

²³ Of the highways mentioned in the written sources two were marked according to Textor's map, but not in agreement with quoted entries (no. 13 and 14), and the third highway was shown only in part overlapping with another road (no. 12). The highway no. 18 was shown on the basis of the Quartermaster's map. Of the remaining roads, which do not appear in the sources, only the highway Ciechanów–Sochocin supposedly did not appear on old maps, but it is marked on Perthées's map of Płock Voivodeship. We could not find the road from Płońsk to Nasielsk in cartographic sources, which led south of Królewo, as well as several minor roads marked by the author; A. Borkiewicz-Celińska, *Osadnictwo ziemi ciechanowskiej*, pp. 135–139 and map on p. 141.

²⁴ We decided not to mark only two roads, also excluded on A. Borkiewicz-Celińska's map. These were the roads Ciechanów–Krasne and Czerwińsk–Żukowo (no. 12 and 13).

²⁵ These are the connections: Krzynowłoga Mała–Janowo, Przasnysz–Bogate–Maków, Sochocin–Sarbiewo–Raciąż, Czerwińsk–Wyszogród. Note that two last highways appear on Perthées's map.

only the first variant. Similarly, we chose only one of the two roads depicted by Perthées between Wizna and Zawady. Here we could add that some of these branches were seasonal.²⁶

Detailed course of roads was determined according to the maps from the turn of the eighteenth and nineteenth centuries, on the basis of the 1:100,000 maps from the first half of the twentieth century. When a highway appeared only on Perthées's map, we resorted to other old maps, e.g. the detailed course of the road between Mogielnica and Goszczyn was marked with the help of rural roads marked on Gilly's and Quartermaster's maps. When a highway appeared on several maps and these maps show certain differences in the course of the road, we accepted various solutions, believing that in such cases it would be wrong to assume the priority of only one map.²⁷ Naturally, the sixteenth century settlement network of a given area helped us make the proper choice. Therefore we sometimes accepted the course of a road shown by Perthées on his map, e.g. the highway Płock–Bodzanów through Jasień, Miszewo Strzałkowskie, Peplowo, which finds confirmation in the sources from the sixteenth century.²⁸ The road from Sierpc through Mochowo towards Dobrzyń can be an example of a different solution. We placed the road not through Kurowo, as on Perthées's map, but through Zglinice Wielkie – as on the Quartermaster's map (the highway does not appear on Textor's map).²⁹ Similarly, certain roads in the vicinity of Mława were simplified or distorted by Perthées, whereas Textor drew them more precisely and probably more faithfully.

Yet another example is the connection between Wyszogród and Gąbin, determined on the basis of the maps by Perthées and Gilly: the fragment Wyszogród–Iłów was marked on both these maps, Iłów–Jamno only on Gilly's, Jamno–Słubice on Perthées's (Gilly shows Iłów–Słubice), Słubice–Wymyśle appears on both maps, and Wymyśle–Gąbin only on Gilly's. Finally, an example of using additional materials from the eighteenth century, which allowed us to control the highways shown on the maps: the road Skierniewice–Jeżów was placed partly according to Perthées, and partly according to Gilly's map, and partly according to the written source.³⁰

In some cases, when we were able to say that the course of a highway in the sixteenth century differed from the one shown by the eighteenth century sources, we accepted such a deviation from our basic source. So the fragment of the road connecting Sierpc and Bielsk – before Bałyszewo – was placed differently than on the maps by Perthées and Textor, i.e. through Grodkowo Sędzicowe, according to a source entry from 1595–1596.³¹ On our map, the highway Płońsk–Nowe Miasto runs not through Bołęcino, but through Sobieszczki, where in the sixteenth century there was a bridge over the River Wkra.³² On Gilly's map, the route Grójec–Warka goes through Kocieszewo and Miedzechowo, whereas we accepted its course through two parochial villages, Jasieniec and Boglewice, according to the confirmation from 1414–1425.³³ This course mostly overlaps with other highways which appear on old maps, so only the fragment Krobowo–Boglewice required supplementation. Exceptionally, the road from Warsaw through Stanisławów and Liw towards Lithuania was shown in two variants between Dobrze and Liw. The older variant was mentioned in written sources from 1462 and 1548, and the newer one was shown on the maps by Perthées and Heldensfeld – Benedicti. Entries from the fifteenth–sixteenth centuries mention an old road leading from Warsaw to Lithuania through Osówno Stare and Czerwonka,³⁴ whereas according to the maps this highway went through Pniewnik.

Here follows the list of these roads shown on our map, which were not marked on Perthées's map or the maps of the partitioning countries from the turn of the eighteenth and nineteenth centuries. The list contains, among others, the highways which changed their route only partially between the sixteenth and eighteenth centuries after a neighbouring town became more important than the old

²⁶ A fragment of the road Dąbkowice–Krepa was provided with an explanation of Gilly's map: 'im Herbst und Frühjahr.'

²⁷ See footnote 21.

²⁸ In 1575 this highway was mentioned next to Gulczewo and Jasień, and in 1593 through Peplowo Lenarty. *Płockie grodz. wiecz.*, no. 61, f. 23; no. 95, ff. 25 and 214.

²⁹ Dobrzyń highway is mentioned in a note from 1595 about Zglinice Wielkie; *ibidem*, no. 98, f. 131.

³⁰ J. Warężak, *Osadnictwo kasztelanii łowickiej (1136–1847)*, part 1, Łódź 1952, p. 114.

³² LM 1565, vol. 1, p. 165; LM XVII, p. 36. An entry from 1449 about a highway near Bołęcino does not – we believe – reject the possibility that this road also went through Pruszkowo and Sobieski (Sobieszczki); A. Borkiewicz-Celińska, *Osadnictwo ziemi ciechanowskiej*, pp. 136–137, no. 7.

³³ MK, no. 3, f. 39.

³⁴ Now2, p. 38.

centre (from Czersk to Góra Kalwaria, from Wąsosz to Szczuczyn). The majority of these roads, not confirmed by our basic cartographic sources, appear as higher-rank roads on the Quartermaster's map (in each such case we provide an explanation: Quat. in brackets).

Roads in northern Mazovia: Krzynowłoga Mała–Janowo (Quat.), Nowe Miasto–Kałużyn–Gołymin (Quat.),³⁵ Nowe Miasto–Klukowo–Przewodowo–Pułtusk (Quat.), Nasielsk–Winnica–Pułtusk (Quat.), Maków–Węgrzynowo–Leszno with a connection to Przasnysz (Quat.), Korzeniste–Poryte–Wilamowo as a fragment of the road Nowogród–Wąsosz,³⁶ Niedźwiadna–Wąsosz as a continuation of the road Kolno–Niedźwiadna, Kędziorowo–Grajewo i.e. extension of the road from Wąsosz,³⁷ Grajewo–Białaszewo–Klimaszewnica, from there the connection to Radziłów,³⁸ Burzyno–Ślasy as a fragment of the highway Wizna–Radziłów (Quat.), Radziłów–Wąsosz (Quat.), Wola Zambrowska–Dąbrowa–Ciechanowiec, i.e. fragment of the road from Łomża to Ciechanowiec.³⁹

Roads in southern Mazovia: Wola Pasikońska–Żelazowa Wola, i.e. the connection between Warsaw and Sochaczew through Leszno (Quat.),⁴⁰ Grójec–Osuchów as a fragment of the highway from Grójec through Biała to Rawa,⁴¹ Grójec–Drwalewo–Czersk,⁴² Goszczyn–Fałęcice–Białobrzegi (Quat.), Grabowo–Ryczywół, i.e. fragment of the road from Warka to Ryczywół, Cędrawice–Sobików–Czersk as the connection between Tarczyn and Czersk,⁴³ Czersk–Radwanków–Osieck,⁴⁴ Mińsk–Wiśniewo–Zimna Woda as a fragment of the route from Czersk to Liw,⁴⁵ Latowicz–Kuflew–Cegłów (Quat.).⁴⁶

Although the degree of probability of roads, or even their fragments, varies, the road network of Mazovia depicted on our map could generally be described as follows: all roads marked on the map likely did exist in the sixteenth century (despite some minor differences in their course, e.g. through a village or around a village), but some of them may have been less important. On the other hand, it is possible that an important highway was overlooked and excluded from our map. However, one may believe that (in modern terminology) of main roads all were depicted, and of secondary roads – the majority. The road network presented on our map is therefore incomplete and not wholly certain, but is still approximately correct.

We know some of the crossings and bridges on the roads shown on our map. In this case we based on the sixteenth century source records, particularly those from the second half of the century, as bridges were more likely to be destroyed than roads. Naturally, the information is not complete. The majority of entries referred to bridges on royal estates.⁴⁷

³⁵ A. Borkiewicz-Celińska, *Osadnictwo ziemi ciechanowskiej*, p. 138, no. 18.

³⁶ The fragment Nowogród–Korzeniste appears on Perthées's map as a fragment of the road Nowogród–Szczuczyn, the fragment Wilamowo–Wąsosz is a part of the highway from Łomża to Wąsosz. The road Korzeniste–Dzierżbia is mentioned in the road inspection from 1767. Z. Góralski, *Materiały*, p. 372. The road we showed appears partially as a tract on the Quartermaster's map.

³⁷ The fragment Kuchmistrzewo (today Wierzbowo)–Grajewo is a tract on the Quartermaster's map.

³⁸ Only the fragment Białaszewo–Klimaszewnica appears on the Quartermaster's map.

³⁹ This road is described (partly in much detail) in the document separating the Crown and Lithuania from 1546. Dogiel, part II, pp. 14, 18–19.

⁴⁰ This is a fork of the road Warsaw–Leszno–Brochów–Wyszogród, marked on Perthées's map. We introduced one modification and lead the road through Łazy. The highway Żelazowa Wola–Sochaczew was based on the maps by Gilly and Perthées. The entire tract appears on the Quartermaster's map, but it does not go through Wola Pasikońska.

⁴¹ See H. Rutkowski, *Roads*, [in:] AHP Sandomierz, in this edition III.5.2, and footnote 22.

⁴² We present the shortest connection between Czersk and Grójec, i.e. the one leading through parochial villages Drwalewo and Chynów; the fragment Grójec–Żyrowo Wielkie appears as a tract on the Quartermaster's map.

⁴³ This is a modification of the highway Tarczyn–Góra Kalwaria presented on Gilly's map. We introduced changes in two fragments: instead through Ustanów, we led the road through Krupia Wólka (before: Wólka Uwielińska), and we added the connection through Sobików–Czapolino between Cędrawice and Czersk.

⁴⁴ The 1569 inspection mentions the two bridges on the road from Czersk to the crossing: 'the town needs them very much, as well as the carters, because a great highway goes there', LM 1569, ff. 48v.

⁴⁵ Only a small fragment of the road Mińsk–Zimna Woda, namely between Mińsk and Niedziałka, appears on the Quartermaster's map as a tract. In 1506 Sigismund the Old travelled the road through Czersk, Wiśniewo, Liw. AGAD, ASK, Rachunki Królewskie, no. 33, ff. 213 f; A. Pawiński, *Młode lata Zygmunta Starego*, Warsaw 1893, p. 231.

⁴⁶ The fragment Kuflew–Cegłów is mentioned in the inspection of roads from 1767; Z. Góralski, *Materiały*, p. 375. Sigismund August, on his way from Lublin to Knyszyn, travelled the road through Stoczek and Kuflew in 1569. MRPS V, no. 4088, 8763–8786.

⁴⁷ The basic sources of information about bridges and crossing were: the surviving fragments of the inspection of bridges, that is the inspector's accounts before the *sejms* in 1566 and 1567, AGAD, dz. XVIII, no. 4, ff. 74–93v, 290–296v; inspections

We provide the list of settlements in or near which **bridges** were situated, in alphabetical order (without bridges located outside the network of important roads): Błonie, Bobrowniki (Sochaczew district), Borukowo (Zakroczym district), Brochów (Sochaczew district), Cielądz (Biała district),⁴⁸ Czersk,⁴⁹ Fałęcice (Grójec district), Gać (Łomża district),⁵⁰ Gąbin, Gostynin, Grójec, Janowo (Przasnysz district), Kamieńczyk, Latowicz (Garwolin district),⁵¹ Liw Stary, Lubowidz (Sreńsk district), Łomża, Łowicz, Maków, Nowogród (Łomża district), Ostrołęka, Pęcice (Warsaw district), Płońsk, Popielżyn Zawady (Zakroczym district), Popień (Rawa district), Pułtusk,⁵² Rawa,⁵³ Rożan, Sobieski (Zakroczym district), Sochaczew, Sochocin, Świder (Czersk district), Warka, Warsaw,⁵⁴ Wilga (Garwolin district), Wizna,⁵⁵ Zakroczym,⁵⁶ Zawady (Zambrów district).⁵⁷

It is certain that in Mazovia there was only one bridge over the River Vistula – the Warsaw bridge. Still, many ferries must have operated on this largest river. They were also situated on other large rivers which were difficult or even impossible to cross. Just like bridges over smaller rivers, the ferries on the large ones were located by both highways and local roads.⁵⁸

The sixteenth century sources confirm the following ferry crossings, which connected major roads: over the Vistula in Czersk,⁵⁹ Warsaw, Zakroczym, Wyszogród and Płock, on the Narew – in Serock, Zegrze, over the Bug – in Nur.

Inland ports served as a connection between waterways and land routes.⁶⁰

The intensity of the traffic defined the importance of each road. The traffic was related to various factors, such as the political activity of the nobles. However, the importance of roads can best be judged based on trade. The results of contemporary research allow us to list the following connections between large economic, political and cultural centres as **the most important roads in sixteenth century Mazovia**.⁶¹

1. Warsaw–Cracow:

a) Czersk, Warka, Radom,

of royal property from 1565, 1569 and 1616 (MRPS). Cf. WP, pp. 37–38; J. Senkowski, *Skarbowość Mazowsza od końca XIV wieku do 1526 roku*, Warsaw 1965, pp. 78–82.

⁴⁸ ‘sixteen rods of wooden road through the muds, and on this wood cut logs, laid in a row’, AGAD, dz. XVIII, no. 4, f. 88. So this was in fact a dyke, probably with some bridges allowing the watercourses – shown on the maps – to flow.

⁴⁹ There were two bridges near Czersk ‘over an arm of the Vistula or a lake – on the highway to the crossing’, AGAD, dz. XVIII, no. 4, f. 90. See footnote 44.

⁵⁰ The 1565 inspection tell us that after the nobles were freed from their duty to repair the bridges in Gać village, only the burghers from Łomża and the subjects from royal villages repaired their spans, and the carters avoided this crossing because it was bad. In 1592 the nobility of Zambrów district requested that – because of the bad crossing in Gać – J. Żabicki, the subcamerarius of Zakroczym, was allowed to build a bridge and collect toll. LM 1565, vol. 2, pp. 72, 78, 80; *Dyaryusze i akta sejmowe r. 1591–1592*, pub. E. Barwiński, Cracow 1911, p. 143. Cf. MRPS V, no. 3550; VL, vol. 2, p. 287. See also above, footnote 6.

⁵¹ There were two bridges in Latowicz. LM 1565, vol. 1, p. 121.

⁵² J. Zwolińska, *Pułtusk w średniowieczu*, [in:] *Pułtusk. Studia i materiały z dziejów miasta i regionu*, vol. 1, Warsaw 1968, pp. 34–39.

⁵³ Two bridges, see W. Kalinowski, *Rawa*, [in:] AHP Mazovia, in this edition III.6.25.7.

⁵⁴ See W. Szaniawska, *Warsaw*, [in:] AHP Mazovia, in this edition III.6.29.7.

⁵⁵ The inspection mentions bridges, LM 1565, vol. 2, p. 46.

⁵⁶ ‘a great bridge before the town, on a great highway over a very deep ditch’. LM 1565, vol. 1, p. 143.

⁵⁷ The bridge on the River Ślina between Zawady and Łopuchów in Podlasie. Dogiel, part 2, p. 5. In 1564 bridge toll was mentioned on the River Narew in Zegrze (AGAD, dz. XVIII, no. 4, f. 291), but there is no proof there really was a bridge there; also, we know about a crossing in Zegrze, see e.g. J. Senkowski, *Skarbowość Mazowsza*.

⁵⁸ Compare with a clear example in *Lustracja województwa sandomierskiego*, p. 107.

⁵⁹ There were two crossings through the Vistula in the vicinity of Czersk: one towards Radwanków, and the other towards Kosumce. LM 1569, ff. 47v.

⁶⁰ See J. Humnicki, K. Pacuski, *Geographical environment*, [in:] AHP Mazovia, in this edition III.1.7.

- 15. Brześć–Królewiec: Ciechanowiec, Zambrów, Łomża, Kolno, Pisz.

Probably the two most important sixteenth century trade routes led through Mazovia. The first one was the road from Moldova and the Russian lands of the Crown, running through Lublin to Gdańsk. In actuality, several routes led that way. The other important trade route was the connection between Russia and Lithuania with Greater Poland. Most of the variants of the first route, and the entire second route (if we disregard the road to Greater Poland leading through Toruń) ran through Warsaw, which in the sixteenth century had already become the most important road interchange in Mazovia.

(1973)

Translated by Agata Staszewska

III.5.8 PODLASIE VOIVODESHIP

Michał Sierba

Here we present maps that illustrate the more significant highways of the Podlasie Voivodeship. These routes have been depicted twice – once on the general map, and once on a thematic one. On the latter, all the communication routes have been, in accordance with the marking system employed in previous tomes of the AHP series, divided into main roads and those viewed of secondary importance.¹ In contrast to the volume that concentrates on the Greater Poland,² this work does not include places tied to the alcohol sale (e.g., inns) as a result of the scarcity of relevant data. Watchtowers are also absent, as sources simply do not mention them. Toll gates and toll points do not appear on this map either. Due to the inability to pinpoint the exact type of crossing in all cases, points of passage across rivers have also been omitted. In the same manner as in prior AHP volumes (especially those concerning the regions of Greater Poland, Cracow Voivodeship and Cuyavia) adopted has been the method of finding important communication hubs, hence the appearances on the thematic map of, among other landmarks, points of customs clearance (custom houses).

While reconstructing the roads of the Podlasie Voivodeship, (as was done in previous volumes of the AHP series), the retrogressive method has been adopted.³ The network of primary roads was recreated on the basis of maps from the turn of the nineteenth century. The most noteworthy being the works of Karol Perthées of 1795 and the maps of von Stein, Johann Christoph von Textor and Anton Mayer von Heldensfeld, all dating back to the beginning of the nineteenth century. These were later compared with the maps of the Quartermasters and WIG.⁴ For the northern part of the Bielsk land (north of Tykocin) two Russian maps from 1706⁵ and Swedish documents charting the route taken by their army, dating back to 1655,⁶ have proved to be a valuable supplementation to the already existing data. Plotting the course of communication routes was also greatly aided by preserved schematic estate maps from the sixteenth century depicting the area.⁷ This undertaking was supplemented by surveys and rough sketches of a part of the Podlasie parishes, ones dating back to 1784; the same resources

that were used by Karol Perthées in creating his detailed map of the Podlasie Voivodeship.⁸ Previous volumes of the AHP have been taken into consideration when reconstructing roads situated in areas bordering with the Voivodeships of Mazovia and Lublin.⁹

The quality of the written sources that could potentially provide support when drawing up a comprehensive image of the Podlasie road network, and here when compared to other regions of the Crown covered by the AHP series, is rather poor. There is an absence of satisfactory records and road surveys, toll points, points of customs clearance and custom houses. Surveys of Crown land are of little help either, except for indicating the location of crossing points for some of the bigger rivers.¹⁰ Only partial records from the Augustów customs house remain, with these covering just a portion of the year 1607.¹¹ Preliminary research conducted in courthouse ledgers and their copies, with rare exceptions, did not yield satisfactory effects.¹² For the period dating back before the concluding of the Union of Lublin published volumes of the *Lietuvos Metrika*¹³ were utilized, while the *Crown Metrica*¹⁴ was employed for later periods. This preliminary research was supplemented by noble court archives, which ultimately proved to be of little help, especially in the context of the sixteenth century. More information could be found in sixteenth-century inventories of royal estates.¹⁵ The research was subsequently expanded and enhanced by the published itineraries of authorities and noblemen,¹⁶ as well as through select diaries¹⁷ which, due to their limited source content were expanded to encompass those from the seventeenth century. Significant pointers were provided by the descriptions, sketches and maps depicting

⁸ Szkice Perthéesa; a part have been published. *Rękopiśmienne opisy parafii litewskich z 1784 roku: dekanat knyszyński i dekanat augustowski*, pub. W. Wernerowa, Warsaw 1996. Supplementation of these sources are also materials derived from the acts of the Treasury Commissions of the Grand Duchy of Lithuania and the Crown of the Kingdom of Poland: *Seniųjų Lietuvos Didžiosios Kunigaikštystės kelių aprašymai*, pub. A.A. Baliulis, T. Čelkis, Vilnius 2018; Z. Góralski, *Materiały dotyczące traktów i przepraw od 1767 r. z zaginionych akt Komisji Skarbu Koronnego*, KHKM, vol. 13, 1965, no. 2, pp. 369–376.

⁹ AHP Lublin and AHP Mazovia. On the Podlasie–Mazovia border terrains it was necessary to conduct a minor correction to the look of some roads, but this was not to have an impact on the whole course of the routes themselves. The exception being the environs of Tykocin, where from Mazovian Zawady a road led to Podlasie which was to fork beyond the River Ślina. With one fork heading in the direction of Tykocin, while the other towards the crossing of the Narew at the village of Nieciecze (in the sixteenth century Nieciecze). Only the former remains, about which below.

¹² Complete research would require many years of work and significant funds. There are over 500 legal ledgers in Minsk and Moscow – a part of these have, in the form of scans, been transferred to AGAD and APB; NGAB, Mińsk, ff. 1706, 1708, 1712, 1715, 1726, 1759, 1789; RGADA, f. 356, op. 1. There are 57 municipal castle court Bransk ledgers, 19 land court ledgers, 99 Drohiczyń municipal (castle court) ledgers, 3 Goniądz municipal (castle court) ledgers and 14 Suraz land court ledgers in AGAD's possession. S. Tarnowski, *Akta ziemskie i grodzkie*, [in:] *Archiwum Główne Akt Dawnych w Warszawie. Informator o zasobie*, ed. T. Zielińska, Warsaw 1992, pp. 52–54. It follows to add that a lot of information concerning Podlasie can also be found in Mazovia ledgers. Excerpts and extracts from Podlasie and Mazovian court ledgers were compiled by Ignacy Kapica, hence the popular reference to them as being Kapicjans. This resource is scattered across AGAD, ANK, the State Archive in Łódź, the Central State Historical Archive of the Ukraine in Kiev and Lviv, the Diocese Archive in Drohiczyń, the Parish Archive in Tykocin.

These have been utilised despite methodological reservations. See T. Związek, *Roads*, [in:] AHP Greater Poland, in this edition III.5.4. The mentioned diaries and accounts are often extremely detailed in their description of a road travelled which, given a weak source base, acts as an important supplement in the reconstruction of a road network.

the routes taken by armies during the Great Northern War and, above all, those produced during the period of the Swedish Deluge.¹⁸ Road reconstructions by Stanisław Herbst,¹⁹ Hugo Weczerka,²⁰ and Stanisław Lewicki,²¹ as well as Georg Ignaz von Metzburg and Johann von Lichtenstern's²² map have been used as visual sources. Incidentally, it is worth noting that archaeological excavations and digs from the Podlasie area have contributed little that could be utilized while reconstructing the region's sixteenth-century road network.

The subject literature available that covers communication routes and relevant crossing points of Podlasie is poor and in no way may be deemed satisfactory.²³ This topic has often been marginalised in favour of works on settlement, specific villages, towns, and estates, and here a tendency visible not merely in works on the sixteenth century, but in equally in those spanning the medieval and modern era.²⁴ The most information can be found in Józef Maroszek's monograph on the Podlasie Voivodeship up to the Third Partition,²⁵ as well as in his post-doctoral (*habilitacja*) thesis on northern Podlasie,²⁶ although this researcher equally covers the issue fairly superficially. Certain information can be also found in the (still indispensable) work by Aleksander Jabłonowski.²⁷ The only author to cover the road network question more extensively is Teresa Dunin-Wąsowicz. Her research revolving around communication routes of the early medieval period.²⁸ In turn, the Warsaw–Wilno postal route has been described rather modestly in a piece by Grzegorz Ryżewski.²⁹ The course of some of the more prominent roads of northern Podlasie have been described and depicted on maps found in the works of Jerzy Wiśniewski.³⁰ Alina Wawrzyńczyk had explored the problem of the location of primary trade

³⁰ J. Wiśniewski, *Dzieje osadnictwa w powiecie augustowskim od XV do końca XVIII wieku*, [in:] *Studia i materiały do dziejów Pojezierza Augustowskiego*, ed. J. Antoniewicz, Białystok 1967, pp. 13–294; idem, *Dzieje osadnictwa w powiecie*

routes located on the east-west axis, including a demonstrative map aside the text.³¹ The main roads in the Mazovia, as well as their connections to other parts of Poland are discussed by Władysław Szulist.³²

A lack of adequate source materials and academic publications forces one to make the assumption that the map depicting the roads of Podlasie will be the most hypothesis-based within the whole AHP series. This assumption aside, one must suppose that a critical application of maps dating back to the end of the eighteenth and the beginning of the nineteenth centuries, when taking into consideration the significant permanence of communication routes as such, it makes their marked course highly probable, with differences appearing rather in the detailed course of these routes took as opposed to their more general shape, significance and direction.³³ Surviving source materials as well as existing literary works on the topic most often mention only notable intersections and the place names through which these roads passed. Very rarely do we find ourselves in possession of data covering the lands that stretched between these markers and the course that smaller routes took between the unmentioned territories and settlements themselves.

The first step taken was locating and subsequently pinning down the route of the main roads as shown on maps from the eighteenth and nineteenth centuries. These findings were then verified. This process consisted of comparing the charted routes of specific roads on all the map versions with each other. Subsequently, using sixteenth-century sources the crossing points across rivers (bridges, fords and ferry crossing points) were marked, as well as attempting to compile a list of all settlements where either toll gates or custom houses were located and in operation.³⁴ Settlements that housed a significant number of inns and potential boarding houses, usually towns, were often (though not always) treated as hubs and intersections of sorts, where important communication routes came together.³⁵ The map also pinpoints places where inns were scarcer – this pointer served as an aid in situations of controversy and uncertainty, not as a primary marker of indicating the course of any road as such. In cases where it was unclear whether a route crossed through a settlement or not, the placement of one or more inns increased the likelihood of the former variant, though this in no way provided one with a decisive answer. This method had a merely fragmentary usage, for the tax registers which were the basis for creating this volume in the AHP series, were very sparing in their descriptions of agricultural buildings and settlements (especially in the Drohiczyn and Mielnik lands). The topographic attributes of the region played a significant role in ascertaining the trajectory of roads. It allowed factors such as the presence of wetlands to be taken into account, which allowed for corrections to be made based on the difficulty and accessibility of the terrain. The shape of the settlement network too was taken into consideration, as this was a factor often associated with the course and shape of important communication routes.³⁶

grajewskim do połowy XVI w., [in:] *Studia i materiały do dziejów powiatu grajewskiego*, vol. 1, ed. M. Gnatowski, H. Majecki, Warsaw 1975, pp. 9–252; idem, *Dzieje osadnictwa w powiecie suwalskim od XV w. do połowy XVII w.*, [in:] *Studia i materiały do dziejów Suwalszczyzny*, ed. J. ³¹ A. Wawrzyńczyk, *Studia z dziejów handlu Polski z Wielkim Księstwem Litewskim i Rosją w XVI w.*, Warsaw 1956. Mention should be given to the following of those significant works that allow one to supplement our picture of the roadways of the Podlasie and Brześć Litewski district border region: eadem, *Rozwój wielkiej własności na Podlasiu w XV i XVI w.*, Wrocław 1951; S. Wysłouch, *Dawne drogi Polesia. Ze studjów nad historją gospodarczą Polesia w XVI–XVIII w.*, Wilno 1937.

³² W. Szulist, *Ważniejsze szlaki handlowo-komunikacyjne województwa mazowieckiego w XVI–XVIII w.*, „Rocznik Mazowiecki”, vol. 6, 1976, pp. 325–358. However, despite the article’s title mainly it is the state at the end of the eighteenth century that is described. It follows to mention that the author did not make use of the AHP Mazovia volume and based himself on his own analysis of maps from the eighteenth and nineteenth century.

³³ There exist exceptions to this rule that will be discussed below.

³⁴ S. Weymann’s view to connect the customs houses with the road network is a valid one; idem, *Cła i drogi handlowe w Polsce piastowskiej*, Poznań 1938, p. 90. For other view on this matter see: H. Samsonowicz, *Przemiany osi drożnych w Polsce późnego średniowiecza*, PH, vol. 64, 1973, no. 4, p. 705.

³⁵ An additional problem in any retrogressive reconstruction is that of towns founded in the seventeenth and eighteenth century. On maps from the turn of the nineteenth century the most important roads passed through the majority of them. However this did not have to be the case in the sixteenth century. Symptomatic is the example of the present-day capital of the Podlasie Voivodeship, Białystok, about which below.

³⁶ This argument was advanced by T. Dunin-Wąsowicz in researching early-medieval Polish communication routes; eadem, *Badania sieci drożnej średniowiecznej Polski*, [in:] eadem, *Drogami średniowiecznej Polski*, p. 18. It is equally accurate for later periods.

The maps created using all the above mentioned methods were then confronted with detailed accounts contained in written and cartographic sources as well as those covered in historical research papers. This facilitated the finding and removal of changes that had occurred between the early medieval era and the sixteenth century, as well as the period between the seventeenth and nineteenth centuries.

Locating all the river crossing points proved a difficult task, as one could not blindly rely on maps from the turn of the eighteenth century for the relevant data; the course and water levels of rivers being susceptible to change in certain parts. Another important factor was the aspect of rivalry and conflict between landowners over, amongst other things, river crossing points – a point of dispute that often influenced the trajectory main roads took.³⁷ In some instances earlier maps and written sources aided in solving these inaccuracies, but this was not always the case. Waniewo serves as a prime example of this problem. In the fifteenth and early sixteenth century it was the location of a bridge that straddled the Narew River, as well as having a castle. In the first half of the sixteenth century both the town and pertaining lands belonged to the Radziwiłł family, who at the time were engaged in a serious conflict with Olbracht Gasztold – the proprietor of the nearby town of Tykocin. Olbracht, as a form of payback for the invasion of his lands and the burning of the Tykocin Castle, ransacked Waniewo, destroying the local bridge and fortress in the process. The bridge was later restored.³⁸ However, this renovation process must have taken a significant amount of time, because it managed to influence the trajectory of the road. The route that crossed those lands was redirected to the crossing of the Narew River, newly created by Gasztold in the vicinity of Żółtki and Złotoria, therein making the road through Waniewo practically obsolete.³⁹ Olbracht Gasztold used a similar strategy when destroying the Narew River bridge located between the villages of Łazy Duże (in the sixteenth century known simply as Łazy) and Nieciece, thus changing the route of the high road, redirecting it in the direction of Tykocin, owned by him.⁴⁰

The primary crossings that bridged the most important rivers of Podlasie at the end of the sixteenth century were:

- on the Bug River: Drohiczyn, Tonkiele (known as Tunkiele in the sixteenth century), Siemiatycze (Turna Mała, known as Turna-Ogrodniki in the sixteenth century), Granne-Krzemień, Mielnik, Niemirów;
- on the Narew River: Tykocin, Strabla, Płoski-Wojszki, Narew, Suraż, Żółtki-Złotoria;
- on the Nurzec River: Ciechanowiec, Brańsk, Boćki, Kleszczele;
- on the Biebrza River (also known in the sixteenth century as the Bobra): Osowiec;
- on the Netta River: Augustów, Białobrzegi;
- on the Ełk River (known in the sixteenth century as the Łęk): Bogusze;
- on the Ślina River: Zawady-Łopuchowo;
- on the Liwiec River: Węgrów, Mokobody, Mordy (Wyczóki), Chodów.

Customs houses in the Podlasie were often tied to the location of river crossings or important intersections within the communication route network. There is no available register of any units functioning in Podlasie that date back to the end of the sixteenth century. Some of them appear merely as brief mentions from the first half of that century, though it is safe to assume their location remained more or less the same. Customs houses and affiliated subunits were located in Bielsk Podlaski (in the sixteenth century known simply as Bielsk), Drohiczyn, Mielnik, Łosice, Węgrów, Ciechanowiec, Wysokie Mazowieckie (Wysokie in the sixteenth century), Suraż, Tykocin, Narew and Augustów.⁴¹

Szlaszyński, *Stosunki handlowe na pograniczu polsko-litewsko-pruskim na początku drugiej połowy XVIII wieku*, „Rocznik Augustowsko-Suwalski”, vol. 4, 2004, <http://www.astn.pl/r2004/stos.htm> (access 20.12.2020). S. Kazusek mentions only the customs houses at Tykocin, Bielsk Podlaski, Drohiczyn and Mielnik; *Księgi celne Korony z drugiej połowy XVI w.*, pub. S. Kazusek, Kielce 2017, map. It is possible that at the beginning of the sixteenth century the Hlebowicz family established an illegal customs house in Mordy. Podlasie III, p. 195.

In the sixteenth century salt storage points existed in Drohiczyn, Tykocin and Goniądz.⁴² The exact timeframe within which these units functioned is unknown, which is why they do not appear on the subject map.

A significantly encountered issue was how to choose from the selection of late eighteenth and early nineteenth century roads those that would be represented in the abovementioned map for the sixteenth century. Some of them, though of lesser importance in later centuries, played a vital role within the sixteenth century communication network. An example is a 'large road' ('*wielka droga*') that in the sixteenth century ran from Goniądz through Trzcianne, Boguszewo, across the bridge in Lewonie (known as Krasowo in the sixteenth century), then through Knyszyn, heading eastward through the Knyszyn Royal Forest, reaching Straż located in the Grand Duchy of Lithuania and carrying on all the way to Grodno itself.⁴³ Similar issues arose in many other cases, because written sources, as well as academic writings on the subject were often imprecise in categorising and naming specific roads. Available resources on the topic often feature terms such as *large road*, *magna via*, high road, tract, public right of way, *via publica*, *via*, *strata*, or simply road, sometimes containing an additional descriptor referring to a place name or a landowner the said road led to. In reference to the first six terms one can with some certainty assume that the routes being described were of some importance – though even that cannot be assumed to be always the case. In instances where the denomination was impossible to ascertain, and here based on literary and other sources alone, the demarcation of roads from the late eighteenth and early nineteenth century were taken into consideration (after much scrutiny). The primary source analysed was the map created by Perthées, and after that the employment of other maps dating back to the beginning of the nineteenth century.⁴⁴ In these circumstances, due to the inaccuracies found on Perthées's map, though the classification of particular roads was decided on based on his work, the more detailed topography of their course was reconstructed using more detailed maps.⁴⁵ During analysis the importance and size of the locations through which the particular road passed were taken into account, as well as the destinations and connections to landmarks outside the perimeter of the Podlasie Voivodeship along with factors such as river crossings, natural obstacles, the network of settlements, the placement of parishes, marketplaces and places of trade as well as the number of inns located en route. These instances occurred most commonly during the reconstruction of certain fragments located within the Drohiczyn and Mielnik lands.⁴⁶ The last step involved categorising the charted roads into main roads and those of secondary importance – a process that has been reflected in the thematic map and the list of noteworthy routes located at the end of this chapter.

⁴² Maroszek, *Dzieje województwa podlaskiego*, p. 366.

⁴³ See J. Maroszek, *Pogranicze Litwy i Korony*, tabl. XVII.

⁴⁴ On the maps employed in the reconstruction from the eighteenth and nineteenth century, roads had various designations and notations. Von Stein employs the following terms: national roads (*Landstrassen*), communication roads (*Communications Wege*), dry ground roads (*trokne Feldwege*), marshy roads (*Nasse Wald u. Weissen Wege*), foot byways (paths) (*Fussweg*). On Textor's map the main division is that between national roads and postal routes (*Land und Poststrassen*), ordinary (*Gewöhnliche Wege*), as equally foot byways (paths) (*Fußsteige*). Heldensfeld mentions road-highways (*Chaussee*), postal and communication roads (*Post- u. Communication-strassen*), routes (*Landstrasse*), ordinary roads (*Ordinaire Fahrwege*), field ways and forest paths (*Feld- u. Waldwege*), foot bypaths (*Fusssteig, Steef, Pflad*). Perthées's Polish-language map divides roads into: postal, cart drivers' and ordinary roads. On the maps mentioned the self-same roads had often divergent meanings, which most obviously complicated matters. It follows to add that some of the lower category roads appeared to have been important thoroughfares in the sixteenth century while those of a higher categorisation are of less significance for the sixteenth-century; cf. road categorisation: Z. Budzyński, *Cesarskie gościńce w Galicji. Pierwszy etap budowy sieci dróg bitych (według mapy józefińskiej Fryderyka Miega)*, [in:] *Galicyjskie drogi i bezdroża*, pp. 25–57; A. Janeczek, *Staropolski układ komunikacyjny*, pp. 12–18; T. Panecki, *Koncepcja struktury bazy danych historycznych obiektów topograficznych*, Warsaw 2018, PhD thesis under the supervision of Dr. hab. W. Ostrowski, Dr. Eng. I. Karsznia, Warsaw University's Faculty of Geography and Regional Studies, pp. 83–95; M. Zawadzki, *Sieć komunikacyjna województwa lubelskiego w drugiej połowie XVIII w.*, Lublin 2019, PhD thesis under the supervision of Dr. hab. B. Konopska, Dr. hab. B. Szady, the Lublin Maria Curie-Skłodowska University's Faculty of Earth Sciences and Spatial Management, pp. 96–106; T. Związek, *Roads*, [in:] AHP Greater Poland, in this edition III.5.4.

⁴⁵ Cf. M. Zawadzki, *Sieć komunikacyjna województwa lubelskiego*, pp. 71–74; idem, *Methodology of Reconstruction of the Old-Polish Road Network as Exemplified by the Historic Lublin Voivodeship*, "Polish Cartographical Review", vol. 51, 2019, no. 3, pp. 129–141.

⁴⁶ The road network for the Bielsk land is easier to notice in the source materials, as well as having been researched in more detail by historians – and in particular the part to the north of Tykocin.

This text will not cover the course of every single route in the area, as this is not the intention of such a commentary. It is important, however, to indicate cases of conflicting information and other problematic instances. These discrepancies are usually caused by inconsistencies between the source material and other appropriate literary writings and maps from the period of the seventeenth to the twentieth century. We will begin in the north. Jerzy Wiśniewski, a renowned researcher in the field of northern Podlasie settlement history, has included in his written findings a map depicting the Augustów district (within its 1965 boundaries). He has marked on it the course of the *grand way* that went in the direction of Augustów – Żarnowo Drugie (known as Żarnowo in the sixteenth century) – Stara Kamionka (in the sixteenth century simply Kamionka) – Pomiany-Żrobki – Rajgród.⁴⁷ Such a road did exist and has been indicated on the maps mentioned. It does however seem that circa the year 1600 a much more vital role was played by the road connecting the settlements of Augustów and Rajgród along the following route: Augustów – Netta Pierwsza (known in the sixteenth century as Netta) – Bargłów Kościelny (known in the sixteenth century as Bargłowo) – Solistówka (known in the sixteenth century as Szelistówka) – Rajgród. A schematic trajectory of this route can be found in a terrain sketch from the route of the Swedish army's marching route of 1655 and from a Russian map of 1706.⁴⁸ The extended trajectory of this route equally poses a problem. The way from Rajgród to Wizna passed through Czarna Wieś (known as Czarny Las in the sixteenth century) – Skrodzkie – Karwowo – Kołaki – Rydzewo – Kosówka, avoiding Lake Toczyłowo on its northern side to subsequently cross the border into the Mazovia Voivodeship at Bogusze in a location known as Kamienny Bród,⁴⁹ from where it continued on through Grajewo to Radziwiłów or Wąsosz.⁵⁰ This route, however, is not substantiated by certain other maps. According to Perthées the route led between the villages of Bukowo and Kołaki, where it forked. The northern leg of the road led through Rydzewo and subsequently Długosze, located on Prussian soil. The second offshoot, as Perthées claims, did not pass through Rydzewo, instead going off in a north-west direction and crossing the border with the Mazovia on the River Ełk, near Toczyłowo. The Toczyłowo route should be classified as one of local-level importance. There is an absence of source evidence to show that there was a crossing across the Ełk River here in the sixteenth century.⁵¹ As a result it has not been included on the map. Northern Podlasie (north of the Biebrza River) was most lacking in communication routes. The only noteworthy roads in this area were the route connecting Grajewo through Rajgród, Augustów to Grodno, as well as the Podlasie section of the Królewiec (known in sixteenth century as Königsberg, now it is Kaliningrad) – Augustów – Grodno high road.

The northern part of Podlasie had restricted contact with the rest of the voivodeship due to the lack of a stable, established connections within the area of Goniądz. In order to reach it one had to actually leave the territory of Podlasie and take a tortuous roundabout route or only travel in winter. In the area located between the Jęgrznia, Biebrza, Ełk and Netta Rivers there existed a place marked by Perthées on his map as 'profoundly muddy terrain, impassable in summer, possibly crossable in winter.'⁵² One of the more significant routes connecting Augustów with the rest of Podlasie was the

⁴⁷ J. Wiśniewski, *Dzieje osadnictwa w powiecie augustowskim*, fig. 10.

⁴⁸ K. Łopatecki, *Two Maps*, p. 493; K. Łopatecki, W. Walczak, *Mapy i plany*, pp. 267–269.

⁴⁹ J. Wiśniewski, *Dzieje osadnictwa w powiecie grajewskim*, p. 251.

⁵⁰ Such a course for the road is coincident with J. Wiśniewski's map, which he located [in:] *ibidem*, p. 214. Wilhelm von Bancke marked the settlement at 'Wolka' on a sketch of the Swedish march in 1655, through which the army was to have passed. The map's publishers interpreted matters whereby this would have been Wólka Piotrowska, which would have made the line of march illogical and contrary to the sketch where the subsequent place on the route was Kołaki, which lies in a straight line to the north of Wólka Piotrowska, while on the sketch it is marked that the road went in a westerly direction with a slight deviation to the north. Therefore matters must have concerned a place unknown today (possibly Karwowo). Such a course for the road is also not completely possible; for the road was to have passed by Chmiele from the south and headed north; K. Łopatecki, W. Walczak, *Mapy i plany*, pp. 268–271. However, in order to reach Kołaki the road should have headed in a southern direction.

⁵¹ J. Wiśniewski has written: 'The only land passage was at Kamienny Bród on the River Ełk, that is at the village of Bogusze, right on the former Prussian border. So in the Middle Ages as in the modern era only in this place could one travel by land road from Mazovia to the environs of Rajgród and Augustów', *idem*, *Dzieje osadnictwa w powiecie grajewskim*, p. 11.

⁵² A road across mud was possible in winter as was achieved by, among others, Janusz Radziwiłł with his army at the end of 1655 making it from Rajgród to Tykocin. See J. Płoskiński, *Potop szwedzki*, p. 20. In a northerly direction from the village of Wroceń (in the sixteenth century Wroczenie) there was a road across the Biebrza marshes, noted by von Steian on his map as: 'Bey ausserst durren Sommer nur mit Bauerwagen zu passiren'.

Augustów – Białobrzegi (the Netta River crossing)⁵³ – Sztabin (a bridge across the River Biebrza).⁵⁴ This road later forked and led either through Mikicin or Korycin to Goniądz or through Korycin and Jasionówka to Knyszyn.

Certain controversial points regarding the exact trajectory of communication routes arose in the Goniądz area. The first issue concerned the crossing of the Biebrza River at Goniądz. There are a few valid points to confirm this assumption. Maps published both by Textor as well as by WIG illustrate a route leading from Goniądz across the Biebrza River and reaching Wólka Piaseczna (known in the sixteenth century as Wólka Przytuły). Additionally, it is important to note that the inventory for the Goniądz starosta's district of 1571 mentions fees paid for transportation and river crossing tolls.⁵⁵ This points to the lack of a bridge and the functioning of a ferrying system. Such a ferrying point existed within the vicinity in a north-west direction from Goniądz, near Osowiec with this being mentioned in written sources.⁵⁶ Another cause of debate is the trajectory of the Goniądz-Mikicin route. Each map represents this segment of road slightly differently. Here the decision was taken to verify the cartographic sources with the description of the Swedish army's marching route of 1708⁵⁷ and a Russian map from the year 1706.⁵⁸ The road led through Goniądz – Klewianka⁵⁹ – Krzecz – Smogorówka Goniądzka (in the sixteenth century known as Smogorówka) – Smogorówka Dolistowska (in the sixteenth century simply Smogorówka) – Radzie – Moniuszki – Mikicin.⁶⁰ During the research process a decision to classify the late sixteenth century road from Goniądz to Dolistowo Stare (in the sixteenth century Dolistowo), Zabiele and Karpowicze (in the sixteenth century Brzozowo-Karpowicze) as well as the roads going in the direction of Dzieciółowo as routes of merely local importance, thus excluding them from inclusion on the aforementioned maps.

The course of the road leading from Goniądz to Knyszyn also was a cause for debate, first and foremost the point at which it crossed the River Nereśl. In the first half of the sixteenth century the crossing was located in Lewonie.⁶¹ This version of the route is confirmed by an estate map from circa 1561⁶² and additionally a map dating back to the period between 1545 and 1564.⁶³ Józef Maroszek has drawn up a map of Knyszyn and surroundings for around the year 1574. He has marked the main road connecting Goniądz, Knyszyn and Grodno via the Nereśl Bridge at Lewonie.⁶⁴ Maps from the eighteenth and beginning of the nineteenth century show the main road to lead through the Czechowizna lands while denominating the Lewonie route to be a local track. Despite this conflicting data, I have decided to include the road leading through Lewonie, trusting that it had not diminished in importance between 1561 and 1600. Bigger reservations arose on the matter of placing the road's route through the Czechowizna lands, for if the Knyszyn – Lewonie – Goniądz road played any role that influenced the region on a level above that of local significance it follows to assume that the Czechowizna route

⁵³ J. Wiśniewski, *Dzieje osadnictwa w powiecie augustowskim*, p. 45. There is information about the existence of a bridge here at the end of the eighteenth century which subsequently was destroyed. J. Szlaszyński, A. Makowski, *Augustów. Monografia historyczna*, Augustów 2007, p. 34. It is unknown whether a bridge was to be found there in the sixteenth century or simply a ford or ferry.

⁵⁴ This bridge existed already around 1554; MK 410, pp. 1065–1066.

⁵⁵ „Przewóz też jest u tego miasta przez rzekę Biebrzę. Kiedy wielka woda jest, tedy od wozu dają przewoźnego po gr 2 pol., a od konia po gr 1, od bydłęcia także gr 1. A kiedy mała woda, tedy od wozu dają po gr 1, od konia po ½ gr i od bydłęcia też po ½ gr. Podużne zasię cło jest takie: postronni ludzie, gdy z towarem jadą na one stronę rzeki Biebrzej, tedy dają od duhy, to jest od wozu po groszu litewskim”, Goniądz 1571, pp. 59, 163. These payments are also mentioned in LWP 1602, p. 41

⁵⁶ *Rękopiśmienne opisy parafii litewskich z 1784 roku*, pp. 82, 180.

⁵⁷ T.M. Nowak, *Szwedzka mapa*, pp. 197–209.

⁵⁸ K. Łopatecki, *Two Maps*, p. 493.

⁵⁹ Most likely the track did not pass through the village but through the demesne which lay to the north of the village of Klewianka.

⁶⁰ The Swedish army in 1708 took a somewhat roundabout route Moniuszki – Dzieciółowo – Brzozowa – Skindzierz – Żuchowo – Chodorówka – Suchowola, through which they avoided Mikicin. T.M. Nowak, *Szwedzka mapa*, pp. 204, 207. On Perthées's map this road takes a somewhat different course, but this is the result, among other things, of the faulty locating of some settlements on the part of the author.

⁶¹ In 1510 Sigismund I the Old allowed Mikołaj Mikołajewicz Radziwiłł the Wilno voivode to repair four bridges, one of which in the environs of Boguszewo – in Lewonie. AGAD, Zb. dok. pergaminowych, no. 1393.

⁶² BUWil, sign. F23-135.

⁶³ BUWil, sign. F23-131.

⁶⁴ J. Maroszek, *Pogranicze Litwy i Korony*, tabl. XVII.

was of little importance. For these aforementioned reasons it has been omitted from the maps.⁶⁵ The subsequent trajectory of the Lewonie – Goniądz road also poses an interesting query. Maroszek suggests that it carried on to Boguszewo and subsequently to Trzcianne.⁶⁶ Such a road did indeed exist. Around the level of Trzcianne it joined up with the Goniądz – Trzcianne – Tykocin way. However, this was not the sole route of importance leading from Lewonie to Goniądz. On an estate map dating back to circa 1561 there is a demarcation indicating an additional route, arching up in a northern direction towards Goniądz somewhere around the location of the village of Kołodzieże (in the sixteenth century Kołodzieże) and another unmarked settlement, completely passing by Trzcianne en route.⁶⁷ This road has also been presented on the aforementioned maps, even though its course is more or less hypothetical.

A decision was made, and here going contrary to Józef Maroszek's pointers, to chart the highway from Grodno on through Knyszyn, and not through Wodziłówka that played no important role in the second part of sixteenth century. I consider that omitting Knyszyn from the highway trajectory would be illogical, even if on the route was a royal residence.⁶⁸ On Perthées's map one can observe two similar roads on the Knyszyn – Jasionówka stretch: 1. Knyszyn – the environs of Jaskra – Jasionówka; 2. Knyszyn – Zofiówka (in the sixteenth century Safiejewo) – Chobotki – Jasionówka. On comparing the course of these two roads on different maps a decision was made to include only the first of the two, as this was most likely the more important one. This decision is backed by the existence of various offshoots that led on a local level to Kalinówka Kościelna and further on to the Goniądz – Korycin road. This part of the map omits the highway that led to the bridge that crossed the Narew River between the settlements of Łazy Duże and Nieciece. This highway subsequently branched off into a route leading to the village of Zajki and one heading for the bridge at Łazy Duże-Nieciece.⁶⁹ Around 1520 the bridge was destroyed by Olbracht Gasztołd, and the highway was redirected to nearby Tykocin that belonged to him.⁷⁰

The biggest challenge faced when attempting to create the road maps herein presented was the recreation of the communicational accessibility of Białystok. By the end of the sixteenth century this was a village with a market square, a church and a fortified manor house belonging to the Wiesiołowski family.⁷¹ It did not constitute an important commercial or service centre, neither was it a place of primary importance in general. Issues with recreating the local road network arose due to Białystok's change in status following it being taken over by the Branicki family of the Gryf coat-of-arms. In the second half of the seventeenth and the eighteenth centuries Białystok was to gain municipal status and experience noticeable expansion; it was to see its structure and shape changed, and record a notable increase in population as well as becoming the setting for a magnate residence known as 'The Versailles of the North.' As Białystok evolved, so did the surrounding road network. On the aforementioned maps the most important eighteenth-century route, the Warsaw–Wilno postal way which passed through, among others, Białystok – Bielsk Podlaski – Brańsk – Sokołów Podlaski (Sokołów in the sixteenth century) – Węgrów – Liw, is nowhere to be found. In the sixteenth century this road most likely did not exist on the stretch between Bielsk Podlaski and Białystok.⁷² It is more probable that Białystok and Bielsk

⁶⁵ See, on the subject of the lack in the presented reconstruction of several variants for roads connecting the same settlements: H. Rutkowski, *Roads*, [in:] AHP Mazovia, in this edition III.5.7.

⁶⁶ J. Maroszek, *Pogranicze Litwy i Korony*, tabl. XVII.

⁶⁷ BUWil., sign. F23-135.

⁶⁸ It additionally follows to note that during a forest inspection in 1559 noted was: 'Ostęp Nerestek, which begins from the great Wilno road that goes through Knyszyn'. Which means that the road already went through Knyszyn at the time and not through Wodziłówka. A. Kołodziejczyk, *Z dziejów kolonizacji puszczy na Podlasiu w XV–XVI wieku*, [in:] *Szkice z dziejów kolonizacji Podlasia i Grodzieńszczyzny od XIV do XVI wieku. Prace ofiarowane profesorowi Antoniemu Czacharowskiemu w siedemdziesięciolecie urodzin i czterdziestopięciolecie pracy naukowej*, ed. J. Śliwiński, Olsztyn 2002, p. 79, from *Ревизія пуць и переходовъ звѣриныхъ въ бывшемъ великомъ княжествѣ литовскомъ, съ присовокупленіемъ грамотъ и привилегій на входы въ пуць и на земли*, Вильна 1867, p. 33. Also an estate map from around 1561 shows the road course running through Knyszyn, and not to the north of it. BUWil., sign. F23-135.

⁷⁰ Kapicjana 64, pp. 190–201.

⁷¹ See M. Gochna, *Character of settlements*, [in:] AHP Podlasie, in this edition III.3.2.8.

⁷² G. Ryzewski, *Wielki trakt*, p. 11.

Podlaski were connected by a network of roads instead of one direct highway.⁷³ Documentation in the form of an act dating back to 1514 indicates the existence of a so-called ‘Kožany way’ which led from Kożany on the Narew River all the way to the point where the River Czarna joins the Supraśl. This could have coincided with the later trajectory of the Bielsk Podlaski – Białystok route.⁷⁴ However, this road cannot be deemed important as a right of way for the end of the sixteenth century hence its exclusion from the aforementioned maps. During this time Białystok was definitely on the course of the road that connected Suraż with Wasilków.⁷⁵ Białystok was also connected to Tykocin and Knyszyn. Choroszcz and Białystok were connected by two routes – the so-called ‘Chodkiewiczowska’ and ‘Bazylińska’ ways. The former constituted a tract between two properties owned by the Chodkiewicz family – Choroszcza and Gródek, while the second one connected Choroszcz to Supraśl, which had been gifted to Basilian monks by a family member.⁷⁶ It is quite probable that Zabłudów too boasted a direct connection to Białystok in the sixteenth century. The Zabłudów and Choroszcz estates belonged to the Chodkiewicz family, who most likely passed through Białystok while travelling from one land holding to the other.⁷⁷ Despite the existence of several research papers focused on the spatial city plan of Białystok itself as well as the roads that served and passed through it,⁷⁸ and personal attempts to portray the road situation on the maps herein presented, the exact trajectory of the routes in that region in the sixteenth century still remains an open question.

Communication routes from the southern part of the Bielsk land, as well as the Drohiczyn and Mielnik lands according to maps from the turn of the eighteenth and the beginning of the nineteenth century mostly coincide with the sources available for the sixteenth and seventeenth centuries. It is important to note that this particular section of Podlasie is not as well documented in sources as is the northern part of the Bielsk land, which leads to less effective methods of verification. Recreating the state of roads in Podlasie for around the year 1600 is a very challenging task. Consulting sources from the second half of the seventeenth century is necessary in order to create a comprehensive image. Due to the lack of sources for the southern part of the voivodeship, one of the available options is surveying the routes taken by armed forces during the period of the Swedish Deluge.⁷⁹ It is of course completely possible that the army travelled not just along main routes, but also used local byroads. However, due to the greater ease in movement and the better maintained state of such highways, these

⁷³ In confirming the rights of the Białystok Catholic church of 1661 Jan Kazimierz recalled the *lane* to the village of Krywłany; J. Maroszek, *Dzieje Białegostoku w latach 1547–1692*, [in:] *Historia Białegostoku*, ed. A.C. Dobroński, Białystok 2012, p. 72. Krywłany is a sub-Białystok village that lay on the subsequent postal road to the south of Białystok. Today it is a part of the city itself.

⁷⁴ According to J. Maroszek: ‘The Kożany road leads from Bielsk [Podlaski] through Kożany grand ducal pastures at the mouth of the River Czarna entering the Supraśl and further on to Wodźkówka (Knyszyn)’; idem, *Wasilków – miasto renesansowej harmonii*, [in:] *Wasilków miasto renesansowej harmonii 1566–2006*, ed. J. Maroszek, Wasilków 2006, p. 14.

⁷⁵ In the aforementioned confirmation of the rights of the Białystok Catholic church of 1661 the king wrote about a road ‘great that leads to Suraż, Wasilków and elsewhere,’ idem, *Dzieje Białegostoku*, p. 72. In Wasilków at least from the year 1566 there was a bridge over the Supraśl River, on which the road from Białystok ran. *Wasilków – miasto renesansowej harmonii*, p. 5. Besides King Sigismund III Vasa visited Wasilków on his travels in 1601, 1612, 1613 and 1620; M. Wrede *Itinerarium króla Zygmunta III*, pp. 190, 247, 259, 278.

⁷⁶ T. Popławski, *Droga Chodkiewiczowska i Bazylińska – najstarsze trakty Białegostoku*, „Białostoczczyzna”, 1995, no. 4, pp. 103–106; T. Wasilewski, *Białystok w XVI–XVII wieku*, [in:] *Studia i materiały do dziejów miasta Białegostoku*, vol. 1, ed. J. Antonowicz, J. Joka, Białystok 1968, pp. 111–112.

⁷⁷ Most curious is, however, the fact that the author of diary from the second half of the seventeenth century, Jan Antoni Chrapowicki passing often between Zabłudów and Wasilków, never once mentioned Białystok; idem, *Diariusz*, part 1.

⁷⁸ See i.a.: J. Glinka, *Zamek obronny w Białymstoku na przełomie XVI i XVII w.*, „Rocznik Białostocki”, vol. 2, 1961, pp. 53–97; W. Kusiński, *Rozwój przestrzenny miasta Białegostoku*, [in:] *Studia i materiały do dziejów miasta Białegostoku*, vol. 1, pp. 29–56; J. Maroszek, *Dzieje Białegostoku*, pp. 51–94; A. Oleksicki, *Rozwój przestrzenny i struktura ludności Białegostoku w XVIII w.*, [in:] *Studia nad społeczeństwem i gospodarką Podlasia w XVI–XVIII w.*, ed. A. Wyrobisz, Warsaw 1981, pp. 31–90; A. Oleksicki, A. Sztachelska-Kokoczek, *Białystok w czasach Branickich (1708–1795)*, [in:] *Historia Białegostoku*, pp. 95–212; T. Popławski, *Droga Chodkiewiczowska i Bazylińska*, pp. 103–106; J. Tęgowski, W. Wróbel, *Dzieje Białegostoku w okresie średniowiecza i wczesnej nowożytności*, [in:] *Historia Białegostoku*, pp. 23–50; J. Wasilewski, *Białystok w XVI–XVII wieku*, pp. 107–128; idem, *Kształtowanie się białostockiego ośrodka miejskiego w XVII i XVIII wieku*, [in:] *Studia i materiały do dziejów miasta Białegostoku*, vol. 4, pp. 29–40; J. Wiśniewski, *Początki Białegostoku i okolicznego*, pp. 7–28.

⁷⁹ See footnote 18.

were the most common choice. Marking down these trails on maps confirms that the majority of them coincides with the course of the main roads seen on maps dating back to the end of the eighteenth and the beginning of the nineteenth century.

Detailed descriptions of the trajectory of main roads on the routes of Grodno – Narew – Bielsk Podlaski – Węgrów and Zabłudów – Bielsk Podlaski – Węgrów can be recreated on the basis of the data contained in the diaries of Jan Antoni Chrapowicki and Stanisław Niezabitowski who used these routes regularly to travel to Warsaw.⁸⁰ The shape of this route as sketched through the accounts of Niezabitowski is not entirely in accordance with the trajectory illustrated by Perthées's map. Instead of travelling from Drochlin to Ostrożany and subsequently to the river crossing point located in Granne, he most likely took a shortcut along a route visible on the map created by Textor. Niezabitowski passed by Krakówki-Zdzichy (in the sixteenth century known as Zdzichy), Twarogi-Trąbnica (Twarogi-Trubnica in the sixteenth century), Miodusy-Pokrzywne (Miodusy Koprzywne in the sixteenth century), not passing directly through any of them.⁸¹ Both travellers opted for an unusual route between Bielsk Podlaski and Płoski.⁸² Instead of following the road that led straight through Proniewicze – Haćki (Haczki in the sixteenth century) – Chraboły – Płoski, Niezabitowski and Chrapowicki opted for a circular: Bielsk Podlaski – Biała (non-existent in the sixteenth century) – Orlanka (non-existent in the sixteenth century) – Saki – Lubów (a largely unknown settlement) – Zubowo – Rzepniewo – Płoski or Bielsk Podlaski – Rajsk – Płoski.⁸³ They have also been marked on the maps.

In the seventeenth century there existed a road that connected Zabłudów and Narew by means of the Ancuty (Hanczuty in the sixteenth century) – Saki (which did not exist in the sixteenth century) – Bielki – Małynka route.⁸⁴ It seems, however, that in earlier decades this was merely a local byway, and for these reasons has not make an appearance on the maps.⁸⁵ All evidence also points towards the existence of a prominent trail connecting Suraż and Narew through Ancuty – Trześcianka (Trościanica in the sixteenth century) – Soce – Pawły (Pawłowicze in the sixteenth century) – Ryboły (Antonowicze in the sixteenth century) – Wojszki – Baranki – Rynki (Rymki in the sixteenth century).⁸⁶ The elevated status as given by Dorota Michaluk raises doubts and here designated 'grand way or the Bielsk summer highway',⁸⁷ leading along the southern bank of the Narew River through Kaczały – Janowo – the vicinity of Koźlik – Stupniki all the way to Płoski, from where Bielsk Podlaski could be reached by travelling south while Zabłudów or Suraż were accessible by crossing the Narew River. This road mirrored the highway from Bielsk Podlaski to Narew through Klejniki (known as Zygmuntowo in the sixteenth century) or Lada, then later, on the other side of the Narew River the Suraż – Narew

⁸⁰ See footnote 17.

⁸¹ Such a conclusion may be drawn from Niezabitowski's notes, where reference is made to almost each and every place he passed by. However, between Grodzisk and Granne he makes no reference to any settlement; idem, *Dzienniki*, pp. 100, 125, 130, 151, 162, 249, 251–252. Somewhat untypically Piotr Tolstoy, a Muscovite diplomat, decided on the Granne – Węgrów road. He managed to cross the Bug at Granne, later making for Zembrów, from where he continued on to Węgrów. This was obviously a roundabout route. He did similarly on the route Granne – Boćki, where he rode through Dziadkowice; *Иныеместные столыника П.А. Толстого*, pp. 352, 356.

⁸² At Płoski there was a bridge across the Narew; LWP 1602, p. 78.

⁸³ Once Niezabitowski noted that he travelled the route Bielsk Podlaski – Proniewicze – Chraboły – Płoski; idem, *Dzienniki*, pp. 100, 125, 130, 252; J.A. Chrapowicki, *Diariusz*, part 1, p. 203.

⁸⁴ More than likely along this road from Zabłudów and further through Narew – Lada – Szczyty-Dzięciołowo (in the sixteenth century Dzięciołowo) to Orla Muscovite troops made their way in 1659. J.A. Chrapowicki, *Diariusz*, part 1, p. 216.

⁸⁵ An increase in its significance was presumably to have occurred in the seventeenth century when Orla (from 1585) and Zabłudów (from 1599) found themselves in the hands of the Birze branch of the Radziwiłł family.

⁸⁶ A. Kołodziejczyk, *Przemiany społeczno-gospodarcze na Podlasiu w XV–XVI wieku*, Olsztyn 2012, p. 122.

⁸⁷ See D. Michaluk, *Z dziejów Narwi*, map *Narew na tle osadnictwa w XII–XVIII w.* There equally appears another problem in the case of this work. There is attached to D. Michaluk's publication a reconstruction of the spatial arrangement of Narew for the year 1560. Marked there are three crossings over the River Narew. One of these leads to Wilno, the second to Grodno, while the third to Suraż; ibidem, plan *Narew w 1560 r.* However, on the attached map depicting the settlement in the vicinity of Narew together with the course of the roads – there is no route to Wilno marked. More than likely these two roads were in fact one and the same route, and even if not then these two roads crossed and further were to be but one. In another of her works the author also includes a spatial reconstruction of Narew for the year 1560. There the ford crossing to Grodno she describes as 'A ford crossing of a medieval route'; eadem, *Miasteczko Narew w XVI w. – powstanie i rozwój*, [in:] *Europa Orientalis*, p. 129. The inventory of 1560 recalls but a single bridge on the River Narew, from which Kościelna Street started its course. AWAK 14, p. 62.

highway. Evidence suggests that this road was not used as often as the other two routes, consequently it has been excluded from the maps.

Another interesting issue is the road network connecting the town of Milejczyce, located in the Grand Duchy of Lithuania between Kleszczele and Siemiatycze. Sigismund I the Old when granting it municipal rights in 1516 stressed that he was granting them out of the necessity to provide a place of respite for the monarch and his subjects on the road between Mielnik and Bielsk Podlaski.⁸⁸ During the early modern period this road diminished in importance, causing Perthées to mark it as one of lesser importance on his map. It does appear however that in the sixteenth century this was quite an important route.⁸⁹ The exact reconstruction of its course has proven to be quite challenging – hence the highly hypothetical nature of its representation. On consulting Perthées's map it does seem that for the town of Milejczyce it was more important to appear on the route Siemiatycze – Kleszczele, though the link to Bielsk Podlaski and Mielnik was in the sixteenth century the most significant. The section of the road linking Bielsk Podlaski and Milejczyce has been etched according to the pointers from Perthées's *Polonia* map of 1770 and expanded on the basis of later maps. In its creation Perthées utilised older maps hence also the marking of this route on his.⁹⁰ An interesting query is posed by the fact that Mielnik had both a Milejczycka and a Bielska Streets.⁹¹ However, according to Prussian maps from the beginning of the nineteenth century these two streets crossed each other not far to the north of the town. Neither of them directly led to Bielsk Podlaski, going instead to Milejczyce. The route leading from Mielnik to Wysokie (known as Wysokie Litewskie in the sixteenth century) led not from the city itself, but instead (cited after D. Michaluk) began by the crossing of the Bug River located near Mielnik.⁹²

Looking at Perthées' map we can see a road that lead from Siemiatycze to Klimczyce through Słochy W[ielkie] (known today as Słochy Annapolskie). This road was referred to as *grobła nowa* (new levee way). It appears that in the sixteenth century this road did not exist or was merely a local byway that did not cross the Bug River itself. A bridge on the Bug existed in Turna Mała, located just a couple of kilometres eastward.⁹³ The ferrying point at Stare Mierzvice (Mierzvice in the sixteenth century) probably was not in operation (visible on Perthées's map),⁹⁴ and consequently the route leading through Buzka (Buzka in the sixteenth century) – Stare Mierzvice – Rozwadów (Rozwadowo in the sixteenth century) – Sarnaki (if it existed at all in the sixteenth century) was just a local byway, and has not found its reflection on the maps. The doubling of trails leading from Łosice to Siemiatycze, as marked on Perthées's map is another issue needing further attention. In the beginning there was but one route that forked at the height of Falatycz. The first offshoot went in the direction of Ostromęczyn and Kisielew, all the way along the side of the Bug as the road between Mężenin (Mężenino in the sixteenth century) and Klimczyce that led eastwards to the Bug River crossing at Turna Mała. The second branch led through Sarnaki to the Bug River crossing at Turna Mała. The part of the first route between Ostromęczyn and Kisielew and Klimczyce did not play an important role in the sixteenth century if it existed at all for it led to the crossing located at Klimczyce, which is marked on Perthées's map, but could not be found in sources pre-dating those of the eighteenth century. So there is the possibility that this crossing point simply did not exist- especially that relatively nearby is the bridge at Turna Mała.⁹⁵ Hence this route is not found on the map. However, on Perthées's visible is yet another link

⁸⁸ *Lietuvos Metrika, Knyga nr. 9 (1511–1518)*, pub. K. Pietkiewicz, A. Baliulis, Vilnius 2002, pp. 191–193.

⁸⁹ See A. Wawrzyńczyk, *Rozwój wielkiej własności na Podlasiu*, map.

⁹⁰ Such a course also lends credence to the delimitation of the Boćki estates of Paweł Sapicha from the village of Lewki belonging to Iwan Jesman of 1532. It ran across the environs between the villages of Piliki, Lewki, Mokre and Podbiele. It was through these lands that the Mielnik 'great road' ran; *Lietuvos Metrika. Knyga nr. 17 (1530–1536)*, pub. L. Karalius, D. Antanavičius, Vilnius 2015, pp. 290–293 (I would like to thank Dr. T. Jaszczolt for drawing my attention to this).

⁹¹ See. A. Buczyło, *Mielnik*, [in:] AHP Podlasie, in this edition III.6.19.8.

⁹² D. Michaluk, *Rozwój układu przestrzennego Mielnika w XIII–XVIII w.*, SP, vol. 4, 1993, pp. 34–35. In Mielnik itself there existed a street Wysocka, which more than likely fulfilled the role of being a local road leading to the main road to Wysokie itself; see A. Buczyło, *Mielnik*, [in:] AHP Podlasie, in this edition III.6.19.8.

⁹³ In 1554 Sigismunt August gave Stanisław Tęczyński permission to build a bridge on the Bug in the vicinity of Siemiatycze and to charge tolls. AGAD, Zb dok. pergaminowych, no. 6890; MK 119, ff. 398v–400.

⁹⁴ Possibly mention of this crossing comes in the appeal of the Mielnik burghers of 1642: 'A crossing on the River Bug being near Mielnik', NAHB, Mińsk, f. 1708-1-1, ff. 331v.

⁹⁵ In the Mielnik municipal ledger of 1580 there is mention of an attack on the servants of Piotr Skarbek and his wife on a public road from the bridge at Turna Mała to Lipno (I would like to thank Dr. T. Jaszczolt for this information). This

(according to this map of lesser importance) – the connection between Turna Mała and Falatycze. The route ran from Turna Mała to Sarnaki, hence it headed in the direction of Grzybów (in the sixteenth century Grzybowo) – Ostromęczyn – Górki and further onto Falatycze. This road may also be seen on Heldensfeld's map. This is most probably the main route connecting Siemiatycze and Łosice.⁹⁶ It is possible that this second variant (Turna Mała – Sarnaki – Chłopków (Chłopkowo in the sixteenth century) – Falatycze) equally existed in the sixteenth century, hence it appears on the thematic map as a secondary byway.

Perthées' and Heldensfeld's maps depict not two but three possible routes crossing the area between the settlements of Rusków (known in the sixteenth century as Ruskowo), Tokary, Drażniew (Drażniewo in the sixteenth century) and Ruda. These maps point to the existence of three crossing points for the River Toczna, all located on the same small area of territory, and each of them being part of an important thoroughfare. At the beginning of the sixteenth century such a crossing point was definitely located in Drażniewo. This busy route was used by merchants and led along the road and causeway for which, and dating back to 1510, Niemira Hrymalicz exacted toll fees.⁹⁷ There is no mention of the other two roads in sources that date back to the sixteenth century. It is, however, possible that at Tokary or Ruda there did exist a ferry crossing, suggesting that the roads course was directed towards Skrzyszew (in the sixteenth century Skrzyszewo).

With a degree of hesitation I took the decision to mark on the maps two roads that led to Międzyrzec Podlaski (Międzyrzec in the sixteenth century), which in 1600 was located beyond the borders of the Voivodeship of Podlasie. The first led from Łosice, the second forked off from the Łosice – Siemiatycze road, subsequently cutting across the Łosice – Janów Podlaski (Janów in the sixteenth century) thoroughfare and carried on further through Huszlew. The simultaneous existence of both roads in the sixteenth century raises some suspicion, and here mainly as they connected and linked the at same locations. However, in its defence is the fact that Łosice definitely had a direct connection to Międzyrzec Podlaski, just as Siemiatycze and here because Międzyrzec Podlaski was at that time an important communication hub and a crossing point where roads going through Podlasie to places such as Brześć Litewski, Łuków, Parczew and Lublin, as well as the Warsaw – Brześć Litewski route, converged.

A road which was not marked as an important route on any of the maps from the end of the eighteenth and the beginning of the nineteenth century is an interesting case in point. This was the thoroughfare leading from Ciechanowiec to the crossing point over the Bug River between the settlements of Wojtkowice-Glinna (in the sixteenth century Wojtkowicze-Glinna) and Kamieńczyk. This way was to travel, among others, Stefan Batory on his way to Warsaw through Miedzna (in the sixteenth century Międzyzlesie), Liw and Stanisławów. Prussian maps indicate a ferry crossing point located on this section of the River Bug. A similar situation occurred at the Gródek crossing point located between Drohiczyń and Granne. This was most probably the location of a ford, also used at the time by Stefan Batory.⁹⁸ Additionally, during the time of the Swedish Deluge it constituted a frequently used alternative crossing method to reach nearby Granne and Drohiczyń.⁹⁹ These routes assuredly played

settlement lies on the mentioned road from Łosice to Klimczyce. Given that it passed through Turna Mała to Lipno it means that in Klimczyce there was no crossing across the Bug, only that at Turna Mała.

⁹⁶ This is pointed to by the road notation from Piotr Myszkowski's diary of 1566 who travelling from Knyszyn to Lublin, rode on, among others, the following route: Knyszyn – Choroszcz – Bielsk Podlaski – Hornowo – Siemiatycze – Ostromęczyn – Międzyrzec Podlaski (in the sixteenth century Międzyrzec); *Dziennik biskupa Piotra Myszkowskiego*, p. 464. Sigismund August also travelled on this route as is borne out by documents issued in, among other places, Bielsk Podlaski, Siemiatycze and Ostromęczyn; *Lietuvos Metrika. Knyga nr. 47 (1565–1567)*, pub. E. Deveikytė, G. Lesmaitis, Vilnius 2018, pp. 26–29 (I thank Dr. T. Jaszczolt for pointing this out). The given road route Sarnaki – Ostromęczyn – Falatycze is the more likely, not that this excludes a different course, for example: Sarnaki – Kisielew – Ostromęczyn – Falatycze or Turna Mała – Lipno – Kisielew – Ostromęczyn – Falatycze.

⁹⁷ *Lietuvos Metrika, Knyga nr. 8 (1499–1514)*, pub. A. Baliulis, R. Firkovičius, D. Antanavičius, Vilnius 1995, p. 362. A part of the authors suggest that the crossing at Drażniew was across the Bug; see for example I.T. Baranowski, *Podlasie w przededniu Unii Lubelskiej*, PH, vol. 7, 1908, no. 2, p. 197. Drażniew is 2.5 km away from the river; to which a bridge and later a ferry crossing was in Drohiczyń not far away. See: T. Jaszczolt, *Most w Drohiczyń i jego właściciele w I połowie XVI w.*, [in:] *Małe miasta: gospodarka*, ed. M. Zemło, Lublin–Supraśl 2007, pp. 11–33.

⁹⁸ M. Wrede, *Itinerarium króla Stefana Batorego*, pp. 81, 97.

⁹⁹ During the Swedish Deluge there are several references to this crossing over the Bug being used – including by the army of Bogusław Radziwiłł and the Transilvarian army; *Itinerarium Bogusława Radziwiłła*, p. 242; J. Płosiński, *Potop szwedzki*, pp. 30, 80, 84, 154.

important roles within the sixteenth century road infrastructure, but were not as popular as the route that led through Granne. Despite this I have still decided to include them on the maps.

The distance from Węgrów to Mokobody could be travelled by two routes. The first way led through Ruchna while the second one traversed Szaruty. Out of the two, the second variant was deemed more important and is therefore included on the map.¹⁰⁰

When examining the thematic map, the absence of main roads located in the territory between the border with the Voivodeship of Mazovia and the Jabłonka Kościelna (in the sixteenth century known as Jabłonka) – Wysokie Mazowieckie – Sokoły – Tykocin road becomes apparent. This was historically an area divided into various smallholdings owned by noblemen (especially in the case of the sixteenth century parishes of Kobylin Poświętne and Kulesze Rokietnica), devoid of larger settlements. This area stands out in the whole of the Podlasie (not counting heavily forested and marsh-covered areas) region because of the scarcity of its network of main roads, which is not to say that there were no roads. The commission called into being to demarcate Mazovia and Podlasie in the year 1546 recalled ‘the Łomża road’, the ‘Suraż road’ or the ‘great Suraż road’ leading to Łomża and which divided the two territories. This began in Zawady in Mazovia and ran through a significant part of the western border of the Biesk land to the south of the River Ślina.¹⁰¹ The employment of the formulation ‘great road’ appears to be excessive on the part of those writing matters down. This road did not have much significance in the first half of the sixteenth century, with its importance diminishing in the second half of the century.¹⁰² Hence its non-inclusion on the map. The area between the Stare Lipki (Lipki in the sixteenth century) – Kosów Lacki (Kosowo in the sixteenth century) and the Kosów Lacki – Miedzna, Miedzna – Stara Wieś routes was also characterized by a low level of connectivity to the main road network. The main reasons for its occurrence was poor settlement infrastructure as well as the prevalence of heavily wooded areas, as can be seen on map by Perthées and Heldensfeld. A similar situation could be observed in the area enclosed by the circular Skrzyszew – Paprotnia – Zakrze – Tokary – Skrzyszew route. It is important to note, however, that it was crisscrossed by a network of local byways, for instance the following roads: Korczew (Korczewo in the sixteenth century) – Knychówek (Knychowo in the sixteenth century) – Paprotnia or Korczew – Dąbrowa (known as Duplewicze in the sixteenth century) – Przesmyki.

