I. INTRODUCTION

I.1 FOREWORDS TO THE SERIES

I.1.1 FOREWORD TO THE SERIES' COLLECTIVE EDITION: HISTORICAL ATLAS OF POLAND. DETAILED MAPS OF THE SIXTEENTH CENTURY

Marek Słoń

The idea of a historical atlas of Poland goes back over 140 years. The formation of a Research Group (today, Department) for the Historical Atlas over seventy years ago, initially at the Warsaw Scientific Society (TNW), which was tasked with preparing the AHP series apparently marks the initiation of the project. The idea and history of the AHP have been discussed several times, including as part of this publication.¹ The switch into digital work and the process of integration of the volumes into one database and book-format edition, starting with the English-language edition from 2014, have also been discussed.² These subjects will be covered also by a dedicated forthcoming publication. Thus, the rationale behind the present edition and its form calls for a justification.

The need to produce one map in lieu of cartographic representations of individual voivodeships seems obvious. The reader thereby receives a comprehensive picture of the settlement network, including the ownership relations, administrative (state) and ecclesiastical divisions, roads, and natural environment elements. This is true for the main map, scale 1:250,000, and the reference maps twice smaller in scale. Hence the need for a possibly comprehensive and coherent commentary. We have decided not to compile the entire text anew. Such a task would exceed the team's potential as it would require considerable reworking of the wide-ranging subject-matter in line with the current state of research. Such an attempt has been partly made, though. Instead of the original sections on the sources, the 2014 English edition contained synthetic texts prepared for the purpose by the authors of most of the comments thitherto written. Yet, the compilation arouses doubts from the perspective of the few years. Those summary representations prove to be overly modest as portions of original content have been removed in an attempt to avoid redundancy. Moreover, with the generational shift in the team and with the digitalisation of the research techniques, the texts were written by new authors and in a different way. Therefore, we have quit the idea to extend the aforesaid solution to the volumes published after 2014; also the section on sources will contain the original chapters.

Similarly to the 2014 English edition, the present publication is arranged by subject rather than geography. Since this arrangement is preserved in the consecutive volumes and thus required no essential intervention in the division within each of them, all the more that the readers have been accustomed to it. The arrangement is explained in the introduction to the said edition. Only the commentaries to the plans of towns have been modified. The earlier edition had fifteen of them, attached to the respective volumes. In this edition, their number doubled to thirty-four, and we have decided that the alphabetic arrangement would facilitate the reader's ability to find the appropriate chapter (which seems of special importance for foreign readers).

For Royal Prussia, it was necessary not only to prepare a supplement to complement selected issues but also to alter the order and attach the content absent in the series of detailed maps to the relevant chapters.³ The method of integrating the work done by Professor Marian Biskup into the edition is detailed in the table below.

Table 1. MRP volume incorporated in the *Detailed Maps* series:

Arrangement of MRP volume	Arrangement of the series
INTRODUCTION	I. INTRODUCTION, Part 1
I. SOURCES	II. SOURCES

8. Holdings and social structure of the nobility	Character and size of settlements, Part 1
9. Distribution of craftsmen population	Character and size of settlements, Part 1
10. Location of the key industrial facilities	Character and size of settlements, Part 1

The relation between the volume published in 1961 and its 2021 supplement is specified in the introduction to the latter.⁴ At this point, attention should be paid to the differences between the naming used in the atlas edited by Marian Biskup and in the series of detailed sixteenth-century maps. While

³ MRP; AHP Prussia.

⁴ Chapter I.1.2 in this edition.

reconstruction of the toponymy was marginal for the former, it was a basic issue for the latter. This aspect has therefore been complemented by presentation of the completed material on the map, in the index and in the commentary with an extensive section on geographic nomenclature. This did not affect the re-edition of the 1961 volume, though. The reprints of the maps from the Biskup volume gives the names used by its authors, usually the contemporary ones. The commentary volume shows a lesser difference, for the use of modern naming has been adopted for the whole series, with the sixteenth-century form added to the first mention of a given locality or settlement. The 1961 atlas of Royal Prussia has the German name attached in a similar manner; such names might have been, but did not have to be, dominant in the period. The list of settlements of this collective edition usually specifies these forms as variants, sometimes with a different spelling (e.g., 't'/'th', or '-e' as the final letter). The contrast between the sixteenth-century toponymy, reconstructed and shown in the 2021 Prussia volume supplement and the naming applied by Marian Biskup appears most clearly in the annexes listing the parishes.⁵

There are two issues that were discussed in the 1961 volume in a way not satisfying the series' requirements and hence they have been newly elaborated on in the 2021 supplement – namely, the roads and the territorial divisions of the Catholic Church. The respective section opens with texts by Marian Biskup which are followed by chapters penned by Tomasz Nowicki and Tomasz Związek. Despite minor repetitions, they prove mutually complementary.

As was the case with the English edition of seven years ago, this collective edition is not corrected or updated. The current state of research has not been reflected and a number of terms unmodified. The reader may be stricken today by mentions of the Soviet Union as an existing country in the Prussia volume. Such was the state-of-affairs, the political situation at the time these publications first appeared in print⁶ and we have decided replacing these items with names or forms corresponding with a twenty-first century map and present-day language convention would have been an unauthorised intervention in the original text.

Due to the size of this edition and the amount of references between the texts we have resolved not to use the references by page number, but only by chapters. Given the digital form of this publication, searching such content items should pose no problem to the reader.

The title page and the table of contents do not fully reflect the contributors' share in the preparation of this collective edition. The project has basically been a common effort of the entire Department of Historical Atlas at the Institute of History, Polish Academy of Sciences (IH PAN). This is particularly true for the decision to meet the challenge and then resolve through open discussion any doubts related to the conceived edition. In the aftermath of those decisions, the team assumed the specified tasks with unceasing support from the IH PAN, particularly its Publishing House. Krzysztof Kubik prepared the OCR of the earlier volumes and initially proofread it; an integrated list of abbreviations and acronyms for the first six volumes has been compiled by Wiesława Duży. Both tasks were completed by Jolanta Rudzińska. Compilation of an index encompassing the eight elements for more than 25,000 entries posed quite a challenge; this effort was mainly tackled by Michał Gochna and Arkadiusz Borek (*List of settlements*), and Tomasz Panecki (*List of natural landscape elements*). Both the index and the maps, the fundamental element of this atlas, would not have been compiled without the spatial database that has been gradually developed and extended over the years. Bogumił Szady and Grzegorz Myrda have excelled in this team effort. Dawid Maciuszek requires a mention among the main map contributing cartographers and editors.

This present English edition comes out in parallel with the collective Polish edition and reflects its content.

The series' first five volumes were published in English 2014, a few years after the last original volume was issued, with only one translator involved. Now, the situation was entirely different. Owing to the need to almost simultaneously submit the three final volumes for print and prepare both language versions of the collective edition, the tasks had to be gravely delivered in large measure in parallel,

⁵ Cf. annexes at the end of the MRP, here III.3.2.9a and at the end of the chapter: T. Nowicki, *Church administration borders* [in:] AHP Prussia, III.2.2.9b in this edition.

⁶ The chronology of publication of the consecutive volumes is broken down in M. Słoń, *Afterword* [in:] AHP Podlasie, IV.1.8 in this edition); MRP came out in 1961, AHP Prussia in 2021.

rather than consecutively. Problems with execution of the translation contract for the Greater Poland volume caused that the work on this particular volume continued throughout the year 2021. Hence the need to involve a team of five translators in order to have the four volumes translated. The previous schedule primarily assumed that the original version be completed on time, which eventually did not succeed. This caused delay and considerable pressure of time at the final stage as well as the need to retranslate some parts of the text which have been modified or added by the authors after their chapters were submitted to the editors. Another consequence is the stylistic differences that could not be completely eliminated by the editorial team. The team composed of the translators, a native speaker language editor and several editors cyclically met and discussed online, exchanged email messages, and a table of the most challenging terms contributed to by all. These terms included the source form, the version from the 2014 edition, suggestions proposed by the translators, authors or editors (sometimes with a comment), and the version finally accepted by the language editor. Once translated, every text was submitted to the author's proof and then verified by its translator and the language editor. After the typesetting, it would be finally approved by the author(s) and editors. Applied as a standard with academic publications, this procedure posed a real challenge owing to the number of contributors, diversity (maps, texts, lists) and volume of the material processed, and lack of an earlier-completed model in the form of a complete Polish edition. In this volume, we have decided to make editorial corrections to the 2014 edition by placing the footnote numbers after the punctuation marks, standardising the specification of centuries and dates, using the correct specification of map scales (e.g., 1:250,00) and numerals. The identified errors and inconsistencies in the equivalents of some terms have been rectified. One example of such standardisation is the adoption of the term 'district' as a uniform equivalent of the Polish administrative unit of *powiat* (in Latin *districtus*). Moreover, the titles of three chapters have been altered – *Index of settlements* into *List of settlements*, *Index of physiographic names* into *List of natural landscape elements*, and *Nomenclature* into *Geographic nomenclature*. All these actions, including the approval procedure and fluent communication between the translators and volume editors, is the merit of Katarzyna Słomska-Przech.

Translated by Tristan Korecki

I.1.2 FOREWORD TO THE BRITISH EDITION, VOL. 1-3, 5 AND 7 (2014)

Marek Słoń

This work consists of five volumes of the series of *The Historical Atlas of Poland, Detailed Maps of the sixteenth century* edited by Władysław Pałucki, Stanisław Trawkowski, Henryk Rutkowski, Małgorzata Wilska. The volumes included were:

- Vol. 3: Lublin Voivodeship in the Second Half of the sixteenth century*, edited by Władysław Pałucki and published originally in Warsaw in 1966;
- Vol. 7: Mazovia in the Second Half of the sixteenth century* by Anna Dunin-Wąsowiczowa, Irena Gieysztorowa, Józef Humnicki, Wojciech Kalinowski, Wanda Lewandowska, Kazimierz Pacuski, Henryk Rutkowski, and Wanda Szaniawska, edited by Władysław Pałucki and published in Warsaw in 1973;
- Vol. 2: Sandomierz Voivodeship in the Second Half of the sixteenth century* by Krzysztof Chłapowski, Anna Dunin-Wąsowiczowa, Wanda Lewandowska, Kazimierz Pacuski, Henryk Rutkowski, edited by Władysław Pałucki and published in Warsaw in 1993;
- Vol. 5: Sieradz and Łęczyca Voivodeships in the Second Half of the sixteenth century*, by Krzysztof Chłapowski, Anna Dunin-Wąsowiczowa, Stefan K. Kuczyński, Kazimierz Pacuski, Elżbieta Rutkowska, Stanisław Trawkowski, Małgorzata Wilska, edited by Henryk Rutkowski and published in Warsaw in 1998;
- Vol. 1: Cracow Voivodeship in the Second Half of the sixteenth century*, by Krzysztof Chłapowski, Jerzy Duma, Kamila Follprecht, Jacek Laberschek, Zdzisław Noga, Marta Piber-Zbieranowska, Zenon Piech, Elżbieta Rutkowska, Ryszard Skowron, Jarosław Suproniuk, Małgorzata Wilska, Michał Zbieranowski, edited by Henryk Rutkowski and published in Warsaw in 2008.

The original edition in Polish available free on the internet:

<http://dlibra.umcs.lublin.pl/publication/1074> (the volume of Lublin)

<http://rcin.org.pl/ihpan/publication/6733> (the other volumes)

The numbering of volumes was established in the 1960s, and did not determine the order in which the subsequent parts were prepared. Each volume consists of maps, being the first part, and the commentary – the second part. Only Lublin Voivodeship was presented in a slightly different manner; given the smaller size of the commentary, and the fact that in the beginning of the work on the Atlas the rules were still not set, the volume was not divided into parts, and the map was an inset in the commentary.

The structure of this edition is different, as it was not divided into volumes presenting individual voivodeships. The first volume of the work contains maps, the second the commentary, and the third bibliography and lists. Each of the parts covers the entire territory prepared so far: Mazovia (Mazovian Voivodeship with the capital in Warsaw and the Voivodeships of Płock and Rawa), Lesser Poland (Voivodeships of Cracow, Sandomierz and Lublin), and Sieradz and Łęczyca Voivodeships.

The task to prepare one, uniform main map proved a real challenge. In the course of over 40 years which passed between the publications of the first and the last volume, cartography changed beyond recognition. Even though the authors tried to refer to the work of their predecessors, numerous cartographic elements differed significantly: e.g. the way borders were marked, or the saturation of colour of forests, rivers and lakes. As such, the entire map had to be drawn once more, with the

use of already existing content. The map was divided into three basic parts: 1. Symbols and labels for settlements, 2. Borders, roads, hydrography, forests, 3. Contour lines. Our work on the maps of Mazovia and the Voivodeships of Lublin and Sandomierz, had to be based on scans of printed maps. For two latter maps we had vector files for each layer. Maps were placed in geographic space by means of GIS software. Chosen parochial churches, around 30–40 for each of nine sheets, served as a base for calibration. Settlement points from three older volumes were marked on this basemap. Parameters were ascribed to each settlement. They were based on the data recorded on the map and in the lists included in the commentary, and allowed us to mark settlements correctly (including name, type of ownership, size and central functions). The second group of layers, which contains mostly linear (e.g. borders, roads, rivers) and spatial elements (e.g. lakes and forests), was vectorized. However, we decided not to use in our five volumes the hypsometry prepared for main maps. The vectorization of this layer proved so complicated and time-consuming that it exceeded our capabilities. We considered including the modern depiction of the lay of the land, but the inexactness of the map, particularly its older sheets, prevented us from completing this goal. Already the cartographic base of the series (maps of WIG, the Military Institute of Geography, from 1919–1939) was not fully accurate. In the second half of the twentieth century, such precision was technically not feasible, and so it was not a priority. The purpose of the map was to present relative location of presented objects, and the exchange of individual layers and superimposing them on satellite images was not taken into consideration. To this we must add certain slips which occurred during printing. Also, it seems quite possible that prior to 1989 the censorship purportedly introduced various changes to the work. These inaccuracies were only partially corrected through the calibration of maps. As a result, the contour lines were only an approximate representation, their error equalling even several hundred meters. When superimposed on the modern, precise hypsometry, it often turns out that lakes are situated on slopes, and rivers flow upwards. Such mistakes were too numerous to be corrected in this edition. As such, we decided to move the relief to one of the reference maps at a scale of 1:500,000, which shows the road network. There are some obvious drawbacks in this solution: it offers no information about the lay of the land around a given settlement, but it can be viewed on the internet for free at the above-mentioned links. Still, it allows for a better orientation as to the nature of individual regions, what is particularly important for readers less familiar with the physical geography of Poland. Elevation points remained on the map at a scale of 1:250,000.

Individual sheets of the map were joined forming one, main map of eight old Voivodeships: of Lublin, Mazovia, Płock, Rawa, Sandomierz, Łęczyca, Sieradz, and Cracow. Even though it does not cover all Polish lands of the old Crown, the whole area is around 107,540 km², spanning 385 km from the East to the West and 520 km from the South to the North. The printed map at the scale of 1:250,000 is 154 × 208 cm. For practical reasons, it was divided into four sheets.

It was agreed that thematic maps in the series would be prepared at a scale of 1:500,000, which allowed us to put each of them on one A0 sheet. For the majority of voivodeships, three topics (Church divisions, location of landed property, roads) were presented on separate sheets or maps in the text, and in case of Lublin Voivodeship almost all the necessary data (ecclesiastical borders were completed for this edition by B. Szady) was included in the main map. Here, these elements were presented on a uniform image showing the entire territory of our Atlas. These maps were not created from sheets from individual volumes, but were generated from the joint main map. The map of roads shows also the lay of the land. Other thematic maps were reprinted on the basis of the original edition with added English translation. This also refers to city plans.

The preparation of these maps was an extremely difficult task, requiring not only enormous effort, but also mastery of graphic software, calculation sheets, GIS software, as well as good cartographic intuition. This work required cooperation of a multidisciplinary team of experts and participation of the majority of employees and co-workers of the Department of the Historical Atlas of the Institute of History of Polish Academy of Sciences. The main part was done by Piotr Kann. Other tasks were completed by the following: Elżbieta Rutkowska, Anna Faliszewska, Bogumił Szady (maps), Arkadiusz Borek, Marta Kuc-Czerep, Michał Gochna (indices), Tomasz Związek, Jarosław Suproniuk (redaction), Henryk Rutkowski, Kazimierz Pacuski, Hanna Dunin-Wąsowicz, Krzysztof Chłapowski, Marta Piber-Zbieranowska, Małgorzata Wilska, Michał Zbieranowski i Jerzy Duma (corrections).

Also the commentaries were combined into one, relating to all voivodeships included in the Atlas. Here it was necessary to divide original volumes according to five main sections (Introduction, Sources, Method and Results, City Plans and List of Settlements), and partially also according to chapters and subchapters. The introductions were arranged in chronological order: this text and the introduction to the entire series (published in 1966) is followed by the introduction from the Lublin volume (1966), then Mazovia (1973), Sandomierz (1993), Sieradz and Łęczyca (1998), and Cracow (2008). It was decided that the part on Sources should be rewritten, as subsequent volumes discussed the same categories of historical monuments, or even the same records, especially cartographic ones. This was possible, as the authors of original texts agreed to prepare the new one. Krzysztof Chłapowski described written sources in three of the five volumes, and Henryk Rutkowski presented cartographic records in all volumes, except for Lublin Voivodeship. The section on 'Method and Results' is the most complicated. It was divided into five basic chapters (geographic environment, administrative division, settlement, geographic nomenclature, roads), and two of those chapters have also subchapters, in all volumes: State and Church division was described separately, and as for settlement – the localization, character and size of settlements and their ownership affiliation. In this section, like in the next one (city plans), the order depended on the numbering of volumes, not the date of printing. Hence the first fragment presents materials on Cracow (vol. 1), next is Sandomierz (vol. 2), then Lublin (vol. 3), Sieradz and Łęczyca (vol. 5), and then Mazovia (vol. 7).

Obviously, the List of Settlements had to be prepared from scratch. It has the same structure as individual volumes of the Polish edition, and similar form of description, both explained in details in the introduction to the List. The most important change concerns letter and number coordinates which were replaced with approximate geographical coordinates, thanks to which the List will be more universal, and not limited to this publication, and finding a given location will be much easier. As said, lists of subsequent volumes were used to ascribe proper symbols to items presented on the map. For this purpose, each of the lists was turned into a database and linked with the point layer of the map.

Thus prepared data, later confronted with maps and lists printed in individual volumes, formed the foundation for the general list. The List of natural landscape elements on the other hand, did not cause such difficulties for us, and is a simple joint version of original lists from the volumes of the Polish edition. We only changed the method of marking location: like in the List of Settlements we introduced geographic coordinates. In case of linear object, like rivers, we provide the coordinates of the beginning and end, i.e. source and estuary, or the edges of the map. For spatial objects – forests in particular – the coordinates mark the centre.

New section, which was not included in the original edition, is the Bibliography, prepared by Urszula Zachara. The form of bibliographic description commonly used in Poland was replaced with the Oxford system, with which an English-speaking reader will be much more familiar. We were therefore able to reduce the size of the publication slightly, and above all – gather the English versions of all titles in one place. The list of abbreviations and full bibliographic description with translated titles was arranged in alphabetical order of the abbreviations.

Despite these changes in relation to the Polish original, the English edition is not a revised edition. The map and the commentary reflect the state of research from the time of the publication of subsequent volumes. Minor corrections were introduced only in several cases. Works described in the original edition as 'in print' were given a full bibliographic description, although they were published later. We also included the erratum to Mazovian volume published in the next volume on Sandomierz Voivodeship. In case there were any inconsistencies between volumes, we accepted the version included in the more recent publication. This particularly concerns areas situated on the edges of successive maps. The revision of the List disclosed quite numerous inconsistencies between the List and the map, which were also corrected. However, content-related errors, revealed by newer research, were not changed. It would have been impossible to do that for the entire Atlas, and selective actualization would confuse the reader as to the character of this edition.

The work was translated by one person, Agata Staszewska, and then proofread by Martha Brożyna, a native speaker of English fluent also in Polish. The authors of original texts were asked to review the translation. Naturally, not in every case was this possible. Władysław Pałucki, the editor of the volumes on Mazovia and Sandomierz Voivodeship, Stefan Wojciechowski, the author of Lublin volume, as well as some other authors, already passed away. Also, some of the living

authors did not verify the translation. In total, the author's proof-reading covered some two-thirds of the text (66%).

In the commentary, we decided to translate everything, which could possibly be translated into English. For some old Polish words, of key importance for our work and lacking an unambiguous, precise equivalent in English, the original term was also given in brackets next to the first appearance of a given word. As for maps, only the necessary elements were translated. The majority of names on maps are sixteenth century proper nouns. In the original version it was not modern form, but the form confirmed in the sources, which was accepted. Likewise, what was important in the English version of the maps was not an English equivalent (e.g. Warsaw, Vistula), but its conformity with the sixteenth century nomenclature practice (Stara Warszawa and Nowa Warszawa, Wisła).

English edition was possible thanks to the kindness of all authors of the volumes published so far, or their heirs. As the editor of this work, I would like to thank them once more. My gratitude goes also to Polish Scientific Publishers PWN, which – owning the rights to Lublin and Sandomierz Volumes – granted us permission to translate them.

The Historical Atlas of Poland is not a complete work. Two Voivodeships – of Poznań and Kalisz, which form the Greater Poland region – are currently being prepared. The end of the works is planned on 2017. Then, only two volumes will remain – Cuyavia and Podlasie. The current method of work on these volumes gives us hopes that adding those new territories to our map will not be too costly. The Department of the Historical Atlas of Poland intends to translate the three next volumes and publish them also in English in the full, completed series, at least in electronic format, however this still remains only a desire and a dream, and not a plan with means for its realization.

Translated by Agata Staszewska

I.1.3 FOREWORD TO THE SERIES (1966)

Władysław Pałucki

Historians have long been fascinated by the political, social and economic changes which occurred in the second half of the sixteenth century, just as they have been drawn to the abundance of statistical and geographical sources from this period.

These circumstances led A. Pawiński and A. Jabłonowski to publish the voluminous *Źródła dziejowe* ('Historical Sources') on this period, of which the most important series was *Polska XVI wieku pod względem geograficzno-statystycznym* ('Sixteenth century Poland with Regard to Statistics and Geography').

Following publication of the last volume of the series, the publishers found it necessary to chart the printed source materials and prepare a grand historical atlas of sixteenth century Poland. In consideration of their personal interests, scholarly backgrounds and their division of roles during the works on *Źródła dziejowe*, Pawiński was to cover the Polish territories for the atlas, and Jabłonowski was to cover the Ruthenian.

Pawiński's untimely death (1896) prevented him from realizing his goal. Jabłonowski on the other hand, using volumes XVIII–XX of *Źródła dziejowe* that he had published, prepared *Ziemie ruskie* ('Ruthenian lands') from the turn of the sixteenth and seventeenth centuries and published it in 1904 on 17 coloured sheets at a scale of 1:300,000, which constituted Part II of the Historical Atlas of the Republic of Poland.¹

Critical assessment of this pioneering work in Polish historical cartography was not positive, although F. Bujak highlighted the author's merits and gave high praise to his efforts, citing the publication as an example to follow for those who would so cover the Polish lands of the Republic.² However, prior to the First World War, despite Jabłonowski's warm encouragement aimed particularly at Bujak, no one made the decision to continue working on the Polish territory.

Later, on Poland's regaining its independence in 1918, the fortunes of the Atlas went in a different direction. The first decade (1922–1931) of the Committee of the Historical Atlas of Poland appointed at the Polish Academy of Arts and Sciences was a period of trials, when the scientific program of works crystallized.³ The Warsaw Committee did in fact begin to put together working materials concerning Mazovia and Podlasie in the sixteenth century. Later it turned its attention to a different period.

When it comes to the chronology of the Atlas, three periods were considered: the second half of the fourteenth century, then the sixteenth century, and finally the eighteenth century. Finally, it was decided that the works would begin with the preparation of detailed maps of voivodeships from after the Partitions of Poland. When this task was finished the maps of the seventeenth century, sixteenth century, etc., would be prepared by reverse chronology.⁴

It must be admitted that the assumptions of this program, agreed upon by the distinguished scholars specializing in geographical history, W. Semkowicz of the older generation and S. Arnold

⁴ *Ibidem*, p. 335.

and K. Buczek of the younger, were at the time fully justified. The statistical and geographical source materials for the second half of the eighteenth century were abundant, such as the hearth tax rates, censuses, and the *Statystyczno-geograficzne opisanie parafiiw Królestwa Polskiego z 1791 r.*, or the modern cartographic representations, to mention just a few.

Even though the work on any selected chosen chronological period was conducted at several university scientific centres (the committees in Cracow, Warsaw, Poznań, Lwów and Pomerania), the Cracow committee made the fastest progress, finishing and publishing 'The Map of Cracow Voivodeship at the Age of the Four-Year Sejm (1788–1792)' already in 1930.⁵ This map (abbreviated as AHP 1930) along with its working methods were to be used for maps of the remaining voivodeships in the second half of the eighteenth century.

Unfortunately, the outbreak of the Second World War interrupted all work in this period. They were in various stages of development, and – to make matters worse – the bulk of basic manuscript sources kept in the Central Archives and the National Library in Warsaw was completely destroyed in 1944.

It was for this reason that following the reconstitution of Poland, in the newly-created Department of the Historical Atlas at the Institute of History of the Polish Academy of Sciences as the works on the AHP commenced for the third time, the controversies about the program and its methodological assumptions reignited.⁶ 'As the materials on the historical geography of eighteenth century Poland were destroyed in the Warsaw uprising of 1944, we decided to abandon the rule accepted correctly for the works on the *Map of Cracow Voivodeship at the Age of the Four-Year Sejm (1788–1792)* published in 1930 according to which the works started with the eighteenth century. At the time this was the most certain base for retrogression. It was agreed that the work would recommence with the end of the sixteenth century, for which a rich stock of historical sources survived'.⁷

It was also decided that the traditional range of the atlas would be broadened, and several thematic and choropleth maps would be prepared for each voivodeship other than the main map, in order to present the dynamics of social and economic processes. On the other hand, because of the smaller scale of the map, namely 1:500,000, the graphical representation of settlements presented on the map became less precise, as the scale allowed the authors to depict only important settlements and parochial seats. In short, it was decided that a second series of the Atlas of the second half of the sixteenth century, series B, consisting of reference maps, would be prepared, which would – in accordance with the best intentions of the work's supervisors – allow the work to be finished through the efforts of one generation.⁸

In 1961 the map of *Royal Prussia in the Second Half of the Sixteenth century* (abbreviated MRP) was published in this series. It was prepared by M. Biskup with L. Koc, and consisted of a vast analytic commentary along with 11 choropleth maps.⁹ MRP was preceded by a preliminary experimental study, the map of *Płock Voivodeship around 1578* (abbreviated as AHP 1958), which was a joint effort also containing a substantial analytic commentary and nine choropleth maps, published in 1958 in the series A, detailed maps of the AHP, as the main map was prepared at a scale 1:200,000.¹⁰

This was the situation until 1964, while the work on the map of Lublin Voivodeship in the second half of the sixteenth century continued in accordance with the rules accepted for the series of reference maps. Advanced work on the reference map of Mazovia in the second half of the sixteenth century was stopped for a time for two reasons. Firstly, the small team preparing this map (in the Warsaw Department of the Historical Atlas of Poland) was burdened with cartographic works on subsequent volumes of the *History of Poland* and *The Inspection of Royal Estates*. Then, given the increased interest in the history of Mazovia, or incoming requests that a simplified version of the map of this

⁹ MRP.

¹⁰ See above footnote 7.

province in the sixteenth century – yet still showing the complete settlement network – was to be delivered to the scholars, the authors decided to prepare this map, planning to finish it in 1963, and publish it in 1964.

Following the publication of AHP 1958 and MRP the few published reviews did not satisfy the authors of the atlas, as they did not express a full approval of the accepted assumptions of the MRP, even though the obtained results were highly regarded.¹¹ Moreover, criticism of some of thematic maps in AHP 1958 made this study controversial.¹²

All this, regardless of the substantial aspects of the issue, had a significant influence on the progress of work on the atlas. Apart from substantial publishing costs, the preparation of the thematic map required as much time – if not more – as the main map. This fact together with the small number of authors on the one side and the vast territory on the other could raise concerns over the fate of the AHP. Still, the most important opinions, which could influence the future fate of the AHP, claimed that the reference series of the atlas, prepared at a scale 1:500,000, was of little use and did not fulfil its task. It failed to provide a useful research tool for the historians because it could not offer them maps which would contain a named network of settlements for a given chronological period. It was also confirmed that – contrary to anticipation – detailed maps relatively did not require more time than reference maps at a scale 1:500,000. While working on the latter, one had to mark all settlements on working maps at a scale 1:100,000, and only then was this element reduced, at the last stage of the work, when the initial drafts of the maps are made. In brief, the same time and effort brings much less benefit for the users of such maps.

In this situation, the authors decided to revise the previous assumptions of the atlas work and discuss them in a broader circle of specialists and interested individuals. The issue was quite urgent as the reference map of Lublin Voivodeship in the sixteenth century and the simplified map of Mazovia were almost finished. The time had come to prepare and publish that series of the AHP which begins with Lublin Voivodeship in one form.

In 1964 the revised program of this series of the AHP was approved by the mixed committee of historians and geographers. In the first place it eliminated thematic maps (choropleth maps). This does not mean that the authors abandoned work on this type of maps, but they were to be prepared in another series of the AHP, or by the Committee of the Historical Atlas, as thematic maps usually, by nature, require detailed historical study.

The accepted chronological period of this series of the AHP – the second half of the sixteenth century – requires a certain amount of explanation. Namely, based on the experimental study, *The Map of Płock Voivodeship around 1578*, it should be understood that this means the period close to the end of this century, according to our present assumptions. As a result, should an important phenomenon have either occurred (a new settlement) or changed (a village turned into town, the foundation of a new parish) in that half of the century, the map will show the latter situation. This rule does not apply to the existence of a settlement itself – if a settlement was liquidated in the second half of the sixteenth century, it still appears on the map.

S. Wojciechowski's *Województwo lubelskie w drugiej połowie XVI wieku* ('Lublin Voivodeship in the second half of the sixteenth century') is slightly different in terms of chronological assumptions as it reflects the situation from 1564–165, with minor updates from later years. This is because the preparation of this map took many years and the author worked using different assumptions. Adjusting the map to the new, now-accepted rules would require too much time and effort.

The territorial range of this series of the AHP was defined by both historical and practical reasons. Generally, the atlas should include all lands of the Polish State in this period, which means the kingdom within the borders following the 1569 Union of Lublin as well as the ethnically Polish territories in the west and north lost in the Middle Ages and regained in 1945. This is how the matter should have been treated if we were just commencing work on the atlas for the second half of the sixteenth century. In reality we must consider the scientific and publishing achievements of the past.

¹¹ A. Mączak, *Obraz statystyczny Prus Królewskich w XVI wieku: Prusy Królewskie w drugiej połowie XVI wieku*, comp. Marian Biskup with Lucjan Koc, *Atlas Historyczny Polski, seria B: Mapy przeglądowe, 1*, Warsaw 1961, PH, vol. 53, 1962, no. 1, pp. 164–174.

¹² KHKM, vol. 8, 1960, pp. 251–256 (review of K. Górka-Gołaska).

As such, our territorial range of this series of the AHP will be somewhat limited, and the preparations possible in present conditions.

Therefore, in the first place Jabłonowski's *Ruthenian lands*, covering Ruthenian Voivodeship with Chełm land, and the Voivodeships of Bełcz, Podole, Wołyń, Kijów and Braclaw, will be excluded from this series of the AHP. Still, his *Atlas* shows, more or less correctly, the three basic elements in 50 years at the turn of the sixteenth and seventeenth century, which – we should add – is somewhat too long a period. The elements are the named and localized settlement network, details of ownership marked as to locality, and the political and administrative borders. Thus, these are charted facts which are the most useful for the scientific work of historians. That is why, having accepted our limited means and capabilities we decided to exclude Ruthenian lands from our atlas, even despite all the imperfections of Jabłonowski's work, prepared 60 years ago on the basis of different methodical and methodological assumptions, and with the foundation of an outdated map of Poland by W. Chrzanowski, published in 1859 at a scale 1:300,000. This was, after all, consistent with A. Jabłonowski's intentions, as he treated his work as Part II of the *Historical Atlas of the Republic of Poland*, postulating that other voivodeships of the Crown be compiled as Part I of the Atlas.

For practical reasons we must exclude Royal Prussia (Voivodeships of Chełmno, Malbork and Pomerania) from this planned series of the AHP, because the maps of this territory have already been finished in several variants, although on the basis of a slightly different program: in the series B of reference maps of the AHP at a scale 1:500,000¹³ and analytical maps at a scale 1:300,000. These contain the most valuable elements for research, which are the named, complete settlement network, political, administrative and Church borders, including parochial borders, and ownership status.¹⁴

Finally, the presentation of the sixteenth century western and northern lands recovered in 1945 should be prepared in a different manner, as for these territories we possess no uniform sources such as tax registers, Church visitations or inspections of royal property. As such, without settling the methods and forms of solving this issue (which might require – as an analogy to the *Historical Atlas of Silesia in the 18th century* currently being finished – a reference map at a scale 1:500,000) the preparation and publication of maps of western and northern lands in the sixteenth century must be moved to another series of the AHP.

As a result, this series A of detailed maps of the sixteenth century is limited to Polish lands of the Crown. We offer our readers the first part of this series: *Lublin Voivodeship*.

When it comes to the scope of the Atlas, we followed the rule according to which our reference maps had to contain the highest possible number of the most important elements, as well as the connections between them, and yet still remain readable.

As such, the maps consist of the following elements: full, named and localized settlement networks outlining the characteristics and size of urban and rural settlements, their ownership affiliation, administrative and political aspects, (borders of the State, voivodeships, lands and districts) and Church division including parishes, which – as we know – fulfilled administrative, judicial and fiscal purposes, and finally: important roads. All this information was marked on the reconstructed physiographic base, the main elements of which, such as bodies of water (rivers, lakes, and important swamps) and forests were attested to by cartographic sources, (Prussian and Austrian), from the turn of the eighteenth and nineteenth century or from around 1830 (according to the Quartermaster's map). The relief (contour lines) was copied from modern maps.

The contents of the maps determined the scale on which they were published. By trial and error we decided on the scale 1:250,000, which offered many advantages for this series of AHP maps. In the first place the scale allows us to mark the entire network of settlements, even in the areas where the density of settlement was highest, for example. eastern Mazovia and Podlasie, without distorting the readability of the map. Also, the scale has some potential benefits for the future, as it could be

¹³ See above footnote 9.

Tomczak, *Sieć parafialna województwa pomorskiego, okręgu bytowskiego i lęborskiego w drugiej połowie XVI w.*, [in:] M. Biskup, A. Tomczak, *Mapy województwa pomorskiego w drugiej połowie XVI w.*, Toruń 1955 (RTNT, vol. 58, no. 1); M. Biskup, *Podziały administracyjne województwa chełmińskiego w drugiej połowie XVI w.*, SMDWP, vol. 1, 1956, no. 2, pp. 105–127; M. Biskup, *Rozmieszczenie własności ziemskiej województwa chełmińskiego i malborskiego w drugiej połowie XVI w.*, Toruń 1957 (RTNT, vol. 60, no. 2).

conveniently converted for the reference series of the AHP at a scale of 1:500,000, and later – when the entire work is finished – would facilitate the reduction by four times of detailed maps into one, synthetic map of Poland in the sixteenth century at a scale of 1:1,000,000.

The preparation and publication of detailed scale maps of such a large area had to involve division into smaller sheets. In case of the AHP however, we could not follow the classic rules used in cartography, as this would mean territories which had a common past and administrative affiliation would have been cut. In analogy to the plan accepted by the editors of *The Historical and Geographical Dictionary of the Polish Lands in the Middle Ages*¹⁵ at the Institute of History of PAN, our AHP was divided into sheets, or issues, for scientific and practical reasons. Specifically, as territorial units differed in terms of size and geographical configuration, we decided that some of the voivodeships (e.g. of Cracow, Sandomierz, Lublin) should be presented on separate maps. Other voivodeships, constituting parts of provinces (e.g. Mazovia) and in more centric shape, would be presented on one map sheet.