Before concluding it is imperative to name all the most important roads connecting important landmarks located both within and outside the country whose course crossed through the territory of the Podlasie. These have been marked as main roads on the thematic map. In line with the rest of the AHP series the connections presented have their starting and termination points located outside the Voivodeship of Podlasie. In the east the focus is directed on the Brześć Litewski and Grodno lines of communication, a network that served as the basis for travel to other important centres located in the eastern part of the Polish-Lithuanian Commonwealth.¹⁰³ Connections to various cities located in the Crown, Royal Prussia and the Duchy of Prussia included Warsaw, Królewiec, Gdańsk, Cracow and Lublin. From these main tracts many offshoots formed, connecting them to the rest of the Crown, as well as to Silesia and the lands pertaining to the Holy Roman Empire. The primary routes were:

1. Warsaw – Grodno

- a) Łomża – Grajewo – Rajgród – Augustów – Lipsk;
- b) Wizna or Zambrów – Zawady – Tykocin – Knyszyn – Sokółka – Kuźnica;
- c) Liw – Węgrów – Sokołów Podlaski – Brańsk – Bielsk Podlaski – Narew – Jałówka – Gródek – Krynki;

¹⁰⁰ See M. Gochna, „Porządki jako największe i najlepsze”. *Bogusław Radziwiłł w dziejach Węgrowa – rola magnata w funkcjonowaniu miasta prywatnego*, Węgrów 2016, map *Włość starowiejska i sokołowska ok. 1620 r.* (I would like to thank Michał Gochna for his help in this matter).

¹⁰¹ AGAD, Varia Oddziału I, sign. 55, ff. 11–19.

¹⁰² It follows to emphasize that the very name of the road is puzzling for if it were to have been a connector for first and foremost Suraż and Łomża, then travelling this route would have clocked up many kilometres in comparison with the road going through Wysokie Mazowieckie and Zambrów (in the sixteenth century Zambrowo). The significance of this route would also have been diminished by the course running parallel on the Mazovia side and linking Zawady – Rutki (in the sixteenth century Rudki) – Zambrów. The publishers of the Mazovia volume of AHP have also not recognised the aforementioned ‘great Suraż road’ as important – hence their decision not to include it on the map; see AHP Mazovia, map.

¹⁰³ From Grodno the roads went through Merez to Wilno and Kowno, through Nowogródek right to Minsk.

- d) as above, leading to Sokołów Podlaski, further on to Drohiczyn – Boćki – Bielsk Podlaski, and continuing on as above;
 - e) Nur – Ciechanowiec – Brańsk – Bielsk Podlaski, and continuing as above.
2. Warsaw – Brześć Litewski
 - a) Liw – Węgrów – Drohiczyn – Siemiatycze – Wysokie;
 - b) as above, leading to Siemiatycze, Mielnik – Wołczyn.
 3. Królewiec – Grodno
 - a) Olecko – Raczki – Augustów – Lipsk;
 - b) Ełk – Rajgród – Augustów – Lipsk.
 4. Królewiec – Brześć Litewski
 - a) Ełk – Grajewo – Łomża – Nur – Ciechanowiec – Drohiczyn – Siemiatycze – Mielnik – Wołczyn;
 - b) as above, leading to Siemiatycze, Wysokie;
 - c) Ełk – Grajewo – Goniądz – Tykocin – Suraż – Bielsk Podlaski – Milejczyce – Mielnik – Wołczyn.
 5. Gdańsk – Brześć Litewski
 - a) Działdowo or Nidzica – Pułtusk – Nur – Ciechanowiec – Drohiczyn, continuing as 2a or 2b.
 6. Cracow – Grodno
 - a) Radom – Łuków – Międzyrzec Podlaski – Łosice – Mielnik – Milejczyce – Bielsk Podlaski, with a continuation the same as in 1c;
 - b) Radom – Warsaw, with a continuation the same as in 1a–1e.
 7. Lublin – Grodno
 - a) Parczew or Łuków, with a continuation the same as in 6a;
 - b) as above leading to Łosice, further Siemiatycze, Boćki – Bielsk Podlaski, with a continuation the same as in 1c.

III.5.9A ROYAL PRUSSIA, PART 1 (1961)

Marian Biskup

Roads were also taken into consideration in the reconstruction of the state of the settlement network in the sixteenth century. The Schrötter Atlas served as the primary source in this effort, with both public roads (so-called *Land- und Poststrassen, gościńce*) and smaller village roads marked on the maps. The current map includes only this first category, namely post roads. The prevalent stability of road networks allows for speculation that, with a great degree of probability, these roads would have remained unchanged from the late the sixteenth century until the late eighteenth century and beyond. Modern maps were used for control and minor supplementation.

The reconstructed road network of Royal Prussia presents quite a bustling image, especially in Chełmno and Pomeranian Voivodeships. Chełmno Voivodeship had both latitudinal and meridional main roads, and all cities were connected by public roads. The most important hubs were Toruń, Chełmno, Grudziądz, Golub, and Brodnica. This speaks of the economic significance of these urban centres, even for sometimes faraway regions; for example, Grudziądz, a town located on the Vistula, was an important partner in the wheat trade to the Lubawa Land. Major routes, with significance beyond their region, ran north from Toruń, Golub, and Brodnica, through Grudziądz, Malbork, and finally to Gdańsk.

The road network in Malbork Voivodeship, due to the limitations imposed by the terrain, was concentrated mostly in the western part, in the area of Sztum, Malbork, and Nowy Staw. In the north-eastern part of its voivodeship, Elbląg constituted another major centre, connected with roads heading to the Duchy of Prussia and to Warmia.

In Pomeranian Voivodeship, most routes led north with Gdańsk as the main destination. One notable public road was the old road from Świecie upon the Vistula, through Starogard, and to Gdańsk. One of its branches leads from Świecie, through Nowe, Gniew, and Tczew – Royal Prussia's most important centres by the Vistula. Two other major public roads converged in Starogard, coming in from Chojnice and Tuchola in the south, and crossing the Tuchola Forest.

The roads described above converged in Gdańsk, together with several others, coming in from the west, from Kościerzyna and Mirachowo, and from the north, from Puck. There were also roads connecting to the Duchy of Pomerania, via Lębork and Bytów. In the southern part of the voivodeship, Tuchola, Człuchów, and especially Chojnice served as major hubs, with roads coming in from all parts of the voivodeship, as well as the Duchy of Pomerania (from Białobór) and Greater Poland (from Kamień).

Some of these major arteries were extensions of roads leading from the central regions of the Polish Crown. The road connecting Świecie and Gdańsk joined with the road leading to Kuyavia (Bydgoszcz – Inowrocław). Roads leading from Toruń or Golub, following the route of Brodnica – Grudziądz – Malbork were extensions of larger routes, leading from Kuyavia, Dobrzyń land, and Masovia towards Gdańsk. The importance of these routes is evidenced by the bridge across the Vistula in Toruń, which appears in the sources already towards the end of the fifteenth century;¹ correspondingly, bridges could

¹ A. Mańkowski, *Przywilej króla Jana Olbrachta z r. 1495 na most drewniany na Wiśle pod Toruniem*, „Zapiski Towarzystwa Naukowego w Toruniu”, vol. 8, no. 11–12, Toruń 1931, pp. 303–304.

be found on the Drwęca in Brodnica, Golub, and Lubicz,² as well as on the Nogat, opposite Malbork (since the mid-fourteenth century).³

The sources indicate that there was also an abundance of ferry crossings, mainly on the Vistula and the Nogat. In Chełmno Voivodeship, the existence of one such crossing is mentioned in the sources, between Chełmno and Świecie.⁴ There was also a well-established ferry crossing connecting Ostromecko and Fordon, on the route between Toruń and Bydgoszcz, and another crossing connecting Grudziadz and Michał, which is evidenced by the continuation of the roads on both sides of the Vistula.

There were at least seven ferry crossings in Malbork Voivodeship, mainly across the Nogat (in Benowo, Biała Góra, Sadlno, Klimonty, and Janówka)⁵ and across the Leniwka (Ostaszewo, Palczewo).⁶ There was another ferry crossing across the Leniwka in Pomeranian Voivodeship, between Kończewice and Gorzędziej, near Tczew.⁷ The evidence for ferry crossings helps explain some “missing” stretches in the road network and the means of crossing the Vistula and the Nogat.

III.5.9B ROYAL PRUSSIA, PART 2 (2021)

Tomasz Związek

Preliminary research on the road network in Royal Prussia in the second half of the sixteenth century dates back to the 1960s. Compiled by Stanisław Herbst, the findings of the study were first introduced in the B series of the *Historical Atlas of Poland*.¹ Another notable analysis can be found in Krzysztof Mikulski's 1994 book on settlement processes of the period.² The state of research has since undergone verification and has been adjusted to the methodology developed and utilised in current cartographic publications.³

One of the main components of the study was the hypothesis that major roads should lead through the strongest economic centres in this area (including Grudziądz, Dzierzgoń, Elbląg, Tuchola, Skarszewy, Chojnice, Nowe, Gniew, Sztum, Starogard or Malbork) and converge in the town which was the strongest socioeconomic and cultural hub in the region of Royal Prussia, which at the time was Gdańsk.⁴ For this reason, the shape and the categories of the roads within the network should reflect the key position of this urban centre, important in both the region in particular and the Polish Crown in general. In accordance with the methodology used in the research, roads have been categorised as either **primary** or **secondary**. As opposed to research by Marian Biskup in the previous volume,⁵ the identification and verification of the roads was not based on the post road network depicted in Schrötter Atlas maps. However, Biskup's maps were digitised and juxtaposed with the road network compiled on the basis of current research, independent of its predecessor, as a control measure for both accuracy, and any missing elements. In the end, Biskup's map and the map based on current research yielded very similar results (Map 1). It should be noted that this current state of research was also informed by previous reconstruction efforts of road networks in volumes on the regions of Greater Poland and Cuyavia. However, the lack of source materials on roads in Western and Eastern Pomerania proved to be a major obstacle in establishing the shape of route connections on both the western and eastern borders of Royal Prussia.⁶

Similarly to the last three volumes of the AHP, the large number of inns in towns and villages served as the basis of establishing points of convergence in the road network.⁷ A surviving liquor excise registry from 1569 (Map 2)⁸ was used to categorise the importance of Prussian towns as communication centres. However, Gdańsk did not feature in the ledger, as at the time the town was exempted

III.6 TOWN PLANS

III.6a INTRODUCTION

Marek Słoń

As in the case of the main map, town plans are reconstructed primarily on the basis of written sources from the sixteenth century, directly or through secondary scholarship, and cartographic sources from the turn of the eighteenth and nineteenth centuries. From the former, we obtain information about the existence of individual buildings, while more recent plans and maps show us their approximate range from a century or two later. Transferring a spatial image into the past is a classic example of the application of retrogression and should be used in accordance with the principles of this method. First and foremost, the subjects of this method should be elements that are relatively permanent, such as ownership boundaries, and not those inherently variable, like the outline of a wooden building. One must always remember about the approximate and partly hypothetical nature of the resulting information. Only some spatial shapes can be considered reliable and precise. These usually are fragments of brick buildings that have at least been preserved as relics or foundations. These are a kind of controlled variable in reconstruction that make it possible to, on the one hand, verify the hypotheses, and on the other hand, coordinate other elements with them.

The legend for town maps includes (throughout the entire AHP series) seven basic surface markings. The buildings were divided into three categories: urban, suburban and rural. These are not outlines of particular buildings, but rather the area of property intended for construction and development. The urban districts are quarters surrounded by streets, squares or outer town limits. In small and unfortified centers, most of this area was not covered with buildings, some of the land could even be used for small gardens. However, this does not change their character. Moreover, even in the richest cities and between the most cramped walls, neither whole quarters nor individual properties could be filled with buildings, and the extent of these cannot be reconstructed for the sixteenth century. Where, preserved in the oldest cartographic records, ownership divisions could have been made with some probability to reflect the location parceling, individual lines or grids have been drawn indicating the width and direction of the property. In the case of suburban and rural buildings, our knowledge of its spatial extent is usually limited to the fact that the houses and farm buildings stretched along the road. Sixteenth-century buildings, the size and shape of which can be estimated, are shown separately. This applies primarily to defensive buildings and churches.

With regard to the use of undeveloped land, there is even less information available. Several categories have been distinguished among them. Gardens, i.e., small and usually fenced off areas of intensive mixed cultivation, have been marked on the map, as well as orchards and vineyards. Arable lands are shown too. Meadows, pastures and wastelands, which are identified spatially, function as a separate category, created primarily on the basis of the reconstruction of natural conditions, such as floodplains. However, there are also areas near towns, which were not classified into any of these categories. These are shown in the reconstruction as arable lands.

The names provided in the plans have been derived from sources dated to the sixteenth century. The network of roads is, to a great extent, the result of the juxtaposition of the settlements with the cartographic records from the eighteenth and nineteenth century. The latter are also the basis

for the reconstruction of rivers and water reservoirs, although available source records as well as the results of archaeological and hydrological research have been taken into account. To avoid geometric distortions, all the data is applied to precise, contemporary terrain mapping.

III.6.1.1 BIECZ

Jarosław Suproniuk

The royal city of Biecz was the seat of judicial authorities for the entire land of Biecz: land courts gathered here, the gord court (court of the starosta of Biecz) resided in the town, as well as the court of high Magdeburg law, which had other seats in Cracow and Nowy Sącz.¹

The plan of the sixteenth century Biecz (at a scale of 1:10,000) was reconstructed on the basis of: a cadastral plan *Stadt Biecz sammt Ortschaften Belna, Harta und Przedmieście niżne in Galizien Jasloer Kreis* at a scale of 1:2,880 from 1850,² and the plan of old Biecz by Józef Barut, based on archaeological research.³ The cadastral plan shows the city with its street network, plots (with buildings), city buildings, road and river network, and the nearest surroundings of Biecz, but only on the left, northern bank of the River Ropa. J. Barut's plan shows Biecz within city fortifications, and the church of St. Ann, and the monastery of the Franciscans of Primitive Observance, both situated east of the city.

The image of the city by Frans Franciszek Hogenberg, created at the turn of the sixteenth and seventeenth centuries played an important role in our reconstruction. It was printed in the 6th volume (*Theatrum urbium praecipuorum mundi*) of Georg Jerzy Braun's *Civitates Orbis Terrarum*. According to the literature on this subject, Hogenberg 'drew Biecz from nature, and therefore can be trusted not only to present the correct number of towers on the southern side of the city, but also to show certain buildings, and their function, exactly as they were'.⁴ The drawing shows the city as seen from the south, and a bit from above. As a result, almost all fortifications can be discerned, as well as the city centre, with the nearest surroundings to the River Ropa, and Przedmieście Górne.

The information found in *Materiały do historii Biecza*,⁵ published by Franciszek Bujak, allow us to use cartographic data in relation to our chosen period, and quite often also to roughly localize topographical objects, which were not presented on any cartographic, or topographic source. The earliest data (before 1530) on Biecz, its location, borders, inhabitants, topographic objects, town and sacral buildings, come from *Słownik historyczno-geograficzny województwa krakowskiego*

⁵ *Materiały – F. Bujak, Materiały do historii miasta Biecza (1361–1632)*, Cracow 1914.

w średniowieczu.⁶ Valuable information can be found in collections of articles: *Biecz: studia historyczne*, *Biecz: szkice historyczne* oraz *Nad rzeką Ropą. Szkice historyczne*.⁷ The published *Lustracja województwa krakowskiego 1564* unfortunately lacks Biecz, and the 1569 inspection only records the price paid by the city; the inspection conducted in 1616 tells us little more.⁸

Fortifications of Biecz. We do not know the exact date of the construction of the city walls: it could have happened at the close of the thirteenth century,⁹ during Ladislaus the Elbow-high's reign,¹⁰ or during Casimir the Great's reign.¹¹ The first entry concerning the city walls comes from 1399, when Ladislaus Jagiello allowed the burghers of Biecz to employ people living in the suburbs to repair the walls.¹² Topography defined the course of the city walls: Biecz occupies an entire hill on the left, northern bank of the River Ropa. Various bodies of water also influenced the final shape of the fortifications: the stream Zadziurze flows at the foot of the northern and north-western slope, and there was a flume (Młynówka) on the southern side, between the city and the River Ropa.¹³ The walls had an oval, prolonged shape, stretching from the east to the west, and its south-eastern part formed a protruding wedge. The fortifications were around 1,200 m long.¹⁴

The northern wall of the fortifications, some 300 m long, was cut in three almost equal parts by a round tower and a wicket. In this part of the city, the walls were slightly concave, and also secured by the scarp, the ditch, and the earth embankment. Due to the sloping terrain, the ditch was probably not filled with water.¹⁵ There was a quadrangular tower in the north-eastern corner.

The north-eastern fragment was also concave in shape. The eastern part of the fortifications, between the north-eastern tower and the wedge, occupied by the Church of the Holy Spirit, was cut into two even parts by Dolna Gate ('Lower Gate', also called Pilzneńska). Each part was around 110 m long. A ditch and earth embankment were also on this side. The embankment surrounded the wedge, and probably ended freely in Młynówka.¹⁶

The southern fragment of the walls, from the Church of the Holy Spirit to the Main Gate (in the west) was some 490 m long, and had eight towers (including two wickets).¹⁷ There was no ditch or embankment on this site, as the scarp reached around 20 m here. The proximity of the River Ropa and the artificial flume strengthened the city's defence from the south. The inhabitants could reach the building situated by the River Ropa and the flume through the two wickets in the wall.

⁶ SHG Kraków, part I, no. 1, pp. 72–88.

⁷ See footnote 177 and 179. Manuscripts provide much information on the urban and topographic character: e.g. Biecz court books, or city's bills, see: AP Kraków, Wawel division: Biecz court books from 1550–1603, Dep. 7–13; Biecz city bills 1540–1553, Dep. 24–25. ¹⁷ *Ibidem*, p. 141.

The western fragment of city fortifications was over 120 m long.¹⁸ This was the most fortified part of the walls. Goods entered and left Biecz through the western gate (Górna Gate). Travellers going to the east (to Ruthenia, or to Transylvania through Dukla Pass) also used this gate, whereas the eastern gate (Dolna Gate) played a secondary role. It connected the city with the north, with the district of Pilzno. The conversion of the road leading from Biecz to Gorlice, conducted in 1790–1794, resulted in the complete destruction of Górna Gate, and that made its reconstruction difficult.

The north-western fragment of the defensive walls, from the tower situated at the back of the parson's garden to the church tower, was around 100 m long, and had four towers. We accept J. Barut's opinion that 'the northern embankment and the moat continued here, and soon ended after it passed under the drawbridge'.¹⁹ It seems that one of these towers defended the wicket of the church cemetery. The reconstruction of Górna Gate is the most hypothetical. Again, we accept J. Barut's belief that it consisted of four gates: 'the first one, outer, was rather symbolic and it led to the drawbridge, raised towards two small towers on the other side. They formed the second gate'.²⁰ Behind this second gate two parallel walls formed a short fragment (so-called 'neck'), which reached the third gate, defended from the south by a vast tower. Behind the third gate there was a courtyard closed by the church wall from the north, and by the city wall and Radziecka tower in the south.

In total, there were 16 towers in the fortifications of Biecz, including four wickets: two in the south, one in the west, and one in the north.²¹

Biecz inside the fortifications. The area of the city within the fortifications was over 7 ha.²² The urban layout of Biecz was prolonged along the main trade route, running from the east to the west: the distance between the gates Górna and Dolna was some 430 m, while the city was only 170 m wide (from the south to the north).

The quadrangular market square occupied the centre of the city. Its shape resembled a rectangle with a prolonged northern and southern frontage, 110 m long and 73,5 m wide (375 × 250 feet).²³ The two-storey town hall stands in the centre of the market square.²⁴ The main entrance to the building was probably situated on the western facade. Possibly, other buildings stood adjacent to the town hall. For instance, we do not know, whether the weigh house was located in the town hall, or in a separate building next to the town hall;²⁵ it is possible that cloth cropping was done in one of the rooms in the town hall; the mason's house²⁶ and some other house²⁷ stood by the town hall. Also salt sellers, butchers, and shoemakers had their stalls in the market square.²⁸

¹⁸ Ibidem, p. 142.

¹⁹ Ibidem, p. 142.

²⁰ Ibidem, p. 143. J. Bogdanowski, *Obwarowania*, p. 605, includes the reconstruction of the barbican by Górna Gate.

²¹ The reconstruction of the western fragment of the city walls is only hypothetical, as Górna Gate was destroyed and on Hogenberg's print the church of the Corpus Christi blocks out the north-western fragment of the fortifications. Some scholars give different values: e.g. A. Wąchała, *Biecz. Starożytne królewskie miasto grodowe*, Grudziądz 1930, pp. 9 f., claims Biecz had 15 towers, and probably six wickets. Similarly F. Srzeniawski, *Biecz w swoich pamiątkach*, Jasło 1878, p. 45: 'The fortress had only two gates/Six smaller wickets/Drawbridges by each of them/allowing to leave the city/ The gates were fortified with towers/and wickets by small towers'.

²² T. Ślowski, *Studia nad ludnością Biecza*, p. 27 determines the area of Biecz at 73,200 m². J. Barut, *Dawna ziemia biecka*, p. 138 gives 73,000 m².

²³ B. Krasnowolski, *Lokacyjne układy urbanistyczne*, p. 17; includes precise measurements (in metres, feet, rods, ropes) of individual elements of the urban layout of Biecz. T. Ślowski determines the area of the market square at 7800 m², See T. Ślowski, *Rynek w Bieczu*, [in:] idem, *Ratusz królewskiego miasta Biecza: siedziba władz samorządowych na przestrzeni dziejów*, Biecz 2000, p. 9.

Walczy, *Badania architektoniczne ratusza bieckiego*, "Sprawozdania z Posiedzeń Komisji" (Polska Akademia Nauk, oddział w Krakowie), lipiec-grudzień 1965, Cracow 1966, pp. 606-609.

²⁵ An entry from 9 May 1554 tells us: '... et in carcere in praetorio apud stateram...', see Materiały, no. 257.

²⁶ 'Alberti muratoris coniunx de conducta domuncula penes praetorium', as quoted in S. Walczy, S. Załubski, *Ratusz w Bieczu*, p. 228, footnote 150.

²⁷ 1602: 'Hedvigis Kristkowa e domuncula penes praetorium dedit annalem censum', as quoted ibidem, p. 228, footnote 151.

²⁸ See Materiały, no. 18: the endowments of the vogt of Biecz.

Two pairs of transit streets met in the market square. They ran from the east to the west: from Górna Gate and the parochial church to the market square (Kościelna Street north of the western block by the market, and Węgierska street south of it), and from the market square towards Dolna Gate (Piekarska Street north of the eastern block by the market square, and south of it – Grodzka Street).²⁹ The streets were over 7 m (25 feet) wide. Also, four narrow lanes left from the corners of the market square: two went southwards to the wickets, two northwards – one to the northern wicket, and the other, which left from the north-western corner, was ‘moved’ west and reached the round defensive tower in the wall. It is estimated these lanes were around 1,7 m (6 feet) wide.³⁰ Two similar lanes ran also in the western part of the city: between the streets Kościelna and Węgierska, at the back of the western block by the market square, and one small lane ran in the north-western part of the city: from the parochial church and the exit of Kościelna Street to the city wall. There were two such lanes in the eastern part of Biecz, they ran from the north to the south: one of them was situated at the back of the eastern block by the market square, from the exit of Piekarska Street to Grodzka Street, and the other – Św. Ducha Street – led from Grodzka Street to the vogt’s house and the Hospital of the Holy Spirit.³¹ A street ran along the city walls, it surrounded the city, except for a south-eastern fragment, where the church of the Holy Spirit, the hospital, and the vogt’s house stood. In 1570, streets in Biecz were described as ‘good roads in town, cobbles both in the streets, and the market square...’.³²

Building blocks in Biecz were diversified. Those along longer frontages of the market square were themselves prolonged, had only one frontage, and were divided by small lanes. The eastern and western blocks by the market square had plots with two frontages. One-frontage plots were mostly situated close to the city walls. Altogether, we found 166 plots in Biecz measuring 7,3 m × 42 m (25 × 144 feet), and 48 plots measuring 7,3 m × 29 m (25 × 100 feet).³³ We know the number of the houses in 1626, together with their division into streets and frontages of the market square. There were 23 houses in Kościelna Street, ‘in the first wall of the market square’ – 11 houses, in Piekarska Street – 29, ‘in the second wall of the market square’ – 6, in Grodzka Street – 23, in Św. Ducha – 7, ‘in the third wall of the market square’ – 14, in Węgierska Street – 26, and ‘in the fourth wall of the market square’ – 11 houses. This gives us 150 houses inside the fortifications.³⁴ Unfortunately, the source does not tell us, which houses were brick, and how many people lived in the buildings.

The late-Gothic parochial church (*fara*) of the Corpus Christi dominated (and still dominates) the western part of the city.³⁵ The cemetery, mentioned already in 1473,³⁶ lay to the north of the church,

²⁹ For street names from 1590 see Materiały, no. 343: ‘... in platea ecclesiae’, ‘... in platea pistoria’, ‘... in platea castrensi’, ‘... in platea Ungaricali’. Street names appear earlier, e.g. in 1590, see Biecz court books from 1550–1556, AP Kraków, Dep. 7, p. 41: ‘... domum in platea pistorium...’, in 1563, see Biecz court books from 1559–1563, Dep. 9, p. 1085: ‘... quia domum in platea pistorium...’. Term ‘... in platea castrensi’ this could also be understood as ‘Zamkowa Str.’, see F. Kiryk, *Rozwój urbanizacji*, p. 44. However, already in the document from 26 July 1395, in which queen Hedwig concedes the hospital of the Holy Spirit be built, the place for the hospital was called a square, where the royal manor once stood: ‘aream nostram, in qua alias regalis curia erat...’, see Materiały, no. 15; Dodatek GL, 1850–1851, no. 23, p. 91. Some entries from the end of the fourteenth century suggest that at the time the streets in Biecz were still unnamed: 1398: ‘... domum Nicolao Paltinger sitam in plathea versus scolias’, ‘... resignavit domum [...] et usus proprios convertendum et sitam retro antiquum Zilbirmanum braxatorem’, see *Najdawniejsza księga sądowa miasta Biecza*, pub. B. Ulanowski, “Archiwum Komisji Prawniczej”, vol. 5, Cracow 1897, no. 79, 125; Also F. Kiryk, *Z dziejów miast*, p. 109. After the castle was demolished in 1475 (it was situated southwest of the city on Góra Zamkowa) the starosta’s district authorities resided on a ‘gord’ east of the city, outside Dolna Gate: this was the seat for gord and land courts until 1641, see T. Ślawnski, *Biecz. Gród starościński. Studium historyczno-urbanistyczne*, [in:] idem, *Biecz: szkice historyczne*, pp. 290–292. The inspection from 1602 describes the road, which ran from Dolna Gate ‘viam ad Pilsno post curiam castrensem’, see Materiały, no. 368. For these and other reasons we are inclined to accept the name ‘Grodzka Street’.

³⁰ B. Krasnowolski, *Lokacyjne układy urbanistyczne*, pp. 17 f.

³¹ Materiały, no. 343: ‘in domo in platea S. Spiritus’.

³² LDK, p. 43.

³³ B. Krasnowolski, *Lokacyjne układy urbanistyczne*, p. 18; this number of parcels suggests there were 214 houses in the city. T. Ślawnski, *Studia nad ludnością Biecza*, p. 30, informs there were 128 parcels in Biecz, and the houses stood in 70% of them, so that would give us 209 houses inside the walls.

³⁴ Materiały, no. 495. See also: Regestum 1626 and Regestr 1626. Also A. Miłobędzki, *Architektura polska XVII w.*, Warsaw 1980, pp. 84–88.

³⁵ About the parochial church (building, equipment, epitaphs) see S. Tomkowicz, *Powiat gorlicki*, “Teki Grona Konserwatorów Galicyi Zachodniej”, vol. 1, 1900, pp. 175–230.

³⁶ Materiały, no. 60. The visitation of the parochial church, conducted on request of bishop Filip Padniewski in 1565 mentions: ‘a cemetery surrounded by walls’; similarly, the visitation of the provost of Tarnów, Krzysztof Kazimierski, from 1595 tells us that ‘the cemetery was surrounded by a wall’ see Materiały, no. 299 and 352.

and reached the western wicket. The fortified belfry and the presbytery reached the city wall, and strengthened the city's defence. There was a chapel dedicated to St. Barbara (also called a church) in the cemetery, which was already abandoned in 1602, and 'turning into ruin'.³⁷ In 1595, 'the town council had recently built a house for the widows near the church'.³⁸ Biecz school stood south of the parochial church, by the city walls.³⁹

The Hospital of the Holy Spirit (asylum), built in 1395, was situated in the south-western wedge of the city, just like the hospital church (recorded from 1398), of the same denomination.⁴⁰ There probably was a cemetery by the hospital. The vogt's house stood west of the hospital. Probably, its southern wall touched the city wall, and the eastern wall – the defensive tower.⁴¹ The city bathhouse (mentioned from 1395) was probably located in this part of Biecz, west of the vogt's house.⁴²

Apart from sacral and city buildings already mentioned, we should also describe elements, which were not marked on our plan, but constituted an integral part of the sixteenth century city. These include breweries (recorded from the end of the fourteenth century). For instance: we know a brewery from 1592 situated in the southern frontage of the market square, next to Mikołaj Leszczyński's house; another brewery was mentioned in 1595 in Kościelna Street, next to Barbara Rzgowska's house; and Jerzy Jurecki's house with a brewery was mentioned in Piekarska Street.⁴³ Numerous hop-fields (together with a hop drying house), gardens, and utility buildings belonging to the burghers, like stables, pigsties, various barns, sheds or warehouses and granaries fulfilled a similar role in the city. In our period, the city probably had some channel system, supplying the inhabitants with water, if in the fifteenth century Biecz had obtained permission to build such a system.⁴⁴

Suburbs. The first entry mentioning the suburbs comes from 1397.⁴⁵ The suburbs of Biecz were vast, and incoherent in terms of terrain: some were located away from the River Ropa, like Załawie, or Bedlna, which was also called Przedmieście Wójtowskie. In terms of ownership, we can distinguish estates belonging to the vogt, the city, and the parochial church.⁴⁶ The topographic criterion allows us to distinguish Przedmieście Dolne (situated east of the city, together with Bedlna), and Przedmieście

³⁷ Materiały, no. 368; there information that 'the repairs ordered by the cardinals were not conducted by the late parson Piotr Piotrowski or the counsellors'. Since 1473 recorded as 'altaria św. Barbary' in the chapel on the parochial church cemetery (Materiały, no. 60, 61); in 1546 called 'the chapel of St. Stanislaus' by the parochial church (Materiały, no. 205). The 1595 visitation tells us that the chapel of St. Barbara, built on the cemetery, so that Polish service could be offered there, was empty (Materiały, no. 352), and in 1598 there is an entry mentioning 'an altar dedicated to St. Barbara in the cemetery chapel' (Materiały, no. 355). SHG Cracow (part I, no. 1, p. 80) uses the term 'church of St. Barbara'.

³⁸ Materiały, no. 352. The 1602 visitation calls this house 'Hospitale viduarum civium senio confectorum provisionis consulum' (Materiały, no. 368).

³⁹ Materiały, no. 200: the town council endowed Andrzej, the town scribe, with a plot 'between the city wall, the school and the tower over the upper gate' so that he could build a house. See also an entry from 1557 in the court book of Biecz 1556–1559, AP Kraków, Dep. 8, p. 225: '...quia domum virum ambrozium shiklia ab una et portam superiorem ab altera partibus ex opposito schole sitam...'. About the school recently Suproniuk 2002, also Pachulski 1927.

⁴⁰ See "Dodatek tygodniowy przy Gazecie Lwowskiej", 1850–1851, no. 23, p. 91. The hospital church ('ecclesie hospitalis') mentioned in 1398, see *Najdawniejsza księga sądowa miasta Biecza*, no. 5. Also SHG Kraków, part I, no. 1, pp. 80 f. (inside: church of the Holy Spirit). The 1595 visitation mentions 'a chapel by the hospital of the Holy Spirit', and describes it as neglected (Materiały, no. 352).

⁴¹ The construction of this house was commenced by Jakub Sieklucki (castellan of Biecz 1500–1503, starosta of Biecz 1500–1511) in 1500–1506. In 1641 it became the seat of the starosta of Biecz, see T. Ślowski, *Biecz. Gród starościński*, pp. 294–296.

⁴² Materiały, no. 15; Also T. Ślowski, *Biecz. Gród starościński*, p. 307. In 1505 r. Alexander Jagiellon allowed Jakub of Siekluka to buy a parcel with a home on the left side of the vogt's house, towards the bathhouse, see MRPS, vol. III, no. 2378 ('... in eodem oppido ad sinistram partem domus advocatiae illius versus balneum sitam, ab ipso Ozanek emere consentit.'). Also. SHG Kraków, part I, no. 1, p. 76. In 1611, during the division of property of Sebastian, son of Marcin Barian Rokicki, the bathhouse was described as situated 'on the city embankment with a garden', quoted in T. Ślowski, *Mieszczanstwo bieckie*, p. 127. Materiały, no. 343, p. 135: '... in domo aciali olim Martini Rossocha mariti sui inter olim Laurentii pellionis, plateola, qua itur ad balneum intercurrente, et Alberti Schepiolo domos in platea castrensi', p. 136: '... in domo aciali in circulo inter olim Martini Rossocha, plateola, qua itur ad balneum, intercurrente, et olim Simonie Rigler domos'.

⁴³ As quoted by T. Ślowski, *Mieszczanstwo bieckie*, p. 122. The earliest entries about hops production see: SHG Kraków, part I, no. 1, p. 75.

⁴⁴ Lib. Form. 1888, no. 204: '... in ipso opido canalia aquatica faciendum, construendum et erigendum necnon aquam ad eandem undecunque de arwis, agris et montibus decurrentem'.

⁴⁵ *Najdawniejsza księga sądowa miasta Biecza*, no. 523: 'Laurencius suburbanus Beczensis...'

⁴⁶ See the comment on 'Biecz suburbs' [in:] SHG Kraków, part I, no. 1, p. 76.

Górne, that is the area west (northwest and southwest) of the city.⁴⁷ The inconsistency of the area of the suburbs of Biecz can also be confirmed by the ‘inspection of tolls, customs, bridges and roads of the voivodeships in Lesser Poland’ conducted in 1564, in which Przedmieście Górne was described as two separate suburbs.⁴⁸ We should also note here that not only compact settlement clusters were called suburbs, but also uninhabited areas within city jurisdictions. Tax registers list Przedmieście Dolne and Przedmieście Wójtowskie, not shown on our plan, as separate settlements. The city owned Przedmieście Dolne, which had 28,5 lan in the 1580s, and 29,5 lan ten years later.⁴⁹ 53 inhabitants of the suburbs were listed by name in 1510, along with fields they owned.⁵⁰ Still in 1888 Przedmieście Dolne (Niżne) was described as property of Biecz, situated ‘between the monastery and the city. It has a watermill on a stream flowing to the River Ropa from its left bank’.⁵¹

The River Ropa, which divided not so much the suburbs, but grounds of burghers, suburb inhabitants, or of the vogt, forced the people to have access to the other bank. The inspectors controlling the state of roads in Cracow Voivodeship in 1570 wrote: ‘They showed us seven bridges, and the eighth one was great, it was built over the swamps over 200 m long’.⁵² Unfortunately, we have no source, which would tell us, where the bridges were situated, they cannot be seen on Hogenberg’s picture.⁵³ It is also difficult to deduct the possible location of bridges from Mieg’s map of Galicia from 1775–1783 (at a scale of 1:28,800). It shows one ‘bridge’ (more or less between the southern wickets), but none of the roads run through here: the roads are marked east and west from it.⁵⁴

Suburban buildings were shown on the plan of Biecz based on Hogenberg’s image, which also helped us mark mills on Młynówka. There were certain buildings and structures in the suburbs, which were difficult to localize and mark, given the scale used: numerous demesnes belonging to the burghers, the vogt, and the parson, breweries, lime kilns (to the northwest of town; hence the current name Wapniska), brickyards, or alum mine, situated in the village Korczyny, later incorporated.⁵⁵

A chapel (‘church’) dedicated to St. Jacob, and a royal gord (‘castle’) were marked in Przedmieście Dolne. The church of St. Jacob, mentioned since 1450, was situated ‘extra muros Biecenses’.⁵⁶ In 1624, it was described as ‘located in the smaller (lower) suburb’, it was also said that the square intended by the city for the construction of a monastery of the Franciscans of Primitive Observance was located ‘next to the church of St. Jacob, in the lower suburb’.⁵⁷ The ‘royal castle’ (also seat of the starosta of Biecz) stood close to the chapel of St. Jacob. It was built between 1475 and 1487 and functioned until 1641, when it was turned into the monastery of the Order of Primitive Observance, and the brothers moved in.⁵⁸ In Przedmieście Dolne there was also a chapel of St. Nicolas, in a place

⁴⁷ See T. Ślawnski, *Przedmieścia bieckie w historycznym zarysie*, [in:] idem, *Biecz: szkice historyczne*, p. 246. Góra Zamkowa (‘Castle Hill’) situated southwest of Biecz, was described as a part of Przedmieście Górne, see Cons. Biecz 1612–1644, p. 880: (10 September 1633) ‘...sub monte Castris in suburbia superiori Biecensis...’.

⁴⁸ Lustracja ceł 1564/65, p. 214: ‘A great highway from Cracow to Hungary, one suburb called Krakowskie [...] which stretches for two staje from the gate. In the other suburb there were two bridges from this gate [...]. In the fourth suburb, Dembowcza or Zmygroda are three swampy places [...].’

⁴⁹ P. Małopolska, vol. 3, p. 115; Tax reg. 1588, ASK I, 126, f. 312; Tax reg. 1589, ASK I, 127, f. 284. *Regestr poborowy województwa crakowskiego pod sprawą y urzędem IMOści pana Stanisława Morskiego z Morska, poborcze na sejmie walnym Warszawskim Coronnym in a. 1593 uchwalonym*, BJ, MS 5043, fol. 267 [microfilm in BN no. 1152]; Tax reg. 1595, fol. 224 [microfilm w BN no. 18567].

⁵⁰ Rejestr dochodów ze starostwa bieckiego z lat 1508–1510, ASK I, 1, pp. 400–405, 483–488, 500–505, see also SHG Kraków, part I, no. 1, p. 76.

⁵¹ SGKP, vol. 9, p. 137.

⁵² LDK, p. 44.

⁵³ In LDK B. Wyrozumka emphasized this probably means two drawbridges in front of Górna and Dolna gate and the bridge over the Ropa (which can be seen on the cadastral plan from 1850).

⁵⁴ Mapa Galicji 1775–1783, by Mieg, Kriegsarchiv Vienna, photocopies in e.g. Pracownia Atlasu Historycznego, Instytut Historii PAN, section no. 68.

⁵⁵ T. Ślawnski, *Przedmieścia bieckie*, pp. 255 f., 265 f.

⁵⁶ Materiały, no. 47. Described in the 1595 visitation as: ‘a chapel outside the city’ and ‘chapel of St. Jacob, bricked’.

⁵⁷ Materiały, no. 487 and 488. According to T. Ślawnski ‘The church of St. Jacob was partially destroyed by floods and the lack of care’, as quoted in T. Ślawnski, *Przedmieścia bieckie*, p. 264. See also Pasiiecznik 1984, p. 13: ‘a church of St. Jacob the apostle, by the road to Jasło, built around 1550 by Zimowie, the parents of the provost of the church of the Holy Spirit, Sebastian Hiemovius’; p. 18: ‘Church of St. Jacob – not this place lies inside a timber mill’.

⁵⁸ T. Ślawnski, *Przedmieścia bieckie*, p. 264; idem, *Biecz. Gród starościński*, pp. 290–292. On 25 August 1639 the *sejmik* (dietine) of Cracow Voivodeship in Proszowice decided that: ‘the delegates will of for the desertion of the royal town of Biecz,

difficult to localize.⁵⁹ We do not know the location of the church of the Holy Cross, or the chapel of the Holy Virgin Mary.⁶⁰

The church of St. Peter stood south of Przedmieście Górne. In the 1595 visitation it was called a chapel of St. Peter ‘older than the town itself, wooden, has a consecrated altar, a field, a garden, and a small house’.⁶¹ The city bleachery (marked on the plan) was situated in this part of the suburb, between the church of St. Peter and the city, by the River Ropa, as well as ‘another one’, built by the starosta of Biecz in 1554.⁶²

In total, in 1629 in the suburbs there were ‘46 serf huts, two herdsman huts [...] one hut of the *soltys*’ and ‘107 small houses outside both gates and around the city’.⁶³

ANNEX BURGHERS OF BIECZ IN 1590

(Prepared on the basis of the register of money appropriated by Marcin Kromer for scholarships for the youth of Biecz, who studied at the University of Cracow⁶⁴)

so that the vogt’s district of Biecz was turned into a town and commuted’, Akta sejmik. krak. 1955, part 1, art. 46, p. 240. Only on 9 July 1641 did the nobles of Biecz district decide on the *sejmik* (dietine) of Cracow Voivodeship in Proszowice that: ‘All estates and substances of our district depended on good and secure protection of the town books of Biecz, which are kept outside the city in the place loco nullo praesidio munito; that is why we de unanimi consensu allow, providendo indemnitati nostrae the town books of Biecz be moved to the vogt’s office in Biecz from their current location, and the vogt’s residence shall be permanently considered a castle and gord, so that the courts of the starosta and the gord courts could be held there. We allow a brick storeroom for the books be built to keep the books and house gord court, and one collection of the lan tax and the town tax in our district of Biecz, together with everything according to the universals of the Diet be spent’, Akta sejmik. krak. 1955, part 1, no. 101, p. 266. The *Sejm Walny* (General Diet) of the Crown on 20 August 1641 confirmed Kommutacya Grodu Bieckiego za Woytostwo: ‘In order to prevent the danger, which could inde oriri our Grod of Biecz, outside the city be left without protection and destroyed, on request of the delegates from this district, with perimission of Jan Wielopolski, the starosta of Biecz, we move the vogt’s seat. And the vogt’s seat in the seat is to remain ours, and hold courts, and store books. So that they could be conducted more conveniently: laudum for a tax to build a court house and a storeroom is hereaby approved’, *Konstytucye seymu walnego koronnego sześciedzielnego warszawskiego 20 sierpnia 1641*, art. 42, p. 21 (p. 14), [in:] VL, vol. 4.

⁵⁹ The church of St. Nicolas mentioned in 1450 (Materiały, no. 47) described in the 1595 visitation as ‘a chapel of St. Nicolas’ outside the city (Materiały, no. 352). The only entry about the location of the church comes from 1485: ‘penes curiam nostram regalem versus ecclesiam s. Nicolai’ and ‘s. Nicolai iuxta curiam castrensem’ (Materiały, no. 75).

⁶⁰ The church of the Holy Cross is mentioned in 1450 (Biecz 1945, no. 47), and the 1595 visitation calls it a chapel situated outside the city, just like the chapel of the Holy Virgin Mary (Materiały, no. 352). ‘All not consecrated (i.e. of St. Jacob, St. Nicolas, Holy Cross, and the Virgin Mary) and not endowed, but traditionally masses were held there sometimes’ (Materiały, no. 352). T. Ślawski, *Przedmieścia bieckie*, p. 264 tells us the churches of the Holy Cross and St. Nicolas, and the Virgin Mary ‘were destroyed in 1656 by the Polish soldiers, so that the defence of the town and the monastery against the Swedes was easier’; J. Pasiecznik, *Kościół i Klasztor Franciszkanów-Reformatów w Bieczu*, p. 42 informs us that wooden churches (St. Nicolas, Holy Cross, and the Mother of God) was burned down in January 1657 during the invasion of Rakoczy’s army, to improve the defence of the monastery.

⁶¹ Materiały, no. 352; See also SHG Kraków, part I, no. 1, p. 81.

⁶² Materiały, no. 46 and 255. Also Lustracja ceł 1564/1565, p. 214: ‘In the other suburbs from this gate two bridges showed us a flumen, which led water from the River Ropa to the town’s bleachery and mill [...]’.

⁶³ Materiały, no 515 and 516.

Translated by Agata Staszewska

III.6.2.8 BIELSK PODLASKI

Michał Sierba

Bielsk Podlaski¹ acted as the capital for the surrounding Bielsk land – one of the three lands that formed the Podlasie Voivodeship after the year 1566. In the sixteenth century, Bielsk, and the six municipal villages surrounding it constituted the biggest town in the Voivodeship.

The plan of Bielsk presented in this volume is of a mostly hypothetical nature – this is due to the absence of comprehensive data in both literary and cartographic sources, which has made accurately recreating the town's street network as well as the types and appearance of the buildings in the time frame of the sixteenth century well nigh impossible. This is particularly true concerning terrain that fell into the private ownership of the so-called *jurydyka*: land privately owned yet comprising a part of a larger municipal unit. The current plan in no way pretends to constitute an exact representation of Bielsk, for such still requires critical reflection particularly given the state of research, newly discovered sources and their ambiguous entries, which all make for a host of possible interpretations. The majority of town plans presented in the AHP depict them as they were circa the year 1600. In the case of Bielsk reconstructing the town plan in accordance with this time period is far more difficult, if at all possible. Due to these factors the town plan was created to depict the municipal space as it appeared in the year 1563. These particular time constraints were influenced by two factors, the first being the availability of sources. The only inventory-related (registries of the VoloK Reform) sources that could be utilized in potential municipal space reconstructions date back to the 1560–1563.² The second reason was another series of fires that broke out in the 1570s as well as in the year 1591, destroying a further portion of the town's buildings.³

The first known plan depicting the town's layout dates back to the year 1781. This was the fruit of the undertakings of the *boni ordinis* board, whose role was to reform and improve existing laws, privileges as well as the general appearance of Bielsk. This document survived, reaching modern times in the form of a copy made during the inter-war period.⁴ Von Stein's map titled *The New-Eastern Provinces of Prussia*⁵ has also proved to be helpful, as well as a map of the Bielsk district from the year 1839,⁶ and a Bielsk municipal plan from the mid-nineteenth century.⁷ The main basis for developing an accurate urban overview was a detailed plan of Bielsk from 1834, which originated from National Historical Archives of Belarus in Grodno.⁸ This was supplemented by a more general

¹ In further references the shorter form *Bielsk* shall be used.

⁷ The map was published [in:] J. Jaroszewicz, *Miasto Bielsk*, intro. B. Białokozowicz, Studziwody 2007, p. 135.

⁸ NGAB Grodno, f. 126, 1, 105 (for making this scan available, as well as other plans of Bielsk from the 1830s I am most grateful to Mr. Wojciech Konończuk). The plan contains detailed information on the spatial planning of the town – the

plan of Bielsk from 1830,⁹ and the terrain plans of five communal pasture grounds that all date back to the same year.¹⁰

Up to the present day preserved is a recently discovered register of the Volok Reforms of 1563 conducted by Andrzej Dybowski.¹¹ Hitherto research had been based first and foremost on a fragmentary eighteenth-century copy of the register. This contains chiefly information on Catholic Church and Orthodox Church properties and real estate. Only a portion of the streets are mentioned by name. It is also important to note that the copy was created seemingly at random, with visible and sudden jumps to various parts of the town as well as numerous omissions of other areas.¹² Appropriate supplementation of this source was found in an nineteenth-century abridged list that encompasses an incomplete record of streets and places of worship located within the town boundaries. This source is related to the first, though not entirely successful reform conducted by Stanisław Dziewiałtowski Skoczek.¹³ Inspections from the years 1576, 1602 and 1664 do not provide much information that could be considered relevant in any process of spatial reconstruction for the Bielsk municipal area.¹⁴ Examples of detailed inventory records first date back to as late as 1772¹⁵ and 1779.¹⁶ While any surviving municipal ledgers only account for the second half of the seventeenth century and the eighteenth century onwards.¹⁷

Due to the absence of sixteenth century cartographic sources and the fragmented nature of the existing inventory ones, retrogressive and comparison-based methods were implemented when reconstructing the layout of Bielsk. Inventory sources from the eighteenth century were correlated with existing mentions of the Volok Reform conducted in the area, with the overarching similarities and disparities selected and used as the basis upon which changes to the municipal layout could be simulated. This data was supplemented by information gathered from other sources, such as records of granted privileges, verification procedures, legal acts, chronicles, records of Church visitations, excavations and records of archeological digs and research. All the gathered data was then marked on the aforementioned maps and plans of the second half of the eighteenth and first half of the nineteenth century, as well as the contemporary map of the town. The work was based on the earlier mentioned plan from 1834, which was transformed with the aid of the gathered resources. During every stage of the proceedings the outcomes were compared to other existing attempts at reconstructing Bielsk's layout. The first to undertake such a project was Stanisław Herbst, whose work was not free of errors and inaccuracies.¹⁸ The next was Anna Czapska, who also made some fundamental mistakes.¹⁹ This topic also appears in the monograph on Bielsk by Henryk Kosieradzki.²⁰ The most extensive writings on the topic can be found in the work of Jerzy Zieleniewski, who supplemented his findings with very informative and valuable plans that depict Bielsk itself, as well as its suburbs and surrounding areas

localisation of all public utility buildings, residential houses and certain economic objects, the names of streets and their course, and a description of the specific town boundaries. Visible is also a noticeable part of the hydrographic network as equally the positioning of various bridges. The plan was drawn up on a scale of 1:6,800 (I would like to thank Dr T. Panecki for his assistance here). For more on the subject of the plan see: W. Konończuk, *Nieznany plan Bielska z 1834 r. Z dziejów kształtowania się układu przestrzennego miasta*, "Biuletyn Konserwatorski Województwa Podlaskiego", vol. 26, 2020, pp. 87–113.

in the year 1563 and during the course of the eighteenth century.²¹ These plans did, however, require some level of verification and supplementation in order to make them complete. In the works of this author the introduction of street names into the sixteenth-century topography can be observed, even though some of these place names appeared only in historically later sources. The newest attempt at describing the spatial expanse of the town (without jotting them down in the form of a plan) was contained in a topical source work compiled by Waldemar Bukowski and Dorota Michaluk.²²

Bielsk and its surrounding villages are located on the Bielsk Plain. The topography of the area is fairly flat. The area constitutes a gently undulating ground moraine. The elevation levels in the boundaries of modern-day Bielsk fluctuate between altitudes of 135 and 155 m AMSL. The lowest-lying areas are found in the valley located between the Biała and Lubka Rivers. The highest spot is located in the area of the main square and principal church. In areas surrounding the nearby streams and rivers there existed a boggy section of terrain which was not settled. This was divided up into meadows, gardens or fallow lands, and sometimes the occasional tannery, which needed large quantities of water when processing their leather products. The plan clearly reveals the lack of residential building in that area, especially on the western shore of the Biała River. This was also true for the area surrounding the Lubka River. Bielsk between the middle of the sixteenth and the first half of the nineteenth century saw little to no territorial expansion – a phenomenon noticeable on nineteenth-century town plans. It was only to evolve and expand in later years – and here mainly in a southern and northern direction.

Bielsk's hydrographic network is comprised of several watercourses. The Biała River, being the left tributary of the Orłanka River, which constitutes the left tributary of the Narew, played a major role. This was not a large waterway, and definitely could not be used to transport goods. The plan depicts its course, which was reconstructed based on the main trajectory taken from nineteenth-century maps and plans, hypothesizing on the basis of old river beds located in the area (visible on the 1834 plan). The Lubka River, once originating to the southwest of the town, acts as a tributary to the Biała. It flowed through its southern outskirts, turning in a northeastern direction in the area once occupied by a gord. Another tributary of the Biała River was a brook called the Seret, whose course began to the west of the town, subsequently to flow through forest, through which it cut the road to Brańsk, only later to emerge at the level of the eighteenth-century Poświęcińska Street (known today as Poświętna Street) and carried on in an eastward direction, crossing the trajectory of Kondratowska, Litewska and Hrycowska Streets. Here its course is presented according to the Bielsk plan of 1830.²³ The Seret subsequently flows into the pool that is reached by Stare Miasto Street. Beneath the Seret there flowed another stream,²⁴ which combined in this pool and together created a stream that enters into the River Biała. On the eastern bank of the Biała River two additional streams, acting as its tributaries could be found. One crossed Dubicka Street at its northern section, the other flowing across the street's southern stretch. The Bielsk area also featured pools and ponds of various sizes but pinpointing their exact location and number based on surviving sources is simply not possible. Nineteenth-century maps illustrate four sizeable pools located to the north of the parish church. These bodies of water are also mentioned in the subject literature relevant to the topic.²⁵ Records of official visits to the Bielsk church elaborate that the digging of some of them was commissioned in the second half of the eighteenth-century.²⁶ It is also possible that a pool or multiple ponds existed in the area occupied by the old gord, as they

²³ One can observe on the plan from the inter-war period a different course taken, something that obviously does not mean that this is how it appeared originally; MPwB, catalogue no. H/D/240, sheet 5. This stream is marked as: channel 'M', I am most grateful to the former director of MPwB Mr. A. Lechowski and the former head of the Bielsk Podlaski branch Ms. A. Dębowska for allowing access.

²⁴ This is equally visible on the interwar plan. It was there marked as: central channel 'P'; MPwB, catalogue no. H/D/240, sheet 5.

²⁵ Bukowski, Michaluk, *Przywileje*, p. 22.

²⁶ Archiwum Archidiecezji Białostockiej, *Kopia wizyty dekanalnej w kościele bielskim z 1804 r.* [without catalogue number].

are all mentioned in an inventory registry of 1779.²⁷ However, their existence in the sixteenth century cannot be confirmed, which is why they have not been included on the plan. Royal pools existed in the environs of Dubicka Street and the road leading to Stanisławowo; however we do not know their precise location, hence they have not been included in the plan.²⁸ The existence of others that feature on nineteenth century maps is even more doubtful, which is why they also have been omitted from our visual representation of Bielsk.

The Bielsk settlement was formed and developed initially on the marshy terrain located by the Biała and Lubka Rivers, reaching out on the northern side all the way to where the main square is today located. Archeologists claim that the beginnings of Bielsk are tied to a settlement that existed in the tenth century around the area of today's Zamkowa Street.²⁹ Not far from the settlement a gord was constructed, located by the Lubka River. It was probably erected by Ruthenian princes in the period of the twelfth–thirteenth century.³⁰ The first mention of the town of Bielsk appears in the Galician-Volhynian Chronicle³¹ in the year 1252. According to archeological findings, the Bielsk gord was actively used for only quite a relatively short period of time, because not too long after its creation it burnt down in a fire.³² To the north of the gord an outer bailey was formed. To the east of the gord, on both sides of present-day Zamkowa Street (which is omitted from the plan) there was a settlement which functioned during the medieval era. It lost its status when a castle was erected in a different location, and when the area was declared an vogtship in 1430.³³ Further settlements developed in a northern direction, following the course of the Vilnius Road (in the sixteenth century known as Wielka Street and Litewska) and the later developed street of Stare Miasto Street (present-day Jagiellońska Street). Over time many new settlements formed in these areas, and would later become various districts of Bielsk itself.³⁴

Researchers into Bielsk's history propose that after Bielsk was occupied by the Lithuanians in the mid-fourteenth century all the functions performed by the gord were taken over by the wooden castle herein erected.³⁵ This was due to the constant threat posed by the Teutonic Order.³⁶ Initially it was believed that the castle was erected on the site of the old gord, nowadays falsely named *Góra Zamkowa* (Castle Hill).³⁷ This theory has been disproven by archeological findings.³⁸ Jerzy Zieleniewski ventured forth a hypothesis that the Lithuanian castle was located between the streets visible on the plan: Zalubecka, Zamkowa and an unnamed street (present-day G. Narutowicza Street, in the seventeenth and eighteenth centuries Podzamecka Street).³⁹ This theory has neither been confirmed, nor disproven

²⁷ *Описание Руконсаго*, vol. 4, p. 77.

²⁸ MPwB, catalogue no. H/D/506.

²⁹ Many artefacts reaching back chronologically from the tenth to the thirteenth century have been found there. *Informator archeologiczny. Badania. Rok 1976*, Warsaw 1977, p. 175; J. Maciejczuk, *Sprawozdanie z badań i nadzorów archeologicznych w Bielsku Podlaskim na ulicy Zamkowej 26 VI-15 IX 1997*, WUOZwB, TS; K. Mazuruk, *Stanowiska archeologiczne Bielska Podlaskiego na tle historiografii*, "Białoruskie Zeszyty Historyczne", 2004, no. 21, pp. 135–136. In the sixteenth century more than likely no street existed there at all. It is only in a document of 1610 that streets without names start to be mentioned. This document set the *Nowa Osada Podzamecka* along its length. MK, XVIII, 64, pp. 569–570.

³⁷ This thesis was advanced by the nineteenth-century researchers J. Jaroszewicz and F. Pokrowski. Jaroszewicz, *Miasto Bielsk*, p. 103; Ф.В. Покровский, *Археологическая карта Гробненской губернии, Вильна 1896*. Repeated in later subject literature.

³⁸ W. Szymański, *Komunikat o wynikach sondażowych badań*, p. 502.

³⁹ J. Zieleniewski to confirm his hypothesis has advanced several fundamental arguments. The register of the Volog Reformations recalled that Wielka Street ran from the town market square to the castle. This ended at the junction with Zamkowa Street, while the extension of Wielka Street was Zalubecka Street. Together with the unnamed street (present-day G. Narutowicza

by archeological research something that makes for an exact recreation of the built-up area difficult.⁴⁰ Given the premises adopted by the AHP series whereby only confirmed elements may be marked, this castle is not located on the plan herein presented. In the sixteenth century, due to political changes, such as the Polish-Lithuanian Union, the eradication of the Teutonic threat, and the assimilation of Mazovia into the Polish Crown, the castle's function changed. It stopped serving a defensive purpose, instead becoming the headquarters of local authorities and often housed monarchs.⁴¹ There are no surviving accounts as to what the castle looked like, the only thing known is the fact that it was comprised of two parts- an upper and lower castle. It ceased to exist on the 22 July 1564, when 'a lightning bolt struck down the upper castle with a flame so potent, that in two hours not just the upper, but the lower section were reduced to mere ash; a terrible flame which the king [Sigismund August – M.S.] could only helplessly survey from the safety of the stables, mounted upon his steed.'⁴² It should be added that, with the exception of the castle, Bielsk was in no other way fortified.

Bielsk gained municipal rights in a staggered and gradual manner.⁴³ The first stage being the bestowing of a hereditary vogtship on a certain Andrzej on the 2 January 1430 by the grand duke of Lithuania, Witold. This privilege meant that the only groups allowed to settle in Bielsk were Catholic Poles and Germans, although no harm was to be done to the Ruthenians native to this region.⁴⁴ This document introduced two legislative orders into Bielsk. Due to these circumstances a new settlement by the name *Miasto Lackie* (Polish Town) was formed in the northern part of Bielsk. This municipal area was populated by both Polish and German inhabitants, and functioned under German Law. The Ruthenian district was located in a part of Bielsk known as *Stare Miasto* (Old Town), and operated under Ruthenian Law. This area in the sixteenth century covered the Stare Miasto Street,⁴⁵ the area surrounding the gord as well as the settlements Podzamecka and Kłopoty,⁴⁶ the latter of which was located to the north of the subsequently erected parish church, continuing along the sixteenth-century Kłopotowska Street, reaching up to Zarynek Street (at present a part of 11 Listopada Street). These two settlements were created to guarantee a stable agricultural and service base; one that could provide for the Bielsk castle.⁴⁷

In the November of 1495 the ruler of the Grand Duchy of Lithuania Aleksander Jagiellończyk granted Bielsk Magdeburg rights, an act of legislation which applied to all ethnic groups living within the municipal bounds. During different periods many municipal villages were to be formed: Augustowo,

Street) they created a spindle-shaped square on which the castle was to stand. Here was also to have run the routes leading to Brześć Litewski, Brańsk, Grodno and Suraz. According to Zieleniewski, a market square was to have been situated on the opposition side to the junction of these roads, one that was later to be abandoned and turned into settlement. In the 1980s J. Zieleniewski conducted 'geotechnical work by means of drilling', which was to have confirmed the existence of the castle in the discussed place; idem *Bielsk Podlaski – topografia historyczna*, p. 10; idem, *Sredniowieczny zespół osadniczo-obronny w Bielsku Podlaskim*, pp. 117–119, 124–125. The employment of this method and the conclusions drawn by someone who is not an archaeologist raises doubts as to the appropriate interpretation of the final results, ones that could have been willingly subject to the earlier formulated hypothesis as to the location of the castle. Nevertheless this does not alter the fact that in the light of the register of Vokok Reform for 1563 such a localisation is indeed highly probable; see MPwB, catalogue no. H/D/506.

⁴⁰ K. Mazuruk, *Stanowiska archeologiczne Bielska*, pp. 137–138; K. Rusin, *Sprawozdanie z nadzoru archeologiczno-konserwatorskiego nad pracami ziemnymi związanymi z budową kanalizacji sanitarnej i deszczowej na ul. Narutowicza i Kazanowskiego w Bielsku Podlaskim w 1996 r.*, WUOZwB, TS, pp. 2–7.

⁴¹ The residence of rulers in Bielsk is confirmed by their published itinerary. See M. Sierba, *Roads* in this volume, footnote 16.

⁴² *Zbiór dziejopisów polskich*, vol. 1, p. 561. This information is not accurate for on the 10 July the king left Bielsk and headed for Parczew. Bukowski, Michaluk, Przywileje, p. 18.

⁴³ Bielsk already prior to the obtainment of Magdesburg rights was in relation to its economic structure municipal in character. Despite this, and here like so many similar settlements in the Grand Duchy of Lithuania, up until the moment of gaining municipal rights it was subject to ducal law.

⁴⁴ Bukowski, Michaluk, *Przywileje*, pp. 67–69.

⁴⁵ Archaeological research has shown that this part of Bielsk was inhabited at least from the fifteenth century. In the southern part of the Old Town have also been found the oldest archaeological remains. Z. Misiuk, *Badania archeologiczne w Bielsku Podlaskim na ul. Poniatowskiego 14 przeprowadzone we wrześniu 2003 r.*, "Białoruskie Zeszyty Historyczne", 2005, no. 23, p. 169.

⁴⁶ According to archaeological research the area of the settlement at Kłopoty was inhabited from at least the second half of the fourteenth century. L. Pawlata, *Badania archeologiczne na starym mieście w Bielsku Podlaskim na tle wyników dotychczasowych badań*, "Biuletyn Konserwatorski Województwa Podlaskiego", 2015, no. 21, p. 271.

⁴⁷ Bukowski, Michaluk, *Przywileje*, p. 18.

Stryki (Młodzianowo or Stryki interchangeably in the sixteenth century), Szastały (in the sixteenth century Koszczyno or Szastały), Widowo (in the sixteenth century known as Stanisławowo, in the seventeenth century Widowo or equally Stanisławowo),⁴⁸ Parcewo (Piotrowo in the sixteenth century) and Spiczki.⁴⁹ The municipal laws also extended to a leather tanning settlement located on the other bank of the Biała River, known as Dubicze.⁵⁰ The so-called *people of Kolyenka* or *Kolyenkowicze*⁵¹ also fell under this legislature. This group was most likely comprised of individuals of Ruthenian provenance, falling somewhere between the peasantry and the gentry in their social ranking. Their place of origin is unknown, but during the Voloč Reform they were most likely instructed to move to the area known as *na Kolence*, which is located at the very top of the plan, straddling the Wilno Road.⁵² Only the so-called *Podzamecka* settlement was not covered by the document, which was transformed into an area of starosts *jurydyka* with its own vogt.⁵³ Aleksander Jagiellończyk approved in this document the freedom of access for the local townsfolk to the surrounding forests, in an area ‘reaching out in the direction of Grodno, all the way to the banks of the Narew River, stretching out towards Brześć Litewski up to the river named Dobra Woda,⁵⁴ and in another direction reaching the village of Burycze.’⁵⁵ This municipal ring of influence stretched from the village of Koszele located in the southeast, to the Krzywa⁵⁶ Brook in the east and the *Wierhuszewka* Stream, in 1501 known as the *Wojtuszkówka*.⁵⁷ From the northwestern, western and northern sides the municipal boundaries were marked by the following villages: Niewino Stare (Niwinowo in the sixteenth century), Malinowo (Malinowo-Żółtki in the sixteenth century), Łubin Kościelny (Łubino in the sixteenth century), Pietrzykowo-Wyszki, Bańki and Hryniewiczze.⁵⁸ Between 1499 and 1501 Aleksander Jagiellończyk consolidated, legitimised and expanded the municipal rights of Bielsk.⁵⁹

A major factor that influenced the shape of urban development both before and after the Voloč Reform was the funding and location of places of worship in Bielsk. All places of worship that existed

⁴⁸ In subsequent parts of the commentary the form Stanisławowo will be used and not Widowo, to enable consistency with the plan to be maintained. In Stanisławowo was situated a demesne that constituted an income for the Bielsk vogt. In the inspection of 1576 mention is made of six vogt voloks. *LWP 1570, 1576*, p. 31. Prior to 1614 this was the property of Maciej Szepliński, from whom it was bought in 1614 by Jan Lubmajer. From then onwards the land was to go under the name Lubmajerowizna. E. Bończak-Kucharczyk, J. Maroszek, *Widowo*, <http://www.ogrodowy.minigo.pl/index.php/article/show/id/235> [accessed: 27 11 2019].

⁴⁹ All the Bielsk municipal villages are to be found on the main map. They do not appear on the plan as a result of their distribution at distance and in various directions from Bielsk. This would have required a change in scale resulting in the town plan itself being difficult to interpret. See M. Gochna, *Character of settlements* in this volume.

⁵⁰ Bukowski, Michaluk, *Przywileje*, p. 23. Researchers into the history of Bielsk also mention the tanning community Zastawie, which was to have been situated in the southern part of the present-day Dubicze Street. Archive research has not revealed a settlement of that name in the sixteenth century and consequently it has not been marked on the annotated plan. J. Zieleniewski was the first to write about the existence of a settlement of such a name, but he did not include its location on the plan of the town he devised for 1563. He did mark on this plan though Zastawiecka Street. The settlement at Zastawie itself only occurs on his plan of Bielsk of the eighteenth century. J. Zieleniewski, *Powstanie i rozwój*, p. 64; plan [1] *Bielsk Podlaski. Układ przestrzenny w 1563 r.*; plan [2] *Bielsk Podlaski. Układ przestrzenny w XVIII wieku* after p. 328. Around the year 1563 a street of such a name did not exist. This was the southern part of the present-day street Dubicze Street, which in the register of Voloč Reforms of 1563 is not named. J. Zieleniewski presumably drew his information from the inventory of 1779; *Opisanie Руконсаго*, vol. 4, pp. 78–81. The inventory of 1772 makes no mention of this street or settlement. BUWil., catalogue no. F4-A1661. On the town plan of 1834 there is also no Zastawiecka – only Dubicka Street. NGAB, Grodno, f. 126-1-105. J. Jaroszewicz mentions this street in his description of the town of 1845. Jaroszewicz, *Miasto Bielsk*, p. 134.

⁵¹ Bukowski, Michaluk, *Przywileje*, pp. 73–76.

⁵² Idem, pp. 23-24. See Zieleniewski, *Powstanie i rozwój*, pp. 64–65; plan *Bielsk Podlaski. Układ przestrzenny w 1563 roku*.

⁵³ Zieleniewski, *Powstanie i rozwój Bielska*, p. 69; Jaroszewicz, *Miasto Bielsk*, p. 147.

⁵⁴ This was the right-bank tributary of the Nurzec at the village of Dobrowoda to the east of Kleszczele. Bukowski, Michaluk, *Przywileje*, p. 74.

⁵⁵ A non-existent village, whose land was combined during the Voloč Reform with the village of Kleniki, subsequently Zyguntowa – at present the village of Klejniki. D. Michaluk, *Z dziejów Narwi i okolic. W 480 rocznicę nadania prawa chełmińskiego 1514-1994*, Białystok-Narew 1996, p. 19.

⁵⁶ According to Z. Romaniuk this was an earlier name for the River Orlanka. *Przywileje wielkoksiążęce i królewskie dotyczące Bielska Podlaskiego z lat 1430-1512*, ed. Z. Romaniuk, [in:] *Bielsk Podlaski. Studia i materiały*, p. 260. J. Zieleniewski considers the village of Krzywa to be located on the right bank of this brook. Zieleniewski, *Powstanie i rozwój Bielska*, p. 52.

⁵⁷ Bukowski, Michaluk, *Przywileje*, pp. 73–76, 88. According to Z. Romaniuk today this is a ditch to the south of the village of Kotły. Idem, *Bielsk w latach 1366–1513 (na tle dziejów regionu)*, [in:] *Bielsk Podlaski. Studia i materiały*, p. 24.

⁵⁸ J. Wiśniewski, *Osadnictwo wschodniej Białostocczyzny*, pp. 16–17.

⁵⁹ Bukowski, Michaluk, *Przywileje*, pp. 79–88.

in the sixteenth century have been marked on the plan. The first Orthodox church was most likely erected within the perimeter of the gord and was later relocated to Bielsk castle. This place of worship is associated with the Orthodox church of the Nativity of the Blessed Virgin Mary, which was most likely relocated in 1562 from the castle to the Old Town, where an Orthodox church bearing the same name exists to this day.⁶⁰ Next to the temple there was most likely also a graveyard.⁶¹

Before the year 1527 an Orthodox monastery and church complex were created on Zamkowa Street (the present-day intersection of the Zamkowa and J. Poniatowskiego Streets).⁶² The monastery grounds encompassed a graveyard and its remains have been found in a lane of present-day J. Poniatowskiego Street as well as in the area to the north as equally the south of this street.⁶³

The most important site of Orthodox worship in the town was the church of St. Michael, which was later given the designation The Transfiguration. The first verifiable mention of its existence comes from the year 1560 when it was granted two voloks of land in Stryki.⁶⁴ It was placed in the southern part of Wielka Street on the east-facing frontage. Its origins, however, were most probably before the year 1560, during the process of the actual municipal organization of this part of the town. It is also known that in the second half of the sixteenth century it functioned as a cathedral church and was the principal Orthodox church in town. Adjacent to the church existed a hospital which in the 1580s was additionally granted 4 voloks of land in the starostvillage of Gredele (Hredele in the sixteenth century).⁶⁵

The Holy Trinity Orthodox church appears for the first time in documents in the second half of the sixteenth century. It was located immediately on the intersection of Litewska Street and *Droga do Młynów*, referred to as *Wypustowa* in the eighteenth century (present-day Widowska Street). It was separated from the aforementioned crossroads by a single lot. Confirmed has been its existence in the 1560s.

The last Orthodox church, the church of the Resurrection was to have been relocated to Bielsk from its original placement in the village of Lewki. It was placed on a triangular square, located at the junction of the sixteenth-century streets Dubicka and Łoknicka Streets on the right bank of the Biała River. During the VoloK Reform the church was most likely moved to its present-day location the crossroads of the sixteenth-century streets: Brzeska and Orłańska.⁶⁶

Catholic places of worship also had an important influence on the shape and direction of urban development. The parish was presumably founded at the latest in 1430 in order to fulfill the spiritual needs of Catholic settlers.⁶⁷ The first existing source information regarding the parishes of the Nativity

⁶⁰ Idem, pp. 18, 20. (see there also the subject literature and discussion on the subject of the transfer of the Orthodox church of the Nativity of the Blessed Virgin Mary).

⁶¹ WUOZwB, catalogue no. 310/A, M. Sobczak, *Sprawozdanie wstępne z badań wykopaliskowych w Bielsku Podlaskim. Działki 2993 i 3031/6 przy ul. Kopernika, lipiec 2004*, TS; WUOZwB, b. catalogue no., D. Krasnodębski, J. Mizerka, *Sprawozdanie z badań archeologicznych-nadzorów przeprowadzonych w Bielsku Podlaskim na działce 3004/1 (ul. Poniatowskiego)*, TS.

⁶² A. Mironowicz, *Podlaskie ośrodki*, p. 103. G. Sosna and D. Fionik are of the view that the Orthodox church of St. Nicholas could have existed before the year 1430, for later a monastic order was founded there. Idem, *Dzieje cerkwi w Bielsku Podlaskim*, p. 97. However, this hypothesis does not find its confirmation in the sources. The monastery and Orthodox church that belonged to it no longer exist – the church burnt down in 1941. At the junction of the present-day of Zamkowa and Poniatowskiego Streets a chapel-shrine has been placed. A secondary school is housed in what remains of the monastery property. *ibidem*, pp. 115–117.

⁶³ WUOZwB, b. catalogue no., D. Krasnodębski, J. Mizerka, *Sprawozdanie z badań archeologicznych-nadzorów przeprowadzonych w Bielsku Podlaskim na działce 3004/1 (ul. Poniatowskiego)*, TS; Z. Misiuk, *Badania archeologiczne w Bielsku*, pp. 163–167.

⁶⁴ LMAVB, f. 41-394, p. 851.

⁶⁵ Idem; KWiD, catalogue no. 2816, ff. 19-23v.; D. Fionik, G. Sosna, *Dzieje cerkwi w Bielsku Podlaskim*, pp. 21, 121–122; Jaroszewicz, *Miasto Bielsk*, p. 115; Mironowicz, *Podlaskie ośrodki*, p. 102; Bukowski, Michaluk, *Przywileje*, p. 20.

⁶⁶ Bukowski, Michaluk, *Przywileje*, p. 25; Jaroszewicz, *Miasto Bielsk*, p. 106. On the Church square next to the junction of Dubicka and Łoknicka Streets was a cemetery. In 1993 during the course of archaeological digs several graves were discovered. MPwB, Dział Archeologii, catalogue no. B/627, *Karta archiwalna stanowiska no. 38 w Bielsku Podlaskim*; K. Mazuruk, *Stanowiska archeologiczne Bielska*, p. 140. Following the transfer of the Orthodox church to its present-day location the square was used as a market place for the tanning settlement at Dubicze. Bukowski, Michaluk, *Przywileje*, p. 25. As an aside is the matter of the adoption of the Union of Brześć by the Bielsk Orthodox churches, something which lies outside the plan's time scope. The current topic is most complex and has already been covered in the relevant subject literature. See: G. Sosna, D. Fionik, *Dzieje cerkwi w Bielsku Podlaskim*; J. Maroszek, *Katolicy – unicy w Bielsku Podlaskim w latach 1596–1839*, [in:] *Bielsk Podlaski. Studia i materiały*, pp. 31–82.

⁶⁷ Z. Romaniuk is of the view that a church existed more than likely already before 1430 even though this cannot be confirmed in the sources. Z. Romaniuk, *Bielsk w latach 1366–1513*, p. 18.

of the Blessed Virgin Mary, and of St. Nicholas can be traced back to a later date – 1446.⁶⁸ The church was placed in the same location as a present-day basilica bearing the same name. The original founding act was lost as early as the fifteenth century. In 1492 the Grand Duke of Lithuania Aleksander issued a special document in which he affirmed the parish's rights and possessions. The funding bequeathed encompassed, amongst other things, two plots within the town. On the first stood a church and adjacent graveyard, and additionally a school and vicar's residence, on the second, a manor presbytery surrounded by gardens.⁶⁹ Along with the granting of vogtship privileges in 1430 and the founding of the parish church, a marketplace was created in the vicinity of the church, which later during the Vok Reform was measured and transformed into a town square, with a town hall and stalls in the centre. The eastern frontage of the square was marked out by a street which in the sixteenth century was known as Wielka, and in subsequent years called Szeroka and Rynkowa, and which constituted one of the town's main communication arteries. This route was further extended by a street called Litewska, which further down the line became the Wilno Road.⁷⁰ The square became a hub of trade and administration services in Bielsk, which influenced the depreciation in importance of the old castle settlement. It is important to note that the area located to the north of the parish church was under Church ownership and jurisdiction referred to as Poświętne.⁷¹

On the eastern side of Litewska Street, to the south of the Seret Brook existed property belonging to the hospital and the chapel of St. Martin's.⁷² A shelter for the poor was definitely already functioning in 1521.⁷³ Both the shelter and the chapel were dissolved sometime between the late seventeenth and early eighteenth centuries.⁷⁴ The plan omits another Catholic church, located at the junction of Knyszyńska and Litewska Streets. In 1632 a Carmelite monastery, along with the area falling under its jurisdiction was founded in the same location.