Thus, the following volumes comprise our printed series of detailed maps of the sixteenth century:

1. Cracow Voivodeship,
2. Sandomierz Voivodeship,
3. Lublin Voivodeship,
4. Greater Poland (Voivodeships of Poznań and Kalisz),
5. Łęczyca and Sieradz Voivodeships with Wieluń land,
6. Cuyavia (voivodeships of Brześć Kujawski and Inowrocław and Dobrzyń land),
7. Mazovia (Voivodeships of Płock, Rawa and Mazovian),
8. Podlasie.

Each volume of the AHP will consist of three basic parts: the map, the commentary (more or less extensive) and the List of settlements. The purpose of the list, which provides variants of site names, type of settlement (village, town), district and parochial affiliation, and location coordinates, is to help the users find a given settlement on the map.

Naturally, the presentation of so vast, though limited, a territory (13 voivodeship and two historical lands) in the AHP, based on the methodology described in this foreword, is no easy task. It must be made clear that this is a continuation of a large-scale effort of a small group of scholars geared up for such a task. By continuation we mean here that although this series of the AHP will be prepared according to the new scientific methodology it was refined based on previous, experimental studies in some form or other; the AHP 1930 from the Interwar period and the AHP 1 and PV published after the Second World War.

Below, in a brief commentary on the map of *Lublin Voivodeship in the Sixteenth century*, Dr. Stefan Wojciechowski describes the source basis, the work methodology and the results obtained. Naturally, in the commentary the author focuses on details of settlements, which dominate the map. It should be added here that Dr. Wojciechowski was uniquely qualified for this task due to his earlier historical and geographical research over many years of the old Lublin Voivodeship. He successfully used the results of this research in the work on the atlas and this made it easier for him, for example, to identify and position many settlements which no longer exist.

However, particular attention should be paid to those parts of the commentary in which the author describes – in broader terms than was previously done – the geographical environment of the territory and the changes undergone. As W. Semkowicz once noted, without knowledge of geographical, and especially topographical, conditions it would be difficult to prepare a map on a bigger scale, and historians – the main recipients of this Atlas – would not be able to grasp or determine many spatial historical phenomena.

The analysis of cartographic sources from the turn of the eighteenth century and the first half of the nineteenth, or descriptive sources from the chosen chronological period, or even earlier ones, (such as *Chronografia* by Jan Długosz), allowed the author to reconstruct certain physiographical elements, particularly rivers and lakes conforming to their sixteenth century reality. It also offered him the opportunity to correct details on many lakes mentioned in Długosz's *Chronografia* and erroneously identified and positioned by J. Kornaus. Observed shifts of river channels (oxbow lakes), often significant, for

¹⁵ SHGP, vol. 7, part 3; *Słownik historyczno-geograficzny ziemi wieluńskiej w średniowieczu*, comp. R. Rosin, Warsaw 1963, pp. 12–13 (foreword by K. Buczek).

instance of the Vistula or the Wieprz, explained why certain settlements disappeared or changed their location in relation to the river. The depiction of the patterns and density of settlements and their connection with physiographic conditions was also clarified.

Having emphasized the values of Dr. Wojciechowski's work, we should add here that it opens the series of detailed maps of the sixteenth century, and as the first of the series is in fact a kind of a test. As such, should it be decided in the course of scientific debate that certain changes or methodological – or even factual – corrections are needed, they will be introduced in subsequent volumes of the Historical Atlas of Poland.

Translated by Agata Staszewska

I.2 INTRODUCTIONS TO VOLUMES

I.2.1 INTRODUCTION TO VOLUME 1: CRACOW VOIVODESHIP (2008)

Henryk Rutkowski

In the sixteenth century the Voivodeship of Cracow covered the south-western borderland of the Polish-Lithuanian Commonwealth. In this voivodeship lay the capital of Poland, and as such it occupied the first place in the honorary hierarchy of the lands of the State. Already in the eleventh century Cracow began to play the role of the most important centre of the Piast monarchy. Later, during the period of feudal fragmentation, the city was a symbolic capital. In the beginning of the fourteenth century it became the actual capital city. However, the sixteenth century witnessed opposite changes. Given the development of the Nobles' Republic, the need to rule a vast country required that the political centre be gradually moved. Piotrków became the first place where the General Sejm usually met. The breakthrough occurred in 1569, when the Real Union between the Kingdom of Poland (commonly called the Crown) and the Grand Duchy of Lithuania was sealed. Warsaw was then chosen as a place for the common sejms, and later – after several decades – it became also the permanent residence of the king. Hence, towards the end of the sixteenth century, Cracow lost its status of the capital city, although it still kept the title of capital city and the privilege of a place of coronation of kings.

The voivodeship, being a continuation of the Duchy of Cracow from the feudal fragmentation period, was a neighbour of the Kingdom of Hungary in the south. In the second half of the sixteenth century the Kingdom already lost the majority of its territory to Turkey. In the west, the voivodeship bordered on Silesia, which belonged to the Bohemian Kingdom (except for the Duchy of Siewierz). Both Kingdoms were ruled by the Austrian Habsburgs, who also ruled – more nominally than actually – over the Holy Roman Empire. (Hungary did not belong to the Empire). In the Crown, on its northern and eastern side, Cracow Voivodeship was a neighbour of the Voivodeships of: Sieradz, Sandomierz and Ruthenia (see the map of state and ecclesiastical borders). As we know, the Voivodeships of Cracow, Sandomierz and Lublin formed Lesser Poland (in the original, narrower meaning of this name).

The borders of Cracow Voivodeship were finally formed between 1563 and 1564, and in this shape they survived until the First Partition of Poland (1772), when the duchies of Zator and Oświęcim were incorporated into the Crown and the voivodeship. The duchies comprised the district of Silesia, though they kept their titular name of duchy. Before, these were separate lands, bought by kings of Poland in 1457 (the Duchy of Oświęcim) and in 1494 (the Duchy of Zator). Except for the Silesian district, the voivodeship consisted of six fiscal (administrative) districts and the same number of judicial districts. These territorial units differed (see below p. 124–137).

Apart from Cracow Voivodeship, this volume of the Atlas encompasses also the Duchy of Siewierz. In 1443 the Bishop of Cracow bought this small land, which later merged with Poland, from the duke of Cieszyn. The bishops enjoyed the sole authority in the Duchy of Siewierz until 1790, when the Duchy was incorporated into the Crown.

In 1412 the King of Hungary pawned part of Spisz territory to the King of Poland. The lands were not bought back, and so the area consisting of several small separate territories remained related to Poland. It constituted a part of royal property, i.e. State property, and was organized as a starosta's lease of Spisz, included in the inspections of royal property in Cracow Voivodeship. However, this did not change the legal reality: the entire Spisz territory lay within the borders of the Kingdom of Hungary. That is why the starosta's lease of Spisz was not shown on the map of Cracow Voivodeship, but was presented on a separate, textual map.

Detailed maps of the Polish lands of the Crown in the second half of the sixteenth century form the main element of this volume, just as in the entire series. The main map, at a scale of 1:250,000, shows all settlements which existed in the second half of the century, differentiated by means of their character (towns, villages, mill settlements, etc.), size, and type of ownership. Site names were given in their sixteenth century wording but modern spelling. The maps show the borders of State and Church administration, and important roads. The end of the sixteenth century was treated as the main chronological period. If a change occurred in this 50 years in, e.g. an ownership, or parochial, affiliation of a given settlement, then the later situation was presented on the map (this rule does not apply to settlements that disappeared). Elements of the natural environment (water bodies and forests) were marked according to the state from the turn of the eighteenth and the nineteenth century, as it was impossible to depict older reality with enough precision. For practical reasons, the main map was printed on two sheets, showing the northern and the southern part of our territory.

Additional maps at reference scale 1:500,000 depict selected themes: the Church division, communes of other denominations, location of landed property, the network of major and secondary roads. Several other themes were shown on small textual maps. Plans of selected towns, at a scale of 1:10,000 – accepted for the entire series – were included in Part I. There are six such plans, more than in any other volume (originally only plans of capital cities were included). The plans show: the capital city of Cracow, two district capitals at the same time being the seats of gord starosta's districts (Biecz and Nowy Sącz), the town where salt was mined (Wieliczka), pilgrimage centre (Częstochowa), and the capital of the bishopric duchy (Siewierz). The central area of Cracow was also described in details inside the city walls, and the plan of the Wawel hill was also included, both plans at a scale of 1:2,000.

The main part of the commentary was devoted to our source basis, obtained in large part from querying manuscript sources. This series of the Atlas utilizes the type of the sources which allows for the series' program to be fulfilled, and the basic theme of the main map is the reconstruction of the settlement network. The commentary describes our working methods, explains selected detailed issues, provides statistical data, and characterizes the results obtained. It is limited to the sixteenth century, and does not cover any medieval changes within State and Church administration, or the process of town foundation, etc. Unlike the maps, or the List, the commentary uses modern names of settlements (just like the town plan, which uses the name 'Nowy Sącz', not 'Sądecz Nowy'). When a sixteenth century site name had more than one version, the List lists its variants next to the name shown on the map. When an old name differed from the modern name, the List provides the latter as well. Additionally, the List provides information concerning the district and parochial affiliation of settlements, as well as their ownership affiliation, and approximate localization. It also lists unlocalized settlements. The List of natural landscape elements resembles the List of Settlements.

The contribution of individual authors was marked in the Table of Contents. Below we provide the list of authors who took part in the preparation of the cartographic part and the lists. The term 'settlement' means here the localization of settlements, their name, type and ownership affiliation.

Krzysztof Chłapowski	<ul style="list-style-type: none"> – settlement and borders of the districts of Biecz, Proszowice, and Szczyrzyc, – participation in the work on Lelów district – checking the ownership affiliation of settlements – map of landed property – map of the communes of other denominations – List of Settlements (with M. Members of the team working on the main map (K. Chłapowski, M. Piber-Zbieranowska, E. Rutkowska, J. Suproniuk, M. Wilska) consulted each other and offered source information. Apart from the team, Marta Kuc made the planimetric calculations, provided us with technical assistance in editorial works, and helped us correct the commentary and the lists.

We would like to express our gratitude to Professor Stanisław Trawkowski, patron of the works on the atlas of Poland in the sixteenth century, for overseeing the names of settlements in the files.

Finally, we would like to thank Professor Feliks Kiryk who familiarized himself with the penultimate stage of our study, and reviewed it, thus pointing out any errors. We thank Professors Stanisław Alexandrowicz, Maria Koczerska and Henryk Samsonowicz for their opinions which played a role in the publication of this volume.

Translated by Agata Staszewska

I.2.2 INTRODUCTION TO VOLUME 2: SANDOMIERZ VOIVODESHIP (1993)

Władysław Pałucki

This third – second, according to the program – volume of this series of the *Historical Atlas of Poland* for the second half of the sixteenth century was brought to the readers later than we had expected.

During our works on this voivodeship we met with some source-related difficulties (insufficient number of direct sources, which had to be replaced with different, carefully selected materials) which caused significant delay. On the other hand, we thought it necessary to broaden the scope of the map and the commentary to include information on the relations between different denominations (defining the course of the borders of Catholic parishes more precisely) and ownership relations (their spatial presentation on an additional map at a larger scale) – and this also required more time.

In the first case we had to resort to manuscript sources of Church origin (visitations) from the end of the sixteenth century and the first quarter of the sixteenth century, as parochial borders were at the time somewhat complicated owing to the Reformation which encompassed the majority of the Crown's land in the second half of the sixteenth century, especially in Sandomierz Voivodeship, home to several important dissident centres, including the Arian Raków.

In the second case, following suggestions by many consultants who wanted to use a map which would also depict territorial range and size of landed property, we prepared such a map at a 1:500,000 scale. The basic type of historical sources for this kind of map, land and gord court books, was destroyed in the entire Sandomierz Voivodeship (except for the district of Pilzno). Therefore we were forced to use other sources. Our methodology is described later in the commentary.

This forced us to introduce certain changes in the way we present several other maps. We decided to print them in this volume. In case of the map of Mazovia in the second half of the sixteenth century these maps were included in the text of the commentary, or shown as sections on the main map. So the map of important roads in Sandomierz Voivodeship in the second half of the sixteenth century, placed in the commentary in the previous edition, was now prepared at a scale of 1:500,000 in the form of an appendix to the main map. Two other maps: 1) property presented in dots, and 2) administrative division, added to the main map of Mazovia – were omitted.

In the case of Sandomierz Voivodeship these maps were replaced with: 1) the aforementioned, more useful additional map offering spatial depiction of ownership relations; 2) map of the divisions of Church administration in Sandomierz Voivodeship in the second half of the sixteenth century at a scale of 1:500,000. One more map at this scale was also included in this volume, namely the map of *Communes of Other Denomination in Sandomierz Voivodeship in the second half of the Sixteenth century*. These maps present the borders of administrative and political division of the voivodeship and the districts.

General assumptions and working plans on the series of detailed maps of Poland in the sixteenth century were presented in the *Introduction to Lublin Voivodeship in the Second Half of the Sixteenth century*. Methods described in this introduction, specified and utilized in the preparation of the map of Mazovia, were not changed – with one addition, important in my opinion in this type of work. Namely, after several years of experience and practice acquired with subsequent volumes of the *Historical Atlas of Poland* we decided that if we wanted to obtain a realistic picture, (though incomplete, given the source basis and the four-century gap) we could not disregard any historical source, from an earlier or later period, even though at first glance, or according to registrators' opinion it should be

rejected. Such an approach naturally prolonged our work, still at the same time it eliminated uncertain or hypothetical solutions.

Our methodological assumptions require that the main map contains only certain elements, well-attested by the sources. As it was impossible to present all elements which could have been shown on the map with full objectivity, much effort was applied so as to avoid any hypothetical elements. Thus, we will agree with an old claim that such a study, based on all available sources, bears much resemblance to published sources.

It should be added here that – as in the commentary to the map of Mazovia – certain issues which occurred unexpectedly during our work on the Voivodeship of Sandomierz, and which will probably arise in subsequent volumes of this series of the *Historical Atlas of Poland*, were sufficiently described in the commentary. And although we tried to make this commentary as brief as possible, we thought it necessary to inform our readers and users of all major difficulties and the ways we dealt with them. Only then can one fully understand why certain long-accepted findings were corrected on our map, or presented in a different manner for the first time.

The form of publication used for this series of the *Historical Atlas of Poland* was not changed in any way for this volume. It consists of two parts: the cartographic and the textual, and the main map. Given the shape of the Voivodeship of Sandomierz and in order to make the use of the map easier, the main map was printed in two sheets, in the same way as the map of Mazovia. The first sheet shows the northern part of the voivodeship, and the second shows the southern.

The authors of specific chapters of this extensive commentary were listed in the Table of Contents. The cartographic part and the lists were prepared by:

- | | |
|------------------------|---|
| Władysław Pałucki | <ul style="list-style-type: none">– supervising the entire work– settlement, borders and nomenclature in Wiślica district– borders, political and administrative division– ownership affiliation of settlements– detailed check of nomenclature |
| Krzysztof Chłapowski | <ul style="list-style-type: none">– settlement, borders and nomenclature of Opoczno and Pilzno districts– map of the communes of different denominations in Sandomierz Voivodeship– nomenclature of forests and bodies of water– castles– participating in technical preparation of the List of Settlements and List of natural landscape elements,– participating in statistical calculations |
| Anna Dunin-Wąsowiczowa | <ul style="list-style-type: none">– settlement, borders and nomenclature of Radom land and Stężycza land– size of settlements– borders of Church administration– map of landed property (layer method) |
| Wanda Lewandowska | <ul style="list-style-type: none">– forests and bodies of water– cartographic work on the maps (basic carbon papers and first drafts)– cartographic work on the city plan of Sandomierz– graphic design of coats of arms |
| Kazimierz Pacuski | <ul style="list-style-type: none">– settlement, borders and nomenclature of Sandomierz district– city plan of Sandomierz– participating in technical preparation of the List of Settlements and the List of natural landscape elements– participating in statistical calculations |
| Henryk Rutkowski | <ul style="list-style-type: none">– preliminary work on settlement and borders in Sandomierz Voivodeship on the basis of tax registers published by A. Pawiński and some of the Church sources– settlement, borders and nomenclature of Chęciny district– roads– coats of arms |

Given the above division of work, based on two intersecting criteria – the geographical and the factual – the authors provided each other with source information and offered consultation, which was not always noted in the commentary.

Between 1954 and 1955 Colonel Adam Borkiewicz marked selected elements from Perthées's, Liesganig's and Quartermaster's maps on WIG maps at a scale of 1:100,000 including the territory of the old Voivodeship of Sandomierz. We used his work to present forests and water bodies on our map according to the Quartermaster's map (the area north of the Vistula upstream of Sandomierz). It also helped us with settlement localization and reconstruction of the road network.

Doctor Małgorzata Wilska calculated the area of districts and parishes, and like all the authors participated in checking maps and lists.

Finally, we would like to express our gratitude to all institutions which made their scientific collections available to us and offered us kind advice during our work on this volume of the Atlas, particularly to the management and workers of the Central Archives of Historical Records (AGAD, Archiwum Główne Akt Dawnych) and the National Library in Warsaw, the Archives of the Archdiocesan Archive of Cracow, the Jagiellonian Library, the Library of Princes Czartoryski, and the Library of the Polish Academy of Sciences in Cracow, the Institute of the Historical Geography of the Church in Poland and the Institute of Church Archives, Libraries and Museums at the Catholic University of Lublin. Among the people whose assistance was particularly helpful in continuing and finishing this strenuous work, we should list in the first place our colleague and permanent consultant, the late lamented Professor Jerzy Wiśniewski, who passed away in 1983. To the very end he offered us his precious advice, carefully reviewed our map, commentary and lists. We remember Doctor Maria Sipayło's helpfulness. She died in 1989 but before then shared her outstanding knowledge on communes of different denominations with us. We thank Professor Ewa Rzetelska-Feleszko for her valuable toponymic suggestions, Professor Wojciech Kalinowski for his consultations concerning the city plan of Sandomierz, Professor Stanisław Litak for his kind remarks and for making his source notes available, and Doctor Stefan Krzysztof Kuczyński for his help regarding the coats of arms. We are also grateful to Professor Andrzej Wyczański, the author of the second review.

We should finally mention that the work on the map of Sandomierz Voivodeship in the sixteenth century was finished in the middle of the 1980s. Because of various obstacles, seven years had to pass before publication became possible. However, we were unable to utilize studies published after 1984.

Professor Władysław Pałucki (12 March 1905 – 19 December 1989) passed away after the work on the map of Sandomierz Voivodeship in the sixteenth century was completed. Since 1962 he supervised the work on the Atlas in the Institute of History of the Polish Academy of Sciences. He accepted the program for detailed maps in the series about maps of sixteenth century Poland, organized all work on the maps, supervised this work and participated in it actively. Władysław Pałucki combined thoroughness of source queries, the ability to read maps both old and modern, developed particularly during his military service (first in the cadetship, then during the Second World War: first in Poland in the September Campaign and later in France and England), with care for details. These features of a scholarly character, of vital importance to our work on the Atlas, could also be seen in his own, private research, of which we should mention at least the publications on the history of the Polish fiscal system: *Studia nad uposażeniem urzędników ziemskich w Koronie do schyłku XVI w.* (1962, the studies on the salaries and endowments of land officials of the Crown until the end of the sixteenth century), and the monograph *Drogi i bezdroża skarbowości polskiej XVI i pierwszej połowy XVII w.* (1974, the history of Polish fiscal system in the sixteenth century and the first half of the seventeenth century). Until the very end, despite his old age and poor health, Władysław Pałucki paid close attention to the work on the Atlas of Poland in the sixteenth century, keeping an eye on our progress.

Translated by Agata Staszewska

I.2.3 INTRODUCTION TO VOLUME 3: LUBLIN VOIVODESHIP (1966)

Stefan Wojciechowski

The map of Lublin Voivodeship in the second half of the sixteenth century and the accompanying commentary are the result of our research on this territory as part of the work on the Historical Atlas of Poland. The research was conducted by only one person, and therefore the progress made was quite slow. The general assumptions were formulated by the Committee of the Historical Atlas of Poland at the Polish Academy of Arts and Sciences in Cracow soon after the First World War, and were later modified according to the new research program. The materials collected over the years were used to prepare the map of settlement on a physiographic base, set finally at a scale of 1:250,000 in order to include all settlements with their names and ownership affiliation on the smallest possible surface. We thus obtained a detailed map, largely similar to the map of Płock Voivodeship (1:200,000),¹ but differing from the reference map of Royal Prussia (1:500,000).²

Apart from the main map, maps of certain themes, on a smaller scale, were also prepared. They depict various demographic and economic phenomena, just as in the aforesaid publications. However, following the assumptions of this series of the AHP, these theme maps were included in the commentary.

The period presented on the map was described in the title – it is the second half of the sixteenth century, but more precisely around 1564. This means that although settlements which appear in the sources only in 1564–1580 were shown on the map, the ownership and administrative division was depicted rather according to the situation from 1564. Still, important changes in the course of the borders, or character of settlements, which occurred before the end of the sixteenth century were described in the commentary. It is also worth noting that the presentation of water bodies and forests was prepared on the basis of the nineteenth century sources, so especially in case of the forests they are only hypothetical.

The commentary describes the sources basis first, then it explains our work method and provides information on our territory, a necessary supplement to the settlement map. Its aim is to sum up the detailed data included in our cartographic presentation. An list of of natural landscape elements found on the map was placed at the end.

The cartographic work on the map was done by geographer Wojciech Szczawiński, MA, who created the initial draft on the basis of the author's sketches and provided List of settlements, as well as some other maps, both old and new.

We would like to thank all those whose assistance, advice, or encouragement helped us finish this task: Professor Tadeusz Manteuffel, Professor Stanisław Herbst, and Dr. Władysław Pałucki. We thank Dr. Stanisław Litak and the workers of the Department of the Historical Atlas of Poland in Warsaw, especially Henryk Rutkowski, MA, for all their editorial work.

I.2.4 INTRODUCTION TO VOLUME 4: GREATER POLAND (2017)

Krzysztof Chłapowski, Marek Słoń

This work is the fourth volume of the Historical Atlas of Poland series, which is primarily composed of detailed maps of Polish Crown lands in the second half of the sixteenth century at a 1:250,000 scale. The entire series will be composed of eight volumes.¹ This is the sixth volume to be published, with the remaining two (no 6 – Kuyavia and no 8 – Podlasie) in active development. This is the third volume to cover more than one voivodeship.²

This volume covers the historical region known as Greater Poland proper. The Latin term *Polonia Maior* came into use in the thirteenth century, with its Polish counterpart appearing in the mid-fifteenth century. It was composed of two voivodeships: Kalisz and Poznań. The genesis of this district of the Crown dates back to the twelfth century and the emergence of two units was derived from the division into two duchies in the second half of the thirteenth century. After Greater Poland was properly incorporated into the reborn Polish Kingdom (1313–1314), this divide found itself reflected in the establishment of two hierarchies of voivodeship administrations.³ Greater Poland's borders remained virtually unchanged until 1768, when at the behest of the Tsar and an unofficial order of the Russian ambassador, the Gniezno Voivodeship was formed, and encompassed two districts from the Kalisz Voivodeship – Gniezno and Kcynia.⁴ In the second half of the fifteenth century, the meaning of the term Greater Poland was broadened. It happened once again in 1578, as a result of the creation of the Greater Poland Province as part of the Commonwealth under the jurisdiction of the Crown Tribunal in Piotrków.

Greater Poland's unique history from the thirteenth century onward is a result of multiple factors, mainly its geography, its proximity and relations with Silesia, Pomerania and Brandenburg, which belonged to the Holy Roman Empire of the German nation from the fifteenth century and the gradual forming of a local society and economy.⁵ The external borders of the region were stabilized in the first half of the fifteenth century, and did not undergo any major changes until 1668, when the Margrave of Brandenburg and Duke of Prussia, Friedrich Wilhelm I, known as the Great Elector, annexed the Drahim starosta's district, the most northern part of the Poznań Voivodeship. Despite the Crown's best efforts, this territorial change turned out to be permanent.⁶ Greater Poland bordered other Crown lands

¹ As part of the current NPRH project „Historical Atlas of Poland. Complement to the series”, Krzysztof Mikulski is preparing a volume on Royal Prussia, which will be number 9. It was not initially part of the plan as it was previously included in a series of overview maps, MRP. Moreover, a draft of the next issue for Warmia is being prepared; if it receives funding, it will be volume 10 of the series.

from the south, west and north (to the north it had a short border with the Pomeranian Voivodeship). The southern border had not changed since 1343, when the Wschowa area was integrated into Greater Poland. To the east, it bordered the Inowrocław, Kuyavian Brest, Łęczyca and Sieradz Voivodeships, which were often included into a broader understanding of the term Greater Poland.

In the hierarchy of Polish regional administrations, the Poznań Voivodeship was second only to Cracow, with Kalisz also being quite significant.

The idea of compiling sixteenth-century maps was first put forward in 1880 during the first congress of Polish historians by Stanisław Smolka.⁷ The goal of such an undertaking was, besides its direct informational value, to create new tools for historical research. This was not to be limited solely to the creation of a map and publishing it as an atlas. "These maps of Polish lands were to be blind or mute, with accurate hydrography and mathematical divisions, so that topographical dates could be easily transposed to suit the need of the research being done. As for the scale of such a map, in my opinion a 1:300,000 scale would be the most appropriate (as in the case of Chrzanowski's famous map). These maps should be published for the lowest possible price, on cheap paper, in an autographical manner, so that everyone could have access to copies. Anyone involved with historical geography is in dire need of such a basis to note his observations on the map".⁸ Smolka's intent was to create a foundation for the historian's spatial thinking at the stage of the research query. Newly discovered facts were to be instantly written down onto the geographical base appropriate for a given era. This visionary idea – geographical flashcards for historians – lay untouched for a century. Even this series, launched in the mid-twentieth century and constituting the fulfillment of the substantive aspect of Smolka's concept, did not reference his statement.

Only recent advancements in technology contributed to a renewed interest in the creation of spatial notes in a new form. The "cheap printouts" have been replaced by digital maps onto which a researcher could transpose his observations. Furthermore, geographic information systems (GIS) expand one's ability to collect, analyze and publish geographical data. They can be helpful during the preparation of the atlas, as well as during the study of the sources and editorial work. The data added to them can serve not only the researcher, but also be made available for broader use. The space mapped with appropriate IT tools becomes a platform for the exchange of information about the past. Atlas preparation can and should be based around the creation of an environment in which a historian can search for and gather the required information, in which he can find tools that will facilitate a more in-depth analysis, where he could share his discoveries and present his conclusions.⁹ The function of the atlas understood in this way guided the authors of this volume.

The publishing of a paper copy of the maps, comments and index is not only ceasing to be the sole, but also the primary goal of the project. It remains necessary though. This is not only due to a need for continuity in the series, but also a result of the limitations and divergent functions of digital maps. Only careful editing in a specific scale and range allow to harmoniously present a variety of content. It is a conclusion of a particular stage of work. It requires one to make final decisions and allows for a holistic assessment and the drawing of conclusions, in the form of statistics, for example. A similar role is fulfilled by the drafting of a commentary and preparing it for publication. It requires to gather one's thoughts, verify one's theses and present them in the form of a closed, coherent whole. The publication of the volume in a traditional form provides an opportunity for external evaluation of the work performed, which is a necessary part of the research process.

The volume presented to the reader is, however, merely a stage in the process and only one means of presenting the results. The fruits of the team's work are primarily gathered in a relational database. It is composed of a few basic elements. The main element linking the tables is an identifier assigned to each settlement. Its constitutive feature is uniqueness: every settlement must have a different one. Every time a settlement point appears in the database, it must have its identifier. This usually appears in three types of tables. The first determines the spatial location of an object. Apart from the ID, there

⁹ This is gradually implemented on the site: atlasfontium.pl.

are columns (fields) containing geographic coordinates: one pair (length and width) for a point, and for linear or spatial features (polygons) many pairs – one for each point. In the reconstruction of the network of settlements found in the Polish Crownlands in the sixteenth century, settlements are represented via a point topology, i.e. are treated as having no dimensions on the map. Lines are used to demark roads, rivers and part of the borders if a given unit is not shown in its entirety on this map. Larger rivers, lakes and, most importantly, state and Church territorial are recorded as surface features. This system was used to gather data about the location and reach of the researched geographical and historical subjects. Data about them was collected during the query and was stored in source tables. Other than the identifier, they contain information about the source, e.g., its archival signature and the page of the manuscript, as well as its contents, such as transcribed names, numerical values, categories and additional entries. If possible, hyperlinks to the source's facsimiles, map applications and sometimes other databases are also included. For this atlas, the most important set of source tables is the edition of the tax registers. Other data was also gathered in such a manner but is not currently designated for publication.

These materials, along with other datasets and the literature on the subject, were used in the creation of the critical assessment, that is the record of the findings made during the course of the research. The collection of the various versions of a name in sources allows for the determination of its form in the sixteenth century. Information on the taxation of a village, along with its number of *lans*, allow for the assessment of the demographics and for their classification as large or small. Such a summary table contains columns corresponding to subsequent elements of the index (the name along with its variants and modern iteration, the settlement's character and size, its affiliation to a parish and district, the type of land ownership), which also determine its symbolization on the main map. The basic scope of the information of the map, i.e. the presentation of the settlement network, is a cartographic representation of this table, and the index – its properly formatted printout. Some of the other contents of the main and overview maps are also an edited presentation of this data.¹⁰ They are used as the basis to determine the borders of territorial units and the central functions of different settlements. The ownership map is created using additional columns with information about the owners and, in the case of landed property, whether it belonged to the category of large holdings. The data concerning other subjects, such as the location of communes of other denominations or of customs chambers, can be gathered in other tables, but must be separated into source materials and critical texts and, of course, be marked with the proper identifiers. Source information usually relates to a specific date, e.g., daily or annual, while the critical one to a specific time frame. In the database created for this project, the second half of the sixteenth century is the default time frame, but it can be narrowed, e.g., in the cases of newly established villages (starting date) or those that disappear (with the final mention of it serving as the end date).

The GIS software allows for the presentation of numerical, qualitative and even textual data in cartographical form, and, simultaneously, for their statistical and spatial analysis. The main limitation here is the user's experience. Basic data is provided on the atlasfontium.pl website – for initial viewing in a browser and for downloading to your own device in the most universal formats. The use of the system of space and identifiers as the primary points of reference allows for the integration of this data with external materials, such as official space databases including geoportal, as well as using them as a starting point for new queries. In this way we tried to implement Stanisław Smolka's original idea; allowing a historian to immediately transpose newly discovered information onto the map, allowing him to use it to find previously compiled data, also in the form of source editions, and analyze it with the assistance of programming tools, as well as share his discoveries, once again including source editing.

The data presently compiled for this AHP volume will be, therefore, constantly corrected and expanded. In addition to the currently available edition of tax registers and the basis of the settlement network (index data and geographical coordinates of settlements),¹¹ this will be the content of the overview maps, including territorial units and roads, and hydrography and afforestation. Up to and

¹⁰ This list in the form of a spreadsheet and a geodatabase with spatial data can be downloaded from the website: atlas-fontium.pl.

¹¹ RPWK, RPWP, Polish Lands of the Crown in the sixteenth century. Spatial database, IH PAN, atlasfontium.pl (access 25.07.2017).

including 2018, they will be presented as downloadable files (database files with geographic coordinates in standard GIS formats such as Shapefile, GeoJSON, MDB or spreadsheets) and as WMS (Web Map Service) or WFS (Web Feature Service) services, enabling the presentation of the map on one's own website or in one's own application. Independently of this, the atlas team is also working on further topics concerning the geography and history of Greater Poland at the turn of the Middle Ages and Early Modern period. We also hope to encourage external researchers to publish source editions and studies in a format enabling integration with the above-mentioned resource. The digital version of the atlas is thus expected to constantly evolve; however, this published volume is a record of the current state of research at the turn of 2016 and 2017.

As is standard practice in this series, the format of the commentary and the rules used for its preparation are explained in the introduction. These are consistently maintained between volumes, so their description is similar and, at times, identical. The directions must be repeated each time, as they offer the reader essential advice that cannot be relegated to another book. The parts that remained mostly unchanged will retain their text and be directly quoted from the *Foreword to the Cracow Voivodeship in the sixteenth century*, written by Henryk Rutkowski. This is an expression of our admiration for his excellent prose, which we have no intent of editing, and a marker of the series continuity. The latter is quite important, considering the deep changes to the production and publication processes that occurred over time.

The structure of this volume resembles that of the entire series. The main map, at a scale of 1:250,000, shows all settlements that existed in the second half of the sixteenth century, differentiated in terms of their character (towns, villages, mill settlements, etc.), size and type of ownership. Site names were given in their sixteenth-century wording but modern spelling. The map depicts the borders of State and Church administration, major roads, elements of the geographical environment (bodies of water and forests according to their state from the turn of the eighteenth and nineteenth century, as their earlier situation cannot be precisely reconstructed). If any changes happened over the aforementioned half-century, e.g., a settlement changed its ownership affiliation or changed parishes, the map will display the later state (except for a population center disappearing or losing town status). For practical reasons the main map was printed in two sheets, splitting the region into its eastern and western half, containing the Poznań and Kalisz Voivodeships respectively.

Additional maps at a scale of 1:500,000 repeat some of the themes included earlier, especially in the volume dedicated to the Cracow Voivodeship: Church division, the structure of landed property, the network of major and secondary roads. The first volume contains seven town plans – the most in all the series – at a scale of 1:10,000: two voivodeship cities, Poznań and Kalisz; Gniezno, the capital of the Catholic Church's metropolis; Wschowa, the land's capital and second largest town of Greater Poland; the center of one of the Crown's largest districts – Kościan; and two typical examples of local urban networks, a Church one – Dolsk, and a private one – Pleszew. Certain other themes are presented on smaller maps included in the commentary volume.

The commentary describes mainly the source base, gathered mostly on the basis of thorough and extensive query of manuscript sources. Next, the text focuses on our working methods. It explains selected issues, provides statistical data and describes the obtained results. The general layout of the volume is similar to that found in the rest of the series, with the internal structure of some chapters deviating from convention. The borders of the Church administrations are discussed by two authors, separately for the east, including the archbishopric of Gniezno and parts of Włocław one, and for the west, with the Poznań diocese and the outskirts of the Wrocław one. This is a result of the varying reach of the Reformation in both parts and the accompanying differences in the state of the source material. The chapter on the character of the ownership of settlements is similarly comprised of separate texts written by three authors. The available sources made it possible to address a subject omitted in previous volumes – the presence of Jews in the cities. The commentary is limited to the sixteenth century. It does not describe the medieval changes in the borders of state and Church administration, or the process of town foundation, etc. The commentary, unlike the maps or the List of settlements, uses modern settlement names most of the time. If a given sixteenth century name had more than one version, the index provides its alternative variants next to the name which appears on the map. When an old name differs from the modern name, the latter was also included in the List. Moreover, the index provides information concerning the parochial and district affiliation of settlements, as well as

their ownership affiliation. It also indicates approximate location of settlements and includes unlocalized settlements. This volume also contains mill and demesne settlements with approximate location, which are not marked on the main map. A separate list contains physiographic names

The contribution of particular authors was shown in the Table of Contents. Below we specify their part in the preparation of the cartographic section and the Lists. The term 'settlement' means here the localization of settlements, their name, character and ownership affiliation.