The biggest factor that influenced the spacial layout of Bielsk and its suburbs was the aforementioned Vok Reform. This was conducted according to the 'Vok Act' of 1557.⁷⁵ The measuring of the Bielsk estate was to have commenced as early as 1540, when this was in the hands of Queen Bona.⁷⁶ The outcomes of which are unknown to this day. During the reign of King Sigismund II August the measurements were taken twice, both within the municipal boundaries proper, as well as the surrounding areas. In 1560 this process was initiated by Stanisław Dziewiałtowski Skoczek. He conducted his work in a manner that did not fully adhere to the Vok Act and the instructions of the Grand Duke, as a result infringing peasant rights.⁷⁷ Consequently he was removed from his administrative role. His place was taken by Andrzej Dybowski, who was assisted by Adam Pilchowski.⁷⁸ The measurement process finished in 1563.⁷⁹

⁷⁹ MPwB, catalogue no. H/D/506.

It appears that as a result to the aforementioned reform the layout of Bielsk was arranged in accordance with the premise of roads running from south to north. The town's main axis was Wielka and Litewska Streets. Along these streets, or in their near vicinity were to be placed the most important points on the town map, such as the centrally positioned Main Square, the castle located on the southern border of the town, as well as the various religions churches. The plan does not feature a detailed breakdown into individual urban lots, and here simply because the preserved research base do not provide enough insight into the issue. Hypothetical for the sixteenth century is also any demarcation into plot users or non-users of an agricultural, rural, horticultural, pastoral or fallow nature. The buildings were most probably located 'here and there' – a phenomenon most likely influenced by the lay of the land. This can be seen when looking at a plan for the year 1834 and consulting eighteenth-century descriptions of the town. There is a stark absence of regularity. Streets were of varying lengths and intersected each other at different angles, consequently a fixed axis or point of reference was clearly absent.

The VoloK Reform resulted in the measurement and division into voloks of the municipal area itself. Bielsk had virtually no agricultural areas within its boundaries, relying instead on the lands located in the surrounding municipal villages – ones enjoying the status of full-privileged parts of the town. In total 381 voloks in all were counted: 164 in the village of Augustowo, 43 voloks in Stryki, 29 voloks in Szastały, 74 voloks in Stanisławowo, 45 voloks in Parcewo and 16 voloks in Spiczki.⁸⁰ The town itself had 121 morgens and 5 rods of land.⁸¹ These reforms changed the layout of the municipal villages, turning them into linear settlements. Additionally, the layout of arable lands was adjusted. After the VoloK Reform was implemented Bielsk became one of the centres in the Podlasie Voivodeship that had the most land at its disposal. The municipal villages were located at a fair distance from the Biała and Orłanka Rivers but this did not mean they were cut off from the water supply. They were reached by streams of various sorts and additionally could boast fish ponds.

The available sources are insufficient for us to appraise the changes that occurred to Bielsk's layout as a result of the VoloK Reform. Jerzy Zieleniewski believes that before the VoloK Reform Wielka Street hosted a substantial marketplace, which extended from the castle in a northward direction. During the reform it was narrowed and turned into a street. The reform also targeted and closed down marketplaces located by the town's churches. The only trading plot to survive was the market used by the settlement at Dubicze in their tannery trade, located where the Orthodox church of the Resurrection had originally stood. In place of many trading plots a sizeable town market square was created, rectangular in shape and located to the east of the parish church.⁸² This square has survived and still exists to this day. The eastern side of the square corresponds to the course of Wielka Street. In 1563 here stood the town hall and stalls.⁸³ Presumably also here was situated the town scales.

It is also likely that, as a result of the VoloK Reform, plots of land had been measured and were divided anew, which would have helped regulate and systemize the layout of real estate located within the town boundaries, however the irregular forms of eighteenth- and nineteenth-century buildings cast doubt upon this theory. During the reform all agricultural buildings located in the vicinity of the castle were pulled down and relocated to the Hołowiesk demesne that was located not far from Bielsk in a southeastern direction. The starost's castle residence remained in place until it too was relocated to Hołowiesk following the 1564 fire. Here a Renaissance-style palace and garden complex was created, complete with an adjacent agricultural section, this located to the south of it.⁸⁴ How long the palace

⁸⁰ This figure does not include the 10 voloks of Bielsk Orthodox church property at Stryki; Kopicjana, 10, pp. 33–37; J. Maroszek, *Katolicy – unici*, pp. 72–73. In 1565 Sigismund August confirmed the expanse of Bielsk land by 359 voloks. Bukowski, Michaluk, *Przywileje*, pp. 95–97. This figure did not take into consideration voloks free of duties.

⁸¹ MPwB, catalogue no. H/D/506. According to later inspections the town possessed 106 morgens and 7 rods of property and 12 morgens of land located beyond municipal fields that was taken into cultivation. *LWP 1570, 1576*, pp. 29–31; *LWP 1602*, pp. 63–66.

⁸² Bukowski, Michaluk, *Przywileje*, p. 25; *Opisanie Rukopnago*, vol. 4, p. 61; Zieleniewski, *Powstanie i rozwój Bielska*, pp. 62, 64–65, 69–70.

⁸³ MPwB, catalogue no. H/D/506. E. Narolska, J. Jaroszewicz and H. Kosieradzki are of the view that a wooden town hall could have been in existence in Bielsk in the fifteenth century though they do not quote any source references; Jaroszewicz, *Miasto Bielsk*, p. 129; H. Kosieradzki, *Bielsk Podlaski*, p. 72; E. Narolska, *Ratusz w Bielsku Podlaskim – dzieje, przeobrażenia i konserwacja*, "Biuletyn Konserwatorski Województwa Białostockiego", 1997, no. 3, pp. 98–99.

⁸⁴ According to Zieleniewski then also was to be eradicated the royal stables at Zarynek (present-day 11 Listopada Street). Zieleniewski, *Powstanie i rozwój Bielska*, pp. 64, 69–70. However, there is no certainty as to when this happened,

stables, located opposite the St. Nicholas monastery complex and mentioned in the VoloK Reform register, existed is unknown.⁸⁵

Records of municipal privileges granted at the end of the fifteenth and beginning of the sixteenth centuries mention a couple buildings which were presumably erected in Bielsk at that time: the vogtship baths, municipal public baths, shambles, vogtship taverns, waxmaker's shops and fabric finishing workshops.⁸⁶ Sources from the end of the fifteenth century and the first half of the sixteenth century also mention that Bielsk had a customs house.⁸⁷ Unfortunately attempts at locating these buildings and marking them on the plan have been – bar the shambles –unsuccessful.

Jurydyka was a fundamental part of the urban expanse. One of the first was the Podzamecka settlement, which was subordinate to the vogt. It was located in the environs of the castle on the western frontage of an unnamed street (present-day G. Narutowicza Street)⁸⁸ and the southern frontage of Zamkowa Street.⁸⁹ Equally the inhabitants in fragments of both frontages of Grobelna Street and the northern part of Stare Miasto Street were subordinate to the vogt.⁹⁰ When it was created in 1495, it was not covered by the municipal rights granted by Aleksander Jagiellończyk.⁹¹ In 1565 the existence of 36 lots was recorded.⁹² The year 1610 saw the creation of a street that branched off Zamkowa Street in a southward direction, starting around the level of St. Nicholas' monastery. On both sides of the then-nameless street (at present a part of Zamkowa Street), in the section located beyond the Lubka River created was a settlement called Nowa Osada Podzamecka, but this location has not been included in the aforementioned plan.⁹³ Poświętne constituted the second *jurydyka*, which was located to the north of the parish church and featured many plots and a taverns. This *jurydyka* most likely came into existence in 1430, and most certainly existed by the year 1492, but the clergy had to wait until Sigismundus I the Old gave his consent for serfs to be settled there.⁹⁴

Bielsk's layout did not change fundamentally after the VoloK Reform and survives in more or less the same configuration to this day.⁹⁵ Consequently we are able to locate almost all contemporary streets with reasonable ease in relation to the street network in existence in 1563. Obviously these routes were no way identical, as the widths of some street and the course of certain of their sections may have varied. The streets on the plan have been named accordingly to the designations used for

where their exact location was or even if they existed there altogether. Given these controversies they have not been marked on the plan.

⁸⁵ KWiD, catalogue no. 2816, f. 19v. MPwB, catalogue no. H/D/506.

⁸⁶ Bukowski, Michałuk, *Przywileje*, pp. 73–88.

⁸⁷ J. Maroszek, *Dzieje województwa podlaskiego*, pp. 266–267; Z. Romaniuk, *Bielsk w latach 1366–1513*, p. 22.

⁸⁸ Unfortunately the sixteenth-century sources do not provide us with any information about buildings along the length of this street, hence no such constructions have been included on the plan. It is quite possible that in 1563 the entire western frontage was made up of the castle which could have been situated there.

⁸⁹ The grounds along the southern frontage of Zamkowa and Grobelna Streets on the section from Zalubecka Street to the crossing on the River Biała equally belonged to the Podzamecka settlement; see LWP 1570, 1576, pp. 41–42; LWP 1602, p. 67. The privileges of the Podzamecka settlement have been confirmed many times. Jaroszewicz, *Miasto Bielsk*, p. 147; *Onucanie Rukopnago*, vol. 4, p. 65. The inspection of 1664 described the area of the old Podzamecka settlement: 'Podzamcze in Bielsk alias Podzamecka Street. Going from the Hołowiesk's manor house to the town there is a street at the stone causeway called Podzamcze of the old settlement. It stretches along one side to the west up to the Lubka Brook, past the Ruthenian Orthodox church of St. Nicolas right up to the junction with the long municipal street known as Zalubcze.' MK, XVIII, catalogue no. 64, p. 569. This was already after the founding of the Nowa Osada Podzamecka (New Podzamecka Settlement), which limited the territorial range of the Podzamecka settlement to the east, about which more below.

⁹⁰ In the register of the VoloK Reform of 1563 there is mentioned in describing the eastern frontage of Stare Miasto Street: 'Here begin the squares of the castle expanse directly under the jurisdiction of the starost, a side street that leads from the old town to the pool.' Here were to have been situated five properties in total: MPwB, catalogue no. H/D/506. Most probably the reference is to the pool at the little bridge over the stream which cut across the nineteenth-century Stare Miasto Street; see Российский государственный исторический архив, Санкт-Петербург, f. 1293-166-10. On the plan analysed Stare Miasto Street ends there.

⁹³ MK, XVIII, 64, pp. 569–570.

⁹⁴ Podlasie II, p. 218; J.M. Szczerba, *Jurydyki i libertacje*, p. 25.

⁹⁵ The remark concerns the area taken up by Bielsk in the sixteenth-eighteenth century, where at a later stage the urban area built on became greater.

the VoloK Reform. With few exceptions if streets do not appear in the relevant documents then they have not been entered onto the plan.⁹⁶

The most important communication axis for Bielsk in the sixteenth century was Wielka Street. This constituted a part of the Wilno Road or Lithuanian High Road running through Bielsk on its way to Grodno and Wilno.⁹⁷ This road was additionally comprised of Litewska Street, an extension of Wielka Street which then turned into the Wilno Road. Today the aforementioned streets are A. Mickiewicza Street in the section branching off the intersection with 11 Listopada Street onwards. To the east of the market square, next to the chapel of St. Martin, leading off from Litewska Street, Hrycowska Street starts its course (present-day Kazimierzowska Street). It headed eastward, after which it turned into a northerly direction, passing by the Seret Brook and going on right the way to *Droga do Młynów*. In this part of Hrycowska Street it corresponds to the course of present-day Orodowa Street up to the crossroads with Widowska Street.⁹⁸

To the north of Litewska Street in an eastbound direction, not far from the Holy Trinity Orthodox church was to be found *Droga do Młynów* (in the eighteenth century Wypustowa Street), the extension to which was beyond the River Biała the road to nearby Stanisławowo. Today this is Widowska Street. Litewska Street went on further from *Droga do Młynów* in a north-east direction, where on both frontages it was accompanied by lots at the rears of which were allotment-field farmland. Already beyond the scope of the plan in an easterly direction there branched from it ‘a small street free to accessing of common pasture and the River Biała,’ beyond which equally municipal properties extended. While in a western direction stretched out ‘the small street of Pluczie [present-day Plutycze – M.S.] towards the fields’, while the further stretch of Litewska Street ‘the small street to the Hryniewice boyars Hryniewicz’, after the crossing over of which were still four municipal properties.

The street Litewska Street forked around the level of the later monastery of the Carmelite Order. The road going in a northwestern direction became Knyszyńska Street – known today as Żwirki and Wigury Street. Beyond the town it stretched on further to *municipal pastures* and here in the direction of Suraz. On a significant part of this street were located measured out lots; on which in 1563 there were still no buildings. There branched off from this street, in a northerly direction, a small street to morgens. An offshoot of Litewska Street in the environs of the junction with Knyszyńska Street was Kondratowska Street (present-day J. Dąbrowskiego Street) which meandered and carried on in a southward direction (present-day Kryniczna Street),⁹⁹ finally reaching the north-western corner of the town square.

Not far to west of the square was, and is still is to this day, the location of the parish church, next to which there could be found an irregularly-shaped yard. From this yard there branched off a street, which sixteenth century sources do not mention by name, but which is later referred to as Poświęcińska Street or Poświętne Street (present-day Poświętna Street). This street branched out in a northwestern direction and carried on until it reached Knyszyńska Street.¹⁰⁰

At the church square another street branched off, this time in a southwestern direction. This was Kłopotowska Street – named after the Kłopoty settlement (today T. Kościuszki Street). It extended to Zarynek Street – today’s 11 Listopada Street. The extension of this street in a western direction constituted part of the Brańsk Road. At Zarynek Street located was a place where the town allotments and

⁹⁶ Cf. Zieleniewski, *Powstanie i rozwój Bielsk, plan Bielsk Podlaski. Układ przestrzenny w 1563 roku*.

⁹⁷ One can find in the sources also the designation: Gościniec Narewski; ZZG, catalogue no. 31, p. 348.

⁹⁸ Noted in 1779 in the north part of this street right up to the road *Droga do Młynów* is a new district called Nowa Osada (New Settlement); *Opisanie Pykonchnago*, vol. 4, p. 71. The name semantically implying that it did not exist in the sixteenth century.

⁹⁹ According to eighteenth-century sources from the southern frontage of Knyszyńska Street and here already behind the Carmelite complex emerged the side street Świnia, which joined up with Kondratowska Street where the latter turned southwards. BUWil., F4 (A-1661), ff. 1-1v; *Opisanie Pykonchnago*, vol. 4, pp. 71-72. It is possible that this small street already existed in the sixteenth century – yet this cannot be confirmed in the source material. Today this is rather a broad pavement (and not a street) joining Kryniczna and Żwirki and Wigury Streets.

¹⁰⁰ The preserved VoloK Reform sources do not make reference to this street for it lay in its entirety on the territory of Church *jurydyka*. A similar situation was noted in the seventeenth and eighteenth century on Podzamecka Street (at present G. Narutowicza Street). On Poświętne stood 15 houses and cottages; MPwB, catalogue no. H/D/506. One may conjecture that in 1563 the Poświętne *jurydyka* was more built-up, hence the placing on the plan of hypothetical buildings.

threshing floors were located.¹⁰¹ Outside the municipal boundaries the Brańsk road forked and carried on in the form of routes leading to, amongst others, Augustowo and Wyszki.

Zarynek Street intersected Wielka Street in the east and carried on in a northward direction and crossed Zalubecka Street, only to carry on towards the south (today forming the southern part of A. Mickiewicza Street and the northern fragment of Wojska Polskiego Street). The eastbound extension of Zarynek Street was Zamkowa Street (present-day J. Poniatowskiego Street),¹⁰² which in the sixteenth century had a slightly more southbound course than it does today, at least in the section located near St. Nicholas' monastery. Zalubecka Street was to cross over the River Lubka and to further carry on to the town of Boćki, which was a part of the Cracow main road. To the south of the River Lubka 'from this to Zalubecka Street the small street went left (in a southern direction) by the Mielnik main road.' This road may be identified in its course with the present-day Dubiażyńska Street. With Zalubecka Street an unnamed street (at present G. Narutowicza Street) joined,¹⁰³ which led to Zamkowa Street. On the expanse remaining between the Streets Zalubecka, Zamkowa and the unnamed street (at present G. Narutowicza Street) could have been the site where, up to 1564, the Bielsk castle was located. Zamkowa Street in the environs of St. Nicholas' monastery deviates from the course of present-day J. Poniatowskiego Street due to the existence of a graveyard located in that very spot.¹⁰⁴ The southern frontage of Zamkowa Street probably did not have any buildings on it.¹⁰⁵

Zamkowa Street at the height of the St. Nicholas monastery is linked to other roads. In a northern direction runs Stare Miasto Street (at present the southern section of Jagiellońska Street). This ends up at the pool and brook that flows into the River Biała.¹⁰⁶ From Wielka Street in the direction of St. Nicholas led Dziechil Street – today M. Kopernika Street. The continuation of Zamkowa Street from the St. Nicholas monastery to the east was Grobelna Street (Hrebena), which headed to the crossing of the River Biała. In the eighteenth century it was called Grobelna or Mostowa Street (the present-day western section of Stefana Batorego Street), crossing over the river on three bridges. In these environs three mills could be found. Over the River Biała Grobelna Street crossed into Brzeska Street, which ran further in the direction of the south-east towards Brześć Litewski. This started at the crossroads with Orłańska Street leading southwards to Hołowiesk and Brześć Litewski (at present R. Traugutta Street).

Not far from the Biała River off Grobelna Street departs in a northerly direction an unnamed street which goes as far as Łoknicka Street. In the inventory of 1779 it is referred to as Zastawiecka Street, whose extension was Dubicka Street (at present one Dubicze Street).¹⁰⁷ The second ran from

¹⁰¹ This is pointed to by sixteenth- and eighteenth-century sources, as equally evidence from archaeological digs. K. Mazuruk, *Stanowiska archeologiczne Bielska*, p. 146; L. Pawłata, *Badania archeologiczne na starym mieście w Bielsku*, p. 263.

¹⁰² This street was not mentioned by name in the Volok Reform register of 1563. The source describes it as 'a street starting off from Wielka Street and going from the Market Square to the castle'; MPwB, catalogue no. H/D/506. Zamkowa Street is noted in the Dziewiałtowski Volok Reform of 1560; BUWil, catalogue no. F5-A41-7932. From where its name appears on the plan.

¹⁰³ The recalled nameless street (at present G. Narutowicza Street, in the seventeenth and eighteenth century Podzamecka Street) more than likely existed in 1563. As equally the register for this year, as a notation from the Dziewiałtowski Volok Reform do not mention this street for in its entirety it lay on the area of the *jurydyka*. Hence the decision to mark the street on the plan but without a name.

¹⁰⁴ Archaeological digs discovered, under the surface of the present-day Poniatowskiego Street and on its southern frontage, human remains from the territory of the former cemetery at the monastery of St. Nicholas. We do not know the exact boundaries of this cemetery wherein the course of the street is hypothetical. The street must have avoided the cemetery from the north to the south; WUOZwB, b. catalogue no., D. Krasnołębski, J. Mizerka, *Sprawozdanie z badań archeologicznych-nadzorów przeprowadzonych w Bielsku Podlaskim na działce 3004/1 (ul. Poniatowskiego)*, TS; Z. Misiuk, *Badania archeologiczne w Bielsku*, pp. 163–167.

¹⁰⁵ Archaeological digs conducted on the present-day property at Poniatowskiego Street 14 show that in the sixteenth century this was boggy ground that had material from burnt down buildings scattered over it (possibly from the burnt down castle or following the fire of 1591). It was inhabited only in the seventeenth century. *ibidem*, pp. 167–171.

¹⁰⁶ See footnote 90 above.

¹⁰⁷ The name Dubicka Street in the Volok Reform register of 1563 only referred to the north part of present-day Dubicze Street. Its description has its start from the royal pools on the River Biała; MPwB, catalogue no. H/D/506. This term related presumably to the mill pond on the river Biała at the Sikinin mill, possibly on the south or north of the road leading to Stanisławowo were to be found water bodies (pools). On the map of Bielsk of 1834 visible is a pool on the north frontage of the road leading to Stanisławowo. However, one can also see a pool at the end of the stream that cuts across the northern part of present-day Dubicze Street; NGAB, Grodno, f. 126-1-105.

a triangular plot, where up until the time of the VoloK Reform was to be found the Orthodox church of the Resurrection, to the street leading to Stanisławowo (at present Widowska Street). From the eastern tip of the aforementioned plot ran off Łoknicka Street leading to the village of Łoknica (at present Warzywna Street). While from the northern tip of the plot two roads depart, one towards the River Biała, this being an unnamed small street (at present the eastern section of Kazimierzowska Street), while the second is the already mentioned Dubicka Street. From Dubicka Street several smaller back streets branch off, which lead down to the River Biała.¹⁰⁸

Problematic was the precise locating of a street unnamed in the VoloK Reform register of 1563. 'A new street beyond the royal pools'.¹⁰⁹ It was situated on the eastern bank of the River Biała. It was not possible to establish the course of the back street Krzyżowa, which according to the note from the Dziewiałtowski VoloK Reform was to have been located near to the Orthodox church of the Resurrection.¹¹⁰ It is possible that it was simply removed or changed location.

On the map Pieski Street has not been located, for there was no certainty as to its situation or course. It was located in the environs of Dubicka and Łoknicka Streets.¹¹¹ On the plan cannot be found the street that ran along the western edge of the town and which connected Knyszyńska Street with the road to Brańsk. Jerzy Zieleniewski marked its trajectory in his reconstruction of Bielsk in 1563 and the eighteenth century, naming it the Brańsk Highway (present-day al. Piłsudskiego).¹¹² However, this street is not mentioned in sixteenth century sources.¹¹³ The existence of other streets, side streets, tracks and paths is quite likely but they have been omitted by sixteenth century documents, as the role they played was strictly in terms of communication and access routes they did not have any homesteads on them.

Bielsk additionally had various objects of economic and trade activity. Five mills are marked on the plan. Three of them were municipal property, with the other two belonging to the starost. The first three of these mills (Sieheniewicz, Ożar and Lihy) were located next to bridges that crossed the Biała

¹⁰⁸ BUWil, catalogue no. F4-A1661; BUWil, catalogue no. F5-A41-7932; KWiD, catalogue no. 2816, pp. 19–23v; MPwB, catalogue no. H/D/506; *Opisanie Rukopnago*, vol. 4, pp. 57–112.; cf. Bukowski, Michaluk, *Przywileje*, pp. 15–34; S. Herbst, *Bielsk Podlaski*, pp. 39–47; H. Kosieradzki, *Bielsk Podlaski*, pp. 36–47; Zieleniewski, *Powstanie i rozwój Bielska*, pp. 47–70, plan *Bielsk Podlaski. Układ przestrzenny w 1563 roku*.

¹⁰⁹ 'A new street beyond His majesty's pools, laid on two plains, this end is at the above mentioned pools, the other end at the new road, which leads from the village Stanisławowo to the Sikinine mill, leading to Bielsk. The right side leading to His Majesty's pools and to the Sikinine mill. Of which plain the ends of the boundaries' ends and face the common pastures. There Dubicze inhabitants on residential lots facing the sunset opposite the left plain. [...] The other left plain of this street, in which their gardens end towards the malt houses, up to the boundary where have been made free clay pits and the meadows facing the sunrise opposite the right plain.'; MPwB, catalogue no. H/D/506. The exact locating of this street is complicated by the lack of placement for the royal pools and malt house, as equally the location of clay extraction. However if one were to assume that the royal pools described are those visible on the plan of 1834 and that from the mid nineteenth century at the end of the stream cutting across the northern fragment of present-day Dubicze Street, then one may state that the discussed street corresponds to the course of the northern fragment of the present-day street Chmielna Street; NGAB, Grodno, f. 126-1-105; Jaroszewicz, *Miasto Bielsk*, p. 135. Given the lack of certainty the street has not been located on the plan.

¹¹⁰ BUWil, catalogue no. F5-A41-7932.

¹¹¹ 'Pieski Street one plain at outlet it lies back to free outlet, one side from Stanisławowo volok, the second to the Biała River, in front lots in April of 1563 prepared and distributed, it starts from Stanisławowo volok' MPwB, catalogue no. H/D/506. Zieleniewski on his plan of Bielsk in 1563 has marked Piaskowa Street and the Piaski meadows; *ibidem*, *Bielsk Podlaski – topografia historyczna*, plan *Bielsk Podlaski w 1563 roku*. However, Piaskowa Street as marked by him would be too short for the number of properties marked and measured up in 1563. According to the inventory of 1779 Piaski Street was situated where was the then Zastawecka Street after passing by the cobbled causeway; *Opisanie Rukopnago*, vol. 4, p. 79. Undated inventory (most probably from the mid seventeenth century) mentions: 'Piaski, Dubic[z]e from Łoknicka Street', while further on: 'the right side [in] Piaski, heading towards the mills'; MPwB, catalogue no. M/H/506. Visible on nineteenth-century maps is a road heading in a south-eastern direction, and departing from a triangular plot at the junction with Dubicka Street and Łoknicka Street. It is possible that this was Pieski/Piaski Street; see above footnotes 8-10. However, given the overall lack of certainty it has ultimately not been marked on the plan.

¹¹² Zieleniewski, *Powstanie i rozwój Bielska*, pp. 47–70, plan *Bielsk Podlaski. Układ przestrzenny w 1563 roku*; plan *Bielsk Podlaski. Układ przestrzenny w XVIII wieku*.

¹¹³ Possibly this street was *ulica wielka Zachawecka*. It was mentioned in a notation within the register for the first volok reform. Though possible also is that the name referred to another street. However, the order in which the streets are enumerated suggests that the matter might concern the present-day al. Piłsudskiego. BUWil., catalogue no. F5-A41-7932. It is not mentioned in the VoloK Reform register of 1563. Given this lack of certainty it has not been included on the plan. This street should not be confused with the Zastawecka Street mentioned in 1779, which was situated in a completely different part of town, and for certain could not be deemed *wielka* (great).

River. The castle mill was situated on the Lubka River not far from a bridge of the Biała River. The last of these known as Sikinin was located at a Biała River crossing on the road to Stanisławowo.¹¹⁴ Both the town and its suburbs had many taverns. According to the inspection of 1602 there were 50 beer taverns and six mead houses.¹¹⁵ It is uncertain how many taverns were located in the Poświęcińska *jurydyka*, but they existed given that the parish priest had the authorization to allow them to operate.¹¹⁶ In 1602 no taverns were noted in the area belonging to the Podzamecka *jurydyka*, though this does not mean that none had existed previously or were to exist afterwards.

The forest, which was freely accessible for the utilisation of the town's inhabitants, was an important element of the local landscape. In the case of Bielsk the forestial borders were mentioned in the rights privilege granted by Aleksander Jagiellończyk of 1495 (mention of which has already been made). On the 15 July 1554 Queen Bona exchanged the originally granted lands for 120 voloks of forest located by the Narew and Łoknica Rivers. This forrested area was taken away from the town during the Voloł Reform of 1561; with Sigismund II Augustus instructing for another area be presented to the town, although this order was not executed during his lifetime. It is unclear where the residents of Bielsk sourced their timber and wood for the years 1561–1581.¹¹⁷ The plan displays only two small wooded areas which most certainly would not have covered the townsmen's needs.

The inhabitants of Bielsk specialized in the leather trade, which is the reason for the existence of so many tanneries and leather workshops in the area. The town was home to many tanners,¹¹⁸ especially in the area of the Dubicze settlement, which was a leader in the craft. The local workers took advantage of the easy access to the waters of the Biała River and its tributaries.¹¹⁹ This settlement was also located at a reasonable distance from the town centre, which meant the unpleasant aspects of the leatherworking industry were not overly burdensome for the inhabitants. Tanners could also be encountered at the Podzamecka and Church *jurydyki*.¹²⁰

In 1563 Bielsk, in conjunction with its suburbs, amounted to 830 households in total, out of which 36 were on the territory of the Podzamecka *jurydyka* while 220 more were located in the municipal villages.¹²¹ A survey from 1576 mentions 557 houses located within town boundaries and 193 plots (not counting those located in *jurydyki* territory).¹²² At this time Bielsk definitely constituted the biggest municipal centre in Podlasie, towering above others in terms of number of inhabitants.¹²³ Aleksander Gwagnin in the sixteenth century had this to say about the town: 'This town of Podlasie

¹¹⁴ The first three millers were Konrad Sieheniowicz, Jakim Ożar and Chwiedor Lihy; MPwB, catalogue no. H/D/506. One may come across in the subject literature the names of these mills, where according to the inspection of 1576 the millers were Jacek Szypliwy, Łukasz Ożarowicz and Okuł Jazykowicz; LWP 1570, 1576, pp. 31, 61.

¹¹⁵ LWP 1602, p. 63.

¹¹⁷ In 1576 Stefan Batory repeated the order of Sigismund August and called a commission to divide the municipal forest. Thanks to the involvement of Anna Jagiellonka in 1581 the town was given 30 voloks of forest called Kąt Lasu, which the queen confirmed in 1583. This terrain was to have been in the environs of the villages of Istok, Jagodniki and Orzeszkowo (to the south of Hajnówka). AGAD, Archiwum Roskie, Akta Prawno-Majątkowe, catalogue no. 1117, p. 17; MK 135, ff. 1v-3; catalogue no. 129, f. 484-485v; APB, Starszy Notariusz Sądu Okręgowego w Grodnie, catalogue no. 238, pp. 74–76v; Jaroszewicz, *Miasto Bielsk*, pp. 89, 145; Bukowski, Michaluk, *Przywileje*, pp. 28, 103-104; *Летопись занятий Археографической Комиссии 1862–1863*, Санкт Петербург 1862, ch. III-IV, pp. 30–32. see Zieleniewski, *Powstanie i rozwój Bielska*, plan *Obszary leśne trzebione i kolonizowane przez Bielsk w XV i XVI w.*

¹¹⁸ The inspection of 1576 enumerates two saddlers, one leatherworker, eight furriers, 39 cobblers and 53 tanners. LWP 1570, 1576, p. 29. While the tax register of 1580 recalls one leather purse maker, two leatherworkers, 12 furriers, 62 cobblers and 54 tanners. ASK I 47, ff. 648–649v.

¹¹⁹ Zieleniewski, *Powstanie i rozwój Bielska*, p. 56.

¹²⁰ Bukowski, Michaluk, *Przywileje*, p. 54. In the sixteenth century guild organisations developed in Bielsk focusing on various kinds of leather workers. See AGAD, Archiwum Roskie, Akta Prawno-Majątkowe, catalogue no. 1122, pp. 53–54; BUWil, catalogue no. F5-A24-4369; F5-A24-4402; *Летопись занятий*, ch. 3–4, p. 31; Bukowski, Michaluk, *Przywileje*, p. 54. Other artisan branches were not so developed.

¹²¹ Jaroszewicz, *Miasto Bielsk*, p. 97.

¹²² Used in the inspection is the expression: 'Houses in this place in the market square, streets and suburbs are 557.' LWP 1570, 1576, p. 29. Here it is possible that with regard to the designation 'suburbs' reference was being made to parts of the town like the settlements at Kolence or Dubicze. It seems that this figure of 557 does not include the buildings of municipal villages – hence also the difference when compared to the Voloł Reform. Bukowski, Michaluk, *Przywileje*, pp. 23, 28.

¹²³ Cf. S. Alexandrowicz, *Powstanie i rozwój miast województwa podlaskiego (XV – I połowa XVII w.)*, "Acta Baltico-Slavica", vol. 1, 1964, p. 151.

shines in timber-sided excellence, by the Biała River, sprawling toward the Lithuanian border lies.¹²⁴ In the sixteenth century there most probably was an absence of brick buildings. The streets in their vast majority were without cobbles. It is hard to ascertain in the present day, which parts were cobbled and which mere earth.¹²⁵ Archeological excavations have led us to conclude that at least a part of the town's roads employed timber planks as surfacing while others were reinforced with brushwood fascines.¹²⁶ The appearance of urban sprawl was accurately described by Stanisław Herbst: 'A network of close-standing houses with a regular skyline concentrated mostly in the town centre. The buildings located on other streets, especially those on the outskirts were placed in a more irregular manner and often featured front gates, nestled between the shacks and manors.'¹²⁷ Recreating the state of Bielsk's architecture in the sixteenth century solely on the basis of surviving sources is unfortunately not possible. In the region surrounding the main Market Square the buildings were placed quite close together, though it is probable that with the greater the distance from it the less intense the construction proximity. The archeological research hitherto conducted is only of a fragmented nature, which makes recreating the entirety of the townscape a near impossibility.¹²⁸ Urban lots tended to be long and narrow. The houses were located by the edge of the lots, near the street and were usually thatched with straw or covered in wood shingles.¹²⁹ To the rear of the premises utility building and plots of arable land were located. Bielsk, like other towns in the Podlasie Voivodeship was a centre of agriculture and artisan trade. This greatly influenced the structure and placement of buildings, as much of the urban plots had to be used for the deployment of barns, pigstys and storehouses. The plan clearly presents this phenomenon, showing the outlines of buildings concentrating round the various streets and pathways while the middle of the plots remains empty. Those vacant plots were occupied by the threshing floors, which are not marked on the plan. Amongst these areas could be found horticultural allotments. To avoid overcrowding the plan with too much unnecessary detail, the latter have been marked. Some streets lacked buildings altogether. A good example is Zarynek Street. The north-facing side of this street was made up of the threshing floors belonging to the burghers who were the proprietors of lots that intersected the of Kłopotowica and Wielka Streets. It is also important to note that within the town boundaries with no residential buildings constructed on them at all.¹³⁰

¹²⁴ A. Gwagnin, *Z kroniki Sarmacji europejskiej*, p. 25.

¹²⁵ Orłańska Street was cobbled; MPwB, catalogue no. H/D/506. It is possible that the environs of the market square were paved. Three levels of stone paving found in the course of archaeological digs on the property at present-day A. Mickiewicz Street 58 point to the said. K. Mazuruk, *Stanowiska archeologiczne Bielska*, pp. 139-140. It is known that in the second half of the eighteenth century Wielka Street was cobbled (paved). H. Kosieradzki, *Bielsk Podlaski*, p. 58. W In the 1780s Michał Starzeński described the town thus: 'In the town there was no Catholic church, or town hall, or cobbles.' *Na schyłku dni Rzeczypospolitej. Kartki z pamiętnika Michała Starzeńskiego (1757-1795)*, ed. H. Mościcki, Warsaw 1914, p. 68. However, in a document of 1590 contained is 'so these burghers the cobbles, the causeways and bridges repaired.' MK, XVIII, 64, p. 565.

¹²⁷ S. Herbst, *Bielsk Podlaski*, p. 44.

¹²⁸ There are settlement zones which we are able to consider on the basis of archaeological research as intensively utilised by their former residents – and here equally in the sixteenth century. Belonging to these is the modern centre of the town, the northern part of present-day Kościuszki Street, the environs of the intersection of present-day 3 Maja Street with Kościuszki and Mickiewicz Streets, as well as the territory close to the crossroads of Jagiellońska and Kopernika Streets. L. Pawlata, B. Wetoszka, *Badania archeologiczne w formie nadzoru nad pracami ziemnymi inwestycji "Rozbudowa infrastruktury ochrony środowiska w ulicach w Bielsku Podlaskim, ul. ¹²⁹ A. Czapska, *Układ przestrzenny*, p. 2.

¹³⁰ This is borne out by archaeological digs which point to a later settlement of areas next to streams, the bank of the River Biała (as a result of seasonal flooding) as well as between the present-day Ogródowa and A. Kazanowskiego Streets. A part of these areas constituted the economic base for the plots located on other streets. WUOZwB, sygn. 195, M. Karczewska, *Wyniki nadzoru archeologicznego przeprowadzonego w dniach 20-25 września 1998 r. nad wykopem budowlanym pod "Sukienice Bielskie"* w Bielsku Podlaskim na ul. The process of urban development was halted by the wars that occurred during the mid seventeenth century and the beginning of the eighteenth century. These historical events greatly reduced the number of houses and inhabitants. During the period of urban regeneration in 1779 it was noted that the town numbered a mere '269 inhabited lots, 438 commercial gardens (allotments) laid fallow or made empty and 38 barren lots.'¹³¹

III.6.3.6 BRZEŚĆ KUJAWSKI

Dariusz Karczewski

Sources

The cartographic material that could be used to recreate the spatial arrangement of the old town of Brześć Kujawski (Brześć, r) is extremely limited. First of all, there is no cadastral plan for the town. A 1:1,000 map from the beginning of the nineteenth century has survived only in the form of a copy made in 1915, known from its redrawn copy created by the famous architect, Prof. Oskar Sosnowski.¹ This map is highly valuable because it shows a network of streets and parcels, in both the town itself and the suburbs. It was made more widely available in the work on this Polish medieval town's defensive walls in the form of a second redrawn copy from 1967.² Earlier, in a slightly simplified version which lacked the outline of individual plots of land, it became the basis of a plan published in the collection of small-scale general maps of Polish towns from 1927.³ Three Russian plans from the late nineteenth century were also helpful in some aspects. One is the town plan of Brześć Kujawski from 1897,⁴ another shows the north-west corner of the town around the former Dominican church,⁵ and the third covers the area of the then prison, *i.e.* the former castle.⁶ The stock of iconographic sources concerning the former town of Brześć Kujawski is equally unimpressive. In practice, it is limited to merely an engraving included in the work of Samuel Pufendorf (1632–1694) concerning the achievements of Charles X Gustav.⁷ It was drawn from memory by Erik Jönsson Dahlbergh, who was the chief quartermaster of the Swedish army at that time. The engraving presents a view of the town and the castle from the west side in 1657.

When compared with the above, the amount of available descriptive sources seems much higher. The most notable sources falling within this group include the register of Brześć Gord Starosty property from the close of the fifteenth century⁸ and the book of the Brześć Kujawski town court.⁹ The 1564–1565¹⁰ and 1569¹¹ inspections of royal estates are equally valuable in terms of the information they offer. These records are supplemented or confirmed by inspections of royal estates from the seventeenth century.¹² The sixteenth-century visitations of the bishop of Włocławek diocese, most of which have been published, are of particular importance as sources of information on Brześć churches.

The most valuable of them, due to their very detailed nature, are the 1584¹³ and 1598¹⁴ visitations of Brześć deanery. We have also used a repertory of the visitation records kept in the Diocesan Archives in Włocławek, which was compiled by Witold Kujawski and constitutes a very useful reference source.¹⁵

Town

It has yet to be determined when exactly a town was chartered with German law in Brześć Kujawski. The first item of information to confirm its town status dates to 1250, and also happens to be the earliest written record of this settlement. The initiative to found this town should be attributed to Duke Casimir I of Cuyavia and Łęczyca (d. 1267).¹⁶ Most likely at the end of the thirteenth century, this time on the initiative of Duke Ladislaus the Short, the town was translocated from the area of today's Stary Brześć Village to the south, to the top of a rather high moraine hill.¹⁷ The municipal authorities have only begun to take shape in the first decades of the fourteenth century, as evidenced by first mentions of a vogt (1306),¹⁸ town court members (*lawnicy*) (1317),¹⁹ and representatives of the town council, which included counsellors (1317)²⁰ and a mayor (1328).²¹ Until 1300, Brześć was the town of residence of Duke Ladislaus the Short and the capital of the Duchy of Brześć.²² In the years 1300–1306, it was ruled by Czech kings.²³ The first information about Cuyavian (Brześć) starostas comes from this period.²⁴ They were appointed by the king and exercised direct authority in a given starosty on behalf of the monarch. After Ladislaus the Short regained control over this part of the Kingdom of Poland, the office of starosta was maintained, except for a short period when the Teutonic Order occupied the Brześć area of Cuyavia in 1332–1343. After the death of King Louis I of Hungary (1383), the Brześć area of Cuyavia was taken over by one of the pretenders to the Polish throne – Mazovian Duke Siemowit IV. The land remained in his hands until May 1398.²⁵ Until the end of the fifteenth century, the town frequently hosted gatherings and sejmiks (dietines), which brought together the nobility of the Brześć region, whilst Radziejów became the customary venue for dietines of both Cuyavian voivodeships only at the beginning of the following century.²⁶ At that time, Brześć

Kujawski was classified as a medium-sized town with a fairly wide range of trade connections.²⁷ Even at the end of the fifteenth century, the starostas of Brześć included almost all previously unencumbered royal estates in the territory of Brześć Voivodeship.²⁸ The town was hit by a great fire, most likely in 1558. All the churches inside the walls, as well as the suburban hospital with the Holy Spirit Chapel,²⁹ and the Jewish district,³⁰ were beyond doubt destroyed. In the second half of the sixteenth century, Brześć Voivodeship consisted of Brześć, Falborz (Chwaliboż, rt), Falborek (Chwalibożek, r), Gołębin (Gołębino, r), Kłobię (r), Kruszyn (Kroszyno, r), Lekarzewice (r), Miechowice Duże (Mnichowice, r), Rządka Wołę (Wołę Rządka, rc), Sokołowo (rc), Stary Brześć (Stare Miasto, rc).³¹ The castle was the seat of the Brześć starostas and the place where gord and land court books were kept.

Town defensive walls

The town walls which surrounded the chartered town of Brześć Kujawski had a semicircle-like shape, with Zgłowiączka River forming its bowstring. On the remaining three sides, the town was encircled by a moat watered by the river. This fortification element was both mentioned by Jan Długosz³² and referenced in early modern inspections.³³ Town fortifications, walls and towers were mentioned for the first time in 1306.³⁴ Most likely, they were not yet finished at that point, but it had already been mentioned that the towers could not be higher than castle fortifications. During the Teutonic siege in April 1332, the defensive walls of Brześć Kujawski were to be destroyed by siege engines.³⁵ From the north, the entrance to the town was defended by Toruńska Gate, while Krakowska Gate was located next to the parochial church, on the south side. There was one more gate (wicket?) from the west side, leading to Zgłowiączka River. Two pieces of evidence stand proof of this claim: Erik Jönsson Dahlbergh's drawing and the route of present-day Widok Street, which runs from the north-west corner of the square towards the river. Still, it remains open to debate whether this was an original or an early modern design. Jarosław Widawski assumed that two more gates were planted in the line of the town walls, on the east side (within the extension of Szewska/Mistrzowska Street) and on the south side (within the extension of Zamkowa Street).³⁶ However, these two gates are confirmed neither in written sources nor archaeological research. Only two gates are mentioned even at the end of the eighteenth century, although the general condition of the defensive walls was already considered to be very poor at that time.³⁷

Castle

The castle in Brześć Kujawski was situated on Zgłowiączka River, on the southern moraine spur of the town hill. Its defensive qualities were emphasized by the relative height of the terrain – approximately 10 m above river level. In historical and archaeological literature, the genesis of the castle, much like that of the town itself, is described in contradictory ways.³⁸ The first information about this building (*castrum*) was included in the armistice document of 1306.³⁹ The predecessor of Brześć Castle was a gord located somewhere in the area of today's Stary Brześć Village, whose more precise location remains obscure.⁴⁰ For over a century and a half, the castle in Brześć Kujawski was an important military point on the Cuyavian-Teutonic border and a site of political negotiations, repeatedly visited by rulers. Its importance clearly decreased, as was the case with other Cuyavian strongholds, when the Teutonic Knights ceased to be a direct threat. That was only after the Thirteen Years' War (1454–1466), which was victorious for the Kingdom of Poland. The laconic description from 1494, which stated that 'in castro omnia sunt ruinosa',⁴¹ can be seen as a confirmation of this fact. In the second half of the sixteenth century, the condition of the castle clearly improved, as evidenced by the 1565 inspection. Its circumferential walls were built on a plan whose shape resembled a rectangle. In the northern part of the complex, on the town side, there was a rectangular building of a Gothic grand tenement house. A gate tower with a drawbridge, additionally protected by a watchtower (*sambornia*), adjoined it to the east. There were also two cellars in this section. Along the eastern wall of the castle, there was a cellared building with one floor above the ground level, intended 'for living in the summer'. In the south-eastern corner of the castle walls, there was a cylindrical tower (bergfried), 'commonly called Kesza', which also served as a prison.⁴² By the southern wall, there were three buildings with living quarters and storage areas. On the west side, there was a bakery and a kitchen, as well as a wicket gate leading to the ramparts. The inspector assessed the condition of roof trusses and coverings as very poor. Only the gate tower was covered with tiles. The castle was separated from the town by a wide ditch (moat) with a 24-meter-long bridge.⁴³ To the north of this moat, there was a spacious outer bailey, protected by a wooden fence with a gate. It was a service and transport for the castle, primarily intended for the stables and a house of the equerry. By analogy, it can be assumed that the outer bailey was built in the times of Ladislaus Jagiello, and its importance decreased at the end of the sixteenth century or at the beginning of the next century.⁴⁴ Also, the outer bailey was separated from the town with a ditch.⁴⁵ On the other hand, Falborek Demesne, located across the river and opposite the castle, served at that time as the castle's supply base.⁴⁶ Unfortunately, according to the inspection from 1632, the condition of castle buildings was already much worse at that point,⁴⁷ and this picture was complemented by the burnt ruin left by Swedish and Polish troops passing through the town during the Deluge.⁴⁸

³⁸ Recently, L. Kajzer put forward a rather controversial thesis on this subject in Kajzer 1994b, pp. 93–95; L. Kajzer, *Z problematyki translokacji średniowiecznego Brześcia Kujawskiego*, pp. 161, 164. Based on archaeological observations, he assumed that Brześć Castle was built around the mid-fourteenth century. Thus, he attributed its foundation to King Casimir the Great. Subject literature's stance on this issue has been presented in Pietrzak 2003, p. 76.

Townspeople

There were 192 parcels⁴⁹ within town walls, which, according to various demographic estimates, translated into about 1,100–1,300 inhabitants in the period from the turn of the sixteenth century to the second half of the sixteenth century.⁵⁰ The Jews stood out as a specific sub-group. The oldest information about Brześć Jews dates back to 1428,⁵¹ although Żydowska Street (Jewish Street, *platea Iudeorum*) was mentioned as early as in 1463.⁵² The Jewish community in Brześć Kujawski was one of Cuyavia's oldest.⁵³ Subject literature commonly accepts the view that a fully organised Jewish community (*kehilla*) functioned in Brześć in the sixteenth or perhaps even in the fifteenth century.⁵⁴ Existence of an organised community would imply that Brześć had a synagogue, but sources mentions no such temple *expressis verbis* until 1782. At that time, it was located on the left side of Żydowska Street (looking from Mistrzowska Street).⁵⁵ A Jewish school is mentioned to have existed in the town at the close of the fifteenth century,⁵⁶ which could possibly be identified with a synagogue? The local Jewish cemetery was recorded relatively late (1619–1620).⁵⁷ Considering the stable nature of this site type, it can be assumed with a high degree of probability that it was located west of Zgłowiączka River, on the road towards Radziejów and Kruszwica. As part of the extraordinary tax announced on the occasion of the coronation of Sigismund the Old in 1507, the Jews of Brześć paid a considerable sum of 25 florins,⁵⁸ which may point to the fairly big size and wealth of the community. In the sixteenth century, Brześć became the arena of a socio-economic conflict between its Christian and Jewish inhabitants. The main point of contention was the number of town parcels occupied by Jews and the amount of taxes they paid. The document of King Sigismund the Old of 25 February 1538 mediated an agreement between the representatives of the town's Christian inhabitants and the elders of the Brześć Jewish community. The ruler set the number of Jewish houses and municipal parcels at 15, forbidding their sale to Christians.⁵⁹ A similar agreement was concluded on 21 July 1558, this time allowing the number of Jewish houses in the town to be increased by another eight.⁶⁰ The 1564–1565 inspection showed 18 Jewish houses and a schoolhouse in Brześć.⁶¹ Despite this, in 1620, the town's inhabitants complained to the inspectors that the Jews occupied more houses and town plots than was specified in the previous agreement.⁶²

Suburbs

It seems that late medieval Brześć Kujawski had only one suburb, and this was most probably the later Krakowskie (*Cracow*) Suburb. The 1465 entries to the Brześć court book simply mention a *suburbium Brestensis* or simply a *suburbium*.⁶³ However, aside from the suburb, it seems that there was a weavers' settlement on the so-called 'kowalska' (*blacksmith's*) road (probably the same road which was called Smólska Road in the eighteenth century), as a 1466 record indicates the existence of a property located 'penes viam que dicitur in Cowale versus lanificum Brześcensis'.⁶⁴ Already the 1494 inventory of the estates falling within Brześć Gord Starosty listed 35 parcels and nine granaries in the suburbs. In the eighteenth century, the following streets of Krakowskie suburb were listed: Zduńska, Strycharska, Zatylna, Nadrzeczna, Krakowska, Sokołowska, and Smólska. At that time, the hilly, sandy area to the south of the town, outside the Krakowskie Suburb, which stretched in the form of a strip of land from Zgłowiączka River to the border of Guźlin Village, was called *Góry* or *Góra* (Eng. *Mountains* or *Mountain*, respectively).⁶⁵ The sixteenth century saw the emergence of what was to become Toruńskie (Toruń) Suburb to the north of Toruń Gate. In 1533, the Brześć town council sold to the Brześć townspeople a garden called *Jeziorny*, consisting of seven parts.⁶⁶ Jezierna Street was located in the suburb and was the site of seven gardens belonging to the town's inhabitants, as mentioned in the sixteenth-century inspections.⁶⁷ The name suggests that the street lead towards Smętowo Lake. Back then, the townspeople cultivated orchards in the area between the town wall and the river.⁶⁸ The records from the end of the eighteenth century indicate that there were Solarska and Toruńska Streets in the Toruńskie Suburb, as well as gardens in the area known as *Na Brzuśni*.⁶⁹ In 1551, King Sigismund Augustus granted the inhabitants of Brześć Kujawski a permit to exploit the nearby marl deposits for the production of lime and cement. Over time, the area where this sedimentary rock was mined began to be called *Margle* or *Duże Margle* (Eng. *Marls*, or *Big Marls*, respectively).⁷⁰

Churches

Parochial church of St. Stanislaus

St. Peter's was the original church of Brześć Kujawski. This church was located near the town, in what is today the village of Stary Brześć.⁷¹ The first mention of this church can be found relatively early in the history of Brześć, as it comes from 1264.⁷² In 1313, Duke Ladislaus the Short handed it over to be managed by Knights of the Cross with the Red Star.⁷³ This is the last reference to this temple as a parish church, which could indicate that the translocated town acquired a new, or at least a partially completed, Gothic parish church at that time. For centuries, the structure of the church of St. Peter's had been wooden, and survived in this form until the end of the sixteenth century. According to the 1584 visitation, by that point no mass had been celebrated in the church for a year, and the associated

endowment was transferred to the church of St. Stanislaus.⁷⁴ Despite the post-visitation recommendations, the church had not been renovated.⁷⁵ The parish priest of Brześć, Wawrzyniec, mentioned in the papal tithing list from 1325, probably performed his service already in a brick church.⁷⁶ It was probably the site of some sessions of the papal Inowrocław-Brześć trial (1320–1321).⁷⁷ Its patronage was recorded relatively late – in the first half of the fifteenth century.⁷⁸ In 1489, Brześć Parish was made up of the following settlements: Brześć Kujawski, Stary Brześć, Falborek, Falborz, Guźlin (Guźlino, t), Jądrówice (Jandrowice, n), Kuczyną (c), Miechowice, Pikutkowo (Pilchutkowo, t), Rządka Wola, and two parts of a very fragmented Smólsk (Smolsko, n) – the noble part (Smólsk Krystyna) and the part belonging to Włocławek Chapter (later known as Popowiczki and Ardziakonowo).⁷⁹ This parochial district did not change much in the late sixteenth century.⁸⁰ At the end of the century, there was already a brick belfry by the parochial church, although it was not yet fully finished at that point.⁸¹ The surroundings of the church could not have been impressive since the inspector wrote that the cemetery was only partially repaired, the presbytery was badly neglected, and the fence was ruined. There were also stables and houses of prayer brotherhoods, houses of mansionaries and altarists, a brick school building and a small but well-kept preacher's house.⁸² In the first half of the eighteenth century, the presbytery was housed in a two-story building adjacent to the town walls.⁸³

The Dominican Monastery and the church of St. Michael

The Dominican Monastery with the conventual church dedicated to St. Michael the Archangel was located in the north-west corner of town walls, at Toruńska Gate. The Monastery was built there in the period of the chartered town's translocation at the turn of the fourteenth century. According to the traditional beliefs passed on by Jan Długosz, the Monastery was founded in 1264 by Casimir I of Cuyavia, the Duke of Cuyavia and Łęczyca.⁸⁴ Originally, therefore, it had to be located in the area of today's village of Stary Brześć like the entire thirteenth-century town. During the Teutonic invasion of 1332, it shared the fate of the town, which was destroyed during the siege.⁸⁵ It was rebuilt using bricks. However, the construction of the church was not carried out simultaneously with other investments in the town, as archaeological research indicates these activities were carried out later.⁸⁶ Its presbytery was to be constructed by the Bishop of Włocławek, Zbylut of Gołańcz, member of the Pałuk family (1364–1383).⁸⁷ Next, the nave was expanded, which probably lasted until the beginning of the fifteenth century. Monastery buildings were wooden or half-timbered at the time, or possibly

only partially made of brick (the so-called priory).⁸⁸ In 1584, the inspector indicated that the Dominican church, just like the convent's house, was badly damaged. At that time, the Monastery operated a small hospital (for 3–4 people) for the poor.⁸⁹

The hospital and church of the Holy Spirit

The consent to the foundation of the Holy Spirit Hospital in Brześć Kujawski was given by Duke Ladislaus the Short in 1294. It was to be located near the town, on a public road near the end of a bridge. The Duke entrusted the organisation and management of this charitable institution to the Knights of the Cross with the Red Star.⁹⁰ The following year, the same ruler concluded an agreement with Jan, a burgher from Toruń, for the construction of a hospital in the outskirts of the town.⁹¹ In order to create the foundation's supply and financial base, the Duke endowed it with the knight's village of Kąty, which had been confiscated for robberies, along with the right to build a mill at the point where Bachorze River fed into Zgłowiączka⁹² in 1297. These actions were complemented by the foundation of the parish church of St. Peter in (Stary) Brześć.⁹³ The exact location of the poorhouse was specified in subsequent visitations which mention that it was located outside town walls, in the Krakowskie Suburb, on the road leading to Włocławek.⁹⁴ At the end of the second half of the sixteenth century, the hospital buildings had a half-timbered structure with wattle-and-daub infill, while the chapel was wooden. There was a garden and a cemetery next to the chapel.⁹⁵ At that time, it had about 30 inhabitants.⁹⁶ In the first half of the next century, the chapel was rebuilt as a half-timbered structure with wattle-and-daub infill.⁹⁷ Even at the beginning of the sixteenth century, the Knights of the Cross with the Red Star continued to take care of this poorhouse.⁹⁸ However, with the progress of the Reformation, their religious discipline and dependence on the St. Matthias House began to weaken. As a result, during the Sejm (Diet) in Piotrków Trybunalski in 1565, King Sigismund Augustus incorporated the Brześć hospital provosty of Holy Spirit, together with the income to which it was entitled, into the local parish church.⁹⁹

Streets

The 1494 register of rents from Brześć Kujawski mentions the market square (*circulus*), which, as we can assume, probably contained a block of town buildings located around the market square with a town hall. References to the rents from craftsmen working near the town hall (*subpretoriales*) can

⁸⁸ A. Andrzejewska, L. Kajzer, *Badania zespołu poddominikańskiego w Brześciu Kujawskim*, pp. 134–135, 146; eidem, *Klasztor dominikanów w Brześciu Kujawskim*, [in:] *Klasztor w mieście średniowiecznym i nowożytnym*, ed. M. Derwich, A. Pobóg-Lenartowicz, Wrocław–Opole 2000, pp. 536–538.

⁹⁹ Ibidem, ff. 22v–24; S. Kuliński, *Monografia Brześcia Kujawskiego*, pp. 43–44, 84. M. Surdacki, *Szpitalnictwo zakonne w średniowiecznej Polsce*, "Roczniki Humanistyczne", vol. 63, 2015, no. 2, pp. 69–70; Surdacki incorrectly attributed this decision to Bishop H. Rozdrażewski. This hospital's charitable activity is described in detail in: Z.H. Kuźniewska, *Działalność charytatywna w archidiakonatach kruszwickim i włocławskim diecezji kujawskiej i pomorskiej*, Włocławek 2015, passim.

be seen as further proof of this hypothesis.¹⁰⁰ Little can be said about the appearance of the town hall apart from what can be seen in the engraving by Erik Jönsson Dahlbergh. It seems to be a massive, two-storey building with a gable roof, which is adjoined on its eastern side by a square tower. It was about two storeys higher and was topped with a baroque cupola. In the late Middle Ages, the buildings around the market square were at least partially made of brick,¹⁰¹ and tenement houses began to appear in the town at the end of the sixteenth century.¹⁰² The sources mention also Mnisza Street (*platea Monachorum*), which ran from Toruńska Gate to the market square, and whose name referred to the nearby Dominican Monastery.¹⁰³ This name was first mentioned in sources in 1458.¹⁰⁴ The next specified street is Tkacka Street (*platea Textorum*), which ran from the north-eastern corner of the market to the north. It was not only mentioned in historical sources many times under this name,¹⁰⁵ but also appeared earlier (1440) as the *platea Lanificum*.¹⁰⁶ It was identical to Knapska Street, mentioned in 1782.¹⁰⁷ Szewska Street (*platea Sutorum*)¹⁰⁸ was most likely the same street as Mistrzowska Street mentioned in the inventory from the end of the eighteenth century. It led from the north-eastern corner of the market square to the town defensive walls.¹⁰⁹ Leśna Street (*platea Lesznÿa*)¹¹⁰ and Świnia Street (*platea Szwÿnÿa*)¹¹¹ also date back to at least the fifteenth century. In 1463, the following streets were registered in the town's council book: Zamkowa Street (*platea Castrensis*),¹¹² Żydowska Street (*platea Iudeorum*),¹¹³ and another street referred to in a descriptive manner as located opposite the parish church (*platea versus ecclesiam parrochiale*).¹¹⁴ It was probably the same street which was later called Farna Street.

Municipal facilities

The sixteenth-century inspections mention the existence of a municipal scale and a bathhouse,¹¹⁵ but their location is difficult to determine. In the case of the scale, it can be presumed that it was, as was the custom, located in the middle of the market square in the block of buildings centred around the town hall or by one of its frontages. According to the 1527 *Liber Retaxationum* of Włocławek Diocese, throughout the sixteenth century, Brześć had an active parish school¹¹⁶ whose origins can be traced back to at least the first decades of the previous century.¹¹⁷ Visitations from the end of the sixteenth century describe it as being located in a brick building near the parish church.¹¹⁸ As already noted, there was also a Jewish school,¹¹⁹ references of which were recorded already in 1494. It was

located in Świnia Street which probably later became Żydowska Street.¹²⁰ It is also worth noting that there was a water supply system in the town, for which King Sigismund Augustus issued a relevant privilege on 5 January 1549.¹²¹

Town property

‘This town has no fields, but it has gardens a plenty’¹²² – this sentiment was unanimously emphasised in all the inspections.¹²³ Still, this statement alone, if left without elaboration, would be misleading since the nearby villages of Pikutkowo and Guźlin belonged to the town. They were granted to Brześć *ad reformationem praenomitatae civitatis* by Ladislaus the Short in 1292,¹²⁴ which was confirmed in 1538 by King Sigismund the Old.¹²⁵ In 1383, the Duke of Mazovia, Siemowit IV, granted the town *in subsidium* the village of Stary Brześć, confirming that the town owned Pikutków and Guźlin.¹²⁶ Later, the village returned to the Brześć starostas. In addition, Brześć burghers held a meadow called Obora, given to them by King Ladislaus Jagiello in 1431 as compensation for the damage caused by the fire which occurred during the Teutonic invasion of August of that year.¹²⁷

Mills

The royal mill with a mill pond on Zgłowiączka River, located outside the town gate, was first mentioned in a document issued by Casimir the Great in 1364.¹²⁸ As the mill had to be operated, the dammed river undoubtedly formed a vast pond (*piscina*) at the level of the town, which was first mentioned in 1346.¹²⁹ In 1489, two royal water mills located near the town were already listed in the records.¹³⁰ The records from 1494,¹³¹ not a much later period, list only one mill with six wheels in Brześć. Five of them were used for grinding grain, and the sixth for moving the fulling mill. The 1565 inspection also mentions only one mill with only two undershoot wheels;¹³² it was similarly described in 1569.¹³³ Its location is more precisely defined by the assignment documents from 1574.¹³⁴ According to the 1569 inspection, a new mill called *Wilcze Gardło* was already in operation at that time. It was supposed to be built *na Zdroju* (Polish for: ‘over a spring’), and it had one overshot wheel.¹³⁵

Inspections from the seventeenth century clearly define it as already devastated.¹³⁶ At present, it is difficult to clearly define its location, but most likely it could have been located by Zgłowiączka River, south of the town, at the height of the castle.

Roads

A long-distance trade route from Toruń to Red Ruthenia passed through Brześć Kujawski already in the Middle Ages. Around 1316, Ladislaus the Short designated a route to Sandomierz for Toruń merchants through Brześć Kujawski, Łęczycza, Inowłódz or Sulejów, Wąchock, Opatów and further, from Opatów through Zawichost to Ruthenia.¹³⁷ His son took a similar approach in 1349, creating a Toruń-Sandomierz route that went through Brześć Kujawski, Łęczycza, and Opoczno.¹³⁸ During the reign of Casimir the Great (around 1350–1360), Brześć was mentioned as part of the trade route from Toruń to Lviv. Leaving Brześć Kujawski, the route led further through Kowal, Gostynin, Łowicz, Rawa Mazowiecka, Góra (near Nowe Miasto upon Pilica), Radom, Opatów, and Sandomierz. There was also an alternative road to Lviv (named *Via nova* in the deed) through Brześć Kujawski, Przedecz, Łęczycza, Inowłódz, Opoczno, Radom, Opatów and Sandomierz.¹³⁹ During the reign of Casimir the Great, Prussian merchants who travelled through Brześć Kujawski to Sandomierz opened an extension of this route to Hungary.¹⁴⁰ Aside from this route, there was also a road leading from Brześć Kujawski to Włocławek. It was of local importance and although it does not appear in sources until the first half of the fifteenth century, it can be assumed that it was already in use much earlier.¹⁴¹ This route naturally extended through Kruszwica to the west – to Greater Poland.¹⁴²

III.6.4.9b CHEŁMNO

Marek Grzegorz Zieliński

One could reasonably expect that in the case of Chełmno – one of the major urban centres of the Commonwealth and the former capital town of a voivodeship belonging to Royal Prussia – the reconstruction of the town's profile in the second half of the sixteenth century should not cause much difficulty. All the more because it was the biggest Church town in the estates of the bishops of Chełmno, affected by the Reformation movements to a slight degree only and subjected to strong polonization in the last twenty years of the sixteenth century. Undoubtedly, sixteenth century Chełmno should not be seen solely through the prism of its original location area. The steady growth of the agrarian potential of the town, increasingly affecting its economic profile, makes it necessary to consider the town in connection with its vast patrimonium. As is often the case, one obstacle is the quality of the source material preserved, which obviously affects research. In most general terms, the core of the source material which allows a relatively precise recreation of the spatial layout of the town has been preserved either for the Middle Ages or for the period between the seventeenth and eighteenth century. As the author of this article feels more scientifically attracted to modern history, the retrogressive method has been used for the reconstruction of the profile of Chełmno at the end of the sixteenth century.

The key archive resources for the study of the history of Chełmno in the sixteenth century can be found in the State Archive in Toruń, the Archive of the Parochial Church of Chełmno – the deposit in the Archive of Old Records of the Diocese of Toruń, and the Diocesan Archive in Pelplin. The key materials include books of municipal expenses, records of bishops' inspections, inventories of bishops' estates, chronicles kept by orders and books kept by guilds. Unfortunately, during the Second World War, nearly all council and court books were lost. The preserved treasury records cover the town's spending starting from 1626.¹ Some light can be shed on the structure of the fiscal system and the condition of the buildings in town thanks to the tax records (*księga czynszów*) from the years 1749–1773 and the register of rents for the years 1726–1752.² In addition to the aforementioned sources, one can consult the three preserved books of the court of assessors from the years 1480–1559, 1619–1627, 1696.³ Of particular importance for the study of the organisation of the urban authorities is the book of regulations (*wilkierz*) issued by Bishop Piotr Kostka in 1590 together with the town ordinances issued by Bishop Wawrzyniec Gembicki in 1603, Bishop Maciej Konopacki in 1612, Bishop Jan Kuczborski in 1619, and Bishop Jakub Zadzik in 1626 as well as the 'Town Hall Resolutions concerning Łęg' (*Rezolucje Magistratu względem Łęgu*) starting from 1583 until 1772.⁴ Of smaller importance for the study of the history of Chełmno are the books of protocols of the courts of the Chełmno Bishopric estates kept in the Toruń Archive and Diocesan Archive in Pelplin.⁵

⁴ APT, AMCh, sign. 4, pp. 63–91, 102–104; ADPelplin, Culmensia et Pomesaniensia, sign. C 9, C 13, C 18. Cf. Z. Zdrójkowski, *Nieznane źródła nowożytnego prawa chełmińskiego (XVII wiek)*, part 2, "Czasopismo Prawno-Historyczne", vol. 24, 1972, no. 1, pp. 151–184.

⁵ ADPelplin, Culmensia et Pomesaniensia, sign. C 51a, (*no pagination*) the first 70 sheets; APT, Sądy dominialne dóbr biskupstwa chełmińskiego, sign. 1–9.

The Pelplin Archive also houses extremely valuable documents from the general bishops' inspections of the Chełmno parish carried out in the seventeenth century by Andrzej Leszczyński in 1647, Andrzej Olszowski in 1672, Jan Małachowski in 1680. Unfortunately, we have no account of the general inspection carried out in 1581–1594 by Bishop Piotr Kostka. Very useful for research are also the ordinances issued by Bishops Wawrzyniec Gembicki, Maciej Konopacki, Jan Kuczborski. The *Acta curiae* of 1639–164 also include the book of regulations of the brewers' guild of Chełmno from the year 1471.⁶

The Archive of the Sisters of Mercy in Chełmno keeps the chronicle of the Benedictines of Chełmno from the years 1578–1619, which registered the life of the order and the town during the key period of the reign of Abbess Magdalena Mortęska.⁷

The Museum of the Land of Chełmno houses the plans by Georg Friedrich Wilhelm Rüdiger and Westphal,⁸ which are crucial for the establishment of the town topography. We know of two plans of Chełmno by Rüdiger; both show Chełmno from a 'stereoscope' perspective. The copy kept in Chełmno is a photocopy of the original, which measures 78 × 110 cm. At present, the original remains unknown. The plan was drawn after the first partition of Poland, definitely between 1782 and 1792, the date of the author's death. A copy of this plan is also kept in the State Archive in Toruń.⁹ The second plan which we know of is that of Chełmno by Rüdiger was drawn between 1776 and 1779 and is currently held by the Geheimes Stattsarchiv Preissischer Kulturbesitz in Berlin Dahlem.¹⁰ The analysis of the precise and accurate rendering of many details testifies to the author's utmost diligence. Nevertheless, the work is not free from mistakes.¹¹ The two plans by Westphal, dated 1820 and 1849, show the town together with the Vistula riverbank area. The preparation of the plans was definitely preceded by minute measurements of the land, which makes them a credible source to consult. The first of the two plans by Westphal also contains valuable inscriptions from 1821–1824. The plan is almost identical to the one kept in the Berlin Archive.¹²

When discussing the cartographic sources, one should not forget the map drawn by Fredrich Leopold Schrötter, which concluded the cartographic works carried out at the turn of the nineteenth century.¹³ Unfortunately, the estates of Chełmno were included only at the borders of the four sheets, which makes the analysis slightly more complicated. On the other hand, the 'Polonia' map of 1770 by Karl Perthées as well as the 'Charte vom Königlich Preussischen Regierungsbezirk Marienwerder' by Renner published in 1831¹⁴ are not of much use. And conversely, the maps of the regulation works on the Vistula in 1849¹⁵ prove extremely useful for the establishment of the hydrographic changes in the

nearest vicinity of Chełmno. Of some importance for the establishment of the exact location of the road called 'Nadolnik' is also the panoramic view of Chełmno from the north-east painted by Carl Schulin in the early nineteenth century.¹⁶

Some interesting remarks on the burghers' architecture can be made thanks to the analysis of the panoramic view of the town from the painting of St. Roch and Sebastian from 1708, kept at present in the St. Peter and Paul church in Chełmno,¹⁷ and the votive painting placed under the matroneum in the parochial church. Less importance can be attached to the oldest panoramic views of the town painted by Bartosz Paprocki in 1599 and Johan Jacob Vogel in 1684.¹⁸

The Archive of the Parochial Church of Chełmno also contains a very interesting document – the book of copies (*kopiarz*) of the archery brotherhood drawn up in 1695, containing the book of regulations of the guild from 1427 as well as extracts from some bishops' ordinances concerning the brotherhood issues.¹⁹ The birth records of Chełmno, obviously useful for demographic studies, do not cover the sixteenth century. The oldest records of this sort begin in 1640. The oldest book of baptisms of Chełmno, which covered the end of the sixteenth century and survived until the Second World War,²⁰ is no longer available.

When it comes to printed sources, one should point to the seventeenth century works by Jesuit Fryderyk Szembek, Stanisław Brzechwa and Paweł Kuszewicz.²¹

The first editions of the sources for the study of the town history were published as early as the mid-nineteenth century. One of the oldest is the printed copy of the sumptuary (luxury) law of the town of Chełmno produced in 1843 by Kazimierz Wójcicki. Unfortunately, only fragments of the manuscript were quoted without indication of the place where the original was kept and drawn up.²² Another text – this time enabling the study of the Reformation – was published in 1858 by W.S. Broel-Plater.²³ Yet another very important source publication for the study of the schooling and Church in Chełmno is the 'Urkundenbuch des Bisthums Culm' collected by C.P. Woelky in 1884–1887. In the early twentieth century, thanks to the priests Wojciech Pobłocki and Bruno Czaplą, the two oldest documents from the bishops' inspections in 1647 and 1667, which also covered the parish of Chełmno, were published in

print.²⁴ In the interwar period, Father Tadeusz Glemma, and subsequently Father Władysław Szoldrski, published extensive fragments of the Benedictine chronicle.²⁵ After the Second World War, the key source editions referring to the sixteenth century were published by Jadwiga Lechicka and Zbigniew Zdrójkowski.²⁶

In the existing historiography, relatively little space has been devoted to the early modern period history of Chełmno; this applies to the German and Polish texts equally. Still, some of the crucial publications saw the light of day as early as in the nineteenth century; these include the work of Johannes Seeman, Eugeniusz Janota, Jakub Fankidejski, Gustaw Pobłocki, Józef Łukaszewicz and Wojciech Łożyński, Feliks Koneczny, Johann Heise.²⁷

The topic of the early modern period history of Chełmno was also taken up by Friedrich Schultz, whose monumental work constitutes a continuation of the mediaeval history of the town. The volumes devoted to the modern period have been preserved as manuscripts under the titles ‘Geschichte der Stadt Kulm and der Kulmer Kreis vom Jahre 1479’ and ‘Die Stadt Kulm und deren Umliegenschaft seit dem Jahre 1600’.²⁸

The interwar period brought some more prominent works by Jan Nierzwicki, Bolesław Makowski, Mieczysław Orłowicz, Alfons Mańkowski.²⁹

In the period after the Second World War, the study of the demographics of Chełmno was undertaken by Sergiusz Sadowski in the publication entitled ‘Ludność i stosunki narodowościowe miasta Chełmna do schyłku dawnej Rzeczypospolitej’ (*The Population and Ethnic Relations of the Town of Chełmno until the Fall of the Former Polish Commonwealth*).³⁰ In 1961, a volume of the AHP was published which showed the issues of the geomorphology, settlement, property, demographics and economy of Royal Prussia.³¹ Undoubtedly, the greatest contribution to the study of the mediaeval and modern history of the town in the second half of the twentieth century was brought by Zenon Hubert Nowak.³²

A large contribution in the field of art history was brought by Teresa Mroczo.³³ The sensational research by Eliza Szandorowska into the printing industry in Chełmno in the fifteenth and sixteenth centuries has suggested that possibly there was a robust printing trade functioning in Chełmno already at that time.³⁴ Many important observations were made by the following authors: Eugeniusz Gąsiorowski, Jerzy Kałdowski, Jerzy Domasłowski and Lilianna Kranz-Domasłowska.³⁵ In 2007, the work of Marek G. Zieliński was published.³⁶

Another most valuable source is the 'Atlas historyczny miast polskich' (*The Historical Atlas of Polish Towns*), in which one book was devoted to Chełmno. It features reproductions of panoramic views and plans of the town. Even though out of fourteen sheets included in this book only three refer to the period of the former Polish Commonwealth, the study of the topography of the town and its vicinity can benefit also from later plans, drawn after the first partition of Poland or even at the beginning of the nineteenth century. One should not forget the 'Album Steinera' (*Steiner's Album*), a collection of works by the Toruń-based engraver kept at the Toruń Museum and published in 1998; it contains four drawings of Chełmno, which are – very importantly – inscribed with captions.³⁷

Last but not least, when attempting to reconstruct the profile of Chełmno in the sixteenth century, one should not disregard the works referring to the mediaeval period, without which the understanding of the processes going on in the subsequent epoch would be impossible and inaccessible due to the lack of proper sources. In this regard, the dissertations by Tomasz Jasiński, Zenon Hubert Nowak and Jan Zobolewicz³⁸ deserve a mention.

* * *

It is believed that the foundation of the castle town of Chełmno coincided with the foundation of the Polish state in general.³⁹ It was located on top of Góra Świętego Wawrzyńca (*St. Laurent Hill*). The mention of Chełmno in the so-called Falsification from Mogilno testifies to the fact that already in the eleventh century its economic profile was shaped by trade and crafts. It is equally clear that during this period it also served major civil, military and Church administrative functions at the northern border of the early Piast state. The castle town together with its spacious suburbs occupied a prominent hill, sloping down at some 30–45°; it was surrounded by a wooden-clay palisade with the base width of approximately 50 m and the height of over 15 metres.⁴⁰

At the turn of the thirteenth century, the castle town of Chełmno became a centre of intensive military-missionary activities directed against the Old Prussian tribes, which kept attacking the Chełmno land from the north.⁴¹ As a result of one of the such assaults which took place before 1222, the castle

town of Chełmno was destroyed. Measures to reconstruct it were taken by Duke Konrad of Mazovia, who held jurisdiction over the town, and the missionary bishop Chrystian.⁴²

The plan to hand the land of Chełmno over to the Teutonic Order, which Konrad conceived in 1226, was still related to the perception of the town as a centre for missionary efforts, as evidenced by the idea to erect a Dominican monastery inside its perimeter – the first one planned on the territories captured by the Teutonic knights after 1228.⁴³

The Teutonic knights took control of the land of Chełmno in 1230–1232; the town became the seat of a commandery. When carrying out the location of Chełmno, which ultimately took place on 28 December 1233, together with the indispensable settlement activities, they gave up the idea of returning to Góra Świętego Wawrzyńca; instead, they chose a spot some 2 km up the Vistula, which offered more favourable conditions for the construction of the town around the Teutonic castle. The location document was issued in Chełmno by Grand Master Herman von Salza and Country Master Herman Balk. The urban commune was organised according to the modified provisions of the Magdeburg Law, which subsequently came to be used for the locations inside the territory of the Teutonic state as well as outside its borders, mainly in Mazovia and Kuyavia, as the so-called Chełmno Law. It was planned that Chełmno should become the capital town of the Teutonic state under creation at that time; therefore, it received 420 lans of land. The Chełmno parish was equipped generously too, as it received eight lans in the vicinity of the town and another 80 to their discretion.⁴⁴ Although the location privilege is the first document to mention the parish of Chełmno, undoubtedly it was established even earlier than that. The Chełmno parish was incorporated in the Chełmno diocese established in 1243, however the seat of the bishop and the chapter was located in 1252 in Chełmża, 18 km from Chełmno.⁴⁵

It was most likely the destruction of the town by a fire which encouraged the decision not to reconstruct it in the same location but to move it in 1239 to a spot which appeared to be more favourable for trade, i.e., some 5 km down the Vistula, in the direct vicinity of a tributary channel, which later came to be called the Trynka. It appears that the place was to be guarded by a Teutonic guardhouse known as Mestwin Tower, whose erection dated back to the second quarter of the thirteenth century⁴⁶ This location turned out to be rather unfortunate, because the area was a flood plain with poor defensive qualities, which was taken advantage of in 1244 by Duke Świętopełk. Consequently, the next step was to move the town to the hills where it is located at present. The subsequent translocations of the town have been recorded in the place names: Starogród (*Old Castle Town*) – in relation to the first localisation; *Antiqua Civitas* – in relation to the second localisation; the name was used as late

⁴³ According to the Dominican tradition of the seventeenth century, the erection of the monastery in Chełmno took place as early as 1228 thanks to Saint Jacek Odrowąż and the legate William of Modena. The friary was supposed to become the main tool for the missionary work among the heathen tribes. See: *Archiwum Dominikanów w Krakowie*, sign. as the sixteenth century, when it got replaced by the name Rybaki.⁴⁷ It was then that Country Master Eberhard von Sayn on 1 October 1251 in Chełmno confirmed the destroyed original Chełmno privilege with a separate document.⁴⁸ It differed, however, in some details from the original one; Chełmno was no longer titled 'the capital town', but only 'the main one'.

This time, the town found itself on a hilly terrain reaching approximately 40 m above the Vistula level, on hill tops from which the access to the Vistula was the most advantageous and closest between Ostromecko and Grudziądz.⁴⁹ It was planned anew on an area of approximately 28 hectares. This area was so spacious that in spite of the dynamic development of the town in the thirteenth and fourteenth century, during the Middle Ages, there was no need to locate a Chełmno new town, which also affected the development of the suburbs. Longitudinally, the town's broadest measurement reached approximately 772 m; along the traverse axis, it reached 444 m. The blocks measured 20 × 20 Chełmno rods, equalling approximately 87 × 87 m; however due to the fact that the design of the town market was square, the blocks of the market belt along the traverse axis were given the measurements 30 × 20 rods, or approximately 130.5 × 87 m. Furthermore, some of the blocks in the vicinity of the walls could not have a regular shape. There were 15 blocks with regular measurements and 16 with non-regular measurements, i.e., bigger or smaller ones. According to the measurements taken by J. Zobolewicz, the majority of the blocks were divided into 16 plots. In total, as many as 420 plots could have been made available for construction. The width of the majority of streets was 2.5 rod, i.e., approximately 11 m.⁵⁰

After mapping out the blocks for the erection of buildings, delimited by the streets criss-crossing perpendicularly, construction works started on the parochial church of the Assumption of Virgin Mary, the Dominican church of St. Peter and Paul; after 1255, the Franciscan church of St. Jacob and Nicholas; after 1266, the female Cistercian church of John the Baptist and John the Evangelist as well as the town rampart; around 1298, the town hall, and the hospital church of the Holy Spirit. The construction works leading to the creation of the present church buildings are dated 1280–1330. There are also relics of gothic dwellings dating back to the same period. The youngest church – dated the mid-fourteenth century – is the one devoted to Saint Martin.⁵¹

The Chełmno town hall was the seat of the higher court of the Chełmno Law;⁵² in 1386, Grand Master Konrad Zöllner took steps to locate a university in Chełmno, the establishment of which was approved by Pope Urban VI. It remains unclear whether already at that time the block located to the north-west of the parochial cemetery was designated for that purpose; however, the university was not created. The idea to have a higher education institution in the town reappeared several times in the fifteenth century, and ultimately in 1472, with the support of Bishop Wincenty Kielbasa, a *stadium particulare* was established. The school was entrusted to the Brethren of the Common Life, who had their headquarters in Zwolle in the Netherlands.⁵³ In all likelihood, the aforementioned block in the closest vicinity of the parochial church and presbytery was designated for the school.

The urban development of Chełmno until the end of the Middle Ages did not interfere with the chessboard layout of blocks and streets. The generosity of the original planning still met the

needs of the townsfolk. In reality, no new civic or sacral buildings were erected which would distort the mediaeval layout determined during the second translocation of the town; the town's civil infrastructure, dwellings and utility buildings did not interfere with the mediaeval arrangement of the plots either.

As the seat of the Teutonic delegation and a witness to some of the Polish-Teutonic negotiations in 1466, the town did not return with its lands under the reign of the Polish kings after the peace Treaty of Toruń. It remained under the occupation of the Teutonic mercenary Bernhard von Zinnenberg, also known as Bernard Szumborski, and his heirs, and then Commander Georg Ramung von Rameck until 10 November 1479.⁵⁴ It remained a royal town until 26 May 1505, when King Alexander Jagiellon bestowed the town upon the bishops of Chełmno together with some other settlements, including the nearby castle in Starogród, which proved especially important for the future fate of Chełmno.

The sixteenth century was not, as it is sometimes suggested in the literature, a period of fall, but rather one of economic stability, in spite of some religious turmoil and cataclysms, such as the big fire of the town in 1544. This is evidenced by investment in new constructions; in two stages in the years 1567–1572 and 1589–1596, the Renaissance-Mannerist reconstruction of the town hall was completed.⁵⁵ The new building was twice the size of the previous, gothic one. The good financial condition of the burghers can also be deduced from the construction of the 'arcade' house (*'dom podcieniowy'*, i.e. a prestigious house type with a large outdoor area protected from the sun by a protruding roof) in the eastern façade of the town square, which carried some traits of the Dutch Mannerism; it was also known as the 'Polish House'. Among the most representative buildings was also the tenement house erected in 1570 by Melchior Cywiński and located in the corner of the town square and Rycerska (*Knight*) Street. Be that as it may, the town no longer played as significant an economic role as in the thirteenth century.

The location of the town on hills and the natural defensive qualities of the terrain did not force the development of modern fortifications, even though the mediaeval rampart ceased to meet the battlefield requirements, as imposed by the advancement in the art of war. Nevertheless, in 1563, the town obtained a royal privilege to restore and raise the walls. The layout of the walls was adjusted to the natural conditions imposed by the terrain in such a way as to make them fulfil defensive functions, at the same time surrounding as big a part of the town hills as possible. For this reason, their arrangement was irregular. In the privilege issued in 1563, King Sigismund Augustus approved of the reconstruction and raising of the defensive walls. Steiner's plan shows the wall complex equipped with 27 towers and six gates. Rüdiger's plan features 32 towers. The 1773 plan features 30 fortified towers.⁵⁶ The differences in the number of fortified towers follow mainly from the different marking of some objects, such as doors or towers. The majority of the towers – rectangular or half-circular – were open on the inner side, which means they served no other purpose than defence. Rüdiger's plan shows some towers as covered with sloping roofs. It can be assumed that the same was true also in the sixteenth century.⁵⁷ Out of seven mediaeval town gates (Grubińska, presently known as Grudziądzka; Toruńska, in the sixteenth century also known as Duchy Świętego [*Holy Spirit*]; Wodna [*Water*], in the sixteenth century more often called Paulińska [*Pauline*]; Franciszkańska [*Franciscan*], which starting from the seventeenth century was commonly called Rosmelska, Sukiennicza [*Draper*], Mostowa [*Bridge*] and Merseburska), only the first five were operating in the sixteenth century. The non-operating gates were called empty.⁵⁸ From the north, Furta Rybacka (*Fisherman Door*) was open at the end of the street called the same name. In 1612, Bishop Maciej Konopacki re-named it Brama Rybacka (*Fishermen Gate*). It must have been really broad if the bishop had ordered the installation of crosses inside the passage to prevent driving carriages.⁵⁹ If Steiner is to be believed, Chełmno's gates – with the only

exception of Wodna – had auxiliary front fortifications, or barbican. On the barbican of Grubińska Gate, the Chapel of the Apparition of Mother of God was built in the mid-seventeenth century.

Along the fortifications, there was a narrow belt free from any construction – it was not even separated with any fences. This belt was necessary to ensure a free access to the walls. The only exception was in the vicinity of the Holy Spirit Hospital and the female Benedictine monastery.

Since its establishment, Chełmno has preserved the original chessboard layout of streets virtually unchanged. There were eighteen of those altogether. The Old Polish archives mention 13 street names, including one outside the town walls: Grubińska, Wodna (Water),⁶⁰ Toruńska Duchy Świętego (*Holy Spirit*)⁶¹ and another one known under the name Duchy Świętego too,⁶² Rosmelska,⁶³ Kaznodziejska (*Preacher*),⁶⁴ Knapska,⁶⁵ Polska (*Polish*) – mentioned as late as 1545⁶⁶ and most likely identical to Szpitalna (*Hospital*),⁶⁷ Sukiennicza, later called Tkacka (both names referring to draper's trade),⁶⁸ Ciasna (*Strait*),⁶⁹ and outside, Brama Wodna (*Water Gate*), Kamienna (*Stone*) Street.⁷⁰ In 1583, Kaznodziejska Street ran still as far as the defensive wall at the western extreme of the town.⁷¹ In the Middle Ages, the following names were also used: Tłusta (*Fat*), Rogowa (*Horn or Corner*), Kotlarska (*Coppersmith*), Merseburska, Mostowa (*Bridge*), Paulińska (*Pauline*), Przy św. Marcinie (*At St. Martin*), Za św. Pawłem (*Behind St. Paul*), Wąska (*Narrow*).⁷² The aforementioned names were customary, so it cannot be excluded that in casual speech, a few different names in Polish and in German were used to refer to one and the same street. All the streets preserved their original width. The street network has not changed, however the passageways in the town got changed in connection with the closing of some gates and doors. The greatest communicative importance was attached to the streets of Grubińska, Toruńska and Wodna. As early as 1626, Bishop Jakub Zadzik ordered the town authorities to take care of the condition of the paving.⁷³ This means that the most important sections of streets and town squares had to be paved much earlier than that.

The centre of the town, just like in the previous period, was the town square (*Rynek*). At each of the four corners, two full-width streets met perpendicularly. Its dimensions, as encircled by the streets, were approximately 36 × 26 rods, i.e., around 157 × 113 m; the area measured 1.77 ha. The town hall together with the merchant house occupied the middle part of the square. The relatively small one-storey town hall was dominated by a 47 m high tower crowned with an ornamental Renaissance top. The weighing scales were installed on the ground floor of the town hall. To the east of the town hall, there stood the house of commerce, also known as 'Dom Angielski' (*English House*), which in the modern period was also called 'Pakusz'. This last name derived from the German expression 'Englische

Packhaus'.⁷⁴ It was an impressive gothic structure with characteristic fault peak. Most likely, it was erected shortly after the town obtained the privilege on 19 May 1298 to have a merchant house with counters and stalls constructed.⁷⁵ The basement of Pakusz housed the prison. It consisted of three rooms at two different levels.⁷⁶ When necessary, the basement of the town hall served as the torture chamber. Adjacent to the house of commerce from the south were some stalls (stands), while counters, including fish benches, were located to the north of the house of commerce.⁷⁷ Towards the end of the sixteenth century, there was a stable or a granary near Pakusz, which in the seventeenth century got restructured as an arsenal.⁷⁸ In the south-eastern corner, i.e., at the exit of Grubińska Street there was a guardhouse (the Polish name *wachtbuda* deriving from German).⁷⁹

To the west of the town hall, there was a large pit surrounded with oak logs and used as a fire fighting reservoir; it was called 'Fyca'. Its estimated dimensions were 15 × 22 m. Its creation was necessary due to the problems the town had with getting water. There was a gutter going away from the reservoir and leading under the surface of the town square; for safety reasons, it was covered with wooden logs. It carried excess rainfall water and allowed the draining of the reservoir for maintenance.⁸⁰

There were several wells inside the town. The public ones were located in the town square corners. In the 1590 book of regulations by Bishop Piotr Kostka, it was ordered that there should be five wells inside the town: three on the town square, the fourth one on Grubińska Street and the fifth one on Knapska Street. The well-keepers elected from each quarter were obligated to supervise the condition of the wells.⁸¹ In addition, there were wells used by monasteries and some owned privately by the townspeople, as recorded in later sources.⁸² There was one well (or maybe two) operating inside the premises of the Franciscan monastery.⁸³ In 1604, the old well on the Benedictine courtyard collapsed; the new one was made entirely of stone.⁸⁴ There can be no doubt that the water obtained from these wells was too scarce to meet the demands of the town residents, therefore the town was also supplied with water from the Trynka.

In the western façade of the town square at the exit of Rosmelska Street, there was an Artus Court, also known as Dom Duński (*Danish House*), later called Giełda (*Stock Market*). During the Middle Ages, the building was owned by the merchant guild and subsequently, in 1422, it was acquired by stallholders. Rüdiger's plan presents it as an impressive multi-storey building with a gothic stair-like gable and a steep arched portal leading inside. Most likely, there was a terrace with a stoop in front of the Artus Court.⁸⁵

The parochial church of Chełmno occupied a whole block in the town centre, in the immediate vicinity of the town square to the south-west. The parochial church, as the only gothic church in

Chełmno, is perfectly orientated. On 7 July 1519, Bishop Jan Konopacki promoted the church to the rank of a collegiate church. The presbytery was located to the west of the temple, opposite the main entrance. It was a single-storey brick-built building. In the backyard there was a stable and further up the plot, a garden.⁸⁶ At the southern exit of Franciszkańska Street, which at that time reached the town wall, there was an auxiliary St. Martin church. The entrance to this temple was from this street. In the north-western part of the town, there were two monastic complexes: Franciscans and female Benedictines. During the modern period, in addition to the blocks given to them in the Middle Ages, each of them occupied also an adjacent one, used as a garden. The Dominican monastery occupied a block in the north-eastern part. On the northern side, the Dominican and Franciscan monasteries each touched an approximately 30 m-high monastery church. The oldest wing of each of the Franciscan and Dominican monasteries was perpendicular to the church building. The oldest part of the Benedictine monastery was erected along the church axis at a slope, while the other two wings were perpendicular to the southern façade of the church. Each of the monasteries was surrounded by a complex of utility buildings, such as stables, coach halls, barns, pigsties, breweries and servant quarters. On the southernmost extreme of the town, right next to Toruńska Gate, there was a complex of buildings belonging to the Holy Spirit church and hospital. As opposed to the male monasteries, the hospital building together with its utility surroundings was adjacent to the church from the south. Towards the end of the sixteenth century, a stand-alone St. Hyacinth (*Jacek Odrowąz*) chapel was erected by the Dominican church, while at the Benedictine abbey complex, there was St. Michael chapel.⁸⁷ There were also two churches located outside the town walls: of St. George and St. Agnes. St. George church stood at the bifurcation of the road to Grubno and Nowawieś, some 400 m from Grubińska Gate and to the right of the exit road.⁸⁸ The other church was situated in the Rybaki district, below the monastic church of the Benedictines.⁸⁹ In the ravine leading from Grubińska Gate to Kamienna Street, there was most likely a revered miraculous spring.

By all the aforementioned churches, there were operating graveyards with burying sites. In total, there were seven of those in the town and its nearest vicinity. The town's main cemetery was the parochial one, even though laymen could also be buried in monastic graveyards, in particular the Dominican and the Franciscan. Until the end of the sixteenth century, the Benedictines were buried in the graveyard at St. Michael church. After vaults were constructed under the church, starting from 1605 the monks found their eternal rest there, while the graveyard at St. Michael church, commonly called 'kirchówek' (most likely from the German word '*Kirchhof*', meaning '*graveyard*'), was used as the burying site for less significant persons. The graveyards by the churches of St. Martin, St. George and Holy Spirit were used by less affluent residents of the town and villages belonging to the parish. The residents of the Rybaki suburbs could also be buried at St. Agnes church. Throughout the entire modern period, priests, monks, the wealthiest townspeople, and noblemen were buried inside the greatest churches of Chełmno.⁹⁰

Towards the end of the sixteenth century, there were three schools operating in town: the parochial school, the academic gymnasium and the girls' school at the Benedictine monastery. A stand-alone building of the Academy, approximately 15 m long, was situated in the closest vicinity of the parochial church at Szkolna (*School*) Street.⁹¹

There were two hospitals – or rather shelters – operating in Chełmno. The first one, by the Holy Spirit church, next to Toruńska Gate, gave shelter to the poor, elderly and lonely. The second one, next to St. George church, was located outside the town, at the road to Grubno.

The location of the bathhouse remains unknown, although some suggestions mention that it stood on the premises of the Holy Spirit Hospital. The municipal bathhouse operated under the auspices of both Bishop Piotr Kostka and Bishop Maciej Konopacki. The bath keeper was mentioned in the oldest,

currently lost baptismal book of 1598–1664. In 1584, the Benedictines set up a monastery bathhouse by Merseburska Gate. It was made of wood with a brick wall on the outside. A separate bathhouse was used by the priests of the monastic church.⁹²

On the north-eastern side of the town hall there was a pillory, mentioned in 1590.⁹³ The executioner's house as well as the accompanying utility buildings were the property of the town. We do not know their exact location, however, the treasury records suggest that it stood in the vicinity of the defensive walls, rather than on the fringe.⁹⁴ Outside the town, by the road to Nowawieś called Nagórnik, there were gallows. Decapitation was performed in the vicinity of St. George church.⁹⁵

A horse-operated malt house was located at Rosmelska Street. Most likely, it stood in the back behind the Artus Court. It was powered by a horse mill. On 20 July 1583, Bishop Piotr Kostka renewed the privilege for the construction of a horse mill. The bourgeois families which owned it belonged to the wealthiest in town.⁹⁶ Another malt house was owned by the Franciscans; it stood on the monastery premises, most likely in the corner of the present Klasztorna and Biskupia Streets.⁹⁷ The Benedictines owned two breweries, which were located inside the monastery premises, near the defensive walls at Merseburska Gate. One of these was constructed in 1595.⁹⁸ The town had two windmills. The Dutch windmill was located on the adapted former town gate which closed Knapska Street from the east. It is clearly visible on the 1708 panoramic view of the town from the painting of St. Roch and Sebastian and on the Rüdiger's plan. The town brickyard was located by the road to Grudziądz, called Nagórnik. It was probably because of this fact that a part of this road was called Starocegielniania (*Old Brickyard*) in the Middle Ages. The hill upon which it stood was formerly called Ceglana Góra (*Brick Hill*). In the immediate vicinity of the brickyard, there was a small water reservoir, most likely an old clay pit, called 'Glinianka' (the Polish word '*glina*' meaning 'clay'). In addition to a furnace, called the 'great municipal furnace', the brickyard encompassed also the brickmaker's house, an area designated for drying bricks, a well and a water reservoir.⁹⁹

Houses in Chełmno had one, two or even three floors. Brick-made houses were called 'kamienice' (the Polish word '*kamień*' means 'stone', however the term 'kamienica' later came to be rather unambiguously associated with tenement houses). On the other hand, wood and clay were preferably used for the construction of utility buildings. The vast majority of houses had basements.¹⁰⁰ As early as 1590, attempts were made in Bishop Piotr Kostka's town rule to encourage the townspeople to erect buildings on empty plots in town by reminding them that 'they are of no use' (Archaic Polish: *z nich nie idzie żadna wolności*, literally: 'there is no privilege to them').¹⁰¹ In general, residential infrastructure was more eagerly erected in the eastern part of the town, primarily around the town square as well as Grubińska, Toruńska, and Wodna Streets and, to a lesser degree, along Kaznodziejska and Knapska Streets. As the original construction plots were 2.5 rod wide, there could have been 40 houses at maximum at the town square of Chełmno. Rüdiger's plan of the entire town includes 278 buildings which can be considered residential. Immediately after the capture of Chełmno by the Prussians after the first partition of the Polish Commonwealth, the cadastre registers drawn at that time indicated

257–259 houses.¹⁰² Towards the end of the sixteenth century, the process of the town depopulation was clearly gaining impetus, as evidenced by the voices recorded from the early seventeenth century.¹⁰³ Definitely, one of the reasons for the deterioration of the urban infrastructure in the sixteenth century was the great fire of 30 March 1544.¹⁰⁴ What the modern period travellers found so enjoyable about the appearance of Chełmno – the red of the roofs – was a consequence of the orders issued by Bishop Piotr Kostka in his book of documents of 1590, in which he obligated the townspeople to cover their homes with ceramic rather than thatched roofs.¹⁰⁵

Another important element of the town landscape were gardens or, worse, empty plots located at the town extremes, along the walls. The blocks in the western part were occupied by three monastic gardens. The plot adjacent to the Benedictine monastery, delimited by the streets Klasztorna (*Monastery*) and Biskupia (*Bishop*), was occupied by the Benedictine garden. The second, so-called great garden (according to the naming convention used by Steiner) was cultivated by the Benedictines on the slope of the hill below the monastic church. The garden of the Franciscans was located between the streets Biskupia, Klasztorna and Szkolna. The garden of the Dominicans was located on the monastery premises in the north-eastern corner of the town. Almost the whole block between the streets Kościelna (*Church*), Poprzeczna (*Sideway*), and Rycerska and between Knapska, Poprzeczna and the town wall was occupied by vegetable and fruit gardens. Rüdiger's plan shows only 10 blocks which did not have any gardens. There were also gardens in the Rybaki district as well as in front of Grubińska Gate.¹⁰⁶

Outside the defensive walls, between Grubińska and Tkacka Gates, by the so-called 'shooting trench', there stood the municipal shooting range used by the archers' guild. Its maintenance was one of the responsibilities of the town. Towards the end of the sixteenth century, it was probably neglected, which bothered the bishops of Chełmno. In the book of town documents of 7 February 1590, Bishop Piotr Kostka ordered reactivation of the marksmen guild and restoration of its former rights and customs. Above all, it was ordered that the income from meadows belonging to the archers' brotherhood should be returned and assigned to the king marksman (*król kurkowy*).¹⁰⁷

The area of the town inside the walls was divided for fiscal, defensive and police-organisational reasons into four quarters. The first scholar to attempt to recreate this division was F. Schultz. His results were taken over by J. Zobolewicz however, revised and corrected by two other scholars – T. Jasiński and Z.H. Nowak. In their view, the Larger Quarter (*quartale maius*) occupied the south-eastern part of the town and was delimited by the streets Grudziądzka and Toruńska. The Smaller Quarter (*quartale minus*) occupied the south-western side, enclosed by the streets Toruńska and Biskupia. The Franciscan Quarter (*quartale barfotorum*¹⁰⁸) constituted the north-western part, delimited by the streets Biskupia and Rynkowa (*Town Square or Market*). The Dominican quarter (*quartale praedicatorum*) in the north-eastern part was delimited by the streets Rynkowa and Grudziądzka.¹⁰⁹ Each of the quarters covered also one of the blocks adjacent to the town square. Unfortunately, the preserved quartermaster books

¹⁰² Between November 1772 and early April 1773, Prussian Privy Financial Advisor Roden collected data on the population of the towns of Royal Prussia. This survey was published by Max Bär, *Westpreussen unter Friedrich dem Grossen*, Leipzig 1909, vol. 2, pp. 586, 708ff. See also: *Statystyka Departamentu Bydgoskiego ułożona w miesiącu kwietniu 1812 roku*, elab. M. Kallas, J. Wojciak, Warsaw–Poznań 1972, pp. 72–78. At present, there are approximately 375 residential buildings inside the defensive walls.

did not use the mediaeval names, but only Roman numerals, and secondly, in all likelihood the borders of the quarters had changed.¹¹⁰

In the sixteenth century, there were still suburbs to the north-east – Rorgasse and Pantkensee – whose significance was gradually diminishing. Accepting the conclusions of T. Jasiński, the first one was located to the north-east at the town hills, maybe at the bent of Kamienna (*Stone*) Road, near the town's utility infrastructure. The other is hypothesised to have existed in front of Grubińska Gate. At the foot of the uplands on which the town is located from the side of the Vistula, there was a suburb called Rybaki. Its perspectives on territorial development were rather limited. From the south, it was constrained by the town hills, from the north by the Trynka. The 1820 plan of Chełmno presents an irregular network of streets of Rybaki, which corresponds to the present one. The buildings of the suburbs stretched from the place where the present-day Kilińskiego Street meets Żeglarska Street in the east to Łąkowa Street in the west. However the greatest density of brick-made buildings was in the vicinity of the present-day streets of Leśna, Zielona, Portowa. Until the mid-seventeenth century, St. Agnes church stood there. The layout of the roads was roughly the same; however it should be assumed that the two main roads mentioned in the mediaeval sources were Rybacka and Przewoźna, at the intersection of which there was the Przy Grobli (*By the Dyke*) Square.¹¹¹ This suburb never got protected by a defensive wall, even though it was here that the river port of the town was located on the bank of the Trynka, next to Przy Grobli Square. According to Tomasz Jasiński, this square was located at the intersection of Przewoźna and Rybacka Streets. In all likelihood, the docks were located in front of Wodna Gate. The upper bed of the Trynka was used for temporary storage of wood which was transported along the main bed of the Vistula.

Marian Biskup counted Chełmno among the main transport nodes of Chełmno voivodeship, as it was located on the main route from Toruń via Unisław to Grudziądz and then Gdańsk. From the perspective of Chełmno, this route began to lose importance in the modern period, because a shorter route became preferable, which bypassed the town. The second route led from the north-west to the south-east via Chełmża and Toruń and was connected to the crossing over the Vistula. The Vistula crossing nearby Chełmno was mentioned already in the privilege of Chełmno of 1233 and then once again in 1251; consequently, it can be assumed that it started functioning around that time. In the modern period, it still played a very important role in the life of the town. The ferry crossing of the Vistula could be reached via the road leading past the Trynka and Kępa Panieńska, or, more specifically, the eastern part of the latter called Ostrów. On the other side of the Vistula, the ferry docked in the vicinity of the present-day Głogówek. The Chełmno crossing played an important role in communication and not only on the local scale.¹¹² Another crossing operated close to Chełmno between Bieńkówka and Topolno, some 10 km up the Vistula.¹¹³

The operating town gates connected with roads coming from the most important directions. Grubińska Gate connected with a road which at St. George church brought together two other roads, Grubno and Grudziądz. The road to Grudziądz via Nowawieś was called Nagórník (Polish phrase *na górze* means 'over the hilltop'), as it ran along an upland, at the same time flanking the municipal estates from the south. Furthermore, right at Grubińska Gate, it was joined by a tiny road running along a ravine from the side of Kamienna Street. Toruńska Gate connected with a road from Toruń via Unisław and Osnowo. Some 4 km before Chełmno, the road began to slope down steeply towards the Fryba Valley and past the bridge it rose steeply again until it reached the said gate. Already past the bridge, the road was joined by the road to Starogród and Ostromecko, and further to Fordon and Bydgoszcz. At Wodna Gate, two

Jasiński, *Przedmieścia średniowiecznego Torunia i Chełmna*, p. 124; AHMP Chełmno, plan no. 3. However, this plan indicates that the road to the ferry branched off from Nadolnik only to the east past Broch.

¹¹³ *Inwentarze dóbr biskupstwa chełmińskiego (1646 i 1676)*, publ. R. Mienicki, Toruń 1955 (Fontes Towarzystwa Naukowego w Toruniu, vol. 40), pp. 57, 144

roads began: one going to the left, called Bramita, which led to Rybaki; the other going to the right, Kamienna Street, in the direction of the Vistula crossing, or Grudziądz via Podwiesk, to become another route called Nadolnik (Polish phrase *na dole* means ‘at the bottom’). Nadolnik led in the direction of a deep pond called Broch; it circumvented it and then led between the Trynka and the dyke.¹¹⁴ Similarly to Nagórník, Nadolnik too connected the town with the municipal estates and demesnes, among others Nowe Dobra, Kolno, Łęg, Górne Wymiary, Dolne Wymiary, Klamry, Nowawieś, Podwiesk, Wielkie Łunawy, Brankówka, Sosnówka, Rozgarty, Szynych as well as Sztywnag and Gogolin.

The area of the town’s patrimonium amounted to 420 lans, or over 70 km² in the Middle Ages. This area, commonly referred to as Nizina (*Lowland*), was bestowed upon to the town already on the basis of the Chełmno privilege of 1233. This endowment was also confirmed in the privilege of 1251. It spread along the Vistula – a belt approximately 3 km wide and 25 km long, from the village Uśc to the south-west of Chełmno up to Lake Rządź and the village Ruda on the periphery of the present-day Grudziądz. It seems that this area in its entirety, or at the very least its part directly dependent on the municipal authorities, is called the ‘fret miejski’ (literally, the municipal common pasture) in the 1590 book of documents. From the south-east, the area was enclosed by the hills called Białe Góry (*White Hills*) and covered with forest. According to T. Jasiński’s estimations, at the turn of the fifteenth century, approximately 60%, or 4,200 ha of the patrimonium, were agrarian lands; 240.8 ha were gardens; 28 ha were meadows, while the rest – approximately 2,531 ha – was mainly used as pastures and covered with woods.¹¹⁵

The use of the entire area of the patrimonium for agriculture was rather problematic, as it spread on flooded areas by the Vistula which required extensive melioration works as well as the construction of dykes using the existing hills.¹¹⁶ Halmhuber, a nineteenth century mayor of Chełmno, claimed that the first dam to protect the municipal estates against flooding from the Vistula was built only in 1525. He also believed that the proper use of the area of the patrimonium dated back to the sixteenth century¹¹⁷ Surely, one factor which facilitated this process was the settlement of the Dutch settlers in this area; these were people from the Netherlands, usually of the Mennonite faith, who were knowledgeable about melioration. The area was drained among others by the digging of the Wielki Kanał (*Great Canal*), also known as the Rów Główny (*Main Ditch*), which carried water to Lake Rządź.¹¹⁸ Already in the Middle Ages, the townspeople of Chełmno had their allotments there, called ‘dworzyszczka’. In the sixteenth century, after the conclusion of the last war between Poland and the Teutonic Order, when Chełmno became more stable, the interest of the residents of Chełmno in using the municipal land estates to their benefit started to grow. Towards the end of the sixteenth century, works were started to divide the area of the patrimonium (fields, meadows and gardens) located by the town among the residents to be used for the maintenance of their houses in town and construction of new buildings on empty parcels. This process, called elocation, was carried out first in 1602 and then repeated every 50 years.¹¹⁹

A significant element of the landscape of the part of the patrimonium located closest to the sixteenth century Chełmno were residents’ barns. They were situated mainly to the north-east of the town; the main cluster was located by the Vistula, between Rybaki and municipal gardens, in the direction of Nowe Dobra. Only a part of hay and grains was stored there, however, and the rest was kept in stacks near meadows and fields.¹²⁰

¹¹⁴ Most likely deriving from the German word *Bruch* – swamp, quagmire. The name ‘broch’ was used in the eighteenth century in Chełmno and referred to swampy areas. Cf.: APT, AMCh, sign. 828, p. 18v.

In the closest vicinity of Chełmno, there were many woods. In the mediaeval times, the townsfolk had an unrestricted access to them; however in the course of time and reductions of the stands of trees, restrictions were introduced. The town owned quite a large stand of trees in Lipa. As early as 1603, Bishop Wawrzyniec Gembicki remarked that the Chełmno woods ‘have got much ravished’ (Archaic Polish: *napustoszały bardzo*). Consequently, he forbade cutting trees for sale already at that time. The only acceptable practice was cutting for one’s own use by the townspeople upon consent of all the three classes of burghers.¹²¹

In 1794, a remark was made about the topography of Chełmno: “a town on some high hills a quarter mile from the Vistula (...). Not far from the town, down the hill, there is a small river or distributary of the Vistula called the Trynka, which one mile up from Chełmno flows in the direction of Starogród and in half a mile falls back to the Vistula”.¹²² As ‘an arm of the Vistula’, the Trynka was already marked on the 1745 plan by Steiner and, similarly, on Westphal’s plans of 1820 and 1849. On the 1840 plan, it is even called ‘the Little Vistula’. On one of the plans from the late eighteenth century, on the other hand, the Trynka is called a river which carries waters in and out of the oxbow lake Chełmianka (present-day Jezioro [Lake] Starogrodzkie). The name ‘Chełmianka’ was used already in 1524.¹²³ In all likelihood, then, Lake Chełmianka developed out of the original Trynka – the oxbow lake of the Vistula. In the modern period, the main course of the Trynka no longer led through the lake. The Trynka, bending off the Vistula, neared the town at the Benedictine monastery. The subsequent course of the Trynka in the north-western direction past the town was the same as that of the present-day water course called the Trynka and some 2 kilometres past the town it re-joined the Vistula. The peaceful Trynka made it possible to get as close to the town as possible and to unload the goods safely.

The island created between the Trynka and the Vistula was called Kępa Panieńska (*Maiden Grove*). Its area is approximately 450 ha.¹²⁴ As if by extension of this grove to the east, there was another part called Ostrów (the Polish word *ostrów* denotes a river island covered with vegetation).¹²⁵ The larger, western part of Kępa was separated from Ostrów by a distributary channel called Ramię Trynki (*the Arm of the Trynka*). The plans from the late eighteenth and early show the Ramię Trynki as a dead-end watercourse which did not connect with the Vistula. Further away down the river, there were Kępa Wilcza (*Wolf Grove*), Kępa Pańska (*Lord’s Grove*), and Kępa Ostrowska (*Ostrów Grove*). Up the Vistula in the direction of Starogród, there was Świnia Kępa (*Pig Grove*) on the river.¹²⁶ In 1558, King Sigmundus Augustus confirmed the former privilege awarding the two groves to the town. On the other side, there were several groves too, of which Popowska and Krostkowska were given to the Abbess of the Chełmno Benedictines Magdalena Mortęska towards the end of the sixteenth century.¹²⁷ The groves were covered with trees, therefore Sebastian Fabian Klonowic wrote in 1595 in a poem entitled ‘Flis’ (*timber rafting*):

*When Chełmno, an old Prussian port, through a thicket shines
You shall turn right.
(Archaic Polish: Chełmno, stary port pruski, ujźrżysz przez gaj,
W prawo puszczaj.)*

¹²⁷ *Kronika benedyktynek chełmińskich*, pp. 46, 51; SGKP, vol. 4, Warsaw 1883, p. 710.

From the south and south-west, the town was encircled by the Fryba Stream, also known as the Browina, most likely after the name of the village Browina near Chełmża. Its length is only 43 km, but at the same time, it is the biggest watercourse to flow down from the upland in the vicinity of Chełmno. The Fryba used to flow into the Trynka in the past.¹²⁸

The dykes, also called dams, were constructed along the Vistula bank using natural elevations of the land. One of the oldest dykes stretched along some 3 kilometres from Broch down the Vistula to Nowe Dobra. Then it was extended using hills to reach Podwiesk. In the sixteenth century, the dyke was extended to Rządź. In 1603, Bishop Wawrzyniec Gembicki issued a reminder stating that the duty to maintain the dyke was borne by all the town residents.¹²⁹

An important role in the town's economy was played by lakes. Within the perimeter of the patri-monium, the most important ones were Lake Rządź and Lake Cykop, also known as Kolińskie. Lake Rządź was located at the very extreme of the municipal estates, at the border with Grudziądz estates. For this reason, there were disputes held with the starosts of Grudziądz concerning the rights to this lake; as early as 1524, Starost Jan Sokołowski challenged the ownership of the lake by Chełmno. After a four-year argument, the case was presented in front of the general sejmik in Grudziądz.¹³⁰

In the second half of the nineteenth century, in the period of a significant demographic boom, Chełmno extended its area greatly. Inside the originally located town, many new houses, tenements and public institution buildings were erected. The blocks meant for the construction of buildings were filled up once again. Still, the layout of the streets – and, consequently, blocks – remained in general the same, also in the vicinity of the defensive walls, because the walls had not been pulled down, except small fragments and the entry gates. The only one left was Grudziądzka Gate, which at the same time served religious functions. When it comes to the town square, Pakusz was demolished already at the end of the eighteenth century. All the gothic churches were preserved inside the perimeter of the original location town; however the monasteries of the Dominicans and Franciscans were pulled down just as the Holy Spirit Hospital was. Outside the town, St. George church was demolished. It appears that since the sixteenth century, the road layout in the most immediate vicinity of Chełmno has not changed, even though the road from Toruń to Grudziądz via Chełmno lost its importance. Most likely, the roads leaving the town through the western gates disappeared already in the seventeenth century. The most significant changes occurred in the north-western areas in connection with the massive construction completed in 1855 and 1889, which consisted in the regulation of the banks of the Vistula by the drainage of the waters of the Fryba. As a consequence of these, the 'small Vistula', also known as the Trynka, became 'dead'. The demise of the Trynka was brought about in 1963 in connection with the construction of a fixed bridge over the Vistula and the creation of levees which cut off the former mouth where it flowed into the Vistula. Then, in connection with the designing of the city sewage collector in the 1990s, the presumably oldest Chełmno dyke, which stretched in the direction of Nowe Dobra along the old road called Nadolnik in the past and, today, Nad Groblą, was pulled down.

III.6.5.1 CZĘSTOCHOWA

Małgorzata Wilska

The plan of Częstochowa was reconstructed on the basis of the eighteenth and nineteenth century cartographic sources, supplemented with information collected from written sources – mostly from the sixteenth century. The following cartographic manuscripts were used in the first place: a Swedish military plan from 1702;¹ a plan of military operations conducted near Częstochowa in 1809;² ‘Plan sytuacyjny miasta Starej Częstochowy...’ (‘Situational plan of the Old Częstochowa city’) made by Bernhard in 1823 at a scale of 1:1,500;³ ‘Plan sytuacyjny miasta Nowej Częstochowy wraz z przedmieściem św. Barbary...’ (‘Situational plan of the New Częstochowa city with Św. Barbary suburbs’) also from 1823 and by the same author, at the same scale;⁴ ‘Plan sytuacyjny gruntów i siedzib przed regulacją i po regulacji połączonych miast Częstochowy’ (‘Situational plan of grounds and residences before and after the regulation of conjoined cities of Częstochowa’) from 1842, prepared by J. Zawadzki at a scale of 1:5,000.⁵ inspections, tax registers, Church visitations (particularly the Radziwiłł visitation from 1598) and other written sources along with later cartographic materials allowed us to reconstruct the sixteenth century urban layout, which is partly hypothetical.⁶

The city is the real subject of this study, as well as other plans in this volume. However, an exception was made in the case of Częstochowa – the plan presents not only the located city and its suburbs, but was also expanded beyond the western border of the city’s territory to show the Pauline Monastery on Jasna Góra, which was excluded from the main map. Already in the fifteenth century, the monastery was the destination for many pilgrimages, which naturally influenced the life of the city.⁷

The earliest settlement in our area – a village Częstochówka (originally Częstochowa, then Częstochowa Stara) – was situated at the foot of the later Jasna Góra, by the road from Cracow to Greater Poland and Silesia. The city of Częstochowa was founded on the left bank of the River Warta, near a crossing of the said road, some 3 km from Jasna Góra.⁸ The River Warta flows in the city in a swampy valley. The River Kucelinka flows into the Warta from the east, and the Stradomka, called Rybna in the fourteenth century, and then Żarnowa, from the southwest (both rivers fall beyond the range of our plan). In the sixteenth century, a stream from the current Rynek Wieluński flowed into the Warta, and another stream flowed from the south. The northern one can be seen on the 1809 plan, and it was marked on this basis. The gorge of the Warta to the north between Mirów and Mstów, as well as waterlogged area south of the old city were difficult to cross. The city was founded on a site,

where the crossing was easier. The road from Lelów to Wieluń ran through this area. In the sixteenth century it was called ‘the great Lelów road’.⁹

Częstochowa was granted municipal rights in the fourteenth century. The document of the location is missing, and the first entry about the city comes from 1377, so it is impossible to say, who located the town, and when. This was a royal town, located ‘in cruda radice’, therefore we must consider both: King Casimir the Great, and Duke Władysław Opolczyk, the owner of Częstochowa and adjacent territories since 1370.¹⁰

Successive monarchs confirmed town rights of Częstochowa, and geographical conditions allowed the city to expand. Water was easily found here, unlike in the village Częstochówka. The borders of the located town ran in the north where Spadek Street now runs, in the east – Nadrzeczna Street, in the west – current Krakowska and Warszawska streets, and in the south – Przesmyk Street.¹¹ The city occupied some 8 ha in the sixteenth century. The market square, 62 m long and 110 m wide, i.e. 0,68 ha, was located at the centre of the town.¹² The town hall stood in the market square, and the butchers’ stalls next to the town hall. The first entry on the town hall comes from 1564, and its location is shown on the cartographic sources. There was a bathhouse in the town at the time (attested to since 1423) and the vogt’s manor, built across from the royal manor, whose location remains unknown. The municipal rights were restored in 1502 by King Alexander. In 1540, the same monarch allowed the counsellors of Częstochowa to build a dyke near the bridge over the Warta, and to collect 3 dinars from each cart carrying goods. In 1512, the privilege was confirmed by Sigismund the Old, who emphasized that one dinar from the toll should be spent on bridge and road repairs. In 1508, the king established a market each Monday, and a fair on the first Sunday of the Lent.¹³ In 1519 a fire broke out in Częstochowa, and the property of the burghers burned down. As a result, Sigismund the Old freed them for 12 years from town tax on houses, and for two years from liquor excise tax.¹⁴ The confirmation of the vogt’s privilege from 1532 mentions a bridge ‘over the River Warta’.¹⁵ A document issued by Sigismund the Old in 1531 tells us about a mill situated before the city gate.¹⁶ The 1532 inventory of Olsztyn starosta’s district mentions two mills, one belonging to the vogt, and the other – to the king.¹⁷ Four fairs were organized in Częstochowa in 1551.¹⁸ In 1564 there was a customs house in the city, where toll was paid for cattle, horses, carts and oxen driven to Silesia. In 1570 the merchants were advised to take the road through Częstochowa, where bridge toll was collected on the River Warta.

The church of St. Sigismund, situated to the south-west from the market square was originally a subsidiary church of the parochial temple of the Holy Virgin and Mother Mary on Jasna Góra. The church of St. Sigismund, built probably around 1356, became a parochial church in 1382, when Władysław Opolczyk brought the Pauline order to Jasna Góra. In 1474 the parish of St. Sigismund, with benefices, was removed from the administration of a secular parson, and put under the jurisdiction of the prior of the Pauline monastery. In his *Liber beneficiorum* Jan Długosz tells us that between 1470 and 1480 the parish encompassed: the town of Częstochowa, the royal villages – Rększowice, Dzbów, Kiedrzyń, and Wierzchowiska, also several villages of the Church – Grabówka, Częstochówka, and villages belonging to the nobility, like Konopiska, property of Jakub Koniecpolski, Bleszno and Wrzosowa – property of Jakub Trepla, and ironworks in Bleszno (a village belonging to the nobility)

⁹ J. Laberschek, *Nowe spojrzenie na początki miasta Częstochowy*, “Almanach Częstochowy”, 1994, pp. 5-15. The author believes that the most important factor in the development of the city was the building of a crossing over the Warta.

¹⁰ Idem, *Wójtostwo częstochowskie w czasach piastowskich i jagiellońskich*, “Almanach Częstochowy”, 2004, pp. 6–9.

¹¹ The borders of the town are a controversial issue. The findings of St. Herbst and S. Szymański, corrected only in the south by W. Zaleski, shed much new light. See J. Borowska-Antoniewicz, *Urbanistyka i rozwój przestrzenny*, [in:] *Częstochowa. Dzieje*, pp. 451 ff.

¹² The area of the market was copied from St. Herbst and S. Szymański, who reduced it in comparison to S. Krakowski.

¹⁸ J. Rajman, *Rozwój miasta*, p. 181.

and Gnaszyn (a village belonging to the Church).¹⁹ Originally, the church of St. Sigismund was made of wood. The documents of the 1598 visitation record that it was made of brick and well-equipped. At the time, it had four stone altars, a tower with two bells, and a signature tower with another bell.²⁰

Many burghers of Częstochowa endowed to the benefit of the Church, mainly to charity. In 1559, the vogt, Stanisław Skoczylas, offered some of his money towards the building of a poorhouse. In 1590, a burgher Maciej Mrozon handed three patches of field to the hospital of St. Jacob, founded by Jakub Zalejski.²¹

A document issued in 1388 mentions Jasna Góra as the location of the monastery, and Częstochowa as a town, for the first time. The office of a vogt was also mentioned there, and the city seal was used. The prerogatives of a hereditary vogt, as well as his endowments, were specified in the 1423 privilege of Ladislaus Jagiello. In 1530, this privilege was confirmed by Sigismund the Old. The border of the estates of the vogt's district ran through the forest from the road leading from the village Kawodrza, which belonged to the Pauline Order, to the border of a royal village Dzbów, and then to Bleszno village. The office and district of the vogt in Częstochowa remained in the hands of the nobility, in the sixteenth century it was Mikołaj Szydłowiecki, and Jan Kliziński afterwards. In 1554 the city bought the vogt's office from private owners. This probably meant only the prerogatives, as seizing the estates proved impossible back then.²²

The inspection conducted in 1564 informs us that the burghers of Częstochowa paid rent from lans, leas and 166 town meadows, 108 gardens and 218 houses. At the time, the town had 14 butchers' stalls, 19 bakers, 23 shoemakers, 10 potters. There was a cropping workshop, and three cloth merchants, as well as a town mill, which had four wheels. In the sixteenth century, the iron merchants formed the most distinctive professional group (the register of the customs house from 1584 mentions several of them), some of them also traded salt. There were two ironworks in Częstochowa parish, mentioned in 1551 and 1598.²³ The Pauline monastery owned a foundry since the end of the fourteenth century, and in the middle of the sixteenth century over 20 founders worked there.

The number of houses grew in the sixteenth century. Between 1564 and 1569 31 houses were built.²⁴ In 1631, there were 378 burgher houses, and 18 houses of the nobles in Częstochowa.²⁵ Since 1589, the nobility founded *jurydyki* in the town and on the town grounds, beginning with Jan Ocieski, the starosta of Olsztyn. A Pauline monastery was built south of the parochial church of St. Sigismund in the sixteenth century. The church was said to be brick by the 1598 visitation (three friars and a prior lived there at the time). Sometime before 1539 a school was founded by the church. It was probably situated in the building next to the temple.

At the end of the sixteenth century Cracow Gate ('porta Cracoviensis'²⁶) was most certainly brick, just as was the adjoining fragment of the city walls to the south and west. The remaining part of the walls, that is the majority, probably comprised an earth embankment with a palisade. The popular belief, according to which the entire city was surrounded by brick walls (alternatively except for its eastern fragment, on the side of the river) is groundless.²⁷ The fortifications of Częstochowa: an embankment, only partially strengthened by a wall, were not exceptional, one can clearly see an analogy with Sieradz here.²⁸ The burghers likely had to look after the fortifications, and perhaps that is why vogt Aleksander Bełdowski laid claim to fragments of the city walls.²⁹ Another stone building in the south-western part of the town, the monastery, adjoined the church from the south. The western wing of the present-day presbytery is in proportion to the old monastery depicted on the print from

1655. Probably at the end of the sixteenth century some houses in Częstochowa were also brick.³⁰ The town hall situated on the market square was made of brick.

A cemetery with a wooden chapel of the Holy Cross, mentioned in the 1598 visitation, lay west of the city walls ('extra muros') and the Church of St. Sigismund.

The streets Kościelna, Garncarska, and Poprzeczna appear in the town documents from the sixteenth century.³¹ The latter probably ran parallel to the southern side of the market square and was perpendicular to Kościelna and Garncarska Streets (perhaps just like the current Graniczna Street). The names of streets: Targowa, Nadrzeczna, and Mostowa are attested to only in the seventeenth and eighteenth centuries, but were probably created earlier.³²

The so-called 'Royal Tract' led along the western frontage of the market square. This was the road from Krakowska Gate to Wieluńska Gate (now the streets Targowa and Senatorska). It was crossed by the street, which now bear the name of Mostowa, Mirowska, and Ptasia. Fragments of Mirowska Street from the south, and Mostowa from the north, mark the two short frontages of the market square. According to Jadwiga Borowska-Antoniewicz, the location of the church square – the north-eastern corner of which touched the south-western corner of the market square – is a model example of the late-medieval urban layout.³³ It seem, the main communication route (longitudinal) encircled the city from the west, and ran along the present-day Krakowska and Warszawska streets.³⁴ The eastern block by the market square was closed at the back by Garncarska street.

A wooden chapel dedicated to St. Jacob was founded in 1586, along with a hospital (alms house) for the poor, outside the town, by the road to Jasna Góra. The founder, Jakub Zalejski, the customs scribe of the Crown, put the hospital and the 'church' under the care of the town council of Częstochowa, but under the condition that it would 'never fall into the hands and under the supervision of the priests from Jasna Góra monastery'. The benefices of the hospital grew thanks to the burghers. Around 1630, the hospital and the chapel of St. Jacob were, in the end, seized by the Paulines.³⁵

In the sixteenth century, there were also other wooden chapels situated outside the city, both dedicated to St. Barbara: one near the bridge over the River Stradomka, where a hospital was founded in 1572, and the other by the spring near the road from Jasna Góra to Kawodrza. Neither of these chapels was shown on our plan. A demesne belonging to the priests lay south of the town. In 1382 the borders between city grounds and the estates of the monastery were defined. They survived until the seventeenth century.³⁶

Recent research has confirmed the existence of brick buildings on Jasna Góra hill before the arrival of the Paulines. The discoveries made by the eastern elevation of the monastery buildings revealed fragments of walls of a structure built on bare rock in the fourteenth century, which probably constituted a part of the defensive system created by Casimir the Great.³⁷ Works of Jacek Laberschek suggest this was a small castle, where the king stayed during his tours around the country.³⁸ The monastery on Jasna Góra was founded by Władysław Opolczyk in 1382, which used the old structures, and later gradually developed. The chapel, where the miraculous image of the Blessed Virgin was kept, was built from the local limestone, shortly after 1382. The gothic church was built on the site of the old wooden church. In the last years of the sixteenth century, the following parts of the monastery were brick: the chapel, the church, the free-standing tower, and the part of the monastery situated on the side of the town. The monastery was not fortified, as the construction of the fortifications began in 1620.

The village Częstochowa appears in the documents as early as 1220. It lay between Jasna Góra and Parkitka hill, by a stream flowing from the place, where the current Rynek Wieluński is situated. After the foundation of the town, the village was called Stara Częstochowa, and since the fifteenth century – Częstochówka.³⁹ In 1382 it was endowed to the Pauline Friars from Jasna Góra and later developed as a monastery hamlet of agricultural and trade character, attending to the needs of pilgrims. It was the richest village of the monastery. Since the eighteenth century, the inhabitants of Częstochówka paid tithe to the monastery of Canons Regular in Mstów. This situation was a source of conflict with the monastery in Jasna Góra, which lasted throughout the sixteenth century, and spread over other villages belonging to the Paulines: Grabówka, Kawodrza, Kiedrzyn, Wyczerpy, Wierzchowiska. In 1591, Cardinal Jerzy Radziwiłł, the Bishop of Cracow, confirmed that Mstów had the rights to the tithe.

In 1564, there were 13 single-lan serf farmsteads and one half-lan in Częstochówka. In 1581, there were 14 serfs, eight smallholders, and five landless peasants there. Some villagers were connected with the monastery, also in the way that they copied the image of the Holy Virgin, which was later sold to the pilgrims coming to Jasna Góra (e.g. in 1543 there appears a painter from Częstochówka called Krystian). There was a conflict between the town of Częstochowa and the convent of the Paulines concerning the sale of food and forage to the pilgrims. The monastery supported the trade, conducted by the inhabitants of Częstochówka in the vicinity of its church. The city obtained numerous decrees of the king, which put a limit to this procedure, dampening the profits of the town market, but the decrees were not executed.⁴⁰ The pilgrims were probably partially guilty, as they preferred to stay near the monastery, not in the city.

In the seventeenth and eighteenth centuries Częstochówka was repeatedly and completely destroyed in wars and fires, and in the eighteenth century it was turned into the town of Nowa Częstochowa.⁴¹ As such, the situation presented on cartographic sources may differ much from the sixteenth century reality. This fragment of our plan should therefore be treated as hypothetical to a large degree.

III.6.6.6 DOBRZYŃ-UPON-VISTULA

Wiesława Duży

The motivation behind the work on the reconstruction plan of Dobrzyń-upon-Vistula (Dobrzyń, r) was its nominal status as the capital of Dobrzyń Land in old Commonwealth. As per the requirements of the AHP series, the reconstruction plans show towns in accordance with their condition from the second half of the sixteenth century at a scale of 1:10,000. At that time, Dobrzyń was a small town which still operated as a local marketplace.¹ It was, however, also one of Poland's oldest towns – a result of Dobrzyń Land's political situation. From the thirteenth century onwards, this region remained under the influence of the political and social system of its neighbour—the state of the Teutonic Order.

From the eleventh to thirteenth century, Dobrzyń was a gord in the territory of Mazovia. In 1228, Duke Casimir I of Cuyavia bestowed Dobrzyń to the new knightly Order of Dobrzyń as its seat and the central settlement of the order's endowment, but this state of affairs lasted only until 1235.² Then, the Order of Dobrzyń merged with the Teutonic Order, and Dobrzyń returned to the Duke of Mazovia.³ The beginning of the town's foundation can be dated to the period when it constituted property of the Order. Privileges whose details are nowadays unknown probably came to the town from the Order of Dobrzyń, and the appearance of settlers in the area should be linked with the Order's activity, as evidenced, among others, by the settling of the Dobrzyń sołtys.⁴ Dobrzyń quickly became the most important centre of the region and received very early first the foundation privilege, and then the privilege to re-charter with Chełmno law in 1519.⁵ In 1248, the town with the castellany gord was incorporated into the Duchy of Cuyavia, and so Dobrzyń Land ceased to belong to Mazovia.⁶ However, almost all of it remained in Płock diocese, where a separate archdeaconry was created for the town at the turn of the fourteenth century. As Dobrzyń did not have a collegiate church, the archdeacon was part of the Płock Cathedral Chapter.⁷ In the following decades, Dobrzyń went through numerous ups and downs, as did all Dobrzyń Land. The situation of the town worsened already in the fifteenth century after the Polish-Teutonic War, when Dobrzyń and its surroundings were destroyed in 1409 by the Teutonic Knights. The town also began to gradually lose its importance. In the period of interest, *i.e.* in the second half of the sixteenth century, Dobrzyń was the seat of the non-gord starosty, associated only with the cluster of estates known as Dobrzyń Gord Starosty, and the capital of one of

the three districts of Dobrzyń Land. Bobrowniki was the seat of the gord starosty for Dobrzyń Land.⁸ In the sixteenth century, the titular offices of the area included also the castellan of Dobrzyń,⁹ which was a relic of the former territorial division into castellanies.¹⁰ Dobrzyń had served as the seat of one such castellany.¹¹ In 1567, officially, on the basis of a *Sejm* (Diet) resolution, it was decided that the sejmiks (dietines) of Dobrzyń Land would gather in Lipno 'as was the old custom [– –] always [– –] in the future'.¹² Dobrzyń was the seat of the parish in Płock diocese and the nominal centre of Dobrzyń archdeaconry and deanery. In the second half of the sixteenth century, apart from the town, the local parish probably owned 17 villages on both sides of the Vistula: Bachorzewo (n), Dąb Wielki (Dąb, r), Dobiegniewo (Dobiegniew, r), Dyblin (Dyblino, n), Glewo (n), Główczyn (Główczyno, n), Głowina (Głowina, n), Gołyszewy (n), Kisielewo (n), Lenie Wielkie (Linie Wielkie, r), Płomiany (n), Ruda (?), Skaszewo (r), Strachon (r), Stróżewo (n), Tulibowo (Tolibowo, n), Zbyszewo (r).¹³

The basis for reconstructing the plan of Dobrzyń in the second half of the sixteenth century was the 1804 town plan created by Goepfner and Penne. It is the oldest known plan which depicts the entire town with such a level of detail, providing information about the buildings and the street network, drawn up at the scale of 1:1,750. The original document, described in detail by Agnieszka and Henryk Bartoszewicz,¹⁴ is kept at AGAD.¹⁵ There are two known versions of this plan, probably the original and a copy later redrawn from that original. The first version did not provide street names, but showed names of the market square, the church of St. Stanislaus, and the monastery. The second version of this plan included names of selected streets, as well as other information. For example, it was emphasised that ruins lay where the destroyed and never rebuilt church of St. Stephen ('Altes Mauerwerk') once stood. The plan showed not only churches, but also an inn located east of the church of St. Stanislaus. The town's parcels were numbered and various types of urban structures were marked on the plan.

The nineteenth-century situational plans of the Franciscan Monastery were also used as an auxiliary material. They depicted individual elements of the layout of the monastery complex, including a cemetery and a belfry.¹⁶ Technical drawings from 1819 concerning the construction of two bridges over ravines at the town's western border also provided additional information. The drawings depict the shape of the ravine which stretched towards the Vistula along the road to Lipno.¹⁷ Another auxiliary source of information was the nineteenth-century situational plan of a section of Dobrzyń. It was drawn up for the purpose of developing the land between the town and the Vistula scarp for the sake of creating a school, probably after the dissolution of the Franciscan Monastery in 1864.¹⁸ The walls of the old (St. Stephen) church, an inn belonging to the voivode, as well as paths leading from the town to the manor and to the scarp, were marked on the plan.¹⁹ We also analysed the plan of municipal land in Dobrzyń from the first half of the nineteenth century. This colourful plan is a fragment of a larger document, without a legend, and shows the layout of fields, a very schematic outline of the town, and the topography of the terrain on the Vistula's riverbank.²⁰

Dobrzyń was destroyed many times as a result of both war hostilities and fires.²¹ For this reason, its growth was stunted before it could properly develop. These issues also impacted the condition of

²¹ LWWK 1628, part 3, p. 64: information about the Teutonic Knights burning the town down, and about seven fires that broke out in Dobrzyń over 11 years in the second half of the sixteenth century, when Stanisław Kryski was the starosta

the preserved sources that could be useful for recreating the layout of the urban space in the period of interest. As no town books, accounts or other documentation prepared by the municipal office have survived to this day, the extant inspections had to become our main sources of information. There are many descriptions of Dobrzyń-upon-Vistula, starting from the 1564 inspection to documents of the late eighteenth century.²² Unfortunately, the inspections are not particularly rich in information that could facilitate the process of reconstructing the town plan from the second half of the sixteenth century. As the starosty in Dobrzyń was in fact a lease, it was not subject to inspections until the 1630s.²³ In the years 1616–1620, there is only a note about the sum assigned for the fourth life-annuity and information that the inspection had not been performed.²⁴ Therefore, these documents do not provide insight into the town's structure, and contain only a highly detailed description of the manor and the buildings belonging to the Dobrzyń Starosta. However, they provide valuable information on the Vistula riverside and its nearby tributaries, where the mills were located. An important source of information about the town's layout is the 1616 inventory of Dobrzyń Gord Starosty, drawn up after the death of Starosta Feliks Żelski, of the Ogończyk coat of arms, on the occasion of Jan Podoski, of the Junosza coat of arms, receiving the gord starosty in question.²⁵ It contains information about the buildings of the manor of Dobrzyń Gord Starosty, the town's main obligations towards the starosta, the surrounding mills and villages of Linie and Skaszewo, as well as forests. The records concerning the functioning of the Franciscan Monastery in Dobrzyń were also a valuable resource. These materials should be treated with due caution, as the originals have been lost and are known only from later copies and published excerpts.²⁶ Some information useful for the reconstruction of the town plan was established on the basis of the Bobrowniki castle court books in which the confirmation of the privileges granted to the Franciscans of Dobrzyń was filed in 1658.²⁷ The document centred on, among others, a privilege to build a mill and information on the scope of the monastery's endowment granted in the fourteenth century. The 1659–1665 inspection also mentioned the Franciscans and their mill on Vistula River.²⁸ The partially published post-visitation protocols of Płock diocese also proved to be helpful, albeit in a limited way.²⁹

As the source base for the period in question is rather limited, Dobrzyń has not become a subject of its own monograph. However, due to its significant position among medieval towns, the history of Dobrzyń was of considerable interest to many researchers, both archaeologists and historians, especially regionalists. In the late nineteenth and early twentieth centuries, Dobrzyń Land became the subject of works by such historians as Wincenty Hipolit Gawarecki,³⁰ Gustaw Zieliński, with strong ties to Skępe,³¹ Dominik Staszewski and Aleksander Maciesza.³² Zenon Guldon and Jan Powierski published a study on the development of Dobrzyń, which was not very extensive, but nevertheless significant for the history

of Dobrzyń (lifetime starosta from 20 April 1564, died on 26 June 1595); K. Chłapowski, *Starostowie niegrodowi w Koronie 1565–1795 (materiały źródłowe)*, Warszawa–Bellerive-sur-Allier 2017, p. 335; Z. Góźdź, *Najazdy krzyżackie na Ziemię Dobrzyńską*, ZD, p. 49.

of the town.³³ Jerzy Kalinowski also wrote about the spatial development of the town over the centuries, but this study should be treated with due caution. Although providing many valuable tips, it is rather a popular than a scientific publication.³⁴ Aldona Andrzejewska's article on the archaeological research carried out within the Vistula scarp in Dobrzyń is a very important piece of work for the topic in question.³⁵ The history of the entire Dobrzyń Land owes a lot to the contributions of Mirosław Krajewski, the editor of *Rocznik Dobrzyński (Dobrzyń Land Yearbook)*, a journal which has been published since 2008, as well as selected volumes of the publishing series *Z dziejów Ziemi Dobrzyńskiej (From the History of Dobrzyń Land)*, which presents the results of cyclical conferences on the history of the region.³⁶ Krajewski is also the author of bibliographic lists concerning the history of Dobrzyń.³⁷ As the post-visitation protocols were preserved, it was possible to research the history of the parish and churches of Dobrzyń.³⁸ Unfortunately, the chronicle of the Dobrzyń Franciscan Monastery, which was maintained since the eighteenth century, was destroyed, as was most of the Monastery's documentation. As a result, the comprehensive 1918 study on this subject becomes an even more important source, as its author knew the now destroyed sources and referenced some of them in his writing.³⁹

Dobrzyń is situated in Dobrzyń Upland on the Vistula River, in the border zone of the Pomeranian-Cuyavian Swell, in a landslide area, which has significant consequences for local settlement patterns. As the research conducted so far indicates, it is the largest landslide area in the entire Polish Lowland. In this section, the Vistula's path runs almost latitudinally, undercutting the right bank. Due to the lack of adequate sources for the sixteenth century, it is not possible to track changes in the course of the river's shoreline in the long term. Diachronic comparative analyses are possible only for cross-sections from the nineteenth to the twenty first century. Changes in the Vistula bank range are presented on the Dobrzyń town plan. It shows three cross-sections: the contemporary shoreline, its shape from the mid-twentieth century and representation of the early nineteenth-century shoreline, marked in accordance with the plan created by Goepfner and Penne. The research conducted so far indicates also that the course of the Vistula's shoreline underwent significant changes over time.⁴⁰ At the beginning of the twentieth century, the land of the local area was described as unstable, due to the presence of springs and streams. The river could easily flood whole swathes of land, and ravines often formed at the shore.⁴¹ During the archaeological research conducted in the mid-twentieth century, it was noticed that the Dobrzyń Vistula Scarp is sliding down at a pace that makes the results of the research imprecise due to the shifting soil layers, and prevents safe research in this area.⁴² As a result of these conditions, it was difficult to recreate the previously delineated boundaries of individual municipal or monastic properties, the traces of which can be found in the old records of the Dobrzyń-based monastery. At the end of the fourteenth century, the endowment of the monastery was probably located both within and outside the town, as evidenced by the seventeenth-century confirmation of the privileges granted to the Franciscans of Dobrzyń.⁴³ In the seventeenth century, it

was impossible to recreate these boundaries in the field due to the fact that part of the land near the river had sunk into the water.⁴⁴ Information about the landslide can also be found in the seventeenth century inspection.⁴⁵

There are no written or archaeological sources that could confirm the existence of a town hall on the market square in Dobrzyń. We can only assume that there were butcher's stalls, meat stalls, and other municipal facilities used by the town's inhabitants in this part of the town, although no sources have survived that could confirm their exact location. The main square was most likely an undeveloped rectangular square measuring approximately 87 x 76.5 m, which formed a rectangle measuring approx. 300 x 350 m⁴⁶ as demonstrated by previous studies and the results of archaeological works, together with the adjacent blocks of buildings. Streets lead from the corners of the main square in all directions, but their grid is known only from the nineteenth-century town plan. Dating from the nineteenth century until today, Franciszkańska Street led from the southern frontage of the market square to the west, towards the monastery, and then curved slightly in an arc becoming the north-west road to Bobrowniki and Włocławek. The road to Bobrowniki was already noted in the afore-mentioned confirmation of privileges granted to the Franciscan Monastery.⁴⁷ Another street led from the south-eastern corner of the square towards the scarp, passing near the church of St. Stephen, and, after the bend, turning into a road to Płock. It can be assumed that this route was the main transport axis of the town. To the south of the square, there were two streets (today: Zamkowa and Farna), the second of which led to the parish St. Stephen's church and, further, to the Vistula scarp. It should be noted that the streets at the south-eastern corner of the market square had an irregular course, which was caused both by the terrain (there is a small slope in this place visible on the plan by Goepfner and Penne) and the fact that the parochial St. Stephen's church with the cemetery were located in the area. On the north side of the square, there was a street which went along its northern frontage (Włocławska in the nineteenth century, present-day Juliusza Słowackiego) and further westwards, ending at the ravine/ditch. In the other direction, heading east, it reached the town quarter bordering on the Płock Suburb. There were also two streets starting at both corners of the square leading north whose end was located at the point when they crossed the third street (in the nineteenth century and today: Zduńska Street), connecting the entire northern block of municipal buildings, bordering on the hypothetical moat.⁴⁸ Once the moat was crossed, the road from Dobrzyń to Lipno turned slightly to the north-east, towards the road to Bobrowniki and Włocławek. In the nineteenth century, there were plans to form a direct connection between this road and the town, as evidenced by the above-mentioned technical drawings of two bridges. Perhaps one of them was to connect the afore-mentioned Zduńska Street with the road to Lipno.⁴⁹ The enumerated fragments of sources providing information on the medieval boundaries of the property of the Dobrzyń-based monastery can be seen as a source of only very general insight into the spatial arrangement of the town built-up area, referring to the owners of individual parcels, but not the names of streets.⁵⁰

Except for two churches, all town buildings were made of wood in the discussed period. It was only in the eighteenth century that some of the monastic buildings were built of brick replacing the earlier wooden constructions. The monastic church of the Assumption of Blessed Virgin Mary and the parish church of St. Stephen were both made of brick.⁵¹

The presence of Jews was already noted in Dobrzyń at the beginning of the sixteenth century.⁵² According to the so-called coronation tax record of 1507, *i.e.* the list of Jewish settlements which paid the extraordinary tax announced at that time, the Jews of Dobrzyń paid 2 florins. This suggests an existence of a small commune, comparable to the communes in Cuyavia's Pakość, and Gniewków, Greater Poland's Kórnik, Łekno and Ostroróg, and Mazovia's Rawa, which contributed the same amounts.⁵³ The sixteenth-century tax registers confirm that there was an unspecified number of Jews who paid taxes in Dobrzyń. In 1564, the tax amounted to 40 florins, which may mean that the Jewish community had 40 contributors, as indicated by the rate of 1 florin for each Jew given in the universal.⁵⁴ These values should, however, be approached with caution, because the register from 1565 does not provide any information about Jews from Dobrzyń, and the register from 1573 reports 15 florins of tax paid by the Jewish population.⁵⁵ In turn, the inspection from the beginning of the seventeenth century states that there were six houses belonging to Jews in the town.⁵⁶ We do not know where exactly these houses were located. The Goepfner and Penne plan provides some hints, as it depicts Bużnicza Street, whose course was perpendicular to Zduńska Street and connected the latter with Włocławska Street. Most likely, Bużnicza Street, whose name in Polish refers to the word 'bożnica', meaning a Jewish temple, was named after the synagogue in Dobrzyń. A religious building was marked in this part of the town on the 1:25,000 WIG map, but it is impossible to say to which religion it belonged. The synagogue was probably erected in the seventeenth or eighteenth century.⁵⁷

Earlier, fifteenth-century sources mention that there were gardens in the town by the moat, but we do not have any sources that would make it possible to determine their precise location.⁵⁸ It can be assumed that the gardens were established mainly along the northern border of the town, because of the topography and also the presence of watercourses and ravines at its eastern and western border. The shoreline of the Vistula could be occupied by fishermen that were mentioned by both inspections and tax registers from the second half of the sixteenth century, as well as the 1616 inventory of Dobrzyń Gord Starosty.⁵⁹ This letter source provides information about the obligations of Dobrzyń fishermen. Their privileges included the right to graze cows and pigs on an island (*ostrów*) on the Vistula River and collect wood and dried branches, as well as to acorns, on condition that they provide two measuring buckets (*korce*) of this feed to the starosta's manor.⁶⁰ The 1628–1632 inspection provides more information on fishermen, noting that their duties were rendered to the starosta, not the town.⁶¹ There were probably undefined garden crops in the area occupied by the Monastery, as illustrated by cartographic materials from the nineteenth century, but we do not have clear information concerning this subject in older sources.

Two of the three churches in Dobrzyń were built at the southern border of the town, near the Vistula scarp.

The no-longer-existing parish church under the invocation of St. Szczepan (Stephen), known as the parochial (*farny*) church, as evidenced in the adjacent street bearing the same name (Farna Street), was located near Góra Zamkowa (Castle Mountain). It is possible that the church was built in the Gothic style.⁶² The post-visitation protocols from the beginning of the seventeenth century indicate that the church was made of brick with a partly brick and partly wooden tower, and there was a cemetery surrounded by a wooden fence around the church. The church burnt down in a town fire in 1767.⁶³ It was most likely built just above the scarp, on a fragment of the area protruding towards Góra

Zamkowa.⁶⁴ This area sunk into the river, and today only the name of Farna Street and a fragment of the wall indicate that it was the location of the former church. Near the parish church of St. Stephen, there was a hospital, with three gardens and a school.⁶⁵

On the same axis, parallel to the bank of the Vistula, in the south-west corner of the town, there was a Franciscan church and monastery. The appearance of the Franciscans in Dobrzyń should be associated with the foundation activity of Duke Vladislaus II of Opole, but we do not have sources that would allow us to determine the exact date of this foundation. The construction of the church and monastery was probably completed before the fourteenth century.⁶⁶ The church of the Assumption of Blessed Virgin Mary burned down in the seventeenth century, and was rebuilt as a brick building in 1634. The monastic buildings were still made of wood. However, the church was destroyed in the second half of the seventeenth century.⁶⁷

The third church in Dobrzyń was the church of St. Stanislaus built in the Płock suburb. It was a small wooden building surrounded by a cemetery. It did not perform the function of a parish church, but a provostry.⁶⁸ After the fire at the church of St. Stephen in the eighteenth century, it took over the function of parochial church, and fulfilled them until 1805. From then on, the monastery church became the seat of the parish.⁶⁹

As was already mentioned, there was a Jewish community in Dobrzyń. There was also a synagogue in the town, built in the seventeenth or eighteenth century, but its location is not clearly confirmed in the sources. It is possible that it was built in the quarter at today's Zduńska Street.⁷⁰ Archaeological research and a field survey confirm the existence of a Jewish cemetery located on the bank of the Vistula River, west of the town.⁷¹

In the Middle Ages, there was a 'castle' on Dobrzyń's Castle Hill, or rather a small, fortified manor.⁷² It was built on the Vistula River, in the area of a hillfront (*grodzisko*). It was destroyed in 1409, and a wooden starosta's manor with utility structures, surrounded by a fence, was built in this place.⁷³ There was probably a ditch or channel between the manor and the town, but there is no clear information that could confirm this hypothesis.⁷⁴

Dobrzyń was not surrounded by a wall. We also do not have any information about town gates or wickets. The town was situated on a slope that provided protection from the south. Slopes, ravines, ditches and the already-mentioned fairly unstable ground surrounded the town from the east and west, making it impossible to build permanent fortifications. There is no reliable information about the security features of the northern borders of the town. The Goepfner and Penne plan shows remains of a rampart, a drainage ditch, or a moat. The lack of sources makes it impossible to clearly state what this area looked like in the second half of the sixteenth century. However, we cannot rule out that the town was at least partially surrounded by a moat filled with water. Such a possibility is confirmed by the topography and the presence of aquifers in the soil layers surrounding the town's buildings.⁷⁵

Krupa Mill on Vistula River, visible on the 1:100,000 WIG map, was outside the scope of the Dobrzyń reconstruction plan in the second half of the sixteenth century. It was probably one of the two mills used by the town, which was damaged during the discussed period as a result of construction work carried out by Marcin Głowieński. The second mill could be Łosak Mill, which was probably located near Dobrzyń (the location is unknown) and belonged to the vogt's office.⁷⁶ As stated in the inspection from the mid-sixteenth century, Głowieński, who paid tax on the villages of Głównina and Więclawice, located on the Vistula, upriver of Dobrzyń, dug 'a ditch or a dam that [he used to] provide water to His Majesty's mill that belongs to Dobrzyń', which resulted in the stoppage of both the royal mill which belonged to Dobrzyń and the mill owned by the vogt of Dobrzyń. In the inspection, both were described as having been 'built in ancient times'.⁷⁷

The 1616 inventory of Dobrzyń Gord Starosty indicates that there were four floating mills, constructed on boats in the town, or rather near Dobrzyń, on Vistula River.⁷⁸ Another mill located near Dobrzyń belonged to the vogt of Dobrzyń. In 1555, Sigismund Augustus consented to the sale of Soczewka Mill (Soszki, n) by a miller by the name of Grzegorz to Vogt Mikołaj Chelmicki.⁷⁹ As the mill was located to the north-west of the town, by the stream outside Zbyszewo Village, it was not included in the map of Dobrzyń. There was also a horse mill in the area. It was located at the starosta's manor, on the side of the town, and it was used for grinding malt.⁸⁰ It is visible on the town plan. The mill was also founded by the Franciscans of Dobrzyń. As they were granted the privilege to do so at the beginning of the seventeenth century, the mill was not included on the plan.⁸¹ It is worth adding, however, that the mill was situated 'on the rampart in ripa fluminis Istula ex opposito fundi', and both monks and townspeople had the right to use it.⁸²

It is likely that there was a small brewery or an inn in the Płock Suburb, near the church of St. Stanislaus. We can only guess its exact location, as there are no unambiguous sources that could identify it.⁸³ The brewery with the inn which was located on so-called *Psia Górką* (Dog's Hill) was also mentioned in the inspections from the second half of the eighteenth century.⁸⁴ Perhaps the former brewery operated on the site or near the inn which was marked on one of the above-mentioned plans from the nineteenth century.

Certainly, there were also various buildings related to the work performed by craftsmen in the town, but imprecise entries from the tax registers make it impossible to determine their specialisation. The 1616 inventory of Dobrzyń Gord Starosty was the first source to mention butchers of Dobrzyń, who probably had butcher's stalls or booths.⁸⁵

There were probably three suburbs in Dobrzyń in the analysed period. Lipno Suburb and the neighbouring Bobrowniki Suburb were just starting to develop in the second half of the sixteenth century. Płock Suburb, together with the church of St. Stanislaus, could have been inhabited for a long time, but it has not been confirmed in the archaeological material.⁸⁶ The inhabitants of Dobrzyń also had privileges to use the river – the privileges of Dobrzyń fishermen were already discussed above. The area west of the town which was covered by this privilege can be estimated on the basis of the records from the mid-sixteenth century inspection, as it contained information about the dispute between the town and a nobleman who breached the borders of Dobrzyń on the river and caused damage to fishermen to the west of the town.⁸⁷ As already mentioned, Marcin Głowieński is entered in the tax register of 1564 as payer of tax on the villages of Głównina (Głównina, n) and Więclawice (n); the distance from

the Vistula River bank at the town level to the latter villages, measured along the shoreline, is currently approximately 8 km.

Lacking sufficient written and cartographic sources, we can only presume that most of the arable land belonging to the town was located near its northern border. There was no information about the tax on Dobrzyń's lans in the tax registers. It was not until the mid-seventeenth-century inspection that it was recorded that the town had paid a tax from 18 lans, occupying an area of 40 lans.⁸⁸ The plan from the nineteenth century, which depicts the areas around Dobrzyń, shows that the fields were clearly managed in the strip cropping style. It is also noticeable that strip cropping was the field management technique mostly used to the north of the town, perpendicular to the Vistula.⁸⁹ It is possible that field arrangement was similar in the discussed period, but again, there are no adequate sources that would make it possible to verify this hypothesis.