Arkadiusz Borek	Settlement in the Kcynia district (with M. Piber-Zbieranowska), in the Kościan district (with B. Szady and J. Suproniuk) and in the Wschowa land, verification of the localization of the settlements in the Kalisz voivodeship, map of the Church divisions (with B. Szady), the map of Wschowa, oversight of atlasfontium.pl
Krzysztof Chłapowski	Settlement in the Pyzdry district (with T. Związek), settlement ownership affiliation, preliminary bibliography of the sources and secondary literature, edition of the volume (with M. Słoń)
Paweł Dembiński	Map of Poznań (with E. Rutkowska)
Michał Gochna	Settlement in the Nakło district (with M. Zbieranowski), the borders of the state territorial units, the character and the size of villages, map of Pleszew (with M. Stępnia), coats of arms (with E. Rutkowska)
Dariusz Kram	Map of Kościan
Marta Kuc-Czerep	Settlement of the Konin district (with M. Słomski) and the Wałcz district, communes of other denominations, development of the Index of Settlements (with J. Suproniuk)
Anna Orłowska	Map of Gniezno
Tomasz Panecki	Main map (with E. Rutkowska), cartographic edition of the map of Gniezno, Wschowa, Kościan, Dolsk i Pleszew, map of Kalisz (with U. Sowina and T. Związek), overview and text maps (with K. Słomska)
Marta Piber-Zbieranowska	Settlement of the Kcynia district (with A. Borek)
Elżbieta Rutkowska	Main map (with T. Panecki), forests and bodies of water, physiographic names with the index, comprehensive (with P. Dembiński) and cartographic development of the map plan Poznań, coats of arms (with M. Gochna)
Katarzyna Słomska	Overview and text maps (with T. Panecki)
Michał Słomski	Settlement of the Poznań district (with T. Związek and M. Słoń) and Wałcz (with M. Kuc-Czerep), verification of the localization of the settlements in the Poznań voivodeship, list of castles and abbeys, map of Dolsk
Marek Słoń	Settlement of the Gniezno and Poznań districts (with M. Słomski and T. Związek), edition of the volume (with K. Chłapowski)
Urszula Sowina	Map of Kalisz (with T. Związek and T. Panecki)
Milena Stępnia	Map of Pleszew (with M. Gochna)
Jarosław Suproniuk	Settlement of the Kalisz district (with A. Borek and B. Szady) and the Kościan district, development of the Index of Settlements (with M. Kuc-Czerep), summary and size of cities, the Jewish population in the cities
Paweł Swoboda	Verification of names in the settlement database
Bogumił Szady	Settlement of the Kościan district (with A. Borek and J. Suproniuk), map of the Church divisions (with A. Borek), construction of the database
Michał Zbieranowski	Settlement of the Nakło district (with M. Gochna)
Tomasz Związek	Settlement of the Pyzdry district (with K. Chłapowski) and the Poznań district (with M. Słomski and M. Słoń), roads, map (with U. Sowina and T. Panecki) and the coat of arms of Kalisz, development of the list of abbreviations and the rules of editing

The abovementioned table does not include the work done on the digital edition of tax registers, which included members outside of the primary team. They are included in the table of contents of

that publication.¹² We must also mention Urszula Zachara-Związek, who took on the difficult task of proofediting the annex to the chapter regarding ownership affiliation.

The team members who worked on the main map (A. Borek, K. Chłapowski, M. Gochna, M. Kuc-Czerep, T. Panecki, M. Piber-Zbieranowska, E. Rutkowska, M. Słomski, M. Słoń, J. Suproniuk, B. Szady, M. Zbieranowski, T. Związek) exchanged source information and provided consultations.

The work on the Greater Poland volume began under the guidance of Małgorzata Wilska, who passed away shortly before its completion. We also received immense help from Henryk Rutkowski, the doyen of Polish historical geography, who is the series' co-author and the editor of two of its volumes. He read the entire volume and added valuable comments.

An important element of the research on settlements was personally acquiring the most intimate knowledge of these terrains as possible. For this purpose, we organized six research trips by bicycle. We drove through several thousand kilometers of Greater Poland roads; we saw dozens of cities and hundreds of villages. We conducted dozens of discussions with local historians and history enthusiasts. We would like to express our sincere thanks to local administrations, cultural institutions and generous people, who organized these meetings and hosted us. We benefitted greatly from their historical knowledge; we were always offered competent guided tours, free accommodation and, often, meals.

The preparation of this volume in its current form would not have been possible without the kind help of the Central Archives of Historical Records in Warsaw (AGAD, Archiwum Główne Akt Dawnych), as well as the State Archive in Poznań, and especially their directors, Hubert Wajs and Henryk Krystek.

We would like to thank the team of the Section for the Historical-Geographical Dictionary of Greater Poland IH PAN for all the numerous consultations and files of both voivodeships that were afforded to us. We would especially like to thank their head, prof. Tomasz Jurek, who read nearly the entire book and shared his thoughts with us. We would also like to thank the reviewers of this atlas: prof. Marek Górny, prof. Zdzisław Budzyński and Jerzy Łojko.

I.2.5 INTRODUCTION TO VOLUME 5: SIERADZ AND ŁĘCZYCA VOIVODESHIPS (1998)

Henryk Rutkowski

The Voivodeships of Sieradz and Łęczyca lay between Greater Poland (bordering on Kalisz Voivodeship), Cuyavia (Brześć Voivodeship), Mazovia (Rawa Voivodeship), Lesser Poland (the Voivodeships of Sandomierz and Cracow) and Silesia, which was situated outside the borders of the Kingdom of Poland.¹ In the second half of the sixteenth century Marcin Kromer remarked that contrary to the lands surrounding it, the territory of Sieradz and Łęczyca did not have a common name. It only went by the name of Greater Poland understood in its broader meaning – as a province united by the general *sejmik* (dietine) in Koło.² The two voivodeships were formed in the Middle Ages. There could have existed a province, subject to a governor (*komes*) who resided in Łęczyca, before Poland was divided into duchies in 1138. The Duchy of Łęczyca was created in the first half of the thirteenth century. Around 1262 it was divided into two duchies: the smaller duchy of Łęczyca, and the duchy of Sieradz, twice its size. After the Kingdom was united in the following century, both duchies became voivodeships. In the fifteenth century Wieluń land, earlier called Ruda land, was annexed to Sieradz Voivodeship. In the hierarchy of Polish lands established at the time, the Voivodeship of Sieradz occupied a higher position than the Voivodeship of Łęczyca. Because of the conservatism of the nobility, both these voivodeships survived unchanged in size until the Second Partition of Poland in 1793.³

The following study constitutes another volume of the Historical Atlas of Poland series. The main element of the AHP are the detailed maps of the Polish lands of the Crown in the second half of the sixteenth century at a scale of 1:250,000. According to the program of the series, presented by Władysław Pałucki, eight maps are to be published, and each volume was given a specific number.⁴ Three volumes have already been published, all under the supervision of Władysław Pałucki. The first volume was no. 3, consisting of Lublin Voivodeship (1966), then volume 7 – Mazovia (1973), next volume 2 – Sandomierz Voivodeship (1993, since then the series is supervised by Stanisław Trawkowski). The publication of the fifth volume marks the fulfilment of half of the program. The following territories remain to be published: 1 – Cracow Voivodeship (in progress), 4 – Greater Poland, 6 – Cuyavia, 8 – Podlasie.

The structure of this volume resembles that of the entire series. The main map shows all settlements that existed in the second half of the sixteenth century, differentiated in terms of their character (towns, villages, mill settlements, etc.), size and type of ownership. Site names were given in their sixteenth century wording but modern spelling. The map depicts the borders of State and Church administration, major roads, elements of the geographical environment (bodies of water and forests according to their state from the turn of the eighteenth and nineteenth century, as their earlier situation

¹ See map of state and ecclesiastical borders.

² It should be noted that Kromer incorrectly appropriates Rawa Voivodeship to the Voivodeships of Sieradz and Łęczyca, failing to realize Rawa Voivodeship belonged to Mazovia. M. Kromer, *Polska czyli o położeniu, ludności, obyczajach, urządach i sprawach publicznych Królestwa Polskiego księgi dwie*, transl. S. Kazikowski, foreword and comp. R. Marchwiński, Olsztyn 1977, p. 22, see also pp. 122, 141, 157 f.

³ See H. Rutkowski, *Borders of state territorial units* [in:] AHP Sieradz, III.2.1.5 in this edition.

⁴ W. Pałucki, *Foreword*, [in:] AHP Lublin, I.1.3 in this edition.

cannot be precisely reconstructed). For practical reasons the main map was printed in two sheets: showing the southern and the northern part of our territory.

Additional maps at a scale of 1:500,000 repeat some of the themes included earlier, especially in the volume dedicated to Sandomierz Voivodeship: Church division at the close of the sixteenth century, the structure of landed property, the network of major and secondary roads. New themes were also presented: Gniezno diocese in the Voivodeships of Sieradz and Łęczyca in the beginning of the sixteenth century, and the area of Łódź in the second half of the sixteenth century (at a scale of 1:125,000). This volume contains four city plans at a scale of 1:10,000: the two voivodeship capitals, the capital of Wieluń land, and the most important urban centre in this territory – Piotrków.

The commentary describes mainly the source base, gathered mostly on the basis of thorough and extensive query of manuscript sources. Next, the text focuses on our working methods. It explains selected issues, provides statistical data and describes the obtained results. The commentary is in fact limited to the sixteenth century. It does not describe the medieval changes in the borders of State and Church administration, or the process of town foundation, etc. The commentary, unlike the maps or the List, uses modern settlement names most of the time. If a given sixteenth century name had more than one version, the List provides its alternative variants next to the name which appears on the map. When an old name differs from the modern name, the latter was also included in the List. Moreover, the List provides information concerning the parochial and district affiliation of settlements, as well as their ownership affiliation. It also indicates approximate location of settlements and includes unlocalized settlements. The List of natural landscape elements resembles the List of Settlements.

The contribution of particular authors was shown in the Table of Contents. Below we specify their part in the preparation of the cartographic section and the lists. The term ‘settlement’ means here the localization of settlements, their name, character and ownership affiliation.

| Stanisław Trawkowski | <ul style="list-style-type: none">– detailed check of the nomenclature |
| Małgorzata Wilska | <ul style="list-style-type: none">– settlement and borders of the district of Radomsko, Wieluń and Ostrzeszów– roads (with H. Rutkowski)– additional map of roads– plans of Łęczyca and Wieluń |

Apart from the team, Michał Zbieranowski helped us prepare the nomenclature of physiographic elements and participated in the technical work on the lists, while Jarosław Suproniuk and Marta Piber helped in the proofreading of both parts of the volume: the cartographical and the textual.

Given the accepted division of work, based on two intersecting criteria: the geographical and the factual, the authors provided each other with source information and offered consultation. Stanisław Trawkowski's expertise was particularly helpful in this commentary.

Here we would like to offer our thanks to Professor Jan Szymczak, who familiarized himself with our study thoroughly, pointed out certain errors and provided us with further information from archival sources. We thank Professor Stanisław Litak for reviewing the chapters on Church organization, and Professor Andrzej Tomczak – for consulting on some of the detailed issues. We owe gratitude to Professor Antoni Mączak and Professor Andrzej Wyczański for their opinions suggesting that this study should be published. We would also like to express our gratitude to the sponsors, who made the publication possible – they are listed on the editorial page.

Translated by Agata Staszewska

I.2.6 INTRODUCTION TO VOLUME 6: CUYAVIA AND DOBRZYŃ LAND (2021)

Wiesława Duży

Sixth in the series of *The Historical Atlas of Poland. Detailed Maps of the Sixteenth Century*, the present volume is one of the two final AHP parts. Together with the volume on Podlasie, edited by Bogumił Szady and Michał Gochna, and published parallel hereto, it brings the series to a close.¹

This volume covers Cuyavia and Dobrzyń land. Such territorial range follows from the plan outlined for working on consequent volumes of the AHP series,² yet it ought to be explained that Dobrzyń land has earned separate mention also in the volume's title. This decision is justified by the public official structure of sixteenth-century Cuyavia and Dobrzyń land, which indicated the independence of the latter, as well as by the source base. And so we elaborated on the specific features of tax registers for Dobrzyń land in the chapters on written sources and rural settlements. The grounds for discussing Dobrzyń land separately from Cuyavia are also formed by historical administrative divisions, presented in more detail in the chapter on the borders of state administrative units. The borders and administrative division of Cuyavia and Dobrzyń land emerged only after a lengthy process, with Cuyavia's division into the voivodeships of Brześć and Inowrocław solidifying since the fifteenth century. What is characteristic of Cuyavia and Dobrzyń land of the second half of the sixteenth century is the absence of state borders. The said area was surrounded by other voivodeships of the Crown. In the period of interest, the border with Royal Prussia was beyond doubt a voivodeship border. Throughout this volume, we consistently use the term 'Brześć Voivodeship', thereby following the historical practice of referring to this area by this name, which ignores the fact that the same designation denotes the Lithuanian voivodeship of Brześć.

It ought to be added that the lack of large municipal centres (with populations of more than 5,000 residents) was typical of Cuyavia and Dobrzyń land. Brześć Kujawski, Włocławek, Kowal, Przedecz, Radziejów, Bydgoszcz, Koronowo, Inowrocław, Pakość, Nieszawa, and Rypin were the largest towns boasted by this region in the second half of the sixteenth century. Scantly populated towns with no more than a thousand residents accounted for a major part of the region's urban development, among them the capital, Dobrzyń-upon-Vistula (Dobrzyń, r). The network of urban settlement has been described in a separate chapter of this volume. Brześć Kujawski, Inowrocław, Włocławek and Dobrzyń-upon-Vistula have been presented in greater detail in separate chapters accompanying the plans of those cities.

The list of chapters and contents of this closing volume is congruent with the guiding principles adopted for the AHP series, save for necessary supplementations. The whole team sought to ensure the cohesion of the contents hereof. This volume was written in accordance with the methodology proposed and implemented as part of preparing the AHP Greater Poland volume. The changes introduced between 2015 and 2017, thanks to the GIS software, paved the way for fuller use of data presentation options and, paradoxically, for returning to the original concept of the Atlas put forward by Stanisław Smolka back in the nineteenth century.³

¹ I intentionally refrain from mentioning the volume on Royal Prussia, as originally it was not part of the AHP series concept. The said volume is being reviewed by Marek Słoń and Krzysztof Mikulski, aided by their team, on the basis of the work already conducted by M. Biskup and J. Koc.

² W. Pałucki, *Foreword*, [in:] AHP Lublin, I.1.3 in this edition.

³ For more information on this subject, see: M. Słoń, K. Chłapowski, *Introduction*, [in:] AHP Greater Poland, I.2.4 in this edition.

Maps form the crucial element of this AHP volume, as is true for the entire series. They make up the bulk of the first part of this volume. The 1:250,000 main map presents the network of Cuyavia and Dobrzyń land settlements in the late sixteenth century. All settlements have been described in terms of their character, size, and ownership type. They have also been assigned their sixteenth-century names. It needs to be clarified here that we use the contemporary name of Raciążek settlement (Raciąż in the sixteenth century) to distinguish this locality from Raciąż in Mazovia. The map outlines the borders of state and Catholic Church administration, as well as the major roads. Physiographic objects (hydrography and forestation) were restored on the basis of information dating back to the late eighteenth and early nineteenth centuries, yet again proving that previous network condition cannot be determined in sufficient detail owing to limited extant source material. Maps at the scale of 1:500,000 resemble the maps presented in previous volumes in terms of the content covered. They show Catholic Church division, communities of other denominations, gord starostys, and the road network. The above-mentioned plans of four cities in the discussed area supplement the cartographic material. In selected chapters, we have provided small text maps as well.

Lists of settlements and natural landscape elements form an integral part of each and every AHP volume. The former gives insight into the ownership affiliation of settlements to districts (*powiaty*) and parishes, and ownership character. It covers all identifiable settlements, including those whose location could not be ascertained.

This volume is the result of efforts taken not only by the authors of individual chapters. The division of preparatory work, which has yielded the individual parts of the Commentary and the Maps, was as follows:

Arkadiusz Borek	settlement in Brześć and Kowal districts of Brześć Voivodeship, borders of Catholic Church administrative units, territorial reach of Reformation, description of written source base, supervision over Włocławek town plan, volume editing
Wiesława Duży	settlement and verification of settlement location in Dobrzyń land, Dobrzyń town plan, supervision over Brześć and Inowrocław town plans, volume editing
Dawid Maciuszek	cartographic work on the town plans of Dobrzyń, Brześć, Inowrocław, and Włocławek; work on selected coats of arms
Tomasz Panecki	main map, text maps (with K. Słomska-Przech)
Katarzyna Słomska-Przech	(small-scale) general and text maps (with T. Panecki), forestation and hydrography, physiographic nomenclature
Michał Słomski	settlement and verification of settlement location in Inowrocław Voivodeship, preliminary bibliography of sources and publications, list of castles and abbeys, ownership affiliation of settlements, volume editing
Paweł Swoboda	verification and determination of names in settlement database
Marcin Woźniak	consultation and archaeological comments to Inowrocław town plan
Tomasz Związek	settlement and verification of settlement location in Kruszwica, Przedecz and Radziejów districts of Brześć Voivodeship

Translated by Katarzyna Bartkowiak

I.2.7 INTRODUCTION TO VOLUME 7: MAZOVIA (1973)

Władysław Pałucki

This map of Mazovia in the second half of the sixteenth century is chronologically the second (after the Voivodeship of Lublin) – and the seventh volume in editorial plan of the series of detailed maps comprising the Historical Atlas of Poland. It should be mentioned here in this introduction that the territorial and factual range of the AHP, and the position of the map of Mazovia within the entire series, I described in the Foreword to Lublin Voivodeship.¹

I would like to remind the readers of our desire that the subsequent volumes of the AHP series should present the cartographic picture of Poland in the second half of the sixteenth century, containing all important information on the spatial arrangement of the following selected elements: a) the complete, named network of settlements, showing the size, character and ownership affiliation of settlements, b) State and Church administrative divisions, including parishes, c) major roads and d) basic geographical elements (the lay-out of the land, water bodies and forests) confirmed by cartographic sources from the end of the eighteenth century and the first half of the nineteenth century.

In the Introduction to Lublin Voivodeship we justified our choice of the chronological period – the second half of the sixteenth century. It is the period of the greatest prosperity of the Polish State. Moreover, we possess a rich supply of historical sources (geographical and statistical) from those times, which witnessed important systematic, economic and social changes.

It is a widely known fact that scientific needs, or even the source basis determine the chronological period and the possibility of preparing a historical map.² In the case of Polish lands, such favourable conditions occur precisely for the second half of the sixteenth century. It would be impossible for the later period, until the end of the eighteenth century, given the fact that the analogous archival collection of the Central Archives of Historical Records in Warsaw, where geographical and statistic sources (hearth tax rates from 1789–1791 and census records from 1787–1791) were kept, was destroyed in the Warsaw Uprising of 1944.³

In the second half of the sixteenth century basic settlement processes were finally complete, and the following centuries witnessed few new settlement foundations. In certain areas the number of new settlements was smaller than the number of those which disappeared, either because they were turned into demesnes, destroyed by natural catastrophes, perished during a war, or were bought and consolidated into a larger property.

Comparable official fiscal sources seem to confirm such assumptions. In the seventeenth and eighteenth century the number of taxed settlements in Mazovia was lower than the one found in the registers from 1576–1578 published by A. Pawiński.⁴ We must therefore agree with H. Rutkowski, who also noticed that the sixteenth century could be described as ‘the best period for preparing a detailed picture of Polish lands before the great changes of the geographical environment’.⁵

⁵ H. Rutkowski, *Mapy podstawowe i atlas historyczny*, KHKM, vol 14, 1966, no. 4, p. 696.

Given what was said about the chronological framework of this series of AHP, the term ‘second half of the sixteenth century’ may appear too extensive. This issue was already explained in the aforementioned foreword to the Lublin Voivodeship. In 1964 we assumed this would actually mean something closer to the end of the sixteenth century. Therefore, if an interesting event occurred in this half of the century (a new settlement), then the map depicts the later situation. Naturally, this does not apply to the existence of a settlement alone. Namely, a settlement which disappeared in the second half of the sixteenth century still appears on the map.

The programme of this series assumes that some important historical and geographical territories of Poland, which in the past constituted individual political and administrative units, were not divided into old voivodeships they consisted of, but prepared and published in separate volumes.

Mazovia provides a typical example here of a unit – considering the territorial development of Poland, before the Recovered Territories in the west and north returned to the Mother Country in 1945 – exceptional and in many terms separate (as explained below in the chapters on the Ownership affiliation of settlements and Geographic nomenclature), in its historical borders which were finally settled (with the Podlasie) in the sixteenth century.

Earlier, Mazovia was larger. It went beyond the initial tribal territories with centres in Płock (Płock or ‘old’ Mazovia), Czersk (southern Mazovia), and Pułtusk (in the area of downstream and middle Narew).⁶

In the west, still in the twelfth century and the first quarter of the thirteenth century, Chełmno and Dobrzyń lands lay inside the borders of Mazovia, and in the east Mazovia reached far into the Podlasie, east of the River Biebrza, between the middle Narew and Nurzec.

Later, after the Teutonic Order obtained the land of Chełmno, the land of Dobrzyń was appropriated to Cuyavia, and various other still not entirely explained territorial changes occurred in the borderlands with the old Duchy of Łęczyca, the border between Mazovia and Lithuania also moved back to the west. As a result, these borders survived 250 years without changes, until the Second Partition of Poland in 1793.

The local old Mazovian duchies were gradually incorporated into the Crown, while the particular lines of the Mazovian branch of the Piast dynasty – the vassals of Poland – were dying out. First the Duchy of Rawa (the lands of Gostynin and Rawa in 1462 after the death of duke Siemowit VI and Władysław II, Sochaczew land in 1476 after the death of their mother, duchess Anna), then in 1495 after the death of duke Janusz II the Duchy of Płock and Wizna land, which at the time belonged to this duchy.⁷ Finally, after the last of Mazovian dukes died – Stanisław in 1524 and Janusz III in 1526 – the largest Mazovian duchy, with main centres in Warsaw, Czersk, Ciechanów and Łomża were incorporated.

As such, Mazovia as presented in this volume encompasses not one, but three voivodeships derived from old duchies: Płock, Rawa and Mazovia, and its area was three-times larger than that of Lublin Voivodeship (10,674 km²). Mazovia is 33,493 km² and naturally that prolonged our work on this volume of the Atlas, consisting of the main map at a scale of 1:250,000, three plans of voivodeship cities at a scale of 1:10,000, a vast commentary on the main map and the plan, and the List of Settlements (6,679) and the List of natural landscape elements (220).

Still, the main differences between the map of Mazovia and the map of Lublin Voivodeship, and in fact all other provinces – or voivodeships – of the Crown, lie in: 1) the density of settlement – in the sixteenth century there were almost as many settlements in Mazovia as in Greater Poland in the broader borders of the province (six voivodeships) in an area almost twice as big, 2) unusual social and ownership structures which influenced the character of settlements and their nomenclature, a situation found also only in Podlasie.

It was necessary to present the three old voivodeships comprising the historical Mazovia also as the map of Mazovia would fulfil its task as a necessary help to historians and scholars of related

⁶ The so-called castellany of Świeck is a trace of the old territorial range of Mazovia, see S.S. Zajęczkowski, *Najdawniejsze osadnictwo polskie na Podlasiu*, RDSG, vol. 5, 1936, pp. 13–14; J. Wiśniewski, *W sprawie badań nad pograniczem Jaćwieży*, PH, vol. 48, 1957, no. 2, pp. 319–326; J. Wiśniewski, *Podlasie*, [in:] *Słownik starożytności słowiańskich*, vol. 4, Wrocław 1970, pp. 172–174.

⁷ In 1499 leased by John I Albert to Jakub Glinka, the starosta of Wizna, in 1599 it was bought out by duchess Anna by Sigismund I's assent from Glinka's successors and for a short spell of time incorporated to the Duchy of Mazovia.

disciplines, (archaeologists, art historians, ethnographers, linguists) only in this territorial range, as almost every serious source publication,⁸ or synthetic works and monographs starting from *Dzieje Mazowsza za panowania książąt* by F. Kozłowski from 1858, until now,⁹ treat Mazovia as one unit.

The territorial range of the map of Mazovia (the three old voivodeships) could still raise some doubts among less knowledgeable readers, given the fact that the members of the Department of the Historical Atlas of the Historical Institute of the Polish Academy of Sciences had previously prepared and published in 1958 the map of Płock Voivodeship around 1578 (*Mapa województwa płockiego około 1578 r.*) at a detailed scale of 1:200,000. We should therefore explain that the map of Płock Voivodeship was a preliminary stage for the chronological period of the sixteenth century and – as emphasized Professor S. Herbst who supervised this collective effort – it was of experimental nature.¹⁰ Hence, despite the undoubted values of this map, it could not always be imitated. The chronological range accepted for this series of the AHP (the second half of the sixteenth century), much broader than the one used previously, allowed us to broaden our source basis, and as a result to introduce certain changes and corrections in relation to the situation from 1578 presented in volume of Płock.

As such, on our map parochial borders, and some of the district borders, were changed or specified in relation to the map of Płock Voivodeships. The location, wording or spelling of names of certain settlements, and in several cases their ownership affiliation, was also corrected. In particular, we eliminated ownership categories introduced in AHP 1958 (including those of four towns): mixed, belonging to the Church and the nobility, for these settlements which in fact belonged only to the nobles (e.g. Drobin Kryskie); small plots of arable land (parson's land called *poświętne*) did not change the ownership affiliation of the entire village. Given the critical assessment of the size of settlements on the map of Płock Voivodeship (eight size groups), based on calculations with too many unknown quantities that the authors themselves treated as dubious,¹¹ the number of size groups on the map of Mazovia was reduced by half (four), and in the key to the map these groups were described as follows: large cities over 5,000 inhabitants, towns – 1,000 to 5,000 inhabitants, settlements (small towns and large villages) from 200 to 1,000 inhabitants, and other villages, hamlets, mill settlements, ironworks, etc., below 200 inhabitants. Also, we refrained from marking various production facilities (marked on the map of Płock Voivodeship) in individual settlements, like water and horse mills, windmills, fulleries, cropping houses, breweries, taverns or inns, which existed in 1578), as apart from technical obstacles (the scale of our map), many of these facilities were changed into something else or liquidated in this half of the century. All main roads (highways) were marked on the map of Płock Voivodeship, as well as country roads marked on Perthées's map from the second half of the eighteenth century, something that again was called a 'useful hypothesis' by the authors themselves.¹² That is why, having broadened the basis of sources, (Perthées and other detailed maps from the end of the eighteenth century – the middle of the nineteenth century), the map of Mazovia shows a selection of important roads which played an important role in the sixteenth century, on the scale of the entire country, voivodeship, or district. The sixteenth century course of these roads was reconstructed on the basis of detailed maps from the end of the eighteenth century and the first half of the nineteenth century. In terms of physiographic elements, we decided not to distinguish forests and meadows shown on the map of Płock Voivodeship according to their contemporary state. Finally, to move into technical details, the enlarged symbols (circles) denoting 'towns or villages' on the map of Płock, with 4–5 mm diameter equalling around 1 km in the field, were reduced on our map, as explained elsewhere, in order to minimize the degree of hypothesis on our detailed maps of Poland in the second half of the sixteenth century.¹³

To end this rather lengthy list of differences between the map of Płock Voivodeship and the map of Mazovia, we must also mention the List of Settlements, a very useful aid in this type of publications.

In case of the map of Płock Voivodeship, the List was limited to the names in their sixteenth century wording, without modern versions of names (if different), or any information as to whether a given settlement had ceased to exist. The List of Settlements accompanying the map of Mazovia does provide this information. Additionally, the List includes all important variations of names, the affiliation of each settlement to district and parish according to the sixteenth century administrative division, and the ownership affiliation of settlements.

As regards the experimental nature of the map of Płock Voivodeship, we could not pass over the first of this series of the AHP, namely the map of Lublin Voivodeship, which – as we expected – was also experimental to a certain degree.¹⁴ Specifically, in comparison to the map of Lublin Voivodeship, the map of Mazovia was supplemented with the following elements: apart from the forests copied from the Quartermaster's Map according to the state prior to 1830, we marked thickets shown also by this source, with a separate symbol. The commentary provides further information on this issue.¹⁵ Based on the map of Płock Voivodeship, the map of Mazovia shows the seats of major officials (castellanies, town starosta's, town and land courts, and land *sejmiks* (dietines), excluded from the map of Lublin Voivodeship). Contrary to the opinion of one of the advisors of the map of Lublin Voivodeship (a co-author of the map of Cracow Voivodeship), who considered such information redundant, we think these offices, perhaps except for castellanies (in contrast to their original role) played an important part in the internal affairs of Poland in the second half of the sixteenth century. As such, we considered it wise to include the seats of these offices and institution on our detailed map. The plans of voivodeship cities were also elaborated, and provided with a longer commentary than was the case with Lublin Voivodeship. The List of Settlements contains information on the ownership affiliation.

Source basis and work methods on the map of Mazovia were described further in this commentary. However, we cannot pass over the fact that during our work, after consultation outside our team, we were forced to change some of the assumptions of our previous, detailed instruction. It became apparent that sometimes what at first, when our method of work was being determined starting with creating the files of settlements, seemed easy to determine on the basis of known and available sources, later turned out wrong or dubious, and the obtained results still uncertain. Therefore, we had to search for other, additional materials and – naturally – analyse this broadened source basis. This usually concerned the localization, identification, correct nomenclature of settlements and physiographic elements marked on the map, and the courses of borders and roads.

For instance, at times a settlement, or its name, localized or identified after long and strenuous work, proved to be incorrect. After using other sources, we had originally not taken into account, not bearing much relation to the territory or the subject of our interest, we had to change everything, or introduce appropriate corrections.

To the authors working on particular lands or districts of Mazovia such 'discoveries' offered much satisfaction, and not just the only one, something that is not easily understood by those who have no experience with laborious scientific research.

Many of these novel findings, which were, as already stated, in comparison with our knowledge up until then of sixteenth century Mazovia, a result of careful examination of a huge number of manuscript or printed sources, or various studies, not reflected in the chapters describing our source basis. However, we considered it appropriate to comment not only on selected important problems and methods used to solve them, but also on our results, when they differed from earlier findings, or explained previously controversial issues concerning Mazovia in the sixteenth century.

This naturally had its influence on the size of this commentary which had to be longer than in case of Lublin Voivodeship. Apart from certain completely natural reasons (like the large territory and dense settlement), we had to conduct an archival query for almost every group of topics represented on the map, as well as separate analysis of sources utilized, and additional – not always successful – searches, in which moments of triumph were often interlaced, when a lost village or its name was found, with those where spirits were low. The readers will therefore find in this commentary, apart

¹⁴ Idem, *Foreword*, [in:] AHP Lublin, I.1.3 in this edition.

¹⁵ See further.

from necessary methodical hints and explanations concerning the methodology for showing particular elements on the map, a wide array of historical and geographical information, allowing for a better understanding and usage of the map.

The commentary was prepared to fulfil the needs of certain source publications which require a broader interpretation as the published map of Mazovia in the second half of the sixteenth century does not differ much from other source publications.

However, at the end of our work we encountered a difficult dilemma, which was whether to keep certain parts of the commentary, such as the assessment of tax registers (our main source basis), the ownership affiliation, character and size of settlements, and the administrative division, in their planned form, or to exclude them from this volume and – as suggested – publish in historical journals, or as a separate volume of studies on cartography and historical geography, or finally – whether to abridge the text. The author of this introduction used to support the latter approach. As the majority of our consultants voted for the broad commentary, given the modest and often controversial knowledge about Mazovia in the past, the form of the commentary remained unchanged. Apart from the usual hints and explanations, the commentary offers a thorough analysis of many a complicated spatial issue (e.g. the size and ownership of settlements) which had to be simplified on the map, even given specialized cartographic methods.

Therefore we decided that the users of the map of Mazovia would find it more convenient, if answers to certain doubts and questions (we decided to describe a wide array of other issues in separate studies) could be found at hand, in this commentary which – accordingly – should be exhaustive. In short, we could not refer to works not yet finished or published.

Our aim was to present all three Mazovian voivodeships on one map. This caused certain technical difficulties. The map published at a scale of 1:250,000 would be 107 × 100 cm, a very inconvenient size, and larger than the map sheets used in cartographic publications. Thus, the map was printed on two sheets equal in size, showing the northern and the southern part of the sixteenth century Mazovia separately. The map was cut along the line Płońsk – Brańszczyk, with a 12 cm wide contact zone which we believe makes using the map much easier. For the same reasons, unlike in the case of the map of Lublin Voivodeship, plans of the three voivodeship cities: Płock, Rawa and Warsaw at the same scale of 1:10,000 and the coats of arms of voivodeship capitals had to be printed on a separate sheet.

In this volume Mazovia in the second half of the sixteenth century was presented in two parts: cartographic and textual.

The cartographic part is the detailed multi-element, coloured map (eight colours) at a scale of 1:250,000 and plans of the three voivodeship capitals at a scale of 1:10,000.

The text contains an extensive commentary to the main map, the commentaries to the city plans and the two lists: of settlements and of natural landscape elements.

The map and the lists were prepared by:

- | | |
|------------------------|---|
| Władysław Pałucki | – main editor |

- graphic design of coats of arms
- Kazimierz Pacuski
 - settlement and borders of Sochaczew land
 - revision of settlement and parochial affiliation in Płock diocese
 - city plan of Płock
 - participating in technical work on the List of Settlements and the List of natural landscape elements
- Henryk Rutkowski
 - methodological instructions
 - settlement and borders of Czersk land and Rawa land
 - roads
 - coats of arms
 - consultations for settlement, borders and city plans
- Wanda Szaniawska
 - city plan of Warsaw

Not all members of our team participated in the works on this volume of the AHP series from the beginning to the end, and their input of work varied. Apart from the authors, Krzysztof Chłapowski contributed to our efforts in the following areas:

- castles,
- technical work on the List of Settlements,
- calculating the area of the voivodeships, lands and districts,
- the majority of statistical calculations concerning the localization of settlements and their ownership affiliation.

The authors of individual chapters of this commentary were listed in the Table of Contents. I would also like to add that I shared the general editorial work on this volume with my closest colleague – Henryk Rutkowski.

Finally, we are glad to offer our sincere thanks to all institutions and persons who made it easier for us to use their scientific collections, or offered us their advice and help while working on this volume of the AHP.

In particular, we must thank Dr. Jerzy Wiśniewski, effectively our permanent consultant on issues related with the nomenclature and settlement of Mazovia, for the revision of lists, assessment of the commentary and his valuable advice. We are grateful to Dr. Karol Buczek for his kind remarks and for allowing the Department of the Historical Atlas of Poland to use his notes from the no longer extant archival files, kept prior to 1944 in the Central Archives of Historical Records in Warsaw (the files of the Fiscal Committee, hearth tax rates from 1789 and 1790 for the entire Mazovia). Thanks also to Dr. Adam Wolff for his advice on the matters of Mazovian settlement and nomenclature.

We offer our sincere thanks to: Dr. Tadeusz Żebrowski, the Director of the Diocese Archive in Płock for making the records available to us and for his help in determining the parochial borders and the ownership affiliation of Church estates, to Dr. Henryk Samsonowicz – the adviser of our map and commentary, Dr. Janusz Rieger – the reviewer of the lists, for their valuable advice and consultations, to Dr. Stefan K. Kuczyński for his help with the coats of arms, to Dr. Iza Galicka for her help with the castles, to Dr. Andrzej Wyczański and Dr. Tadeusz Lalik for their kind opinion on the commentary, and to Dr. Leonid Żytkowicz for lending us his copy of the inventory of the estates of Płock bishopric from 1650, and to Hanna Szwankowska, MA, for her valuable remarks on the city plan of Warsaw.

Moreover, we are grateful to the Director of the Central Archives of Historical Records for his kindness displayed during our many visits to the Archives.

We are also much obliged to the Państwowe Wydawnictwo Naukowe for their editorial and technical efforts, to Wydawnictwo Geologiczne for their excellent map, and to the Scientific Printing House in Wrocław for their careful and efficient typesetting and page makeup of the commentary and lists.

Translated by Agata Staszewska

I.2.8 INTRODUCTION TO VOLUME 8: PODLASIE VOIVODESHIP (2021)

Michał Gochna, Bogumił Szady

The regional uniqueness of Podlasie has been shaped by its borderland nature as well as by the constant conflicts over state and administrative affiliation. Although Zygmunt Gloger decided to include Podlasie to the province of Lesser Poland,¹ it needs to be considered and treated as a separate historical and cultural region. The said borderland ‘marches’ character of Podlasie is apparent to this very day in almost all the elements that comprise its material and cultural landscape – beginning with the natural environment, through forms of settlement right up to the ethnic and religious make-up of the population inhabiting the region.² Its location at the meeting point of two civilisations – Latin (western) and Byzantine (eastern) as well as of two political organisms – the Polish and Lithuanian-Ruthenian was to significantly impact almost all aspects of the anthropogenic (cultural) landscape that constituted the subject of the work herein presented: settlement and onomastics, territorial divisions (particularly ecclesiastical), urban expanse. The source base at the disposal of the researchers was noticeably more limited and diffuse than it had been in relation to the Crown voivodeships situated in the central and western part of the Crown something which enforced the application of a retrogressive method and most obviously weakened the reliability of the conjectures made.