The 1628–1632 inspection stated that Dobrzyń bordered on Linie Village. The distance from Płock Suburb to the manor situated next to Linie Village currently falls short of 3 km. Skaszewo and Linie Villages were part of Dobrzyń Gord Starosty, but, as they constituted separate villages, they were not included in the reconstruction plan of Dobrzyń.⁹⁰ However, it is worth to determine the area occupied by both villages, and thus the surface area of Dobrzyń Gord Starosty. It is possible thanks to the 1616 inventory of Dobrzyń Gord Starosty, which stated that Linie Village was inhabited by 12 subjects who settled on an unspecified number of włóki. Moreover, there were three włóki upon which no-one was settled recorded in the village. There was also a demesne by the lake, near the manor.⁹¹ On the other hand, Skaszewo Village covered the area of 8 włóki, of which only three were settled at the time when the inventory was drafted.⁹² There was a manor in the village with a stable, a cowshed, and a barn. The inventory also highlights two small fragments of the forest which belonged to the gord starosty. The first of these fragments occupied a small area near the demesne in Linie Village, the second – an oak forest which was 'partially damaged' during the times of the last starosta – was located right next to the starosta's manor in Dobrzyń. The crossing of the Vistula near the town⁹³ and the above-mentioned obligations of Dobrzyń fishermen also constituted sources of income for the starosta. Available sources only say that the crossing was located near the town, at the level of Dobięgniewo Village, located on the other side of Vistula River.⁹⁴

The afore-mentioned Soczewka Mill (Soszki, n) was part of the Dobrzyń Vogt's estates. In the second half of the sixteenth century, the Dobrzyń Vogt's Office was in the hands of the Chelmecki family.⁹⁵ At that time, Andrzej Chelmecki had a debt held against the vogt's office in the amount of 720 grzywnas. Andrzej and his wife, Anna of Grabie, received confirmation of the lifetime right to the vogt's office in 1570.⁹⁶ Wierzniczka Village and Łoszek Mill, whose locations are unknown, belonged to the Vogt of Dobrzyń.⁹⁷ Perhaps it was the same mill for whose construction the then Vogt of Dobrzyń received a privilege in 1455. The privilege for the Vogt included the villages of Skaszewo (which later, probably at the beginning of the sixteenth century, belonged to the gord starosty), Strachoń, and Zbyszewo.⁹⁸

III.6.7.4 DOLSK

Michał Słomski

The map showing the town of Dolsk in the second half of the sixteenth century depicts the town itself and its two suburbs, *Śremskie Przedmieście* (Śrem Suburb) in the north and *Gostyńskie Przedmieście* (Gostyń Suburb) in the south; featured is also the chapel of St. Laurent (*św. Wawrzyńca*), situated south-west of the town proper. Dolsk is featured in AHP as an exemplary Greater Poland's town owned by an ecclesiastical institution – in this particular case, to the bishop of Poznań. Our choice of an urban centre representing Great Poland's Church-owned towns has been based on two determinants – the surviving written sources for the sixteenth century and early decades of the seventeenth, as coupled with an extant plan of the town, compiled at the end of the eighteenth or beginning of the nineteenth century. Apart from Dolsk, these conditions are fulfilled by Chwaliszewo and Krzywiń. The space of the former is reconstructed as part of the map of the Poznań agglomeration. As for Krzywiń, the historical records – basically, municipal records, the earliest of which date to the fifteenth century, and a precise plan of the town from 1796, preserved as a copy dated 1826, calls for more complete and more detailed studies on this town's urban space. Among the other towns we have taken into consideration, Żnin has quite satisfactory source materials but its earliest map is from 1842. Krobia, in turn, has a map dating to 1796, but there are no relevant written records available. It was the opposite with Słupca, for which starost's registers from the second half of the sixteenth century are available but the earliest plan showing the locality's town-planning layout is only from 1915. For the town of Buk, an interesting source is a register of the levy (upon appraised value of realty) payable by the municipality to the king (called *szos*) at the end of the sixteenth century; yet, the town's map is from as late as 1936. Also the towns of Kostrzyn, Wągrowiec, and Trzemeszno have a rich heritage of records; however, the available maps of the former and latter are from 1828–9 and 1835, respectively, while Wągrowiec has no corresponding map from the period.¹

The present reconstruction has been compiled in line with the assumptions adopted for the AHP series' maps of urban areas, in the scale of 1:10,000. The project is based on cartographic records from the eighteenth and nineteenth centuries and written ones dating to the sixteenth and the first half of the seventeenth century. The proposed map is a hypothetical reconstruction, which means that some of its elements are displayed with different degrees of probability.

Cartographic sources

Among the cartographic sources, the most important one is the plan of the town of Dolsk compiled in 1794–6. Though its original copy is not extant, its two images are known. One is a copy of the original map, made on a glass cliché before the Second World War at the 'Fotochemia' atelier run by Józef Stachowski in Cracow; the copy was used by Henryk Münch as a basic source for his monograph on

¹ Münch, 155 (Buk), 164–5 (Słupca), and Tab. XXVIII (Kostrzyn), XXIX (Krobia), LXI (Trzemeszno), LXVIII (Żnin). An iconographic view of Słupca from 1705 is preserved, but it could not be used as the basis for developing a map in line with the AHP requirements regarding maps/plans of towns or cities. For a portrait of Słupca, see J. Sobczak, *Słupca w XVII i XVIII wieku*, [in:] *Dzieje Słupcy*, ed. B. Szczepański, Poznań 1996, p. 79.

the origins of the layout of Greater Poland's urban areas. Presently, the copy is kept at the Department of the Historical Atlas, Institute of History, Polish Academy of Sciences (IH PAN).² The other image is a manual copy of the plan, also made for Münch, kept today at the State Archives of Poznań (AP Poznań).³ The map from 1794–6 was most probably made as part of classification and measurement works commenced in 1793 on initiative of the Prussian government. A series of maps of Southern Prussia was meant to provide the basis for calculating the taxation of the Polish lands that were seized by Prussia with the Second Partition of the Polish-Lithuanian Commonwealth (1793). Along with the maps, detailed measurements of state, clerical, and municipal estate were to be measured in detail; they were supposed to supply the Treasury 50% of their income.⁴ The classification was finally carried out in the former royal and Church demesnes, which became property of the state as from 1796;⁵ Dolsk was one of the then-mapped towns.

As auxiliary aids, a plan of Dolsk from 1840–1⁶ and a sketch plan from 1853⁷ have been used – both reflecting the town-planning status of the town before the road from Śrem to Gostyń was constructed in 1854, which traversed the eastern part of the marketplace (the present-day Świętego Ducha St.).⁸

Written sources

The earliest information concerning municipal and religious buildings, topographic features, the limits of the town, its streets and their names (up to around the middle of the sixteenth century) are put together in the entry on Dolsk contained in IH PAN's historic-geographical dictionary of the mediaeval Voivodeship of Poznań (*Słownik historyczno-geograficzny województwa poznańskiego w średniowieczu*).⁹

For a better understanding of the relationships and relations connected with Dolsk and in order to gain more information, a search has been carried out through the manuscript records – the most important of which being the municipal registers kept today in the fond comprising files of the town of Dolsk ('Akta miasta Dolska') at the State Archives in Poznań.¹⁰ As for the sixteenth century, the notes from the town council's book are from the years 1562–73, and then from 1598 onwards,¹¹ mostly referring to the town's major buildings. The municipal books from the first two decades of the seventeenth century, which much more frequently used names of streets, have also been used.¹² Among the records contained in the aforesaid fond, a privilege of King Stephen Báthory (Stefan Batory) from 1585, determining the amount of customs duty chargeable at Dolsk, stands out with regard to the present purpose.¹³

Of high importance for our work on the plan of Dolsk were the records kept at the Archdiocesan Archive of Poznań; among the most important ones was a document of Poznań Bishop Benedykt

Izdzieński, dated 1548, concerning the buyout of the hereditary vogt's area in Dolsk from the noble Wojciech Dąbrowski, specifying a few aspects of topography and nomenclature within the town and in its surrounding area.¹⁴ Of use has been the only extant sixteenth-century inventory of the Poznań Bishopric's estates, dated 1564.¹⁵ Moreover, pieces of information from ecclesiastical visitations carried out in 1610 and 1629 have been used.¹⁶

Related studies

The first books dealing with the history of Dolsk date to before the First World War. In 1857, the Rev. Jan Jabczyński had his *Rys historyczny miasta Dolska*¹⁷ published; the book entitled *Obrazek historyczny miasta Dolska*¹⁸ by the Rev. Witold Olszewski came out in 1902. Both scholars used archival material in their research (Jabczyński would explore the ecclesiastical records; Olszewski, chiefly, those stored at the State Archives of Poznań. In spite of the lapses of years, their studies are still a basic source of information on Dolsk in the Middle Ages and modern era, along with the SHGPoz entry. Also the German researchers Heinrich Wuttke¹⁹ and Adolf Warschauer,²⁰ active before the First World War, devoted some attention to Dolsk mainly focusing on the town's source legacy. In the later period, Dolsk was of no special interest to scholars. It was dealt with the most extensively by Mieczysław Brust, in his study on the beginnings of Poznań bishops' towns; this author extensively presented his view on the beginnings of the urban structure of Dolsk.²¹ The Brust article has proved highly useful in the compilation of the town's plan and this present commentary. Dolsk was moreover referred to by Józef Nowacki²² and Walerian Sobisiak.²³ Recently, two popular studies on Dolsk penned by Zdzisława Dłużak have been issued.²⁴

Dolsk: a historical outline

In the second half of the sixteenth century, Dolsk was situated in the eastern part of the district of Kościan, Voivodeship of Poznań. It was one of the ten towns owned by the bishops of Poznań.²⁵ Initially, it most probably formed part of the endowment of the archbishops of Gniezno, as it is mentioned among the Church's possessions in the so-called Gniezno Bull of 1136.²⁶ Finally, since the middle of the thirteenth century at the latest – it was property of Poznań bishops. It received the town charter, in its Środa variety, from King Casimir III the Great (Kazimierz III Wielki) in 1359, during

²⁶ KDW I, no. 7.

the pontificate of Bishop Jan Doliwa.²⁷ The town was the central locality in the episcopal demesne, composed in the latter half of the sixteenth century of Dolsk and six villages.²⁸ It was probably the need to create an adequate centre of cash-and-commodity trade for the subjects of the Poznań bishop who resided in those villages, and, perhaps, an attempt to increase the episcopal property in the area of the newly-formed town, that became the main reason(s) for Bishop Jan to take action toward the incorporation.²⁹ There was a parish in Dolsk, which in the second half of the sixteenth century covered the town and fourteen villages and a part of yet another one.³⁰

It seems that before Dolsk started to function as the centre of an episcopal demesne and the seat of a parish, the village of Banie acted in these capacities. It was mentioned among the centres of Poznań bishops' demesnes in 1350;³¹ its probable location was south of the Lake Banie (today, Dolskie Wielkie; see below), in the vicinity of St. Laurent's chapel. The importance of Banie diminished as the town of Dolsk developed. The village is last noted at the end of the fifteenth century;³² it is possible that in the later period, it formed some part of the southern suburb of Dolsk.

Dolsk was ravaged by fires a few times, including before 1403, as in that year King Władysław II Jagiełło renewed the town's municipal privilege as its copy had been incinerated.³³ It is also known that a pestilence occurred in the town in 1604.³⁴ Olszewski mentions an attack of Silesian troops on Dolsk in 1627.³⁵ The severest havoc was caused by a fire that broke out on 27 April 1790, consuming a part of the marketplace and the houses on Kościelna St., including the parson's house.³⁶

Location

In physical geographic terms, Dolsk is part of the Krzywiń Lake District, which itself is part of the Leszno Lake District.³⁷ The town is situated between the Lakes Dolskie Wielkie and Dolskie Małe, in an approx. 1 km-wide shallow basin that forms an approximately 10 km-long sluice,³⁸ on a slight natural elevation of approximately 80 m AMSL. Both lakes formed part of the extensive system called the Racocki Graben (Racocki Rów), stretching from the Ostrowieczno Lake to the lake's point of inflow into the Obra South Canal (Obrzański Kanał Południowy).³⁹ This watercourse linked both Dolsk lakes south of the chartered town; it was most probably called Samica, though based on the scarce information it is hard to tell whether it was a hydronym of the said watercourse or a stream of an undetermined

name was called so.⁴⁰ The name is marked in the map in brace brackets as hypothetical. Also the path of the watercourse is indicative only. Due to strong paludification, it could have gone along different recesses,⁴¹ depending on the quantity of rainfall and current level of water in the area.

North and south of Dolsk, moraine hills and kame hills appear; the higher and steeper are those that shape the topographic form of the Śrem Suburb in the north of Dolsk. The relative heights in the area oscillate between 11 m (so-called Kramarska Góra, a hill approximately 91 m high, outside the present map, though located right behind its north-eastern corner, by the road to Trąbinek⁴²) and 28–30 m (the fell on which windmills are marked, approximately height 108 m, and the hill in the north-western part of the map, through which a road to Lubiатовo Małe led, and whereon the cemetery in Kościańska St. is situated today; its height was approximately 110 m). In the southern suburb of Dolsk, the relative figures are somewhat lower (approximately. 10–15 m), albeit the chapel of St. Laurent, situated outside the town, was erected at the height of approximately 100 m – some 20 m higher than the chartered town.

The aforementioned names of lakes are present-day names. In the Middle Ages and modern age, the Lake Dolskie Wielkie was known as Banie; Dolskie Małe was simply called Dolskie (the respective modern names are used herein below).⁴³ According to some scholars, the lakes were once connected to form a larger lake; Jabczyński believed that the dyke linking in the sixteenth century the town's centre and the Gostyń Suburb was erected before 1363.⁴⁴ Dolsk owes its name to its location in a depression.⁴⁵ The town's spatial development was determined by the physical geographic conditions (discussed above).

The greatest change in the town's landscape was the overgrowing and drying of the Dolskie Lake. It is still visible on the 1794 map that its south-western part reached up to the gardens in the market's southern frontage, on two-thirds of its length beginning with the eastern corner. However, the lake's banks were much overgrown already then, as is reflected by the signatures on the map. With time, the lake increasingly dried up, which by the middle of the nineteenth century enabled the construction of the Śrem–Gostyń road running through the eastern part of the market. Already the plans from 1840–1 and 1853 make it apparent that the lake's reach had shrunk significantly; at that time, it only reached the south-eastern corner of the market. The detailed maps from the first half of the twentieth century (MTB sheet from 1880–1888–1911⁴⁶ and WIG map sheet dated 1933, both in the scale of 1:25,000) record the progressing extinction of the western part of the Dolskie Lake. Probably in the second half of the sixteenth century the lake's south-western part penetrated even further westward than as shown in the 1794 map.

Since the AHP series' main map has its hydrographic features reconstructed based on maps from the late eighteenth and early nineteenth centuries, our plan of Dolsk has the range of the Dolskie Lake marked as of the end of the eighteenth century. However, a hypothetical reconstruction of the lake's shrinking surface (on a to-date basis) has been proposed (see Figure 1).

Our reconstruction of the changes in the reach of the lake, based on the aforementioned maps from 1794–6 and 1853, MTB map sheets from 1880–1888–1911 and the detailed WIG map from 1933 (both

⁴⁰ Mentions of this watercourse are scarce and not associated directly with the town. In 1486, Wawrzyniec Lipowski, pledged to Piotr Górecki the amount of 9 *grzywnas* of debt, with the buyout right upon three 'trawl water-depths' of the Ostrowieczno Lake (east of Dolsk) and the Samica stream flowing out of Ostrowieczno and then flowing into Tursko Lake; G. Rutkowska, 'Ostrowieczno', SHGPoz, part III, 505; K. Górka-Gońska, 'Samica', SHGPoz, part IV, 283. In 1560 r. Maciej Wilkowski of Małe Lubiатовo sued the Lubiатовo-based Lubiатовski family for their 'violent take-over off the old ditch or the *samica*', which linked the Banie Lake with another lake (probably, Brzednie; J. Luciński, *Lubiатовo Małe*, SHGPoz, part II, p. 620). The municipal files mention, in 1571, a watercourse named *Samica*, situated in a depression, by which a Dolsk burgher's garden, to be transacted, was located (AmD, ref. no. I/4, f. 132: "ad primam semitam iacentem in profundo dicta Samycza asz nadol" [the reading of the penultimate word is uncertain]).

⁴¹ The depression through which water flew is mentioned in a 1571 note; AmD, ref. no. I/4, f. 132; see footnote 39.

⁴² AmD, ref. no. I/17, f. 396 (1613): "hortos sive agros suos dictos Kramarska Gora ... iuxta viam versus Trąbinek".

⁴³ AmD, ref. no. I/4, f. 22: "lacus dicti [*sic*] Banye"; ibidem, f. 30: "lacus dicti [*sic*] Dolsko"; AAP, CP 126 (1664), f. 88: "Of the lakes bye that towne, there are 2. One is called Bonie, and the other Dolsko"; J. Luciński, *Banie*, p. 10; idem, *Dolsk*, pp. 384–385; J. Duma, *Nazwy wodne w dorzeczu Warty od Prosnego ujścia do Odry (z wyłączeniem dorzecza Noteci)*, part 2: *Nazwy jezior*, Warsaw 2010, pp. 223, 406.

⁴⁴ Jabczyński, p. 63; Brust, p. 129, footnote 210. Also, in the opinion of K. Hładyłowicz, the aggregation of lakes might have formed one large lake in the past; quoted after W. Sobisiak, *Rozwój latyfundiów*, p. 50.

⁴⁵ S. Kozierowski (*Badania nazw topograficznych dzisiejszej archidiecezji poznańskiej*, vol. 1, Poznań 1916, p. 139) explains it as a "settlement by the water, located on the bottom level"; also, see Jabczyński, 2; NMP, vol. 2, p. 394; Brust, p. 130.

⁴⁶ MTB, sheet 4068 (Dolzig, 1888–1890–1911).

1:25,000), as well as on the modern Topographic Objects Database map (BDOT10K). The base has supported our presentation of the lake's surface at the end of the twentieth century and the drawing of the hypothetical earliest possible range of the lake, along contour line 78.75 m. This particular contour line has been selected as the stretching of the lake's line along the full-value contour line (80 m) would have caused a connection of the Dolskie Lake with the Banie Lake and, moreover, a significant increase in the range of the lake in its eastern part.

The hydrographic conditions must have exerted an essential influence on the town's life, though in records we have examined virtually do not mention the lake's impact on Dolsk. Also the dwellers of the nearby villages must have experienced the influence of the lakes. The 1383 deed incorporating the parish churches in Banie (probably, St. Laurent's chapel) in Ostrowieczno to the parish in Dolsk referred to the local church-goers' problems with getting through to either of those churches due to frequent inundations.⁴⁷ Problems with high water table were felt also at the demarcations between the town and its adjacent villages.⁴⁸ A wetland area – or, in any case, one that was used as a fishing pool – was located also north of Dolsk. 1403 saw King Władysław II Jagiełło bestow the Poznań bishops with 'rippam nostram seu littus paludis siue stagni, wlgariter dicti Prussy', which were situated by the road from Dolsk to Drzonek.⁴⁹ The ponds situated 'at Kotowo', mentioned in the inventory of Poznań bishops' estates, might have been meant: there, an abandoned pond was noted as of 1564 and a place appeared that was convenient, in the opinion of the inventory's compiler, for setting up a new one.⁵⁰ Due to the restrictions imposed by the adopted scale, the aforementioned area has not been plotted on our map.

The size and character of the town

The town had a dozen-or-so *lans* at its disposal. As per the 1564 inventory of Poznań bishops' demesnes, 17.5 *lans* was property of Dolsk,⁵¹ while tax registers from the latter half of the sixteenth century inform about 16–16.25 town's *lans*.⁵² Agriculture and horticulture had quite an important role in the town's economic and social life but were not the only source of income for at least a part of its inhabitants. The records speak of individuals performing handicraft professions, which were mostly typical of small towns (related to food industry as well as shoemakers, stove-makers, and so on). Hence, Dolsk cannot be referred to as a farming-only town.⁵³

⁴⁷ KDW III, no. 1811: "et presertim ad petitionem parrochianorum et populo[!], qui et tempore hyemnali et inundacionis et diluuium aquarum, cum pluvie inundant glaciesque dissolvitur, prefatas ecclesias sine magna difficultate non poterant adire et congruo tempore divinis officiis interesse".

⁴⁸ As of 1513, a part of the border between Dolsk and Lubiatowo Małe was not yet been determined due to high water table; MK 26, f. 258r; J. Luciński, *Dolsk*, 377.

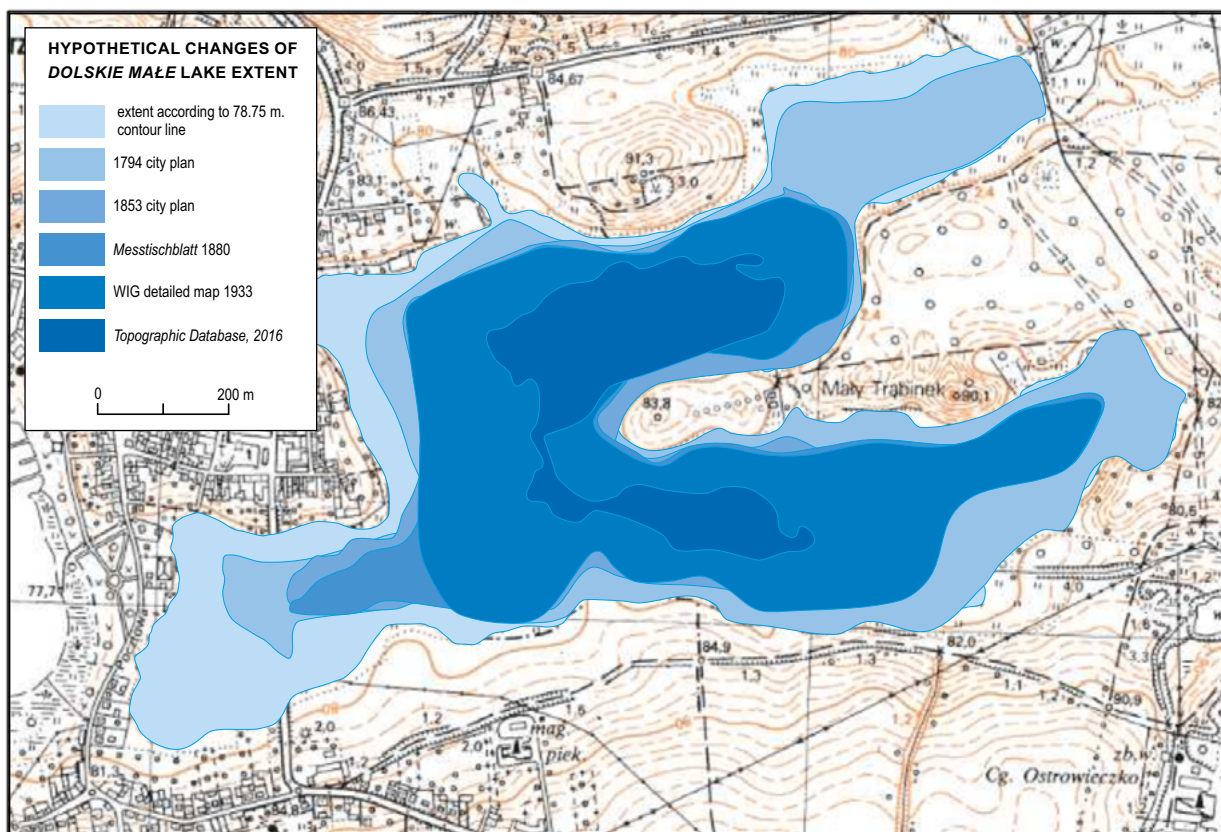

⁴⁹ KDW V, no. 30; J. Luciński, *Dolsk*, 377.

⁵⁰ Inw. bp. poz. 1564, p. 289. Kotowo never appears in the tax registers in the second half of the sixteenth century, though at the end of the fifteenth century it was still referred to as a separate settlement; J. Luciński, 'Kotowo', SHGPoz, part II, p. 415. At the end of the seventeenth century, the aforementioned forest was called 'Kotowo'; after S. Kozierowski, *Badania nazw topograficznych*, vol. 1, p. 339. J. Jabczyński (Jabczyński, p. 70) identified those marshes as situated within the limits of Dolsk presbytery's land in the nineteenth century, named Krupczyn. Mentions of Krupczyn are extremely scarce; in 1295, the bishop of Poznań granted the domain of Krupczyn (*Krupczino*) to Bartłomiej and Mikołaj, sons of Męcz; KDW II, no. 730. Thereafter, the name 'Krupczyn' appears in a 1777 visitation record, as a part belonging to the Dolsk parson's endowment (*agger versus Srem Krupczyn*; after S. Kozierowski, *Badania nazw topograficznych*, vol. 1, p. 358; also, see J. Luciński, *Krupczyno*, SHGPoz, part II, p. 470). MTB, sheet 4068 (Dolzig, 1888–1890–1911) sheet still shows a parson's demesne farm situated by the road to Śrem, north of the extent of the map's range, where today's Krupczyn. Today, Kotowo village is situated north of Krupczyn.

⁵¹ Inw. bp. poz. 1564, p. 288. The 17.5 *lans* in Dolsk, from which the tithe was paid to the Parson of Dolsk, is mentioned also in the 1610 visitation record; Wiz. Poz. 1610–1619, f. 63v–64r; also, see W. Sobisiak, *Rozwój latyfundiów*, p. 52.

⁵² RPWP, ksc, 1565, no. 711; RPWP, ksc, 1567, no. 675; RPWP, ksc, 1570, no. 94; RPWP, ksc, 1576, no. 182; RPWP, ksc, 1580, no. 795; RPWP, ksc, 1581, no. 563; RPWP, ksc, 1583, no. 625.

⁵³ Dolsk is, apparently, so approached in T. Czwojdrak, *Miasteczka rolnicze w latyfundiów biskupstwa poznańskiego w XVI–XVIII wieku*, "Roczniki Wyższej Szkoły Rolniczej w Poznaniu", vol. 45, 1969, pp. 3–12 (though it is remarked [on p. 6] that until the mid-seventeenth century, Dolsk (among other localities) was home to a little more representatives of diverse crafts compared to the other episcopal towns); A. Głowacka, *Zajęcia rolnicze mieszkańców małych miast Wielkopolski w drugiej połowie XVI i w XVII wieku*, [in:] *Folwark – wieś – latyfundiów. Gospodarstwo wiejskie w Rzeczypospolitej w XVI–XVIII*

basemap: topographic map 1:10,000; prepared by Tomasz Panecki

Map 1. Hypothetical changes of Dolskie Małe Lake extent

The town's arable land separated the town from its adjacent villages. The demarcations with Lubiatowo Małe from the late fifteenth/early sixteenth century and from the end of the latter are known.⁵⁴ As of 1575, a border mound between Dolsk and the villages of Malechowo and Łagowo is mentioned;⁵⁵ the mound is mentioned again at the 1599 demarcation between Łagowo, Dolsk, Malechowo, and Gaj.⁵⁶

The number of houses in Dolsk in the second half of the sixteenth century is unknown. The first statistics is offered by a 1631 hearth-tax register, enumerating four houses of the local *propinatora* and 145 other houses, altogether 149 buildings.⁵⁷ As it seems, it is the possible number of houses also for the latter half of the sixteenth century. Due to the above-described physiographic conditions the area within which Dolsk had a potential to develop spatially was restricted. This supposition is confirmed, in a way, by the later statistics of houses and their residents. At the beginning of the eighteenth century, Dolsk had 146 houses and 784 residents. Resulting from the 1710 epidemic, more than 700 people are reported to have died, with the result that only fifty-nine burghers were reported for the year 1733.⁵⁸ A total of 110 *Feuerstellen* were found to appear in the years 1793–4; added to the twenty-four houses in the suburban areas, this makes up 134 households, with 754 dwellers in the town.⁵⁹ As of 1810,

wieku, ed. J. Muszyńska, S. Kazusek, J. Pielas, Kielce 2009, pp. 219–228. For comparison, see the remarks in P. Miodunki, *Demograficzny i gospodarczy potencjał małych miast południowej Polski od końca XVI do początku XIX wieku*, RDSG, vol. 78, 2017, pp. 146–151.

⁵⁴ Based on the reports of demarcation commissions from 1493 (J. Luciński, *Dolsk*, p. 377), 1499 (ibidem), and 1513 (MK 26, f. 257r–258v; MRPS IV/2, no. 10422, 10453; Jabczyński, 75; J. Luciński, *Dolsk*, p. 377). In 1424, litigation was held at the land (circuit) court of Kościan between the bishop of Poznań and Czerna of Lubiatowo, possibly over the marking out of the borders between the episcopal possessions (Dolsk, Brzednia, Banie, Kotowo) and Lubiatowo Małe; J. Luciński, *Dolsk*, p. 377.

⁵⁵ J. Luciński, *Dolsk*, p. 377.

⁵⁸ W. Sobisiak, *Rozwój latyfundium*, p. 52.

⁵⁹ J. Wąsicki, *Opisy miast polskich z lat 1793–1794*, part 1, Poznań 1962, pp. 68–71.

Dolsk counted 146 houses and 824 inhabitants;⁶⁰ in 1837, the respective figures were 150 and 1,198; in 1857 it had approximately 1,400 inhabitants;⁶¹ and around 1881 there were 145 houses and 1,644 residents.⁶²

Since in the first half of the seventeenth century and in the later centuries, the number of houses tended to be around 145–150, it can be presumed that it was similar also in the second half of the sixteenth century.⁶³ It is not known whether the number of Dolsk houses was determined together with the suburbs (presumably, yes). Such differentiation was made for the years 1793–4; the total for the town and its suburbs gives the result similar to the other statistics.

Assuming, therefore, that Dolsk around 1600 might have been home to 145–150 houses, the number of its inhabitants can be estimated. Adopting the proportion of five persons per house, the town's population would have been 725–750; with six people per house, the result would be 870–900. As the span is rather considerable, let us presume that the number of Dolsk's inhabitants was approximately 800–850 (900 as a maximum).

An indicative view of the town's size can be gained based on the statistics of craftsmen, based on whom tax was paid in the second half of the sixteenth century; the information of use comes from six tax registers from the years 1563–83. The figures are as follows: 1563 – 112 (which is astonishingly many) craftsmen; 1580 – 59, an 48 in each of 1581 and 1583.⁶⁴ These numbers incline one to regard Dolsk as a rather small town, but not one among the smallest, which apparently fits category III, as once proposed for Dolsk by Henryk Samsonowicz.⁶⁵

It also has to be remarked that an unknown number of grounds and houses stood empty. The 1794–6 plan shows empty grounds, with identification numbers attached in the town's western part. Those deserted parcels might have been, in the sixteenth century, plots on which burghers' houses once stood but the fire of the town in 1790 made them deserted and void of people; hence their absence in the earliest map. Empty grounds could also be encountered elsewhere in the town.⁶⁶

As it seems, the houses in Dolsk were wooden only, including at the marketplace.⁶⁷ In 1587, upon bestowing an empty ground in the market to Wojciech Dorażala, a burgher and vogt of Dolsk, Poznań Bishop Łukasz Kościelecki had him erect a wooden house within twenty-four months.⁶⁸

Plots, urban parcels, urban area development

Urban parcels of land were the main constituent of the town's area. Not uniformly developed, they formed one estate – composed, primarily, of the ground on which a house, farm and sanitary (out)

⁶¹ Jabczyński, p. 1, footnote 1.

⁶² SGKP II, p. 103.

⁶³ See P. Guzowski, R. Poniak, *Przeliczniki demograficzne w szacunkach zaludnienia miast w Królestwie Polskim w drugiej połowie XVI wieku*, PDP, vol. 37, 2015, 2, p. 81. The small populations characteristic of Greater Polish agricultural towns between the end of the eighteenth century and the beginning of the twentieth is pointed out to in I.F. Tłoczek, *Miasteczka rolnicze w Wielkopolsce*, Warsaw 1955, pp. 55–56. Whereas the increase of Dolsk's population was fairly remarkable, given the above statistics, it seems that the number of residents of small towns in the late Middle Ages and in the modern age tended to be fairly constant (except for depopulations caused by fires or plagues).

⁶⁴ RPWP, ksc, 1563, no. 180; RPWP, ksc, 1580, no. 795; RPWP, ksc, 1581, no. 563; RPWP, ksc, 1583, no. 625.

⁶⁵ M. Bogucka and H. Samsonowicz, *Dzieje miast i mieszczaństwa w Polsce przedrozbiorowej*, Wrocław 1986, p. 115. For more on the use of tax-register data regarding the number of artisans, see M. Słoń, *Miasta prywatne w sieci miejskiej Wielkopolski XV–XVI wieku*, RDSG, vol. 77, 2016, pp. 104–107.

⁶⁶ The bestowal by the municipal council of an empty ground in Wodna St. to the 'assiduous Piotr Kaczka' in 1566 (AmD, ref. no. I/4, f. 58); the bestowal of a ground by the road to Śrem, 1566 (ibidem, f. 67). Uncared houses appeared in other parts of the town as well, as e.g. in Kozia St., as of 1615 (AmD, ref. no. I/17, f. 468).

⁶⁷ To mention the wooden house by the road toward Śrem, recorded as of 1602; AmD, ref. no. I/17, f. 2. The UMTB map, sheet 2270 (Dolzig, 1826) features the property at the corner of Gostyńska and Wodna Sts. as the only brick residential house.

⁶⁸ AAP, CP 4, f. 208v: "sub his tamen conditionibus, quo prefatus Albertus Dorazala tenebitur in eadem area deserta infra decursum duorum annorum domum ligneam pro commoditate sua suorumque haeredum et successorum et item pro circuli praedicti oppidi exornatione extruere et aedificare" (1587).

buildings, and areas of garden use⁶⁹ – as is visible in the 1794–6 plan (see Figure 1), and as suggested by municipality-related records.⁷⁰ The uses of those areas beyond their basic residential and farming functions seem to be attested by considerable depths of the plots of land,⁷¹ which in Dolsk reached up to approximately 90 m – in the parcels of the market’s southern part or the northern frontage of Kozia St., or to approximately 75 – in the eastern frontage of Stary Dwór St.⁷² Such remarkable depths might have been due to the remains of property divisions of the former village, prior to the town’s incorporation in 1359, and to the lack of permanent fortifications that would have hindered the elongation of lots in their arrears with no developments.⁷³ The only limits were posed by the natural barriers of both Dolsk-area lakes and the depression around the town.⁷⁴

Figure 1. Urban land parcels in Dolsk at the end of the eighteenth century. Visible are the parcels in the marketplace’s eastern frontage (L) and those in Stary Dwór St. (R). The Dolskie Lake’s coastline is marked along the picture’s right-hand-side edge. (Detail of the map of Dolsk, 1794–6 [MüncH, ZAH, ref. no. 44].)

⁶⁹ G. Wróblewska, *Rozplanowanie nowożytnych miast w Wielkopolsce od XVI do końca XVIII wieku*, Warszawa–Poznań 1977, pp. 214–219; A. Berdecka, *Lokacje i zagospodarowanie miast królewskich w Małopolsce za Kazimierza Wielkiego (1333–1370)*, Wrocław 1982, pp. 51, 72, 74–75; U. Sowina, *Średniowieczna działka miejska w świetle źródeł pisanych*, KHKM, vol. 43, 1995, no. 3, p. 330; A. Głowacka, *Zajęcia rolnicze*, p. 227. C. Buśko, *Stan badań nad parcelą mieszczańską w średniowiecznych miastach śląskich*, KHKM, vol. 43, 1995, no. 3, p. 345 proposes a division of the town parcel into five functional zones, incl. residential, farm, back buildings, sanitary, and garden ones – primarily based, however, on analyses of urban land parcels in towns bigger than Dolsk. The few studies on lots in smaller urban centres confirm this observation; M. Starski, *Zagospodarowanie parcel mieszczańskich w Pucku jako źródło do poznania przemian kulturowych w małym mieście lokacyjnym w późnym średniowieczu*, “Archaeologia Historica Polona”, vol. 22, 2014, pp. 145–166.

⁷⁰ In 1603, Maciej Szerszeń bequeathed to his wife Anna Masełkówna a security pledge on the house and the garden thereto adjacent (“as upon the house & upon the garden lying beeside that house”, AmD, ref. no. I/17, f. 25); in 1608, Melchior the butcher and his wife was about to sell to Wawrzyniec Kobyła a house with a garden in Kozia St. (“domum domum suam propriam iuridice per se possessam, una cum horto in postico eidem domui adiacenti in Caprina platea”; ibidem, f. 205).

⁷¹ B. Krasnowolski, *Lokacyjne układy urbanistyczne na obszarze Ziemi Krakowskiej w XIII i XIV wieku*, part 1: *Miasta Ziemi Krakowskiej, chronologia procesów osadniczych i typologia układów urbanistycznych*, Cracow 2004, p. 222.

⁷² The differences in the sizes of the plots in the town were mainly based on their functions; ibidem, p. 182.

⁷³ A. Berdecka, *Lokacje i zagospodarowanie*, pp. 72, 74–5.

⁷⁴ In 1618, a house was to be sold in Stary Dwór St. with a garden stretching up to the Dolskie Lake, in the backyard (“domum ... in platea Starydwor dicta ... et horto a poste[!] domus ad lacum Dolsco extendente”; AmD, ref. no. I/18, f. 13).

The plots in the urban area were thus typical primarily of small-town habitat-and-garden plots, of the type probably appearing since the first urban foundations in the thirteenth and fourteenth centuries, and common also in the period of modern foundations.⁷⁵

The plots' borders formed the frontier of the urban area. Hence, the category 'urban development' or 'built-up area' coincides with the plot borders known from the 1794–6 map,⁷⁶ thus perhaps causing a somewhat mistaken idea as to the town's rank or population.⁷⁷

The marketplace

Münch describes Dolsk's foundation layout as a three-belt one, with three belts parallel to one another, the town square in the central zone. The latter emerged, according to this scholar, out of the former marketplace that stretched from the road toward Śrem to the one toward Gostyń. The buildings forming the development block of the western frontage apparently followed up the houses, stalls, or butcheries originally situated at the centre of the former marketplace. This argument is additionally supported by the fact that the market was situated somewhat to the side of the town, rather than in its centre.⁷⁸ There are no source mentions that would confirm Münch's hypothesis.⁷⁹ Moreover, let us remind that in 1350, Banie was mentioned as the centre of a Poznań bishopric's demesne; hence, presumably, it might have been in Banie that a space used as the marketplace was located, before the incorporation of the town of Dolsk. If, however, one was to accept that an elongated marketplace initially functioned in Dolsk, its dimensions would have been irregular (approximately 240 x 72 x 258.5 x 95 m). One can doubt whether the town's original market square would have been that large.⁸⁰

The frontages of the Dolsk market square did not form an ideal quadrangle, close to a rectangle, apparently in the sixteenth century. The market's size is estimated at approximately 100 m along the southern (and longest) frontage, 70 m in the eastern frontage, and 74 m in the western one.

The town-planning layout was primarily influenced by the terrain conditions related to the town's location in the basin, between the two lakes.⁸¹ The plan from 1794–6 still reflects a section of the market's southern frontage being limited by the Dolskie Lake. The eastern and western borders were set by the coasts of both lakes; in the north, development was restricted by meadows, marshes, and rather steep elevations.

The market is attested since 1513.⁸² There was a town hall at its centre, first mentioned in 1568,⁸³ and then, more frequently, from 1597 onwards.⁸⁴ It is featured on the 1794–6 plan. In Münch's opinion,

⁷⁵ I.F. Tłoczek, *Miasteczka rolnicze*, pp. 67, 95; T. Zarębska, *Przemiany przestrzenne miast polskich w dobie renesansu i baroku*, [in:] *Miasta doby feudalnej*, pp. 222–223, 226–227, 239; G. Wróblewska, *Rozplanowanie*, pp. 217–219; A. Berdecka, *Lokacje i zagospodarowanie*, p. 88; B. Krasnowolski, *Lokacyjne układy*, p. 222.

⁷⁶ Urban developments are marked in a similar way in the reconstruction maps of the reach of towns, recently published in the *Historical Atlas of Polish Towns (Atlas historyczny miast polskich)* series (as separate fascicles), i.e. Koronowo, Włocławek, or Wieliczka (the latter having the most precisely drawn town limits of all these examples); *Atlas historyczny miast polskich*, vol. 2: *Kujawy*, fasc. 2: *Koronowo*, ed. by E. Okoń, R. Czaja, cartographic editors R. Golba, Z. Kozieł, and A. Pilarska (Toruń 2016), f. 2: *Koronowo. Rozwój przestrzenny miasta XIV–XX w.*; fasc. 4: *Włocławek*, ed. by R. Czaja, A. Marynowska, and T. Wąsik, cartographic editors R. Golba, Z. Kozieł, and A. Pilarska (Toruń 2016), f. 2a: *Włocławek. Rozwój miasta XI–XX w. Topografia obiektów*; vol. 5: *Małopolska*, fasc. 3: *Wieliczka*, ed. by Z. Noga, editorial team: Z. Beiersdorf, A. Jodłowski, B. Krasnowolski, and Z. Noga, cartographic editor T. Szpytma (Toruń and Kraków 2015), f. III.3.4: *Wieliczka. Rozwój przestrzenny od końca XIV do połowy XVIII wieku*.

⁷⁷ The sometimes very large areas of small towns, chartered in as late as the sixteenth/seventeenth century, has been pointed out by A. Wyrobisz, *Małe miasta w Polsce w XVI i XVII w.*, [in:] *Miasta doby feudalnej*, p. 179.

⁷⁸ Münch, pp. 161, 173.

⁷⁹ Brust, pp. 134–5.

⁸⁰ Some cases are known of town squares or marketplaces were of considerable dimensions, but it was related to the function projected for such towns or their particular trade domains; cf. A. Berdecka, *Lokacje i zagospodarowanie*, pp. 92, 94; Z. Morawski, *Miejskie układy przestrzenne*, [in:] *Architektura gotycka w Polsce*, ed. T. Mroczko, M. Arszyński, Warsaw 1995, p. 33. It nonetheless seems that Dolsk did not specialise in any specific type of trade.

⁸¹ Brust, p. 142.

⁸² Ulan. Act. Cap., vol. 2, no. 1680; J. Luciński, *Dolsk*, p. 377.

⁸³ AmD, ref. no. I/4, f. 108.

⁸⁴ *Ibidem*, f. 189, 191–2f.

the town hall, standing in the middle of the marketplace, was erected upon the town's incorporation.⁸⁵ It cannot be found based on the available sources what the construction material was, but it was probably a wooden building.⁸⁶ The town council is believed to have gathered mainly inside that building, though the municipal records from the second half of the sixteenth century scarcely mention the officials officiating at that very place.⁸⁷

The market was surrounded by blocks of residential buildings, though, empty grounds could be seen within the frontages;⁸⁸ for instance, one of them was bequeathed in 1587 to Wojciech Dorazała, burgher and the Vogt of Dolsk.⁸⁹ Mentions of developments in the marketplace's central area, apart from the town hall, are rare and mostly rather general. In 1519, a butchery was mentioned, the income from which was collected by the Dolsk vogt. It must have been a slaughterhouse butchery as the vogt received twelve stones of tallow from it.⁹⁰ Two butcheries are mentioned as of 1548, the fees from which were collected by the Dolsk vogt; they had been transferred to the municipality by Bishop Benedykt Izdbieński.⁹¹ The 1564 bishopric estate inventory points to thirteen local slaughterhouse butcheries among the main sources of income flowing from Dolsk.⁹² A mention comes from 1572 of the sale of a house at the market's centre, called a *buda* ('shack').⁹³ In 1606, Jakub Kwapisz sold to his mother Agnieszka Kwapiszka a butchery located at the marketplace, between the butcheries Więckowska and Lorkowska, for one *grzywna*.⁹⁴ Shoemakers' stalls also functioned in Dolsk; they are first attested in the privilege whereby Bishop Andrzej of Bnin permitted the shoemakers' and furriers' guild, in 1455, to erect eighteen booths 'in the appropriate places'.⁹⁵ A third of the income from the shoemakers' stalls was earmarked for the vogt; another mention of this fact comes from 1519.⁹⁶ Also the stallholders, bakers, and potters had their stalls (*penesticae*); the income from them was received by the vogt of Dolsk.⁹⁷ Apart from a mention from 1606, there is no certain information about slaughterhouse butcheries or shoemakers' stalls being located at the market's centre; it nonetheless seems that they were situated right there.⁹⁸ No mention of the weigh-house or cropping house has been found in the records whatsoever.

⁸⁵ Münch, p. 161.

⁸⁶ My argument is based on the analogies with other Polish mediaeval and modern-period small towns (Z. Morawski, *Miejskie układy przestrzenne*, p. 34; A. Bartoszewicz, *Miasto czy wieś? Małe miasta polskie w późnym średniowieczu*, PH, vol. 99, 2008, no. 1, p. 124) as well as on the fact that there is no mention of a brick or stone town hall in Dolsk.

⁸⁷ The council would at times gather at the bishop's court, e.g. in 1564, 1567, 1568 (AmD, ref. no. I/4, f. 87–88, 109) – primarily in case a decree by the Poznań bishop or Dolsk *starosta* was about to be published to resolve a disputable issue between the involved parties (reconciliation, possession of a mill, etc.).

⁸⁸ AmD, ref. no. I/17, f. 213: "domum suam propriam ... per ruinam structurae collisam ac desertam in circulo Dolscensi", (1608), or references to an empty house of Dolsk burgher Sebastian, a furrier, dated 1609–15 (AmD, ref. no. I/5, f. 44, 55, 63; AmD, ref. no. I/17, f. 268–9, 392).

⁸⁹ AAP, CP 4, f. 208r: "aream desertam ... in circulo oppidi sittam acialem penes plateam ex una et domum Jacobi Salawy[?] civis ex altera partibus" (1587).

⁹⁰ Ulan. Act. Cap., vol. 2, no. 1724; J. Luciński, 'Dolsk', 378.

⁹¹ They were situated between the butcheries 'Erazm' and 'Wojciecha' (no more details are known); AAP, AE IX, f. 42v.

⁹² Inw. bp. poz. 1564, 288.

⁹³ AmD, sygn. I/4, f. 173: "domum suam propriam in medio circuli sittam, Budą dictam".

⁹⁴ AmD, sygn. I/17, f. 97: "quia macellum suum proprium haereditarium in circulo fori Dolscensis, inter macella parte ab una macelli dicti Więckowska, parte ab altera macelli Lorkowski situm".

⁹⁵ AP Poznań, Cechy miasta Dolsk, ref. no. 19: "damus eidem fraternitati in locis ipsis ad hoc deputatis plenam, liberam et omnimodam facultatem denuo erigendi decem et octo macella".

⁹⁶ Ibidem; Ulan. Act. Cap., vol. 2, no. 1724.

⁹⁷ " ... census de penesticis institorum, pistorum, sutorum, figulorum seu ollariorum"; AAP, AE IX, f. 43r.

⁹⁸ Such market facilities were usually situated in the midst of the marketplace, through not only at its central point; U. Sowina, *Sieradz. Układ przestrzenny i społeczeństwo miasta w XV–XVI w.*, Warsaw–Sieradz 1991, p. 28; K. Górńska-Gońska, *Topografia późnośredniowiecznego Kościana*, [in:] *Spółeczeństwo Polski średniowiecznej. Mikulski, *Topografia i hodonomastyka Nowego Miasta Torunia w XIV–XVIII wieku*, "Zapiski Historyczne", vol. 62, 1997, no. 1, pp. 9–10; A. Bartoszewicz, *Warta. Społeczeństwo miasta w II połowie XV i na początku XVI wieku*, Warsaw [1997], p. 182.

Streets

The town's three main streets extended from the marketplace: Śremska Street started at the north-eastern corner and led northwards, toward Śrem. From the north-western corner, Kościelna Street went westwards, toward the parish church of St. Michael's. Wodna Street, starting at the south-western corner, also went westwards.

Early name	Today's name
Rynek	pl. Wyzwolenia
Kościelna	Kościelna
Śremska	Świętego Ducha
Stary Dwór (Rybacka/Łazienna)	Rybarska
Wodna (Warcząca)	Podgórna
Kozia	Garncarska
Gostyńska (Warcząca)	Pocztowa

Hodonastics concerns only three streets in sixteenth-century Dolsk. Kościelna St. was attested the earliest, in 1513.⁹⁹ Then, in the century's second half, the names of Wodna (1563)¹⁰⁰ and Kozia Streets (from 1598 on) appear.¹⁰¹ Only since the first years of the seventeenth century do we encounter mentions of other street names. At the time, the following names of streets appear: Rybacka (1602),¹⁰² Śremska (1602),¹⁰³ Stary Dwór (1603),¹⁰⁴ Łazienna (1603),¹⁰⁵ Gostyńska (1603),¹⁰⁶ Warcząca (1606),¹⁰⁷ Błotna (1610),¹⁰⁸ and Garncarska (1611).¹⁰⁹

Some of these names referred to sections of longer streets; Warcząca was alternately named Wodna¹¹⁰ or Gostyńska.¹¹¹ A part of Wodna St. was called Błotna.¹¹² Rybacka St. was either a part of

⁹⁹ Ulan. Act. Cap., vol. 2, no. 1680; J. Luciński, *Dolsk*, p. 377; AmD, ref. no. I/17, f. 80: "domum iacentem ... in platea Ecclesiastica" (1605) Określano ją niekiedy również opisowo jako "platea, qua itur versus aedes divi Michaelis"; ibidem, f. 310 (1610).

¹⁰⁰ AmD, sygn. I/4, f. 3 (1563 r.): "locum desertum Ploninski nuncupatum a tergo aedem [sic] providi Jacobi Almani lanii parte ab una, a fico stratus, quo itur ad plateau Aquaticam parte ab altera iacentem"; ibidem, f. 35, 58 (1564); AmD, ref. no. I/17, f. 11, 23 (1602).

¹⁰¹ AmD, ref. no. I/4, f. 210 (1598): "domum Godzikowski in cornu situatam circuli ab una plateae eundo in plateam Kozia dictam et ab alia domus Andreae Kobila utrisque partibus"; AmD, ref. no. I/17, f. 86: "in plateam dictam Caprinam" (1605).

¹⁰² AmD, ref. no. I/17, f. 8, 9.

¹⁰³ Ibidem, f. 2: "in platea versus Szrem" (1602 r.); ibidem, f. 43, 46: "dom ... na Szremski ulicy leżący" (1603).

¹⁰⁴ Ibidem, f. 49: "upon his own house ... at the street going toward Starydwor" (1603); ibidem, f. 89: "domo sua propria ... iacente in platea dicta Stary dwor" (1605); ibidem, f. 304: "in platea, qua curitur versus Antiquam Curiam" (1610).

¹⁰⁵ Ibidem, f. 33: "the emptie place alias void of his own ... lying from one side of the house of Maciei Kozak, from the othere side of Łazienna Street".

¹⁰⁶ Ibidem, f. 20, 22, 24.

¹⁰⁷ Ibidem, f. 128, 156 (1606 r.).

¹⁰⁸ Ibidem, f. 317: "domum ... in platea Błotna" (1610).

¹⁰⁹ Ibidem, f. 357: "the house ... in koscielna [sic] streete betwixt the houses of lane garczarska [sic] and of Michał Mąnka lying from bothe sydes" (1611); ibidem, f. 478: "domum suam propriam in plathea figulorum parte ab una viae lapidibus stratae Agnetis Kokoska parte ab altera Stanisłai Nędzy situatam" (1615).

¹¹⁰ AmD, ref. no. I/5, f. 32: "in platea Warcząca alias Wodna" (1606).

¹¹¹ AmD, ref. no. I/17, f. 232: "in platea nuncupata Gostinska alias Warcząca" (1608). In 1606, Urszula Sadłowa sold to Jan Iwanek, a locksmith, a house located at Warcząca St., between the houses of the Dolsk preacher and Szczęsna, widow; ibidem, f. 156. Two years later, Jan Iwanek borrowed a sum of money from the municipal office, which he collateralised against his house in Gostyńska St., situated between the Dolsk preacher's house and the house of Mrs. Szczęsna; AmD, ref. no. I/5, f. 41.

¹¹² W 1610 r. Jan Grzybowski sold a house that had fallen to his share after the death of his father Stanisław Grzybowski, to Andrzej Gajdka and his wife Dorota, situated in Błotna St., between the houses of Krzysztof and Wawrzyniec Knychala; AmD, ref. no. I/17, f. 317. In 1615, Andrzej Gajdka and his wife Dorota exchanged their house, described as located in Wodna St., between the houses of Krzysztof and Wawrzyniec Knychala, for the house of Błażej Wanięga; ibidem, f. 466–467.

Stary Dwór St. or led to the latter.¹¹³ Perhaps the northern part of Stary Dwór was called Łazienna St. (see below – the paragraph on baths).

The name *Stary Dwór* (Old Manor) suggests that there once was a building in the eastern part of the town, after which the street was named. It is difficult to point to the name's actual source based on the records of use for our purpose. Rather than an earlier episcopal manor (see below), the name might presumably have emphasised the once-location of the vogt's house, prior to the vogtship's buyout in 1548.

There were three other streets stretching from the marketplace's corners; due to their lesser importance, they would be referred to as alleys or lanes. One led from the north-eastern corner toward Stary Dwór St.; another one went from the south-eastern corner toward Stary Dwór St. and then on, toward the Dolskie Lake. As it seems, the Dolsk-related records referred to it as a part of Wodna St. or Stary Dwór St., though a street leading toward the lake Dolskie is also frequently mentioned.¹¹⁴ At the market's south-eastern corner, a lane began that apparently linked Wodna and Gostyńska Sts.,¹¹⁵ whose role was presumably purely housekeeping and farming-related.

Alleyways functioned also in some development blocks, connecting Dolsk's main streets with farming/housekeeping mechanisms and facilities at the back of the plots, and their role was mainly related to such facilities.¹¹⁶ A street like this is mentioned as of 1611 at the back of Wleklowski's house, which was situated (as is otherwise known) on Kościelna St.¹¹⁷ The said street was mentioned upon determining the neighbourhoods of the developments situated at the back of the aforesaid house.¹¹⁸ Apart from the road leading toward the Dolskie Lake, the records refer to a road toward the other lake, Banie, outside the town;¹¹⁹ it namely led westwards, from the crossing of Wodna and Gostyńska Sts.

Although Dolsk was not surrounded by a rampart (the natural conditions ensured a rather favourable defensive situation), two town gates were mentioned at the beginning of the seventeenth century:¹²⁰ the Gostyńska (Gostyń; 1603) Gate¹²¹ and the Śremska (Śrem; 1610)¹²² one.

Churches

St. Michael the Archangel's church – the town's major church, the centre of the local parish – was situated in the western part of the town.¹²³ The church was probably erected together with the town's foundation in 1359; in 1363, the thitherto-parson churches in Banie (St. Laurent's; see below) and Ostrowieczno Małe were subordinated to it; the parson of Dolsk is first attested in 1387.¹²⁴ The church was seemingly the town's only brick building in the sixteenth century. Tradition had it that it was erected around 1460, under Bishop Andrzej of Bnin, who is reported to have consecrated the church

¹¹³ Ibidem, f. 408: "in platea piscatorum sive proxime antiquae Curiae" (1613).

¹¹⁴ AmD, ref. no. I/5, f. 181 (1623); AmD, ref. no. I/17, f. 162 (1607), 303 (1610), 398 (1613).

¹¹⁵ AmD, ref. no. I/4, f. 3: "vico stratus, quo itur ad Plateam Aquaticam" (1563); ibidem, f. 11: vicus angularis, quo itur versus Gostin" (1564).

¹¹⁶ Brust, 143.

¹¹⁷ In 1618, the female heirs of Jakub Wlekló, Agnieszka and Zofia, sold the house in Kościelna St., formerly belonging to Jakub, to their sister Małgorzata. The house was adjacent to a *via alias przecznice* ('alley, that is, a cross-street'); AmD, ref. no. I/5, f. 176.

¹¹⁸ Ibidem, f. 32 (1606), 120–1 (1617); AmD, ref. no. I/17, f. 116 (1606), 351–2 (1611).

¹¹⁹ AmD, ref. no. I/17, f. 365 (1612), 422, 436 (1613).

¹²⁰ As of 1605, Dolsk burgher Walenty Uszko was to mend "two gates spoiled at Dolsk and the cobbles near them at hiss expense"; AmD, ref. no. I/17, f. 114. Gates appeared in other towns having no ramparts or walls, at their exit roads – as, for instance, in Grodzisk Wielkopolski (J. Luciński, *Grodzisk*, SHGPoz, part I, p. 683), Krzywiń (K. Górską-Gołąska, *Krzywiń*, SHGPoz, part II, p. 497), or Chodzież (R. Kabat, *Historia zabudowy Chodzieży*, Chodzież 2008, p. 8).

¹²¹ AmD, ref. no. I/17, f. 25: "as upon the house and the garden lying beside that house on the one side of the Gostynska gate [*brona*], on the other side of Franciszek Kozdebka's house". The word *brona* meant 'gate' in Old Polish (*brama*, in modern Polish), incl. one that leads to the town; see *Słownik polszczyzny XVI wieku*, vol. 2, Wrocław–Warsaw–Cracow 1967, p. 438.

¹²² AmD, ref. no. I/17, f. 303: "the house at the Szremska [= Śremska] gate [*brama*] and thereto bequeathed he to herr the garden Zabnik [= Żabnik] in totalitie at the Szremska gate at the righte side" (1610).

¹²³ ŁOp., vol. 2, pp. 55–6; Olszewski, pp. 76–84; Now2, pp. 411.

¹²⁴ KDW, III, no. 1811, 1868; J. Luciński, *Dolsk*, p. 382; Brust, pp. 141–142.

in 1474.¹²⁵ There was a cemetery around it. Not far from the church, probably close to the western end of Kozia St., a presbytery stood,¹²⁶ whereas in the vicinity of the western part of Wodna St. and the northern section of Gostyńska St. (also referred to as Warcząca St.), the house of the Dolsk preacher was located.¹²⁷ The other church within the town was the Holy Spirit Chapel, erected in the first half of the fifteenth century;¹²⁸ it is known in the records mostly as a *capella* or *oraculum*.¹²⁹ The chapel was situated in the town's north-eastern part on Śremska St., not far from the town gate. In contrast to the Dolsk parish church, the chapel was wooden.¹³⁰ There was a cemetery around it,¹³¹ and the Holy Spirit Hospital was situated not far from it. Town records also mention a house of the Holy Spirit's provost (who is also referred to as the Provost of Dolsk),¹³² giving however no clue as to its location; it was seemingly situated next to the other Church buildings or close to the Holy Spirit Chapel and Hospital.

Among the other houses, the one of the vicars'¹³³ was related to the Church, as were those of the altarists,¹³⁴ mentioned in the first half of the seventeenth century, and the organist's house, presumably situated on Śremska St.¹³⁵

Outside Dolsk, on an elevation at the southern bank of the Banie Lake, south-west of the town, the chapel of St. Laurent stood, probably the oldest church in the area.¹³⁶ In the second half of the fourteenth century, it was united with the church in Dolsk, along with the Ostrowieczno Małe chapel.¹³⁷ In the latter half of the sixteenth and in the seventeenth century, it was probably merely a suburban chapel at which masses were occasionally held, related, for instance, to testament bequests.¹³⁸ The building served at times as the waypoint in describing the location of arable land, gardens, and orchards of Dolsk burghers.¹³⁹

Other buildings

There were, moreover, such facilities or structure in Dolsk whose location cannot be recognised in an undoubtful way. Some of them – namely, the municipal baths, the malt mill, and the windmills – are nonetheless marked in our plan.

¹²⁵ ŁOp., vol 2, 55; J. Luciński, 'Dolsk', 383; Brust, 141–2 and footnote 266. J. Jabczyński (*idem*, 77) mentions a nineteenth-century inscription reading '1474' on one of St. Anne's chapel walls.

¹²⁶ The parochial house, mentioned as adjacent to a house being an object of a purchase/sale transaction among Dolsk burghers in 1607 and 1609. The house was described as situated in Kozia St.; AmD, ref. no. I/17, f. 174, 272. As can be presumed, it might have been located in the area where the eighteenth-century presbytery building stands today.

¹²⁷ *Ibidem*, f. 156 (1606 – here, in Warcząca St.), 240 (1608 – here, in Wodna St.); AmD, ref. no. I/5, f. 41 (1608 – here, mentioned as the neighbourhood of a house in Gostyńska St.).

¹²⁸ ŁOp., vol. 2, pp. 56–7; Olszewski, pp. 85–6, 93–4; Now2, pp. 411, 655; J. Luciński, *Dolsk*, pp. 382–3.

¹²⁹ AmD, ref. no. I/4, f. 1, 35 f. (1560s); Wiz. Poz. 1610–1619, f. 64 r: "hospitale S. Spiritus cum capella" (1610).

¹³⁰ Wiz. Poz. 1610–1619, f. 64r: "capella lignea antiqua consecrata".

¹³¹ In 1608, Anna Kościelecka of Kościelec bestowed to the Dolsk hospital an empty ground she owned in Śremska St., neighbouring on the Holy Spirit church's cemetery; AmD, ref. no. I/17, f. 206–207.

¹³² AmD, ref. no. I/4, f. 71 (1566).

¹³³ Ulan. Act. Cap., vol. 2, no.1680–1682 (1513–14); J. Luciński, *Dolsk*, p. 381.

¹³⁴ AmD, ref. no. I/5, f. 33 (1606—in Warcząca St.); AmD, ref. no. I/17, f. 261, 263 (1609 – altarist at St. Michael's church), 447–448 (1614 – altarist Jakub Szcześniak of Kazimierz, mentioned for the same neighbourhood as the Warcząca St. house in 1606). Three houses owned by altarists are mentioned in the 1610 visitation record; Wiz. Poz. 1610–1619, f. 60v.

¹³⁵ AmD, ref. no. I/17, f. 264 (1609). Whether the same house was meant by the visitor of the Dolsk church, who referred to an organist-owned "domunculum cum horto"; Wiz. Poz. 1610–1619, f. 63r.

¹³⁶ Olszewski, pp. 86–91; ŁOp., vol. 2, pp. 56. J. Nowacki dates St. Laurent's Chapel to the 11th century; Now2, pp. 351–2. The church was most probably associated with the Banie settlement, which until the incorporation of Dolsk in 1359 was probably the main colonisation point in the area; J. Luciński, *Banie*, pp. 10–11.

¹³⁷ KDW III, no. 1811; Jabczyński, pp. 82; Now2, pp. 411.

¹³⁸ A mention is extant from 1603 on Gabriel Gabrek's bequest of 8 *grzywnas* to St. Laurent's Chapel (AmD, ref. no. I/5, f. 23); in his will dated 1610, Piotr Kuśnierz assigned ten *grzywnas* for masses to be celebrated for his soul by the preacher at, *inter alia*, St. Laurent's Chapel (AmD, ref. no. I/17, f. 303).

¹³⁹ AmD, ref. no. I/17, f. 234, 235: "pomario ... in suburbio ad aedes divi Laurentii Levitae tendente, inter hortos et pomaria" (1608 r.); similarly, *ibidem*, f. 325 (1610), 432 (1614).

The baths are earliest mentioned in 1444.¹⁴⁰ Its localisation on the map, in the northern part of Stary Dwór St, has been based on neighbourhood-related mentions found in the municipal registers. As of 1566, the baths is mentioned in the neighbourhood of the house on which a loan of six *grzywnas* was pledged.¹⁴¹ Though no street name is mentioned, whilst one of the neighbourhoods had a fisherman's house; based on our reconstruction of neighbourhoods, it has been noticed that fishermen had their houses in the eastern part of the town. The baths were mentioned twice whilst determining the neighbourhoods in 1618: once, as a neighbourhood to the house sold by Anna Piaścina to a fisherman named Franciszek and his wife Anastazja (on Stary Dwór St.); then, as a neighbourhood Anastazja Charłężyna's house, in Łazienna St., against which a loan was collateralised.¹⁴² Most probably, the same house was referred to in both cases.¹⁴³ The baths' location may have been owed to a quite convenient access to water from the Dolskie Lake or, possibly, from the watercourse north of the hypothetical baths erection site.¹⁴⁴

First mentioned in 1455, the malt mill is another facility whose marking on the plan is hypothetical. At the beginning of the sixteenth century, a quarter of the income from it belonged to the Poznań Cathedral Chapter.¹⁴⁵ Its location close to the manorial buildings comes from 1664;¹⁴⁶ this might hold true for its sixteenth-century location as well. The mill in our plan is marked appears near by the pool between the garden, the demesne farmstead, and the episcopal manor.

Windmills were situated outside the town proper. Mentioned as of 1570,¹⁴⁷ they were located on the heights situated north of the town.¹⁴⁸ At least one of them belonged to the Holy Spirit hospital,¹⁴⁹ one to the parson,¹⁵⁰ and at least one to the municipality.¹⁵¹ Moreover, in 1600, Bishop Jan Tarnowski permitted Ambroży Giel to have a windmill constructed on the ground behind the vineyard, belonging to the Dolsk manor.¹⁵² This would mean that still in the late sixteenth century, at least four windmills operated in Dolsk at the end of the sixteenth century.¹⁵³ Their locations in the map are also hypothetical, though determined based on somewhat more precise information compared to that related to the baths or the malt mill.

There was also a parish school functioning in Dolsk. Indirect information on the school appears since 1444, when its students were mentioned.¹⁵⁴ There is no indication of its location in the second

¹⁴⁰ Namely, on the occasion of Poznań bishop's confirmation of the Dolsk provost's bequest of one *lan* for the Holy Spirit hospital; therefore, clergymen, the local school's students, the indigent, and pilgrims were allowed to use the baths free of any charge; AAP, Wiz. Poz. 1610–1619, f. 63r; J. Luciński, 'Dolsk', 378. Bishop Benedykt Izdbieński's 1548 privilege also refers to the municipal baths; AAP, AE IX, f. 42v.

¹⁴¹ AmD, ref. no. I/4, f. 51: "in et super domum propriam balneorum eiusdem opidi Dolsko parte ex una et Valentini piscatoris Czossnek dicti parte ex altera".

¹⁴² AmD, ref. no. I/5, f. 136, 179.

¹⁴³ There are two premises to support this idea, one being the same neighbourhood – apart from the baths, the house that was described as *domus Rutae* and, in the second mention, *domus Ruciński* – plus the fact that Anastazja is once mentioned as Franciszek the fisherman's wife and then, as wife of Wojciech Charłęga, Franciszek's widow.

¹⁴⁴ Cf. the remarks on baths in urban areas in U. Sowina, *Woda i ludzie w mieście późnośredniowiecznym i wczesnonożowym. Ziemie polskie z Europą w tle*, Warsaw 2009, pp. 102–4.

¹⁴⁵ The income from Dolsk's malt mill belonged to the Poznań Cathedral Chapter pursuant to the decision of Bishop Jan Lubrański from 1504; Jabczyński, pp. 75–6; J. Luciński, *Dolsk*, p. 378; K. Lutyński, *Majątek poznańskiej kapituły katedralnej w XVI wieku*, "Nasza Przeszłość", vol. 69, 1988, p. 241.

¹⁴⁶ AAP, CP 126, f. 89; Jabczyński, pp. 185.

¹⁴⁷ "... ex molendinis extra opidum Dolsko ventilibus"; AmD, ref. no. I/4, f. 130; also, f. 131.

¹⁴⁸ In 1571, the town council of Dolsk rada transferred to the local burghers: Jan Naskręt, a furrier, Jakub Długosz, and Jan Kustos – an empty ground "post alodium Jacobi Dorazala eundo in montem versus molendinum ventilem"; ibidem, f. 144.

¹⁴⁹ Ibidem, f. 150: "domum spectantem molle hospitalis".

¹⁵⁰ AmD, ref. no. I/17, f. 16: "the wind-mill of his [i.e. of the miller being party to the deal (M.S.'s note)], standing on the parson's own land" (1602); also, see footnote 136.

¹⁵¹ As of 1602, mention of a wind-mill standing on the municipal land; ibidem, f. 13.

¹⁵² AAP, CP 4, f. 309v: "consensimus et admissimus eidem Ambrosio Giel edificare et extruere molendinum ventile suis impensis in et super loco et area ad curiam nostram Dolscensem spectantis post vineam nostram, penes agrum plebanalem et prope molendinum in eodem agro plebanali situatum" (1600).

¹⁵³ The tax registers for the District of Kościan from the second half of the sixteenth century mention, from 1570 on, one windmill from which the tax was paid by the municipality; RPWP, ksc, 1570, no. 94; RPWP, ksc, 1576, no. 182; RPWP, ksc, 1580, no. 795; RPWP, ksc, 1581, no. 563; RPWP, ksc, 1583, no. 625; the municipal windmill might have been meant.

¹⁵⁴ J. Luciński, *Dolsk*, p. 383.

half of the sixteenth century, though it might have been due to the school's situation at the time. The 1610 visitation record states that there is a need to erect a new school building; until then, the young people had been educated at the house of a Dolsk altarist.¹⁵⁵ To this end, the Dolsk parson allocated a ground between the road and the house of vicar Kacper; whether the school was actually constructed is not known, though.¹⁵⁶

Apart from the school, a number of facilities owned by burghers of Dolsk – the malt-house and breweries. Inns in the town were associated with them, as mentioned since the second half of the fifteenth century.¹⁵⁷ Significantly enough, no inn of Dolsk is mentioned in any of the tax registers from the second half the sixteenth century, though these records refer to fees chargeable on *garnecs* (Old Polish gallons) of vodka. Inns were probably arranged at the houses of those burghers dealing with propination. Owing to the aforementioned reasons, no artisan butchereries have been marked. In 1564, the Dolsk's town council provided the butchers' fraternity with a ground, by the road leading to the vogtship, for the construction of a sheepfold.¹⁵⁸ A road leading to a municipal *pasieka* (*sarepta*) was mentioned twice;¹⁵⁹ a pasture on the wetland was possibly meant by that. Information on a brickyard being the object of a sale transaction entered into by Dolsk burghers is from the first decades of the seventeenth century.¹⁶⁰ A gallows functioned in Dolsk in the eighteenth century;¹⁶¹ it cannot be said whether it was so in the second half of the sixteenth century as well.

The manor

West of St. Michael's church, a manor of bishops of Poznań was situated, the earliest mention of which is from 1293, the later ones coming from the fifteenth century.¹⁶² It was located at the north-eastern shore of the Banie Lake.¹⁶³ The manor was most probably built of timber.¹⁶⁴ Already in the second half of the seventeenth century, its condition was far from appropriate. It owed its temporary renaissance to Bishop Teodor Czartoryski, but after his death in 1768 the building became dilapidated and was wrecked to the extent that the inspectors neglected it in 1793.¹⁶⁵ Józef Nowacki was of opinion that the manor, redeveloped by Teodor Czartoryski, served as a provostry since 1798;¹⁶⁶ however, this

¹⁵⁵ Jabczyński, p. 79. The visitation record refers once to the altarist's house as a teaching place ("Quintum [altare] domum habens propriam, in qua docebantur pueri ante scholam extractam"; Wiz. Poz. 1610–1619, f. 60v), elsewhere pointing to the vicar's house in this respect ("pueri pauci ad docendum in domo vicariali instruebantur"; ibidem, f. 63r). It seems that the same house might have been referred to: in 1605–6, municipal records refer to Wojciech Gierzyk, a man described as an altarist and vicar of St. Michael's church; AmD, ref. no. I/5, f. 27, 33, 35–36, (1606); AmD, ref. no. I/17, f. 86 (1605).

¹⁵⁶ Wiz. Poz. 1610–1619, f. 63r; Olszewski, p. 91.

¹⁵⁷ Ulan. Act. Cap., vol. 2, no. 1354, 1568, 1680; J. Luciński, *Dolsk*, p. 378.

¹⁵⁸ A sheepfold was to emerge on the ground by the road to the vogtship; in 1578, it was an object of a purchase/sale transaction; AmD, ref. no. I/4, f. 21.

¹⁵⁹ Ibidem, f. 156: "plateae versus eundo sareptam civilem" (1572); ibidem, f. 161: "vicus eundo sareptam civilem" (1571); AmD, ref. no. I/17, f. 321: "the garden lying upon the municipall land on the one side of Jan Wielki, and on the othere side of the alley as toward the municipall grass-land" (1610).

¹⁶⁰ AmD, ref. no. I/17, f. 421 (1613). The brickyard was outside the town, by the road toward Trąbinek village.

¹⁶¹ Olszewski, p. 50.

¹⁶² KDW VI, no. 44 (1293); J. Luciński, *Dolsk – klucz, dwór, folwark*, p. 384 (mentions dated 1418, 1446, 1456, and 1476).

¹⁶³ J. Nowacki and M. Brust believe that the earliest, thirteenth/fourteenth-century manor was in the village of Banie (inexistent today), situated on the southern shore of the Banie Lake, near St. Laurent's Chapel; Now2, 140; Brust, 137, 139.

¹⁶⁴ As indicated by references in the episcopal estate inventories from the second half of the seventeenth and eighteenth centuries, e.g.: "Yet the walls are very flexing. The beames are rotting and also the joyst, this because there is no soffite" (1664; AAP, CP 126, f. 89); "The lorde's grange and the manor by that town is very empty, in which the walls, beames & the othere lumber hath decayed to nothing, and this for the sake that there was no good roofe upon it for a dozen yeares allready" (1676; AAP, CP 127, f. 86). Bishop Teodor Czartoryski, who frequently stayed in Dolsk, had the manor rebuilt, as a wooden building (Jabczyński, p. 190).

¹⁶⁵ Jabczyński, p. 191. The reconstruction carried out by Bishop Czartoryski yielded two brick outbuildings which in the mid-nineteenth-century housed school premises; R. Zawadzki, *Freski biskupa Teodora czyli Dolsk osiemnastowieczny*, "Śremski Notatnik Historyczny", vol. 3, 2009, pp. 82–83. Today, one of them survives and is home to 'Janusz Kusociński' Elementary School; the other annex was demolished in 1988 as the building was structurally unsound; the 'Powstańców Wielkopolskich' Junior Secondary School; Z. Dłużak, *Dolsk. Moje miasto*, p. 37.

¹⁶⁶ Now2, p. 140.

is not true. The site where the manor once stood was destroyed in the middle of the nineteenth century, during the construction of the Śrem–Gostyń road that traversed the eastern part of the marketplace, as earth material from the remains of the manor complex was used in the construction of a section of that road.¹⁶⁷ The plan of Dolsk from 1794–6 still features a slight elevation west of St. Michael’s church. Referring to source information, we have marked the episcopal manor west of the parish church, by the bank of the Banie Lake.¹⁶⁸

Around the manor, farming and industrial buildings were situated, including a demesne farmstead, a malt mill, as well as meadows, gardens, or pools, as reflected in the 1564 inventory of the Poznań Bishopric’s estates.¹⁶⁹ The first fairly exact description of the buildings is given only in the 1664 inventory,¹⁷⁰ though it does not precisely localise the demesne farm. As it seems, the latter was situated in the area of what is today Szkolna Street. Until the Second World War, it was a village called Jaskółki, situated west of the Dolsk manor; the association between the demesne farm and Jaskółki was obvious for Jabczyński.¹⁷¹ Brust, for a change, did not link the sixteenth-century demesne farmstead of Dolsk with the later Jaskółki village,¹⁷² though based on the mentions in the eighteenth-century inventory material, as quoted by Sobisiak, one finds that a new village emerged around the Dolsk demesne farm.¹⁷³ Hence, in our map, the latter is marked west of the manorial complex.

There was vineyard belonging to the manor as well, first attested as such in 1476, though workers of a Dolsk vineyard appear in the records in as early as 1427.¹⁷⁴ It was most probably located on the southern slope of moraine elevations north of the Banie Lake¹⁷⁵ – and so is it marked on the map. Developments, mostly houses of Dolsk millers, were situated beside the vineyard.¹⁷⁶

Suburbs

There were two suburban areas adjacent to Dolsk: north of the town, toward Śrem, there was *Przedmieście Śremskie* (the Śrem Suburb); *Przedmieście Gostyńskie* (the Gostyń Suburb), situated south of the town, was connected with Dolsk with a dyke. The former village of Banie might have been part of the Gostyń Suburb, though it seems that St. Laurent’s Chapel was outside the suburb’s limits. Apart from the residential developments, the suburbs featured a host of gardens, fields, demesne farms, and pens belonging to Dolsk burghers, the parson, the Holy Spirit hospital, the vogt¹⁷⁷ or the local

¹⁶⁷ Jabczyński, pp. 191–2; also, see Olszewski, p. 41.

¹⁶⁸ Today, the former manor site features infrastructural items of the Municipal and Communal Sports and Recreation Centre.

¹⁶⁹ Inw. bp. poz. 1564, 289. A more precise description of the demesne-farm buildings can be found in the inventory from 1664, whose fragments are quoted by Jabczyński, pp. 184–5.

¹⁷⁰ AAP, CP 126, f. 89–90.

¹⁷¹ The first mention of Jaskółki is most probably from 1695; Jabczynski, p. 190.