The present publication is the second attempt to develop a map of Podlasie in the mid-sixteenth-century, and here within the framework of the Historical Atlas of Poland project (AHP). The first attempt was undertaken by Tadeusz Żebrowski, who prepared an introductory rough draft depicting the Podlasie Voivodeship in the second half of the sixteenth-century. This work appeared within the framework of works performed by the Warsaw commission of AHP, with a description of the said being given in a paper the author delivered the 4th National Convention of Polish Historians in Poznań in 1925.³ In this he characterised the map content, the source base as well as presented the main problem areas connected with its preparation. The then premise adopted for the choice of Podlasie as one of the first territories to be dealt with was its complicated settlement, ownership, administrative and ecclesiastical relations. Żebrowski’s work was most probably to enable the compilation of a research questionnaire to be employed in further atlas works. Yet this was to be a different assumption than the one adopted in the present series where the Podlasie map was to come to fruition only at the final phase of work on the series already after the establishment and adoption of principles and development of methods in work on the various voivodeships and gaining of experience on the part of the Historical Atlas Department of the Polish Academy of Sciences’ History Institute. Unfortunately a comparison of the results achieved by Żebrowski and those of our team is an impossibility for the initial sketches of the pre-war map nor any copies of the said were to survive the Second World War.⁴

Konopska, *Polskie atlasy historyczne – koncepcje i realizacje*, Warsaw 1994, p. 108.

Two dates which are considered to represent the moment when the Podlasie Voivodeship came into being function within the subject literature: 1513 (mention of Iwan Sapieha, the Podlasie voivode) and 1520 (the charter creating the voivodeship). This significance of those dates is not exaggerated, the present volume has adopted that the Podlasie Voivodeship was sectioned off as an administrative unit in the second decade of the sixteenth-century. And that it emerged from the Troki Voivodeship and initially belonged to the Grand Duchy of Lithuania. In the beginning it comprised six lands: Drohiczyn, Mielnik (which most probably had originally been a part of the Drohiczyn land), Bielsk, Brześć Litewski, Kobryń, and Kamieniec. The territorial shape as presented in the present volume the Voivodeship of Podlasie was to gain under the course of administrative reform within the Grand Duchy of Lithuania and conducted at the *Sejm* sittings for the years 1565–1566. At that time it was divided into two parts. The lands of Brześć Litewski, Kobryń and Kamieniec following their inclusion with the Principality of Turów and Pińsk, created the Brześć Litewski Voivodeship. Within the Voivodeship of Podlasie remained the lands of Drohiczyn, Mielnik and Bielsk, which were joined to the Polish Crown in 1569.⁵ The Podlasie voivode held a place in the senate behind the voivode of Mazovia, but before that of Rawa; so the Podlasie castellan held places behind the Czersk castellan but equally before that of Rawa. It is worth here noting that the territorial shape of the voivodeship determined in 1566 was not stable and for almost the entirety of subsequent centuries (up until 1638) were there disputes over the southern estates of and their inclusion within Podlasie (the territories of Międzyrzec, Wołyń, Łomazy, Rossosz). In this fashion the Podlasie Voivodeship was dragged in a southern direction and bordered with the following:

- from the south-west with the Duchy of Prussia,
- from the north-east, the east, and the south-east with the Grand Duchy of Lithuania, i.e., with the Troki Voivodeship, on a short section with the Nowogródek Voivodeship, and subsequently Brześć Litewski,
- from the south with the Lublin Voivodeship,
- from the south-west and west with the Voivodeship of Mazovia.

As has been mentioned above the source base employed in work into the Podlasie Voivodeship in the second half of the sixteenth-century is much more limited when compared to the earlier volumes in the series. This problem concerns as equally the basic series of sources utilised in the AHP, that is tax registers, as well as supplementary and auxiliary materials. While to a lesser degree the cartographic base. The authors had at their disposal and here for each of the districts at most a few, maximum four tax registers dated to the second half of the sixteenth-century. The same situation finds its reflection in the supplementary and auxiliary sources – the first canonical visits for the terrain under investigation are from the 1630s. What is important is that the way by which registration in taxation lists took place differed from the method employed in other regions of the Crown – even though order in relation to districts was maintained in this registration, often the geographical order of the taxation was disturbed by ownership criteria. The very same concerns the internal order of each of these registers. The headings point to the registration of taxation within the confines of a parish, however a closer analysis of the administrative affiliation and settlement ownership has shown that in many situations of more significance is the ownership affiliation. The owner or steward of estates scattered across several parishes, and even situated in two separate administrative districts, paid tax in one place, something that has made the identification of settlements as well as defining their affiliation to districts and parishes a whole lot more complicated. Given the above of immense significance in the compiling of the main map as well as the commentary texts was the utilisation of other types of source (taxation declarations (*rekognicjarze, recognitiones*), poll tax and hearth tax registers, royal terriers, estate inventories, military rolls, synod registers), that are from as equally the first half of the sixteenth century as later centuries – the seventeenth and eighteenth century (the retrogressive method).

These shortfalls in the source base take on especial significance in the context of reconstructing the complex and dynamic picture of the settlement network of a given region under compilation. Just a general glance at the main map, and in particular at the double-barrelled names of settlements indicates the complicated relations between particular settlements. A lot of attention needed to be

⁵ For more on the date the voivodeship was founded as well as its affiliation to the provinces of Greater and Lesser Poland see M. Gochna, *Borders of state territorial units* [in:] AHP Podlasie, III.2.1.8 in this edition.

directed towards decisions on the degree of settlement unit independence and answers to the question as to whether a definite source mention concerns a separate single settlement, a part of a settlement or even a group of settlements. The collective registration in the sources of many hamlets under a single toponym inclined the authors of the study to take into consideration in the analysis and on the map itself not only hamlets themselves but also noble environs. Under the notion of 'noble environs' one should understand the concentration of a minimum of three hamlets covered by a double-barrelled name, whereby the first component of the said was common for all the settlements belonging to the environs. In this regard the Podlasie settlement network recalls that of eastern Mazovia or the Łuków land.

The changeability in place names derived often from the surnames and forenames of their owners as well as the often registration of several parts of a settlement under a single name has made the unambiguous spatial identification of many settlements. The percentage of settlement points of an unknown localisation or one approximated is 5.7%. The full list contained in the List of settlements covers 1,675 records. A part of these entered into the composition of demarcated noble environs (82 in total), and here particularly in the Bielsk and Drohiczyn lands. In accordance with the principles adopted for the AHP series as a whole all settlements have been described in relation to their type and nature (town, village, mill settlement, manor etc.), ownership (royal, noble, Church, town) as well as estimated size demographically (villages of under 200 inhabitants, larger villages and small towns numbering from around 200 to around 1,000 inhabitants, as well as towns whose populations were within the division of 1,000 to 5,000 residents).

The border nature of Podlasie is particularly visible within the structure of the population's denominational affiliation. Separate chapters of commentary and maps have been devoted to the structures of the Latin Church, the Orthodox Church as well as Protestant congregations and communities. In accordance with the AHP series principles an attempt to reconstruct the boundaries of the parish divisions of the Latin Church has been undertaken. The seats of Catholic and Orthodox parishes have been marked on the main map as well as – respectively – on the thematic map and in the relevant commentary chapter. In turn a separate text map presents the Protestant congregations. In the course of work spent on compiling the main map a lot of space was devoted to evaluating the possibility for the reconstruction of the borders of the Latin parishes in Podlasie in the second half of the sixteenth century. The degree of accuracy in the conjectures made is most variable with this deteriorating as one moves from the north west to the south-east of the voivodeship. The parish boundaries across the expanse of the Mielnik land as well as in the eastern parts of the Bielsk and Drohiczyn lands are highly hypothetical in nature. This results from the fact that many settlements were inhabited by Orthodox populations who did not belong to any Latin parish. The Latin parishes in the eastern part of the Podlasie Voivodeship were not territorially cohesive, remaining obviously communities in the social sense as well as institutions in the legal and economic sense.

The structure and arrangement of the volume maintains the principles adopted within the AHP series. The whole is comprised of Part I: the maps and Part II: the commentaries. The main map of a scale of 1:250,000 presents the whole settlement network with the marking of settlements according to type, size and ownership character, the boundaries of state and ecclesiastical administration as well as the most important roads. As has been mentioned above the map of Podlasie also shows the names of noble environs. The nomenclature of places and environs is given in its sixteenth-century sounding yet in a modern spelling. Elements of the cultural and historical-political landscape has been superimposed onto a physiographical base (water and forests), whose state of being, in line with the series premises adopted, is in accordance with the state of affairs compiled for the turn of the nineteenth century, and here chiefly on the basis of cartographical sources. The main map is accompanied by thematic maps drawn up at a scale of 1:500,000 as well as plans of selected towns at a scale of 1:10,000. The thematic maps relate to the territorial divisions of the Latin Church, ownership structures, as well as the transport system. In the cartographic part there are also to be found four town plans: Drohiczyn, Bielsk, Mielnik and Węgrów. Drohiczyn was chosen as a result of its capital nature for the Podlasie Voivodeship and within the Drohiczyn land. Due to the division of Podlasie into three lands it was decided to also compile street plans for the capitals of the remaining two lands – Mielnik and Bielsk. The latter being also included as a result of it being the largest settlement in the Podlasie of the day and here with regard to population. The three mentioned towns were royal property, while the fourth – Węgrów – was to be the only one that was a private holding, and in addition located on the southern bank of the River Bug.

The volume of commentary is comprised of two parts: I. Sources, II. Method and results, as well as possessing Lists of settlements and natural landscape elements. The treatment of the sources is divided into two chapters – cartographic sources and written sources. In the second part described is the reconstructive method of the image as well as the individual elements of the natural and cultural landscape, which is presented by the main map, the thematic maps and the town plans. Next to the chapter devoted to the natural environment matters of secular and ecclesiastical administrative structure are discussed (those of the Latin, Orthodox, and Protestant Churches), settlement networks (localisation, typology, size, nomenclature, and settlement ownership) as well as the transport communication network. The individual town plans have received their own commentary, with the analysis contained in the commentary of much significance in correctly interpreting the maps. For in many cases the findings arrived at are hypothetical and uncertain in nature. As editors of the volume we would encourage you to read the commentary before looking at the maps themselves in order to obtain information as to which of the presented cartographic contents it follows to approach with the greatest caution and what results from this.

The List of Settlements as equally the presented maps was prepared on the basis of a temporal-spatial database, which served the volume authors in the gathering of source information and its analysis for the duration of the project itself.⁶ It is worth noting that the publication is accompanied by a digital edition of the Podlasie tax registers for the second half of the eighteenth century (<http://atlasfontium.pl>), as the main source base for the compilation. The List of settlements contains the main name (from the second half of the sixteenth century), the contemporary (modern-day) name (if this is different from the main name) as well as the onomastic variants functioning in all the settlements in the Podlasie Voivodeship in the second half of the sixteenth century. The nature of settlement is also given (if its status was different from being a village), its district (*powiat*) and parish affiliation as well as the nature of ownership (if this was different than noble). Shown also are approximated geographic coordinates for each localised settlement, while in the case of places mentioned in the commentary equally the relevant page number.

The whole undertaking is the result of team work – the division of tasks as well as the character of certain individuals' participation is accredited in authorship to the commentary chapters and maps. This is, however, not the full picture of the effort put into the volume by certain individuals. It has been the AHP series editors, Henryk Rutkowski and Marek Słoń, who have vigilantly ensured that the research and editorial works were conducted accordingly. Especial thanks is to be extended to Tomasz Jaszczółt and Andrzej Buczyło, employees of the Polish Academy of Sciences History Institute's Mazovia and Podlasie Historical-Geographical Dictionary Section, who – besides compiling the town plans and texts for Drohiczyn and Mielnik – provided consultations on almost all the thematic aspects of the work. They equally read the volume through in its entirety, providing many valuable comments and additions. Cooperating with the team was also Marta Kuc-Czerep, who gathered source information from the taxation registers, inspections, and tax declarations for the Bielsk land. Team members besides working on specific problem areas were also responsible for the analysis and verification of source information for the individual regions of the Podlasie Voivodeship (the Drohiczyn land – Michał Gochna, Piotr Guzowski; the Bielsk land – Jarosław Suproniuk, Krzysztof Boroda, Michał Sierba; the Mielnik land – Bogumił Szady). Michał Sierba besides drawing up the Bielsk town plan and researching the transport network equally correlated the information on economic objects. Paweł Swoboda in preparing the commentary chapter on onomastics brought many valuable comments and corrections on the identification and localisation of settlements. The cartographers preparing the maps and street plans (Tomasz Panecki, Katarzyna Słomska-Przech and Dawid Maciuszek) exceeded their technical profiles by introducing many valuable methodological additions, some of them resulting from fieldwork research conducted in cooperation with historians (Michał Gochna and Tomasz Jaszczółt). It is also worth remembering that all the project works, beginning from the assembly of information through its analysis and correlation right up to data presentation would not have been possible without the IT support and expertise of Grzegorz Myrda and Przemysław Grądzki. During the course of work on the

⁶ The presented volume was prepared within the framework of the project: A Historical Atlas of Poland in the 16th century – completion and enrichment of the series, no. 1aH15037383, head: M. Słoń, National Program for the Development of Humanities (Narodowy Program Rozwoju Humanistyki). Realisation time: 2016–2020.

Podlasie volume a bicycle field-trip around the southern part of the former Podlasie Voivodeship was organised, during which meetings were organised with members of the local communities of Węgrów, Ciechanowiec, Drohiczyn, Mielnik and Międzyrzec Podlaski, and where the research methods employed and research results were presented. Unfortunately the pandemic that spread in the first half of 2020 made the organisation of a similar trip around the northern part of the former Podlasie Voivodeship an impossibility.

Translated by Guy Russell Torr

I.2.9a INTRODUCTION TO THE SUPPLEMENT: ROYAL PRUSSIA, PART 1 (1961)

Marian Biskup

The map series depicting Royal Prussia in the second half of the sixteenth century (MRP) is the fruit of research which began in 1953 at the Toruń branch of the Institute of History of the Polish Academy of Sciences, in the Historical Atlas Department. The series is part of the *Historical Atlas of Poland*, which incorporates maps to the scale of 1:500,000 was compiled by a team of researchers from scientific centres in Warsaw, Cracow, Lublin, Toruń, and Wrocław.

The current shape of the AHP was conceptualised in the early days drawing on the achievements of the Polish Historical Atlas Committee at the pre-World War II Polish Academy of Arts and Sciences in Cracow,¹ where it was decided that the chief aim of the compilation would be to chart in detail the land falling within the borders of Poland during three key periods: the thirteenth, the sixteenth, and the eighteenth centuries.² However, post-war changes in Polish historiography, especially the new focus on its socio-economic aspect, affected the overall concept of the AHP, broadening its scope and giving it a new dimension. It was decided that the chief aims of the AHP would include a cartographic depiction – numerical and spatial – of the human activity with the geographic landscape as its background,³ as well as the recreation of the economic regions of historical Poland.⁴ By no means was the original cartographic depiction of physiography, administrative division, and settlement (including land ownership) abandoned; instead, this new concept of the AHP aims to capture additionally the basic issues concerning the state and relations of production power, such as density and diversity of rural and urban populations, or the distribution of the centres of the economy. The final result would be a synthesised depiction of production power for particular regions and for specific periods. This concept was first implemented in 1958 by the publishing of the *Plock Voivodeship around 1578 (Województwo plockie około 1578 r.)*, compiled by a team of researchers from Warsaw.⁵

This broad concept behind the AHP also applies to the *Map of Royal Prussia in the sixteenth century* (to the scale of 1:500,000), though the choice of the period of this publication requires some explanation. While a publication on the state of the region in the eighteenth century would have without a doubt been more justified as a good starting point for a retrogressive study, the lack of sources, and in particular the loss of the 1772 Frederician Cadastre, which had gone missing during the Second World War, necessitated an earlier than anticipated start on the depiction of the region for the second half of the sixteenth century. The source base for this period proved to be generally supportive of the implementation of the broadened concept of the AHP, though – which we shall see in the course of this publication – not in its entirety and not for all of Prussia.

Until now, Prussian lands have been given neither a thorough cartographic depiction nor a statistical and demographic database.⁶ Moreover, the planned scale of 1:500,000 made the depiction of the settlement network (one of the more important geographical aspects) impossible in its entirety. To amend the absence of data, 1:300,000 analytical maps of the region, supplemented by extensive commentary,⁷ were drafted as part of the preliminary research process. Not only did these maps help illustrate the data from the 1570 tax register,⁸ which remains the single most important source for all studies in the field of historical geography for the selected time period, they allowed for a more detailed depiction of particular aspects of the project. This is especially true when it came to administrative division, land ownership distribution, as well as the ethnic distribution of various groups of the landed gentry. These early studies also served as an important geohistorical word bank, incorporating tallies and registers of both land ownership and economic data for all settlements, which proved essential in shaping the basis for the developing research on Royal Prussia.

While fulfilling the requirements of the general concept of the AHP, the works on the Map of Royal Prussia series had to nonetheless take into consideration the local historical and geographical character of the region. This uniqueness has time and again found itself within the scope of interest of the publications on the socio-economic conditions in Prussian lands. It was especially apparent in the development of trade, which was far more rapid than in the other parts of the Polish Crown. Set into motion already during the Teutonic State period, developing trade fuelled the emergence of large urban centres in the region, such as Gdańsk, Toruń, and Elbląg, and saw members of the Third Estate bestowed with significantly more land than was the norm in the rest of the Crown, which in turn drove up demand for hired labour.⁹ Naturally, these phenomena would leave a clear imprint in historical sources, and, consequently, in the research methodology and the cartographic depiction of particular issues, which would sometimes differ from the methods used in researching other parts of the Polish Crown.

Another individual feature of the study of Royal Prussia was the particularity of the source material. Without dwelling too much on the issue here, it is enough to say that the database for the region is in many aspects less abundant than for other regions of the Crown. This concerns especially the primary sources, i.e.: the 1570 tax registers; in the light of large portions of data missing, with many settlements omitted, and information being incomplete in general, a need arose to either incorporate data from tax registers for adjacent years or supplement it from other sources. As surviving tax registers from the second half of the sixteenth century for Royal Prussia (differently than in the rest of the Crown¹⁰) featured only a single profile of data, and that largely incomplete, the other sources considered

⁶ The sole attempt at mapping the region for the period was *Mapa heraldyczna Pomorza w XVI w.* by K. Górski, part of the publication *Pomorze w dobie wojny trzynastoletniej*, Poznań 1932, Appendix. A study by E. Bahr, *Die Verwaltungsgebiete Koenigl. Preussen 1454–1772*, Zeitschrift d. Westpr. Geschichtsver., vol. 74, 1938 was more of a compilation of settlement names in accordance with administrative division and land ownership, with no cartographic representation. The popular *Staats- und Verwaltungsgrenzen in Ost-Mitteleuropa*, vol. 2, Munich 1954 by E. Keyser features only a simplified picture of the administrative division of Royal Prussia on a 1:650,000 scale map. A cartographic rendering of the settlement network in Royal Prussia was published by W. Maas, *Zur Siedlungskunde Westpreussens 1466–1772*, Marburg/Lahn 1958 (map: *Besiedlung Westpreussens 1466–1772*, scale 1:300,000). However, this depiction was more of a cross-section, not featuring all settlements, but either newly-emerged ones, or older, inhabited, according to the author, by people of German origin (cf. Biskup's criticism of Maas's publication in: M. Biskup, *Z nowszych prac zachodnioniemieckich nad osadnictwem Prus Królewskich w XVI–XVIII wieku*, PH, vol. 51, no. 2, pp. 411–424).

⁷ The maps include: M. Biskup, *Mapa rozmieszczenia własności ziemskiej województwa pomorskiego, okręgu bytomskiego i łęborskiego w drugiej połowie XVI w.*; A. Tomczak, *Sieć parafialna województwa pomorskiego, okręgu bytomskiego i łęborskiego w drugiej połowie XVI w.* in work: *Mapy województwa pomorskiego w drugiej połowie XVI w.*, Toruń 1955 (RTNT, vol. 58, no. 1); M. Biskup, *Podziały administracyjne województwa chełmińskiego w drugiej połowie XVI w.*, SMDWP, vol. 1, no. 2, 1956, pp. 105–127; idem, *Rozmieszczenie własności ziemskiej województwa chełmińskiego i malborskiego w drugiej połowie XVI w.*, Toruń 1957 (RTNT, vol. 60, no. 2).

⁸ M. Biskup, *Rejestry poborowe województwa chełmińskiego z r. 1570/1*, Toruń 1955 (Zapiski Towarzystwa Naukowego w Toruniu, vol. 20), pp. 305–328.

¹⁰ Cf. the compilation of tax registers in Mazovia by I. Gieysztorowa, A. Żaboklicka, *Rejestry poborowe Mazowsza z XVI w. Uzasadnienie nowego wydawnictwa źródłowego*, KHKM, vol. 3, 1955, no. 2, pp. 338–355.

in building a more complete depiction of the region included: inspections and inventories of royal demesne (also incomplete), inventories of Church properties, accounting documents for the territories of large towns, etc., or even numerous monographs on particular districts, villages, and towns. The detailed analysis of the database can be found in Chapter *Sources* [II.1.9A, II.2.9A], but it is worth mentioning that this diversity of sources allowed for significant supplementation of the missing data from tax registers. However, sometimes missing information on certain elements for particular territories, especially concerning the territories of large towns, could not be found elsewhere, which resulted in no statistical data and, consequently, no possibility to chart these elements, creating “lacunae” on several thematic maps.

While the source base for Royal Prussia has got its limitations, there are also some strong features worth mentioning, especially in comparison to similar source materials for the rest of the Polish Crown. They include the more precise data concerning some economic aspects, especially the number of settled peasants (*gbur*), or the acknowledgement of the existence (or even the size) of manors for particular types of land ownership. This information facilitated and rendered more precise the research on numerous subjects relating to land ownership and the demographics of Prussia.

The final result is a cross-section of Royal Prussia in the second half of the sixteenth century, or, more precisely, between 1564 and 1580, with the particular focus on data from 1570 and 1571. This timeline corresponds with the chronology of studies of other regions of the Polish Crown, established by A. Pawiński¹¹ and considered by most researchers to be the socio-economic peak of the Polish-Lithuanian Renaissance. However, in the case of Royal Prussia, due to the differences in the socio-economic structure of the region, the 1570s were decidedly not the pinnacle of development that they were everywhere else. In fact, the second half of the sixteenth century was a period of intense rebuilding of agriculture in the region after it had suffered heavy war damage in the 15th and the early sixteenth centuries. The later part of the sixteenth century also saw more of the landscape transformed into arable land. Maturing manorialism accompanied the changes in the region, though the systemic changes also had their local spin. The development of manorialism would progress differently than in the other parts of the Crown, while its strong impact and negative consequences would not become salient at this stage.

The culmination of the development of the production forces in Prussia in the late sixteenth and early seventeenth centuries would be the so-called Dutch (*Olęder*) colonisation and the so-called second German colonisation. These settlement efforts brought forth widespread forest grubbing, wetland draining, and significant growth in the number of rural settlements, especially in Vistula Pomerania (*Pomorze Nadwiślańskie*) and Żuławy;¹² urban development, especially in the case of Gdańsk, was also affected by these processes. Source materials for the selected time period do not reflect burgeoning changes, save for perhaps capturing the very beginning of their development.

Considering all these factors, the peak economic development of feudal Royal Prussia seems to have occurred later than in the rest of the Crown, with the beginning of the seventeenth century being the earliest estimation and the early 1620s (before the Polish-Swedish War of 1626–1629) the most probable one. This would put the region’s peak productivity a full half a century later than the period chosen for the AHP. As such, the 1570s analysis of the region would not have showcased the maximum potential of the region but was nonetheless chosen out of necessity, as the existing source material would not have allowed for the reconstruction of a later period, *i.e.*: early seventeenth century, save for a few select categories of land ownership, such as royal demesne. As a result, the general picture of Royal Prussia in the age of the Renaissance is, out of necessity, incomplete. Quantitative values, especially where arable land area and demographics are concerned, are lower than they would have been in the age of full prosperity fifty years later; this is key in understanding and interpreting the data presented in the current study, most prominently in the case of demographics.

¹¹ P. Wielkopolska, vol. 1, pp. 12 f.

¹² Cf. M. Aschkewitz, *Die Bevölkerung im südöstlichen Pommerellen vom 13.–18. Jahrh.*, „Altpreuussische Forschungen”, vol. 19, 1942, p. 166, *passim.*; idem, *Die deutsche Siedlung in Westpreussen im 16., 17. und 18. Jahrhundert*, „Zeitschrift für Ostforschung”, vol. 1, 1952, no. 4, pp. 563 f.; F. Mager, *Geschichte der Landeskultur Westpreussens und des Netzebezirks bis zum Ausgang der polnischen Zeit*, Berlin 1936, pp. 52 f. The most detailed account can be found in W. Maas, *Zur Siedlungskunde Westpreussens*, pp. 21 ff.

When considering the importance of the abovementioned statement, it bears mentioning that the available source material would not allow for the analysis of the region of Warmia, despite it being a part of Royal Prussia. The poor state of surviving sources, as well as the differences between local sources and the rest of the source material for Royal Prussia and the Polish Crown (such as a notable lack of tax registers), has necessitated the marginalisation of the region in the analysis. It remains uncertain whether a similar cross-section study of Warmia for the second half of the sixteenth century would even be possible, with the most promising period being the second half of the seventeenth century.

The regions of Bytów and Łęborg, fiefs of the Pomeranian Dukes until 1637, were also omitted in the Map of Royal Prussia, as the most important issues – data concerning land ownership distribution and the parish network – had already been depicted in maps to the scale of 1:300,000. The physical condition of the source material for the two regions and their differences from the sources on the other regions (the lack of tax registers) did not allow for a comprehensive and comparable analysis of the selected issues in the study.

The entire study consists of the main map (depicting the settlement network), a geomorphological outline, as well as ten thematic maps and their respective commentary. The commentary section consists of both descriptions and statistical tables, which include portions of the socio-economic data, particularly those depicted in cartographic form, aggregated for parishes as basic areal units in each of the three Prussian voivodeships.

The study is the result of many years of interdisciplinary research, combining the historical expertise of Marian Biskup, as well as the geographic knowledge of Lucjan Koc, who prepared the physiographic and geomorphological elements for the entire region with the corresponding passages in the map commentaries, as well as, with great dedication, planimetrically calculated area sizes.

Credit for map drawing, which merits the highest praise by the authors, goes to the invaluable Franciszek Sołtysik. Finally, the authors would like to thank all researchers in the Historical Atlas Department of the Institute of History in Warsaw, especially its head, Professor Stanisław Herbst and Irena Gieysztorowa, for their kind and constant help in the form of consultations and indispensable advice on methodology.

We would also like to extend our gratitude to the Central Archives of Historical Records in Warsaw, the State Archive and the Polish Academy of Sciences Library in Gdańsk, the Toruń branch of the State Archive in Bydgoszcz, the Diocesan Archives of Gniezno, Olsztyn, and Pelplin, and to the Nicolaus Copernicus Provincial and Municipal Library for their gracious cooperation in making the necessary source materials and maps available for research.

General remarks¹³

This chapter will focus very generally on the methodology employed in the study, while a more in-depth analysis will be presented in the chapters dealing with particular subjects, further in the text.

The data acquired from the written source for the maps were entered into a catalogue of settlements in Royal Prussia. This catalogue, separate for each voivodeship and district, contained the following information: both sixteenth-century and modern names of settlements, their parish and district affiliation, landlord name, socioeconomic data – such as number of arable and fallow *lans* of land (*lan*, *lany*), number of peasants and farmhands, craftsmen, industrial facilities, etc. – as well as the source of the information. All in all, over 2,000 items are listed in the catalogue.

The information gathered was subsequently compiled into numerical data, which facilitated transformation, precise calculations, as well as translation of the results into the draft maps. A separate catalogue was compiled for the information on noble landlords (*szlachta*), including names and surnames, the settlements they owned, and the district where these settlements were located, character of the settlements, number of *lans*, and amount of taxes paid (which was crucial in classifying the entirety of Prussian nobility and analysing their diversity). This second catalogue incorporated around 1,350 noble landowners and served as the basis for the calculation of arable land owned by individual landlords.

¹³ MRP, pp. 20–22.

Maps elaborated by the Military Geographical Institute of Poland – known as WIG maps – to the scale of 1:500,000 became the basis for the cartographic interpretation of the data. In the early stages, research was also done on 1:100,000 tactical maps, with the data then scaled and generalised onto the scale of 1:500,000 maps. This method was essential in locating particular physiographic elements, administrative borders, land ownership distribution, industrial objects, and various other features.

In the light of the lack of proper contemporaneous cartographic sources, it proved unfeasible to depict the forested areas, the hydrographic network, and communication routes in sixteenth-century Prussia. To compensate, some later maps had to be utilised for this purpose, namely eighteenth-century maps, including the Schrötter Atlas, and modern military maps; the former also became the primary source for the location of meadows, pastures, as well as wetland and bogs.

The above-mentioned physiographic data and cartographic sources served as the basis for delineating the administrative borders in Royal Prussia for voivodeships, districts (or territories), and parishes as the basic, smallest administrative units. These maps, especially the Schrötter Atlas and a modern map with marked districts, could largely be used to delineate voivodeship or district borders while delineating the parish borders was accomplished by interpolation – used widely in historical studies – with the exclusion of cases in which parish borders ran along the borders of larger administrative units or along natural borders. A similar method, utilising results from 1:300,000 analytical maps of Prussian voivodeships,¹⁴ was used to depict individual land ownership complexes.

Due to the lack of reliable data for Chełmno and Malbork Voivodeships, it was decided that the Atlas would not feature borders of deaneries; the cited work by A. Tomczak depicts deanery borders in Pomeranian Voivodeship to the scale of 1:300,000.

District and parish border networks (with the exception of the territories of the towns of Elbląg and Gdańsk) became the basis for planimetric calculations, with the results employed in further statistical compilations, particularly area size and demographics. For such calculations, the parish was considered to be the basic administrative unit, with several larger unit exceptions made, when the character of the source material required it, e.g., in case of large urban territories (Gdańsk or Elbląg), larger land ownership complexes (such as the Nowodwór estate in Malbork Voivodeship), or other sizeable land territories (such as one around Tolkmicko). The data from this analysis was then compiled and used to create thematic maps, where, consequently, particular topics were depicted with parishes as the basic cartographic unit.

The results of the statistical compilation of data are included in the tables at the end of the Atlas, along with the commentary. It bears mentioning that only the most important issues were presented on the maps; minor issues were incorporated into the commentary. The text also tackles several matters, which, while they failed to emerge as maps, provide valid inklings into our understanding of some of the internal problems of Royal Prussia. Such practice is justified by the severe lack of historical sources on socioeconomic conditions in Royal Prussia. These include demographics, as well as the agricultural and industrial characteristics of the province. Even by just combing through the entire bulk of pre-existing literature – which in itself almost universally described conditions in royal estates (cf. the works by J. Rutkowski, W. Jakóbczyk, W. Rusiński, and A. Mączak)¹⁵ – unexplored areas of research emerged and some conclusions had to be formed for the very first time, without any solid basis in previous research. This, as previously mentioned, became especially apparent in the case of the demographics of Royal Prussia and the extent of arable land. The authors acknowledge the fact that even though

¹⁴ For a more in-depth explanation of the method, cf. M. Biskup and A. Tomczak, *Mapy województwa pomorskiego w drugiej połowie XVI w., vol. 1: Rozmieszczenie własności ziemskiej*, Toruń 1955, pp. 16–17. The limitations of this method were outlined by T. Ładogórski in the review of this work in: ZH, vol. 21, no. 3–4, pp. 307–311, suggesting that this delineation could have been based on modern-day gmina borders; however, this does not account for the transformation Royal Prussia underwent during the period of heavy settlement between 1570 and the end of the eighteenth century (as well as nineteenth- and twentieth-century population influx). These processes prompted the emergence of many new settlements, even in the areas which had been settled very early on, such as the Vistula banks and Żuławy in Pomeranian Voivodeship or the eastern part of Chełmno Voivodeship, not to mention forested areas. The increase of the number of settlements in Pomeranian Voivodeship between the sixteenth and eighteenth century was upwards from 50%, based on the data from G. Dabinnus, *Die ländliche Bevölkerung Pommerellens im Jahre 1772 mit Anschluss des Danziger Landgebietes im Jahre 1793*, Marburg 1953. Moreover, some settlements were destroyed in wars in the seventeenth century. These facts could have caused significant changes in the previous shape in settlement borders. As such, adopting the method proposed by T. Ładogórski could only be justified for the state of borders in the eighteenth century.

¹⁵ Cf. bibliography.

some of these results might raise controversy and become subject to correction in the future we find them necessary to further explore the matter at hand. Compiling the Map of Royal Prussia meant both elements of detailed analysis, as well as a holistic synthesis needed to be considered, which always carries the risk of some premature generalisations. The commentary points to several areas requiring further research that could help consolidate and confirm particular conclusions and data compilations.

Settlement locations were based on the results already obtained from 1:300,000 land ownership maps. Minor supplementation for the rural settlements in Pomeranian Voivodeship was provided in chapters on the settlement. However, it bears mentioning that auxiliary research revealed nine further rural settlements in Pomerania,¹⁶ which brings the number of unidentified settlements in this voivodeship down to twenty; the number of unidentified settlements remains unchanged for Chełmno Voivodeship (twenty-one) and Malbork Voivodeship (four).

Rural and urban settlement names were universally listed in their modern forms (based on the data by S. Rospond for the Recovered Territories¹⁷) due to the specific, mixed, Polish-German (and to some extent Old Prussian) character of place names in the region of Royal Prussia. The characteristic sixteenth-century form of the name was only provided (in brackets) in the case of towns. Some pre-1939 parish settlement names are listed in the tables at the end of the Atlas.

The technical aspect of elaboration of the Map of Royal Prussia was based on the one employed by the authors of *Województwo płockie około 1578 r.* (AHP 1958), following their model of the legend, though supplementing it with some additional symbols.

Due to the scale of the Map of Royal Prussia, rural settlement names only mark parochial seats, while other minor settlements are marked with black dots. Their names, however, can be easily identifiable with the use of the aforementioned 1:300,000 land ownership and parish maps for Prussian voivodeships.

On the thematic maps, individual parishes (or similar large territorial units) were marked with numbers from one to 356, corresponding to the list in the Appendix.

Thematic maps¹⁸

The second part of the MRP consists of 10 thematic maps, which – together with a few smaller charts and sketches – highlight the most important economic and social problems of sixteenth century Prussia. The most important elements of the main map, i.e., the borders of parishes, districts and voivodeships, as well as the hydrography, served as the base maps for the preparation of the thematic maps in the 1:500,000 scale. Most of the statistical calculations were performed on a parish scale and maps for districts were additionally prepared only with regard to demographic issues.

The elaborated thematic maps can be divided into two larger groups:

- I. Maps 1–2, highlighting the problems of arable land, soil and land ownership.
- II. Maps 3–10, illustrating the problems of demographics and rural craftwork as comprehensively as possible.

The cartographic presentation of significant and wide problems of the arable land and demography of Prussia required a thorough statistical study, especially in the absence of studies on these issues. Therefore, in the commentary, a lot of space had to be devoted to the presentation of the calculation methods and their results in the form of tables, presenting the entirety of the problem. For these reasons, it was decided to present a map on land ownership first due to the close connection of this problem with the issue of arable land.

Translated by Paulina Waclawik

¹⁶ Cf. M. Biskup, A. Tomczak, *Mapy województwa pomorskiego*, pp. 18, 81 f. The following settlements have been located: Brody (Tczew district); Kałdowo (Tuchola district); Kowalikowo (Tczew district); Lisewo (Gdańsk district); Pądzienca (Tuchola district); Pucka Wieś (Puck district); Schirschaw (territory of the town of Gdańsk); Westkrug (Gdańsk district), and Węglino (Puck district). In a few cases, the location of known settlements was adjusted, such as Chylonia and Cisowa (Pomeranian Voivodeship) based on a more accurate topographic analysis. Parochial borders in Chełmno Voivodeship and the districts of Pomeranian Voivodeship underwent minor corrections, based on the evidence from improved knowledge of full vegetation cover.

I.2.9b INTRODUCTION TO THE SUPPLEMENT: ROYAL PRUSSIA, PART 2 (2021)

Marek Słoń

The Atlas of Royal Prussia, compiled by Marian Biskup in a collaboration with Lucjan Koc, was published in 1961.¹ At that time, within the Institute of History of the Polish Academy of Sciences which was the driving force behind this publication, the Historical Atlas Department had already been established. Earlier, it was decided that the cartographic study of the Crown would concern the second half of the sixteenth century, in accordance with the original concept of Stanisław Smolka,² and contrary to the position supported by the Cracow centre in the interwar period. The series of atlases of the eighteenth century, which began with the edition of *the Map of the Kraków Voivodeship in the period of the Four Years' Sejm (1788-1792)*,³ lost its priority, mainly due to the destruction of the most valuable archival sources for that period in the war efforts.⁴

Upon the decision being made, there was no program of detailed maps of the sixteenth century, so the pilot volume of Płock was aimed at collecting some “experience in generalization to the overview scale”.⁵ A breakthrough came with the conference in 1964, during which the arguments for the cartographic reconstruction of the full settlement network prevailed.⁶ The Lublin volume, which had been nearly completed at that point, was hastily and almost entirely adapted to the newly assumed requirements. However, this could not be done for the atlas of Royal Prussia, which had already appeared in print in 1961.

In 2015, the Department of Historical Atlas was preparing an application for funding the last works on the series under the National Program for the Development of Humanities (*Narodowy Program Rozwoju Humanistyki*). According to the original assumptions, it was supposed to cover all the lands of the Crown of Poland. While it was clear that this excluded Lithuania and the Ruthenian lands annexed in 1569,⁷ the status of Royal Prussia was unclear. What provoked doubts, however, was not so much the Polish character of the lands as the state of the sources covering the area and the possibility of seamless integration with the entire series. The Prussian volume itself was not included among the publications containing the detailed maps, but only the overview maps to the scale of 1:500,000. This meant, first of all, the lack of data for each settlement separately, which, indeed, lay at the foundation of the whole series. On the other hand, the atlas prepared by Marian Biskup referred to some external

sources containing these data and even their cartographic representation.⁸ Moreover, for the largest of the voivodeships, there was a much newer and more complete study by Krzysztof Mikulski.⁹ Therefore, I asked him if he would be willing to take part in the project and prepare a new atlas of Royal Prussia with a detailed map and a source edition modelled on the Greater Poland volume. He agreed and devoted himself to that purpose, taking a part-time job for the five following years.

There were no doubts what the requirements of the series of detailed maps were and what was missing in the 1961 edition. Apart from the map to the scale of 1:250,000 with the location, names, legal status, size and ownership affiliation of each settlement, there were several issues to cover. There was no chapter on the names of these settlements, as they had been absent in the original atlas published by M. Biskup. The commentary on the road network included in the 1961 edition and their presentation on the map also needed to be supplemented.¹⁰ Mid-level Church organisation and administrative units between the parish and the diocese, as well as their cartographic presentation and textual commentary were also missing. Similarly, it was necessary to recreate the coats of arms, thoroughly documenting the process with accompanying text. This, in turn, was related to the greatest lack in terms of quantity: the chapters of development of town plans with an extensive commentary. Certainly, it had to include the capitals of the voivodeships, i.e., Chełmno and Malbork, and it seemed obvious to include also other large towns in this area: mainly Gdańsk, but also Toruń and Elbląg. Already in the first talks, we deemed it important to develop an overview map of Protestant churches and a chapter on the subject. It was obvious that some of these tasks had to be elaborated by people outside of the team, specialising in particular topics, namely the history of the towns, apart from Toruń, and names, which definitely had to be prepared by a linguist. The final form of the publication and its relation to the atlas of 1961 were to be shaped in the course of the project.

Ultimately, the minimum plan was implemented, consisting in publishing a supplement with only necessary supplements. Krzysztof Mikulski played an important role in the elaboration of the main map, settling factual doubts and supporting the team with his advice at each stage of works. He had a significant contribution to the preparation of the edition of the tax registers, serving as an addition to the AHP series. The editing of the text rested on the undersigned, and the cartographic part on Tomasz Panecki. Henryk Rutkowski as the editor of the series was of great help in both tasks. He read all the chapters and maps carefully, providing detailed comments on them.

Much of the historical work was commissioned outside, while most of the mapping was done by the Atlas team. Only the change of the scale of the main map from 1:500,000 to twice as large, using the index of towns and various cartographic sources, was commissioned outside, selecting the contractor in a tender procedure. Eventually, the map was prepared by Piotr Kann under the supervision of Krzysztof Mikulski and Tomasz Panecki. It served as a base map for elaboration of overview maps of administrative boundaries, ownership divisions, and roads, created by Katarzyna Słomska-Przech. As far as the new chapters are concerned, Tomasz Związek re-analysed the road network of Royal Prussia, supplementing and correcting the findings of Marian Biskup on the basis of sources from the sixteenth century, which is documented in a short commentary. Tomasz Nowicki is the author of an extensive chapter on Church boundaries. The major part of the book consists of the texts about the towns of Gdańsk, Elbląg, Chełmno, and Malbork. This is a result of their maps being created from scratch, and not only being an extension of Marian Biskup work. They were given such a prominent place partly because of the overall circumstances this volume was prepared in. However, this also corresponds to the role that the towns played in the life of Royal Prussia. This book is a supplement to Marian Biskup's publication, but also an important voice in the scientific discussion on the reconstruction of the space and layout of selected towns of the Crown in the second half of the sixteenth century, which would not be complete without the Prussian towns. The plans of these towns were elaborated by Dawid

¹⁰ The roads were to be elaborated according to the their "course at the end of the eighteenth century", S. Herbst, *Prace nad polskim Atlasem*, p. 332; cf. H. Rutkowski, *Roads*, [in:] AHP Mazovia, III.5.7. in this edition.

Maciuszek under the supervision of the authors of individual chapters. Finally, I would like to hereby express my gratitude to the members of the Atlas team who coordinated the work on individual centres: Arkadiusz Borek for Malbork and Anna P. Orłowska for Chełmno.

The heart of each volume of the AHP is the overview map to the scale of 1:250,000, while the commentary constitutes its documentation. Research work usually focused on the source query aimed at reconstructing the settlement network. Here, the main work was done during the preparations for the 1961 edition, although its results were not comprehensively presented in one volume, but in a series of articles, of which the AHP was a summary. These data were the starting point for the database and index of the settlements in the Chełmno and Malbork Voivodeships. For Pomeranian Voivodeship, such a role was played by Krzysztof Mikulski's study from 1994. Sources were continuously consulted and information acquired from them was verified. This pertained to the tax registers from the second part of the sixteenth century and royal inspections, particularly the oldest ones, though the later, eighteenth century inspections were also consulted. The names on the map were investigated and corrected by Paweł Swoboda using the toponymic and onomastic data, including the sources collected at the Institute of Polish Language of the Polish Academy of Sciences; he therefore, played an instrumental role in the elaboration of the main map. The cases which provoked doubts were settled by Krzysztof Mikulski. The reconstruction of the settlement network published in this volume is therefore neither a compilation that merely repeats the findings of the literature to date, nor a completely new, comprehensive study of the topic with the use of a full source query.

The main overview map as well as the town maps meet all the requirements of the series. Thanks to this, they can be combined with its other volumes into a uniform database and their coherent cartographic presentation. The commentary, on the other hand, even though it contains the required elements, is in many respects lacking in form. The venture to rewrite the 1961 chapters or extend them with new content proved unsuccessful. Only the parts missing from the 1961 edition were elaborated anew. Thus, the resulting volume is both a separate publication and a partially dependent one. It is only in juxtaposition with M. Biskup's atlas that the commentary can be called comprehensive. So, it can be understood as a supplement to that publication and it cannot be rightly called a ninth volume of the series of detailed maps of the sixteenth century. The two elements together, however, constitute a sort of an addendum to the series. They will be published later this year alongside other volumes in a joint edition in Polish and English. Its layout is the same as the first five volumes from 2014,¹¹ i.e., ordered according to the topics, not the lands they pertain to. It is only in this edition that the old commentary on the roads in Royal Prussia, written by M. Biskup, and the new one by T. Związek, will be published side-by-side as well as the other, new chapters of this volume, together with those from the 1961 edition. That is why we decided to forego reprinting the older version of the atlas. Thus, we hereby present only the new chapters and maps.

Translated by Paulina Waclawik

¹¹ *Historical Atlas of Poland in the 2nd Half of the 16th Century. Voivodeships of Cracow, Sandomierz, Lublin, Sieradz, Łęczyca, Rawa, Płock and Mazovia*, ed. M. Słoń, Frankfurt am Main 2014 (Geschichte, Erinnerung, Politik, vol. 6).

II. SOURCES

II.1 WRITTEN SOURCES

II.1.12357 VOIVODESHIPS OF LUBLIN, MAZOVIA, RAWA, PŁOCK, SANDOMIERZ, ŁĘCZYCA, SIERADZ AND CRACOW

Krzysztof Chłapowski

The following is a description of various types of source listed according to the hierarchy of their usefulness in terms of cartographic works on the Voivodeships of Lublin, Mazovia, Rawa, Płock, Sandomierz, Łęczyca, Sieradz and Cracow in the second half of the sixteenth century. At present, our stock of available historical sources is much poorer than it was prior to 1944, mostly because of war damage to the Warsaw archives.¹

Tax registers, i.e. the records of payments of the extraordinary land tax decreed by the Sejm of the Republic for military purposes, formed the main source basis for the maps in the series of 'Detailed maps of the sixteenth century'. The tax was paid by all villages and towns, and each district had separate registers prepared by the collectors and their chancelleries. In the second half of the sixteenth century the tax was levied not only on country and town arable lands (measured in *lans*, Polish: 'łan', so the tax was also called 'łanowy') except for demesnes, but also on smallholders ('hortulani') and landless peasants, artisans, traders and inns, mills, windmills, ironworks, sawmills and fulleries; additionally, another tax, called 'szos', was in force in towns, imposed on owners of property, as well as the liquor excise tax, the so-called 'czopowe', paid for the production and sale of alcohol, depending on the type and quality of liquor.

The collectors aimed at recording the taxpayers' names and the sums they paid, hence the precision with which the base and rate of the tax were registered. They based collections on tax proclamations,² enacted by the *Sejm*, in which the base and rate of the taxation were determined.³

The smallest unit of the administrative division of Poland was the district, and as such for practical reasons the collectors used the smallest units of Church division, namely parishes. The officials did not require a precise representation of the parochial affiliation of settlements. For that reason, and because newly-founded parishes were often included in the registers much later and royal and Church settlements were sometimes recorded without their affiliation, tax registers cannot be considered a fully reliable source for determining parochial affiliation of settlements.

When the collectors delivered the payments to the treasurer's office, the registers only served as appendices, and their fair copies were sometimes used as a reference. The next collection would be based on copies and drafts of the registers. Therefore, the collectors and scribes did not pay as much attention to the spelling of site names or their proper administrative affiliation as some scholars seem to ascribe to this type of source.

² Announcement on behalf of the king concerning taxes addressed to the citizens.

³ Sixteenth century tax proclamations from 1507–1526 in *Cor. ius. Pol.*, vol. III–IV and in *Vol. Cons. Part 1*, vol. 1, from 1527–1598 in *Vol. Cons. Part 1*, vol. 2, Part 2, vol. 1–2.

Tax registers kept in Central Archives of Historical Records in Warsaw (Archiwum Główne Akt Dawnych; Archiwum Skarbu Koronnego, Oddział I, Rejestry poborowe) were listed in detailed inventories prepared by AGAD and available in the reading room of the Archives. The index card inventory was kept in the Department of the Historical Atlas of Poland of the Institute of History of the Polish Academy of Sciences, and in general the Guide to the Archival Collection.⁴ The registers available for Mazovia were described by I. Gieysztorowa.⁵

Tax registers have been used for more than a century by several generations of historians, and yet they have not been subject to broader critical judgment. However, their reliability has been criticized by scholars who noted various instances of abuse on the side of the owners and collectors, differing scientific value of particular registers depending on the year they were recorded, omitted settlements, the introduction of the lump tax in 1578, and the problems the collectors had with registering settlements of petty gentry.⁶

Demesnes and newly-founded settlements were not included in the registers as they were not subject to taxation. The tax for villages which belonged to towns was often paid together with the town and the name of the village was not recorded, just as in the case of settlements and hamlets which had their own name but were registered with the main village. Because of the above, the tax registers fail to provide a complete record of settlements which had their own individual name. The collector usually did not care who paid the tax – the owner or the leaseholder – so the registers are not a reliable base for determining the ownership affiliation of settlements.

Tax registers allowed us to reconstruct the sixteenth century settlement, i.e. to identify, localize and determine the names of settlements and their character.

Not all tax registers are of equal scholarly value. The most reliable ones, when it comes to data on the taxation base, are the registers from the years in which the tax was collected not according to the so-called 'old bills' but basing on the then-current declaration of the taxpayers, i.e. from the years of tax reforms (around 1530, 1552, 1563, 1578). The registers from the years directly prior to the reforms have the smallest value for us.⁷ Because of the uncommon settlement development of the northern Mazovia between the 1530s and 1560s⁸ (especially of farm gentry), clearly evident from summary registers, the reconstruction of the settlement and administrative division of these lands was much more difficult than was the case of southern Mazovia.

Even the most efficient collection did not ensure that all settlements, or all taxed elements, were included in the register from a given year, as the villages often consisted of over a dozen parcels of farm gentry (i.e. serfless gentry which had no serfs and had to cultivate land with the help of their servants). On the other hand, the registers from years with less income sometimes contained different site names, administrative affiliation or higher tax sums of certain settlements. As such, while working on the maps of subsequent voivodeships in the second half of the sixteenth century we decided to use (sometimes without indicating it) all registers from 1552–1591 kept in the Central Archives, of which

⁴ See *Archiwum Główne Akt Dawnych w Warszawie. Przewodnik po zespołach. 1. Archiwa dawnej Rzeczypospolitej*, ed. J. Karwasińska, Warsaw–Łódź 1975, pp. 63–69. Over 150 books, several hundred bound sheets from the second half of the eighteenth century, usually in chronological and territorial order, with many undated fragments of various origin. The size of this collection and the disarray made it difficult to gain a complete orientation in the state of the sources.

⁵ The list of some 300 registers from the sixteenth century Mazovia was provided by I. Gieysztorowa (I. Gieysztorowa, *Mazowieckie akta skarbowe XV–XVII w.*, [in:] *Księga pamiątkowa 150-lecia Archiwum Głównego w Warszawie*, Warsaw 1958, pp. 209–217).

only a few were published by A. Pawiński,⁹ as well as the registers from Cracow Voivodeship from 1593 and 1595 kept in the Jagiellonian Library and the Library of the Princes Czartoryski in Cracow.¹⁰ The registers from the first half of the sixteenth century were used only for comparison, or played an auxiliary role. We generally based on the registers from 1552–1595. We collated the registers published by A. Pawiński with the base of the edition, and found certain omissions and errors occurring at varying frequency (the most numerous in the volume dedicated to Mazovia).

Of the four surviving registers for Lublin Voivodeship in the second half of the sixteenth century only one, from 1564, encompasses the entire voivodeship.¹¹ The registers from 1552 and 1580 include only Łuków land,¹² and the one from 1563 – the districts of Lublin and Urzędów.¹³

Quite a few registers from the second half of the sixteenth century survived for the three Mazovian Voivodeships (Płock, Rawa and Mazovian). In case of Płock Voivodeship, numerous registers (1552, 1563–1565, 1567, 1573, 1576–1583) encompass the entire voivodeship.¹⁴ In the case of Mazovian Voivodeship there is no one register which would cover the entire territory in one year. Mazovian Voivodeship was divided into ten lands. Seven were included in the registers from 1563, 1569, 1577, six – in the 1576 register, five – in the registers from 1552, 1578, 1579. The latest register from 1591 does not contain Rawa Voivodeship and includes only three lands from Mazovian Voivodeship.¹⁵

There is no register for Sandomierz Voivodeship which would include all districts in the second half of the sixteenth century. The registers from 1577 (Stężyca district missing)¹⁶ and 1576 (Chęciny and Opoczno districts missing)¹⁷ are the most complete. Other registers (1569, 1573, 1579, 1581, 1591) encompass two or three districts, and the 1578 register – only Sandomierz district. We should also note that the number of surviving registers is different for each district.¹⁸

This could not be said of the registers of Łęczyca Voivodeship, as the registers from 1552, 1563, 1564, 1565, 1573, 1576, 1577, 1580, 1581, 1582, 1583, 1590 each cover the entire voivodeship,¹⁹ or similarly of the registers of Sieradz Voivodeship from 1553, 1563, 1564,²⁰ while the registers from 1552 and 1576 lack only Ostrzeszów district. The register from 1565 includes the districts of: Sieradz, Szadek, Piotrków, and the register from 1577 – of Piotrków, Radomsko and Wieluń.²¹

All districts of Cracow Voivodeship were included in as many as eleven registers from the second half of the sixteenth century (1563/64, 1565, 1576, 1577, 1580, 1581, 1583, 1588, 1589, 1593 and 1595).²²

In tax registers from the Voivodeships of Lublin, Mazovia, Rawa and Łęczyca villages inhabited by farm gentry, i.e. serfless gentry (*nobilium cmethones non habentium*) were recorded in separate lists.²³

We also used lists of property (the so-called 'rekognicje'), which were relatively frequent for Mazovia and rare in case of the Voivodeships of Łęczyca and Sieradz.²⁴ As there are many surviving registers of Cracow Voivodeship in the second half of the sixteenth century, the lists of property were used only exceptionally here.

We also used special tax registers encompassing only royal and Church estates. In the case of Płock Voivodeship this means the 1570 register, which covers the entire voivodeship, in the case of Rawa Voivodeship – the register of royal estates from the same year which covered only Rawa land, in the case of Mazovian Voivodeship – the register covered the lands of Czersk, Warsaw, Wyszogród, Zakroczym, Wizna and Łomża.²⁵ For Sandomierz Voivodeship such registers survived from 1569 and 1571 and encompassed Church estates in the entire voivodeship, except for Stężyca district.²⁶ For Cracow Voivodeship we used the list of Church property from 1570 covering the entire voivodeship.²⁷ We do not know the basis of taxation from 1569, in all other years this was the proclamation from 10 July 1570 which contained this requirement.²⁸

The registers of the taxation of estates located in the district of Pilzno and Chęciny in Sandomierz Voivodeship, published by A. Pawiński (with errors and omissions), are particularly valuable. The dates on these lists (Pilzno district – 1536, Chęciny district – 1540) – entered by a later hand than the one which made them – was determined by W. Pałucki at 1527–1530.²⁹ Their value comes from the fact that the lists include all details concerning the income from the villages described by their owners, so they offer us more information than the land tax registers. The parochial division recorded in the two lists is almost identical with the one found in Church sources.

As assumed, there was no source query in the sixteenth century court books for this series of the Historical Atlas of Poland. While working on the map of Sieradz and Łęczyca Voivodeships we did not search the so-called Pstrokoński's Files.³⁰

Bishops' visitations of parishes in each diocese constituted our second basic source. The visitations were conducted by virtue of the resolutions passed at the Council of Trent from the end of the sixteenth century and they listed, among others, all settlements belonging to a given parish.³¹ The visitations allowed us to establish the parochial affiliation of settlements, reconstruct the borders of higher-rank units of Church administration and provided data on settlements which for various reasons did not appear in the registers, as well as on the affiliation of settlements to some of the categories of

²³ Expressions found in the sources: 'nobiles kmethones non habentes', 'nobiles pauperes qui cmethones (colonos) non habent', 'nobiles propriae culturae suae', 'registrum nobilium et advocatorum a se solvencium, cmethonibus carencium', 'mansorum praedialium'.

²⁴ 'Rekognicja' is a taxpayer's statement which mentions the taxation base and sum, authenticated by the taxpayer with this signet seal. Mazovian statements were put together by Gieysztorowa 1958a (table after p. 216); In ASK I, 25 there is the statements book of Piotrków district from 1552 (b. 305–346v) and for Radomsko district, from the same year (k. 557–582v).

²⁵ ASK I, 42, ff. 257–284, P. p. 126–133 (Płock Voivodeship), ASK I 49, ff. 140, 316–318 (Rawa land), 27, ff. 84–104, 69–81 (lands of Warsaw and Czersk), 43, ff. 745–747, 750–752 (lands of Wyszogród and Zakroczym), 38, ff. 632–659 (lands of Wizna and Łomża).

²⁶ ASK I, 7, ff. 391–517 (1569), ff. 252–290 (1571).

²⁷ ASK I, 102, ff. 1–144, 109, ff. 1–274.

²⁸ Universales literae contributionum publicarum, MK 109, ff. 204–220, the same proclamation in Polish, MK 108, ff. 266v–274; Karbownik 1980, pp. 110 f.

²⁹ P. Małopolska, pp. 491–556, 557–589, signatures of the source base given by Pawiński are not up-to-date. The register of Pilzno district is in ASK, LIV, 12, ff. 1–72, and of Chęciny district in ASK I, 9, ff. 725–757. These registers were the base for the unpublished studies by W. Zaklika: W. Zaklika, *Struktura społeczno-gospodarcza pow. pilzneńskiego w XVI w.* (Rzeszów 1957), MS IH PAN, no. 16; idem, *Powiat chęciński w XVI w. pod względem geograficzno-statystycznym* (Rzeszów 1959), MS IH PAN, no. 26; W. Pałucki, *Drogi i bezdroża skarbowości polskiej XVI i pierwszej połowy XVII wieku*, Wrocław 1974, pp. 259 f.

³⁰ Library of the Princes Czartoryski, MS 3260–3380. Concerning the contents of these files: Rosin, *Ziemia wieluńska*, pp. 29 f. We did not use also: J. Kobierzycki, *Przyczynki do dziejów ziemi sieradzkiej*, vol. 1–2, Warsaw 1915–1916, because the source data published there was not much useful to our purpose.

³¹ About the state of the visitation and its scholarly value see S. Litak, *Akta wizytacyjne parafii z XVI–XVIII wieku jako źródło historyczne*, „Zeszyty Naukowe KUL”, vol. 5, 1962, no. 3, pp. 39–58; B. Kumor, *Przedrozbiorowe wizytacje kościelne jako źródło demograficzne*, PDP, vol. 2, 1969, pp. 8–11; *Akta wizytacji generalnej diecezji inflanckiej i kurlandzkiej czyli piltyńskiej*, ed. S. Litak, Toruń 1998, pp. XIII–XXIV; S. Litak, *Parafie w Rzeczypospoliej w XVI–XVIII wieku. Struktura, funkcje społeczno-religijne, edukacyjne*, Lublin 2004, pp. 29–31.

Church property and on the nomenclature. The most valuable were the visitations conducted still in the sixteenth century – unfortunately some dioceses began to fulfil this duty only at the beginning of the seventeenth century, and not all protocols of some of the earliest visitations survived. Information gaps caused by the Reformation or loss of documents were filled with data from other Church sources, and sometimes from tax registers.

During our work on the map of Lublin Voivodeship in the second half of the sixteenth century, which belonged to Cracow diocese, we used the summary of the visitation of this diocese from 1595–1611.³²

Mazovia lay inside the borders of three dioceses: Płock, Poznań and Gniezno. When it comes to Płock diocese encompassing northern Mazovia, we used the visitation of Płock archdeaconry and several parishes of Pułtusk archdeaconry from 1598–1602,³³ the visitation of the deaneries of Ciechanów, Łomża, Wizna, Wyszaków, Czerwińsk and Gostynin from 1609,³⁴ for the remaining deaneries – later visitations from the seventeenth and eighteenth century, of which the visitation conducted in 1711 proved particularly valuable as it contained added documents on the foundation of the parishes from the fifteenth and sixteenth century.³⁵ We also used other materials of Church origin. The southern part of Mazovian Voivodeship lay in Warsaw archdeaconry, which belonged to Poznań diocese. We used the visitation of this archdeaconry from 1598–1603 and the register of the collection of tax from the clergy of this archdeaconry from 1561.³⁶ In the case of the Mazovian part of Gniezno diocese (Łowicz archdeaconry) we used Jan Łaski's *Liber beneficiorum* from the second decade of the sixteenth century and J. Warężak's *Słownik* based on vast, scattered archival material.³⁷ *Liber beneficiorum* provided us with much valuable information about villages which do not appear, or appear sporadically, in the sixteenth century tax registers.

While working on the map of Sandomierz Voivodeship, which belonged mostly to the diocese of Cracow, and also the diocese of Gniezno (Kurzelów archdeaconry), we used fragments of the 1565 visitation of Cracow diocese, which covered over a dozen parishes of the voivodeship,³⁸ but mostly the visitations of individual deaneries from 1592–1604. We used extracts from these visitations made by Z. Kozłowska-Budkowa for the Committee of the Historical Atlas of Poland of the Polish Academy of Arts and Sciences in the Interwar Period and by S. Kuraś after the Second World War or the Historical and Geographical Dictionary of Poland in the Middle Ages ('Słownik Historyczno-Geograficzny Polski Średniowiecznej'),³⁹ sometimes resorting to the originals kept in the Archives of the Metropolitan Cathedral Chapter in Cracow.⁴⁰ We also used the compendium of the documents of visitation of Cracow diocese from 1595–1611 which also contains the visitation of particular deaneries from

³² Archiwum Kapituły Metropolitalnej Krakowskiej, Wizytacje, no. 65.

³³ Archidiaconatus Plocensis; we also used a fragment of the visitation of churches in Łomża and Wizna deaneries from 1598, *ibidem*, no. 8, ff. 301–394v.

³⁴ Visitations from the south-eastern part of Pułtusk archdeaconry are in the poorest state, this means the deaneries of: Wyszaków, Nur, and Stanisławów. For Pułtusk archdeaconry and Płock deanery we used parochial visitations from 1609: of Ciechanów deanery (Arch. Diec. Płoc. No. 11, ff. 220–280v), of Łomża deanery (no. 14, ff. 135–225), of Wizna deanery (no. 14, ff. 225–260), of Wyszaków deanery (no. 11, ff. 1–50), of Czerwińsko deanery (no. 9, ff. 88–118v), and of Gostynin deanery (no. 9, ff. 248–341).

³⁵ We used parochial visitation from 1693–1697 for the following deaneries: of Łomża, Wizna, Wąsosz, Nur, Andrzejów and Radzymin (Arch. Diec. Ploc. no. 47: Acta visitationis generalis in dioecesi Plocensi ...) with some help from the visitation from 1711 (no. 252).

³⁶ Visitations of Warsaw archdeaconry 1598–1603. They were used by Nowacki 1964, pp. 505 and f. ASK I, 27, 272–288; we also used archival notes of W. Knapiński (W. Knapiński, *Notaty do historii kościołów warszawskich*, „Materiały do Dziejów Sztuki i Kultury”, no. 6, mps powielony przez Państwowy Instytut Historii Sztuki, Warsaw 1949).

³⁷ Łaski LB, vol. 1–2; J. Warężak, *Słownik historyczno-geograficzny księstwa łowickiego*, no. 1, Wrocław 1961, no. 2 (to *Ślupia* entry), Łódź 1967.

³⁸ T. Glemma, *Wizytacje diecezji krakowskiej z lat 1510–1570*, „Nasza Przeszłość”, vol. 1, 1946, pp. 43–96, pp. 43–96.

³⁹ Arch. Kur. Metrop. Cracow: deaneries of Pilzno, Mielec, Ropczyce, Biecz and Jasło – 1595 and 1596, AV Cap. no. 2, 4; of Solec and Łuków – 1595, VA Cap., no. 3; of Opatów – y. 1596, AV Cap. no. 7; of Kielce – y. 1597, AV Cap. no. 8; of Tarnów and Dobczyce – y. 1597 (AV Cap. no. 9; of Jędrzejów, Pacanów, Sokolina, Kije, Witów – y. 1598, AV Cap. no. 10; of Stężyca, Zwoleń, Radom – y. 1598, AV Cap. No. 14; Zawichost archdeaconry (‘exortationibus in visitationibus...’) – y. 1592, AV Cons. no. 2; Sandomierz archdeaconry – y. 1604, AV Cons., no. 18. Excerpts from these visitations to be found in the Department of the Historical and Geographical Dictionary of Poland in the Middle Ages in Cracow and contain, apart from information about the parochial church, the list of villages in each parish.

⁴⁰ Arch. Kur. Metrop. Cracow, e.g. AV Cons. no. 2; AV Cap. no. 2, 4, 9, 12 (Zawichost archdeaconry, y. 1598), no. 30 (Kielce deanery, y. 1610).

1608–1611 and perhaps for this reason it provides us with a different division into deaneries that the visitation conducted in 1592–1604.⁴¹ As the documents of the visitation of Kurzelów archdeaconry, to which the fragment of Gniezno diocese situated in Sandomierz Voivodeship belonged, were given to the General Consistory of Warsaw in 1822 and burned in 1944 with the Archdiocese Archives of Warsaw,⁴² for this part of the voivodeship we used J. Łaski's *Liber Beneficiorum*.

We have no surviving visitations from the end of the sixteenth century for the Voivodeships of Sieradz and Łęczyca, so in the cases of these two voivodeships parochial affiliation of settlements was determined on the basis of J. Łaski's *Liber beneficiorum* and the seventeenth century visitations. In 1822, when the diocese borders were being adjusted to the new State borders, the documents of visitations of this part of Gniezno metropolis were moved to Włocławek. Of the visitations kept in the Diocese Archives in Włocławek the oldest comes from 1607 and encompasses the archdeaconry of Kalisz with Staw deanery, which lay in our territory.⁴³ In 1636 Uniejów archdeaconry was inspected (the deaneries of Szadek, Warta, Uniejów, Brzeźnica and Radomsko).⁴⁴ Wieluń territory was inspected again in 1668.⁴⁵ When it comes to the part of Wrocław diocese situated in our area (almost the entire Ostrzeszów district), we could use documents of visitations conducted in 1638, 1651 and 1670.⁴⁶

While working on the map of Cracow Voivodeship we used the visitations of particular deaneries of Cracow diocese from 1595–1599 kept on microfilms in the Centre of Archives, Libraries and Museums of the Church ('Ośrodek Archiwów, Bibliotek i Muzeów Kościelnych) at the Catholic University of Lublin. (As some of the microfilms were unreadable, we also used original documents). Original protocols of the visitation conducted in 1595 encompass the deaneries of Pilzno, Biecz, Jasło and Żmigród,⁴⁷ of the visitation from 1596 – deaneries of Tarnów, Dobczyce, Wojnicz, Wieliczka, Lipnica, Bobów, Sącz and Nowy Targ,⁴⁸ from 1598 – Sokolina, Andrzejów, Wrocimowice, Proszowice, Witów, Oświęcim, Nowa Góra, Zator, Skawina, Skała, Wolbrom, Lelów and Bytom,⁴⁹ from 1599 – the deanery of Cracow.⁵⁰ All listed deaneries from Cracow Voivodeship area also included in the compendium of the visitation of Cracow diocese from 1595–1611 which contains the summaries of the protocols. For small fragments of Lelów and Książ district which lay in Gniezno diocese we used J. Łaski's *Liber beneficiorum*. We also used *Liber retaxationum diecezji krakowskiej z 1529 r.*,⁵¹ which is a helpful source when one wishes to clarify certain doubts concerning the ownership of Church institutions.

Another source in the source used in this series of the Historical Atlas of Poland was the inspections of royal property which helped us determine the affiliation of royal estates, and also provided us with much information about the development of the settlement, site and physiographic names, the size of towns, the borders, etc. We used published inspections of royal estates in each voivodeship from 1564/1565,⁵² and the unpublished ones from 1569/1570.⁵³ For the sake of comparison and because some of the estates were omitted in the sixteenth century inspection, we also resorted to the published and unpublished inspections from the seventeenth century (1602, 1616–1620, 1627–1632,

⁴¹ Arch. Kur. Metrop. Cracow, AV Cap. 65 (we used the microfilm of the Department of the Archives, Libraries and Museums of the Church at KUL, no. 3272).

⁵³ WAPL no. 246 (Lublin Voivodeship), MS. BN no. IV 3082 (Mazovian Voivodeship), LP, pp. 36–54 (Płock Voivodeship), LR XVI, pp. 151–201 (Rawa Voivodeship); AGAD, L. XVIII, 29 (Sandomierz Voivodeship), ASK XLVI, 103 d (Sieradz and Łęczyca Voivodeships), AGAD, L. XVIII, 18 (Cracow Voivodeship).

1659–1664).⁵⁴ The few inventories of royal estates from the second half of the sixteenth century,⁵⁵ and those quite numerous from the first half of this century,⁵⁶ provided us with data similar to those found in the inspections, or sometimes offered us even more information. In case of Mazovia these were the registers of royal rents which were often included in the inventories – as for instance the register of the rents of Warsaw Scribe's Office, or earlier lists of rents in ducal estates from the turn of the fifteenth and sixteenth century, which were used for random control of the settlement.⁵⁷ We must also mention here the separate description of royal castles and manors in Mazovia, made in 1549 by the King's secretary Maciej Wargawski.⁵⁸

Pledged villages belonging to the king were not included in the inspections. In such cases, or when we had doubts as to the affiliation of a given settlement to this category, we resorted to the materials from the so-called 'Revision of letters' (i.e. the control of legal rights to use a given royal estate) from 1563/1564 and to the decrees of the *Sejm* from 1566 and 1567 which regulated controversial issues in some of these estates.⁵⁹

The unpublished inspection of roads and customs in Lesser Poland from 1564/1565⁶⁰ and the published inspection of roads in Cracow Voivodeship from 1570 provided us with much useful information in order to reconstruct the road network in the Voivodeships of Sandomierz and Cracow.

The unpublished inspection of Mazovian forests from 1566 also proved helpful.⁶¹

As important as the inspections of royal estates were the inventories of Church property from the sixteenth and seventeenth century. We used: the published documents of Warsaw collegiate church,⁶² Płock chapter,⁶³ materials to the history of Pułtusk collegiate church,⁶⁴ the inventory of the estates of Płock bishopric from 1650,⁶⁵ the inventories of archbishopric property,⁶⁶ the inventories of purveyor estates of Włocławek bishopric,⁶⁷ the inventories of the property of Cracow chapter from 1523–1536,⁶⁸ the list of villages in this chapter from 1593,⁶⁹ the inventories of the estates of Cracow bishopric from

⁵⁴ 1602 inspection – AGAD, L. XVIII, 19 (Voivodeships of Kalisz and Sandomierz), LR XVII, pp. 1–34. This inspection involved the control of prolonged leases approved during the so-called 'revision of letters' (the so-called 'old sums'), and looked for those royal estates which were no longer subject to inspection. Truly inspected were: Lipnica lease (Cracow Voivodeship), starosta's districts of Sandomierz and Chęciny, holdings in Kozienice and Wiślica, starosta's district of Lublin; 1616–20 inspection – LM XVII part 1, LP pp. 55–81, LR XVII, pp. 35–60, AGAD, ASK XLVI, 99 B (Sandomierz Voivodeship), LWWK 1616, part I, pp. 81–246, 324–346, 371–378, AGAD, L. XVIII, 20, 21 (Cracow Voivodeship); 1627–1632 inspection – L. R. XVII, pp. 61–16, ADAD, L. XVIII, 33 (Sandomierz Voivodeship), LWWK 1628, part II, part III, pp. 1–57, AGAD, L. XVIII, 22 (Cracow Voivodeship); 1659–1664 inspection – LL 1661; LM XVII part 2, LP, pp. 82–100, LR XVII, pp. 117–218, LS 1660/4, LWWK 1659, part II, pp. 1–250; LK 1659–1664.

⁵⁵ Inventories of Radom starosta's district from 1554 (ASK, XLVI, 100c), 1567 (AGAD, L. XVIII, 30) and the second half of the sixteenth century (ASK, LVI, R 1/II), Sandomierz starosta's district from 1567 (AGAD, XVIII, 68) and several from the second half of the sixteenth century (ASK LVI S 5/II), Stężyca starosta's district from the second half of the sixteenth century (AGAD, LVI, S 3/II); several inventories of Korczyn starosta's district from the second half of the sixteenth century (ASK, LVI K 2/I,II) and lease Góra-Robczyce from 1582 (ASK, LVI, G 4); AGAD, LVI B 1 (Bolesławiec 1588, 1615), Ł 2/II (Łęczycza 1567, 1569, 1587), P 4 (Piotrków 1569), S 2/III (Sieradz-Szadek 1568); detailed inventory of Niepołomice starosta's district from 1560 (Library of PAN in Kórnik, MS 268).

⁵⁶ E.g. the inventory of income of Zakroczym starosta's district from 1536 (ASK I, 443, 617 nn), of Łomża – 1528 (ASK I, 39, ff. 1 ff.), more I. Gieysztorowa, *Mazowieckie akta skarbowe*, p. 211 f; of Szydłów starosta's district 1533 (ASK, LVI, S 6/I) and of Chęciny starosta's district from the second decade of the sixteenth century (ASK LVI, C 6); Inventories of royal estates in Cracow Voivodeship from the first half were put together by J. Małecki in LK 1564, p. XVII.