¹⁷² Brust, p. 137, footnote 245. Apparently, the author saw Jaskółki as a settlement point that only emerged in the time Bishop Teodor Czartoryski, in the mid-eighteenth century.

¹⁷³ W. Sobisiak, *Rozwój latyfundiów*, p. 50 and footnote 196, with the mentions reading: “Jaskółki this village lies right behind the manorial grange and has no separate frontiers”; and, “Belonging to this demesne is the town of Dolsk ... Jaskółki the village beside the przy manorial grange”.

¹⁷⁴ Ulan. Act. Cap., vol. 2, no. 1392; J. Luciński, *Dolsk*, p. 377; Brust, p. 137. J. Jabczyński (Jabczyński, p. 143) moreover mentions that in 1430 Bishop Stanisław Ciołek bestowed a barrel of wine to the Chapter.

¹⁷⁵ Thus was the vineyard localised by J. Luciński (*idem*, *Dolsk – klucz*, p. 384, footnote 1) and M. Brust (Brust, p. 137).

¹⁷⁶ AmD, ref. no. I/17, f. 78: “domum suam propriam una cum horto seu pomario ac omnibus aedificiis ad eandem domum spectantibus, iacentem parte ab una loci dicti Vineae, parte ab altera domus Adami Sterpel molitoris” (1605). The properties’ location was similarly described in 1614: “domum in suburbio versus Lubiadowo post curiam Dolscensem parte ab una domus Michaelis Molitoris, parte ab altera Winica [*sic*; = vineyard]”; *ibidem*, f. 439.

¹⁷⁷ As of 1564, the vogt’s district had two gardens; Inw. bp. poz. 1564, 289. It is perhaps to them that the 1606 note refers, upon the bestowal of one of the vogt’s gardens to the newly-established St. Anne’s fraternity at the Michael’s church: “hortum, cuius in possessione nos et antecessores nostri a multo tempore fuimus et ad praesens sumus in suburbio Szremensi oppidi nostri Dolsko Woytowski nuncupato penes lacum Dolsko appellatum ex una et hortum Pawłowski dictum ex altera partibus situm” (1606); AAP, CP 4, f. 359r; also, see Jabczyński, p. 155. On the ‘vogtshipp’ [*wójtostwo*] in the Śrem Suburb, also cf. AmD, ref. no. I/17, f. 210 (1608). The vogtship’s fields were more precisely described upon their transferral in 1670 to Stanisław Borowski, Vogt at Księginki. They were situated south of the Banie Lake Banie, facing toward Księginki, by the

nobles.¹⁷⁸ The location of a given garden or field was oftentimes determined in relation to the roads or directions leading to nearby villages.¹⁷⁹ The abovementioned brickyard was situated in the northern suburb.

In the Gostyń Suburb, or, perhaps, between the chartered town and the suburb, there was a pasture named 'Pasięka'. Its location is known from the 1548 document by Bishop Benedykt Izdbieński. The grassland area was situated 'at the left-hand side betwixt the dyke and the gate through which one goes in the direction of Gostyń, and the lake called Dolsko in the upper part of the town'. We are further on told that the pastures shall be bestowed to the burghers of Dolsk, following the buyout of the vogtship in the town, at the size that stretches between the town and the burghers' and vogtship's barns and pens in the suburb behind the dyke, in the direction of Gostyń.¹⁸⁰ Hence, most probably the meadows formed resulting from the drying up of the Dolskie Lake (see above) were called the Pasięka, and so they are marked on the map. Directly by the lake, more gardens and fields owned by local burghers were located.¹⁸¹

West of the Przedmieście Gostyńskie developments, between the suburban area and the Chapel of St. Laurent, a small stream flew, named Rzechta (as of 1548).¹⁸² In the later period, a manorial estate emerged on the ground by the stream.¹⁸³

The privilege granted by King Stephen Báthory in 1585 mentions a place called Międzyborze, adjacent to Dolsk.¹⁸⁴ The name is otherwise unknown, though one may consider whether it should be related to Zaborze, which is mentioned in the 1564 inventory of the Poznań bishopric's estate as a deserted part (*fundum desertum*) of the village of Kunowo.¹⁸⁵ It is also possible that the forests were mentioned in the western area of the Banie Lake (*międzyborze*, literally meaning an area between the forests). If the latter option is correct, the area was situated beyond the scope of our map.

The limited space depicted in the map left no room for the headland sticking into the Dolskie Lake from the east, which was called Grodzisko. The municipal register contains mentions from the 1560s about a field called Grodzisko (Ogrodzisko), belonging to a local fisherman.¹⁸⁶ Later on, information on this field appears rather rarely.¹⁸⁷ The name survived at least until the middle of the nineteenth century,

Gostyń road, and at the town's border with Masłowo. Moreover, bequeathed to Borowski were two meadows named Błosz, situated in Rudki near the lake of Banie, where the hospital's meadow was located. These areas stretched to the limits of Lubiatowo village; Jabczyński, p. 181.

¹⁷⁸ In 1602, the noble Wawrzyniec Zbyszyński securitised a loan of ten *grzywnas* against his house situated in Przedmieście Śremskie, which he eventually sold in 1616 for eighty *grzywnas* Jakub Baran, a Dolsk burgher; AmD, ref. no. I/5, f. 19, 79. 1611 saw the noble Jan Wilkowski of Lubiatowo Małe sold a garden in the suburb, facing toward Lubiatowo, to Dolsk burgher Sebastian, a furrier; AmD, ref. no. I/17, f. 334. In 1618, the noble Anna Bodzewska sold her "small grange, that is, a barnlet", situated by the road to Trąbinki, to Dolsk burgher Marcin Czureł; AmD, ref. no. I/5, f. 163.

¹⁷⁹ AmD, ref. no. I/4, f. 197: "in suburbio versus Ostrowieczno" (1598); AmD, ref. no. I/17, f. 67: "the garden ... on the way to Ostrowieczno"; ibidem, f. 69: "the garden ... as one goes toward Trąbinek" (both mentions are from 1604); ibidem, f. 80: "hortum iacentem circa viam tendentem Gostinum versus"; ibidem, f. 95 (1605); ibidem, f. 163: "in suburbio versus Lubiatowo" (1607).

¹⁸⁰ The excerpt reads as follows in the original: "pascua libera Passięka nuncupata, que sunt in manu sinistra inter aggerem et portem [*sic*], quo inter [*sic*] versus Gostyn et lacum Dolsko nuncupatum in superiori parte oppidi situm [*sic*], ut ita late, sicut nunc spacium et locus inter oppidum ipsum et inter horrea et hortos civium et advocatie in suburbio ultra aggerem versus Gostyn se protendente consistentia extenditur habebunt"; AAP, AE IX, f. 43r; also, see Jabczyński, 148; J. Luciński, 'Dolsk', 377.

¹⁸¹ AmD, ref. no. I/4, f. 114–115.

¹⁸² AAP, AE IX, f. 43r: "usum rubetorum in alveo Rzechtha"; also, see Jabczyński, 148; J. Luciński, 'Dolsk', 377, 380.

¹⁸³ Jabczyński, p. 3; Olszewski, p. 95; S. Kozierowski, *Badania nazw topograficznych*, vol. 2, p. 55: "Podrzęka pf. [= parish of] Dolsk. Therein, also the field Rzekta at Dolsk"; ibidem, p. 166: "Rzekta, a field at Dolsk. ... the place Rzechta at Dolsk from the direction of Księginki; also at Dolsk, a hamlet named Podrzęka"; Brust, 143. Today, Podrzęka is the name of a street in Dolsk.

¹⁸⁴ AmD, ref. no. I/2: "locum dictum Miedzyborze contiguum huic oppido Dolsko". In his translation of the document, W. Olszewski misread *locum* as *lacum*, and thus a lake named Międzyborze was 'created'; Olszewski, p. 27.

¹⁸⁵ Inw. bp. poz. 1564, 290; W. Sobisiak, *Rozwój latyfundiów*, p. 50. Zaborze is also mentioned by K. Hładyłowicz and S. Kozierowski; the latter historian gives 1434 as the date Zaborze was first mentioned; S. Kozierowski, *Badania nazw topograficznych*, vol. 2, p. 435. M. Brust (Brust, p. 140) approached Zaborze as an integral part of the Dolsk conurbation (together with Krupeczyn, situated north of Dolsk).

¹⁸⁶ AmD, sygn. I/4, f. 87: "in et super agrum Ogrodzisko dictum ex utrisque partibus lacus Dolsko dicti iacentem" (1567 r.).

¹⁸⁷ AmD, sygn. I/17, f. 282: "fyve rows on Grodzisk" (1609).

appearing in the plans from 1840–1 and 1853;¹⁸⁸ also Jan Jabczyński and Stanisław Kozierowski refer to it.¹⁸⁹ The name has probably given an impulse for searching in Dolsk for traces of an early mediæval fortified settlement (as this is what *grodzisko* means in Polish). Witold Hensel considered its existence plausible, but expected that the hypothesis be verified, which has not happened so far.¹⁹⁰ Also Münch was inclined to accept that some mound of a castle/burg-city type existed there, whereon he would have seen the parish church of Dolsk. This author associated the pre-incorporation settlement, a market-oriented village, with a *grodzisko* that supposedly once had existed there.¹⁹¹

Roads

The road linking Śrem and Gostyń would go via Dolsk.¹⁹² According to Stefan Weymann, it branched off the Poznań–Wrocław road whose importance in the late Middle Ages was higher than in the sixteenth century.¹⁹³ It is hard to say whether this opinion precisely reflected the reality. The Stephen Báthory privilege granting the customs-duty income to Dolsk in 1585 still referred to merchants going from Wrocław and other Silesian towns and making for Poznań, Toruń, Gdańsk, and Kalisz as well as Głogów.¹⁹⁴ It is impossible to find on this basis how busy the route was, but it certainly was still in use.¹⁹⁵ The road to Śrem went out from the north-eastern corner of the marketplace, turned westward in Przedmieście Śremskie and finally turned northwards; the road to Gostyń started in the town's south-western part. These roads were described as cobbled at the beginning of the seventeenth century.¹⁹⁶

The so-called great road from the town of Borek toward Dolsk was mentioned in the sixteenth century¹⁹⁷ – possibly, a section of the road along which the merchants mentioned as of 1585 would go on their way from Kalisz toward Silesia. Presumably, the roads towards the villages of Ostrowieczno and Pokrzywnica, situated east of Dolsk, were its fragments.¹⁹⁸

Along with the main arteries, also roads of local importance went out of the town to enable transport and communication with the surrounding localities. A few of them might have been parts of larger roads. Based on the information on the road from Dolsk to Drzonek village,¹⁹⁹ situated between Dolsk and Śrem, one may conclude that sometimes this is how a part of the route from Dolsk to Śrem was called, at times. The very end of the sixteenth century (1599) saw mentions of the so-called great road from Dolsk, which led toward Bielewo village.²⁰⁰ Also in 1599, a road referred to as Kałkowo (?Kałkowa), from Tworzymirki village to the so-called great road called *dolska* [= of Dolsk] was

¹⁸⁹ Jabczyński, p. 3. S. Kozierowski mentions a trench near Dolsk, facing toward Masłowo (i.e. north-east of the town), which was reportedly called 'Grodzisko'; *idem*, *Badania nazw topograficznych*, vol. 1, p. 226.

¹⁹⁰ W. Hensel, *Studia i materiały do osadnictwa Wielkopolski wczesnohistorycznej*, vol. 1, Poznań 1950, pp. 180–1.

¹⁹¹ Münch, pp. 59, 87–8.

¹⁹² Weymann, *Drogi*, p. 228; Brust, p. 135. The road from Gostyń was mentioned in 1464 and 1488; J. Luciński, *Dolsk*, p. 378.

¹⁹³ Weymann, *Drogi*, p. 228.

¹⁹⁴ AmD, ref. no. I/2 = MK 133, f. 137v: "mercatorum vectorum omniumque transeuntum hominum Wratislavia caeterisque Silesiae civitatibus Posnaniam, Thoruniam, Gedanum aliisque tum Poloniae, tum Prussiae civitates ac etiam Calissia aliisque Regni civitatibus versus Glogoviam caeterasque Germaniae civitates impediatur".

¹⁹⁵ Cf. T. Związek, *Roads* [in] AHP Wielkopolska, in this edition III.5.4. Let us add that UMTB map, sheet 2200 (Schrimm, 1826) and 2270 (Dolzig, 1826), the road connecting Śrem and Dolsk was marked as a stone roadway, which would point to its importance in the nineteenth century.

¹⁹⁶ AmD, ref. no. I/17, f. 466: "domum -- in platea Gostinensis parte ab una viae stratae lapidibus parte ab altera Thomae Oczko situatam" (1615). There were four cobbled streets in Dolsk in 1793–4; J. Wąsicki, *Opisy miast*, p. 68.

¹⁹⁷ Referred to in 1514, 1530, and 1542; J. Luciński, *Dolsk*, p. 378.

¹⁹⁸ The road to Pokrzywnica was mentioned in 1606, with burgher-owned barns located along it; AmD, ref. no. I/17, f. 141. The Pokrzywnica direction was, however, rarely referred to when determining the location of farming appliances or municipal arable lands.

¹⁹⁹ J. Luciński, *Dolsk*, p. 377–8.

²⁰⁰ AAP, 'Dokumenty, Kapituła Katedralna, dokumenty papierowe', ref. no. DK pap XII/003, f. 3r: "circa viam magnam ex oppido Dolsko versus villam Bielewo pendentem".

mentioned.²⁰¹ It seems that the road being referred to went westward from the Gostyń Suburb or was a branch or a part of the road toward Gostyń.

The quality of the roads and their maintenance was the responsibility of the municipal commune, bound to this end by the royal privileges: (i) the bestowal, in 1513, of the bridge levy (*mostowe*) by King Sigismund I the Old (Zygmunt I Stary) for the town council at three denarii on each cart (it having been stipulated that a portion of that income be allocated for the repair of bridges and roads around Dolsk); and, (ii) the corroboration of the customs-house by Stephen Báthory in 1585 (containing a similar obligation).²⁰²

III.6.8.8 DROHICZYN

Tomasz Jaszczolt

The plan of Drohiczyn has been reconstructed by means of a retrogressive method employing the oldest known cartographic representations of the town, with these being supplemented by written sources. Obviously, as was the case in the reconstruction of the majority of the town plans herein included, so equally here there understandably has to be a certain amount of source interpretation, one combining certain elements, for example, the position of sacral buildings or street networks, with elements of a lower degree of certainty.

From amongst the cartographic sources available the oldest plan of Drohiczyn to have survived to this day is one from 1789. Though in itself it has not survived as an original to our day. In the 1880s it was kept in the Town Hall (*Ratusz*) in Drohiczyn, where a colour copy was made by the Russian archaeologist Nikolai Petrovich Avenarius, who was carrying out excavational digs in Drohiczyn and environs. Next this plan was to turn up in the private collection of the said academic, while presently it is housed at the Institute of the History of Russian Material Culture at the Russian Academy of Sciences in St. Petersburg.¹ The copy of the plan is most valuable as it shows the former course of the River Bug, which after 1789 was to undergo a significant directional change, one lasting the course of the subsequent century. It also shows the location of subsequently nonexistent sacral objects (churches).

The next two plans are from the beginning of the nineteenth century. They were drawn up by Russian army officers; for after the year 1807 Drohiczyn found itself within the area of the Białystok Oblast that was incorporated into the Russian Empire. These plans can be found today at the Central State Historical-Military Archive in Moscow. The first of these: ‘Plan miasta Drohiczyna z okolicznymi miejscowościami w Obwodzie Białostockim’ was compiled in 1810.² In turn, the second ‘Plan powiatowego miasta Drohiczyna z przyległościami w Obwodzie Białostockim’ comes from 1828.³ Both plans show relatively well the street layout, the distribution of the most important buildings, the extent of the plots, squares and gardens (allotments) within the boundaries of the town.

At the cartographic collection of the University Library in Wilno preserved was a colour plan from around the year 1840 presenting the central part of the town with a marking of the most important sacral and secular buildings as well as the houses situated around the market square.⁴ Also useful in the creation of the scope of the urban build at the turn of the seventeenth century turned out to be the topographic maps created under the supervision of the Prussian officers von Stein and von Geusau for the part of Drohiczyn covered by the Prussian partition as well as under the leadership of Colonel Anton Mayer von Heldensfeld for the Ruthenian side of Drohiczyn, which found itself under Austrian

¹ The Russian Academy of Sciences Institute of Material Culture in St. Petersburg, F 1-1886-55, f. 35; black and white reproduction [in:] H. Siemienczuk, *Prawosławne monasteria Podlasia w latach 1786–1789*, “Białoruskie Zeszyty Historyczne”, no. 12, 1999, p. 179; L. Pawlata, *Budowle sakralne Drohiczyna w świetle źródeł archeologicznych i historycznych*, “Biuletyn konserwatorski województwa podlaskiego”, no. 17, 2011, p. 70. (I would like to thank Dr. M. Dzik for providing access to an electronic copy of the plan).

³ *Idem*, f. 846-16-21909.

⁴ BUW, f. 23-130. There is no date on the plan but the information contained regarding the closed monastery and Franciscan church allowed one to date it to a period post-1832. A reproduction of the plan appears in: “Białostoczczyzna”, no. 2, 1999 (cover), here, however, the plan is incorrectly dated to circa. 1810.

partition administration. Thanks to him it was also possible to recreate the street path network, and as it seems one that authentically reflects its course in earlier centuries as well. Useful was also the map of Drohiczyń and environs for the year 1887 preserved in the aforementioned collection of Nikolai Avenarius.⁵

Known views of Drohiczyń are only available for the period post the second half of the nineteenth century. The best known amongst them is the lithograph compiled by Teodor Nakielski in 1879,⁶ and also the separately published views of various objects from within the town boundaries published in 'Tygodnik Ilustrowany' also by Nakielski. In turn, in the collections of Avenarius, preserved is a view of Drohiczyń drawn by him from the side of the River Bug. This view, next to the then existing buildings, also contains marked places where were to be found already nonexistent in the nineteenth-century: the Orthodox castle churches of St. Nicholas and the Pure Virgin Mary.⁷

The most useful from amongst the written sources were the ledgers of the municipal jurors and those of the vogt's (*wójt's*) office, together with the copied collections of the privileges of Drohiczyń preserved in 45 units for the period 1537–1798, which unfortunately disappeared – along with the AGAD sources, in 1944.⁸ However, to a degree their loss finds recompensation in the land court ledgers and municipal acts for Drohiczyń itself to which were included a certain number of documents containing, among other things, privileges for the *libertacje* – 'freeing of obligations to pay municipal taxations and duties' of town squares as well as for retail transactions of buying and selling conducted within the boundaries of Drohiczyń. An important source are the ledgers of the Lithuanian Metrica (up to 1569) and subsequently the Royal Metrica, to which were entered copies of municipal and guild privileges, documents referring to the office of vogtship and its holders as well as the endowment of lots and urban voloks and the freeing of obligations for the said.

Lost also is the Voloč Reform register for Drohiczyń and the Drohiczyń starosty conducted for the years 1562–1564, by the surveyor Dymitr Sapięha. Equally there is no knowledge as to copies or even fragments of the said. Such a register would be undoubtedly the most useful in recreating the spatial layout of Drohiczyń in the second half of the sixteenth century. Its worth can be seen on the basis of those measurement registers that did survive and which charted other Podlasie towns: Brańsk, Suraż, Mięlnik, Kleszczęle, Narew, Bięlsk. Also we have no preserved inventories for the Drohiczyń of the sixteenth century. To a degree their absence is supplemented by information contained in the town inspections of the sixteenth century, which were published. Particularly abundant in information is the inspection conducted in 1570 following Podlasie's incorporation into the Polish Crown. Yet only in part, and here scantily, do we have preserved the contents of the register of 1576.⁹ Most has been provided in summary by J. Jaroszewicz.¹⁰ In turn, the registers for Drohiczyń for the years 1616¹¹ and 1661¹² await publication.

Drohiczyń has yet to see a monograph written about it that would satisfy academic expectations. For the book published in 1938 cannot be classified as such, because it was written by a pupil of the Drohiczyń secondary school, Feliks Zygmunt Weremiej,¹³ as equally the book compiled by Zenon Skrzypkowski and Zbigniew Ruczał, enthusiasts for Drohiczyń local history.¹⁴ However, there do exist many academic articles and minor publications on Drohiczyń itself as well as those that treat it within research into Podlasie as a whole. The oldest of these includes the work by Józef Jaroszewicz from the first half of the nineteenth century, which in many places has preserved a currency and relevance today and is one of some worth for it has drawn on sources then available to the author and yet ones

that today no longer exist.¹⁵ During archaeological digs conducted in Drohiczyn and environs the aforementioned Nikolai Avenarius made reference in his text to aspects of the town's history.¹⁶ On the basis of archaeological research conducted in the 1950s Krystyna Musianowicz produced a monograph of early medieval Drohiczyn.¹⁷ Equally, later archaeological digs by subsequent researchers have brought to light new findings on the subject of Drohiczyn's past, especially for those periods where there is an absence of written sources or where these are few in number. The works of Lech Pawlata act as a summary of these digs and excavations and an overview of the earlier subject literature, he himself being keenly involved in exploring a series of aspects of Drohiczyn and its oldest history, superbly fusing archaeological digs research with historical findings.¹⁸

A conference held in Drohiczyn in 1978 and organised by Białystok historical circles brought some valuable findings on the subject of the town. The collected works were, however, published in a limited edition with copies today difficult to obtain. The text by Leszek Postołowicz found therein contained is worthy of attention on the spatial layout of Drohiczyn in the fifteenth to eighteenth centuries, as equally the piece by Józef Maroszek on the cultural role of Drohiczyn across the centuries.¹⁹ Equally many other works by Maroszek occupy an important place in the historiography of not only the whole of Podlasie but of Drohiczyn as well. A work prepared to mark the 500th anniversary of the bestowing of a charter (Magdeburg Rights) on Drohiczyn was written exclusively about the town. This chiefly concerns itself with crafts and trade but also deals with other aspects of the town's history.²⁰

By far the oldest known source mention of Drohiczyn is from the year 1142, when the then grand Kijów Prince Vsevolod II of Kijów allocated this town as well as Brześć Litewski to one of his brothers – Igor Olegovich, yet it is widely accepted that the history of Drohiczyn did not begin then but at least a century earlier when it had become the property of the Kijów prince Yaroslav the Wise as 'payment' for the aid he had shown Kazimierz Odnowiciel in the fight against the Yotvingians and Masław, the self-proclaimed ruler of Mazovia. It was to have been then that a fortified settlement was built in Drohiczyn, around which the town was to have developed. This hypothesis can be confirmed by earlier and the latest archaeological findings; for the founding of the town of Drohiczyn is dated to the eleventh century.²¹

In the twelfth century Drohiczyn was an important trade hub connecting Poland and Rus, irrefutable evidence of which are the numerous lead seals that have been discovered here since the end of the nineteenth century. These present an array of marks and signs, letters of the Cyrillic alphabet, images of saints, animals, birds, as well as the coats of arms of Ruthenian princes.²² The existence of long-distance trade is also proved by a tile with the image of a winged lion and the inscription 'Ex officina Sancti Marci', which had found its way to Drohiczyn from distant Venice.

At the end of the twelfth century Drohiczyn found itself within the sphere of influence of Prince Kazimierz the Just and subsequently his son, Konrad Mazowiecki. And it was Konrad who in 1237 bestowed the castle at Drohiczyn together with the area bound by the Rivers Bug and Nur (Nurzec) right up to the borders with Rus, to knights from the earlier order of the Dobrzyń brothers,²³ who

were connected with the Knight Templars when the bestowal took place.²⁴ Drohiczyn was taken from the Templars by the Galician Prince Daniel Romanovich and this presumably in 1243.²⁵ And it was Drohiczyn that Daniel Romanovich chose for his coronation in 1253, and which was conducted by the papal legate Opizon of Mezzano with the accompaniment of the Cracow bishop Jan Prandota.²⁶ In 1275 Drohiczyn was taken and torched by the forces of the Lithuanian prince Trojden, who equally put its inhabitants to the sword.²⁷

Drohiczyn entered into the composition of the Kingdom of Galicia-Volhynia under Romanovich rule until the death of the last ruler, Prince Yuri II Boleslav who died in 1340 – most presumably poisoned by his boyars. Yuri II Boleslav, the son of the Mazovian Prince Trojden, inherited the the Kingdom of Galicia-Volhynia on the deaths of his uncles: Andrzej and Lew Juriewicz. Following his death the part of the inheritance that included Drohiczyn was taken over by the brothers of the deceased, Siemowit and Kazimierz, and possibly maybe even by his father Trojden. The holding of Drohiczyn by the Masovians is borne out by a document penned by Siemowit Trojdenowic of 1342, and directed towards his voivode-governor titled as *Drohiczyn*.²⁸

However shortly, presumably as a result of the battles fought in 1351, during which at Mielnik the Płock Prince Bolesław III Wańkowic died at the hands of the Lithuanians, the Drohiczyn lands were taken from the Mazovians by the Lithuanian Prince Kiejstut, who in 1355 together with his brother Lubart issued a document allowing Torun merchants to freely travel to Łuck by means of the road leading through Drohiczyn, Mielnik and Brześć Litewski.²⁹

The definite inclusion of Drohiczyn within Kiejstut's possessions of is borne out by the treaty of 1366 which he concluded in conjunction with his brother Olgierd with the King of Poland, Kazimierz Wielki. Kazimierz promised not to raid the lands establishing their centres as the fortresses at Brześć Litewski, Drohiczyn, Mielnik, Bielsk and Kamieniec – these belonging to Kiejstut, as well as at Kobryń being the property of the Grand Duke Olgierd.³⁰ The Drohiczyn lands, in a way similar to the lands of Brześć Litewski and Kamieniec, became at the end of Kiejstut's rule the object of a crusade on the part of the Teutonic Order, who left the lands seriously ravaged.³¹ The treaty of 1379, concluded between Lithuania and the Order, and outlining the peace terms, mentions amongst the lands exempt from the Teutonic incursions the lands of, among others, Suraż, Drohiczyn, Mielnik, Brześć Litewski, Bielsk and Kamieniec.³² Following the death of prince Kiejstut and the defection of his son Witold to the Order, the Mazovian Prince Janusz attempted to take the Drohiczyn lands and possibly equally those of Brześć Litewski. However, he was to very quickly lose these to Jagiełło. Only following his return from the Teutonic Order and reconciliation with Jagiełło in 1385 did Witold receive back a part of the patrimony together with Grodno, Brześć Litewski, Kamieniec, Wołkowysk, Drohiczyn and Mielnik. In the documents drawn up by him for the years 1386–1389 Witold titled himself the prince of Brześć Litewski³³ or Grodno,³⁴ though he undoubtedly also held Drohiczyn as is borne out by the appearance in his retinue the Drohiczyn voivode Jan in 1388. Following another desertion to the Teutonic Knights in 1389, Witold again lost his patrimony, which was personally taken control of in February 1390 by King Władysław Jagiełło. The Drohiczyn lands with fortified towns at Drohiczyn, Bielsk, Mielnik and

Suraz he handed over late in the summer of 1390 to the Mazovian Prince Janusz, as is stated in the document drawn on 2 September 1391. Drohiczyn was then mentioned most clearly as the main centre for the entire territory, something that underlined its significance.³⁵ Following Witold's return to Lithuania and the accord agreed in 1392 in Ostrów, Brześć Litewski and Kamieniec were to permanently return to his possessions. The Drohiczyn lands he was to acquire later, only between the years 1401 and 1405. Witold's rule over the Drohiczyn lands is confirmed by his presence in Drohiczyn, noted down at the end of his governance³⁶ as well as the preserved endowments to Orthodox churches, Catholic churches, the knighthood and boyars within this territory. One of Witold's documents of 1420 was even issued during his stay 'in castro Drohicin'. After a short episode of governance in the Grand Duchy of Lithuania by the Świdrygiełło family the Drohiczyn and Mielnik lands found themselves as a part of the said and under the rule of Witold's younger brother – Zygmunt Kiejstutowicz.

Taking advantage of Zygmunt Kiejstutowicz's death in March 1440, the Drohiczyn lands were taken over that very year by the Mazovian Prince Bolesław IV, who even nominated the Drohiczyn castellan. This was to be Jan Nasuta, who came from a Mazovian family but who equally had land possessions in the Drohiczyn area.³⁷ In the late summer of 1444 the Lithuanian army led by Jan Gasztołd took the Drohiczyn lands and rejoined them to the Grand Duchy of Lithuania. From then onwards until 1569 Drohiczyn, together with the whole of Podlasie, found itself within the territory of the Grand Duchy of Lithuania. For in this year, on the strength of the charter of King Sigismund August, it was joined to the Polish Crown.

The preserved charter bestowing on Drohiczyn Magdeburg Rights was issued only in 1498. However there are known numerous testimonies to the fact that Drohiczyn had earlier held town rights, possible those of Kulm Law. These testimonies are first and foremost references to institutions typical for towns founded on the basis of German Law. So we have consequently information from Drohiczyn about a town council, mayors, burghers already during the first half of the fifteenth century.³⁸ Worthy of note is that Bolesław IV while residing in Drohiczyn bestowed Kulm Law rights on Mielnik.³⁹ However, there are no traces of an analogical charter for Drohiczyn, which to a certain extent points to Drohiczyn having obtained such charter privileges earlier, and here possibly under the reign of Prince Janusz I the Elder (1390–1401) or also from the hand of the Grand Duke of Lithuania Witold. Nevertheless in Witold's privilege for the vogtship for Stanisław Dziadek of 1429, Drohiczyn is referred to as 'oppidum'.⁴⁰ Equally in the privileges granted by Kazimierz Jagiellończyk for the Wilno burghers of 1441, Drohiczyn is mentioned amongst 14 towns from the territory of the Grand Duchy of Lithuania that had obtained the right to trade freely.⁴¹

The charter process on the basis of German Law was inseparably connected with the establishment in a town of the office of vogt, which could have existed in Drohiczyn already at the beginning of the

³⁵ M. Radoch, *W sprawie daty nadania przez Władysława Jagiełłę ziemi drohiczkiej księciu mazowieckiemu Januszowi I*, [in:] *Szkice z dziejów kolonizacji Podlasia i Grodzieńszczyzny od XIV do XVI w.*, ed. J. Śliwiński, Olsztyn 2002, pp. 11–20; the author only erroneously attempts to correct the date of the Władysław Jagiełło privilege from 15 September 1391 to 1390. The privilege was issued a year later and here for the actual transfer of the Drohiczyn land to Janusz I.

fifteenth century. This is directly borne out by the notation of 1414 in which mentioned is a certain Niklasz, the old vogt from Drohiczyn.⁴²

However, it was only on the 28 December 1429 and in Grodno that Prince Witold issued privileges by which the vogtship in Drohiczyn was bestowed on the notorious Stanisław Dziadek. The chief holding of the vogt's office was 6 voloks of land. In addition the vogt received also a third of payments from court fines as well as every third stone of wax. He also gained the right to build and hold a mill, at which the inhabitants of Drohiczyn and neighbouring villages could grind their grain. As vogt Stanisław Dziadek was to administer in the fashion of the vogts of Lublin.⁴³ And from the hands of Stanisław Dziadek the office of vogt quickly passed on to others.⁴⁴ Known are the following Drohiczyn vogts of the fifteenth century: Grzegorz (1438–1448), Mikołaj Chodowski (1479–1481), Andrzej (1497–1536).⁴⁵ Sixteenth-century sources point to the existence of a folwark and vogt's manor house in Drohiczyn. A street plan of 1810 marks in the eastern part of the town, on the road to Zajęcznik, the presence of a *wójtowszczyzna* manor house. Equally on Stein's map there is shown in the self same place the existence of a larger object. The Drohiczyn office of vogt was to remain unbroken in operative function up until the Third Partition itself. One may equally assume that the office itself was unchanged in its location for this duration. Consequently, it has been decided to locate the vogt's manor house on the map in accordance with the location given in the aforementioned sources.

The final stage crowning the process of the founding of Drohiczyn was the obtaining by the town of a Magdeburg Law charter, from Aleksander Jagiellończyk on the 4 October 1498.⁴⁶ In the document the ruler clearly stated that the variety of different, and here at times contrary, laws and customs in force and used on a daily basis by various nations and denominations in towns across the expanse of the Grand Duchy of Lithuania, here including Drohiczyn, impacted negatively on their functioning. Desiring as a consequence to impose order in this matter, Aleksander bestowed Magdeburg Law on all the inhabitants of Drohiczyn, both on the Polish and Ruthenian sides, while simultaneously revoking and repealing all other laws hitherto in force and used in particular by the Ruthenians who resided there. It endorsed the authority of the vogt over the town's burghers, who could be judged only by him and mayors and councillors. And with the same the burghers were exclusively under the jurisdiction of the castle and grand ducal starosts. The town was granted four dates for fairs; these to take place after Palm Sunday and following the feast days of Corpus Christi, the Exaltation of the Cross, and of St. Simon and St. Jude Thaddeus. Only at this time trade could be conducted in Drohiczyn by burghers from other towns of the Grand Duchy of Lithuania. An exception was granted only to the inhabitants of Wilno, Troki and Polock, who as a consequence of special privileges were able to trade on different dates. Each of the aforementioned markets was to last a single week.

The original charter granted by Aleksander most presumably had been burnt before 1569. And so the Drohiczyn burghers presented at the Lublin Diet (*Sejm*) not the original but a copy of its entry into the Drohiczyn land ledgers of 1542. For certainty it did not exist in 1592 where written was simply: 'The town of Drohiczyn through great and frequent deterioration had fallen foul of great misfortune with the town's original charter destroyed.'⁴⁷

For a long time after 1569 and the inclusion of Podlasie within the structure of the Polish Crown, the inhabitants of Drohiczyn were unable to free themselves from the cumbersome taxes levied in the Grand Duchy of Lithuania, and which they had to pay to the starost. Undoubtedly the position of the Podlasie and Drohiczyn starost Mikołaj Kiszka (d. 1587) impacted on this, as he did not want to resign from the payment of these taxes. It was only to be with his son and successor as Drohiczyn

starost Mikołaj Kiszka in his document of 24 November 1588, and here on the clear instruction of the king, that an end to the levying of taxes on the basis of Lithuanian custom came about and deemed contrary to the Podlasie inclusion charter of 1569.⁴⁸ The Drohiczyn burghers were to pay only renes at a rate of 50 *grosz* per volok on the 'Polish' side while at a rate of 30 and 1/8 of a *grosz* per volok on the Ruthenian side, and here as a result of the poorer land that was to be found in this part of Drohiczyn and additionally levies from taverns at a rate of 70 *złoty* annually.⁴⁹ However, despite this there still occurred situations where the starosts did not adhere to the decisions adopted, resulting in the need for royal intervention. In the years 1617 and 1618 King Sigismund III, reminded the aforementioned Mikołaj Kiszka not to exploit the Drohiczyn millers and other burghers.⁵⁰

From the 1580s onwards mentioned is the presence of Scots in Drohiczyn, who were to settle here in increasing numbers. Already in 1589 a plot in Drohiczyn was owned by a certain Kilian Szkot (Scot).⁵¹ At the turn of the seventeenth century the mayor was even a Scot, Wojciech, who went under the characteristic surname of Baranowski.

The inspection of 1570 in writing about Drohiczyn claimed it to be 'a large district and a leading town in Podlasie.'⁵² Identical information is contained in the inspection conducted in 1616.⁵³ Drohiczyn's significance was undoubtedly the result of its earlier tradition, for in the thirteenth and fourteenth centuries it had been the most important town within a territory more or less corresponding to the area of the later Podlasie Voivodeship. Also later it was to become the seat of noble courts, which initially functioned within the territory of the Grand Duchy of Lithuania only in Podlasie. The land court in Drohiczyn was already in operation in the day of the Grand Duke Witold, that is from at least 1427, and for certain with his permission.⁵⁴ On the 19 June 1445 Kazimierz Jagiellończyk, the Grand Lithuanian Duke, bestowed on the nobility of the Drohiczyn lands the privilege to employ Polish law, and as it had been employed in the times of the Grand Dukes Witold and Zygmunt Kiejstutowicz.⁵⁵

In 1516 king Sigismund the Elder issued the privilege enabling the nobility of the Drohiczyn lands to employ Polish Law.⁵⁶ At this moment a separate castle court was constituted. Earlier the matters that it heard had been dealt with by castellian courts adjudicated over by starosts. The first Drohiczyn municipal judge mentioned was Hieronim Rospąd Jabłoński in the years 1517–1522.⁵⁷

In 1513 the Voivodeship of Podlasie was created, with the voivode being named Jan (Iwan) Sapieha, a marshall and grand ducal secretary. When he died in 1517 an interlude in the functioning of the voivodeship as such occurred, this being from the formal perspective as a result of an absence of an office holder. Only with the privilege of 1520 did King Sigismund I the Elder nominate a new Podlasie voivode, Janusz Kostewicz and formed anew the voivodeship clearly demarcating its territory, in which there was to be found besides Drohiczyn, Bielsk and Mielnik also Brześć Litewski, Kamieniec and Kobryń.⁵⁸ However, at that time Drohiczyn was not considered the capital of the voivodeship, proof of which being simply the fact that the voivodeship did not owe its name to the name of the town, as was the case with all the other Lithuanian voivodeships. Drohiczyn was to gain the status of voivodeship town only following the conclusion of the Union of Lublin, where voivodeship meetings, general council sittings, as well as the selection of Podlasie Voivodeship deputies for the Crown Tribunal took place. In the mid sixteenth century Drohiczyn was the only royal town in the Drohiczyn lands (up until 1565 also Wysokie).

Sixteenth-century Drohiczyn was situated on both banks of the River Bug. On the right (northern) bank was to be found the part of the town usually referred to as the Polish Side (or Polish Drohiczyn). In turn the part lying on the opposite bank of the Bug was known as the Ruthenian Side (respectively: Ruthenian Drohiczyn). For this reason sometimes in the sources there is talk of two towns.⁵⁹ The matter as to the origin of the nomenclature of the two sides of Drohiczyn itself is not completely clear and will require further and detailed research. In our opinion it is not a reflection of the settlement and ethnic relations that occurred within Drohiczyn as such. For on both sides of the river we can come across resident Poles and Ruthenians. So the River Bug was not a boundary strictly dividing the two nations from each other. The most striking thing is the fact that the main Orthodox churches were located on the Polish side. The most sensible explanation for this state of affairs is the note from the Drohiczyn Magdeburg charter of 1498, where Aleksander Jagiellończyk allowed for the selection of two mayors and two sets of municipal council each of eight councillors strong – a separate one for the Poles and again for the Ruthenians. It is possible, therefore, that these mayors and councillors conducted their affairs of office in the appropriately named parts of Drohiczyn, that is on the relevant Polish and Ruthenian sides. Such a state of affairs must have occurred beforehand given that in 1492 there is already documentary talk of a ‘Polish mayor’ and ‘Ruthenian councillor’ from Drohiczyn. Even the majority of the sources that make mention of these two separate sides do treat Drohiczyn as a single municipal organism.

It is beyond doubt that its positioning on the River Bug impacted on the development of the town and pre-charter settlements in Drohiczyn. The Drohiczyn town itself was situated on the right bank of the river in a position commanding the valley lying opposite. The Bug River valley opposite the Góra Zamkowa (Castle Hill) is fairly wide and of approximately 4 km in length. The Bug River within the territory of Drohiczyn encompasses numerous meanders; while the river current laps alternately the shores of both banks. As a consequence the River Bug has changed its course over the centuries. Traces of these changes are the old river bed, the so *bużyska*.⁶⁰ One of the old river beds is situated to the west of the town and may be clearly seen on Stein’s map. One can most certainly identify it with the so-called lower lake mentioned in 1553 and which is situated not far from the place referred to as *Wasznik*. The old river bed has been included on the map.

An open form settlement developed around the early medieval town this being comprised of several settlements. The territory later taken up by the foundation market earlier had been used for colonising and creating a central settlement which was connected to the eastern settlement (to the north east of the town). On the bank of the River Bug developed a western settlement, quite possibly settled in the main by a populace of western origin; hence here was later situated a Roman Catholic church. Traces of settlement have also been discovered on the area of Góra Kramczewska, separated from the central settlements by a ravine and the stream that flows through it. Land on the opposite side of the Bug was also used for settlement purposes, later occupied by Ruthenian Drohiczyn.⁶¹

The boundaries of the municipal fields were presumably formed a long time prior to settlement on the basis of Magdeburg Law in 1498. There is no actual mention of these in the charter itself, which presumably means that for the majority they were already marked out and were based on the boundary limits of neighbouring settlements. The borders of the fields that belonged to the Polish Side of Drohiczyn were presented as follows: from the west they bordered lands referred to as *Budkowszczyzna*. Initially this had been the town’s oak wood bequeathed in 1522 by the Drohiczyn starost Jan Mikołajewicz Radziwiłł to the castellan usher, Bartłomiej Budka. In the description of the boundaries of this endowment there is clearly talk about its meeting, on the one hand, with the borders of municipal fields, while on the other side with the road leaving Drohiczyn in the direction of Gródek.⁶² To the north the town bordered the village of Kłyżówka, which belonged to the Drohiczyn Franciscans as well as the village of Sieniewice belonging to the Horbowski family and the village of Koczery (Koczerhy)

⁵⁹ As, for example, in the document of the government inspector Dymitr Sapięha of 1564, AGAD, MK 108, f. 15: ‘the voloks and holdings of both Drohiczyn towns’.

⁶² AGAD, Drohiczyckie ziemskie 2, ff. 347v–348.

inhabited by boyars of Ruthenian origin, the Koczerha-Koczerski family. From the east Drohiczyn bordered with the village of Bujaki, which in the sixteenth century belonged to the Izdebski family.

Almost from the very beginning of the sixteenth century the inhabitants of Drohiczyn were in dispute with the owners of Bujaki over the course of the boundaries. Already in 1521 the Drohiczyn starost, Jan Radziwiłł, together with arbitrators, attempted to resolve the dispute between the vogt, the mayor and the Drohiczyn burghers on the one side and Ms. Zofia Izdebska of Bujaki on the other over the oak wood situated between the town and Bujaki, rights to which were claimed by both sides. He also carried out a demarcation, the course of which was noted down.⁶³ However, this was not to resolve the dispute and it was only in 1531 that the Drohiczyn chamberlain conducted another demarcation of the Drohiczyn lands bordering those of Bujaki. And here again the matter concerned the disputed oak wood, which the Drohiczyn burghers considered their property. The boundary was to have commenced from the charcoal smithy situated on the road leading from Drohiczyn to the village of Boguszki and separating the lands of the village of Zajęcznika from the disputed oak wood. This was marked by mounds formed out of earth and stone, of which the latter the chamberlain ordered to be scattered on the road leading from Drohiczyn to Rogawka.⁶⁴

In turn, the part of Drohiczyn located on the left bank of the River Bug, namely the Ruthenian Side, bordered, from the east, the village of Drażniew (Drażniewo) belonging to the Niemira family of the Gozdaw coat of arms. In 1545 commissioners appointed by the king, Sigismund August, carried out a marking of the boundaries between the lands of Drażniew held by Stanisław Niemira and the Drohiczyn lands.⁶⁵ From the southern side the Drohiczyn municipal lands bordered with the villages of Korczew (Korczewo) and Laskowice belonging in the sixteenth century to the Hlebowicz family of the coat of arms of Leliwa. From the west the boundary consisted of the riverlet Kamianka (at present the riverlet Kołodziejka) beyond which stretched the lands of the village of Starczewice. This village initially belonged to Drohiczyn castle but in 1555 it was given by King Sigismund August to the grand ducal scribe Maciej Sawicki in exchange for an earlier bestowed folwark in Drohiczyn, then returned to the castle.⁶⁶ The Przekop mill complex settlement also belonged to village of Starczewice, the millers of which were still subject in the fifteenth century to Drohiczyn castle in. In 1455 the Drohiczyn starost Jan Nasuta allowed the mill at Przekop to be sold by the miller Bartłomiej to the nobleman Grzegorz of Zalesie.⁶⁷

In place of the currently existing eighteenth-century-founded village of Bużyska was situated land of the same name and mentioned in 1589 when the king allowed his 'scout' Adam Truszkowski to purchase 5 voloks including land from the heirs to the former Drohiczyn vogt Mikołaj Chodowski. This land was defined as lying between the moat of the 'Ruthenian town Drohiczyn and the River Bug.'⁶⁸ This land was marked on the plan of Drohiczyn in the place where at present the village of Bużyski can be found.

During the Voloč Reforms of Drohiczyn and of the Drohiczyn starost conducted in 1563 and 1564 respectively by the royal inspector Dymitr Sapięha, the final division of the municipal voloks and their summing up was carried out. In the inspection of 1570 it is stated that Drohiczyn numbered 58 voloks of the Chełmno measure on the one side. This figure only made reference to the Polish side. With the inspection of 1576 giving somewhat different figures. On the Polish side there was to be found in total 61 $\frac{3}{4}$ voloks, while on the Ruthenian 46 voloks.⁶⁹ On the Polish side 43 voloks paid rents while on the Ruthenian this figure was 44. The town had on both sides 147 morgens of meadow, while the total number of houses was then 327. At this time there were six houses in Drohiczyn exempt from the payment of rents, rates and taxes. On the Polish side 42 Lithuanian *grosz* was paid for a volok while on the Ruthenian the price was 30. The inspection of 1576 also provides a detailed

list of craftsmen and stall holders who were to pay tax. In total there were 77 of them: nine tailors, five furriers, two 'beekeepers', four barbers, four blacksmiths, eight butchers, a goldsmith, a sadler, a locksmith, 40 cobblers, 20 carters, six stallholders. Besides, on both sides there were to be found 45 beer taverns paying tax and eight free houses, 13 mead houses, 20 spirit houses of which one was a free house.⁷⁰ According to an earlier inspection of 1570, beer taverns numbered 63, mead houses 12 and spirit establishments two.⁷¹ A detailed breakdown of the craftsmen in Drohiczyn is also given by the tax register of 1580.⁷²

In Drohiczyn tailors and cobblers were organised into guilds, which possessed separate privileges. Cobblers, the most numerously represented in Drohiczyn obtained a charter and statute that defined the principles of how they functioned and this on the power of Sigismund August's document of 23 October 1562.⁷³ Tailors and shearers received from Sigismund August a charter on 10 October 1565 modelled on the document issued to the tailors' guild in the town of Liw.⁷⁴ There equally existed in Drohiczyn a confraternity of local merchants: Poles, Ruthenians and Scots. In 1643 this confraternity compiled its own act which was ratified in 1644 by Władysław IV.⁷⁵

The Magdeburg Law charter of 1498 gave permission for the construction of a town hall 'in loco digniori'. The most suitable place for its location was obviously the market square (at present Kościuszko Square), on which undoubtedly it was placed. The market square like the whole urban construct was wooden in structure, hence it most certainly must have been affected by the fires which often afflicted Drohiczyn. In 1592 the nobility assembled at the deputy council asked King Sigismund III to grant wood from the royal forests to build the town hall, which prior to this had most likely burnt down.⁷⁶ It follows to assume that during the period covered by research a town hall in Drohiczyn existed, although presumably with small breaks. Therefore it has been entered onto the plan according to the localisation shown on the sketch of 1789. In 1805 the town hall burnt down again and was not to be subsequently rebuilt.⁷⁷ The charter of 1498 also gave permission for the burghers to build in the vicinity of the town hall, scales, a shearing machine, shambles, and a wax press as well as a town baths. Undoubtedly such structures came into being at this time. We have a clear reference to the functioning of the baths from the year 1506 onwards, when it was used by Prince Zygmunt Jagiellończyk (the later king Sigismund I the Elder) at the time en route to Lithuania.⁷⁸

Around the town hall in the vicinity of the market square there presumably were located a number of residential houses. According to the tax register of 1580 there were ten of them, in turn according to the register of 1588 – 11. Street houses in both registers were 168 in number, while cottages amounted to 143 in number, with so-called 'hovels' numbering seven. Besides this there were 381 gardens (allotments) maintained within the municipal territory itself.⁷⁹

In a document of Dymitr Sapieha of 1564 there is talk of a square placed 'in the street which leads from the old market square'.⁸⁰ This reference shows that most probably during the survey of Drohiczyn in 1563 occurred the charting of a site for a second market square. However, it is not known where this was located. It is possible that it was to be found on the Ruthenian Side of Drohiczyn. It is also not to be excluded that it could have been demarcated on Góra Kramczewska at the Orthodox church of the Holy Trinity, around which was situated a square that could have been used for trading. This was still visible on nineteenth-century maps.

The lack of the Drohiczyn survey text of 1563 does not enable one to recreate exactly the names of the streets as they were used in the town at the time. The preserved sources equally provide almost

no information on this matter. Known documents of sale, donations and loans secured against properties, plots or municipal gardens (allotments) record their location chiefly on the basis of the surnames of the owners of adjacent properties. Only in two of Dymitr Sapieha's documents of 1564, and here compiled after the Drohiczyn survey, do we have access to street names as such.⁸¹ In both documents there is mention of Bielska Street, which it follows to connect to the present-day Kraszewskiego Street running from the north-east corner, right at the Franciscan church. Its natural extension should have been the road heading in the direction of Bielsk and further on to Wilno. Hence the street was named Wileńska (Wilno Street) in the seventeenth century. In Sapieha's documents there is also talk of a Krzyżowa Street. Of especial importance is the notation that states that this street runs from Bielska Street in the direction of Wasilew. On the basis of this pointer it follows to identify this street with the present-day streets of Mickiewicza and Nieznanego Żołnierza Streets (formerly the single Warszawska Street), which constituted one communicative stretch heading in a westerly direction; that is towards Tonkiele and Wasilew, where in the sixteenth century there existed a ferry crossing over the River Bug. Mentioned is also Wójtowska Street, which was to have been an extension of a small street running from the market square at the house of the Drohiczyn judge's wife Anna Gałączyna and was situated 'on the right fortification'. It is highly likely that the Wójtowska Street ran from the central part of the town in the direction of the manor house and the folwark that belonged to the Drohiczyn vogts. These were situated on the eastern edge of the town. The vogt's manor house is marked on Stein's map as well as the Russian plan of Drohiczyn of 1810. As a consequence the said nameless side street running from the market square at the house of the Gałączyna family in the direction of Wójtowska Street may be identified as the present-day Ratuszowa Street (formerly Ogrodowa). Of the aforementioned streets marked on the plan are: Bielska Street, Krzyżowa Street and Wójtowska Street. However, the demarcation of Ratuszowa Street has not been undertaken.

From the north-eastern corner of the market in an easterly direction ran the street known as Lubelska Street (at present Zygmunta Szmita), whose course was along the embankment on the side of Góra Kramczewska. It descended in the direction of the River Bug and the ferry crossing (the old bridge). Its extension was to have been found on the Ruthenian Side from which it branched off in the direction of Drażniew and Łosice and further to Lublin itself. Lubelska Street, despite the fact that it is not noted in any sixteenth-century sources, has been marked on the plan as a result of its importance as a communication route. Similarly is marked the Kościelna Street running from the south-west corner of the market in a westerly direction towards the church of the Holy Trinity as equally Rudnicka Street (present-day Ciechanowiecka), which departed in a northerly direction from the north-west corner of the market. Such names these streets could have had already in the sixteenth century.

Also on the Ruthenian Side the urban structure was arranged around streets. This can be clearly seen on the maps of Stein and Heldensfeld. The names of certain streets were still known in the twentieth century, these being: Lubelska, Warszawska, Kołaczewska (Korczewska?) and Szeroka.⁸² Of these almost certain as to existence in the sixteenth century is Lubelska Street, which was an extension of a street of the self same name on the Polish Side and which subsequently headed off south. Warszawska Street ran initially in a westerly direction to the road leading to Skrzyszew, from where it continued onto Warsaw through Sokołów and Węgrów. Szeroka Street undoubtedly was to be found in the central part of the Ruthenian Side and one may identify it with a street of a clearly broad appearance and somewhat different direction and course than others marked on Stein's map. It is possible that this at the same time constituted the market square for this part of Drohiczyn. On the plan for the Ruthenian Side marked are the Warszawska Street, Lubelska Street and Szeroka Street.

The inspection of 1616 gives a combined figure of 106 voloks on both sides – the Polish and the Ruthenian. As equally the inspection of 1570 as that of 1616 informs that the number of voloks free of rates and rent in Drohiczyn was 18. However, a more exact summing up shows that their number was 19. According to the inspection of 1570 free voloks belonged to the following possessions: the Drohiczyn presbytery had 2 voloks, besides which 1 belonged to the hospital's endowment, 6 voloks belonged to

⁸¹ MK 105, f. 283 (a Dymitr Sapieha document of 9 May 1564 issued for the Drohiczyn townswoman Michałowa Czechowa), idem, MK 108, ff. 14–16 (a Dymitr Sapieha document of 20 April 1564 issued for Maciej Sawicki).

⁸² L. Pośtołowicz, *Układ przestrzenny Drohiczyzna do końca XVIII w.*, [in:] *Drohiczyn. Dzieje miasta na tle dziejów regionu*, Białystok 1980, p. 36.

the voivodeship, in accordance with the charter/privileges of Prince Witold of 1429. In turn a further 10 were in the hands of private owners. Amongst which 2 were owned by Maciej Chądryński the Drohiczyn chamberlain, the owner of three was Maciej Sawicki, at the time the Drohiczyn tribune; while the most, a whole 5 voloks, was owned by Agnieszka the widow of Michał Czech a Drohiczyn burgher.

According to the inspection of 1616 the number of voloks free of rates and rent in Drohiczyn is presented identically. All institutions possessed them in an unchanged number. However, private voloks changed hands. The 5 voloks of Michał Czech were held by his descendants, similarly the two owned by Maciej Chądryński, the Drohiczyn chamberlain, which were held by his son Andrzej, the Nur starost as well as his nephews. In turn the voloks of Maciej Sawicki in 1616 belonged to Mikołaj Kiszka the Drohiczyn starost.⁸³

During the course of the seventeenth century the number of *jurydyka* (privately owned plots within a broader municipal entity) and nobility taxation exemptions in Drohiczyn rose so sharply that according to the inventory of the Drohiczyn starost of 1690 on the Polish Side there were only 24 homes subject to municipal law, while 15 voloks were sown. On the Ruthenian Side were 14 houses. In turn two fields were completely overgrown with forest and shrub bush, only in one field were 2 voloks sown. For this reason the then Drohiczyn starost Jan Butler complained about the low levels of income drawn both in Drohiczyn itself as equally from the starosty as a whole.⁸⁴

In the inspection of 1570 talk is of the castle vineyards situated at the church of the Holy Trinity. The most suitable location for which would be the southern slopes running between the 'blessed land' (*poświętne*) and the Bug River. And so the vineyard is marked on the plan.

According to researchers, the Kijów princes in the eleventh century on taking their Bug territories bordering on Mazovia, were to found their own towns including the settlements at Drohiczyn and Mielnik with a view to a more effective rule and administration over the area. The castle at Drohiczyn ('castrum Drohicin') was erected on a hill directly adjoining the River Bug. What it looked like or the appearance of the buildings it housed is unknown. The buildings and other fortifications were presumably in the main wooden, although some of them could have been of stone, or at least their foundations were. We can find source mentions concerning the castle at Drohiczyn in the document of Konrad Mazowiecki of 1237 for the one time Dobrzyń brothers. It was destroyed in 1275 by the Lithuanian forces of Prince Trojden. Equally in 1383 the forces of the Grand Duke of Lithuania, Jagiełło, burnt down the castle while taking it from Mazovian hands. It was undoubtedly rebuilt by Prince Witold, who was to stay there several times while surveying his realm. In the fifteenth century Drohiczyn castle was also the seat of the grand ducal aldermens-governors who were responsible for administrative-judicial functions. In turn, in the first half of the sixteenth century, imprisoned in its dungeons were Muscovite prisoners-of-war taken captive at the Battle of Orsza in 1514 and in subsequent engagements. In 1519 to be found in Drohiczyn were 25 Muscovite prisoners, a few of whom died. Equally in 1538 kept here were 17 prisoners from various parts of Muscovy.⁸⁵

The lack of preserved sixteenth-century inventories makes it impossible to provide an exact and comprehensive description of the appearance of the buildings to be found on Góra Zamkowa (Castle Hill). Estimations based chiefly on archaeological evidence only give in part the picture as to the layout of the buildings but are to a large degree merely hypothetical. The main castle building was to be situated on the north-western part of the hill, at its highest point. In the western part of the fortifications the entrance gate may have been located and as a result of the smallest difference in height between the castle and the settlement beyond the castle walls being here.⁸⁶ In the confines of the castle itself was at least one stone tower, whose existence is pointed to by nineteenth-century tradition. This was to have been dismantled in 1788.⁸⁷

In 1592 the Drohiczyn nobility gathered at the envoy Diet; in one of the points of instruction given to the envoys Jan Wodyński and Kacper Kosiński, they asked the king for permission to take wood

from any royal forest to build a house at the castle in which magistrate court sessions could be held and court acts kept.⁸⁸ A similar petition was presented by the nobility in relation to the land ledgers, asking for the designation of a plot in Drohiczyn for the construction of a shop for their storage.

In 1612, on an inspection of the Franciscan monastery, it was stated that Drohiczyn [is] 'a town on the Bug, all wood, inhabited chiefly by schismatics and heretics – without defensive walls bar the castle.'⁸⁹

In the seventeenth century the castle no longer fulfilled a defensive function being purely administrative, hence probably not much attention was paid to the state of the buildings on the hill to ensure they were suitably maintained. The final destruction being inflicted during the advance of Swedish and Transylvanian forces in 1657, and then again in 1660 during the attack of Ivan Khovansky's Muscovite forces, when the castle together with all of its buildings was totally (*funditus*) burnt down and destroyed.⁹⁰ Only the dungeons were left, which were still partially accessible in the mid eighteenth century.⁹¹ The River Bug also played its part in Góra Zamkowa (Castle Hill's) destruction, many times washing over it resulting in only a part of it being preserved to this day. The localisation and marking of Góra Zamkowa (Castle Hill) on the plan is not difficult. However, more has been marked than is at present visible, and therefore it is necessary to take into consideration the part destroyed to the south by the river.

The parish church in Drohiczyn was the church of the Holy Trinity. The lack of sources makes it impossible to exactly establish its origins and the persons responsible for its funding. Later tradition ascribes the founding of the Drohiczyn parish church to King Władysław Jagiello, immediately after Lithuania's adoption of Christianity.⁹² But he could have only done so in the year 1390, when he held control over the Drohiczyn lands, having taken them from Prince Witold allied at the time with the Teutonic knights. Equally in the same year Jagiełło bestowed the Drohiczyn lands on the Mazovian Prince Janusz I. And indeed his personage may also be considered as a potential funder of the church. However, it seems that all those who controlled Drohiczyn at the turn of the fifteenth century could have had an input in the creation of this Roman Catholic church. The most certain is Witold's endowment of the Drohiczyn parish church in the village of Ruda, situated on the opposite bank of the Bug, which later was to constitute a part of the church benefice right up until the Partitions. The first concrete piece of information as to the existence of a church in Drohiczyn is a mention of its priest Dobiesław in 1419,⁹³ and who is still known about in 1450. His successor Wawrzyniec, as the Drohiczyn parish priest gave, in 1458, a mill in the aforementioned parish village of Ruda to Andrzej, the son of Stanisław Dziadek, a former Drohiczyn vogt.⁹⁴ In 1492 the Grand Duke of Lithuania Aleksander Jagiellończyk instructed the Drohiczyn starost to give Father Jan, the Drohiczyn parish priest of the church of the Holy Trinity, annually 6 *rączka* 'hands' [a medieval measure approximately equalling 10 and ¼ *garniec* where 1 *garniec* = approx. 4 litres – G.T.] of honey from the ducal rent.⁹⁵

The original charter for the Drohiczyn church, in as far as it was ever issued, became lost at the end of the fifteenth century. It therefore became imperative to issue a new document that comprehensively covered the rights bestowed on the presbyteries, enabling the parish priests to draw their former incomes. A new privilege was issued by King Sigismund I in 1509 following the hearing of a commission called into being by himself that cross-examined numerous witnesses for this purpose. The King clearly notes in the document that earlier endowments to the Church had been made by his predecessors, the Grand Dukes of Lithuania. The information contained in the document is undoubtedly

⁹⁵ *Lietuvos Metrika, knyga nr 5*, p. 41, no. 5. This endowment was once erroneously ascribed to the Orthodox church of the Holy Trinity in Drohiczyn. In the register notation there is indeed mention of an 'Orthodox church'. Yet here the scribe is using inappropriate terminology in reference to a Roman Catholic church. Father Jan of Iwieniec is known as the Drohiczyn parish priest from elsewhere. In addition, the accrediting of 6 *rączek* (hands) of honey for the Drohiczyn parish priests we find also in the foundation document for the church in Drohiczyn for the year 1509 as well as in the inventory of 1546.

confirmation of the earlier church privileges. Firstly this consisted of the village of Ruda with mill and other additions: next certain meadows situated in Drohiczyn at the royal meadows, the bank of the Toczna brook with a mill situated next to the Holy Saviour Orthodox monastery. What is important is that in this mill the right to free milling was obtained by the Drohiczyn burghers. In the same place the church gained the right to the annual receipt of 4 three score *grosz* from the alcohol tax⁹⁶ levied on the taverns in Drohiczyn. Confirmed also was the above mentioned right to receive 6 *rączka* (manuals) of honey from the ducal rent. The Drohiczyn burghers as equally Catholic as Orthodox were obliged to raise a money tithe at a rate of 6 *grosz* for every settled volok; one of the parts belonged to the vogt as well as from the royal court and here established according to the old custom of a sheaf tithe. The sheaf tithe was also to be paid by the inhabitants of 28 royal and noble villages enumerated in the document.⁹⁷ These villages in the main formed the parish of Drohiczyn. In 1543 the Łuck bishop Jerzy Chwalczewski resolved a dispute between the Drohiczyn parish priest Jakub Topolski and the Franciscan guardian, Jakub, relating to the conducting of the sacraments across the territory of Drohiczyn and environs. The general right to this the bishop bestowed on the parish priest and his curates. The monks could perform the sacraments only in the case of their number being such that the parish priests were not able to manage the said.⁹⁸ In 1543 a Drohiczyn resident Dorota Pidajowa, in carrying out the last wishes of her husband Stanisław, funded at the parish church of St. Anne an altar in the church's southern chapel. She bestowed for the funding of the altar and the altar keeper a volok known as Pidajowska and a meadow at Czornakowska.⁹⁹

The endowments of the Drohiczyn church presented by the inventory of 1544 drawn up by the then Drohiczyn parish priest Father Józef Jasiński are almost identical to those contained in the document of 1509.¹⁰⁰ Here mentioned are also the moveables of the parish church. Besides the parish priest two curates worked at the church, as well as an additional nine retainer priests including the altar keeper of the altar funded by Dorota Pidajowa.

The wooden Drohiczyn parish church was burnt down in the great Drohiczyn fire of the 18 August 1559.¹⁰¹ It is not to be excluded that subsequent fires also damaged the parish church, though no information about this has been uncovered. In 1654 the Drohiczyn parish priest Father Paweł Jędrzej Potrykowski brought several Jesuits from Pułtusk in to help at the Drohiczyn parish church. The events connected with the Swedish Deluge and the incursion of Rakoczy's forces in 1657 was to set back the creation of a Drohiczyn Jesuit residence.¹⁰² Only in the document of 1 March 1659 did King Jan Kazimierz bestow on the Jesuits a parish church benefice giving it additional land situated on the River Bug known as Grelińska, and which in the sixteenth century belonged to the Grela millers.¹⁰³ The founding of a Jesuit order in Drohiczyn and their taking over of the parish was finally confirmed by the papal bull of 15 February 1668 by Pope Clement IX.¹⁰⁴ The period 1696–1709 saw a new stone church built, one that stands to this day.

The parish church of the Holy Trinity has been placed on the spot today occupied by the cathedral church, although it cannot be excluded that the initial wooden churches could have been situated elsewhere than it is at present. The same comment can be made in relation to the sacral objects described below.

In 1545 the privilege bestowed on Michał Czech for the Drohiczyn hospital of 1541 was confirmed.¹⁰⁵ The said well-to-do Drohiczyn burgher had bequeathed to the then constructed poorhouse that was the hospital in Drohiczyn, a volok of land called Orlikowska acquired once from Oryssa the wife of Hryćek Surowec, and comprised of three fields between the voloks of Jan Pluskat on the one side and those

of Maciej Wąs on the other. The king had freed the said volok of any municipal charges and placed it beyond the jurisdiction of the municipal clerks rendering it on an even keel with church voloks. At the same time Michał Czech gained from the king the right to manage the aforementioned volok, yet with the stipulation that the income generated from it be directed to the needs of the hospital. The hospital in Drohiczyn functioned right up until the end of the Commonwealth. The church inspection of Drohiczyn in 1700 shows that the hospital was situated on 'blessed ground'. Its building was designed to accommodate 10 paupers and was made of wood.¹⁰⁶ It was decided to locate the hospital on the plan close to the parish church, where its existence in sixteenth-century Drohiczyn is certain and confirmed by sources.

There also existed at the church of the Holy Trinity a parish school. Its teachers were remunerated in the sixteenth century on the basis of tithes from the villages of Tokary and Starczewice.¹⁰⁷

The second Catholic church to exist in Drohiczyn in the sixteenth century was the church of Our Lady founded as an order church at the Franciscan monastery. The exact date of its endowment and that of the monastery are unknown. The founding documents were lost in a fire already in the first half of the sixteenth century.¹⁰⁸ Later tradition noted down at the end of the eighteenth century admittedly gives the year of 1409 as the date of the Franciscans' arrival. This is impossible to verify though and is not necessarily accurately given. However, it is highly possible that the Drohiczyn monastery was funded on the initiative of the Grand Duke Witold and even at the end of the fourteenth century in a way similar to the convents in Wilno, Lida, Oszmiana and Kowno. According to tradition, the initiator of the settlement of Franciscans in Drohiczyn was to have been also the 'Podlasie voivode', who stopped and kept here several monks on their way from Cracow to Lithuania.¹⁰⁹ Here the matter could have concerned one of the Drohiczyn starost-governors who in the fifteenth century were referred to by the name 'voivode'.

We possess extremely scant information about the Drohiczyn Franciscans from the fifteenth century. Possibly the mother superior of the convent was the 'religiosus Joannes gardian de Ruda' mentioned in 1451.¹¹⁰ In 1470 the guardian was Szymon, who had received a certain endowment from Maciej Miłkowski. What is important is that the document itself was drawn up at the Drohiczyn convent.¹¹¹ In 1537 the king, Sigismund I the Elder, resolved a dispute between the Drohiczyn guardian, Jakub, with the Drohiczyn vogt Mikołaj over land at Kłyżówka. The village was mentioned as the inheritance of the Drohiczyn Franciscans from at least the year 1504, when the then guardian Grzegorz declared the village as such.¹¹² The guardian Jakub claimed that the vogt had taken over the lands illegally, ones which had been given to the convent long before and were described in the charter that had perished in fire only recently along with the burning down of the monastery. The vogt justified his claims on the basis of the vogt charter of 1429. The Drohiczyn starost Iwan Sapieha, in mediating in the dispute, was, however, of the view that in the charter there was only referenced the giving over and endowment of 6 voloks, the boundaries of which were not accurately described, consequently basing matters on witness statements provided by the guardian, he adjudged Kłyżówka to be the property of the Drohiczyn monastery.¹¹³

The Franciscan church presumably burnt down in 1535 during the great fire that engulfed Drohiczyn. In a document of Sigismund I the Elder's of 3 July 1535 freeing the Drohiczyn burghers of taxes for a six year period there is mention of burnt down houses and 'God's churches.'¹¹⁴ It was presumably then that the oldest foundation documents for the monastery were burnt, about which the Drohiczyn

guardian Jakub recalled in 1537, when in dispute with the Drohiczyn vogt Mikołaj over the village of Kłyżówka.¹¹⁵

The next church was to last about 20 years until it too burnt down on the 18 August 1559 together with the monastery during the next large scale fire and destruction of Drohiczyn.¹¹⁶ The monastery itself was to have been burnt down by ‘infidels’ as a result of an otherwise unknown incident in 1583. In 1595 and 1601 subsequent Franciscan churches burnt down.¹¹⁷ The numbers at the Drohiczyn convent in the sixteenth century were small and consequently the monastery itself was not large in size. In 1596 the monastery had living in it a mere six monks: three fathers and three brothers.¹¹⁸

The Franciscan church presumably burnt down again also in 1614 where in an inspection from the subsequent year there is talk of a newly built church, as the previous one, wooden and roofed in shingle. At the same time a new monastery building was constructed.¹¹⁹ The inspection report of 1678 gives us information as to the appearance of the final wooden Franciscan church and monastery in Drohiczyn.¹²⁰ After this date the Drohiczyn Franciscans started the process of constructing the stone church that has survived to this day.

The question of the location of the initial Franciscan church and monastery in Drohiczyn requires some explanation. According to Father Karol Żera these objects were to have been constructed on the spot where the building of the former Orthodox church of the All-Pure Virgin Mary had stood and which had burnt down; with the Franciscans taking over the plot. Karol Żera incorrectly linked the events from the beginning of the seventeenth century when indeed the All-Pure Virgin Mary Orthodox church had burnt down and was not rebuilt and its plot was given by King Sigismund III in 1625 to the Uniate parish priest of Siemiatycze whereas the land on which the Orthodox church had stood was to have been given to the Franciscans. However, ultimately the taking over of this plot by the monks was not to happen, given that even in the royal commission decrees of 1636 resolving the disputes between the Uniates and the Orthodox there is talk of the joint access and use of this plot by both groupings. It therefore follows to accept that the Franciscan church together with the monastery were founded at the end of the fourteenth century or at the beginning of the fifteenth century and that they were situated on the same place and that this was not on the spot of the former Orthodox church of the All-Pure Virgin Mary, which had been located somewhat more to the south and was founded simultaneously with Franciscan constructs and here up to the beginning of the seventeenth century.¹²¹ The Franciscan church and monastery have been marked on the plan in the place of the current church of the Assumption for there is nothing in our opinion to indicate that their location in the sixteenth century was any different than it is at present.

The third church in Drohiczyn was already built after the year 1600 and was to be under the jurisdiction of the Benedictine sisters brought to Drohiczyn in 1623 from Torun at the bequest of the Podlasie voivode Wojciech Niemira, who donated the plots for the building of the church and the seat in Drohiczyn. The material basis for the cloister equally came from the wealth bestowed on the order by its first prioress, Zofia Kiszczanka.¹²² The church of the Benedictine Sisters, as a later addition, has not been incorporated on the town plan in accordance with the assumptions adopted in the volume.

The burghers of Ruthenian origin inhabiting Drohiczyn were in the overwhelming majority of the Eastern Rite. These were served by the Orthodox churches that existed within the boundaries of the town, and these undoubtedly were in existence already in the twelfth century as is borne out by evidence from archaeological digs and the scant source references: these becoming more numerous only with the onset of the sixteenth century. Already in the mid thirteenth century, according to the Volyn

Chronicle following the capturing of Drohiczyn by the Galician Prince Daniel, an Orthodox church to honour the Virgin Mary was built in the town on his orders.¹²³ Its location is not completely certain but it is extremely possible that it was located on the Góra Zamkowa (Castle Hill) within the town itself. Possibly it underwent damage during the fire in 1383 following the capture of the town by the Lithuanian Duke Jagiełło. It was subsequently not to be rebuilt here. At a later period and here as 'the castle church' mention is made of the church of St. Nicholas.

The Orthodox church of the All-Pure Virgin Mary (Prechstenska) is mentioned in the sources for the first time only in the first half of the sixteenth century. In 1539 a mention is made of its priest (*pop*) Łuka.¹²⁴ In turn, from the year 1540 and here referred to as 'the Prechstenska priest' reference is made to his son, Marcjan, who on the 2 July of the same year obtained from the Drohiczyn starost confirmation of the holding of land voloks next to the royal village of Rogawka.¹²⁵ Two voloks at Rogawka were confirmed on the aforementioned Orthodox church by King Sigismund August in an act of charter of the 25 October 1551. In the document recalled is the endowment of the church by the Lithuanian grand duke Witold.¹²⁶ And it is possible that it was then that the church came into existence.

The Orthodox church of the All-Pure Virgin Mary burnt down during the great fire of Drohiczyn on the 18 August 1559.¹²⁷ It is possible that it was not rebuilt straight away; as a result of which the royal inspector for weights and measures Dymitr Sapieha intended to have it transferred to another location. However, this was met with opposition on the part of Father Marcjan Łuczyc, at whose request the King Sigismund August, with a decree of 1563, forbade Sapieha from moving the All-Pure Virgin Mary church to another location and ordered its reconstruction to be carried out where it had earlier stood.¹²⁸

In 1624 the parish priest of the Orthodox church of the All-Pure Virgin Mary, Father Juchnowicz, protested against the Franciscan guardian in Drohiczyn, Anioł Będzina, that the said had taken over lands within the town of Drohiczyn that belonged to the former Orthodox church.¹²⁹ In 1625 Jan Juchnowicz Morze, the parish priest of the All-Pure Virgin Mary Church as a result of his age was unable to rebuild the burnt down structure, transferred its land rights to Father Oksięt Twarowski, the parish priest from Siemiatycze. This deed of covenant was to be confirmed in that very same year by King Sigismund III.¹³⁰ However, already in 1627 he bestowed two voloks, these located between Rogawka, Bujaki and Sytki, and which had once belonged to the Orthodox church of the All-Pure Virgin Mary, on the Benedictine nuns brought to Drohiczyn.¹³¹ Following protests on the part of Father Aleksander Oładowski, the Uniate priest in Siemiatycze, the king in an act of 1631 decided to bestow on him for life ownership of these two voloks.¹³² It was to be King Władysław IV who finally confirmed possession of these lands on the Drohiczyn Benedictines. While the plot that remained following the fire destruction of the Orthodox church and referred to as 'soborna', was decreed for common use by both Uniates and the Orthodox by the royal commissioners in 1636.¹³³ This decree also questioned the authenticity of the above mentioned transfer from the end of the eighteenth century; on the basis of which this plot was one of the possessions of the Drohiczyn Franciscans.¹³⁴

J. Jaroszewicz gives the location of the former Orthodox church of the All-Pure Virgin Mary, citing the accounts of Drohiczyn inhabitants. According to them it was to have been located on Lubelska Street, and so to the east of the market square and to the south-east of the current Orthodox church of St. Nicholas. In those times situated here was a post station.¹³⁵ The exact same location for the former Orthodox church is confirmed on the Drohiczyn plan of 1789, drawn up by Nikolai Avenarius,

as well as on his sketch drawn of Góra Zamkowa (Castle Hill), on which it is marked on its eastern side. Traces of its foundations together with numerous bones that undoubtedly are the remains of the church cemetery have also seen confirmation in archaeological digs,¹³⁶ and so we have placed the church in this location on the plan.

The older Orthodox church of St. Nicholas is certainly fifteenth-century in age, though then it was situated in a completely different location as a wooden structure than it is to be found now as a stone construct. Its oldest known priest 'Orthodox Father Nikolinski' Grzegorz is mentioned in a document of 1519. Presumably there is correlation here with the identity of Grzegorz Father 'Mikuliński', who was to receive the legate from Father Łazowski in for the 40-days' requiem for the dead.¹³⁷ The Ruthenian church of St. Nicholas together with the cemetery was also mentioned in 1552.¹³⁸ It was to burn down in the fire of the 14 September 1614, which we learn about from the account of its parish priest.¹³⁹ It was to be shortly rebuilt. In documents of 1626 and 1665 it is defined as being castellan (*sub arce*).¹⁴⁰ An Orthodox inspection of 1727 even states that it was situated 'on the hill'.¹⁴¹ Though in point of fact it was never situated on the Góra Zamkowa (Castle Hill) but next to it, placed in a valley sided by the present-day Kościelna Street. We can see just such a localisation for the Orthodox church on the plan of 1789. Equally on Stein's plan the small marker to the north-east of the hill appears to confirm its localisation. This church was burnt down in the town fire of 1805. In the day of Józef Jaroszewicz the plot left by it was marked by a wooden cross,¹⁴² and so we too have indicated the said on the plan drawn up. The current Orthodox church of St. Nicholas was founded in the second half of the eighteenth century together with the monastery for the Basilian monks.