⁵⁷ Register of rent of Warsaw scribe's office from 1526 (ASK I, 27, ff. 447 f., 669 ff., of Wizna from 1494 (ASK I, 38, ff. 2 ff.).

⁵⁸ *Consignatio aedificiorum ex mandato SRM in castris et curiis Ducatus Masoviae per rev. dnum Wargawski archidiaconum Lancieniensem – AD 1549 facta*, ASK XLVI 139 and ASK I 27, ff. 290–324 (copy of a fragment).

1668 and 1746,⁷⁰ the inventory of the estates of the Benedictine monastery in Tyniec from 1689,⁷¹ of the Sisters of St. Clare from 1698,⁷² and S. Nakielski's work from 1634 on the Order of the Holy Sepulchre from Miechów.⁷³

We used entries from the sixteenth century found in the Crown Metrica (endowments, demarcations, foundations, etc.).⁷⁴

While working on the subsequent volumes of this series of the Atlas we also used other sources from the fifteenth century, the first half of the sixteenth century, and from the seventeenth and eighteenth century, which helped us fill in the gaps and verify information found in our basic sources.⁷⁵

Information concerning settlement in the fifteenth century was taken from the Historical and Geographical Dictionary of Wyszogród land in the Middle Ages,⁷⁶ the similar Dictionary of Cracow Voivodeship,⁷⁷ *Liber beneficiorum* by J. Długosz,⁷⁸ the Geographical and Historical Dictionary of the former lands of Łęczyca and Sieradz until 1400 and the Historical and Geographical Dictionary of Wieluń land in the Middle Ages,⁷⁹ records of the Chamberlain of Lublin from the fifteenth century,⁸⁰ and the files of the Historical and Geographical Dictionaries of Cracow and Sandomierz Voivodeship kept in Cracow. The Dictionaries and their files contain sourcedata from before 1530.

The seventeenth century sources are the published tax registers of: the Voivodeship of Cracow from 1629,⁸¹ the Voivodeship of Lublin from 1620–1626,⁸² the district of Pilzno from 1629,⁸³ the Voivodeship of Cracow from 1680,⁸⁴ and the unpublished registers of hearth and poll tax from the 1660s and 1670s, excepting this kind of registers from Cracow Voivodeship, because these were published.⁸⁵ We

⁷⁰ Ibidem, MS. 1174/I (microfilm in the National Library, no. 8717).

⁸⁴ Rej. pob. 1680.

⁸⁵ P. Małopolska, vol. 2 (Lublin Voivodeship), pp. 1a–51a; ASK I, 72, ff. 384–636 (Płock Voivodeship), 70, ff. 798–801, 953–1158 (Rawa Voivodeship), I, 65, ff. 812–847, 66, ff. 45–135, 220–289, 376–847, 867–888, 972–1054, 69, ff. 624–677 (Mazovian Voivodeship); I, 65,67 (Sandomierz Voivodeship), and the register of grosz tax of Stężyca land from 1711 is to be found in ASK I, 9, ff. 710–722; ASK I, 74 (Sieradz and Łęczyca Voivodeships). We also, randomly, used the copy of the

made an exception for the unpublished hearth tax registers of Silesian district from 1662 and poll tax registers of the same district from 1673,⁸⁶ as the aforementioned registers of Cracow Voivodeship from 1629 and 1680 do not include this district.

Our eighteenth century sources were: *Materiały do Słownika Historyczno-Geograficznego województwa krakowskiego w dobie Sejmu Czteroletniego* which contain much valuable information of various origin, mostly non-existent now, encompassing the area of the voivodeship after the first Partition,⁸⁷ the files of the Dictionaries of the Voivodeships of Sandomierz, Lublin, and Sieradz made prior to 1939, based on fiscal and Church sources from the last quarter of the eighteenth century and largely destroyed during the Second World War.⁸⁸ We must add here Franciszek Czaykowski *Regestr Diecezjów*, which is a summary excerpt of the descriptions of parishes recorded between 1783 and 1784 by the parsons in response to the survey ordered by primate Michał Poniatowski, for which the questionnaire was prepared by the same Franciszek Czaykowski,⁸⁹ the census of Cracow diocese from 1787⁹⁰ and hearth tax rates in Mazovia from 1789–1790,⁹¹ and the inspections of the post-bishopric estates in Cracow diocese (which contain copies of foundation documents of parishes).⁹²

In order to supplement or verify our data we resorted to many other sources,⁹³ the 1827 Table of Towns and Villages and the *Słownik Geograficzny Królestwa Polskiego*.⁹⁴

This presentation of our sources does not apply to Siewierz Duchy, which – as a property of Cracow bishopric – was not subject to taxation, and thus we had access only to lists from 1443 and 1667⁹⁵ that contain little information, *Liber retaxationum*, the visitations, *Słownik Historyczno-Geograficzny w średniowieczu* and *Materiały do słownika w dobie Sejmu Czteroletniego*. In this case we decided to base our map of the Duchy on the Dictionary of Settlements in the Duchy of Siewierz (*Słownik miejscowości księstwa siewierskiego*) prepared by Zdzisław Noga who used many available sources, especially those kept in the Archives of the Metropolitan Chapter in Cracow.⁹⁶

We do not mention here smaller sources, or those used only randomly, and lists of source data are mentioned in the footnotes to the chapters of the commentary. Sources which were used as a base for the city plans were described in the commentaries on these plans.

II.1.4 GREATER POLAND

Marek Słoń

The thematic scope of the series is comprised of the reconstruction of the settlement network, including names, ownership, and aspects of demographics, as well as state and church territorial structures, communes of different religious denominations, and the road network. The breadth of the subject is so substantial that it has been impossible to utilize all the sources available for two large voivodeships in the second half of the sixteenth century. The preparation of this volume, as in the case of the previous ones, required a careful selection of available information. This both applies to the types of sources as well as their number and the degree of completeness of the conducted query.

First, tax records, such as tax registers, visitations and registers of royal estates, will be discussed. Second, Church documents with a focus on visitations will be examined. Finally, court books and other texts will be reviewed.

The most important basis for the reconstruction of the settlement patterns in Greater Poland were tax registers, i.e., lists of extraordinary taxes passed by the Sejm primarily for war purposes.¹ As part of the work on this volume, an edition of all *lan* tax registers from the Kalisz and Poznań Voivodeships from the second half of the sixteenth century was created. They are available on the atlasfontium.pl website in several forms. Through the search engine or on the interactive map, one can find the location mentioned in the source material and see its basic source information and analysis of it. All the fees recorded in the registers, along with the accompanying information, such as parish affiliation of the settlement, the name of the payer, the reasons for the reduction of obligations, etc. have been entered in the spreadsheets that can be downloaded from the site. Links embedded in these sheets and in the map application allow for quick a transition to the scans of manuscripts. The introduction to the edition explains its nature and contains an introduction to the study of the sources (with a list of tax collectors from individual years for both voivodeships) and a detailed description of all the columns of the tables. A geodatabase with geographical coordinates and identifiers for each settlement can be downloaded from the site, as well as edited in GIS software or database operators.² The annex to this chapter contains the summary of registers by year and district. Their interpretation would, of course, not be possible without taking into account tax proclamations, that is parliamentary resolutions establishing tax collection and regulating its implementation.³

In subsequent volumes of the series, the degree to which registers were included differed. In some cases, such as in the edition concerning Mazovia, all the registers were taken into account, while in others, only the most valuable were used. The peak of the development of the crown treasury occurred

¹ Concerning the source analysis of the source and its credibility, see: I. ³ VL, VC.

in the years 1563–1565: never before or after was it possible to collect receivables from a larger arable land.⁴ Registers from these years are also brimming with information. Fortunately, at least one registry from this time period has survived from each district of Greater Poland, similarly to documents from the years 1579–1580. The entry from these years is also particularly valuable due to the reviewing of the tax base that occurred in 1578.⁵ Previous research on the subject emphasized the lack of usefulness of tax registers from other years, selected on the basis of old receipts. This meant that not only was the list of settlements subject to tax collection repeated in their old layout, but so was the amount of taxes placed on individual categories. Indeed, for example, when it comes to nomenclature, it is difficult to treat a record from subsequent years as an independent confirmation of a certain form: the same error could simply be repeated in subsequent years. In practice, however, each register was different and offered a certain amount of information. Examining the documents as a whole also allowed to better understand their internal structure and to interpret gaps and errors in the records. The risk of limiting the query to selected registers from the supposed best years is best demonstrated through the case of the village of Jordanowo (Jordan). It is present in the registers from 1580, 1581 and 1583.⁶ In the first two, only the name itself was noted, appearing right after the parish Iwno and ahead of the villages of its district. In 1583, it still appears in the same place, but payments from *coloni* (seasonal workers), *hortulani* and a shepherd with a herd of sheep had additionally been recorded. It was also noted that the village was the property of the abbey in Paradyż. In the years 1580–1581, similar payments were made from it. Therefore, there is no doubt that the village in question was indeed Jordanowo, located right next to the Paradyż monastery (now Gościkowo), on the other side of the Paklica river. Placing this settlement in the parish of Iwno, located more than 100 km away in a straight line, is certainly a mistake, which can be easily explained. Until the tax reform of 1578, the Cistercians did not pay taxes on their demesne in Jordan. After verification that year, the name was entered in the tax register, but initially the fees were still recorded with the monastery itself. The village of Iwno appears in the registers in two versions – Iwno and Giwno – and, consequently, was entered in various sections of the register. Lacking additional information, the name of the single-village parish Jordan appeared after Iwno instead of before it in one of the subsequent registers.⁷ We do not know in what year this happened, as the registers from 1578–1579 have not been preserved. The mistake was later copied. Until a note about the payment was made, it seemed as if there was another deserted village in the Iwno parish. This is how the source material was interpreted by the team of the Section of the Historical-geographical Dictionary of Greater Poland IH PAN, which used only the records from the years 1580–1581.⁸

It should also be noted that only fully preserved registers were used and published. Fragments of other registers were only reviewed when useful for atlas-related research. In one case, this resulted in a correction of the dating given in the publication. One of the Kalisz registers bore the date 1564 in a manuscript, and the writing of this entry, although it could point to the sixteenth century, differed from the main one. We assigned this date to the source upon publication. Further research allowed to identify a fragment of another register from the Kalisz district, also dated to the same year. After verifying the rates included in the tax register, which was indirectly made possible by an overview of the sum of payments from the entire village, the original dating of the material turned out to be incorrect. Taxation

⁷ A similar change in the order of parish villages occurred, for example, in the register of the Poznań district between 1553 and 1563, where the single-village parish Rożnowo were entered after Rogoźno, as a result of which several of Rogoźno's villages were assigned to its district; this error was then repeated in all registers until the end of the sixteenth century, RPWP, pzn, 1553–1583; see B. Szady, *Church administration borders*, [in:] AHP Greater Poland, III.2.2b.4. in this edition.

⁸ K. Górńska-Gołaska, *Jordan*, [in:] SHGPoz, part II, pp. 96 f.

regulations point to the period 1569–1577. At that time, complete *lan* tax collection was carried out in 1569, 1573, 1576 and 1577. The Kalisz register from 1576 was preserved and its dating is certain. No registers from other districts from the years 1569 and 1573 are available. The rare tabular form of the list, believed to be from 1564, was also used in this province only in the years 1576–1577. The register of the Gniezno district from this final year is located directly after the aforementioned Kalisz one, although the reasoning for the dating is questionable, especially since the eighteenth-century archivist could have mistakenly placed both entries next to each other in the same volume due to their similar layouts. The entry dated to 1564 is probably from 1577.⁹

Almost the entire area of both voivodships has relatively thorough and evenly spread documentation in the form of tax registers. The Wałcz district is the only exception. Only four of its registers have survived. In addition, their usefulness for the reconstruction of the settlement network at the end of the sixteenth century is limited. During the period in question, many new settlements were established there.¹⁰ Even the register from 1582 not only does not include the villages founded after that date, but also those that were exempt from tax that year as the new ones ('*wolnizna*'). Therefore, we do not have any records that would systematically include the list of settlements of that time. It is difficult to clearly establish to what extent the reconstruction based on other accounts is complete. This also affects the state of knowledge about the course of the disputed concerning state borders in the region.

We only have a register record from 1552 for two districts – Pызdry and Kalisz – at the time when the basis was not a *lan*, but a serf farm. This documentation is valuable for the calculation of the number of peasant families per one *lan* and thus for demographic estimates. Unfortunately, the *lan* registers for those districts from 1553 have not survived. The following registers from these territorial units come from the years 1563–1565, so not only are they a decade younger, but they are also characterized by changed taxation rules and more effective collection methods.

Most of the registers are listed by parish and are arranged in a roughly alphabetical order; within them, other locations are discussed. This has two consequences. Firstly, the organization significantly facilitates the identification of individual settlements. In the registers of the Poznań and Kościan districts from 1567, which list the places in alphabetical order, distinguishing between identical or similarly named villages was difficult, sometimes remaining hypothetical even after comparing the appropriate records for all other years. The parish-based division was not applied at all in the Wschowa and Wałcz districts, probably due to their small size. In this case, there were no issues with identification. However, this did mean that an additional, but nonetheless important source for parish affiliation was missing. These were also areas strongly influenced by the Reformation, while northern Greater Poland is poorly illuminated by visitation protocols.¹¹ Consequently, the range of parish districts in Wschowa raises doubts, and the range of the ones in Wałcz could not be reconstructed at all. This is the only area in the entire atlas series for which, instead of parish boundaries, we can only indicate their seats, and even these are partly hypothetical.

Registers are also a secondary yet useful source for determining ownership. The taxpayer entered in the register could only be the tenant or the representative of the property holder, which was not always specified. However, even such information facilitated further searches, e.g. in court books through *Teki Dworzaczka*, and in most cases, the tax was paid by the village owner. However, many registers only mention owners where more than one section exists. Rarely does such information appear for most taxed settlements and they are not evenly distributed among the various districts. We do not have a single register for Kcynia, while the most thorough one for Kościan (in 1583) has the appropriate information for less than half of the mentioned settlements. Parts of the registers contained separate lists of major keys of estates,¹² and there are even entire registers arranged by ownership.

⁹ RPWK, kls, 1564 [1577]; ASK I 3, bk. 355v–377v; for comparison, see the fragment of another, undated Kalisz register: ASK I 6, bk. 678–750.

¹⁰ See. tab. 10–15 in chapter *Location of settlements*, [in:] AHP Greater Poland, III.3.1.4 in this edition.

¹¹ The parish structures in the Wschowa Land and Wałcz district were different from each other, see B. Szady, *Church administration borders*, [in:] AHP Greater Poland, III.2b.4 in this edition.

¹² For example, the property of the monasteries in Trzemeszno, Mogilno and Wągrowiec and the estates of the Lwowska family in the registers of the Gniezno district (RPWK, gzn, 1564, 1565, 1576, 1577, 1579–1582, 1588) or the villages of the Opaliński family in the Wschowa region (RPWK, EE, 1563, 1564, 1567, 1570, 1577, 1579, 1581, 1582).

Tax registers from the earlier and later periods were studied to a limited degree. The series of registers from the years 1507–1510, covering the Konin, Pyzdry and Kalisz districts, were used to verify the completeness of the lists of locations.¹³ A full indexing of these geographical sources, including the lack of settlements, is being conducted as part of the ongoing project and will be finished in 2020. The register from the Kalisz Voivodeship from 1618–1620, published by Alfons Parczewski, was entered into the data base and utilized during the research. Later hearth tax and poll tax registers served mostly to verify uncertain cases, as well as were helpful in establishing the demographic potential of towns.¹⁴

Despite the initial preparation to be included in the edition, the overdue tax ('retenty') registers, in other words lists of overdue payments, were not edited. They only contained a calculation of the difference between the fee paid in a given year and the receipts from 1578,¹⁵ which is why they were only included in the supplementary query.¹⁶ Additionally, two preserved lists of property ('rekognicjarze'), which are lists of taxpayers' statements ('rekognicja') that mention taxation base and sum, were also not incorporated in the edition. These declarations were made at the time of payment of the tribute and authenticated by the taxpayer with a signet seal and/or with their signature. Such property registers from the period and area studied have been preserved for the Kalisz and Gniezno districts, dating to 1591. The study and edition of the former one is the subject of a separate project and has been fully used in the atlas research.¹⁷ The one from Gniezno, however, was only used to verify the list of settlements – no new ones appear in it – and the type of property, where it brought minor adjustments. Much more important to our findings were the available lists of contributions imposed on the Church property in the Poznań Voivodeship (except for the Wałcz district) from 1540, 1561 and 1570. The first two only contained a list of benefices, but in the face of the very poor state of preservation of the visitations to this diocese and their specificity, this information was not to be underestimated.¹⁸ The contributions register from 1570 based on the tax universal, and containing similar information, was helpful primarily in determining the extent of ownership of the four richest church institutions in the diocese of Poznań: the bishop himself, the cathedral chapter and its members, Cistercian abbeys in Bledzew and Paradyż.¹⁹ In the case of the royal estates, a similar role was played by the inspections and inventories of the starosta's districts. For the studied period, it has been published so far only from the years 1564–1565, which is characterized by a relative shortage of information about Greater Poland.²⁰ As a result, inspections dated to the seventeenth century and those unpublished from 1569–1570 were also incorporated into the research.²¹ Besides information about ownership, these sources provided valuable data about the potential of specific villages, towns and outbuildings, about names, especially physiographic ones, and about establishing new settlements on the northern outskirts of Greater Poland. For some of the Greater Poland royal lands, inventories of property from the sixteenth century have been preserved, but it was also necessary to use later records of this type.²² Protocols of the control of

legal titles for the use of royal property carried out during the Sejm of 1563/1564 (the so-called letter audit), which also covered Poznań and Kalisz Voivodeships, were of less importance.²³

The other source material as essential to the atlas series as tax registers are records of Church visitations. They contain the most reliable information on the parish affiliation of individual settlement, as well as their most thorough lists. They should include demesnes exempt from taxation and recently established settlements, as well as small hamlets, usually treated in the tax documentation as an integral part of a larger village. In the case of in this volume, however, the situation is slightly different. The basic problem is not even that no such source from the sixteenth century has survived, and we have only those from the beginning of the following century. The key data for atlas research is concentrated in one point of the visitation protocol – the scope of the parish district. This element is usually overlooked in the Poznań visitations from the first quarter of the seventeenth century. In the Kalisz archdeaconry of the Gniezno diocese, such records are incomplete and sometimes only referenced indirectly. In addition, in the case of the northern reaches of Greater Poland, i.e. for the archdeaconry of Czarnków (diocese of Poznań, Wałcz district and part of Poznań) and Kamień Krajeński (diocese of Gniezno, Nakło district), the oldest visitation protocols date back to the mid-seventeenth century,²⁴ that is, from a period with fundamentally different settlement and religious realities. This means that the reconstruction of the reach of the parish in accordance with the standards applied so far in the series has only been possible for the archdeaconry of Gniezno and individual villages belonging to the Wrocław diocese.²⁵ In remaining areas, it had to be based on other sources as well. Next to the abovementioned tax registers and lists of contributions from the years 1540 and 1561, these consisted mainly of the lists of benefices for both bishoprics from the beginning of the sixteenth century,²⁶ visitations from the second half of the seventeenth century and the eighteenth century, as well as *Regestr diecezjów* by Franciszek Czaykowski.²⁷ The information about the payments for the mass from individual towns allocated to the parsons, which required a more thorough query than was previously accepted of the visitations from the first quarter of the seventeenth century, has been particularly useful in this regard.²⁸ The inclusion of files of the consistory of Kalisz from the fifteenth century and the first half of the sixteenth century only brought marginal additions.²⁹ This research was greatly facilitated by the digitization of manuscripts, which was conducted with the permission of the directors of the diocesan archives in Włocławek and Poznań.³⁰

Inventory data played an important role in the reconstruction of the state of ownership of church institutions. We have the lists of endowments for two Greater Poland bishoprics and their cathedral chapters.³¹ Therefore, there was no need to conduct a query for episcopal and chapter records. A serious obstacle was the lack of property inventories for most of the monasteries in Greater Poland during this period. The tracing of the development of the endowment of the Jesuit monastery in Poznań was

²⁹ The query in these sources is conducted by Adam Kozak from the Section for the Historical-Geographical Dictionary of Greater Poland (for the fifteenth century) and Arkadiusz Borek (for the sixteenth century).

³⁰ The scans of microfilms from the visitation files with the numbers ABMK 365-367, 380, 3810-3812 have been renumbered (the name of the file corresponds to the page number in the manuscript), provided with the table of contents and sent to their native archives and to the Institute of Church Archives, Library and Museums.

³¹ Ulan. Visit.; AAG, ACap. I, B. 147, *Inventarium omnium proventuum et aedifi ciorum Archiepiscopatus Gnesn. sub Stanislao Karnkowski per Iacobi Pradzewski*, 1592; Inw. bp. poz. 1564; AAP, CP 111 (1500–1615); AAP, CP 112 (1570–1614); *Statuta capituli et ecclesiae cathedralis Posnanensis ex annis 1298–1763*, ed. W. Pawełczak, Poznań 1995 was also consulted.

made easy thanks to the chronicle of this institution.³² No attempt was made to gather the inventories of noble estates.

Conducting a query in court books is not a requirement of this series. However, the case of Greater Poland it is special. Researchers have at their disposal an electronic edition of *Teki Dworzaczka*,³³ which enables a quick search through a huge collection of extracts from court books. This source could not be subject to a systematic query, which would include and examination of all notes from the period under study. Nonetheless, it was used to verify and supplement information about the settlements identified through other sources. It played a significant role in determining the ownership status of landed villages, it was often helpful in locating settlements and in establishing their name in the sixteenth century. The automated search in the text database, apart from its huge advantages, also has its disadvantages, such as records from a period with no uniform orthography, especially in relation to proper names. Furthermore, the notes in the database are third-hand information. While the transcriptions made by Włodzimierz Dworzaczek himself must be viewed through the prism of an intuitively conducted standardization and modernization of the spelling, in the case of his handwritten notes, which were computerized by science students, numerous and completely random errors cannot be ruled out. Besides the *Teki Dworzaczka*, the query in court books was limited to the verification of some source references in the work of Leon Polaszewski. A complete indexing of selected Kalisz town books from the end of the sixteenth century was undertaken, but so far it has not produced useful results for the Atlas research.³⁴

This volume could not have been complete it not for the work of the Section for the Historical-Geographical Dictionary of Greater Poland IH PAN. This fundamental study for geography and history of the Polish lands in the Middle Ages includes all source records until around 1530.³⁵ The dictionary of the Poznań Voivodeship is almost finished. At present, the database for the Kalisz Voivodeship mainly includes published sources and some archival units and series. Of the latter, extracts from tax registers from the first half of the sixteenth century are of particular importance for Atlas research. We also gained access to the full list of entries for both voivodeships. The comparison of the results of our inquiry and the research output of the Poznań team was composed of two stages. Firstly, we were searching for supplementary information in the dictionary and database about settlements we had already located. This allowed us to find information contained in unpublished sources and in documentation previously unknown to us, as well as facilitated the interpretation of difficult passages of manuscripts, helped us complete the query in the materials issued independently separately from the query of e.g., the Crown Metrica or in *the Kodeks dyplomatyczny Wielkopolski*. Secondly, we tried to check if the names present in dictionary entries could also be found in records from the second half of the sixteenth century, e.g., in *Teki Dworzaczka* or in dictionary publications, such as the *Geographical Dictionary of the Kingdom of Poland* or *Nazwy miejscowe Polski*. Both of these publications were often helpful in identifying and locating places.

The most important sources used for the reconstruction of the settlement network and territorial structures shown on the main map were discussed in this chapter. The sources for thematic maps and plans – roads, communes of other religious denominations, centers of Jewish population, individual cities – are presented in the accompanying commentary.

Translated by Karolina Frank

II.1.6 CUYAVIA AND DOBRZYŃ LAND

Arkadiusz Borek

From its very outset, the AHP series draws from a specific corpus of written sources employed in reconstructing the settlement network and the structures of state and Catholic Church administration, as well as the character, nomenclature and ownership of settlements. This corpus was assembled directly on the basis of the proposals presented by Stanisław Smolka in his 1880 paper, where he listed the source base for preparing coherent geographic work on the entire territory of pre-Partition Poland.³⁶ This volume has not been subjected to any significant changes in this department. The core of the work on the atlas of Cuyavia and Dobrzyń land in the sixteenth century is formed by sources of mass nature, mainly registers and inventories, which help capture the whole picture or larger parts of this area's settlement network.

Much like the previous AHP volumes, our work was heavily based on tax registers dating to the second half of the sixteenth century, *i.e.* records on the collection of exceptional taxes adopted by the *Sejm* (Diet) for war purposes. The scope of each tax collection process was regulated in tax proclamations called universals (*uniwersały*). Taxes were levied predominantly on arable land, utility structures, and representatives of different social and professional groups. The information was then broken down by individual settlements or, alternatively, ownership parts in particular settlements. Tax registers cover most of the settlement network existing at the time; demesne land was exempt from taxation. Thus, settlements with no subjects of taxation other than such acreage were not entered into the books. Newly established settlements which enjoyed a rent-free period called *wolnizna* were not recorded either, though this issue does not concern the examined area (see *Location of settlements* in this volume). The very structure of tax registers is of great informative value in terms of establishing the administrative division of a given area—settlements were recorded by district, and districts were divided into parishes, whilst settlements forming part of vast land property were sometimes listed separately. The structure of tax registers reveals that they were characterised by a certain prudence. Sometimes even villages which had been deserted and were therefore defaulting in tax payments were recorded. Registers dating to the 1550s and earlier years present data on the districts primarily by subject of taxation (separate lists of settlements indicating lands used by serfs, held by village headmen (*sołtys* or *Schultheiss*), mills, etc.). In the next decade, the register structure evolved into one which listed all the taxation subjects found within a given settlement. This solution was repeated in later registers, without any significant departures from this concept. Changes occurred only in information with bearing on fiscal matters. Such stability was convenient for fiscal administration, which found such a solution helpful in inspecting inflows and preparing registers of overdue taxes (*retenta*). At the same time, some registers stand out among other records. To provide an example, the 1564 tax register for Dobrzyń land lists the serfs residing in a given village by name, and the 1573 Inowrocław Voivodeship tax register recorded the differences between the expected tax amount and the tax actually paid. Apart from helping to reconstruct the settlement network and the administrative division, tax registers provide the basis for estimating the size of settlements (see *Character and size of settlements: rural settlements* in this volume) and recreating the sixteenth-century names presented in AHP maps. Tax registers also prove useful in determining the ownership affiliation of the settlements. The most

³⁶ S. Smolka, *O przygotowawczych pracach do geografii i historycznej Polski (1880)*, SG, vol. 1, 2014, pp. 11–13.

commonly used tax questionnaire took note of the fact that a given village had more than one owner or taxpayer (e.g. a leaseholder), documented large ownership units, and listed serfless gentry as well. Although this hardly exhausts the issue of land ownership structures, it provides a solid basis for their reconstruction. Despite concerns raised in subject literature regarding the absence of data and concerns about the informative value of tax registers, the significance of this written source to geographical and historical research remains uncontested.³⁷

We based our work on Cuyavia and Dobrzyń land on 29 tax registers dating to the second half of the sixteenth century. The inclusion criterion was that a register is preserved in full for at least the territory of one district. However, there is a glaring disparity between Cuyavia and Dobrzyń land. The source base for Brześć and Inowrocław Voivodeships consisted of thirteen extant tax registers for each voivodeship (26 in total), most covering a similar period. Dobrzyń land, in turn, is covered by only three registers created in the fifty years dealt with in our studies. Dating to 1564, 1565 and 1573, these documents focused on quite a brief period, imposing significant limitations on the available informative resource. In Cuyavia and Dobrzyń land, registers were made for the administrative unit of voivodeship (and land–*ziemia*, respectively), which were further divided into districts (*powiaty*). Table 1 presents the list of registers used.

Table 1. Tax registers of Cuyavia and Dobrzyń land in the years 1550–1600, in AGAD collection

No.	Voivodeship	Year	Source (ASK volume, section I)	Comments
1.	Brześć	1553	29, ff. 191r–211v	First instalment of this year.
2.	Brześć	1553	30, ff. 267r–285v	Second instalment of this year.
3.	Brześć	1557	29, ff. 235r–279v and ff. 334r–338v	In: ff. 334r–338v, Kruszwica district. Along with the 1566 register, this register forms the basis of the publication by A. Pawiński: <i>P. Wielkopolska</i> , vol. 2, pp. 3–45. He used it to supplement the data on land parcel owners missing in the 1566 register.
4.	Brześć	1566	29, ff. 381r–417v	Along with the 1557 register, this register forms the basis of the publication by A. Pawiński: <i>P. Wielkopolska</i> , vol. 2, pp. 3–45. Most of the data presented in that edition was obtained from this register.
5.	Brześć	1570	50, ff. 778r–783v	Register of Church property. Forms a whole with the Inowrocław register for the said year.
6.	Brześć	1576	29, ff. 326r–331v; 51, 325r–332v	Only fragments of this register have survived to date. These cover Brześć, Przedecz and Radziejów districts.
7.	Brześć	1577	29, ff. 418r–451v	
8.	Brześć	1579	29, ff. 453r–507v	
9.	Brześć	1580	29, ff. 573r–647v	The contents of this register are mixed, folios on different districts have been put together in random order.
10.	Brześć	1581	30, ff. 560r–615v

19.	Inowrocław	1570	50, ff. 773r–777v	Register of Catholic Church property. Forms a whole with the Brześć register for the said year.
20.	Inowrocław	1573	50, ff. 741r–769v	
21.	Inowrocław	1576	50, ff. 717r–740v	Z. Guldon dated this register to 1574, ³⁸ most probably based on the date visible under the heading on the first page of the register. However, the register refers to the Congress in Jędrzejów (ff. 717r, 719v, 740r). It also contains direct references to the year 1576 (ff. 720r, 740v) and clearly indicates that a decision on tax collection was adopted in that very year.

The inventory of tax registers available at the Central Archives of Historical Records (AGAD) reveals information on the Dobrzyń register of 1578.³⁹ This date, however, was taken from the folio preceding the said register⁴⁰ and cannot refer to this register, as it was drafted in line with the templates used in the 1550s and earlier, which maintained the division into two instalments. Unfortunately, the extant material does not suffice to identify unequivocally this register as one of the 1550s records. The data covers only serf, sołtys and serfless gentry lans, and water wheels, whereas the tax rates applied do not correspond to any known universal or other register. As a result, this register was not dated to the second half of the sixteenth century. Zenon Guldon also omitted this register in his paper.⁴¹

Digital versions of all materials listed in Table 1 as the source base for working on the AHP volume on Cuyavia have been published. This is in keeping with the method for editing tax registers developed while working on the publication of registers covering Kalisz and Poznań Voivodeships,

³⁸ Guldon, Kujawy, p. 9.

which accompanied AHP Greater Poland.⁴² The contents of Cuyavian and Dobrzyń land registers were thus entered into the database and made available online, in the form of a map and spreadsheet files complemented by scans of the original manuscripts preserved in the Archives of the Crown Treasury (ASK). Once this volume is published, the whole package will be made available at www.atalsfontium.pl.

Catholic Church visitations⁴³ formed the second category of significant sources used to prepare the AHP volume on Cuyavia. Next to tax registers, canonical visitations are the only source which, generally, takes note of the entire settlement network within a given area and covers all the Polish lands of the Crown. Contrary to tax collectors, canonical visitors did not exclude any type of settlement from their records. Tax registers omitted demesne settlements; therefore, Catholic Church visitations provide more possibilities for reconstructing inhabitancy in Poland. From the perspective of the whole series, however, Catholic Church visitations are less useful. Not all areas of the Crown are covered by surviving visitation records dating to the sixteenth century, and those available do not always list the villages belonging to a given parish. Such a situation occurred e.g. in Dobrzyń land. While Cuyavia is very well documented in this respect (seven visitations to Włocławek and Kruszwica archdeaconries of Włocławek diocese conducted in 1577, 1578, 1582, 1584, 1594, 1596, 1598), records concerning Dobrzyń land – or, to be precise, its largest part falling within Płock diocese – are limited to a single visit to Dobrzyń archdeaconry conducted in 1597, whose logbooks do not list parochial districts. This forced us to resort to visitation records from the seventeenth and eighteenth centuries. Visitations carried out at later dates served as supplementary material in studying Włocławek diocese. The exact list of visitations used – along with their publication details – has been presented in the chapter on Catholic Church administration structures (see *Catholic Church administration borders* in this volume). Apart from providing supplementary information on the settlement network and helping reconstruct Church structures, canonical visitation files are also useful in determining sixteenth-century settlement names and their variants. All the more because their contents had been created independently of tax registers. Some visitation records provide information on land property, but such cases are incidental.⁴⁴

Apart from tax registers and visitations, the AHP series traditionally relies on sources of inventorial nature, *i.e.* documents describing royal and Church estates and as such covering only a greater or lesser fraction of the settlement network, depending on the territory. To describe Cuyavia and Dobrzyń land, we used the published inspections of royal property performed in the years 1564–1565, 1569, 1616–1620 and 1628–1632.⁴⁵ We then supplemented the inspections with inventories of gord starosties. We used the following records to analyse the area concerned: the 1494 inventory of Brześć Gord Starosty,⁴⁶ the 1510⁴⁷ and 1647⁴⁸ inventory of Inowrocław Gord Starosty and the 1556 inventory of Przedecz Gord Starosty,⁴⁹ the 1616 inventory of Dobrzyń Gord Starosty,⁵⁰ the 1567 inventory of Gniewków lease,⁵¹ the 1620 inventory of Skulsk Village,⁵² the 1767 inventory of Radziejów Gord Starosty⁵³ the 1514

register of revenues generated by Bydgoszcz Gord Starosty,⁵⁴ and descriptions of Bydgoszcz Gord Starosty in the years 1661–1765.⁵⁵ Further information on monarchic property can be obtained from inspections of royal property with lease titles, *i.e.* the so-called ‘revisions of letters’ (*rewizje listów*) dating to 1564/1565.⁵⁶ Concerning the descriptions of Church property, we used the inventories of Włocławek bishopric dating to the times of Maciej Drzewiecki’s pontificate, the years 1534, 1582 and 1598, as well as the seventeenth century,⁵⁷ together with the inventory of Koronowo Monastery property drawn up for the years 1564–1567.⁵⁸ Inventories of those large property complexes provided not only information about the settlements belonging thereto, but also – in the descriptions of the borders of a given village – about the settlements held by the nobility. For greater complexes of nobility property, solely the 1581 and 1627 inventories of Skępe estate in Dobrzyń land have survived to this day.⁵⁹

For Włocławek and Płock bishoprics, there are no extant *libri beneficiorum*, which belong to the basic sources required to reconstruct the settlement network and the Catholic Church structures at the close of the Middle Ages and the onset of the Early Modern Period, which we widely used in the previous volumes of the AHP series. Włocławek diocese is documented only in the 1527 *Liber Retaxationum*.⁶⁰ Although it enables certain approximations and conveys analogical information, its contents are much scarcer than those of the *libri beneficiorum* of Cracow, Gniezno and Poznań.⁶¹ From the perspective of our research, their gravest deficiency is the absence of parochial districts. Nevertheless, its core-constituted by the description of the assets bestowed upon specific Church institutions of Włocławek diocese in Cuyavia, which description is formed by a list of settlements encumbered with a variety of tributes paid to the Catholic Church – provides information on almost the entire settlement network present in this area in the first half of the sixteenth century. One problem arising from using this source is that identifying individual localities becomes much more challenging if one decides to look at institutions other than parochial churches, as the *libri* do not provide a more accurate spatial context.

Apart from the tax registers dating to the second half of the sixteenth century, which have been mentioned at the outset of this chapter, we also succeeded in conducting a full analysis of earlier and later fiscal sources, specifically the 1489 register of the *lanowy* tax collected in Brześć and Inowrocław Voivodeships,⁶² and the 1634 register of the hearth tax levied in Brześć Voivodeship.⁶³ Similarly as the *Liber Retaxationum*, the former provided a wealth of information on deserted settlements and demesnes which could not be found in books drawn up in the second half of the sixteenth century. While working on the AHP volume covering Cuyavia and Dobrzyń land, we entered the above-mentioned sources into the database which went on to become the basis for further analyses and helped determine the status of individual settlements in the second half of the sixteenth century. If the need presented itself, we employed the following as supplementary material: tax registers dating to the first half of the sixteenth century,⁶⁴ the 1662 hearth tax registers,⁶⁵ and the 1673 and 1674 poll-tax registers⁶⁶ for the two Cuyavian

⁶⁴ The larger part of sixteenth-century Cuyavia and Dobrzyń land registers can be found in volumes 29 (Brześć Voivodeship), 30 (Brześć Voivodeship and Dobrzyń land) and 50 (Inowrocław Voivodeship) of ASK I.

⁶⁵ AGAD, ASK I 65, ff. 277r–320v (Brześć and Inowrocław Voivodeships, and Rypin district).

⁶⁶ AGAD, ASK I 73, ff. 2r–116v, 127r–223v; AGAD, ASK I 74, ff. 837r–902v. The 1674 register was published by: R. Guldon, Z. Guldon, *Rejestr pogłównego województwa brzesko-kujawskiego z 1674 roku*, PKHBTN, vol. 12, 1976, pp. 129–192.

voivodeships and Dobrzyń land. Most of the analysed area (with the exclusion of the territory which fell prey to the first Prussian Partition) is covered by Franciszek Czajkowski's *Register of Dioceses*,⁶⁷ which we also used as an auxiliary source. We settled many detailed issues by consulting Stanisław Librowski's *The Real Inventory of the Documents Stored in the Archive of the Diocese in Włocławek*⁶⁸ and the Crown Metrica, whose tax register summaries were mostly used.⁶⁹

Despite some grave deficiencies and errors,⁷⁰ the *Materials for the Historical and Geographical Dictionary of Cuyavia and Dobrzyń land*, published at atlasfontium.pl and initially prepared by Zenon Guldon, proved useful as a basic guide to sources. Similarly, we used the materials on settlement prepared also by Romana and Zenon Guldon, yet covering a later period. However, these materials provide information only for a fraction of Brześć Voivodeship.⁷¹

We did not use any castle or land court records, as that approach has already established itself as a traditional one in the AHP series. Despite the plethora of information about the settlement network and ownership relations contained therein, the effort required to carry out an effective query rendered court records unusable for the purposes of drawing up the AHP. The only exception was the volume on Greater Poland, where it was possible to analyse the notes from court books gathered in the *Dworzaczek Files*.⁷²

In conclusion, it ought to be stated that the source base on the area covered by this AHP volume is quite uneven. On the one hand, we have at our disposal a broad source base on settlement in Cuyavia. On the other hand, documentation of Dobrzyń land is scant.

Apart from the materials listed above, the authors of this volume also ventured into other sources to supplement the data at hand so as to settle certain detailed issues. Information on these additional sources has been presented in relevant chapters.

II.1.8 PODLASIE VOIVODESHIP

Krzysztof Boroda

In all previous volumes of AHP the principle adopted for the reconstructing of settlement networks for the second half of the sixteenth century was the division into three rudimentary source groups. The first group constituted, and therein comprising primary sources, were the sixteenth-century registers for the collection of extraordinary taxes (first and foremost district and urban collections). The other two groups, ones acting in a supplementary source role, were the diocesan inspections and ledgers of the salaries and earnings of Church institutions as well as the inspections and inventories of Crown properties, goods and holdings. And besides these, and here as equally as auxiliary sources, employed were those archives that had been preserved such as collection records from the sixteenth century, taxation registers from the seventeenth century, the inventories of Church and noble property and goods, entries into the royal registers, document collections, as equally court journals and ledgers. The selection and scale at which the latter was exploited was unsystematic in nature. Every time this was the effect of the scale at which collection registers were maintained for a given region. In the case of court ledgers their contents were, as a rule, utilised in an indirect manner, often by means of the volumes of historical-geographic dictionaries or those card indexes published for a given region.¹

In the course of work on this AHP volume devoted to the Podlasie Voivodeship this traditional hierarchy as hitherto utilised as an important source of written documents could simply not be maintained. Just the very fact that up until 1569 the territory belonged to the Grand Duchy of Lithuania limited, and noticeably, the potential number of land taxation registers that could be created on the expanse of the territory as a result of the activities of the royal exchequer's administration. And it was this that had hitherto constituted the basis for earlier publications in the series. It is important to note that the inclusion of these territories into the composition of the Kingdom of Poland only in 1569 excludes the possibility of the existence of the most trusted by researchers of registers created as the result of the parliamentary acts passed and implemented for the period 1562–1565; and it was these that had enjoyed immense respect as source materials amongst researchers. The below enumeration of information as to the sixteenth-century collection registers preserved for the Podlasie Voivodeship reveals the scant nature of the acts that came into being and were kept following the inclusion of the territory within the Kingdom of Poland.²

For we have at our disposal for each of the districts that made up the Podlasie Voivodeship not more than four taxation collection registers with any precision in dating (and here as a rule incorporating integrated data for urban collection, that of the *szos* property tax and the *czopowe* duty levied on alcohol: a taxation that differed depending on the nature of the alcoholic beverages taxed). As opposed to the situation existing in other voivodeships of the Crown, where often while working on AHP it was decided to leave out a part of the registers that had survived, there is in this concrete case no such possibility given the actual shortage of base sources. Moreover there has been the need to employ a much broader range of supplementary sources. From the perspective of the organisation of taxation

¹ See all the chapters devoted to written sources employed in the other volumes of AHP.

² All the registers noted in the table below have been prepared to allow researchers access and are published on the website: atlasfontium.pl. Employed have been the very same principles for publication used earlier in relation to the Greater Poland registers. The edition has been based on the originals of registers held at AGAD. A part of the registers had been published formerly by A. Jabłonowski; see Podlasie III.

Table 1. A list of sixteenth-century taxation registers preserved for the Podlasie Voivodeship

Year	Bielsk Land	Drohiczyn Land	Mielnik Land
1576		ASK I 47, ff. 35–63	ASK I 47, ff. 65–70
1577 (1578)	ASK I 47, ff. 161–310; 434–487	ASK I 27, ff. 917–938v	ASK I 47, ff. 762–767
1579	ASK I 47, ff. 335–384		
1580	ASK I 47, ff. 567–666v	ASK I 47, ff. 496–544	ASK I 47, ff. 545–554v
1588		ASK I 47, ff. 738–761	ASK I 47, ff. 738–761
1591	ASK I 47, ff. 774–801v (summary registry)		

collection, the voivodeship was divided into two parts – the north and the south. The north comprised the Bielsk lands and with the division into three court (judicial) districts: Surazh, Brańsk, and Tykocin. While the southern section comprised the lands of Drohiczyn and Mielnik. Both parts had separate tax collectors designated for them in the sixteenth century. For the northern part (the Bielsk land) these were: Sebastian Brzozowski (1577), Walenty Niewiarowski (1579), Bieniasz Jałbrzyk Wyszyński (1580), while for the south (the lands of Drohiczyn and Mielnik) they were: Maciej Pobikrowski (1576), Arnolf Hlebowicz (1577), Jan Grot (1580) and Nikodem Jałbrzyk Wyszyński (1588).

Besides the registers in the collections of the Central Archives of Historical Records (AGAD) there has been preserved and employed in work on the AHP district stock lists of special taxes levied for the year 1569,³ a separate register for the liquor excise duty (*czopowe*) paid in the Drohiczyn and Mielnik lands for 1580,⁴ as well as two fragments that cannot be exactly dated of land tax collection for the Drohiczyn district post 1578⁵ and for the Mielnik district for the years 1569–1577.⁶ The Podlasie registers for land taxation as a result of the parish arrangement and their division into the separate personal property of the serfless gentry appears in its form to reflect those registers known from other regions of the Polish Crown. However, in point of fact they actually show important differences that are the effect of them coming into being on the basis of practices implemented by acts of the fiscal-military administration of the Grand Duchy of Lithuania. This finds its manifestation in three elements, of which the first is the order by which parishes appear in the taxation registers. In the majority of cases they reflect the order in which they were visited during the course of the rounds paid by the ducal servants that created tax and military cadastres during the period of the Grand Duchy. Here in the taxation registers created after 1569 parishes were often joined together in groups covering from two up to five units, something that makes any construction of the extent of particular parish districts all the more difficult.⁷ The second element is the absence of detailed information about the taxation basis for royal goods (earlier than those of the Grand Duke) and to a certain degree Church property. As a rule they were summed up in Podlasie collection registers and were placed together under collective headings that covered the entire starosty (district – of a given estate or manor), forest administrative region, or equally parishes themselves. This was the effect of the practice employed in the Lithuanian taxation system of separately registering the tax incomes of specific types of property ownership, in connection with the different method for implementing taxation obligations in force. In the case of Grand Duchy properties and holdings the basic form of extraordinary taxation, the so-called ‘silver’ tax, was enforced on the basis of the personal decision of the monarch, who arbitrarily determined its amount and frequency in collection. This silver tax was taken from the estates of the nobility only after the appropriate and relevant resolution had been adopted by the Lithuanian parliament (*Sejm*).⁸

⁷ K. Boroda, *Dokumentacja skarbowo-wojskowa z czasów Wielkiego Księstwa Litewskiego a rejestry poborowe województwa podlaskiego z lat 1577–1580*, an article prepared for publication in a special edition (22) of RDSG.

⁸ М. Довнар-Запольский, *Государственное хозяйство великого княжества Литовского при Ягеллонах*, vol. 1, Киев 1901, pp. 757–758.

The third element was the universally occurring collective payments found in taxation registers for the post-1569 period, made by those of the serfless gentry. The actual practice of collective taxation payments was nothing exceptional in the case of sixteenth-century Poland. The possibility for such an operation to be conducted had already been implemented into the taxation system of the Polish Kingdom in 1525, initially with the idea of taxation being collectively paid by those representatives of the serfless gentry who farmed a smallholding estate of less than 1 lan (1 *lan*) i.e., approximately 16.8 hectares.⁹ With the passage of time, and at odds with the initial intentions of the regulation, there started to develop the practice of summing up the payments from acreages greater than 16.8 hectares, with in exceptional circumstances it encompassing the actual sum of those taxpayers from a single settlement. However, such a form was never adopted in the case of Podlasie. In the Bielsk lands in the register of 1580, after a mere 12 years of the Polish taxation system being in force, of the 305 taxation divisions registered by this category of taxpayers as many as 249 i.e., 81% – constituted a collective payment of taxes on the part of several individuals with an acreage of at least 3 times 16.8 hectares of cultivated land. In the same year in the Drohiczyn land, out of the 547 registered taxation divisions collective payment from an acreage of 3 voloks or greater constituted 392 cases that being 72% of the money paid. While often these were acreages noticeably larger than three voloks, in many cases being eight or more times the *volok* base unit of 16.8 hectares. Meanwhile in the Płock Voivodeship in 1578, with a noticeable presence of serfless gentry, fifty years after the possibility to pay taxes collectively, only 65 out of 2,010 registered taxation units paid taxes on acreages of 3 lans or more. That is only 3% in all.¹⁰ The only explanation for this phenomenon in Podlasie is the transference on the part of the nobility of the habits and customs of payment that had been acquired under the taxation and military obligations incurred when Podlasie belonged to the Grand Duchy of Lithuania to the new ‘Polish’ taxation system. A key role must have been played by the collective obligation that befell the serfless gentry in the first half of the sixteenth century to provide during the course of nobility service one horse from 8–10 ‘service’ (with one ‘service’ being equivalent to one volok of arable land¹¹).

The limited number of tax registers created after 1569 that have been preserved has resulted in the need in working on this volume of AHP to maximise the use of sources that were created at the time when Podlasie belonged to the Grand Duchy of Lithuania. Special taxes were often imposed in the sixteenth century in Lithuania as a result of the long-term conflict with Moscow. The basic Lithuanian tax, the silver tax, in which the basis for the calculation of the tax was an ox or horse plough and was in character a universal tax. Those directly subject to the Grand Duke paid him as per his instruction, while the nobility were subject to acts of parliament. The nobility in possession of serfs paid a tax on the estate of these subjects, while those who had no serfs paid tax on their own property and goods. We do not know how often this silver tax was levied on state subjects, but over the course of the sixteenth century it was imposed on the estates of the nobility 25 times. This was in the years: 1507, 1520, 1522 (twice), 1524–1525, 1534–1536, 1540–1542, 1551–1553, 1554–1556, 1559–1560 (collected as silver tax due for the tax not collected in the years 1555–1556), 1561 (only Grand Duchy estates), 1563–1565 (in 1565 it was collected only on Grand Duchy possessions, holdings and lands) and 1566 (only Grand Duchy estates).¹² Beside this in the years 1517, 1528–1529, 1538, 1567 (twice) and 1568 was a silver tax imposed, in which the basis for calculation was the number of services resulting from the acreage of land cultivated by nobles’ serfs (vassals, impoverished nobility). In effect it was only levied on the estates of nobility holding serfs. Only in 1568, when the taxation was imposed in lieu of military service, was it to be paid also by those members of the nobility not holding serfs, with its basis being the horse provided within the framework of military service. In this case the representatives of the petty gentry were to contribute towards the taxation proper in those groups in which they were to have combined to have equipped and sent a horseman on the ruler’s command.¹³

¹¹ As equally as in the case of units of surface area measurement denoted in the Płock Voivodeship by both the term *lan* as equally *włóka* (volok), in the Podlasie Voivodeship the matter concerns that of the 30-morgen Chełm volok.

¹² М. Довнар-Запольский, *Государственное хозяйство* pp.742–747, the table on p. 747.

¹³ *Ibidem*, pp. 737–738.

For the years 1514, 1519 and 1565 besides the silver tax a general poll tax was imposed on the inhabitants of the Grand Duchy of Lithuania.¹⁴ It cannot be ruled out that in a similar way to the silver tax, the poll tax was more often imposed on state serfs rather than on the rest of the populace of the Grand Duchy. The administrative effect of this taxation undertaking was the keeping at the Duchy's chancellery in Wilno of an extensive collection of taxation registers. Together with these were stored cadastres of nobility land holdings created in the years 1528–1544 by specially commissioned scribes, while for the years 1544–1567 these were compiled on the basis of taxation declarations. The boyar estates were entered separately from those of the nobility into registers, while the state holdings in inventories.¹⁵ Unfortunately all the registers and cadastres of nobility landed property and holdings were destroyed during the evacuation of the Grand Duchy's archives from Wilno in 1655. The only remnants of what had initially been a most extensive archival source is what remains at the Archive of the Crown Treasury and which has been employed in work upon the Podlasie volume of the AHP, and namely the summed up financial statement as to the income from the poll tax of 1565 and the silver tax for the years 1567 and 1568 as applied at the level of districts, together with the lists of those still subject to its payment.¹⁶

Documentation connected with the organisation and execution of military service and dues in the Grand Duchy of Lithuania has been better preserved, and specifically the cadastres of military service and dues and military rolls. For the Podlasie Voivodeship we have at our disposal two cadastres of military service dues. One is part of the military cadastre that encompassed the whole of the Grand Duchy and which was enacted in 1528 and here on the basis of information contained in the cadastre of nobility property drawn up in the self-same year. This contains data for all the three lands of the Podlasie Voivodeship, though for the Mielnik and Drohiczyn lands these are lists of nobility names with information about the numbers of horses supplied by them. Only sporadically do the actual names of particular settlements appear. While the part that concerns the Bielsk land is exceptional in the form it takes given the scale of the whole cadastre. For the serfless gentry there is information at the parish level about the individuals gathered into groups for concrete settlement locations along with a recording of the numbers of horse supplied. The order in which the parishes themselves appear is in accordance with the route taken by the military rolls commission itself. Out of the three military cadastres for 1528 in existence, we have based ourselves in our AHP work on its edition of 2003.¹⁷ The second preserved cadastre of military service dues employed in AHP work was the cadastre of the nobility of the Drohiczyn land created within the parish system for 1547.¹⁸ Differently from the cadastre of 1528, it does not contain any data about the number of horse provided on royal order. Therefore, it limits itself to information about the acreage of the cultivated land found in the property of serf-owning nobility or in the settlements of those gentry without serfs calculated into the number of servants working the land and taking into consideration the quality of the land itself.

In the case of military rolls their tradition within the context of the Grand Duchy of Lithuania were even older than the cadastres of military duty itself, going back all told to at least the very beginnings of the sixteenth century. For already in the year 1520 the Council of Lords of the Grand Duchy of Lithuania had conveyed in a letter to Sigismund I the Old the information expected by the ruler as to who was to provide military service in a given year and who was not was presented to the monarch on the basis of the relevant register.¹⁹ Furthermore, enacted in 1522 and ratified in 1529, the 1st Lithuanian Statute of military rolls as organised by hetman in military camps was not treated as a novelty but merely as a natural composite element of the system for nobility service. Consequently we have nothing to state than categorically the practice of creating military rolls by the hetman in

camps must have been developed a lot earlier. Beside these, the hetman military rolls that find their reflection in the 2nd Lithuanian Statute ratified in 1566 saw the introduction of an additional obligation for the regular formation of military rolls in times of peace, organised on royal command by the district standard bearers.²⁰

The military rolls for the Lithuanian forces preserved from the first half of the sixteenth century are on the whole fragmentary in character, covering as a rule only individual districts. In the case of Podlasie we have at our disposal military rolls dated for the years 1533–1535 for the lands of Drohiczyn, Mielnik and Bielsk, as well as those dated 1534–1536 for the Mielnik land.²¹ Their usefulness in relation to work on the AHP has been severely curtailed as a result of extremely scant appearance within these entries of the place names from which those nobility assembling at these military rolls actually derived. However, of immense value in the compilation of the AHP have been the hetman military rolls for the years 1565 and 1567. In both cases we are dealing with registers compiled at the parish level and enumerating particular settlements and places in the compilation of the headings, though the actual number of places herein listed is in point of fact greater than the number registered by the headings. For often under the heading for a particular place entered were individuals from several other places. For Podlasie the military roll for 1567 is much broader (more encompassing) than that for 1565. Instead of the ordinary call to undertake compulsory nobility service, and therein the sending of a horse for each 8–10 servants, the nobility of Podlasie generally not possessing serfs or free peasants were obliged to send one armed man from each gentry or boyar household regardless of the number of servants held. In the case where mounted service could not be done then service on foot was demanded. However in 1565 service took place on general principles of nobility service and hence one horse for every nine ‘services’. The printed editions of both military rolls have been used in work on the AHP.²² The list of sources created when Podlasie was a part of the Grand Duchy of Lithuania and which have been utilised in the work on the atlas is brought to a close with – and here a work belonging to the documentation drawn up following the realisation of the Union of Lublin, a list of the nobility of the Bielsk and Drohiczyn lands who swore oaths of allegiance to the Polish monarchy in 1569.²³

While working on the parts of the already published volumes of AHP taxation receipts were inconsequentially used as supplementary sources. Recourse was made most often to these when the number of the tax registers for a given district was modest, or where there existed the need for a supplemental information about individual settlements. However, in the case of Podlasie which had but only a modest input in terms of tax registers, the Bielsk district taxation receipts for tax registers preserved for the years 1580 and 1581 have been used as a primary source.²⁴

Traditionally as auxiliary sources the taxation registers drawn up in the seventeenth century have been employed. This refers to the household tax for the Bielsk lands for the years 1634 and 1635, the land taxation registers for the Mielnik lands for the years 1627 and 1629,²⁵ as equally the poll tax registers for the years 1662,²⁶ 1663,²⁷ 1673,²⁸ 1674,²⁹ 1675³⁰ and 1676.³¹

Besides the taxation sources, and in accordance with the practices adopted for the series as a whole, employed as supplementary sources have been the surveys of the Podlasie royal estates for the years

1570, 1576 and 1602.³² However, none of the above mentioned surveys registered the royal holdings in the Podlasie Voivodeship in a complete manner. The most modest is that presented by the survey of 1570, the preserved part of which covers merely the Drohiczyn and Wołyń starost (administrative division).³³ By far the most extensive is the survey of 1576. This covered in relation to our subject of interest the starosts of Bielsk, Drohiczyn, Mielnik, Łosice, Knyszyn, Goniądz, Tykocin, Augustów, and Goniądz, as well as the leased royal lands of Rajgród; the forest areas of Bielsk, Tykocin and Goniądz as well as the tendered estates at Narewsk, Kleszczelowska and Krzywyska. However no survey was conducted of the starosts of Brańsk and Suraz, the forest area of Knyszyn, and the leased royal land of Pokaniewo.³⁴ While in turn the survey of 1602 covered only the starosts of Knyszyn, Goniądz and Bielsk lying in the northern and central parts of the voivodeship, as well as the Knyszyn area of forest.

Unfortunately, even in the case of the most complete and thorough survey of 1576, part of the settlements contained scant information and in the form of generalised calculation of income sizes, without information about the acreage of land cultivated or any elements concerning manufacturing infrastructure. This situation relates to the starosts of Drohiczyn, Knyszyn, Łosice and Mielnik.³⁵ It is just this sort of information that is key for the AHP to calculate the size of a given settlement. These shortfalls were supplemented by recourse being made to the inventories of magnate and royal estates preserved for the sixteenth century,³⁶ as well as the registers of the Vokod Reform. It was indeed the latter, instigated and enacted in the case of Podlasie in the years 1558–1562, that were to play an important part as supplementary materials. For not only have they provided an opportunity to verify the information in the fullest survey of 1576, but also as a result of the detailed description of the course of the boundaries of individual royal settlements and the accompanying measurement of the exchange in lands between large aristocratic estates and the holdings of the nobility that neighboured them, they have enabled one to uncover information on all holdings that neighboured the said with newly measured and recorded land holdings including data on the persons that were their owners.³⁷

The area of the Podlasie Voivodeship during the second half of the sixteenth century belonged to two dioceses: the Łuck (the Lwów Metropolitan) and the Wilno diocese (the Metropolitan of Gniezno). For both of the two dioceses no acts documenting Church visitations and inspections have survived from the sixteenth century. Consequently as auxiliary source materials used have been the protocols that have survived of inspections that took place in the subsequent century. The Łucka diocese has in its possession a collection of documents of rights and privileges for the eighteenth century³⁸ as well as protocols drawn up for general visitations covering the period 1662–1664.³⁹ In turn for the requirements of the reconstruction of those Podlasie parish districts that lay within the Wilno diocese (Augustów

³⁸ ADS, catalogue no. D 148, *Iura ecclesiarum parochialium dioecesis Luceoriensis et Brestensis ingrossata in hunc librum in anno 1645*.

³⁹ ADS, catalogue no. D 149, *Acta visitationis generalis ecclesiarum palatinatus Podlachiae et Brestensis, nec non decreta reformationis tempore episcopi Nicolai Prażmowski ex annis 1662–1664. Foundationes ecclesiarum dioecesis Brestensis et earum iura*.

and Knyszyn) the visitations of 1633⁴⁰ and 1700 have been employed.⁴¹ The remaining visitations by the Wilno diocese from the seventeenth century did not encompass Podlasie.⁴² The documentation that exists is far from complete and comprehensive and fails to reflect the state of affairs for Church visits in the so-called old Crown dioceses, which provide a much fuller description of parishes. Parish lists with place names occur sporadically and are often replaced by tithe districts. As a result in the reconstruction of parish districts recourse has been made to the first systematic registers of parish districts contained in the acts of the Łuck Synod of 1726⁴³ and the Wilno Synod of 1744.⁴⁴ Extremely helpful have been also the descriptions and sketches of the Crown and Lithuanian parishes drawn up in the second half of the eighteenth century as a result of the cartographical undertakings of Karol Perthées.⁴⁵

As far as the structures of the Orthodox Church are concerned the basic sources, beside the information contained in the visitations, inventories and registers of Crown holdings already enumerated, have been the inventories and registers of private property and documents of various sorts preserved and issued in a multi-volume series of sources published in the second half of the nineteenth century and beginning of the twentieth century by the Wilno Archeographic Commission.⁴⁶ The contents of the Lithuanian Registers have also been utilized. For Protestant Churches employed have been the seventeenth-century acts of the provincial synods of the Lithuanian Congregation covering the so-called Podlasie district assembling the Protestant communities and congregations of the Crown Podlasie Voivodeship and the Brześć Litewski Voivodeship,⁴⁷ as well as original foundation documents or their copies from the Radziwiłł Archives at AGAD and the Library of the Lithuanian Academy of Sciences in Wilno and those of the National Library there.

In accordance with the assumptions adopted for the AHP, no systematic source research in court records and ledgers has been conducted. Information found in sources of this kind that concerned the Podlasie region was utilised selectively and here through the employment of excerpts found and preliminary research conducted by the staff of the Polish Academy of Sciences Institute of History's Section for the Historical-Geographical Dictionary of Masovia and Podlasie in the Middle Ages, the Ignacy Kapica Milewski Collection⁴⁸ and the Zygmunt Gloger Collection.⁴⁹ In this manner utilised was data found in the collections of Jan Kapica Milewski. All lesser written sources employed in the descriptions of individual questions and aspects such as, the planning and layout of urban settlements, the development of road networks, administrative boundaries etc., are described in the relevant chapters themselves.

II.1.9a ROYAL PRUSSIA

Marian Biskup

The material basis of this work is quite complex and slightly different than it was in the case of the other crown lands. That is why it is necessary to present in greater detail the most important sources. For practical reasons, we will discuss the review of handwritten and printed sources separately for each of the three Prussian voivodeships, i.e. Chełmno, Malbork and Pomeranian. This method is also justified to some extent by a source base that is slightly different for each voivodeship, which is also reflected in further parts of the commentary. Only the cartographic sources are discussed jointly for the entire area to avoid unnecessary repetition.

Chelмно Voivodeship

The primary source base for Chełmno Voivodeship are the tax registers from 1570–1571 published by I.T. Baranowski.¹ Due to the faulty way of publishing, which presented many difficulties, they had to be checked against the originals kept in the Central Archives of Historical Records in Warsaw.² Utilizing these helped not only to remove major publishing flaws, such as incorrect reading of names or numerical errors, but also allowed the discovery of 12% of settlements in the voivodeship that had been omitted by the editor. The abandoned items have been published separately as a supplement to the I.T. Baranowski's edition.³ Nevertheless, it still proved necessary to refer to further sources to complete the data of the tax registers, which did not always contain complete data, thereby completely ignoring a significant percentage of rural settlements. Thus, for the crown property, the inspections of the royal lands from the years 1565–1570 were acquired from the Central Archives of Historical Records. However, the inspections pertained to only two starosta's districts (Grudziądz and Rogozin).⁴ The inspections of starosta's districts from 1624⁵ were also reviewed, and an extensive survey from 1664 published by J. Paczkowski⁶ was used as an auxiliary source. Thanks to this, the most complete source material was obtained for the royal property.

The inventories of the Chełmno bishopric from the beginning of the seventeenth century published by A. Mańkowski,⁷ have especially brought valuable additions to the data on Church property. A non-printed list of rents from the property of the Chełmno Chapter from the years 1576–1586 in the Diocesan

⁴ ASK XLVI 29, 30.

⁵ *Ibidem*, 33.

⁶ *Description of the royal lands in Chełmno, Pomeranian and Malbork Voivodeships in 1664*, ed. J. Paczkowski, Toruń 1938 (*Fontes Towarzystwa Naukowego w Toruniu*, vol. 32).

⁷ *Inwentarz dóbr biskupstwa chełmińskiego z r. 1614*, ed. A. Mańkowski, Toruń 1927 (*Fontes Towarzystwa Naukowego w Toruniu*, vol. 22); *Inwentarze dóbr kapituły katedralnej chełmińskiej z XVII i XVIII w.*, ed. A. Mańkowski, Toruń 1928 (*Fontes Towarzystwa Naukowego w Toruniu*, vol. 23).

Archives in Pelplin was also used.⁸ The diplomatic code of the Chełmno bishopric published by C.P. Woelke also provided some supplementation.⁹

For the properties of the Włocławek bishopric, inventories from the second half of the sixteenth century, published by St. Chodyński and L. Żytkowicz, were used.¹⁰

The supplementary sources for the noble property are less detailed. Here, reference was made only to the later non-printed 1662 tax collection¹¹ and the 1682 tax tariffs published by St. Kętrzyński,¹² mostly to at least establish the existence of a given noble settlement. It was also necessary to use sources and studies on the times of the Teutonic Order. The works of L. Weber,¹³ Brauns,¹⁴ G. Henkel,¹⁵ W. Kętrzyński,¹⁶ A. Semrau¹⁷ and J. Paradowski¹⁸ containing lists of settlements in Chełmno and Lubawa lands during the Teutonic era, as well as studies by K. Kasiski,¹⁹ W. Klesińska and J. Rumiński²⁰ were used in particular.

The number of sources for the town property is the weakest. Tax registers provide the necessary information only for a small number of the town owned rural settlements, especially Toruń and Chełmno. For the estates of Toruń, the town property accounting books from the second half of the sixteenth century kept in the State Archives in Toruń, usually provided sufficient supplements.²¹

Based on extensive archival material,²² the valuable work of K.G. Prätorius, was also used as an auxiliary source. On the other hand, supplementary materials for the property of the town of Chełmno, for which only fractional data were provided by the works of F. Schultz²³ (for the Teutonic period) and S. Sadowski,²⁴ proved insufficient. Similarly, for 14 towns in the voivodeship, the source material contained in the tax registers is sufficient for only a few centres. For the town of Toruń, it was possible to use the books of the municipal office from the State Archives in Toruń²⁵ and the valuable work of S. Herbst on Toruń craftsmanship.²⁶ In the case of the other towns, it was necessary to refer to the monographs of individual settlements, which provide meagre data on the economic and social relations of a given urban centre in the sixteenth century, but do provide more data for the seventeenth and eighteenth centuries. Such monographs, which contained also a summary of the history of individual rural settlements situated around a given town (especially if today it is a district capital), served simultaneously as a supplement to all types of property.

Figure 2. Fragment of the 1570 tax register of Pomeranian Voivodeship for the noble estates of the Tuchola district AGAD, ASK 106, f. 142v.

These studies, together with all the auxiliary materials, made it possible to establish the total number of sixteenth century settlements in the voivodeship, demonstrating that the tax registers omitted about 20.4% of the settlements.³³

³³ A more detailed comparison, cf. M. Biskup, *Rozmieszczenie własności ziemskiej województwa chełmińskiego i malborskiego*, Toruń 1957 (RTNT, vol. 60, no. 2), p. 9.

The substitute data, however, did not manage to fill the gaps in the tax registers and did not provide sufficient information, in particular, concerning crafts and the number of inhabitants in the cities of Chełmno Voivodeship. It resulted in a need to limit the extent of the analysis of the town relations in the voivodeship, and sometimes to use data from a later period, e.g. when calculating the number of inhabitants.

The administrative division of the voivodeship was developed on the parish scale based on the Church inspections, which despite dating back to the mid-seventeenth century,³⁴ also contained data for the period which was of interest to us. This problem has been discussed in a separate work, where the method of researching this issue has also been presented in more detail.³⁵ The division on the district scale was adopted on the basis of source data from the mid-seventeenth century,³⁶ due to the lack of sufficient information from the sixteenth century.

Malbork Voivodeship

The study of Malbork voivodeship is also based on the tax registers, but from a slightly later period, namely from 1581–1582. Those from 1582 were also published by I.T. Baranowski³⁷ but much more carefully than the registers of Chełmno Voivodeship, although errors in town names or numerical data could be found here as well.³⁸ However, the unpublished registers from 1581³⁹ were used as a primary source base, both because of their earlier chronology and that they contain a more precise description of the owners of noble estates which were quite poorly included in the other register. However, they omit a few settlements, especially those belonging to the crown and the nobility. Conversely, information about them was supplemented on the basis of registers from 1582. No glaring differences in the data of both registers were found.

For the royal property, the above materials were supplemented with previously unpublished inspections from 1564–1565⁴⁰ and 1569–1570.⁴¹ They basically cover the main part of the royal property, especially the Malbork economy, but do not include inspections for two of the voivodeship's starosta's districts (Tolknicko and Dzierzgoń) and part of the Nowy Dwór lease. They were supplemented out of necessity with inspections from 1624,⁴² which were much less abundant in content than those from the sixteenth century, and – comparatively – with an inspection from 1664.⁴³ The most important items of an extensive collection of inventories and accounting materials of the Malbork economy, especially for the first and second half of the sixteenth century,⁴⁴ were reviewed.

For the noble property, apart from the tax registers from 1581–1582, sources from the State Archives in Gdańsk were used, which were found on the basis of the results of a rural inquiry of

the Head Office of State Archives. In particular, the sixteenth century jurors' books of the town of Sztum,⁴⁵ containing numerous entries of noble owners, and the first of the preserved land books of Sztum from the beginning of the seventeenth century,⁴⁶ were used. The monograph of the Sztum district by F.W.F. Schmitt⁴⁷ and the studies of individual complexes of noble estates by R. Flanss⁴⁸ and E. Wernicke⁴⁹ played an auxiliary role.

For the small in size Church property, the tax registers played the role of the source base. They have failed completely, however, when it comes to town ownership, represented predominantly by the territory of the town of Elbląg. This made it necessary to refer to the materials of the former Elbląg archive.⁵⁰ Thus, mainly bills for individual districts of the territory, mostly from the turn of the sixteenth and seventeenth centuries, and treasurers' accounts from that period were used.⁵¹ These materials were supplemented with the data from detailed monographs of the town of Elbląg and its district by G.M. Fuchs,⁵² M. Toeppen,⁵³ E. Carstenn⁵⁴ and E. G.Kerstan with C.E. Rhode.⁵⁵ In combination with the Elbląg archival sources, they allowed the establishing, in principle, of the entirety of sixteenth century settlements located in the territory of Elbląg and the number of industrial facilities in the town and its vicinity. However, they did not provide a basis for a full study of several important problems, especially the population density, the condition of rural craftsmanship and the division of parishes.

Similarly, the state of materials for the remaining towns of Malbork Voivodeship turned out to be the worst compared to the data for the towns of Chełmno and Pomeranian Voivodeships. Tax registers do not provide any basis here for illustrating the economic and social relations of that time. One could only refer to the different local monographs of individual centres, often of various quality and detail, such as H. Lettau for Nowy Staw,⁵⁶ F. Hassenstein for Dzierzgoń,⁵⁷ G. Berg for Malbork,⁵⁸ to the studies by E.G. Kerstan and F.W.F. Schmitt quoted above, discussing the history of Sztum within the history of individual districts, or finally, to the summary lists in *Deutsches Städtebuch* by E. Keyser.⁵⁹ However, all of the above studies did not provide, similarly to Elbląg case, the necessary materials to illustrate all the problems. In total, it was found that the draft registers omitted a total of 21% of the estates and as much as 38% of the Elbląg territory.⁶⁰

The source material for illustrating the administrative division of the voivodeship posed considerable problems. We could only address the division into parishes because the district scale does not occur here at all. The only larger ownership complex – the territory of Elbląg – marks also the borders of smaller districts. Most of the voivodeship's area, as far as the east of the Elblązka River, belonged

to the Pomesanian diocese, which at the end of the sixteenth century was taken over by the Chełmno bishops; the rest of the area was under the authority of the Warmia bishops. However, the first full, printed inspection of the Pomesanian diocese only dates back to 1647,⁶¹ i.e. from the post-Reformation period and after the First Swedish War, which wreaked significant havoc in these areas. Therefore, to recreate at least approximately the parish network for the second half of the sixteenth century it was necessary to refer to earlier auxiliary sources, especially from the period of the Reformation, which had had a strong influence in these areas. A major help was thus the registry of rectors of the Greater Żuławy parish churches from the 1562–1564 period, preserved in the collection of the Library of the Polish Academy of Sciences in Gdańsk.⁶² The fragmentarily preserved inspections of the Pomeranian diocese from 1604, 1610, 1637 and 1654, located in the Diocesan Archives in Olsztyn in the collection of the former Bishop Archives in Frombork, were also reviewed.⁶³ The work of B. Schmid, who was the first to find the above sources in describing the monuments of the Malbork district, was of great help.⁶⁴ The inspection of the Pomesanian diocese from the end of the seventeenth century, preserved in the Diocesan Archives in Pelplin⁶⁵ was used to clarify unclear or debatable issues. The above materials made it possible to reconstruct the parish network for the period in question, except for the Elbląg territory and the eastern part of the voivodeship belonging to Warmia diocese. The territory of Elbląg, already Protestant around the middle of the sixteenth century, was not subject to inspections by the Warmia bishops, with the exception of the St. Nicholas Cathedral in Elbląg, the only Catholic Church in the entire area. The remaining churches were Protestant and the patronage over them belonged to the Elbląg council, which had full power over the entire church system. The affiliation of individual settlements to the Protestant churches of the Elbląg territory was very unstable and was subject to frequent changes; therefore, there are no sufficient grounds to put forward even retrogressive conclusions about the sixteenth-century parish network in this area on the basis of later information, mainly coming from the beginning of the nineteenth century. Therefore, these fruitless attempts were abandoned, resolving to just marking the parish settlements in this area, shown for the sixteenth century on the basis of reliable data by E.G. Kerstan.⁶⁶ A similar procedure had to be done in a small area near Tolkmicko, belonging to the Frombork deanery of the Warmia diocese. The unfortunate state of preservation of the scattered Frombork archives only allowed for the reconstruction of the parish seats in this area⁶⁷ without the possibility of fully establishing the settlements belonging to them.