On the Polish Side of Drohiczyn on the so-called Góra Kramczewska in the sixteenth century there existed the Orthodox church of the Holy Trinity. Undoubtedly, it had equally been erected earlier than the dates given in the first written mentions as to its foundation. It had presumably been in existence in the fifteenth century. However, it does not follow to related to this the information from the Lithuanian Metrica of 23 September 1492, according to which Aleksander Jagiellończyk bestowed on 'the Orthodox church' and its 'parish priest', Father Jan, 6 'hands' of honey from economic dues.¹⁴³ For this information undoubtedly refers to the Roman Catholic church of the Holy Trinity, whose parish priest was indeed for the years 1486–1495 Father Jan of Iwieniec,¹⁴⁴ and amongst the holdings of the said church for the year of 1544 are the aforementioned gift of 6 'hands' of honey.¹⁴⁵

J. Jaroszewicz has, on the basis of a list unknown to us today, provided a mention of a bestowal made in favour of the Orthodox church for the year 1500.¹⁴⁶ The first presbyter of the Orthodox church of the Holy Trinity, Chwiedko Morze, the son of Aleksy, was mentioned in 1542 when he

¹³⁶ L. Pawlata, *Budowle sakralne Drohiczyzna*, pp. 75, 86–87. However, the author erroneously doubts in the location at this very spot of the Orthodox church of the All-Pure Virgin Mary given by J. Jaroszewicz and the plan of 1789.

¹⁴⁶ J. Jaroszewicz, *Drohiczyn. Opis historyczny*, p. 40. This information is rather incorrect, for placed in the registers for this date was to be the document of Aleksander Jagiellończyk of 1492 which in effect concerned the Catholic church of the Holy Trinity.

waivered the rights to his lands in his native village of Morze.¹⁴⁷ In 1563 during the Drohiczyn VoloK Reform the royal inspector Dymitr Sapieha assigned two voloks to the Orthodox church of the Holy Trinity, 6 morgens of allotment gardens as well as the tithes from the villages of Chrołowice and Sieniewice.¹⁴⁸ What is not certain is whether these two voloks belonging to the Orthodox church were situated within the boundaries of Drohiczyn itself or possibly in one of the neighbouring villages in a similar way to the case of the Orthodox church of the All-Pure Virgin Mary.

An Orthodox monastery was already to have existed here by the sixteenth century at the church of the Holy Trinity.¹⁴⁹ There is, however, a lack of any written sources that could confirm such a state of affairs. Any information about the monastery and the monks at the Holy Trinity Orthodox church is only from the seventeenth century. On the strength of commissioner decrees and royal decisions the Orthodox church and monastery of the Holy Trinity was bequeathed to the Orthodox faithful.

In the seventeenth and eighteenth century there was, besides the Orthodox church of the Holy Trinity, the church of St. Barbara also situated on the hill Góra Kramczewska (Shrine Hill). Then it was treated as a hospital, while subsequently as a refectory or dining hall. However, the origins of this Orthodox church reach back to the sixteenth century. It is highly probable that it was already then connected to the Orthodox church of the Holy Trinity. This would be borne out by the note of 1546 in which Chwiedko of Morze appeared 'parochus ecclesiae sanctae Barbare in monte Drohiciensi',¹⁵⁰ and who undoubtedly is the same figure as the above mentioned Chwiedor Morze, the parish priest at the Orthodox church of the Holy Trinity in 1542. St. Barbara's Orthodox church was also mentioned in 1588 as lying beyond the built-up areas of Drohiczyn.¹⁵¹ In the sixteenth century this was not a parish Orthodox church as such rather a branch in relation to the role played by the church of the Holy Trinity. The church building is described in the inventories of the eighteenth century as being wooden in form and it most presumably remained the same in the sixteenth century.¹⁵² In the 1840s this church fulfilled the role of municipal parish church given the ruined and subsequently dismantled Orthodox church of the Holy Trinity.¹⁵³ The Orthodox church of St. Barbara was pulled down by the Russians in 1940 during the removal of buildings lying within the border strip.¹⁵⁴ The localisation of the Orthodox church of the Holy Trinity and that of St. Barbara on Góra Kramczewska has been established on the basis of plans of 1789 and 1810 as well as from information provided by contemporary inhabitants. At present a private residence stands where both churches once stood, between the Kramczewska Street and Piłsudskiego Street.

Undoubtedly the Orthodox church of the Transfiguration of the Lord situated on the Ruthenian side (the Holy Saviour) has fifteenth-century origins. This is borne out by archaeological digs and excavations that have resulted in revealing here traces of the former church and a medieval cemetery.¹⁵⁵ We come across the first mention of the church in 1509.¹⁵⁶ In 1532 Iwan Sołtan, the grand ducal marshal, confirmed to the church priest Father Wasyl the right to draw tithes from the village of Rudniki, and which his father Aleksander had sold to the bishop of Łuck, Paweł Holszański.¹⁵⁷ In 1548 mention is given of the presbyter of the Orthodox church of the Holy Saviour, Iwan.¹⁵⁸ The monastery that existed at the church of the Transfiguration of the Lord functioned until the beginning of the nineteenth century when the Bug, in changing its course, flooded the grounds on which the church and monastery

buildings were located. Despite disputes between the Uniates and the Orthodox in the first decades of the seventeenth century, the church and monastery of the Transfiguration of the Lord were to remain in Orthodox hands until the end of the Polish Commonwealth. The buildings of the Orthodox church and monastery of the Transfiguration of the Lord were marked on the plan of 1789. They are equally visible on the map by Heldensfeld. Here already occupying grounds just beyond the municipal limits of the buildings of the Ruthenian Side from the south-east, between the River Bug and the road leading to Łosice. The plan of 1789 shows the former course of the Bug's river channel, which flowed right next to the Orthodox church. And so equally marked has been the river course and the location of the Orthodox church and monastery on the devised plan herein presented. However, it cannot be excluded that in the sixteenth century the Bug flowed at an even greater distance from the church of the Transfiguration of the Lord than was to be the case in the eighteenth century.

Beside the above mentioned Eastern-Rite churches there were undoubtedly others. Their exact localisation is at present impossible because of the lack of relevant sources. In 1550 there is mention of the Orthodox church of St. Elijah (St. Ilii, Ilińska). At this time the then Drohiczyn vogt donated a garden (allotment) which had once belonged to the Orthodox church of St. Elijah, and which the former presbyter of this church, Ilarion, had given to Zdan Orlik, who in turn had given it to Mikołaj. This garden was situated on the boundary of Surowczyńska Street and the public road, or the brook known as Lutorzic, while Mikołaj bequeathed it to the then presbyter of the Ilińska Orthodox church, Ihnat.¹⁵⁹

There presumably existed on the territory of mid-sixteenth-century Drohiczyn other smaller churches that following fires were simply not rebuilt with all trace of their existence disappearing. In the year 1545 we have information about an Orthodox priest 'Piątnicki' Prokop, who received a commission from Grzegorz the Orthodox priest in Łazów, to conduct forty masses as part of a *sorokoust* (a forty-day requiem for the deceased) at his Orthodox church in Drohiczyn.¹⁶⁰ This was presumably the Orthodox church of the Martyrs of the Holy Cross (*Piatenka*), which we do not come across later in the sources. Equally, in 1547, there appears Iwan 'Father Mieszkowski'.¹⁶¹ Here it is difficult to say which church is being referred to. However, a gross exaggeration is the claim from the year 1665 stating there were in total twelve Orthodox churches in Drohiczyn, and that each of these had two voloks of field.¹⁶² In 1603 there were three parish churches of the Eastern Rite; and their presbyters: Jan Juchnowicz (of the Holy Trinity), Chwiedor (St. Nicholas) and Hieronim (*zabuska* of the Holy Saviour) brought charges against the tax collector.¹⁶³

A part of Drohiczyn clearly mentioned in the sources was the so called Góra Kramczewska (Shrine Hill), situated in the eastern part of the town, on the Polish side. It was so named because of the *khrams* (shrines) there situated; these being Orthodox places of worship, (of the Holy Trinity, St. Barbara).¹⁶⁴ This hill was separated from the central part of the town by a fairly deep ravine through which flowed a tributary stream of the Bug River. It is highly possible that the stream was called 'Lutorzic'. Both the hill and the stream have been marked on the map.

The inspection of 1570 states that on the River Bug were nine working mills including one vogt-held and belonging at the time to the Drohiczyn vogt Maciej Sawicki as well as eight castle-held mills – of which six were to be found on the Polish side and two on the Ruthenian.¹⁶⁵ A similar figure of six mills (only on the Polish side) is cited by the inspection of 1576.¹⁶⁶ Not all millers had privileges bestowed on them. We have information about two of them from the sources.

In 1541, King Sigismund I the Old presented a privilege to the miller Wojciech Grela from which it resulted that the Drohiczyn starost Jakub Dowojnowicz had been ordered to settle the Drohiczyn estate by Kazimierz Jagiellończyk. At this time the said [Jakub Dowojnowicz] gave to a certain Iwanek Szewc land on the bank of the Bug River opposite the 'Czeremoszne jezioro' in the direction of the

valley of Botczyniec, to Wasznik and the Bug, where he was to build a mill, from which the castle was to receive two measures of all the grain ground with the third measure going to him. And it was the king himself who equally confirmed Wojciech Grela's rights.¹⁶⁷ Another privilege was granted by the king to the miller Micz-Miciel on the 12 December 1533, in which he bestowed on him land on the Bug at a place called Wasznik, on which he himself built a mill; with equally the same obligation to give two measures of grain to the castle. Besides, he was supposed to carry out any necessary auxiliary work on the castle, presumably work connected with carpentry.¹⁶⁸ In 1555 when King Sigismund August wanted to give the said two mills, Grela's and Miciel's, to Maciej Sawicki, he met with the opposition of their leaseholders and in the face of this opposition the king reversed his decision giving Sawicki another property.¹⁶⁹ The place called Wasznik was recalled already in 1553 when the children of the aforementioned miller Mikołaj Micz sold it to the Drohiczyn land scribe Jan Iwanowski. According to the document, this was established on the western side of Drohiczyn and stretched in the direction of the village of Starzewice.¹⁷⁰ This has also been marked on the plan. It was decided to mark two of them from amongst the mentioned mills, the Grelński and Micowski mills, as their localisation between the meadow known as Wasznik and the Bug River appears, in the light of source materials available, highly probable. However, the placing of the remaining mills has been given up on for there is an absence of source materials that allow for even their approximate placement.

Already from about the mid sixteenth century the Bug was a river used to transport sizeable amounts of cargo, chiefly grain in the direction of Gdańsk.¹⁷¹ Hence the once existing mills and weirs on the river constituted a significant obstacle for such a floating of cargo. In 1589 a parliamentary act was ratified, on the power of which all existing weirs and causeways on the Bug were to be removed. On the ratification of the Constitution of 1598 the Bug was designated a navigable river. From then onwards one could not build any mills or weirs which could significantly obstruct any cargo passage. While those mills that had hitherto existed were to be dismantled by the 11 November 1598.¹⁷² This ordinance was to quickly be protested over by the nobility of the Drohiczyn district.¹⁷³ As equally the protest and others meant that the constitution was not rigorously enforced and the inspection of 1616 still noted five mills on both sides of the Bug.¹⁷⁴

Drohiczyn from its very inception was situated at the crossroads of land and water trade routes. Besides, the town was divided into two by the River Bug – a Polish and Ruthenian part. Undoubtedly the river was to severely hamper communication between the inhabitants of both sides, and particularly in spring and late autumn during periods of intensive rainfall and the flooding of the river itself. Matters were better in winter when it was possible to move across the ice-bound river and in summer where in places the level of the river noticeably lowered and possible fording places appeared. The transport of goods took place also by means of ferry as is recalled in the sources.

In the second decade of the sixteenth century an initiative to build a bridge in Drohiczyn connecting both sides of the town was broached. The initiative was taken up by Michał Ezofowicz, a Jew from Brześć Litewski, who had lobbied King Sigismund I the Old to grant a privilege to build such a bridge in the place where there was a ferry crossing and here out of his own money, and for him to be granted the right to charge tolls for the bridge's maintenance.

One may speculate that the construction of the bridge had been finished in 1519, and that it existed for five years. Indirectly, this is borne out by a document of King Sigismund I issued in Cracow on the 3 June that same year and for Michał Ezofowicz, repeating in their entirety the clauses of the document of the 5 March 1514 and additionally increasing the rights to lease the bridge, charge tolls and the right to run a tavern, with the rights being equally extended to the constructor's children.¹⁷⁵

In building the bridge, Michał Ezofowicz presumably counted on sizeable incomes from its exploitation. However, one may question whether the construction brought in such large profits in relation to the costs incurred: ones initially for its construction and then for repairs and maintenance. The river itself made this particularly felt, especially in spring, when the level of water was very high, and the bridge's structure was threatened by the floating ice. Information about this comes in a letter from Sigismund I the Old and directed to the Drohiczyn starost and the Płock voivode Piotr Stanisławowicz Kiszka of the 20 April 1525. The King informs the starost that Ezofowicz has built the bridge out of his own money, but that now in spring high waters and ice (*kriga*), bringing great damage with them, were flowing under the bridge. And for this reason Ezofowicz had requested for a deserted bank of the Bug, in length of 'three shots' and wide from the bank up to the hill where those needed to work and repair the bridge could be settled. The king first ordered the starost to check whether the intended area was not already inhabited by someone and whether this would not damage the royal estates. And if there was nothing to hinder matters, he ordered the starost to fulfil Ezofowicz's request and to give him a part of the Bug's bank to settle.¹⁷⁶

Following Michał Ezofowicz's death, the bridge was inherited by his son Abraham (Awraszko). The original document issued by King Sigismund I on the 20 March 1533 in Cracow has been preserved, which confirms his rights to the bridge. The king confirmed that earlier the privilege had been bestowed on Michał Ezofowicz – Awraszko's father, allowing him to build a bridge at Drohiczyn on the River Bug, in the place where there had been a ferry crossing and to charge tolls. This same right was confirmed on Awraszko by the king with the following conditions: merchants travelling in summer across the ford and in winter across the ice were not to pay a toll; the Drohiczyn burghers with their landless tenants were to pay annually 1 groschen *plaski* each (*szero kie grosze*); stall holders, salt merchants, foot passengers and on horse, as of old were to pay one groschen; a novelty was to be the right to charge tolls at a rate of 12 groschen on rafts, boats, and mastless boats, sailing under the bridge, about which there had been no mention in the earlier documents issued to Michał Ezofowicz.¹⁷⁷ Awraszko Michelewicz was the owner of the bridge at Drohiczyn for only a short time. Possibly he was simply unable to afford the costs of its maintenance and repair and for this reason decided to sell it. The buyer was the Drohiczyn landowner Maciej Lewart Duborowski (Zaborowski). Subsequent owners after his death were, until the mid sixteenth century, Anna Lubecka, Jan Steczko, Stanisław Tęczyński, Florian Zebrzydowski, Andrzej Falkowicz.

On the 8 September 1558 Andrzej Falkowicz's son-in-law Michał Sapięha obtained from the king the right to hold for life the Miklaszewski manor located in the Brańsk starosty known as Sielc or Zamianowo; and this in exchange for the ferry crossing and bridge at Drohiczyn with the plot and the garden (allotment) also.¹⁷⁸ Given the document's context it demonstrates that at this time there was no longer a bridge as such, with only the ferry crossing in operation. This is clearly pointed to in the document of the 10 March 1559, in which the king gave the lease for a period of three years to Maciej Sawicki. He was equally to receive a commission to build a new bridge.¹⁷⁹ However this was not to come to fruition and in Drohiczyn only the ferry crossing remained in operation.

In 1570, during the inspection of the Drohiczyn starosty, the first since Podlasie's inclusion within the Crown, there is confirmation of the existence of a ferry crossing but not of a bridge. The leasing of the ferry gave the crown treasury the sizeable annual sum of 21 *kop* of Lithuanian groschen and 36 denarius.¹⁸⁰ Equally there was to be no bridge at between the seventeenth and nineteenth centuries.

It is worth speculating as to the location of the bridge. It was most likely situated in the place of the ferry crossing as marked on Stein's Prussian map, which linked the Polish and the Ruthenian

Sides. This appears to be borne out by underwater archaeological research, carried out by divers and archaeologists from Toruń in the year 2000. On one of the sections of the river penetrated, just before the bend washing the present-day Góra Zamkowa (Castle Hill), at a distance of about 400 metres from the castle, the channel of the River Bug floods a reasonably wide area and is at this point fairly shallow. Only in the middle part of the channel did the depth reach two metres and here at a width of several metres. Here were discovered, lying on the sandy bottom, parallel to the bank, two wooden beams of a diameter of about 20 cm and a length of 5 metres each, reinforced from the water side by stones and fascine. According to the views of the archaeologists the less steep river banks in this place and the easy access to the water might suggest the existence here of a crossing, of a ferry across the river. An open construction comprising sizeable beams could have constituted a platform or causeway for a ferry operating in the sixteenth through nineteenth centuries but could also constitute the remains of the bridge mentioned in the sources.¹⁸¹ The location of the ferry-crossing (ferry) on the River Bug is based on Stein's map as well as the plan of Drohiczyn from the year 1810. Both sources are in agreement in placing the ferry crossing opposite the municipal beach as it functions at present.

The buildings of fifteenth and sixteenth-century Drohiczyn were predominantly wooden constructions which resulted in them often falling foul to fires. Not only did the houses of burghers burn down but also places of worship and public utility. We most certainly do not have information about all the fires that broke out but from the reports we do have it is clear that this form of natural disaster markedly affected the inhabitants of Drohiczyn.

In 1535 King Sigismund I the Old freed the burghers of Drohiczyn of taxation payments for a period of six years because of a fire that had destroyed their homes and churches.¹⁸²

Most telling is the entry in the Drohiczyn land ledger for the year 1559 informing one that 'In the year of Our Lord 1559 the whole town of Drohiczyn with all of its lots, the church of St. Francis [sic!] with its monastery, the Ruthenian Orthodox church of the All-Pure Virgin Mary and with but the exception of literally a handful of houses at the town boundaries and the immediate environs of the parish church, on Friday on the day of St. Agapit at noon, within the course of two hours, burnt down.' The measure of misfortune was accentuated by the plague rife that year and the flooding caused by the River Bug.¹⁸³

On the 7 July 1569 the king lifted the taxation obligation on fire victims for the town of Drohiczyn. This simply had to have been the result of yet another fire.¹⁸⁴

In 1583 another large fire broke out in Drohiczyn, as a result of which the burghers gained from King Stefan Batory a privilege exempting them from all taxes with the exception of water duty for a period of four years.¹⁸⁵ Similarly, on the 10 July 1601, King Sigismund III freed the Drohiczyn burghers from taxes for a four year period because of fire.¹⁸⁶ The sources also reveal extensive fires in Drohiczyn for the years 1614 and 1624.¹⁸⁷

Numerous fires, military obligations, ones most burdensome for the burghers, were but a taste of the events to befall Drohiczyn during the period of the so-called Swedish Deluge. Particularly tragic in its outcome was the advance of the Transilvanian forces of Prince Jerzy Rakoczy (George II Rákóczi) and the Swedish army under Charles IX of Sweden in May 1657, as a result of which almost the entire town and surrounding villages were burnt down. No less tragic in consequences was to be the attack by the Muscovite forces under the command of Ivan Khovansky in January–March 1660. It is therefore of no surprise that those conducting the inspection for the Drohiczyn starosty for the year 1661 noted that 'the town of Drohiczyn, Polish and Ruthenina called funditus and the castle were burnt down by the enemy.' Out of the entirety of 107 $\frac{3}{4}$ voloks, sowed were 15 on the Polish side of Drohiczyn while only one was sown on the Ruthenian side. Still 19 of all the municipal

voloks were freed from the obligation of taking in incomers. Only a few of their owners changed. 6 voloks were the property of the vogtship. The Benedictine nuns held 3 voloks, which had earlier in the sixteenth century belonged to Maciej Sawicki. 1 volok continued to belong to the hospital. The Franciscans noticeably increased their holding, now being in possession of 5 whole voloks. 2 voloks belonged to the Drohiczyn parish church, which was at the time under the governance of the Jesuits. Of the two voloks that had once belonged to the Chądzyński family, one remained in the possession of the Kupański family, while the second was held by the Franciscans. Of the so-called Czechowski voloks only 2 were counted, of which one was held by Stefan Tonkiel, while the other belonged to Krzysztof Zaleski. There were to have been at the time 70 $\frac{3}{4}$ voloks fallow. Of the former 300 homesteads only 80 remained. A way of conceptualising the degree of demographic loss is in the number of artisans registered in the inspection. Noted then were only two cobblers, a fisherman, one butcher, two tailors, and three stove fitters. From amongst all the Scots who had inhabited Drohiczyn in numbers from the second half of the sixteenth century in 1661 there remained but one – a certain Wilhelm Gordon. Only two mills remained. The ferry crossing was still in operation. The weekly markets which should have occurred on Mondays were, in 1661, temporarily suspended.¹⁸⁸

III.6.9.9b ELBLĄG

Roman Czaja

In the sixteenth century, Elbląg was the biggest town in Malbork voivodeship and, together with Gdańsk and Toruń, belonged to the group of Royal Prussia's greatest towns, whose privileged position was manifested, among others, in the right for each of them to appoint two representatives to the Prussian Council – a body representing all the states of the Prussian province. The importance of the town followed from its socio-economic potential and the tradition of big towns' participation in the political life of the country, which dated back to the Teutonic period. The economic development of the town was based on participation in the long-distance trade and craft industry, with a particular focus on brewing. In the mid-sixteenth century, the population of the whole urban complex of Elbląg reached approximately 15,000.

Cartographic and iconographic sources

Key sources for the reconstruction of the spatial layout of the town in the mid-sixteenth century include a plan drawn in 1626 by the Swedish army officer Heinrich Thomé and three vedutas of the town and its fortifications from 1554, 1558 and approximately 1631. The oldest one, drawn by Kaspar Hennenberger from the northern perspective, shows the fortifications and the sacral architecture in detail. The layout of the streets and buildings, on the other hand, was presented in a schematic and simplified manner. It is impossible to differentiate the buildings on the Granary Island (*Wyspa Spichrzów*) and the houses in the suburbs or inside the area of the New Town (*Nowe Miasto*). Within the Northern Suburb, only Saint George's Dyke (*Grobla św. Jerzego*) was marked.¹ The drawing by the municipal master builder Heinrich Holtzapfel from 1558, preserved as a copy from the 1760s, shows the condition of the defensive walls of the Old Town together with a detailed description of the gates and defensive towers. The third veduta was drawn by the geometrist and architect Jakub Hoffman around 1631; it presents the town from the South. It illustrates the changes to the use of the suburban area caused by the erection of the bastion fortifications since 1626 by the Swedish.² The author of the copperplate engraving also marked the differences in the building patterns between the Old Town, the areas of the New Town and the suburbs surrounded by a new line of fortifications. The houses in the Old Town look higher and heavier. Three streets of the Old Town set along the north–south axis are visible – Wodna (*Water*), Zamkowa (*Castle*) and Rynek (*the Market Square*) – as well as the medieval defensive complex together with the fortifications in front of Kowalska Gate (*Blacksmith*) and Zamkowa Gate (*Castle Gate*) built in the sixteenth century. The geometric plan of the New Town, the regular building

Toeppen, *Geschichte der räumlichen Ausbreitung der Stadt Elbing mit besonderer Berücksichtigung ihrer Befestigungen und ihrer wichtigsten Gebäude*, "Zeitschrift des Westpreußischen Geschichtsvereins", vol. 21, 1887, pp. 16 ff.; W. Rynkiewicz-Domino, *Grafika w XVII-wiecznym Elblągu*, "Rocznik Elbląski", vol. 18, 2002, pp. 106 ff., states that this work was created around 1631.

patterns on Wyspa Spichrzów as well as the network of streets inside the bastion fortifications in the Southern Suburb have been presented accurately.³

Heinrich Thomé's map, drawn after the capture of the town in July 1626 by the Swedish army, is the oldest existing cartographic source for Elbląg.⁴ It shows both towns of Elbląg and the suburbs before the construction of the bastion fortifications in 1626–1629. The network of streets of both Elbląg towns was presented in accordance with the actual state of affairs; the Swedish engineer even tried to differentiate the width of the streets. Nevertheless, he gave up drawing the boundaries of individual plots of land. The network of the streets and roads in the suburbs was rendered with quite high accuracy. For this area, the boundaries of plots and buildings have been marked. It can, however, be hypothesised that this drawing was meant as an illustration only because the number of buildings visible on the map is significantly smaller than the number established based on the written sources. The land book of the suburbs indicates that towards the end of the sixteenth century, there were approximately 610 buildings there, including 520 shacks, whereas the map shows 252 buildings altogether. To learn about the changes caused by the construction of the Old Dutch fortification for the use of suburban land, Heinrich Thomé's 1635 plan is of great importance. It presents, among other things, the design of a new, regular layout of residential infrastructure in the suburbs, within the boundaries of the rampart.⁵ A detailed view of the Old and the New Town with plots of land marked is available in the plan from around 1642. However, the number of houses drawn does not correspond to the actual plot divisions. Thus, the map shows a generalised view of the space inside the medieval defensive walls. Still, thanks to the accuracy of the drawing and the credibility of the presentation of the suburban buildings, it can offer a good departure point for a retrogressive analysis of the spatial development.⁶ In the upper part of the engraving, a panoramic view of the town from the East was placed, which was prepared based on a drawing by Johann Bass. It does not seem to be a coincidence that, as opposed to the map, the veduta does not show buildings erected outside the area delimited by the rampart.

Written sources

In addition to the cartographic and iconographic sources in the Elbląg Council Archive, currently stored at the State Archive in Gdańsk, there is also a rich collection of written sources useful for the study of the topography and spatial development of the town. As far as the location of public utility buildings is concerned, one can in the first place consult such documents as the rent books from the years 1376–1403 for Elbląg Old Town and from the years 1376–1403 for its suburbs. A precise reconstruction of the pattern of plots inside the walls is possible thanks to the land book kept from 1417 and the meadow book from 1421.⁷ Much information about the use of the suburbs in the fourteenth century

can be found in the rent books, including the rent book of the suburbs from 1374–1430, which is of special value. Set up in 1430, the land book of the suburbs contains entries on the owners of shacks, gardens, granaries, and barns. A reconstruction of the spatial arrangement and settlement in the suburbs till the end of the sixteenth century is possible thanks to the land book set up in 1565, which was used until 1721.⁸ A scarcer body of sources has been preserved for the study of the history of Elbląg New Town; still, for this area, we have at our disposal the rent book for the years 1340–1381 and the land book set up around 1382 and kept until the end of the fifteenth century.⁹

Elaborations

The large number of available sources has made the topography and spatial layout of the town in the Middle Ages and in the modern period some of the most studied research subjects in the modern historiography of Elbląg. The first description of the topography was prepared as early as the first half of the nineteenth century by Michael Gottlieb Fuchs.¹⁰ Max Toeppen's publications are still considered up to date; this author devoted a separate study to the spatial development and this topic also took up much of his monograph about the medieval history of the town.¹¹ Another distinguished researcher of the past of Elbląg – one of the greatest, even – was Arthur Semrau, who studied the defensive infrastructure, the topography of the market infrastructure and the spatial layout of Elbląg New Town.¹² One of the founders of the Polish inquiry into the past of Elbląg was Stanisław Gierszewski, who in the late 1950s investigated, among others, the spatial aspects of the development of the port in the modern period.¹³ In the early 1970s, Jerzy Stankiewicz, on the basis of the example of Masztowa (Mast) Street, presented the possibility of combining architectural studies with the socio-topographical method.¹⁴ Archaeological studies, commenced in the early 1980s by a team under the supervision of Tadeusz Nawroński, not only provided new source material to learn about the history of this chartered town but also inspired interdisciplinary cooperation. The interests of archaeologists, historians, experts in urban studies and the history of art revolved around the space of the town originally chartered in the Middle Ages.¹⁵ The issues related to the development of Elbląg suburbs and its spatial development in the modern period have been undertaken as part of investigations into the socio-topography and the defensive infrastructure.¹⁶ This topic was also covered in the second volume of the synthesis of the town's history devoted to the modern period.¹⁷

Spatial layout of Elbląg in the mid-sixteenth century

In the Middle Ages, the Elbląg settlement complex consisted of three parts: (1) the Teutonic castle and the outer bailey together with the neighbouring of Wola Zamkowa [the name indicating a precinct of the castle – translator's note] as well as the fishing cottage Osiek (*Hakelwerk*) in the South; (2) the Old Town with its suburbs; and (3) the New Town, established in 1335–1341, and in 1347 provided with the charter privilege, together with its suburbs. In February 1454, the townspeople conquered and destroyed the castle. While in 1457, on the basis of the privilege issued by Casimir Jagiellon, the areas of the castle, as well as the estates owned by the Commandery in the area of the Elbląg Upland and Żuławy were incorporated into Elbląg Old Town. After the abolition of the legal separation of the New Town municipality in 1478, the entire settlement complex was subjected to the authority of the Council of Elbląg Old Town.¹⁸

Elbląg Old Town

The town of Elbląg was located at the edge of the Elbląg Upland by the River Elbląg, which flows from Drużno Lake to the Vistula Bay. The area of the urban settlement gradually sloped towards the river. Its easternmost part – the area of the New Town – stood at the height of – approximately 6 m above sea level; the Old Town, on the other hand, stood at approximately 2–4 m above sea level. Żuławy stretched on the other side of the river. Due to the topography of the area, watercourses flowing down from the Upland went past the area of the Old Town. North of the town boundary, by the docks, the Hundebekke Stream flowed into the River Elbląg. The Kumiela Stream circled the town from the east and the south and flowed into the River Elbląg to the south of the castle. To safeguard water supplies for the town and the castle in the 1770s, a canal was dug where water flowed from the Kumiela across the Eastern Suburb, along Młyńska Dyke (*Młyńska Grobla*) and then across the southern part of the Old Town; in the vicinity of the southern corner of Wodna Street, it flowed into the River Elbląg. Water from this canal supplied the moat of Elbląg Old Town as well as the town's wells; it was also used as the driving force for mills.¹⁹

The location of Elbląg was connected with the conquest of the lands of Chełmno and Prussia, pursued by the Teutonic Order from 1231, with the support of the Piast dukes and crusaders from the states of the Holy Roman Empire. According to a report from the chronicle kept by the Teutonic Priest Peter of Dusburg, in the spring of 1237, the crusaders erected a fortress near the place where the River Elbląg flowed into the Vistula Bay. After its destruction by Prussians, likely already in the summer of 1237, a new castle was built a few kilometres inland; soon a new town started to develop in its vicinity.²⁰ The sources include no mention of the participation of people from Lübeck in the campaign in 1237 and in the location of the town. The information from 1240 about the handing over of a codex of the Lübeck laws to the inhabitants of Elbląg indicates, however, that the merchants from the former town quickly got involved in the development of the latter. The debate between the Teutonic Order and the town of Lübeck over the location of a town in Sambia and the Prussian uprising in 1242 postponed the process of the location of Elbląg. It was only on 10 April 1246 that Grand Master Heinrich von Hohenlohe issued the privilege in which he bestowed the patrimonium of the land and the Lübeck law upon the townspeople, alas, with some restrictions compared with the mother town

¹⁸ The problem of the legal status of the New Town municipality is a subject of discussion: M. Słoń, *Miasta podwójne i wielokrotne w średniowiecznej Europie*, Wrocław 2010, pp. 279ff, supports the view about the preservation of legal separation of the New Town municipality; Z.H. Nowak, J. Tandecki, *Prawa i przywileje Starego i Nowego Miasta Elbląga w średniowieczu*, Gdańsk 1998, p. 51, subscribe to the opposing view; R. Czaja, *Miasta podwójne i wielokrotne w średniowiecznej Europie*, [in:] 'Roczniki Historyczne', vol. 78, 2012, p. 284.

model, as the relations between the municipality and the territorial ruler had been drawn up as per the charter privilege for Chełmno and Toruń.²¹

The boundaries of Elbląg Old Town were drawn in the years 1237–1242. They delimited a trapezoidal area of 25 ha, whose dimensions, after the expansion of the town in 1326 into the area directly adjacent to the river, amounted to approximately 500 x 300 m.²² The urban land was mapped out based on the layout with the central broad street, which at that time had already been well established in the oldest towns of Central and Central Eastern Europe. From Stary Rynek Street (*Alter Markt*) – the main thoroughfare, which was some 300 m long and some 24 wide and which ran parallel to the river – six perpendicular streets were delineated. Five gate streets opened to the embankment. Seen from the south, the first street was Świętego Ducha (*Holy Spirit*) Street, some 300 m long. The next streets, each some 170–180 m long, were Mostowa (*Bridge*) Street, Rybacka (*Fishermen*) Street, Bednarska (*Cooper*) Street later renamed Masztowa (*Mast*) Street and Tobiasza (*Tobias*) Street, also known as Studzienna (*Wells*) Street, since the fifteenth century. At the Dominican monastery, Kuśnierska (*Furrier*) Street was delineated at the exit from which a gate in the defensive wall was built. The only gate from the north (*Targowa Gate*) was built at the exit from Stary Rynek Street. In the eastern direction, several 85-meter-long streets were drawn: Rzeźnicza (*Butcher*) Street, Wieżowa (*Tower*) Street, Garbary (*Tanner*) Street, Sukiennicza (*Draper*) Street, and Kowalska (*Blacksmith*) Street as the only gate street in this part of the town. The Kumiela Canal hindered the mapping out of a regular chessboard layout in the South-Eastern part of the town, where the streets Nad Kumielą (At the Kumiela) Mincerska (*Coin Engraver*) Street, Mała (*Small*) Street and Zamkowa (*Castle*) Street were drawn, the last of which led to the only gate from the South. Walking routes inside the town walls led along Wodna (Water) Street and Ścieżka Kościelna (*Church Path*), which crossed the Western quarters in the middle and offered a shortcut to the parochial church and retail centre. Wałowa (*Levee*) Street ran along the eastern section of the walls, and Ketzerhagen Street led from Targowa Gate to the north-eastern corner of the ramparts. The urban network established after the 1326 expansion of the town in the direction of the river survived without major changes until the end of the eighteenth century. The extension of the fortifications in the vicinity of Kowalska Gate towards the end of the sixteenth century made it possible to demolish a section of the old defensive walls opposite the New Town. In the area obtained in this way, Podmurna (*At the Walls*) Street was drawn, along which around a dozen houses were built.²³

The first mention of the town's fortifications, most likely made of wood and soil, appears in the privilege issued for the Dominican monastery in 1238.²⁴ Most likely, the construction of a brick-and-stone wall to protect the town from the east, north, and south started in the 1280s. At the beginning of the fourteenth century, the construction of Targowa Gate (1319) and Zamkowa Gate (1322) was concluded. The last section of the town's defensive system which underwent reconstruction was the western part, where, as late as in 1335, a wooden palisade was mentioned. The information about the reconstruction of the gates Mostowa, Ducha Świętego, Rybacka and Bednarska in 1374–1376 indicates the completion of the work on the fortifications protecting the town from the riverside. In addition to nine gates, the defensive system was reinforced by eight towers and a moat.²⁵ Drawing on the experiences of the 1409–1411 war, in the first half of the fifteenth century, a further extension of the town's fortifications was undertaken. Another line of walls was erected from the east and the north with external fortifications in front of Targowa and Kowalska gates, nine towers and an external moat. The next stage of the extension works was undertaken after the attack of the Teutonic army during the

Polish-Prussian war of 1521. More intensive works were carried out in the 1550s. The construction of the southern defensive line required the demolition of the ruins of the Teutonic castle and the gates of the New Town which neighboured the former castle grounds. The person responsible for the works, the master builder Heinrich Holzapfel from Gdańsk, prepared a detailed plan of fortifications in 1558.²⁶ The defensive line from the side of the river was reinforced with two half-bastions – the northern one in the vicinity of the Dominican monastery, and the southern one on the area of the former castle. A half-round bastion was also erected in the south-eastern corner of the ramparts. At the turn of the seventeenth century, the command of the fortification works was taken over by the architect Timotheus Jost from Gdańsk. At that time, the walls between the gates Targowa and Zamkowa were elevated; furthermore, a new bastion was built in front of Brama Kowalska. The reinforcement of the fortification system of this gate required the demolition of Saint Jacob's church (1601).²⁷

Based on the information about the amount of the recognition rent (6 dinars per a full-unit plot) included in the charter privilege and the amount of annual rent payable to the Commander, it can be estimated that originally the town's area was split into approximately 360 full-unit plots. As a result of the division of the original plots and of marking out of new ones in a previously unused area, the initial number and structure of the plots changed substantially. Based on entries in the land book of 1417, the meadow book of 1421 and the rent books, the overall number of plots can be estimated at the level of 658, including 364 full-unit ones and 294 shacks. From the fifteenth century on, the tendency to join plots is more visible; this process did not cause a radical decrease in the number of premises, however. In the fifteenth and sixteenth centuries, only 12 premises were considered double plots, i.e. such produced by the joining of two plots. According to the cadastral plan of Elbląg from 1839, within the walls of the modern town, there were 583 plots. Archaeological studies and metrological analyses did not provide a convincing answer to the question about the original size of the plots. It is very likely that already at the early stages of the town development, the plots differed in size. In the sixteenth century, the most common plot was 2 rods (8.6 m) wide and 6 rods (25.8 m) deep, giving a total area of 222 m². The area of the properties considered shacks was very diverse, ranging from 46 to 148 m².²⁸

The central position of Stary Rynek Street with its considerable width and easy access to every place in town predestined it to become the centre of trade. Consequently, sections dedicated to trading specific articles were designated along this artery. The northern section between Bednarska and Tobiasza streets was named Targ Węglowy (*Coal Market*). Targ Sienny (*Seed Market*) was located between Rybacka and Bednarska streets. Along the western façade between Ducha Świętego and Mostowa streets, Targ Chlebowy (*Bread Market*) was located.²⁹ The sacral, administrative and commercial centre was located between Mostowa and Rybacka streets, between the parochial Saint Nicholas church and the town hall complex. At its southern side, petty traders' stands were placed. Shoemakers' stands and the weighing house neighboured the church square from the North, while bakers' stalls from the south. On the corner of Rybacka and Stary Rynek streets, the main municipal weighing house was located. Two plots at the eastern façade of the Rynek and the corner plot at Rzeźnicka Street were designated for the construction of the town hall and cloth halls; in the cellars of the town hall, wine was sold. In the courtyard of the town hall a spice garden was set up, where traders and pharmacists traded imported roots and spices. Smaller scales for weighing lighter goods were also installed inside the town hall. In front of the cloth halls, on the corner of Stary Rynek and Rzeźnicka streets, a pillory was mounted to represent the judicial authority of the Council. In a house at Rzeźnicka Street adjacent to the cloth halls, butchers' counters were set up.³⁰ The prestige which the society ascribed to the urban space near

the Rynek made the elitist Saint George Brotherhood move its seat from the house at 9 Rybacka Street to the corner house (No. 49) at Stary Rynek and Kowalska Streets.³¹

The main elements of the sacral topography had been shaped already in the first decade of the town's development. The construction of the parochial church in the eastern part of the quarter delimited by Mostowa and Rybacka Streets began right after the location of the town. In 1238, the national master Hermann Balk provided Dominicans with a plot of land in the north-western part of the town to erect a monastery and Blessed Virgin Mary church (*Kościół Najświętszej Marii Panny*). In 1242, the Teutonic Order founded a hospital and a chapel at Duchą Świętego Street.³² After the central authorities of the Teutonic Order were moved to Prussia in 1309, this foundation served as the Order's main hospital in Prussia; it was headed by the Commander of Elbląg, who at the same time held the post of Grand Hospitaller. Based on the royal privilege of 1457, the Town's Council obtained the right to manage the hospital and its assets. Starting from the 1520s, the townspeople of Elbląg showed increasing support for Martin Luther's teaching. The reformation was encouraged by the municipal authorities but hindered by the Bishop of Warmia and the Polish kings. In 1542, by the consent of the last Dominican monks, the Town's Council acquired the buildings of the monastery and Blessed Virgin Mary church, where the first Lutheran commune in Elbląg was established. It also held – since 1563 – the former Holy Spirit Hospital chapel. It took the Lutheran Town Council a little more time to take control over Saint Nicholas church. In 1573, the first Lutheran service was celebrated in the parochial church. It was not until 1576, however, that the privilege issued by King Stephen Báthory confirmed the town's right to organise the structure of the Augsburg church. The settlement of English merchants in the 1580s reinforced the influence of Calvinism. At first, the Calvinist commune gathered for prayers in the house at Duchą Świętego Street. Since 1590, the Mennonites had a prayer house at Garbary Street.³³ By the end of the sixteenth century, there was no church in the town left in the Catholic hands.

Elbląg Old Town Suburbs

The thirteenth century marks the beginning of the development of Elbląg Old Town Suburbs. In the Middle Ages, three suburban areas were formed: the port, the Northern Suburb and the Eastern Suburb, each of them with different economic functions and buildings. The Western Suburb, located by the river Elbląg, consisted of the embankment and Wyspa Spichrzów (*Granary Island*) – an area on the other side of the river, surrounded by a moat. Between the town walls and the river, infrastructure was created to operate the port, manage long-distance trade and fishing: piers, stalls for herring sellers, counters for the sale of the sturgeon and cod, a fish market, two weighing houses, a crane as well as quality assurance and packaging facilities. In 1596, a new large weighing house was built at Brama Tobiasza. By the river, between Tobiasza Gate and Klasztorna Gate (*Furta*) a municipal bathhouse was also erected. As an extension to Mostowa Gate, already in the fourteenth century, Wysoki (*High*) Bridge was erected, leading to Wyspa Spichrzów. Towards the end of the sixteenth century, a new bridge was built; it was called Wagi (*Weighing House*) Bridge or Nizinny (*Lowland*) Bridge.³⁴ Starting from the beginning of the fourteenth century, granaries were built on the swampy areas on the other side of the river Elbląg; at the first stages of the town development, these were located inside the town walls. The information in the land book of the suburbs indicates that in 1430, Wyspa Spichrzów was surrounded by a palisade and a moat and already had its own network of streets. It encompassed 241 granaries, 65 areas designated for storage of goods and 36 gardens. Other buildings located on Wyspa Spichrzów included the town's slaughterhouse, stalls, a coach house, carpenters' workshops and facilities for storage and distribution of tar products. During the invasion of the army of Gdańsk in

³⁴ R. Czaja, *Socjotopografia miasta Elbląga*, pp. 146ff; G. Nawrońska, *Rozwój przestrzenny Elbląga*, pp. 169ff.

1577, the majority of the buildings on Wyspa Spichrzów were burnt down; the storage base for Elbląg port, however, was quickly restored. To the west of Wyspa Spichrzów, municipal gardens, known as Grubenhagen, were located. To the north of the granary district, on the river bank, there were squares designated in the fifteenth century for the storage of export wood and firewood.³⁵

Behind Targowa Gate, by the road to Królewiec (German: *Königsberg*, present-day *Kaliningrad*), another suburb appeared in which facilities necessary for the craft and ship-building industries were located. By the river near the docks, ship-building workshops and a shipyard were located. These were destroyed during the aforementioned invasion of the army of Gdańsk in 1577, however, their reconstruction proceeded immediately.³⁶ It was also for the needs of ship-building that the ropewalk was fitted in front of Targowa Gate. The infrastructure serving the cloth- and leather-making industries – frames, fulling mills and tanneries – was also erected by the river. The Northern Suburb traditionally housed manufactories of ceramics. The oldest mentions about brickyards in the northern parts of the district date back to the 1330s. At the beginning of the fifteenth century, squares were designated for the storage of wood in the area located north of the shipyard. The oldest street of the Northern Suburb was św. Jerzego (*Saint George's*) Dyke, in the sixteenth century also known as Krowia (*Cow*) Dyke, leading from Brama Targowa in the direction of Tolkmicko and Królewiec. Near the ropewalk, the road bifurcated; the street which branched off was called Złodziejska (*Thieves'*) Dyke. It derived its name from the gallows hill (*Galgenberg*) nearby. Another one of the oldest streets was Szeroka (*Broad*) Street, leading to Saint Jacob's church. In the sixteenth century, the development of the suburban streets was under way; new streets stretched out from the main arteries. One of the most important roads created then was a street, called Słoneczna (*Sunny*) since the eighteenth; it facilitated the communication between the Northern and the Eastern Suburbs.³⁷ The main sacral institutions in this part of the suburbs were Corpus Christi church (*Kościół Bożego Ciała*) and the shelter erected at the beginning of the fifteenth century at the location of Saint George's leprosarium. In the mid-sixteenth century, by Złodziejska Dyke and in the vicinity of the gallows, there was a chapel called Jerusalem's. The settlement in the Northern Suburb dates back to the 1340s. In the first half of the fifteenth century, the most densely populated areas were located between St. George's Dyke and the river and by Złodziejska Dyke. In the sixteenth century, residential buildings along Złodziejska Dyke reached as far as the gallows hill, covering also the areas located to the north of Corpus Christi church and the former brickyard.³⁸

The settlement in the Eastern Suburb dates back to the construction of mills by the Kumiela Canal. In the fifteenth century, four such mills are mentioned in addition to an oil mill, located directly in front of Kowalska Gate, to the east of which, there was a bathhouse.³⁹ In its vicinity, a shooting range was set up, which after the extension of the fortifications in front of Brama Kowalska towards the end of the sixteenth century, was moved to the intermural space between the walls from Brama Targowa and the Elbląg River. The main artery of the Eastern Suburb was Młyńska (*Mill*) Dyke. As early as the second half of the fourteenth century, several side alleys, leading East and to the New Town, were marked out. In the eastern part of the Suburb, in the fifteenth century, the streets Zielona (*Green*), Błonie, Reynflet, and Neugut were created, enabling communication with the Northern Suburb. The main sacral institution of the Eastern Suburb was Saint Jacob's church – a filial church dependent on the Old Town's parish – mentioned for the first time in the sources in 1338.⁴⁰ After the demolition of Saint Jacob's church in 1601, the function of the main suburban church was transferred to Saint Anne's Chapel located in the eastern part of the Suburb. Towards the end of the fourteenth century, Saint Elisabeth's Shelter was erected in front of Brama Kowalska; in the second half of the fifteenth

century, it was extended to include a chapel.⁴¹ Settlements in the Eastern Suburb developed most rapidly in the area in front of Brama Kowalska. In the fifteenth century, the greatest number of residential shacks was located in the area between the gate and Garncarska (*Potter*) Street. In the sixteenth century, residential infrastructure started to develop along the streets located in the eastern part of the suburb. The development of the settlement in the area of the Old Town suburbs in the sixteenth century is confirmed by the growth of the number of residential buildings. In 1430, in this area of the suburbs, there were 588 premises, including 383 booths and shacks and shacks with gardens. Towards the end of the sixteenth century, the number of buildings grew up to approximately 610, while the number of shacks – to 520.⁴²

In the sixteenth century, the greatest transformation to the settlement fabric took place in the Southern Suburb, which after 1454 replaced the former castle, outer bailey, precinct of the castle. In addition to garners and a lime kiln, the area also housed facilities supporting the operation of Elbląg's brewing industry (brewhouse, malthouse). In 1578, the coach house was moved from Wyspa Spichrzów to the former castle boroughs.⁴³ In 1458, a monastery for the Bridgettines was founded inside the castle area; however, due to the lack of support from the townspeople, at the beginning of the sixteenth century, it was deserted. In 1535, in the former monastery building, Evangelicals located an academic gymnasium.⁴⁴ In the first half of the sixteenth century, intensive expansion of the residential infrastructure took place in the area between Grobla Malborska (*Malbork Dyke*) and the Elbląg River. A particularly numerous group among the inhabitants of this part of the suburb, also known as Vorberg, were fishermen.⁴⁵

Elbląg New Town

Elbląg New Town occupied the area of approximately 9.5 ha. The urban space was designated in the form of a rectangle 215 x 430 m. The main axes of the spatial layout constituted the two long streets: Długa (*Long*) and Pańska, between which the town square together with five other streets were marked out. At first, 160 full-unit plots were mapped out for the townspeople, but they quickly got divided, as in the fifteenth century, the land book listed 239 plots of land. Starting from the sixteenth century, the joining of plots was taking place, as evidenced by the land book kept since 1721, in which 167 plots of land were listed. The layout of the New Town survived without major changes until the eighteenth century. The only significant change was that during the extension of the south-western section of the Old Town fortifications, the western town boundary was moved. In connection with the extension of the ramparts in 1414, some houses at the western side were demolished. In spite of the fact that according to a 1459 agreement with the Old Town Council, the New Town was to be preserved 'in its entire length and width', in the mid-sixteenth century, 19 buildings adjacent to the Old Town from the western side were demolished together with Zamkowa Gate, as well as St. Jacob's Gate, adjacent from the northern side.⁴⁶ Of the greatest importance for foreign traffic were Pasłęcka (*Pasłęk*) Gate, to the east and Malborska (*Malbork*) Gate, where the route leading to Malbork began. The New Town did not have brick fortifications. It was protected by a moat and a wooden palisade. A plot in the western part of the town square was designated for the construction of the town hall. The Breadcrumbs' counters were located at the ground floor of the town hall, while butchers' counters were erected in the vicinity of Saint Jacob's Gate. Starting from 1560, the New Town's Evangelical commune had its seat in the town hall. Within the boundaries of the town, there were also facilities for the craft industry;

in the vicinity of the Old Town moat, the ropewalk was set as well as frames for cloth dyers. At the eastern extreme, there were two breweries and a municipal stall in the fifteenth century.⁴⁷

The New Town Suburbs stretched between Grobla Malborska and the road to Pasłek, also known as St. George's Dyke. The suburbs served mainly economic purposes; they consisted of pastures, gardens, barns and squares used for storage of goods. It was as late as the first half of the sixteenth century that residential shacks started to be erected in the area between Malborska Dyke and the road to Pasłek. By the latter, already in the fourteenth century, a leprosarium and Saint John's Cemetery were founded, but they did not survive into the sixteenth century.⁴⁸

III.6.10.9b GDAŃSK AROUND 1600

Zofia Maciakowska

The plan to the scale 1:10,000 presented in this chapters covered the area of Gdańsk and its suburbs, stretching along the main access roads from the direction of Oliwa (from the north), Żuławy and the Vistula Spit (from the east), Tczew (from the south), and Kartuzy (from the west). The reconstruction also included the area of four villages (or their parts) located outside the area of Gdańsk jurisdiction (on the Church property): Szkoty,¹ Biskupia Górka, Chełm, and partly, Siedlce. The central role for the entire town area was played by the Main Town with the abutting Old Suburbs (*Stare Przedmieście, Vorstadt*). To its north, it was separated from the Old Town by moats. From the west, north, and east, the two towns were surrounded by unfortified suburbs with a former Teutonic village, called Zaroślak (*Petershagen*), and gardens around *Rosental* (the beginning stretch of Armii Krajowej Street, not existing now), *Sandgrube* (Ks. Rogaczewskiego Street, now existing only in its the western part), as well as Nowe Ogrody (*Neugarten*) and in the area around the Corpus Christi Hospital (*Szpital Bożego Ciała*) and Lazaret, Długie Ogrody (*Langgarten*), and a group of shacks by the New Moltawa (*Neue Mottlau*), called Szopy (*Mattenbunden*). The eastern suburbs were separated from the town with the Old and New Moltawa as well as the Kanał na Stępce (*Kielgraben*) between which Wyspa Spichrzów (Granary Island) and Ołowianka (*Bleihof*) with Kępa (*Kampe*) were located.

The issue of the reconstruction of the town's area together with its nearest neighbourhood in the period between the Middle Ages and the seventeenth century was addressed several times. Usually, the layout of the medieval town was reconstructed as it was at the end of the Teutonic Knights' rule, i.e., around 1454, and then around 1520, 1577, and 1630. The elaboration of the last three depended on the preservation of the cartographic materials presenting the development of certain fragments of the town fortifications, the form of which affected the town space and the layout of the suburbs. The earliest reconstructions were elaborated by Karl Hoburg (1852)² and Gustav Köhler (1893).³ In the case of the former, the area of the town itself, reconstructed for the first half of the sixteenth century, was depicted in a simplified manner. The suburbs were not included in it at all, as the author focused his research on issues associated with the fortifications. The other researcher presented the town plan from 1577, taking into account the street grid and location of the most important facilities, as well as the purpose of chosen areas within and outside the town.

The reconstruction of the town's urban space as it was c.a. 1520 was also undertaken by Friedrich Froese / Erich Keyser (1931)⁴ and Otto Kloeppel (1937).⁵ Froese's reconstruction was in line with Köhler's plans and somewhat simplified. On the other hand, O. Kloeppel presented a very detailed layout of the town and its suburbs, and supplemented it with an attempt to reconstruct the parcel divisions and the buildings on the plots, which were then sketched using axonometric drawing. In terms of reconstruction, it should not be treated as an accurate depiction of the divisions and forms of development of

¹ Since 1781, the village was called Stare Szkoty (*Altschottland*).

⁵ O. Kloeppel, *Das Stadtbild von Danzig in den drei Jahrhunderten seiner großen Geschichte. Die Baukunst im Deutschen Osten. Beiträge zu ihrer Gestaltungsentwicklung*, Danzig 1937.

the plots, as there is no sufficient source basis for that, but only as a visualization of the town's spatial organisation.⁶ Subsequent plans concerning the shape of the urban complex of Gdańsk in the sixteenth century were published in the post-war period by Jerzy Stankiewicz for the years 1520,⁷ 1580⁸ and around 1650.⁹ On all of them, the buildings of the town and its suburbs were depicted as blocks, and the water and road systems were presented schematically. The plans included the most important public, sacral, and industrial buildings, as well as the areas in which the timber was stored. The importance of the oldest plans for the research on the town's development was discussed by Heinz Lingenberg.¹⁰

The plan of Gdańsk as of about 1600 included in this atlas, was created with the use of cartographic and iconographic sources from approximately that time, published results of historical and archaeological research, as well as queries and findings by Wiesław Długokęcki and Zofia Maciakowska, made for the Historical Atlas of Polish Towns vol. 1, issue 8: Gdańsk (within the modern fortifications) including the plan and description reconstructing the area of Gdańsk around 1660, elaborated by both authors.¹¹ The possibility of using the preserved plans and the town's vedutas in the work on reconstructing the space of Gdańsk around 1600 was the main reason it was decided to present the state of the town and its suburbs at that time. The construction of uniform earthen fortifications of the whole town was already underway, but it took more than 30 years to be completed. At that time, the suburbs on the eastern and southern sides of the town remained unchanged, but they were transformed in the 1620s and 1630s as a result of building a bastion ring. The changes in the northern and western suburbs took place only after 1655 when the hills' fortifications were erected. Therefore, this period allows the capture of the transformation of the medieval town into a modern one. The cartographic sources used are fairly complete, but the available written sources are insufficient to comprehensively explore the space of the town and its suburbs at that time. They are scattered and required extensive archival queries in the town registers. This text is an attempt to synthesize the results of the research.

Base maps

In elaboration of the base maps for the reconstruction, two plans by August Gersdorff, characterised with high accuracy and wide spatial range, were used: *Situations Plan von der Stadt und Festung Danzig und den Umgebungen bis zum Ausflusse der Weichsel in die Ost See. Aus mehreren Plänen zusammen getragen und durch neu Aufnahmen ergänzt im Jahre 1815*¹² and *Situations Plan von denen innerhalb der demarcations Linie liegenden Danziger Vorstädten Petershagen, Altschottland, Stadtgebieth, Stolzenberg, Neugarten, Schidlitz, Kneipab und allen mit bennanten Vorstädten combinirten Ortschaften und einzelnen Grundstücken, mit Bemerkung der seit dem Jahre 1807 vorgegangenen Veränderungen. Aus speciellen Plänen der Conductuers Meyen, Weichert, Kietsch (?), Fromm, Bach, Heidefeld, Kienitz, Heuer, Erich und Pape, zusammen getragen und durch neue Aufnahmen ergänzt im März 1816.*¹³

The scale of the first plan is about 1:5,000 (240 Rhein rods are 18 cm), and the second – 1:5,000 (200 Rhein rods are 14.9 cm). The former covers the area from the estuary of Vistula to Stare Szkoty, which were not fully covered, and from Krzyżownik to Knipawa/Rudno. The latter has a smaller range in the north, as it covers the territory stretching to the estuary of the Strzyża Creek, and in the

⁶ The shortcomings of this plan are clearly shown by comparison with the axonometric plan of Gdańsk prepared nearly 80 years later, about 1600 (from the Krigsarkivet Stockholm collection, Utländskastads- och fästningsplaner Danzig 13), hereinafter "Stockholm plan"), which shows that even at that time the development was not as advanced as presented by O. Kloeppel.

¹³ APGd, 9, 2/1036.

west to Emaus. On the southern side, it depicts a part located beyond Stare Szkoty and Chmielniki. The plan does not include the buildings within the town area but focuses on the suburbs. Both plans mark the topography in the suburban area, river and creek beds, pond outlines, afforestation, as well as graveyards, gardens, meadows, and fields; the second one also includes the wetlands. The first plan depicted the town centre within the inner ring of fortifications in quite a detailed manner, even though the divisions into plots were not marked which was impossible, given the scale of the plan and the small width of the town properties. On the other hand, the outlines of town districts, widths of streets and shapes of public facilities, town gates, and sacral buildings were faithfully reconstructed. The arrangement of the buildings – not always accompanied by delineation of the plots – was shown only in sparsely populated parts of the town, located on its outskirts and suburbs.¹⁴

An important supplement to both plans was, therefore, the cadastral plan of the town area of Gdańsk by the same author, *Plan der Königlich Preussischen See- und Handlungs-Stadt Danzig mit Bemerkung der Grundstücke eines jeden Besitzers*, dated 1814 (a scale about 1:3,300, 140 Rhein rods are 15.8 cm), where the most important structures were marked with letters and numbers. The relevant legend is placed in its upper part.¹⁵ The preparation of the base maps was also influenced by two later plans: a precise cadastral plan of the town by Daniel Buhse made at a scale of 1:1,000 from 1866–1869¹⁶ and a plan of its immediate suburbs from 1854 at about 1:2,900 (100 Rhein rods are about 377 m),¹⁷ as they allowed for minor corrections in the course of the streets.

The descriptions and commentaries on all of the aforementioned plans were made in German.

Topography

Gdańsk was founded on the partially waterlogged grounds of the coastline terrace of Kashubian Coast (*Pobrzeże Kaszubskie*), which stretches between the uplands of the Kashubian Lake District (*Pojezierze Kaszubskie*) and the Gdańsk Bay (*Zatoka Gdańska*), at the western edge of the Vistula delta. In the vicinity of Gdańsk, the upland of about 70 m above sea level (and about 50 directly by the town walls) distinctly drops to a height of 10–30 m above sea level. It is interspersed by a series of ravines and valleys carved out by streams and creeks, which in the late Pleistocene period occasionally carried large amounts of water resulting in the eventual formation of sand-gravel alluvial fans in their lower part. The terrace itself is gently inclined in the north-eastern direction. Gdańsk was established at the outlet of the Siedlecki Creek, ran between two mountains Biskupia (*Bischofsberg*) upland to its south, and Gradowa (*Hagelsberg*) from the north. It formed a fan-shaped elevation, reaching from the area of Korzenna Street (*Pfefferstadt*) in the north to the vicinity of the Main Town Hall in the south-east. In the sixteenth century it had already had a low water flow.¹⁸ The town is crossed by the slowly flowing Motława River (*Motlau*), which flows out of Rokickie Lake near Tczew and has its outlet to the Vistula, downstream of the Polski Hak (*Polnischer Hacken*), and the Radunia Canal (*Radaune*), built by the Teutonic Knights before 1338 and routed from Pruszcz Gdański along the edge of the upland to the Old Town.¹⁹

¹⁴ An interesting feature of the second plan is that it marks the buildings which were destroyed in 1807 and 1813 and were not rebuilt, houses demolished in 1807 and 1813, buildings not destroyed and those rebuilt after 1813. The first plan distinguishes the royal buildings and other important facilities, as well as the destroyed buildings in suburbs and within the town itself.

The vicinity of the Vistula delta was associated with frequent floods affecting the town. In particular, the spring thaw or strong northern winds causing a surge of seawater at the estuary and rising water levels in the estuary zone. The flooding usually affected the lowest parts of the town and its suburbs: Długie Ogrody with Szopy (*Mattenbuden*) and Szafarnia (*Schäferei*), Wyspa Spichrzów (*Granary Island, Speicherinsel*), Ołowianka (*Bleihof*), Brabank and Wiadrownia (*Eimermacherhof*) as well as quays and houses near the Targ Rybny (*Fish Markt*).²⁰

The most important roads in the area of Gdańsk were to the west of the town, a route following the Vistula Rivers toward the Western Pomerania, from Tczew towards Oliwa (the former “droga królewska”, *via regia*) and a diverging road that led to Żukowo and Kartuzy; a road towards Żuławy and Mierzeja Wiślana in the east.

The town in c.a. 1600

The axonometric plan from around 1600 presenting the whole town and parts of the suburbs was the most crucial for our research. Its key advantage is high accuracy in presenting forms of fortifications and buildings in the town.²¹ The plan depicts only the part of western suburbs that is in direct proximity to the town, while the eastern suburbs are represented as far as the area of St. Barbara’s Hospital. The plans of suburbs from the turn of the sixteenth and seventeenth century also of great importance: the lost plan of the western front fortifications from about 1590,²² the plan of Gdańsk from 1601,²³ the plan of northern suburbs going as far as the Strzyża Creek from 1601,²⁴ and the town’s vedutas from the hills from 1575,²⁵ 1593/1594²⁶ and 1617.²⁷ Other plans that contributed significantly were those of suburbs fortifications prepared since the 1630s²⁸ and others, dating back to the seventeenth century. They presented the surroundings of Chełm,²⁹ the buildings of Zaroślak before and after it was burnt down in 1656,³⁰ as well as situational sketches of Szkoty and the parts of the town located at the foot of Biskupia Górka opposite Zaroślak.³¹ In the reconstruction of the eastern suburbs, both the axonometric plan and the plan of the whole town from 1615³² were used, as well as the plan from 1615 prepared by the so-called “Construction Department” (*Bauamt*), covering the areas east of the line of the modern fortifications planned at that time.³³ To reconstruct the buildings of the town itself, however, the most important were the axonometric plan from about 1600 and the plans depicting certain fragments of the town from a later period,³⁴ as well as pictures of selected squares and streets from 1617.³⁵

²⁰ R. Curicke, *Der Stadt Dantzig historische Beschreibung*, Amsterdam–Dantzig 1688, pp. 276–277. The flooding of Wiadrownia and Brabank is demonstrated by the results of archaeological surveys carried out in these parts of the town in 2011–2012.

²¹ The credibility of “the Stockholm plan” was validated with several other cartographic and written sources.

The analysis of written sources made it possible to present the location of several industrial and commercial facilities omitted in the previously elaborated plans that aimed at reconstructing the urban complex of Gdańsk in the sixteenth and the first half of the seventeenth century. Nevertheless, it was not possible to depict its sociotopography, as there are no sources that would allow determining the location of individual craft workshops. Using the retrogressive method it is only possible to identify larger clusters of craftsmen of one particular profession in the areas of some streets.

About the year 1600, the town was enclosed by a very diversified ring of fortifications³⁶. The western front was formed by bastion fortifications, and the north and south ones by early modern walls, earthen ramparts and moats. In the east, the town was defended by the New Motława canal and the so-called Psi Wał (*Hundewall*) running along it, together with the flood embankments around Długie Ogrody (*Langgarten*) and Szopy (*Mattenbuden*). There were also fragments of the former fortifications of the Teutonic Knights' castle, which, apart from the small Radunia Canal (*Radaune*), took a form of ramparts and moats running to the tower at the corner of the northern front, called Baszta pod Ciemną Gwiazdą. The town fortifications on the left side of the Motława River enclosed the Main Town (Główne Miasto, *Rechtstadt*), the Old Town (*Stare Miasto, Altstadt*) and the Old Suburbs (*Stare Przedmieście, Vorstadt*) and on its right side: Granary Island (*Wyspa Spichrzów, Speicherinsel*) and Dwór Smolny (*Aschhof*) separated by a canal, Ołowianka (*Bleihof*, previously called *Szafarnia*), and Kępa (*Kampe*), Długie Ogrody and Szopy. The Main Town was separated from the other parts of left-bank Gdańsk by medieval walls and moats (which were already partly backfilled on the west and south side).

The suburbs were located outside the fortifications: in the north – the area around Lazaret and Corpus Christi Hospital (at that time, most of the burghers' gardens in the vicinity of the hospital no longer existed), in the west – the area encompassing the streets: Kurkowa (*Schießstange*), Nowe Ogrody (*Neugarten*), Ks. Rogaczewskiego (*Sandgrube*) and Stawki (*Schwarzes Meer*, currently not existing), formerly known as *Rosental* (now not existing), in the south – the former Teutonic Knights' village Zaroślak (*Petershagen*), in the east – Długie Ogrody (*Langgarten*) and Szopy (*Mattenbuden*), meadows and thickets with loose buildings scattered within the urban patrimony and the former burghers' forest. The western and southern borders of the town were not so clearly distinguished, as the buildings of Siedlce (*Schidlitz*) and Szkoty (*Schottland*) were located just outside the boundaries of the town.

The respective functions of the Main Town and the Old Town, including the division between the two districts, were not fully defined, despite the agreement signed in 1595. The final regulations were not settled until 1637.³⁷

The town area was crossed by the Motława River flowing into the Vistula north of Zamczysko (*Altschloss*). It was also crossed by the Radunia Canal with its tributaries, also flowing into the Vistula, but below the estuary of the Motława River.

Main Town

The Main Town has changed relatively little since medieval times when it encompassed the area from the Motława River to the line of ramparts on the eastern side of Targ Węglowy (*Kohlenmarkt, Coal Market*) and Bogusławskiego (*An der Reitbahn*) and from the line of the town walls on Służebna Street (*Dienergasse*) and Za Murami (*Hintergasse*) in the south to the line of the town walls on the southern side of Podwale Staromiejskie Street (*Altstädtische Graben*). Since the Old Town and the Main

³⁶ The most important publications discussing the urban development of Gdańsk in 1600 are: O. Klooppel, *Das Stadtbild von Danzig*, pp. 204–245; E. Keyser, *Die Baugeschichte der Stadt Danzig*, Köln–Wien 1972 (descriptions of particular parts of the town: Main Town – pp. 78–83, 128–134; Osiek – pp. 222–225; Old Town – pp. 229–231, 237–241; Old Suburb – pp. 293–297; western suburbs – pp. 310–314, 376–377; Granary Island – pp. 316–318, 381–386; Szopy and Długie Ogrody – pp. 319–325; Zamczysko – p. 374); J. Stankiewicz, *Gdańsk. Rozwój urbanistyczny i architektoniczny oraz powstanie zespołu Gdańsk–Sopot–Gdynia*, Warsaw 1959, pp. 88–99; idem, *Rozwój przestrzenny i demograficzny Gdańska*, pp. 17–27; idem, *Urbanistyczny i przestrzenny rozwój miasta*, pp. 410–432. On town fortifications: K. Hoburg, *Geschichte der Festungswerke*, pp. 22–40; G. Köhler, *Geschichte der Festungen*, pp. 200–295; G. Bukal, *Fortyfikacje Gdańska*, pp. 45–80.

³⁷ J. Kaufmann, *Studien zur Geschichte der Altstadt Danzig*, "Mitteilungen des Westpreussischen Geschichtsvereins", 55, 1913, pp. 92–96. Full text of the agreement in copy, i.a., PAN BG, Ms 733, pp. 84–97.

Town, as well as the Old Suburbs, were surrounded by a shared line of earthen fortifications, the former walls and moats of the Main Town have become redundant. Only the Wyżynna Gate (*Hohes Tor*), led into the town through the earthen fortifications. The gates in the brick fortifications were the same as in medieval times: in the south – the Kotwiczników Gate, the Rybacka Gate, the Na Zbytkach Gate; in the west – the Długouliczna Gate, the Ludwisarska Gate, and the Ulicy Szerokiej Gate; in the north – the Zamkowa Gate. From the Motława riverside, access to the town was provided by the following gates: Tobiasza (*Tobias*), Straganiarska (*Stallholders*), Świętojańska (*St. John's*), Żuraw (*Crane*), Duchy Św. (*Holy Spirit's*), Mariacka (*St. Mary's*), Chlebnicka (*Bread*), Zielona (*Green*), and Krowia (*Cow*). Two bridges were placed over the Motława River – the Krowi Bridge (*Cow*) and the Zielony Bridge (*Green*). Another one, located just next to the former Teutonic Knights' tower at the exit of Fish Market, connected the Main Town with the Zamczysko area. The town had a comb layout, consisting of wide streets leading towards the Motława River, interconnected by numerous narrow perpendicular streets.³⁸

At the end of the sixteenth century, a decision was made to backfill the moats on the western and southern sides of the town. Around 1600, the moats on the western side of the town from the Narożna Tower to the Gate of the Bellmakers (*Brama Ludwisarska*) were filled.³⁹ On the area gained north of the Gatehouse complex of Długa Street a new square was created, called Targ Węglowy. Gradual backfilling of the southern moats was intended to enable future expansion of the Main Town buildings up to Podwale Przedmiejskie (*Vorstädtischer Graben*). Shortly after the start of the works, the belt between the former moats was put to use by the shooting society.⁴⁰ Initially, the buildings were developed directly by the town walls, both inside and outside.⁴¹ In particular, many buildings were built on the southern side of the town, where numerous huts were erected using the existing wall structures along Za Murami Street (*Hintergasse*) and Służebna Street (*Dienergasse*), among others, in the vicinity of the Rybacka Gate. The huts (in this case small sectional houses) were intended for municipal service employees (Służebna 4–17).⁴² Another municipal rental house was built on Targ Węglowy.⁴³ The northern moat was approached differently. In 1608, it was decided to convert it into a canal, as the canal that had supplied it was intended to be used for industrial purposes, and there was a need to maintain access to water for the inhabitants of the southern part of the Old Town and former Osiek (*Hakelwerk*) during the repair and cleaning of the Radunia canal. Fragments of both former moats stretching from the Gate of Bellmakers to Jacek Tower remained neglected and partially overgrown for a long time.⁴⁴

Permanent buildings were developed in the vicinity of the town walls from the Lawendowa Street (*Lavendelgasse*) to the Targ Rybny Street (*Fischmarkt*), as far as the former Teutonic Knights' external gate tower (the so-called *Hinter Fischmarkt*). Individual constructions were erected on the area of the castle itself, the internal moats of which were systematically backfilled.⁴⁵

³⁸ On the urban layout of the Main Town, see: O. Klooppel, *Das Stadtbild von Danzig*, pp. 41–80; E. Keyser, *Die Baugeschichte*, pp. 78–83, 128–134; T. Zarębska, *Przebudowa Gdańska w jego złotym wieku*, Warsaw 1998, pp. 19–22, 24–27; Z. Maciakowska, *Kształtowanie przestrzeni miejskiej Głównego Miasta w Gdańsku do początku XV wieku*, Gdańsk 2011, pp. 66–67.

³⁹ Cf. Hogenberg's view of the town from the foot of Gradowa Mountain. On this subject R. Curicke, *Der Stadt Dantzig*, p. 146; P. Simson, *Geschichte der Stadt Danzig*, vol. 1, Danzig 1918, p. 305; G. Köhler, *Geschichte der Festungen*, p. 205.

⁴⁰ A note from 1594 mentions the plot of land being used at least 15 years. The tenant himself made a square for fencing and shooting exercises by backfilling a fragment of former town moats, cf. APGd, 15/16, f. 19. Intensive development of the former town moats was taking place until the 1630s. For properties located there cf. e.g., APGd, 300, 12/837, p. 31; APGd, 300, 12/667, p. 268; APGd, 300, 12/832, p. 18, p. 58.

⁴¹ On the ban on erecting objects by the walls due to narrowing down the wall streets, APGd, 300, R/Q, 12, f. 79r, 80r (1570). The problem of buildings adjacent to the external side of the walls being made of non-durable materials is mentioned in the records of a town rule from 1597, PAN BG, Ms 281, f. 81r. Their construction was banned and the existing ones were ordered to be dismantled due to the fire hazard. On the furriers' huts in the area of Timber Market (Targ Drzewny), APGd, 300, 31/95, p. 101 (1594).

⁴² These houses – 4–17 Służebna Street – are visible on the “Stockholm plan”, which depicts the moats of the former Teutonic castle as already backfilled.

⁴³ The description of this house has been preserved in GStA PK in Berlin, II. HA Westpreussen u. Netzedistrikt: Städte, Abt. 9, Varia, no. 49, f. 75r–75v. It was disassembled at the beginning of the nineteenth century due to the construction of a theatre.

⁴⁴ Cf. the “Stockholm plan” from around 1600 and the view of Timber Market from 1617, Ä. Dickmann, *Praecipuorum locorum et aedificiorum que in urbe Dantiscana visuntur adumbratio*, PAN BG, no. 4091.

⁴⁵ Cf. the “Stockholm plan”, which shows that the internal moats of the former Teutonic castle have already been filled in.

The area within the town walls had also been a subject of intensified development. In 1577, 1,968 houses and huts were supposedly located in the Main Town excluding the area of Zameczysko.⁴⁶ Houses with frame construction were replaced by brick ones (with at least the firewalls made of brick), and the existing brick houses were modified and elevated. These developments were to some extent associated with the street level having risen by about 110–140 cm since medieval times. Various types of outbuildings were being erected in front of the houses – platforms and stoops, roofed and open stalls, one-storey huts. It was not generally allowed, but the preserved concessions suggest that permission for their construction was granted as long as they did not cross the gutter line and were used for craftwork. Keeping the heating devices inside them was forbidden, most likely to prevent them from being used for residential purposes.⁴⁷

There were several marketplaces in the Main Town area. Their location has not changed since medieval times. The main one was Długi Targ (*Langer Markt*), situated on a widened fragment of the street in front of the Artus Court, which held Saturday's fairs of meat and other food products. Nearby, on Chlebnicka Street (*Brotbänkengasse*) at the exit of Kramarska (*Grosse Krämergasse* Street), there was a market (called *Mittelmarkt* in medieval times) which offered birds, fish, crayfish, chicken, etc., as well as vegetables grown in the suburbs.⁴⁸ In its immediate vicinity, on Piwna Street (*Jopengasse*) by the huts erected on the edge of the church square, the Targ Pachnidel (*Schnüffelmarkt, the Fragrance Market*) was located.⁴⁹ On the other side of St. Mary's church on Św. Ducha, Street (*Heiligegeistgasse*) there was a bread market, although bread was also still sold at Chlebnicka Street.⁵⁰ Since the late medieval times, the fish market was located at the exit of Warzywnicza (*Petersiliengasse*) and at the beginning of the seventeenth century it was separated from the Motława River by a series of houses built inside the town wall running along the riverbank from Łabędź to Żuraw.⁵¹ Another one, located in front of the Fishermen's Gate, probably on the bridge or at its exit by Podwale Przedmiejskie Street, was used by the residents of the Old Suburb.⁵² Trade in second-hand goods took place on Wednesdays,

⁴⁶ APGd, 300, R/Vv, 35, p. 305.

⁴⁷ On the town rule regulations prohibiting their construction, cf.: Z. Maciakowska, *Przepisy budowlane w wilkierzach gdańskich i ich wpływ na kształtowanie zabudowy w mieście od średniowiecza do końca XVIII wieku*, [in:] *Studia i materiały do dziejów domu gdańskiego*, part 2, ed. E. Kizik, Gdańsk 2011, pp. 24–25, 46–49. On outbuildings in the modern town: O. Rollenhagen, *Untersuchung und Beschreibung der Danziger Bürgerhäuser mit besonderer Darstellung der Bauten aus der Zeit der Gotik bis zur Spätrenaissance. Edition der nicht veröffentlichten Dissertation (1910–1915) / Analiza i opis gdańskich kamienic mieszczańskich ze szczególnym uwzględnieniem budowli z czasów gotyku do późnego renesansu. Edycja nieopublikowanej dysertacji (1910–1915)*, ed. E. Barylewska-Szymańska, E. Bauer, D. Popp, W. Szymański, Marburg–Gdańsk 2008, p. 153; E. Kizik, *Przedproża i inne przybudówki gdańskich kamienic w świetle koncesji budowlanych z drugiej połowy XVIII wieku*, [in:] *Studia i materiały do dziejów domu gdańskiego*, part 2, ed. E. Kizik, Gdańsk 2011, pp. 161–167; Z. Maciakowska, "...bynnen dem rynsteyne". *Gospodarowanie skrajnym pasem ulicy w Gdańsku w późnym średniowieczu i w czasach wczesnonowożytnych*, [in:] *Ulica, plac i cmentarz w publicznej przestrzeni średniowiecznego i wczesnonowożytnego miasta Europy Środkowej. Strasse, Platz und Friedhof in dem öffentlichen Raum der mittelalterlichen und frühneuzeitlichen Stadt Mitteleuropas*, ed. S. Krabath, J. Piekalski, K. Wachowski, Wrocław 2011, pp. 249–258.

⁴⁸ PAN BG, Ms 281, f. 107v (1597). The market operated since medieval times, P. Simson, *Geschichte der Danziger Willkühr*, "Quellen und Darstellungen zur Geschichte Westpreussens", vol. 3, 1904, p. 58.

⁴⁹ This name first appeared in 1597, cf. *Chronik der Marienkirche in Danzig. Das "Historische Kirchen Register" von Eberhard Bötticher (1616). Transkription und Auswertung/ Kronika kościoła Mariackiego w Gdańsku. "Historisches Kirchen Register" Eberharda Böttichera (1616). Transkrypcja i analiza*, elab. Ch. Herrmann, E. Kizik, Köln–Weimar–Wien 2013, p. 632. Due to the lack of detailed information on the location of the food market (*Mittelmarkt*), it is possible that it was the same as the later Fragrance Market.

⁵⁰ The name of Chlebnicka Street was first mentioned in 1334, APGd, 300, 32/1, f. 34v. On the location of benches in medieval times: T. Hirsch, *Danzigs Handels- und Gewerbsgeschichte unter der Herrschaft des Deutschen Ordens*, Leipzig 1858, p. 301; M. Bogucka, *Gdańsk jako ośrodek produkcyjny w XIV–XVII wieku*, Warsaw 1962, p. 211 The bread benches were still mentioned at the end of the sixteenth century, cf. APGd, 300, 93/53, p. 84. On the bread market on Św. Ducha Street, S. Rühle, *Geschichte des Gewerks der Schneider*, [Danzig 1931], p. 17: "Uff dem brotmarkte" (from 1477). Bread was also sold near the Zielona Gate, APGd, 300, R/Mm, 2, p. 270 (1638). Cf. J. Trzoska, *Gdańskie młynarstwo i piekarnictwo w II połowie XVII i w XVIII wieku*, Gdańsk 1973, pp. 137–138.

⁵¹ The buildings of this part of the square are visible on the "Stockholm plan".

⁵² W. Stephan, *Die Strassennahmen Danzigs*, "Quellen und Darstellungen zur Geschichte Westpreussens", vol. 7, 1911, p. 66. Around 1600, it could have already ceased to exist due to the backfilling of the former moat, which served as a transport route to the Motława River. It was classified as a Main Town market because the properties within the former moat were later incorporated into the Main Town.

Fridays and Saturdays, most likely on a street called Tandeta Street (*Tagnetergasse*).⁵³ At the newly established Targ Węglowy initially called *Dominiks Plan*, charcoal was sold, and annually around St. Dominic's Day, there was a fair gathering numerous foreign merchants, stallholders and craftsmen. The fairs for larger products and goods were held in the western suburbs. On Saturdays, a cattle market took place in front of the Wyżynna Gate a horse market by the watering-place, and a wool market between the exit of *Sandgrube* Street (*Ks. Rogaczewskiego*) and *Rosental / Schwarzes Meer* Street.⁵⁴

The weigh house was located inside the Zielona Gate by the Motława River.⁵⁵ The town charter, known from its renewal in 1378 granted the Main Town the right to set up stalls, butcher's, bread and shoemaker's benches as well as bathhouses, for which the town was to pay an appropriate fee.⁵⁶ Since medieval times, the butcher's benches have been located between Mariacka Street and Św. Ducha Street, in the vicinity of the presbytery of St. Mary's church.⁵⁷ It is not known whether the shoemaker's benches, initially located at Szewska Street (*Korkenmachergasse*), which runs from St. Mary's church square in the direction of Złotników Street (*Goldschmiedegasse*), still operated at that time.⁵⁸ The outlets of other craftsmen's groups were scattered all over the town. They were located in private houses, in the rented cellars underneath and outbuildings, and free-standing stalls situated in front of the houses, behind the gutter line. At the beginning of the seventeenth century probably only one bathhouse still remained – at 111 Św. Ducha Street. Presumably, two other bathhouses, one located near the *Stadthof* a (*Dwór miejski*) and one located opposite the exit of Piwna Street (*Jopengasse*) into Tkacka Street (*Wollwebergasse*), were no longer operating. The first one was being used as a rented flat, and the second one was closed down at the end of the sixteenth century to build a town armoury.⁵⁹

The most important sites of the town were municipal buildings. Another key object was supposed to be the royal residence, which the town authorities were obliged to erect after 1454. However, initially, during their stay in Gdańsk, the kings used the Town Hall premises, then the burgher houses on Długi Targ (11, 17, 39–43, 1–4), adapted for this purpose. Even though in 1570 King Sigismund Augustus agreed to recognise the Zielona Gate built in 1568 as the royal residence, Sigismund III Vasa during his visits to Gdańsk in 1587, 1594 and 1598 still stayed at 39 Długi Targ.⁶⁰ The Main Town Hall, where the council meetings were held, was located at 46/47 Długa Street on the western edge of Długi Targ.⁶¹ Since 1549, the law court has been gathering in a house purchased by the council, adjacent to the Artus Court (Długi Targ 45), the so-called Old Jury House (*Stary Dom Ławy*).⁶² The building served also for social meetings of merchants' fraternities gathered in benches (*Banken*).

⁵³ For information on trade days, cf. PAN BG, Ms 281, f. 84r (1597).

⁵⁴ On cattle market, PAN BG, Ms 281, f. 107v; M. Bogucka *Gdańsk jako ośrodek produkcyjny*, p. 174. Supposedly around the end of the sixteenth century it took place at the Długi Targ Square. Horse market shown on the plans: APGd, 300, MP/598 (ok. 1645), APGd, 300, MP/626 (1650). Location of the wool weighing house probably associated with the market square: APGd, 9, 2/1534 (1806).

⁵⁵ R. Curicke, *Der Stadt Dantzig*, p. 49.

⁵⁶ P. Simson, *Geschichte der Stadt Danzig*, Bd. 4, Danzig 1918, no. 97.

⁵⁷ They existed there until their removal in the nineteenth century.

⁵⁸ At the end of the eighteenth century, many shoemakers already lived in the southern part of Złotników Street. They sold their goods probably directly from their houses.

⁵⁹ The bathhouse at Św. Ducha Street was called "gemeine Badstube", APGd, 300, 12/373, p. 96 (1636). The bathhouse disappeared most probably due to assignment of appropriate bathing places in the burghers' homes. The building of the bathhouse by the Town Manor House in 1607 was leased, APGd, 300, 12/832, p. 18. On the square designated for town armoury, cf. APGd, 300, 12/26, p. 60 (1597); A. Bartetzky, *Das Große Zeughaus in Danzig: Baugeschichte, architekturgeschichtliche Stellung, representative Funktion*, vol. 1, Stuttgart 2000, p. 85. The "Stockholm plan" shows that the bathhouse near the *Jopengasse* no longer existed in 1600.

⁶⁰ The Zielona Gate was built in Kogi Gate place (demolished in 1563). R. Curicke, *Der Stadt Dantzig*, p. 49; I. Fabiani-Madeyska, "Palatium regium" w Gdańsku, "Rocznik Gdański", vol. 15/16, 1956/1957, pp. 153, 157–159; E. Keyser, *Die Baugeschichte*, p. 369; KZSP Gdańsk, pp. 12–22; J. Barton-Piórkowska, *Zielona Brama w Gdańsku. Dzieje i funkcja* [in:] *Zielona Brama w Gdańsku. Materiały z sesji z 12 maja 2003 r. w Muzeum Archeologicznym w Gdańsku*, ed. J. Pałubicki, Gdańsk 2004, p. 17; E. Barylewska-Szymańska, Z. Maciakowska, *Miejsca zamieszkiwania polskich władców w czasie wizyt w Gdańsku w XV–XVIII w.*, [in:] *Król jedzie! Wizyty władców polskich w Gdańsku XV–XVIII w.*, vol. 1: *Eseje*, ed. E. Kizik, Gdańsk 2018, pp. 181–192.

⁶¹ E. Keyser, *Die Baugeschichte*, pp. 138–143; 359–363; KZSP Gdańsk, pp. 34, 35.

⁶² R. Curicke, *Der Stadt Dantzig*, p. 52. P. Simson, *Der Artushof in Danzig und seine Bruderschaften, die Banken*, Danzig 1900, pp. 107–109; idem, *Geschichte der Stadt Danzig*, vol. 2, pp. 175–176; E. Keyser, *Die Baugeschichte*, pp. 143–153, 366–367; KZSP Gdańsk, pp. 48, 49.

To keep their horses and carriages, the authorities were also using the *Stadthof*, which, since medieval times, had been located in the north-western corner of the town.⁶³ The knacker's yard was situated by the walls on the side of the Old Town in the vicinity of the Dominican monastery, with the entrance from Pachołów Street (*Büttelgasse*) It is possible that the horse mill of an unknown purpose was still operating nearby.⁶⁴

The town authorities owned a mint, which was located on Ogarna Street (*Hundegasse*), between the *Stadthof* and the Na Zbytki Gate (*Ketterhagensches Tor*). Its exact location is unknown. It is also unknown whether it was still in use at the beginning of the seventeenth century.⁶⁵ Nearby, by the walls, a metal foundry was situated.⁶⁶

The town had two prisons at its disposal: in the Town Hall Tower and the buildings erected in the neck of the of Długa Street Gate Complex in 1586–1617.⁶⁷ Until the beginning of the seventeenth century, a pillory placed on a platform fixed at the corner of the Town Hall was used to administer milder punishments. In 1604 it was moved to the eastern wall of the Więzienna Tower (*Prison*).⁶⁸

There were two burgher confraternities in the Main Town. The burgher brotherhood of St. George occupied a building erected by the confraternity in 1494 on an intermural space on the northern side of the Długa Street Gate. Next to it, between the low and high walls, a shooting range was located. Another one had been situated at the foot of Gradowa Mountain since 1489. In 1578, a representative of St. George's Court and the shooting yard were taken over by the town, and since 1584 the square was used by a school of fencing.⁶⁹ The confraternity of St. Erasmus resided in the buildings adjacent to the Wide Gate (*Brama Szeroka*), and it used the intermural space that stretched from the gate to the Jacek Tower for exercises.⁷⁰ The shooting fraternity of an unknown name also used a shooting range located at the Na Zbytki Gate, probably on an intermural space or on the area of the former moat.⁷¹

Certain guild houses were also situated in this part of Gdańsk. We know the location of several of them: the guild of sailors of St. Jacob's Hospital used the house at 82 Św. Ducha Street (*Heiligegeistgasse*),⁷² the guild of goldsmiths at 20 Szeroka Street (*Breitgasse*),⁷³ furriers at 5 Kołodziejska Street (*Scharrmachergasse*)⁷⁴ and tailors at 107 Św. Ducha Street (*Heiligegeistgasse*).⁷⁵

⁶³ APGd, 300, 32/1, f. 2v: "Civitas" (1357); R. Curicke, *Der Stadt Dantzig*, p. 57; KZSP Gdańsk, pp. 69–70.

⁶⁴ APGd, 300, 32/5, f. 92r: "Rekkerye"; ibidem, f. 96r: "beth an de Roßmole"; APGd, 300, 12/662: "civitas Roßmole" (1480).

⁶⁵ In 1636, it was referred to as "old", and the apartments located there were leased by Kamlaria in exchange for rent, APGd, 300, 12/373, p. 58

⁶⁶ It was probably situated at 1 Za Murami Street as indicated by the 1756 description, APGd, 300, 12/228, pp. 316, 317, and the plan from 1739, APGd, 300, 58/22, before f. 91, published by J.M. Michalak, *Nowe spojrzenie na teatr "elzbietański" w Gdańsku jego budowniczego*, "Gdański Rocznik Kulturalny", vol. 19, 2000, Fig. 1.

⁷⁴ APGd, 300, 32/4, p. 78.

⁷⁵ S. Rühle, *Geschichte des Gewerks der Schneider*, p. 17.

Dyehouses and frames used for cloth drying were located mainly in the area of Zamczysko due to the availability of water from the former castle moats and spaces large enough for setting up frames. Their exact locations remain unknown. A large dyehouse was situated in front of the Kotwiczników Tower (*Anchorer's*), at the outlet of the southern external town moat to the Motława River, on the axis of Podwale Przedmiejskie Street (*Vorstädtischer Graben*).⁷⁶

The port quays did not form a single line but were fragmented. The longest section stretched from the Zielona Gate to the Św. Ducha Gate and a short one, from the Krowia Gate to the south. There were also piers in front of the Gates: Żuraw, Świętojańska, and Straganiarska. Narrow piers for fishing boats must have also existed in Targ Rybny area.⁷⁷ To set sails, unload and load goods on the ships Wielki Żuraw (*the Big Crane*) at the exit of Szeroka Street⁷⁸ was used.

For fiscal and fire safety reasons, the town was divided into four districts around 1417: Wysoki, covering the south-western quarter of the town within the perimeter of Słodowników Street (*Melzergasse*), Ławnicza Street (*Matzkauschegasse*) Kramarska-Podkramarska Street (*Krämer- Kleine Krämergasse*) in the east and Św. Ducha Street (*Heiligegeistgasse*) in the north; Kogi, from these streets to the east to the Motława River; Szeroki, covering the north-western corner of the town as far as the Św. Ducha Street and the line of streets: Grobla I–IV Street (*Erster-Vierter Damm*) U Furty Street (*Am Haustor*); Rybacki, from these streets to the east as far as the Motława River and the Zamczysko area.⁷⁹

Following the Reformation, all the Gdańsk Catholic parish churches served as Protestant ones. In the Main Town, there were two Lutheran parish churches: Mariacki (*St. Mary's*) and Św. Jana (*St. John's*). The boundary between the parishes was formed by Szeroka Street, inhabitants of which belonged to the first parish.⁸⁰ Next to both churches the cemeteries and ossuaries were located. Parish schools operated at church squares.⁸¹ The spiritual guidance over Catholics was mainly provided by priests from the Dominican monastery and, occasionally, by a parish priest living in the presbytery of St. Mary's church supported by the Jesuits (there was a chapel administered by them in the area of the presbytery).⁸² There was only one monastery within the Main Town – the Dominican monastery with the church of St. Nicholas, located in the north-western corner of the town, and one hospital establishment – the Holy Spirit's, located by the town walls at U Furty Street. The chapel was adjacent to the hospital wing from the north.⁸³

⁷⁶ Dyehouses on Zamczysko: APGd, 300, 12/226, p. 82; APGd, 300, 12/373, pp. 120, 124, 126, 216; APGd, 300, 12/832, pp. 38, 40, 52; APGd, 300, R/ Mm, 1, p. 385 (1657). P. Simson, *Geschichte der Stadt*, vol. 2, p. 522, mentions the 'Blau-Kiepe' dyehouse in Zamczysko. The frames are shown on the "Stockholm plan". The dyehouse at the Kotwiczników Gate: APGd, 300, 12/226, pp. 170 (1639), 212 (1641); APGd, 300, 12/373, pp. 50, 66, 123, 260; APGd, 300, 12/832, pp. 18, 62, plan – APGd, 300, MP/105 (1617); also M. Grupa, *Wielniane tekstylia gospólstwa i plebsu gdańskiego (XIV–XVII w.) i ich konserwacja*, Toruń 2012, p. 110.

⁷⁷ Cf. the "Stockholm plan".

⁷⁸ R. Curicke, *Der Stadt Dantzig*, p. 17; C. Biernat, *Życie portowe Gdańska w XVII i w XVIII w.*, [in:] *Szkice z dziejów Pomorza*, ed. G. Labuda, p. Hoszowski, vol. 2: *Pomorze Nowożytnie*, Warsaw 1959, pp. 239, 248.

⁷⁹ On district boundaries, cf. PAN BG, Od 5701, 8°, adl 6 (1539), f. E I, E II. P. Simson, *Geschichte der Stadt*, vol. I, pp. 147–148. The names of the districts were mentioned for the first time in 1419.

⁸⁰ For parish divisions cf. J. Stankiewicz, *Rozwój przestrzenny i demograficzny*, fig. 2, p. 26; J. Baszanowski, *Przemiany demograficzne w Gdańsku w latach 1601–1846*, Gdańsk 1995, pp. 38–41. Only in 1658 a dispute arose over the inhabitants of the corner house on Tandeta Street, from which one exit led to Szeroka Street and another to Tandeta Street. The residents were allowed to choose one of the two parishes.

⁸¹ On emptying the ossuary at St. Mary's church, cf. *Chronik der Marienkirche in Danzig*, p. 432 (1560). On the facilities at St. John's church, PAN BG, Ms 428, f. 170r–v. The St. Mary's School was located on the northern side of the church; St. John's similarly, at 18 Straganiarska Street.

⁸² The pastoral duties in Gdańsk were carried out in monastic churches: Carmelites and Bridgettines. Cf. J. Baszanowski, *Przemiany demograficzne*, pp. 61–63. According to S. Kościelak, the only Catholic parish after 1561 was the parish of the Blessed Virgin Mary, hence its parish priest managed the area covering all 6 former parishes of Gdańsk, idem, *Katolicy w prote stanckim Gdańsku od drugiej połowy XVI do końca XVIII wieku*, Gdańsk 2012, p. 73.

Old Suburb

The Old Suburb was the southern suburb of the Main Town, but its inhabitants probably had enjoyed town rights since the 1570s, just like the burghers of the Main Town.⁸⁴ There was only one gate leading into the suburb from the side of – Szkoty and Orunia, at the exit of Rzeźnicka Street (*Fleischergasse*, called the new gate. In 1571, the second gate, Wozowa, was permanently closed. It used to lead to Podwale Przedmiejskie Street from the west and was surrounded by the Wozowy bastion, which was part of the line of the town's modern earthen fortifications.⁸⁵ The most important suburban streets were those running on the axis of the gates of the Main Town and the streets parallel to them. They were connected by narrow streets perpendicular to the Motława River. Around the year 1600 this district, although separated from the Main Town by an undeveloped strip of backfilled moats isolated from the suburbs by a wall and a wide parallel street, was the area dedicated for residential purposes of the Main Town, already very intensively developed at that time. In 1577, there were 729 houses and huts.⁸⁶ Unlike in the central part of the town, where the parcels were heavily developed, here, behind the houses situated in the frontages of the streets, there were gardens. In many places, especially in the southern part of the suburb and in the Rzeźnicka Street on the section south of Kocurki Street (*Katergasse*), the frontage was not very tightly developed. Back alleys led deeper into several quarters and rental houses were built along them.

A considerable area of the Motława riverbank was occupied by Łasztownia (*Lastadie*), shipyards designed to build various types of ships and boats. A crane used to lift masts of small ships was operating in this area, although its exact location is unknown.⁸⁷ Close by was the Dylowy Plac (*Dielenfeld*), where the wood offered for sale was stored. Numerous sheds with wood were also located directly at the southern walls of the suburb. The wood plank storehouses were also located by Motława riverbank beyond the town fortifications.⁸⁸ In 1617, a suburban market square was located at Podwale Przedmiejskie Street, to the east of Łasztownia Street and to the west of the street that was a continuation of Kotwiczników Street. Most likely its tradition dated back further.⁸⁹ At Targ Dylowy, on the corner of the street close to the fortifications, a royal ash storehouse (*Aschhof*) was erected, and at the east end of Podwale Przedmiejskie Street a dyehouse operated.⁹⁰

Apart from butcher's benches between 72 Rzeźnicka Street and 12–14 Kocurki Street, there were no other commercial facilities in the district. At 9 Podwale Przedmiejskie Street, as in medieval times, a tannery was probably still in operation.⁹¹

The main (Lutheran) parish church of the Old Suburb was the church of St. Peter and Paul.⁹² The church of the Holy Trinity, after the Franciscans waived their rights to both the church and the monastery in 1555, came under the administration of the town council and became the academic church.⁹³ Both churches were initially taken over by Calvinists.⁹⁴ The monastery buildings were transferred to the town school. Since 1558, an Academic Gymnasium (*Gimnazjum Akademickie*) operated in the former

⁸⁴ Mentioned by R. Curicke, *Der Stadt Dantzig*, p. 29. It is not yet clear whether the inhabitants of the suburbs were subject to the municipal law. This issue has been raised since the 1560s, cf. APGd, 300, R/Cc, 1, p. 39 (1565); APGd, 300, R/Q, 12, f. 40v (1570–1577); APGd, 300, Q/12, f. 72r–v (1574); APGd, 300, 93/51, p. 347 (1587).

⁸⁸ Cf. the “Stockholm plan” and Å. Dickmann's veduta from 1617.

⁸⁹ Cf. Plan APGd, 300, MP/105: “Der Markt”.

⁹⁰ Ibidem: “Des Königs Aschhof”, “Die Ferberey undt Paul Hintzen gehöfft”. Cf. E. Keyser, *Die Baugeschichte*, p. 296.

⁹¹ E. Keyser, *Die Baugeschichte*, p. 294. The axonometric plan of Gdańsk from around 1600 shows a tenement house in the frontage of the street and a small building situated further down the plot. It is difficult to determine if it is the tannery building.

⁹² The church of St. Peter and Paul formally remained the parish church of the Old Suburbs until 1650, cf. J. Baszanowski, *Przemiany demograficzne*, p. 45.

⁹³ R. Kubicki, *Franciszkanie na Starym Przedmieściu w XV i XVI wieku*, [in:] *Historie gdańskich dzielnic*, vol. 2, p. 151; S. Kościelak, *Gimnazjum Akademickie na Starym Przedmieściu (1558–1817)*, [in:] ibidem, p. 158.

⁹⁴ A Lutheran clergyman was introduced to the church of the Holy Trinity after 1622, and the Lutheran parish was established there in 1650. On the service of both churches cf.: J. Baszanowski, *Przemiany demograficzne*, pp. 45–46.

Franciscan monastery, and since 1596 the Library of the Town Council was also located there.⁹⁵ Next to the church, at St. Ann's chapel, a parish for Polish-speaking Lutherans has been established since 1522. Behind the chapel, a small cemetery was located.⁹⁶

At that time, no municipal facilities were located in the suburbs. In three places – at the Podwale Przedmiejskie Street, by St. Peter and Paul's church and St. Trinity church (in a private house) – there were buildings which served as a guardhouse, an armoury, and a fire shed used for storing fire-fighting equipment.⁹⁷

Wyspa Spichrzów (Granary Island)

The area of Granary Island (separated by the New Motława River in 1576), which has belonged to the Main Town since medieval times, has been used for the construction of granaries and wood stacking yards. From the Main Town side, there were two drawbridges leading to the island: Zielony Bridge and Krowi Bridge, and, from the side of Długie Ogrody and Szopy, two bridges built on the continuation of Stągiewna Street (*Milchkannengasse*): Stągiewny Bridge and the so-called “most na Szopy” (*Bridge to the Shacks*), located on the axis of Żytnia Street (*Münchengasse*).⁹⁸ The two former bridges were defended by brick gates connected by a wall which stretched to Psi Wał (*Hundewall*) and encircled the southern and south-eastern part of the island. The wall possibly extended beyond them, perhaps as far as the island's northern cape.

The main street of the island running parallel to the Motława River was Chmielna Street (*Hopfen-gasse*). Several narrow streets departed from it to the east. The most intensively developed areas were located in the vicinity of the Stągiewna Street (*Milchkannengasse*) thoroughfare and a few nearest streets parallel to it, and along Chmielna Street in the part opposite the Main Town. In 1553, 193 granaries were mentioned in the sources, in 1620 – 265.⁹⁹ The southern part of the island was occupied mostly by wood stacking yards. Across from the line of southern town moats, the main town slaughterhouse (Chmielna Street 39–45) was located. Since the early seventeenth century its area was no longer used as originally intended and the buildings situated on its premises were leased. The line of port piers ran along the island's western bank.¹⁰⁰

There were several municipal facilities on the island. The tar storehouse (*Dwór Smolny, Teerhof*) was situated on an islet formed as a result of the separation of the outer southern part of the island by a canal. On the northern side of this canal an ash storehouse (*Dwór Popielny, Aschhof*) was located. Both were moved to this place from the opposite end of the island after being burnt down in 1495.¹⁰¹ The emptied land was used after 1576 as a place for two municipal granaries.¹⁰² The area of the former carpenter's workshop (*Dwór Ciesielski, Zimmerhof*) occupying the adjacent end of the island was already partly built up with granaries. At 95 Chmielna Street, linen weighing house had been in use since 1530.¹⁰³

Ołowianka (Lead Island) and Polski Hak

The Ołowianka Island was the area of the former Teutonic Knights' granaries and supply houses (*Schäferei*, described this way even in the 1601 plan). It was created when the land of the nearby meadows was cut off by the canal called Na Stępcę. The canal was probably created at the same time as the New Motława canal, continuing its flow in the north-eastern direction as far as the outlet of the Gęsi Canal (*Gänse Graben*) to the Old Motława River. The island was connected to the mainland by a bridge located on the extension of Szafarnia Street as well as with a ferry travelling across the Motława to the pier near Zamczysko.¹⁰⁴ Several granaries, a lead storehouse with a weighing house for weighing lead, and a small crane were located there. Along the Motława River, in the northern part of the island, there were timber stacking yards, and in the eastern part – a municipal carpentry workshop moved to this place from Granary Island and separated by a canal. The wood stacking yards were also located on an island called Polskim Hakiem (*Polnischer Haken*), separated from a carpentry canal, north of Ołowianka.¹⁰⁵ In 1615, a crane called 'masztowy' ('mast-like') or 'Polish' was also situated there.¹⁰⁶

Długie Ogrody (Long Gardens) and Szopy (Sheds)

These two districts of Gdańsk belonged to the suburbs of the Main Town. They were enclosed by flood embankments: in the north by Angielska Dyke (*Englischer Damm*) and in the south by Szkocka Dyke (*Schottischer Damm* no longer existing), surrounded by ditches filled with water. Together with the Gęsi Canal, the regulated stretch of the Rozwójka River, they connected the floodplain of the Rozwójka in front of the Żuławska Gate (built on the axis of the dyke located in the middle of the suburb) with New Motława River.¹⁰⁷ According to the records of Gdańsk Law, only gardeners and innkeepers were allowed to settle there. Nevertheless, before around 1574, on many parcels owned by rich burghers, fenced gardens used for entertainment were created, sometimes with gazebos.¹⁰⁸

The properties located on Długie Ogrody Street, which ran on the line of the former dyke, were very narrow and long at the same time (up to 200 m), and they were mostly covered by gardens. The frontage of the street was built up tightly in the part near the Granary Island, and loosely in the part that was closer to Żuławska Gate. Some of the parcels were entirely occupied by gardens. Because the area was waterlogged, numerous drainage ditches ran along their perimeter.

Since medieval times, in the north-western part of Długie Ogrody from the wetlands by the Motława River and as far as *St. Barbara* Street (*Św. Barbary*), the rope makers' tracks were located. West of them along the New Motława canal, numerous new buildings with fronts directed to Szafarnia Street were erected on the land elevated at the end of the sixteenth century.¹⁰⁹ On the opposite side of Długie Ogrody, there was a separate group of buildings, including sheds of straw mats makers, who settled here at the end of the fourteenth century by the wetlands through which the New Motława canal was dug, forming a distinct cluster called Szopy. A building called "*Waldhof*" was located at the exit of

¹⁰⁴ On the ferry, see: *Chronik der Marienkirche*, p. 485 (1577).

¹⁰⁵ A. Januszajtis, *Z dziejów Ołowianki*, "Zeszyty Naukowe Politechniki Gdańskiej, Architektura", vol. 20, 1981, pp. 185–187. The crane on the Motława River, the town carpenter's workshop and the wood storehouse were shown on the "Stockholm plan" from around 1600 and 1601 (Wrocław).

¹⁰⁶ GStA PK Berlin, XI. HA, AKS, Rolle no. 30L.

¹⁰⁷ The English Dyke was elevated by using ballast, which was to be thrown there following the decree from 1582, APGd, 300, 66/5, f. 13 r. The ditch in front of the Scottish Dyke transformed into a sewer and a drainage canal, from which the water flowed into the New Motława River in front of the Stągwie Mleczne, on the northern side of the bridge. The former outlet, backfilled or incorporated into the underground canal in the part under the road, is visible on the plan from around 1600 as well as from 1601. On its function, APGd, 300, 66/5, f. 37r (1615).

¹⁰⁸ M. Foltz, *Geschichte des Danziger Stadthaushalts*, Danzig 1912, pp. 176–177.

¹⁰⁹ E. Keyser, *Die Baugeschichte*, pp. 320, 322, 324–326. The levelling undertaken in the sixteenth century is indicated by the results of archaeological research, R. Krzywdziński, *Analiza przestrzenno-funkcjonalna archeologicznych reliktów zagospodarowania działek mieszczańskich z południowo-zachodniej części kwartału ulic: Długie Ogrody, Szafarnia, Angielska Grobla i św. Barbary w Gdańsku*, "Archeologia Gdańska", vol. 5, 2013, pp. 30, 31, 37.

the road running along the canal to the south. It was used by guards of the nearby burghers' forest.¹¹⁰ There were no commercial facilities in this suburb.

The suburban parish church was the Lutheran church of St. Barbara, with a hospital also dedicated to St. Barbara. Behind it, as far as the Angielska Dyke, the gardens and a fenced meadow stretched.¹¹¹

The wetlands south of Długie Ogrody were still covered by thickets and wastelands. There was also the so-called Świńska Meadow (*Schweine Wiese*), to the east of which the burghers' forest stretched.¹¹² At that time, it was probably already crossed by the so-called 'new ditch', built between the Rozwójka River's floodplain and the Motława River, with which it merged upstream of the town. Perhaps when the level of water in the Motława River was high, this ditch allowed the excess water to flow into the floodplain, and further to the lower part of the river downstream of the town. Roughly midway of its length, a canal with a sluice linked it to the New Motława Canal.¹¹³

The area north of Długie Ogrody up to the Vistula River was also covered by waterlogged meadows divided into two parts by the Gęsi Canal (former channel of Rozwójka). Across from Ołowianka, some land was allocated to the brewers' wood stacking yards, which after 1576 were moved to this place from Świńska Meadow.¹¹⁴ To ensure convenient access to the stacking yards, they were crossed by a ditch. Across from Brabank Island at the mouth of the Gęsi Canal to the Motława River, a tavern of the Holy Spirit was located. Near the place where the Motława River flowed into the Vistula River, another tavern called Polski Hak, was named after the cape created at Motława River's outlet to the Vistula River. The entrance to the port of Gdańsk was managed by the use of the so-called bar, a mobile log baffle, which needed to be opened for the ships to pass through. Similar bars were located on Wiadowników Canal (*Eimermachergraben*) and, supposedly, on *Stagnete Graben*, which was beyond the area covered with the plan, on the New and Old Motława, downstream of the sluice called *Megde Loch*.¹¹⁵

Zamczysko, Wiadrownia, Brabank

In 1455, by the virtue of the privilege of the Polish king Kazimierz Jagiellończyk from 1454, the area in the vicinity of the former Teutonic Knights' castle was incorporated into the Main Town. The boundary separating it from the Old Town estate (finally established in 1637) was drawn along the outer moat. The Teutonic sawmill and the area by the castle were left on the Old Town side. In the south, it probably initially ran along the edge of the northern Main Town moat, and later, after the border regulations, along the northern side of the canal built in the moat's place. In the Targ Drzewny Square (*Holzmarkt, Wood Market*) vicinity, it ran along the outer edge of the strip separating the two Main Town moats (including several plots of land within their area, in the section between the Szeroka Gate and the outer gate of the Ludwisarska Gate) and further along the town walls up to Św. Gertrudy Gate.¹¹⁶

Therefore, three new areas have been added to the Main Town: the area of the former Teutonic Knights' castle called Zamczysko, the north-eastern castle grounds stretching as far as the Wiadowników

¹¹⁰ E. Keyser, *Die Baugeschichte*, p. 325. The manor house was shown on the plans of the Construction Office from the seventeenth and eighteenth centuries, e.g., APGd, 300, MP/502 (1620), APGd, 300, MP/1025 (1641), APGd, 300, MP/522 (1700).

¹¹¹ The plan from around 1600 shows gardens and a fenced meadow, which could have been used for bleaching. The bleaching workshop was shown for the first time there on a Peter Willer's plan from 1687, PAN BG, No. 5640.

¹¹² The forest's range is shown on the 1615 plan, APGd, 300, MP/131.

¹¹³ This canal is shown on Schmer's plan from around 1615 and the plan of the "Bauamt" of the same year, APGd, 300, MP/131. Its remaining part (the northern section and a road along the line of the side canal) is also shown on the plan of the "Bauamt" from around 1700, APGd, 300, MP/522.

¹¹⁴ The square in Szafarnia was considered suitable for storage as early as in 1561, APGd, 300, R/Cc, p. 30. In 1565 a request was made to move it to another convenient location, APGd, 300, 10/1, p. 114r; E. Keyser, *Die Baugeschichte*, pp. 382–383.

¹¹⁵ The location of all these objects is shown on the 1615 Schmer's plan, GStA PK Berlin, XI. HA, AKS, Rolle No. 30L. For the rules of construction and use of the bars cf. C. Biernat, *Życie portowe Gdańska*, pp. 237–238.

¹¹⁶ P. Simson, *Geschichte der Stadt*, vol. 4, no. 137. Cf. plan from 1637, APGd, 300, MP/6 and the description of boundaries, PAN BG, Ms 733, 84r–93v. Both the moat and the area around it supposedly belonged to the Main Town, APGd, 300, R/Mm, 1, p. 507 (1608).

Canal, and Brabank – an island located between the canal and the outlet of the Motława River to the Vistula. Until the end of the sixteenth century, they were hardly developed. The castle walls and buildings were mostly torn down, but the old castle moats were not entirely backfilled. In the area of Zamczysko, along the remaining moats, powder mill, dye workshops and the associated frames were allowed to be situated. Additionally, cloth drying frames were placed in its central part.¹¹⁷ On the castle grounds, to the north-east of the fortifications, the wood stacking yards were located. In 1540, near the place formerly occupied by the Teutonic Knights' brickyard, at the outlet of the castle's outer moat) to the Wiadowników Canal, the bucket makers' guild was given a plot of land.¹¹⁸ It could be accessed by a passage near the gunpowder tower, the former Teutonic Knights' fortified tower which guarded the outlet of the castle's outer moat. The main street of the settlement overlapped with the later Wielka Street (*Grosse Gasse*, currently non-existent). A crane was placed in the spot where the canal reached the Motława River. The area was separated from the town by a series of medieval castle walls drawn into the perimeter of the town fortifications.¹¹⁹ A wide section of the quay stretched near one of the castle towers by the Motława River, allowing smaller vessels and a ferry to Ołowianka to be moored. A bar located there marked the outer edge of the port of Gdańsk and made controlling traffic in the port possible. The further, narrow part of the quay stretched as far as a distinct offset in the wall.¹²⁰

Brabank Island, located on the opposite side of the canal, was only accessible by water. There was a ferry to the island from the eastern corner of the castle grounds. Since medieval times, there was a repair shipyard on Brabank, and a tavern of the same name operated near it. On the other side of the island, by the old Radunia channel, a windmill was situated.¹²¹

Western suburbs of the Main Town

There was only one gate leading to the western suburbs of the Main Town, the Wyżynna Gate, which also served as the main entrance to Gdańsk. The suburbs were adjacent to the property of the village of Suchanino (*Zigankenberg*) from the north and partly from the west, and further to the west on the properties of the Bridgettine Sisters in Siedlce and those belonging to the Bishop of Włocławek from the south. The latter border, which was marked with border stones with the coat of arms of the Teutonic Knights of Gdańsk and frequently monitored, is known from modern cartography.¹²² Little is known about the boundary with the suburbs of the Old Town. Allegedly it ran between the Main Town's shooting range and the grounds of the Corpus Christi hospital.

The suburbs south of the Old Suburbs included Zaroślak, a former Teutonic village. It stretched along an elongated square by the main road below the Radunia Canal. Dense development, marked by the rhythm of narrow parcels reaching the Motława River, stretched only on the eastern side.¹²³ Just behind Zaroślak, along the southern frontage of today's non-existent Motławska Street (*Mottlauschegasse*), there was a boundary between the estate of Gdańsk and those belonging to the Bishop of Włocławek.

The main street of the suburb, situated outside the town and west of the canal, was Nowe Ogrody beginning in the Targ Rakowy (*Krebsmarkt*) in front of the Wyżynna Gate by the Radunia Canal and running further towards Siedlce. The width of the street included the Siedlecki Creek, which at that time had its origin in a pond located in Krzyżownicy. In the south, through the area of the former gravel and sand excavation, ran a parallel street *Sandgrube* Street, which at the foot of Kminkowa

¹¹⁷ E. Keyser, *Die Baugeschichte*, p. 220. Cf. "Stockholm plan" and the copy of Hans Strakowski's missing plan from 1638, Staatsbibliothek, SBB_IIC_Kart. X. The original was published by O. Kloeppel, *Das Stadtbild von Danzig*, p. 125.

¹¹⁸ S. Rühle, *Anfänge und Zusammenschluß des Danziger Böttchergewerks*, "Mitteilungen des Westpreussischen Geschichtsvereins", vol. 29, 1930, no. 4, p. 67, "einen Raum 28 Ruten lang, hinter dem Schlosse, da ehemals die abgebrannte Ziegelscheune ungefähr gestanden hätte".

¹¹⁹ G. Köhler, *Geschichte der Festungen*, p. 188. The castle walls and moats are visible on the plan from around 1600 as well as the later ones from 1615 (Schmer) and 1619. (APGd, 300, MP/2).

¹²⁰ Cf. the "Stockholm plan".

¹²¹ These objects are shown in Friedrich Berndt's plan of 1601, APGd, 300, MP/511 and Schmer's plan of 1615.

¹²² E.g., APGd, 300, MP/630 (ok. 1641), APGd, 300, MP/649 (1650), APGd, 300, MP/629 (1660), APGd, 300, MP/659 (1759). Border signs' checks: 1592 r., APGd, 300, R/A, 1, p. 53; 1601 r., APGd, 300, R/A, 1, p. 59.

¹²³ APGd, 300, MP/168 (1601); 300, MP/661 (1611).

Mountain (*Kümmelberg*) forked into two roads: one running in the direction of Siedlce (in the western part corresponding with the course of Malczewskiego Street (*Schladahlsche Gasse*) the other – currently non-existent, as it was crossed by the hill fortifications around 1655 – towards the Chełm village. Another parallel street also no longer existing today, ran from the direction of the former Karowa Gate of the Old Suburbs, from the bridge over the Canal of Radunia towards Chełm. A winding road diverged from it, leading to the bishop's village Biskupia Górka situated on the flat top of the mountain (or rather on the edge of the upland).

A short distance from the western moats of the Main Town and the Old Suburb ran the Radunia Canal, which was moved away from the town in 1573 due to the construction of a bastioned fortification ring. Following the safety requirements, the strip of land between the town fortifications up to the Radunia Canal remained undeveloped. It was used for livestock markets and wool trade. The only facility in the immediate vicinity of the town was the new St. Gertrude's Hospital, erected in 1582 on the land south of the Wiebe's Bastion, which was under construction at that time.¹²⁴ An old hospital, located near Wyżynna Gate was dismantled in 1563 due to the erection of the fortifications. On the new hospital property, a bleaching workshop operated and a water intake for the Old Suburbs was located nearby.¹²⁵

Since medieval times, several industrial facilities – a bark and a fulling mill – had been operating in front of the Wyżynna Gate by the Radunia Canal, but they had to be relocated due to the alteration of the canal bed.¹²⁶ Nearby, there was an inlet for the water from the canal located there since medieval times, from which both municipal sumps and private houses were supplied. In 1536, in its vicinity, the first water pump station (*Kunst wodny*) was built. It amassed water, extracted from the Radunia Canal. After 1539, it was improved by the water led through a pipeline from the inlet on the pond in Krzyżowniki. This network supplied private houses and the Neptune Fountain. The water installation was all burnt down in 1577 and rebuilt in a new location.¹²⁷ In 1600, on the side of the canal closer to the town, a new water pump station operated, and, supposedly, there was a fulling mill downstream on the canal.¹²⁸ On the other side of the canal, by Targ Rakowy, a tanning mill was built anew.¹²⁹

The development in the frontages of these streets was not continuous. The western suburbs were destroyed every time the town was besieged, last time during the siege of Gdańsk by Stefan Batory's army in 1577. Even in the 1590s, there were only a few houses in the gardens covering almost the entire area of the suburbs. In 1617, their number increased, but it is difficult to say what was the state of the development around 1600.¹³⁰

South of *Rosental* there were sheds of the Main Town brickyard, the former Teutonic Knights' brickyard. It was situated here after 1571 when the Radunia Canal was moved further to the west of the town. Beside it was a clay pit called *Schwarzes Meer*, filled with water at that time, which served as a town dumping ground.¹³¹ There were plans to establish a new cemetery south of the brickyard, to replace the one belonging to the St. Gertrude's Hospital, which was located in front of the Wyżynna Gate and closed down in 1572. It was not possible to ascertain when the plans finally came into being.

¹²⁴ G. Köhler, *Geschichte der Festungen*, p. 215, E. Keyser, *Die Baugeschichte*, p. 313.

¹²⁵ The intake is shown on the "Stockholm plan", Schmer's plan of 1615 and Ä. Dickmann's veduta of 1617. Perhaps its location is the same as the location of the inlet from 1537, cf. APGd, 300, R/LI, 4, f. 300v. Initially the pipes were probably laid at the bridge in front of the New Gate, cf. APGd, 15/1, f. 73v (1599), f. 79r (1600), f. 128v (1608).

¹²⁶ The leather mill leased by the order to the leatherworkers was built in 1397, P. Simson, *Geschichte der Stadt*, vol. 4, no. 112, p. 74. The bark mill was built before 1493, Ch. Beyer der Ältere, *Danziger Chronik*, [in:] *Scriptores rerum Prussicarum*, vol. 5, publ. Th. Hirsch, M. Toepfen, E. Strehlke, Leipzig 1874, p. 450. They had been mentioned since the 1560s, APGd, 300, 10/4, f. 115r, 116v (1571), f. 412r (1573), f. 470v (1572), f. 488r, 489r (1573); *Chronik der Marienkirche*, p. 488 (1577).

¹²⁷ The water pump station was rebuilt in 1585, P. Simson, *Geschichte der Stadt*, vol. 2, p. 166.

¹²⁸ Their position in relation to each other is shown in the Georg Tellior's (?) plan from 1647, APGd, 300, MP/598. It remains uncertain whether the fulling mill existed in 1600. Małgorzata Grupa dates, after Maria Bogucka, its establishing to the seventeenth century, M Grupa *Welniane tekstylia*, p. 105

¹²⁹ The agreement concerning the relocation of the tannery mill of the shoemakers' guild to the square located on the western side of the canal, emptied after the destruction of the water station by the suede mill, was established in 1585, APGd, 300, R/Bb, 26c, p. 1.

¹³⁰ The suburb is shown on two vedutas drawn from the slope of Biskupia Górka: Anton Möller's from 1592/1593 (PAN BG, Z IV 1013) and Ä. Dickmann's from 1617 (National Library of Sweden, KoB DelaG Stö.f.163), as well as three from the slope of Gradowa Mountain: G. Braun's, F. Hogenberg's from 1573. (PAN BG, no. 4488), A. Moeller's from 1610 (from the main altar in the church of St. Catherine in Gdańsk) and Johann Krieg's, after 1620, MNG/SD/281/M.

¹³¹ APGd, 300, R/Cc, 23, f. 37v (1572). It was also described in: 1630 r. APGd, 300, MP/630.

As late as 1617, the area intended for a new cemetery was occupied by a bleaching workshop.¹³² The further eastern part of the slope was torn by clay and sand excavations, extracted for brickyards and the town fortifications built at that time. The excavations in the lower part of the slope, by the Radunia Canal, were gradually levelled and prepared for settlement.

Old Town and Osiek

Since medieval times, the area of the Old Town has undergone certain changes as a result of expansion of the earthen fortifications. It stretched from Targ Drzewny and Podwale Staromiejskie Street (*Altstädtischer Graben*) in the south to the line of the northern walls and ramparts (at the back of Wapiennicza Street, (*Kalkgasse*, no longer exists), Św. Jakuba Street (*Jacobs-Neugasse*, no longer exists) and from St. Elizabeth's Hospital to the area by the castle and the rampart connecting the castle fortifications to the north wall line. In the 1480s the southern part of the Targ Drzewny Square was enclosed by the walls, and incorporated into the town, partly with the buildings surrounding it. The area by the castle situated by the sawmill, on the outside of the former castle moats, as well as the quarter located between Osiek Street and the Radunia Canal were also included. On the other hand, the area of the town decreased on the western side as a result of the widening of the town ramparts in the years 1547–1563. In 1562, the Gate of St. Gertrude at Targ Drzewny was permanently closed. Since then, the Old Town could only have been directly accessed from the north through the Corpus Christi Gate and St. Jacob's Gate.¹³³

The layout of the streets had remained unchanged since medieval times. However, the boundary between the Old Town and Osiek had disappeared. The Town Hall of the latter located at 33 Stolarska Street (*Tischlergasse*), its last trace of autonomy, was sold by the Old Town council in 1597. The streets belonging to this part of the town were already included in the land registry book created in 1624.¹³⁴ A fragment of the town with the regular chessboard pattern layout, located north of the Radunia Canal between Rajska Street (*Paradiesgasse*) and Łagiewniki (*Schüsseldamm*), was enclosed from the west by the streets: Elżbietańska (*Elisabeth-Kirchengasse*), Podbielańska (*Weissmünchen-Hintergasse*) and Korzenna Street (*Pfefferstadt*) and from the south by a line of buildings stretching from Podwale Staromiejskie Street to the Radunia Canal, intersected by a series of wider and narrower streets, irregular in the area of Osiek. In 1577, 1,389 houses and huts were located in the Old Town and Osiek.¹³⁵

The market square of the Old Town was Targ Drzewny, situated by the St. Gertrude's Gate, already closed at that time. It is possible that a part of Gnilna Street (*Faulgraben*) near the Corpus Christi Gate, between Korzenna Street and Rajska Street (*Paradiesgasse*), also served as a marketplace.¹³⁶ The central

¹³² The hospital cemetery was probably located in the area of the later horse watering place in front of the canal conduit by the Old Town moats. The remains of the deceased were transferred to a new cemetery, APGd, 300, R/LI, 4, f. 540v. On the decommissioning of the cemetery by the hospital of St. Gertrude, G. Löschin, *Geschichte Danzigs von der ältesten bis zur neuesten Zeit*, Danzig 1822, vol. 1, p. 264; G. Köhler, *Geschichte der Festungen*, p. 219 (he reported the year 1573 as the time of the relocation). Also E. Keyser, *Die Baugeschichte*, p. 408. The use of the future cemetery area by a bleaching workshop is shown on the Ä. Dickmann veduta from 1617 (National Library of Sweden, KoBDelaG Stö.f.163).

¹³³ On the plots of land near the moat of the Main Town, APGd, 300, 31/95, p. 329 (1595); J. Kaufmann, *Studien zur Geschichte der Altstadt Danzig*, pp. 94–96. Description of the Old Town boundaries from 1637, PAN BG 733, f. 92v–93v. On ramparts development, cf. G. Köhler, *Geschichte der Festungen*, pp. 204–207. G. Bukal, *Fortyfikacje Gdańska*, pp. 84–85. On takeovers of gardens and demolitions of houses, APGd, 300, R/LI, 4, f. 331v (1547), f. 377v (1563); M. Foltz, *Geschichte des Danziger Stadthaushaltes*, p. 547; E. Keyser, *Die Besiedlung der Altstadt Danzig*, "Zeitschrift des Westpreussischen Geschichtsvereins", vol. 61, 1921, p. 175. 1000 *grzywnas* were paid in 1549 as compensation. On closing the gates, G. Köhler, *Geschichte der Festungen*, p. 207.

¹³⁴ Town Hall location, APGd, 300, 41/180, f. 17v; APGd, 300, 32/24, f. 33r. E. Keyser incorrectly concluded that it was located at Sołecka Street, idem, *Die Baugeschichte*, p. 223. He described the Town Hall building as "altes Gemeindehaus". On the sale of the building, which was still being renovated in 1502 and 1511, cf. P. Simson, *Geschichte der Stadt*, vol. 1, p. 368; J. Kaufmann, *Studien zur Geschichte*, p. 89. As early as 1585, a land register covering only the area of Osiek was introduced – APGd, 300, 32/24, while the Old land register of 1624, APGd, 300, 32/28 already covered the area. Both were in use until the beginning of the nineteenth century.

¹³⁵ APGd, 300, R/Vv, 35, pp. 304–305.

¹³⁶ The name "Holtzmarkt" has already appeared on the town plan from 1615. The own name Targ Kaszubski (Kashubian Market), indicating its commercial use, appeared only in 1694, W. Stephan, *Die Strassennahmen*, p. 53.

part of the wide waterfront of the Radunia Canal by Rybaki Górne Street (*Hohe Seigen*) was used as a fish market.¹³⁷ Within the town, the bread benches were operating on the bridge by Korzenna Street. Butcher's benches were placed between Podzamcze Street (*Burggrafenstraße*) and *Podwale Staromiejskie* Street, east of Sołeczka Street (*Schulzengasse*, no longer exists).¹³⁸ The Old Town Slaughterhouse was situated by the side canal of Radunia, at the back of today's properties at 3–4 Na Piaskach Street (*Am Sande*).¹³⁹ Since medieval times, bread benches have been placed on the Bread Bridge by the Radunia Canal, in the vicinity of the Town Hall.¹⁴⁰ The weigh house was probably situated on the ground floor of the Town Hall.¹⁴¹ There is no information about other commercial facilities within the Old Town at the turn of the sixteenth and seventeenth centuries.

The Old Town Hall was located at 33–35 Korzenna Street. Between 1587 and 1595, a new building was erected on the site of a medieval timber frame construction built here after 1455. The town council and the law court held their sessions here. Nearby, at Bielańska Street (*Weißmönchen-Kirchengasse*) – the area of the current car park between the town hall and the building at 5 Bielańska Street – there was a Stadthof, a pillory, and a prison by the Radunia Canal.¹⁴² Two bathhouses were operating in the Old Town at that time one opposite the town hall at 40–41 Korzenna Street and the other at 49–50 Heweliusza Street (*Baumgartschegasse*).¹⁴³ It seems that the town knacker's yard was located in the area of the Bożego Ciała Gate.¹⁴⁴

A number of industrial facilities using the power of the Radunia canals were located in the Old Town. Just behind the ramparts, at the back of the property at 1–3 Garncarska Street (*Töpfergasse*), currently undeveloped, a silver smeltery was placed at the main current of the canal.¹⁴⁵ Downstream, on an island encircled by two branches of the canal, a corn mill called the Great Mill was erected.¹⁴⁶ In the eastern part of the island, another facility was established, perhaps a brick granary. To the north of the mill, two additional branches of the canal were dug and a fulling mill, a tanning mill (the latter still in use around 1600), as well as a small sawmill (sixteenth century), were built over it.¹⁴⁷ At the same side, there was a *Mühenhof* with facilities reaching as far as Bednarska Street (*Böttchergasse*). The remaining part of the canal was not used for economic purposes, which was perhaps because in its lower part fishermen living at Rybaki Górne and Rybaki Dolne (*Höhe-, Nieder Seigen*) kept their pot traps in the water.

From the main canal (the flume) two side branches separated downstream of the ramparts, and upstream of the island of the Great Mill. The first branch, which departed upstream of the silver smeltery, initially ran along the ramparts and then turned eastward in front of the property at 6 *Silberhütte*

¹³⁷ E. Keyser, *Die Baugeschichte*, pp. 178, 189.

¹³⁸ On bread benches, cf. J. Trzoska, *Gdańskie młynarstwo i piekarnictwo w II połowie XVII i w XVIII wieku.*, Gdańsk 1973, p. 138. On meat benches, cf. J. Kaufmann, *Studien zur Geschichte*, pp. 122–123; E. Keyser, *Die Besiedlung*, pp. 170–171; M. Bogucka, *Gdańsk jako ośrodek produkcyjny*, p. 209.

¹³⁹ APGd, 300, R/Bb, 26b, f. 11r: “da vor zeiten ihr Kittelhoff gewesen” (1613); APGd, 300, 12/226 p. 605 (1661).

¹⁴⁰ E. Keyser, *Die Baugeschichte*, p. 241; J. Habela, *Ratusz Staromiejski w Gdańsku*, Wrocław–Warsaw–Cracow 1975, p. 36.

¹⁴¹ It was supposed to be located here in the seventeenth century, J. Habela, *Ratusz Staromiejski w Gdańsku*, p. 35, as well as in the eighteenth, F.C.G von Duisburg, *Versuch einer historisch-topographischen Beschreibung der freien Stadt Dantzig*, Dantzig 1809, p. 96.

¹⁴² APGd, 300, 32/23, f. 46r, 47r; R. Curicke, *Der Stadt Danzig*, p. 57; P. Simson, *Geschichte der Stadt*, vol. 2, p. 560. J. Kaufmann, *Studien zur Geschichte*, p. 104. The prison building is shown in the “Stockholm plan”, and the passage to the prison is presented in the engraving of P. Willer depicting the Old Town Hall, R. Curicke, *Der Stadt Danzig*, before p. 53. The location of the Stadthof and the adjoining pillory is also shown on a plan drawn between 1770 and 1780, PAN BG, C I 50.7.

¹⁴³ In 1449, the Teutonic Knights' bathhouse on Korzenna Street was purchased by the town, cf. APGd, 300, 32/23, f. 50. The oldest mention of the bathhouse on Heweliusza Street comes from 1641, APGd, 300, 32/23, f. 86r, 99r. It could have already existed around 1600, as some buildings were shown on the plan from that time.

¹⁴⁴ APGd, 300, 41/184, p. 77: “vor dem Heiligen Leichnamsthore. Dreckbotel dy ander bude” (1511).

¹⁴⁵ M. Bogucka, *Gdańsk jako ośrodek produkcyjny*, p. 146. The location of the smeltery is shown on the plan from 1612, APGd, 300, MP/324.

¹⁴⁶ It is assumed that the time of its creation is determined by the mention of a new flume from 1356 or even a copper foundry from 1355, P. Simson, *Geschichte der Stadt*, vol. 4, Danzig 1918, no. 88; *Księga Komturstwa Gdańskiego*, publ. K. Ciesielska, I. Janosz-Biskupowa, Warsaw 1985 (Fontes – Towarzystwo Naukowe w Toruniu, vol.70), no. 127.

¹⁴⁷ P. Simson, *Geschichte der Stadt*, vol 4, no. 93; *Księga Komturstwa Gdańskiego*, no. 226, p. 202. They were located around 13–14 Bednarska Street. The tannery mill at that time belonged to the guild of cordovan makers, APGd, 300, 12/373, p. 376. M. Bogucka, *Gdańsk jako ośrodek produkcyjny*, p. 139. A small sawmill: APGd, 300, 12/373, p. 158 (1636). It seems that it must have already existed at the beginning of the seventeenth century, because on the “Stockholm plan” two or three mills were located by the canals. The mill was mentioned in: APGd, 300, 12/373, p. 158.

Street (currently 24 Wały Jagiellońskie). Just after the turn, an oil mill was built by it, and it was still in operation around 1600. Further downstream, at the corner of 14 Kowalska Street (*Schmiedegasse*) a groat mill was established, and at the corner of Młyńska Street (*Große Mühlengasse*, currently an alleyway), at 110 Podwale Staromiejskie Street – two polishing workshops: All these facilities were still in operation at the beginning of the seventeenth century.¹⁴⁸ In the area of the property at 110 Podwale Staromiejskie Street, the branch that supplied the northern moat of the Main Town separated from the canal. The second of the side canals of the Radunia, called the little Radunia, had its origin past the bridge at Garncarska Street (*Töpfergasse*) Just beyond the fork there was a paper mill in place of the former copper foundry.¹⁴⁹ Next to the property at 13 Młyńska Street, the second side canal merged with the first one. There were no other industrial facilities along the further part of the canal, as far as the former Teutonic sawmill at 1 Tartaczna Street (*An der Schneidemühle*). Eventually, the canal forked, encircling a fragment of Osiek and entered the flume at Stajenna Street (*Am Stein*). At that time, there was no watercourse that would connect the little Radunia with the outer castle moat.¹⁵⁰

While it is known that a town powder mill was located in the Old Town as well, its location could not be determined.¹⁵¹ There is no information on other industrial establishments in this part of Gdańsk.

Similarly to the Main Town, the Old Town area was divided into four quarters. However, there are no documents preserved which would allow delineating their boundaries.¹⁵²

There were two Lutheran parish churches in the Old Town: the church of St. Catherine of early medieval origin, and the church of St. Bartholomew built after the inhabitants moved from the demolished the Young Town (*Młode Miasto, Jungstadt*) to the uninhabited land of the Old Town after 1455.¹⁵³ There were also two monasteries: one belonging to the Bridgettine Sisters by the Radunia Canal, west of Brygidki Street, with the church of St. Brigid, with a congregation of penitents operating by it, with its own chapel, at the end of the seventeenth century used by the Jesuits,¹⁵⁴ and one held by the Carmelites at Elżbietańska Street (*Elisabethkirchengasse*), with the church of St. Elijah and Elisha.¹⁵⁵ Supposedly, at that time the chapel of medieval St. George's Hospital for lepers also still existed.¹⁵⁶ Since medieval times, there were two hospitals: St. Elizabeth's Hospital dedicated to the poor, located on the Radunia Canal at Elżbietanska Street,¹⁵⁷ and St. Jacobs's Hospital for sailors, on Łagiewniki Street near the town ramps.¹⁵⁸ In 1541, an orphanage for babies and children up to the age of 10

¹⁴⁸ On the oil mill: *Preussisches Urkundenbuch*, vol. 6, Lfg. 2, publ. K. Conrad, Marburg 2000, no. 530 (oil mill); APGd, 300, 32/23, f. 5; APGd, 300, MP/324 (plan from 1612). E. Keyser, *Die Baugeschichte*, p. 226, incorrectly indicated its location as being on the southern, rather than the northern side of the canal. On the groat mill, M. Foltz, *Geschichte der Danziger Stadthaushalts*, p. 204. Initially, two grinding mills operated here, but since the end of the fifteenth century there was only one, APGd, 300, 32/23, f. 20v: *die schleifmühlen*. M. Foltz, *Geschichte der Danziger Stadthaushalts*, p. 206; E. Keyser, *Die Baugeschichte*, p. 226; M. Bogucka, *Gdańsk jako ośrodek produkcyjny*, p. 113.

¹⁴⁹ M. Bogucka, *Gdańsk jako ośrodek produkcyjny*, p. 158; APGd, 300, 12/226, p. 191 (1640); APGd, 300, R/Q, 12, f. 27r. (1570–1577).

¹⁵⁰ The connection was depicted in the reconstruction plans by G. Köhler, F. Froese, O. Kloeppe, J. Stankiewicz. Only K. Hoburg did not depict it. It was probably created no sooner than in the second half of the seventeenth century. It was not shown on the lost plan of Zameczysko by J. Strakowski from 1648, cf. the copy in Staatsbibliothek Berlin, SBB/IIIIC/Kart. X 22435. It was first shown on the 1687 plan of the town by P. Willer, PAN BG, no. 5640.

¹⁵¹ M. Foltz, *Geschichte der Danziger Stadthaushalts*, p. 206. Perhaps the author mistakenly assigned to the Old Town a gunpowder mill built in the strip separating the former castle moats, and thus belonging to the Main Town.

¹⁵² P. Simson, *Geschichte der Stadt*, vol. 2, p. 460.

¹⁵³ E. Keyser, *Die Baugeschichte*, pp. 256–260.

¹⁵⁴ E. Keyser, *Die Baugeschichte*, pp. 250–252; S. Kościelak, *Katolicy w protestanckim Gdańsku*, pp. 83–85, 88–89. The chapel of the penitents of St. Mary Magdalene was disassembled in 1638. Its remains were discovered during the architectural research carried out after the Second World War, cf.: J. Ciemnołowski, R. Massalski, J. Stankiewicz, *Notatki o odkryciach architektonicznych na terenie Gdańska*, "Rocznik Gdański", vol. 14, 1955, pp. 431–432.

¹⁵⁵ E. Keyser, *Die Baugeschichte*, pp. 261–262; S. Kościelak, *Katolicy w protestanckim Gdańsku*, pp. 85–86.

¹⁵⁶ *Księga komturstwa gdańskiego*, no. 127. The building was to be located on the area granted to the Carmelites in 1464, probably at Elżbietańska Street. According to S. Kościelak, if it still existed, it could be used by the Catholic population of Gdańsk, idem, *Katolicy w protestanckim Gdańsku*, p. 90.

¹⁵⁷ P. Simson, *Geschichte der Stadt*, vol. 4, no. 108, 109; J. Muhl, *St. Elisabeth zu Danzig*, "Mitteilungen des Westpreussischen Geschichtsvereins", vol. 34, 1935, no. 1, pp. 5–9; E. Keyser, *Die Baugeschichte*, pp. 247–250.

¹⁵⁸ E. Keyser, *Die Baugeschichte*, pp. 252–256. P. Samól believes that the church of St Jacob indicated as located in the Young Town is the same as the Old Town hospital church. On this subject, cf.: idem, *Kościół i szpital w topografii Młodego Miasta Gdańska*, [in:] *Między Gdańskiem a Santiago: 600-lecie konsekracji kościoła św. Jakuba fundacji szyprow gdańskich*, ed. B. Siek, A. Szarszewski, P. Paluchowski, Gdańsk 2015, pp. 76–83; idem, *Młode Miasto Gdańsk (1380–1455) i jego patry-*

was established by St. Elizabeth's Hospital.¹⁵⁹ Over the outer dam of the Teutonic castle, there was a house for the patients with smallpox (rebuilt in 1602 after the fire of 1592).¹⁶⁰

Old Town suburbs

The suburbs around Old Town encompassed a small area on the north and north-western side of the town, described in the land books as situated "in front of the Corpus Christi Gate". Two gates led to it: Corpus Christi and St. Jacob's. The main street of the northern suburb, which partly overlapped with Jana z Kolna Street (*Schichaugasse*) was called *Hinter dem Lazareth* Street. The northern suburb was delimited from the west by a route leading initially along Dyrekcyjna Street (*Am Olivaer Tor*), and then through the Young Town's timber stacking yards. To the west of it, the open space stretching all the way to the hills was traversed by a number of north-south roads crossed with many shortcuts. Most of the land in the suburb was occupied by gardens, behind which meadows stretched as far as the Vistula River.¹⁶¹

The oldest known building in the area was the Lazaret built before 1515.¹⁶² It was a hospital for infectious diseases, and eventually also for the old and infirm. Until the beginning of the seventeenth century, a number of buildings were built on the hospital's property – a hospital with a chapel, a kitchen and houses for the prebendaries. On the other side of *Hinter dem Lazareth* Street, a pesthouse was built for patients with smallpox (c.a. 1601).¹⁶³ North of the area belonging to Lazaret, the garden of Old Town councillors was located, and within its perimeter a brick building of unknown purpose was erected. Behind the garden, there was a square with cloth drying frames and Old Town timber stacking yards, accessed by a canal which flew into the Vistula River (it marked the boundary with the Young Town area until 1455). On the eastern side of the street, near the St. Jacob's Gate, there were several plots of land belonging to Gdańsk hospitals, with buildings located near the street.¹⁶⁴

On the northern side of the former border canal, till 1455, lay the areas of the Young Town. Their majority was used by the Old Town and Gdańsk hospitals. Only some facilities were in the hands of the Main Town Council. The closest to the town were the so-called "Young Town" wood stacking yards stretching around the fenced square with cloth making frames, and as far as the road leading from the Corpus Christi hospital, past the Old Town brickyard and towards Nowe Szkoty (*Neuschotland*). The brickyard was located in the vicinity of the current eastern frontage of Marynarki Polskiej Street, at the northern edge of the area of the *Schichau's* shipyard (before the World War II at the exit of Jana z Kolna Street) and at the end of the canal built after 1539, which served to transport the wood intended for burning bricks and roof tiles.¹⁶⁵ Next to the brickyard, a lime kiln was located. In the vicinity, along one of several parallel routes leading from the town to the north, the Young Town hospital of the All Angels of God was situated (in the Steffen's Park on the west side of the current railway line, by the exit of the eastern one from two central avenues of the park, opposite Tuwima Street (*Linden Straße*)). Halfway between the canal of the brickyard and the Young Town's stacking yards along the Vistula River, the Main Town lime kiln was located, and to the north of it, the Main Town's and the Old Town's store places for limestone. Most likely there was a quay in this area used for unloading limestone shipments.¹⁶⁶

monium, Gdańsk 2018, pp. 161–163, 190–197. I do not agree with the reasoning put forward by the researcher, and I believe that there were two churches under this name: the Young Town church and the Old Town church. More on this subject in the Historical Atlas of Polish Towns: Gdańsk [in print].

¹⁶² P. Simson, *Geschichte der Stadt*, vol. 2, p. 384. It was to be built on the site previously occupied by the Young Town hospital of St. Roch. The buildings of the hospital are shown on the plan from 1601, APGd, 300, MP/511.

¹⁶³ P. Simson, *Geschichte der Stadt*, vol. 2, p. 530.

¹⁶⁴ All these objects are shown on a plan from 1601, APGd, 300, MP/511. The pesthouse was marked on a plan from 1674, APGd, 300, MP/764.

¹⁶⁵ APGd, 300, R/LI, 4, f. 310r.

¹⁶⁶ All these facilities and roads are also shown on the APGd, 300, MP/511. On a medieval hospital cf. P. Samól, *Młode Miasto*, pp. 187–190.

Other buildings located between the Vistula River and the hills were only to be found in the vicinity of Wrzeszcz (*Langfuhr*), by the creek of the Królewska Dolina (*Royal Valley*) and the Strzyża River.

West of the Old Town and the wide area crossed with parallel routes, on the edge of the hills, the Corpus Christi hospital buildings, including a hospital church were located. A cemetery was located by the hospital, on its southern side. Both the hospital and the cemetery were fenced. A road leading to Suchanino ran along the northern boundary of the hospital, through the valley between Gradowa Mountain and *Wunderberg* Hill, next to the shooting range of the Old Town burghers.¹⁶⁷ North of the road, on the slope of another hill, there was a chapel called Jerusalem, intended for the use of those sentenced to be executed on Szubieniczna Mountain located at the exit of the Royal Valley.¹⁶⁸

To the south of the Corpus Christi Hospital and to the west of the Old Town, on the slopes of all the hills there were disorganised excavations of earth and sand, used for embankments and levelling. In accordance with the recommendations of the municipal authorities, the cavities created by digging were filled with municipal waste.¹⁶⁹

Similar, scattered clay excavations were located on the hills stretching from Gradowa Mountain to the north as far as the Royal Valley.¹⁷⁰

Suburban villages

The development of Gdańsk's suburbs on the southern and western sides of the town almost unnoticeably transformed into the villages belonging to the Bishop of Włocławek – Szkoty, and to Bridgettine Sisters – Siedlce. Szkoty were adjacent to Zaroślak, separated only by a road. They were divided into the so-called “lower side”, which comprised of houses in the frontage of a road below the Radunia Canal and further abutted Pelplińskie Chmielniki (*Pelplinischer Hoppenbruch*) and Krótka Rega (*Kurze Reihe*), and the “upper side”, which encompassed houses located along the canal on its western side. Another cluster of houses was located in a small area enclosed by forked roads in the vicinity of Chmielniki gardens.¹⁷¹ On the bishop's property on Biskupia Górka there was also a village with medieval origins, bearing the same name. The buildings continued on both sides of the road from the village towards the west, to the village of Chełm (*Stolzenberg*). Access to Biskupia Górka was also possible from the town side, by a road leading along the hillside. The village of Chełm itself was situated on the ridge of a hill that stretched from Biskupia Górka to the west. Both villages had the single-street layout.¹⁷²

(2021)

Translated by Paulina Wacławik

¹⁶⁷ This hill is named *Wunderberg* on a plan from around 1641, APGd, 300, MP/630 and a plan created after 1697, APGd, 300, MP/637. G. Bukal calls it the Admiral (from the names of the two sconces on it: Admiral and Vice Admiral, cf. idem, *Fortyfikacje Gdańska*, pp. 157, 363: fig. 7.9, p. 369: fig. 7.22. The author believed that the name *Wunderberg* was derived from the name of the scone that was built on it – *Wunder Schanze*.

¹⁶⁸ PAN BG, Ms 428, f. 517r, v; E. Keyser, *Die Baugeschichte*, p. 314. The chapel is shown on the plan, APGd, 300, MP/511 (1601).

¹⁶⁹ The Corpus Christi hospital and its neighbourhood is shown on the drawing of Ä. Dickmann from 1617, PAN BG, Gr. Al. 4090. In 1565, a decision was made to change the location of the waste disposal site. From then on, it was to be taken to the ramparts, APGd, 300, 10/1, f. 335r, 368r. Cf. also D. Kaczor, *Utrzymywanie czystości w wielkich miastach Prus królewskich XVI–XVIII wieku. Studium z dziejów kultury sanitarnej w mieście nowożytnym*, Gdańsk 2014, p. 173.

Rozwój przestrzenny do czasu zniszczenia na początku XIX wieku*, [in:] idem, pp. 56–57.

III.6.11.4 GNIEZNO SETTLEMENT COMPLEX

Anna Paulina Orłowska

The map shows the city of Gniezno: the town within its walls (after the location prior to 1241) along with the cathedral hill and numerous suburbs and villages: Jędrzejewo, Cierpięgi, Targowisko, Wójtostwo, Piotrowo, Grzybowo Świętojańskie and Panieńskie, Słomianka, Kustodia and Kawiory.

The reconstruction was developed according to the tenets of the AHP series. Its basis are cartographic sources from the eighteenth and nineteenth centuries, iconographic sources dated from the sixteenth to the nineteenth centuries and written sources mainly from the sixteenth century and the first half of the seventeenth century. A scale of 1:10,000 was adopted. The map is a hypothetical reconstruction, i.e., its elements are presented with a varying degree of probability. Especially in the case of elements known only from written sources, the location may not be fully accurate.

Cartographic and iconographic sources

The fundamental cartographic source for creating our map was the *Mappa z położeniem samych Placów y ogrodów do Miasta Gniezna należące*, developed at the request of the Boni Ordinis Commission by Karol de Kirszenstein in 1787. In this study, the scanned sketch of the map created by Marcin Beyer in 1949 was used. It was compared with a printed copy from the Archdiocesan Archive of Gniezno. There are two more known copies of this map, which were not accessible; however, judging based on the preview images, they do not seem to differ from the aforementioned versions neither in the scope nor in detail. There is no information about the existence of the original. The plan commissioned by the *Boni Ordinis* Commission is highly precise and covers the area of the located town and its southern suburbs. The areas at the edges of the map are drawn with low precision, only barely marked. This is especially true of the hill with the Church of St. John and – unfortunately enough – the present-day surroundings of the train station, extensively transformed in the second half of the nineteenth century. The area of Wzgórze Lecha (Lech Hill) is located completely outside of the plan.

The second map from the eighteenth century is dated to 1797 and, unfortunately, has been preserved only in a very simplified sketch published in the year 1946 by Henryk Münch.¹ The original plan was kept in the Poznań archives and was lost during the Second World War.² Münch used a copy on a glass plate,³ but sadly this particular plate was not transferred to the Department of Historical Atlas IH PAN. The sketch demonstrates that this map took into account many objects whose location is currently unknown.

Due to the lack of availability of older cartographic material for the reconstruction of the suburbs of Gniezno, the UMTB map was additionally consulted. The Gniezno sheet was created in 1830, thus unfortunately only after the great fire of 1819. In certain instances, modern maps have also been used.

¹ Münch, table XI.

² *Gniezno, woj. Poznańskie, Studium historyczno-urbanistyczne opracowane na zlecenie PWRN – Wydziału Architektury i Nadzoru Budowlanego w Poznaniu*, [no place] [1946], manuscript in AAG, pp. 1–2.

³ Idem.

For control purposes, the results were compared with the *Retablissement Plan*, developed after the fire in 1819,⁴ the MTB map and a sketch of the Backhoff-Crusius map.⁵

Iconographic sources also proved very valuable. Among these, a hand drawn plan from 1512 should be mentioned. It was created at the monastery of the Sisters of St. Clare and it not only depicts the northern part of the Gniezno, but also does so in a very schematic manner, though it includes details other sources fail to mention.⁶ Further information about this part of the city can be found in a second plan of the city, which was also hand drawn in the monastery in the seventeenth century. This one, a simplified bird's-eye-view plan,⁷ was less schematic and depicted individual buildings and their relative position. The bird's-eye-view plan created by Wojciech Ostafiej in 1687 was particularly important in the reconstruction of Piotrów. It was also kept in AAG.⁸

Cityscapes similarly proved to be of use. The oldest, made in 1661 by Johann Rudolf Storn, shows the city from the south,⁹ while the gouache paintings by Karol Alberti from the eighteenth century depict the city from the northwest, west and southwest and include, among others, buildings which were destroyed in the nineteenth century.¹⁰ These gouache paintings are the only sources permitting the reconstruction of the outline of buildings and are the basis for establishing the way in which the terrain was developed, particularly in the case of buildings, which were not represented on the Kirszenstein map. Unfortunately, another image of the city, dated to the same time period – the background of the painting of St. Lawrence from the church of the same name – did not offer additional information.¹¹

Written Sources

In light of the significant losses in the Gniezno archives, resulting from the fires that occurred in the city, only a very limited number of sources produced by the town was consulted. Among the most notable were the contents of the church archives. The inspection from 1608 conducted by Wincenty de Seve¹² was of particular importance. Records belonging to the Sisters of St. Clare were also used as auxiliary evidence.¹³ Files from *jurydyki* (juridical enclaves), kept at the State Archive in Poznań, were utilized in the study of particular *jurydyki*.¹⁴

Secondary Sources

The history of Gniezno was already of interest to historians in the nineteenth century. Earliest works about the city's monuments and issues related to its history were published in the 1840s by Karol Ney, mainly in the magazine *Przyjaciół Ludu*.¹⁵ In his work dedicated to the Blessed Jolanta, he outlined the history of the city to the extent that it pertained to history of the monastery of the sisters of St. Clare.¹⁶ Most of the scholars studying the history of Gniezno in the second half of the nineteenth century, including Joachim Lelewel, Ignacy Polkowski, Józef Walkowski, presented a similar approach to the subject and focused on a fairly narrow range of issues, mostly on the history of churches,

especially the cathedral.¹⁷ Research of these topics was made a lot easier with the publication of the work by Jan Korytkowski about the archbishops of Gniezno.¹⁸ The study that stands out against this trend is E.S. Kortowicz's book, devoted to topography of Gniezno.¹⁹ The first monograph about the city by Stanisław Karwowski was published in 1892 in the *Roczniki Towarzystwa Przyjaciół Nauk Poznańskiego*, it was also mainly based on Church sources and thus focused on the history of the chapter and churches.²⁰ The work by Adolf Warschauer from 1918, in which the author took advantage of his excellent knowledge of the resources found in the Poznań archive, presented the history of the city from various perspectives and thus provided a solid basis for further research.²¹ During the interwar period, the main focus of research had shifted to archaeological studies, as well as history of art and numismatics. The summary of the work carried out, among others by Joseph Kostrzewski, Konrad Jęzewski, Witold Hensel and Wojciech Kóćka, was presented in a volume edited by Kostrzewski and published in 1939.²² The post-war historiographic scholarship included several attempts to comprehensively study the history of Gniezno, the most prominent example of which was the collective oeuvre edited by Jerzy Topolski.²³ The twenty-first century saw the creation of the *Encyklopedia Gniezna i Ziemi Gnieźnieńskiej*,²⁴ which has offered significant additions to the current state of knowledge about the history of the city but unfortunately the individual articles are not marked with the acronyms of the authors. The most recent study of the history of Gniezno was written under the guidance of Józef Dobosz.²⁵ Due to the destruction of many of the written sources pertaining to the history of the city, archaeological research has played a pivotal role in this field. Important studies include a two-volume monograph by Gabriela Mikołajczyk,²⁶ four volumes of studies and materials²⁷ and a collective work edited by Zofia Kurnatowska.²⁸ Unfortunately, studies dedicated to the more recent research are scattered and some have yet to be published. A lot of historical and archaeological information about the northern part of the town within the walls is offered by the work of Stanisław Pasiciel, devoted to the monastery complex of the Sisters of St. Clare and the Franciscans.²⁹ Studies that are not monographic, but nevertheless essential to the research on the history of Gniezno, as well as Münch's study about the layout of the towns and cities of Greater Poland³⁰ and Hensel's research on the oldest capitals of Poland.³¹

History

The history of Gniezno, the first capital of Poland, spans over one thousand years. Four monographs have been published on this subject as well as many smaller studies, which is why only the information most relevant to the reconstruction of the plan will be provided here. Many trade and craft settlements developed beside the gord and the outer bailey, including the settlement on the Wzgórze Panieńskie