To supplement the source materials, the dissertations of A. Semrau on the development of settlement during the Teutonic Order in the areas of the later Malbork Voivodeship,⁶⁸ were also conscientiously reviewed. It was, after all, in many cases also based on material from the sixteenth and seventeenth centuries. Apart from them, works on history of the Malbork district⁶⁹ as well as the works of H. Penner

about the Dutch settlements in the Vistula delta⁷⁰ were consulted. The latter, however, did not bring any major material supplements.

Pomeranian Voivodeship

As the basis for the study of Pomeranian Voivodeship served the tax registers from 1570–1571, also published by the quoted I.T. Baranowski, although they also required re-collation with the originals in the Central Archives of Historical Records.⁷¹ However, due to the previously identified shortcomings of these registers, in particular, the omission of approximately 17.4% of the voivodeship's settlements (not including those located in the territory of the town of Gdańsk),⁷² it turned out to be necessary to refer to supplementary materials. To some extent, they had already been used in the development of the map of the distribution of land ownership in Pomeranian Voivodeship in the second half of the sixteenth century. However, due to the current, extended scope of subjects and research problems, it turned out that it was necessary to expand the source base even further. This observation applies to both handwritten materials and monographs.

Therefore, for the royal property, in addition to the inspection of Pomeranian Voivodeship from 1564,⁷³ several inventories of Pomeranian starosta's districts from mid-sixteenth century to the beginning of the seventeenth century were worked through. They were acquired from Central Archives of Historical Records⁷⁴ and supplemented with the data of the above-cited inspection in 1664, printed by J. Paczkowski then a few inventories of the Puck and Kościerzyna starosta's districts from the seventeenth century⁷⁵ and documents of the Człuchów starosta's district were consulted.⁷⁶

Similarly, the source base on Church property was expanded by using quite fragmentary materials for monasteries in Kartuzy, Oliwa and Pelplin, located in the voivodeship's State Archives in Gdańsk⁷⁷ and in the Diocesan Archives in Pelplin.⁷⁸ Also used were the published inventories of the property of the Włocławek bishopric from the sixteenth century⁷⁹ and the inspection of the property of the archbishopric of Gniezno from 1511–1512.⁸⁰

As far as the entirety of the settlements are concerned, the most important supplementary sources were the inspections of the Pomeranian archdeaconry from the end of the sixteenth century, published by St. Kujot⁸¹ and inspections of the archdeaconry of Kamień from the beginning of the seventeenth

⁷⁸ Diocesan Archives in Pelplin – V.2: Codex diplomaticus Cartusiae 1382–1601; V.3: Codex diplomaticus Cartusiae 1382–1696; Monastica Zukoviensia 1. Privilégia Monasterii Zukoviensis 1596–1754.

⁷⁹ *Inwentarz dóbr i dochodów biskupstwa włocławskiego z r. 1534*, ed. B. Ulanowski, Cracow 1916 (Archiwum Komisji Historycznej, vol. 10); cf. footnote 10 – data about inventories from the end of the sixteenth century published by L. Żytkowicz.

⁸⁰ *Visitationes bonorum archiepiscopatus necnon capituli Gnesnensis seaculi XVI*, ed. B. Ulanowski, Cracow 1920. The resources of the Capitular Archives in Gniezno were also used, especially the inspections of archbishop's estates from 1548–1557 (sign. B. 143) and 1575–1717 (cf. B. 146).

⁸¹ *Visitationes archidiaconatus Pomeraniae*, ed. S. Kujot, Toruń 1897–1899 (Fontes Towarzystwa Naukowego w Toruniu, vol. 1–3).

century.⁸² In particular, they supplemented information for the noble property for which there were no auxiliary materials from the sixteenth and early seventeenth centuries.

The above source materials have been complemented with data from several monographs, concerning both the history of individual Church institutions,⁸³ as well as individual districts and Pomeranian regions,⁸⁴ and also urban⁸⁵ and even rural⁸⁶ settlements.

All in all, the above materials enabled a more complete presentation of individual problems for the entire voivodeship, including even smaller towns, included in the tax registers in particularly great detail. The only exception is the territory of the town of Gdańsk, which constituted the most difficult issue in terms of the source base. The main difficulty was the complete omission of the entire territory in the lists of the voivodeship's tax registers, as well as the lack of appropriate substitute materials in the State Archives in Gdańsk. Some of the archival materials concerning some parts of the territory (especially Żuławy Steblewskie) were also lost during the last war. The existing sources do not provide the necessary data on the economy and social structure for the period in question, due to their general nature or fragmentation. These are usually general lists of rents⁸⁷ that allow us to determine the number of settlements and the size of their arable land, but rarely provide more detailed information about the inhabitants of individual estates.⁸⁸ Supplementing the above gaps with the manuscripts from the Library of the Polish Academy of Sciences in Gdańsk⁸⁹ and monographs on individual settlements⁹⁰ did not provide sufficient grounds for the development of all research problems, forcing the adoption of estimated demographic data or even complete abandonment of cartographic presentation of some problems. It should be emphasized that a complete and thorough presentation of the economic and social relations in the Gdańsk territory will be possible only for 1793, for which we have almost all the materials in the form of the Prussian cadastre.⁹¹

Summarising, it must be stated that in all the collected source materials of Royal Prussia, the sources for royal and Church property are the most complete and of the best quality (for a maximum of 90–95% of housing estates more complete information), and less so for the noble property, where it was necessary to resort more often to methods of additional estimation of numbers concerning arable land or population. The greatest shortages of materials concerned the town property (especially in the territory of Chełmno, Elbląg and Gdańsk and the towns of Chełmno and Malbork Voivodeships), which, as a consequence, was the least numerically and cartographically represented. This led, understandably, to an inevitable underrepresentation of the issues connected with the towns in favour of those connected with the rural areas in Royal Prussia.

II.2 CARTOGRAPHIC SOURCES

II.2.12357 VOIVODESHIPS OF LUBLIN, MAZOVIA, RAWA, PŁOCK, SANDOMIERZ, ŁĘCZYCA, SIERADZ AND CRACOW

Henryk Rutkowski

The maps of Poland from the second half of the sixteenth century had almost no part in our work, as they are much less detailed than our study, and also contain glaring errors (misshapen river networks, incorrect settlement locations, etc.). Three important maps from this period could be mentioned here. They are all more or less direct remakes of Bernard Wapowski's cartographical works published in 1526 and known only in fragments. They are: Waclaw Grodecki's map printed somewhere around 1562 (at a scale of around 1:1,680,000),¹ Andrzej Pograbka's map from 1570 (around 1:1,950,000)² and Gerard Mercator's map from 1585 (around 1:1,600,000).³ One could find these maps interesting as they offer some insight into the knowledge of the time concerning geographical elements reflected by means of cartography, but this is a separate issue.⁴ For the sake of example, we could mention that Grodecki's map of Mazovia shows 44 settlements: 34 capitals of voivodeships, lands and districts (six missing), nine other towns, and the old ducal hunting manor Szkwa situated in a forest which is now called Kurpiowska. This categorization includes a symbol without a name located south of Sochaczew and identified as Mszczonów (according to Pograbka's map). We disregard an unnamed symbol between Nowogród and Łomża (in Pograbka this is second Ostrołęka). Andrzej Pograbka's adds on his map eight new towns to the 44 marked by Grodecki, of which one is a district capital. Pograbka distinguishes Warsaw and Płock with larger letters, but does not do so with Rawa. Similarly, in neighbouring territories Radom and Piotrków are distinguished, but not Brześć Kujawski. Grodecki partially marked the border of Mazovian Voivodeship. Some of its fragments separate settlements correctly, but others are largely wrong. In the later edition of this author's map from 1595, changed according to Pograbka's map, the course of the border was complemented, but still is not entirely without error. Grodecki's map shows 51 settlements in Sandomierz Voivodeship, almost entirely towns. Pograbka added five other towns. The latter's map marks several roads which run through the area included in our Atlas.⁵

In our work on Cracow Voivodeship we used the oldest printed Polish detailed map showing the duchies of Oświęcim and Zator. It was published in Venice in 1563.⁶ The author was Stanisław Porębski, but he certainly cooperated with Waclaw Grodecki (his map of Poland contains a generalized version of the area shown on Porebski's map). The scale is determined at 1:250,000, but there are significant differences between its parts. As in other maps of the period, this one was based on the course of the rivers, and all settlements were located in relation to the watercourses. Settlement was presented almost completely, except for the southern part of the map (Żywiec estates). Mountains were marked with much simplification, and forests – only in the lowlands. Important bridges over the Vistula and its tributaries were shown but roads were omitted.⁷ We accepted Porębski's nomenclature in our study as well as the bridges he marked.

The oldest maps which constitute the proper cartographic sources for our work come from the last decades of the eighteenth century. It is a widely-known fact that historical geography often resorts to retrogression. In the first place we should mention maps of every voivodeship in the Republic after the First Partition (1772). Their author was Karol Perthées, the court cartographer of the last King of Poland, Stanisław August Poniatowski (1764–1795). These maps, set at a scale of 1:225,000, show almost all settlements. Perthées prepared 12 such maps, which cover the majority of the area included in this Atlas. The title of each of them begins with the words: 'Mappa szczegulna woiewodztwa[...]' ('Detailed map of the voivodeship of [...]'). Most of these maps are known from manuscripts and five were published as copperplates. Here we list all maps in chronological order, including the ones which show areas beyond our Atlas. These are the maps of the following territories: Mazovian Voivodeship – first version (1783), Płock Voivodeship with Dobrzyń land (1784, printed in Paris prior to 1802), the Voivodeships of Cuyavia – the Voivodeship of Brześć Kujawski with the remaining part of the Voivodeship of Inowrocław (1785), Lublin Voivodeship (1786, printed in Paris prior to 1806), Cracow Voivodeship with Siewierz Duchy (1787, printed in Paris in 1792), Sandomierz Voivodeship (1788, printed in Paris around 1795), Mazovian Voivodeship – second, corrected version (1791),⁸ Rawa Voivodeship (1792, printed in Petersburg in 1806), Łęczyca Voivodeship (1793),⁹ Podlasie Voivodeship (1795), Poznań Voivodeship (1804), and Kalisz Voivodeship (probably after 1804).

Perthées's basic materials were the descriptions of parishes prepared by parsons according to a distributed questionnaire (the main question concerned the location of all settlements in relation to the parochial church which had to be determined according to position (north, south, east, west) and distance in miles, or parts of a mile). The royal cartographer could also use the few points with astronomically marked geographical coordinates, various older maps and someone's observations in the field, especially drafts of road networks. Perthées's maps, as they were not based on triangulation or topographic surveys, cannot show exact location of elements, often include major errors, but they are still rich in content – usually showing all settlements with division into categories, dense water network, borders (district and higher-rank), site names (including physiographic).¹⁰ In our work these maps were used mostly to determine the course of roads, borders and the nomenclature, and rarely to help us in some issues concerning settlement location. Lists of royal and Church estates helped us

⁶ Ducatus Oswieczimen[sis] et Zatoriensis descriptio – K. Buczek, *The History of Polish Cartography*, fig. 18; *Katalog dawnych map*, p. 38, fig. 11.

Alexandrowicz, *Najstarsza mapa szczegółowa ziem polskich: Stanisława Porębskiego mapa księstwa oświęcimskiego i zatorskiego z 1563 roku*, [in:] *Mente et litteris. O kulturze i społeczeństwie wieków średnich*, ed. H. Chłopocka et al., Poznań 1984, pp. 357–372.

⁸ This map is known from a Russian copy made in Petersburg between 1798 and 1812. Polish names were kept, but the title was translated, as well as all symbols and tables of royal and Church property (map in AGAD). Of the area of Mazovian Voivodeship, Perthées finished only the map of Warsaw's surroundings in 1787, which was published in Paris in 1789 ('Okolice Warszawy w diametrze pięciu mil').

⁹ Perthées 1793 – For the description of this and other maps by Perthées see *Centralny katalog zbiorów kartograficznych w Polsce*, no. 5: *Wieloarkuszowe mapy topograficzne ziem polskich 1576–1870*, part 1: *Tekst*, comp. T. Paćko, W. Trzebiński, Wrocław 1983, poz. 37.

Karczewski et al., Cracow–Bydgoszcz 2004, pp. 76–102.

solve problems related to ownership. Exceptionally, we resorted to Perthées's materials which constituted a transitory stage between the descriptions of parishes and the maps. These materials were drafts of particular parishes bound in 12 volumes and entitled 'Geograficzno-statystyczne opisanie parafii Królestwa Polskiego'.¹¹ The work of the royal cartographer proved not very helpful in the case of Cracow Voivodeship, as it was fully used by the authors of the map of this area in the years of the Four-Year Sejm 1788–1792.¹²

The inquiry of parishes and the questionnaire were planned and conducted by Rev. Franciszek Czaykowski. The project was administered by Michał Poniatowski (the King's brother), the Bishop of Płock, and since 1784 – the Primate of Poland. Basing on the descriptions sent by the parsons, Czaykowski made a list of settlements and their owners in parochial order from six western dioceses of the State in the borders after the First Partition.¹³ He also prepared several maps of low quality. The first showed Płock diocese, or only its western part, in 1779 (scale around 1:190,000).¹⁴ In 1786 Czaykowski prepared a map of Sandomierz Voivodeship (around 1:185,000).¹⁵ Despite serious distortions, we found this map particularly interesting, especially as it contained ecclesiastical division. Although the same parochial affiliation of settlements could be found in 'Regestr diecezjów', yet even an imprecise cartographic depiction has certain values (e.g. the map shows Chełmce parish, which was omitted in the register). This map played only an auxiliary role in our work on parochial borders and in determining site names, and exceptionally – in localizing settlements. Czaykowski's map on the other hand proved entirely useless for our purpose; it shows the Voivodeships of Sieradz and Kalisz, was made probably after 1786, and only its southern part survived (scale around 1:185,000).¹⁶

Of other maps of Poland from this period we used also the detailed military map of a fragment of borderlands on Galician side, i.e. lands annexed by Austria ('from the village Trzebica up to the rivulet Ława'), made in 1790 by lieutenant Franciszek Podoski (scale 1:43,000).¹⁷

In the First Partition of the Polish-Lithuanian Commonwealth (1772), of the territories encompassed by this Atlas, Austria annexed parts of the Voivodeships of Cracow and Sandomierz situated south of the Vistula, and the southern borderland of Lublin Voivodeship. In the Second Partition (1793), Prussia took the western part of the aforesaid area, and the Third Partition, the one that ended the Republic, divided the remaining lands between Prussia and Austria (1795). Cartography changed accordingly. Austrian and Prussian maps from the turn of the eighteenth and nineteenth century show accuracy relatively similar to that of maps from the twentieth century.¹⁸

For the areas annexed by Austria in 1772, the first map was the so-called 'political' survey prepared under supervision of Józef Liesganig between 1772 and 1774. It was based on superficial

triangulation and equally cursory field measurements, and first drawn at a scale of 1:72,000.¹⁹ After some modifications and corrections made by Liesganig, Jan von Lichtenstern reduced the map to the scale of 1:288,000. It was published in this form (with the addition of Bukowina) in 1790.²⁰ The map was published again by the General Quartermaster of Austrian Army in 1824 with minor additions (in the course of roads).²¹ In our work we used the second edition, and our use of Liesganig's map was similar to the way we used Perthées's map, except naturally for the borders. More detailed, not only because of the scale, but also because of a quite precise triangulation and careful topographic survey, is the military depiction of Galicia made between 1775 and 1783. In the initial period the main work was supervised by Colonel Jan Seeger von Dürrenberg, and the principal work recommenced after the break in 1778–1779 was conducted by Lieutenant Colonel Fryderyk von Mieg. (After he died in 1783 Major von Waldau took his place). The result of this work is a multi-sheet manuscript map at a scale of 1:28,800. The map is filled with details and distinguished by its precision.²²

The next cartographic source of our Atlas was the map of some of the lands annexed by Prussia in the Second and Third Partitions of Poland, called Southern Prussia by the occupants. The map at a scale of 1:150,000 was published by Dawid Gilly in 1802–1803.²³ It is a reduced topographic survey, which was made at a scale of 1:50,000 under supervision of Gilly and Cron (Krohn) between 1793 and 1800.²⁴ This survey was not preceded by triangulation or astronomic observations, but still the reduced version published by Gilly is incomparably much more precise than Perthées's maps.²⁵ The published map contains the network of post and major roads prepared by Wilhelm H. Matthias, and some minor corrections in the original. In our work we utilised both the topographic representation and the printed reduced version. Gilly's map was the base for the localization of settlements and for determining the course of important roads. It also allowed us to depict physiographic elements in Ostrzeszów district.

Of Prussian cartography we used also Jan Gottlieb Brodowski's map. Between 1796 and 1802 he made a very good topographic survey of a part of Southern Prussia and the so-called New Silesia, and in 1831 and 1842 his work (with gaps) was published at a scale of 1:57,600.²⁶ Brodowski's map encompasses, among other lands, the south-eastern borderlands of the old Voivodeships of Sieradz and Łęczyca, and in our case its usefulness was limited to these territories.

The lands of northern Mazovia, annexed by Prussia in the Third Partition, were shown on the map of the so-called New Eastern Prussia by Jan Krzysztof Textor, set at a scale of 1:152,500. This map was published in 1808 by D.F. Sotzmann, at the time the main Prussian cartographer and publisher of maps.²⁷ Textor's map of the lands after the Third Partition was based on topographical survey at a scale

¹⁹ Manuscript copy of this map from 1775 bound in form of Atlas is kept in the Library of Ossolineum in Wrocław.

of 1:33,300 prepared between 1795 and 1798 by von Stein, under supervision of General von Geusau. This representation was based on only fragmentary triangulation, yet the topographic measurements were detailed.²⁸ Textor, on the other hand, introduced corrections based on his own survey, and reduced the representation and supplemented it (probably using Gilly's maps) with the lands annexed in the Second Partition. They were included into New Eastern Prussia (the majority of Płock Voivodeship and Dobrzyń land). The map, finished by Textor already in 1800, is quite precise, despite the lack of full triangulation, probably because the coordinates of relatively many settlements were already calculated.²⁹

Northern parts of the Voivodeships of Cracow, Sandomierz and Lublin, and Mazovian borderland were annexed by Austria in 1795. This territory was called Western Galicia and was included in a topographic survey prepared between 1801 and 1804. The work was conducted by Colonel Antoni Mayer von Heldensfeld and the map was set at a scale of 1:28,800, based on good mathematical grounds. The map was carefully drawn and has rich content.³⁰ These detailed maps were soon published in several reductions, e.g. by the General Quartermaster, who was Heldensfeld at the time, who prepared a reduced version at a scale of 1:172,800. It was published by Hieronim Benedicti in 1808. Because this version is much reduced, the map is much more simplified than the topographic representation.³¹

Polish maps by Perthées, two Prussian maps by Gilly and Textor, and one Austrian map by Heldensfeld – Benedicti were all made in a short period between 1783 and 1804. Still, they show significant differences. The analysis of the map of Sandomierz Voivodeship by Perthées showed that its average error of geographical location is 4,750 m, similar or larger errors occur on the maps of this cartographer covering Mazovian Voivodeship.³² For Gilly's map the average error was determined at 1,404 to 4,187 m, on Textor's map this was 1,542 m, and on Heldensfeld – Benedicti's – 680 m.³³

The maps made by occupying countries constituted an important base for our localization of settlements and determining the course of major roads. We used maps published at a scale not much different from the one used for our map, but if necessary we resorted to detailed topographic representations.

Two Austrian military maps, Mieg's and Heldensfeld's, have many errors only in site names,³⁴ otherwise their accuracy, given the scale is much greater than ours, usually exceeded our needs. That is why it was often enough to use Benedicti's representation, not Heldensfeld's original. On the area encompassed by Mieg's map it served as a base for physiographic elements (rivers, swamps, forests); Heldensfeld's map played an auxiliary role in this case, as physiographic elements of these areas were based on Quartermaster's Map.

After the changes brought by Napoleon Bonaparte's wars, in 1815 the Congress of Vienna defined new political borders and created the Kingdom of Poland subject to the Emperor of Russia. *Topograficzna karta Królestwa Polskiego* ('The Topographic Map of the Kingdom of Poland'), i.e. the so-called Quartermaster's Map set at a scale of 1:126,000 was prepared in two stages. The first one lasted between 1822 and 1830 and the work was conducted by the General Quartermaster's Office of the Polish Army, which prepared sheets encompassing the western and central part of the area shown in this Atlas. After the November Uprising, between 1833 and 1839, the map was finished by the Russian Topographic Corps supervised by general Karol Richter. The Map was gradually published, in sections, after the Uprising, and some sheets were printed several times, because of the corrections introduced to them. The entire printing lasted until 1843, and the map was published under the date 1843, with its main

²⁸ Stein's map has 122 sheets, in IH PAN there are films of nine sheets showing the western borderlands of Prussian lands annexed in the Third Partition.

title in Russian, and secondary titles in Polish and French.³⁵ Later there were several reprints with minor changes (e.g. the addition of railways). The field survey of the Quartermaster's Map was set at a scale of 1:42,000. There was no systematic triangulation of the entire country, but assuming earlier Prussian and Austrian maps as a starting point, triangulation works were done mostly at the points of junction of these maps.³⁶ The average error of geographic location was determined for the part prepared prior to 1831 at 747 m, and for the later part – at 690 m.³⁷ *Topograficzna karta Królestwa Polskiego* served as a basis for the representation of physiographic elements, and also helped us localize settlements, determine nomenclature and the road network. While locating settlements we also used the map of the Republic from before the Partitions, prepared in Paris by Polish emigrants under supervision of General Wojciech Chrzanowski (the last stage of work was supervised by Feliks Wrotnowski). The map at a scale of 1:300,000 was published in sheets from around 1840 to 1859, when it was also published in the form of an atlas.³⁸ Chrzanowski's map, compiled from earlier cartographic representations, is characterized by its settlement network, much more detailed than is usual for maps at this scale.

As the main basis for our base map we used military topographic maps at a scale of 1:100,000 published after 1945, but we also resorted to similar maps prepared by Wojskowy Instytut Geograficzny ('Military Institute of Geography') during the Second Republic. The reconstruction of borders was based on administrative maps of districts at a scale of 1:100,000 from after the Second World War.

Cartographic sources for city plans were described in the chapters on these plans.

II.2.4 GREATER POLAND

Tomasz Panecki

The selection of cartographic sources for the work on this volume of AHP was preceded by a library and archival query, the result of which is a list of 15 series of maps (tab. 1). The archival query was conducted in the State Archive in Poznań and the Staatsbibliothek in Berlin, while the bibliographical one was based on inventory and monographic works¹ and on the legacy of previous AHP volumes.² Not all maps turned out to be important for our work, hence why we decided to divide them into four groups in terms of their usefulness for the AHP:

1. unused maps or those minimally used;
2. maps used to analyze general spatial relations;
3. maps serving as sources for road network mapping, natural landscapes and, to some extent, for localizing settlements;
4. reference maps.

Table 1. Summary of maps used in the work on AHP

The first group includes maps that did not play a major role in the development of AHP. This was dictated mainly by their low planimetric accuracy, too small scale and insufficient scope of content, which made them impossible to use as a data source. The group is mainly composed of the oldest studies. Of these, maps that need to be mentioned are those based on Bernard Wapowski's work – the 1:1,000,000 scale map printed in 1526 and preserved today only in fragments.³ These are: the map by Waclaw Grodecki printed around 1562 in a scale of approximately 1:1,680,000⁴ and the map by Andrzej Pograbka (1570, approx. 1:1,950,000).⁵

Wapowski's map, entitled *Mappa in qua illustrantur ditiones Regni Poloniae ac Magni Ducatus Lithuaniae pars*, was made to a scale of approx. 1:1,000,000 and printed in the Ungler publishing house in 1526, though burned along with the building two years later. Only two fragments survived and were discovered by Kazimierz Piekarski in 1932 at Central Archives of Historical Records (AGAD).⁶ One of them covers the northern part of the Poznań and Kalisz Voivodeships, therefore it qualifies for some analysis. The main content of the map is the hydrographic and settlement network, as well as boundaries symbolized by a sign resembling an espalier of trees.⁷ The author has placed and named, among others, the rivers Warta, Wisła, Noteć, Obra, Brda and Drwęca, as well as lakes such as Gopło, Bielsko, Szczytno and Wdzydze. The settlement network within the voivodeships that interests us contains 49 towns. The map is characterized by significant errors in the positioning of objects, an example of which is Frydland (presently: Mirosławiec), found on the Gwda River between Krajenka

⁵ K. Buczek, *Dzieje kartografii polskiej*, pp. 36–37; M. Sirko, *Zarys historii kartografii*, p. 173.

⁶ M. Sirko, *Zarys historii kartografii*, p. 166.

⁷ This sign was interpreted, among others, by S. Pietkiewicz (idem, *Mapa Polski – „milionówka” Bernarda Wapowskiego*, p. 62) as symbolizing forests, however, the juxtaposition of these „ribbons” with the political division of sixteenth century Poland shows that they represent the borders (H. Rutkowski, *Polska na wybranych mapach*, pp. 229–230).

and Lędyczek, while in fact, it is located about 60 km southwest of this area. The error was also copied by Wapowski's successors – Waław Grodecki and Andrzej Pograbka.

Wapowski's map was the basis for the map of Poland *Poloniae Tabula* developed by Grodecki (1562, approx. 1:1,680,000), and the scope of its content is similar: settlements, hydrography, but also topography presented by hill profiles. The map presents 648 pictorial symbols of settlements, 19 of which are unnamed, and the descriptions themselves are not related to the size of the settlements.⁸ In the area of Greater Poland, the cartographer located 55 settlements, of which three were unnamed and remain unidentified. A particularly interesting case is that of the town "Łobżenica" that the cartographer named "Nicza". The mistake occurred due to Wapowski's unfortunate placement of the name of the town in two rows, between the signature denoting the settlement: the upper one ("Łobże") and the lower one ("Nicza"). This error also appeared on Pograbki's map.

During the process of preparing his oeuvre (scale at approx. 1:1,950,000, 1570), Andrzej Pograbka used the works by Waław Grodecki and Gerard Mercator.⁹ Besides the settlements and the hydrographic network, his map also shows the forests and the more important roads. There are 65 towns from both Greater Poland voivodeships represented on the map, as well as one village (Tomice, found in the sixteenth century Poznań district). It is the first map in the analyzed set, in which the settlements were distinguished based on importance: Poznań and Kalisz, capitals of their voivodeships, were written in upper case letters, similarly to Gniezno, most likely due to its significance and historical role. Attention should also be paid to the incorrect locations of some towns: Leszno was placed far west of Wschowa, when, in fact, it is located about 15 km to the east, and Śrem was located between Września and Konin.

The second group includes maps which, due to their relatively low accuracy, could not be used as a source of geographic (spatial) data, instead only providing attributive (descriptive) information, e.g., we used them to denote the names of rivers, but not their course. These maps could be a source of qualitative information, but it was not possible to use them to reconstruct the topography.¹⁰ The common denominator of these maps was the use of their field measurements and points measured astronomically in the construction of a geodetic network. However, it should be remembered that the tools used for these purposes did not yet provide a precise accuracy. Nevertheless, these maps already provide a certain vision of the topography, which was much more credible than the one offered by previous studies. Overall, these maps were used in the AHP research only in cases where other, more reliable works were in conflict with each other.

The oldest map is doctor Krzysztof Opaliński Godfryd¹¹ Freudenhamer's *Palatinatus Posnaniensis in Maiori Polonia primarii, nova delineatio* from 1645 in a scale of approximately 1:560,000.¹² At the time, this map was a very accurate representation of the Poznań Voivodeship – it was based on measurements of the latitude and on the measurements of the distance between the more important settlements. Its contents include settlements, hydrography (rivers, lakes, swamps), afforestation and the relief presented by hill profiles. It is also one of the first maps distinguishing different types of settlements: towns, villages, church villages, monasteries and castles. In total, 1516 settlements (74 towns and 1,442 villages) were located on it.¹³ Based on the analysis of the mistakes in the localization of the map features, it turned out that they oscillate around 17.5 km.¹⁴ In our own work, this

⁸ M. Boczyńska, J. Midzio, *Analiza dokładności Mapy Polski Waława Grodeckiego*, „Polski Przegląd Kartograficzny”, vol. 1, 1974, no. 6, pp. 29–33, here p. 30.

¹¹ Literature on the subject has provided an erroneous interpretation of the name's initials as Georgius (George); A. Sajkowski, *Krzysztofa Opalińskiego „droga francuska”*, SMDWP, vol. 2, 1956, issue. 1; as cited in: H. Rutkowski, *Godfryd Freudenhamer*, [in:] *Polski wkład w przyrodznawstwo i technikę. Słownik polskich i związanych z Polską odkrywców, wynalazców oraz pionierów nauk matematyczno-przyrodniczych i techniki*, vol. 6, ed. B. Orłowski, Warsaw 2015, pp. 422–423.

¹² Researchers do not agree as to the scale of the map: B. Olszewicz (idem, *Polska kartografia wojskowa*) gives the scale at 1:460,000, K. Buczek (idem, *Dzieje kartografii polskiej* 1963) – 1:463,000, G. Kwiatkowska-Gadomska and S. Pietkiewicz (idem, *Mapa „Palatinatus Posnaniensis” Jerzego Freudenhamera*, „Studia i Materiały z Dziejów Nauki Polskiej, Seria C”, vol. 24, 1980) – 1:494,000, while H. Rutkowski – 1:560,000; see. H. Rutkowski, *Godfryd Freudenhamer*, pp. 422–423.

¹³ The main map contains 1535 settlements (including 67 cities) in the Poznań Voivodeship.

¹⁴ G. Kwiatkowska-Gadomska, S. Pietkiewicz, *Mapa „Palatinatus Posnaniensis” Jerzego Freudenhamera*.

map served primarily as a source of information about the approximate location of bridges and fords near the settlements.¹⁵

This group of maps also includes Prussian topographic surveys from 1767–1793. The oldest map was the *Militärische Karte von Gross-Polen* (also known as the map of Teodor von Pfau), which was the result of secret measurements carried out by Prussia in the then Polish–Lithuanian Commonwealth.¹⁶ The colorful manuscript map at a scale of 1:87,500 consists of 41 sheets and was developed in the years 1772–1773. Five years later it was engraved at a scale two times smaller.¹⁷ An unusual feature of the map was its south-up orientation, which was intended to help the Prussian army entering from the north in reading place names from the map without the need to rotate it.¹⁸ The western and northern parts of the Poznań Voivodeship in the sixteenth century were also included in the so-called cabinet map of the Kingdom of Prussia (*Kabinettkarte*), developed under the direction of Friedrich von Schmettau on the orders of Frederick II in the years 1767–1787, at a scale of 1:50,000.¹⁹ According to K. Buczek, however, the *Kabinettkarte* is only a loose collection of maps (not always at a scale of 1:50,000), which were part of the private collection of the author (i.e., Friedrich von Schmettau), and did not belong to the Prussian monarchy until the collection was purchased by the Plankammer in 1787.²⁰ Equally noteworthy is the manuscript *Karte von Südpreußen*, created at the scale of 1:50,000 on the basis of a topographic survey by David Gilly, Cron and Langner in the years 1793–1800, consisting of 89 sheets.²¹ Prussian maps dated to before 1800 were used relatively rarely in the work on the AHP volume about Greater Poland mainly due to their low planimetric accuracy and incomplete coverage.

An important place among maps, although not yet fully accurate, but nonetheless offering a certain perception of space, is occupied by manuscript maps by Karol Perthées – the cartographer of king Stanisław August Poniatowski:²² *Mappa szczegulna województwa poznańskiego* (1804) and *Mappa szczegulna województwa kaliskiego* (after 1804).²³ The technique of their development, however, differs significantly and negatively when compared to, for example, Prussian or Austrian works from that period. The primary source of data for the map were descriptions of parishes and which, on the order of the bishop of Płock and later of Primate Michał Jerzy Poniatowski in 1778, were prepared by the parish priests.²⁴ They were organized according to a uniform questionnaire consisting of 5 (later 9) points, which specified the locations (in miles and according to the cardinal directions) of all important anthropogenic objects in the parish – primarily settlements, farm buildings, as well as bridges and fords.²⁵ The parish survey method results in a fairly high level of detail on the maps in terms of the number of marked objects. However, it is not particularly accurate due to a lack of field measurements and a large generalization of the topography, caused by the relatively small scale of the map

Życie i dzieła*, [in:] Karol Perthées (1739–1815). *Fizjograf pierwszej Rzeczypospolitej. Życie oraz działalność kartograficzna i entomologiczna*, ed. J. Pawłowski, Warsaw 2003, pp. 21–134.

²³ H. Rutkowski, *Źródła kartograficzne*, pp. 283–297, esp. p. 287.

²⁴ This huge informative value of the map resulted from the fact that each of the plans was made on the basis of the so-called parish survey. Presently, one fragment of such a survey is known from the area of former Greater Poland. It is the prewar transcript published in the “Kronika Gostynińska” in 1932; see J. Staszewski, *Gostyni w 1784 roku*, „Kronika Gostynińska”, series 4, no. 7, 1 X 1932, pp. 103–107. For the information about this document, I would wholeheartedly like to thank mgr. Paweł Łachowski, regional historian from Głogów.

²⁵ W. Wernerowa, *Ocena „ankiet parafialnych” jako źródła wiedzy Karola Perthéesa o fizjografii Rzeczypospolitej przedrozbiorowej*, [in:] Karol Perthées (1739–1815), pp. 165–192.

(1:225,000), especially when compared to the maps of the partitioning powers from the same period. However, after considering the map's shortcomings in terms of its accuracy, it served as an important source primarily for the reconstruction of the road network in the AHP.

This group of maps also includes the hitherto little known *Mappa topograficzna wojskowa i statystyczna Wielkopolski*,²⁶ developed by Edward Raczyński and drawn by Ernest Gaul in the years 1807–1812.²⁷ The so-called Gaul/Raczyński map was created as a colorful manuscript, and its individual sheets were to cover all districts of the Poznań Department of the Duchy of Warsaw. The map was never published in print, and the work remained unfinished until World War II at the Raczyński Library. The original was lost during the war and only two sets of black and white photocopies survived to this day in the State Archive in Poznań and in the Raczyński Library. As both sets have different dimensions, the map's original scale remains unknown. However, it can be estimated at approximately 1:75,000 (set from the State Archive in Poznań), which makes it the first Polish cartographic study with such a level of detail.²⁸ The map was created almost 40 years earlier than the Quartermaster's Map.

The third group includes maps that we used to draw roads and elements of the physiography, as well as to locate settlements. They usually give a sufficiently precise image of the space contained within the margin of error accepted for the scale of the AHP main map that they can be utilized not only as a source of descriptive attributes, but also of object geometry. Based on them, one can vectorize (trace in the desired scale of the map) objects such as roads, forests or rivers. This subset includes four series of maps from the years 1802–1843, the ranges of which in the Poznań and Kalisz Voivodeships in the sixteenth century are presented in fig. 1.

The oldest map in this set is the so-called Schrötter-Engelhardt map at a scale of 1:150,000, printed in Berlin (1802–1812) entitled *Karte von Ost-Preussen nebst Preussisch Litthauen und West-Preussen nebst dem Netzdistrict*.²⁹ This is a reduction of a topographic survey at a scale of 1:50,000 (145 sheets, the years 1796–1802), which was, at the behest of Friedrich Leopold Schrötter, the work of Friedrich Bernhardt Engelhardt in collaboration with David Gilly, the author of the measurement instructions. The picture was preceded by a triangulation led by Johann Christoph Textor. This map consisting of 25 sheets covers the northern and central parts of the Greater Poland voivodeships and is incredibly accurate by the standards of its time. The scope of its content does not differ from other contemporary topographic maps and includes settlements (divided into cities, towns, church villages, villages, villages with a demesnes and villages with a castle), road networks (three categories), numerous farm buildings, as well as land cover and hydrography.

The *Special Karte von Südproussen...* at a scale of 1:150,000 is a printed map developed under the supervision of David Gilly in the years 1802–1803.³⁰ It covers the vast majority of both Greater Poland

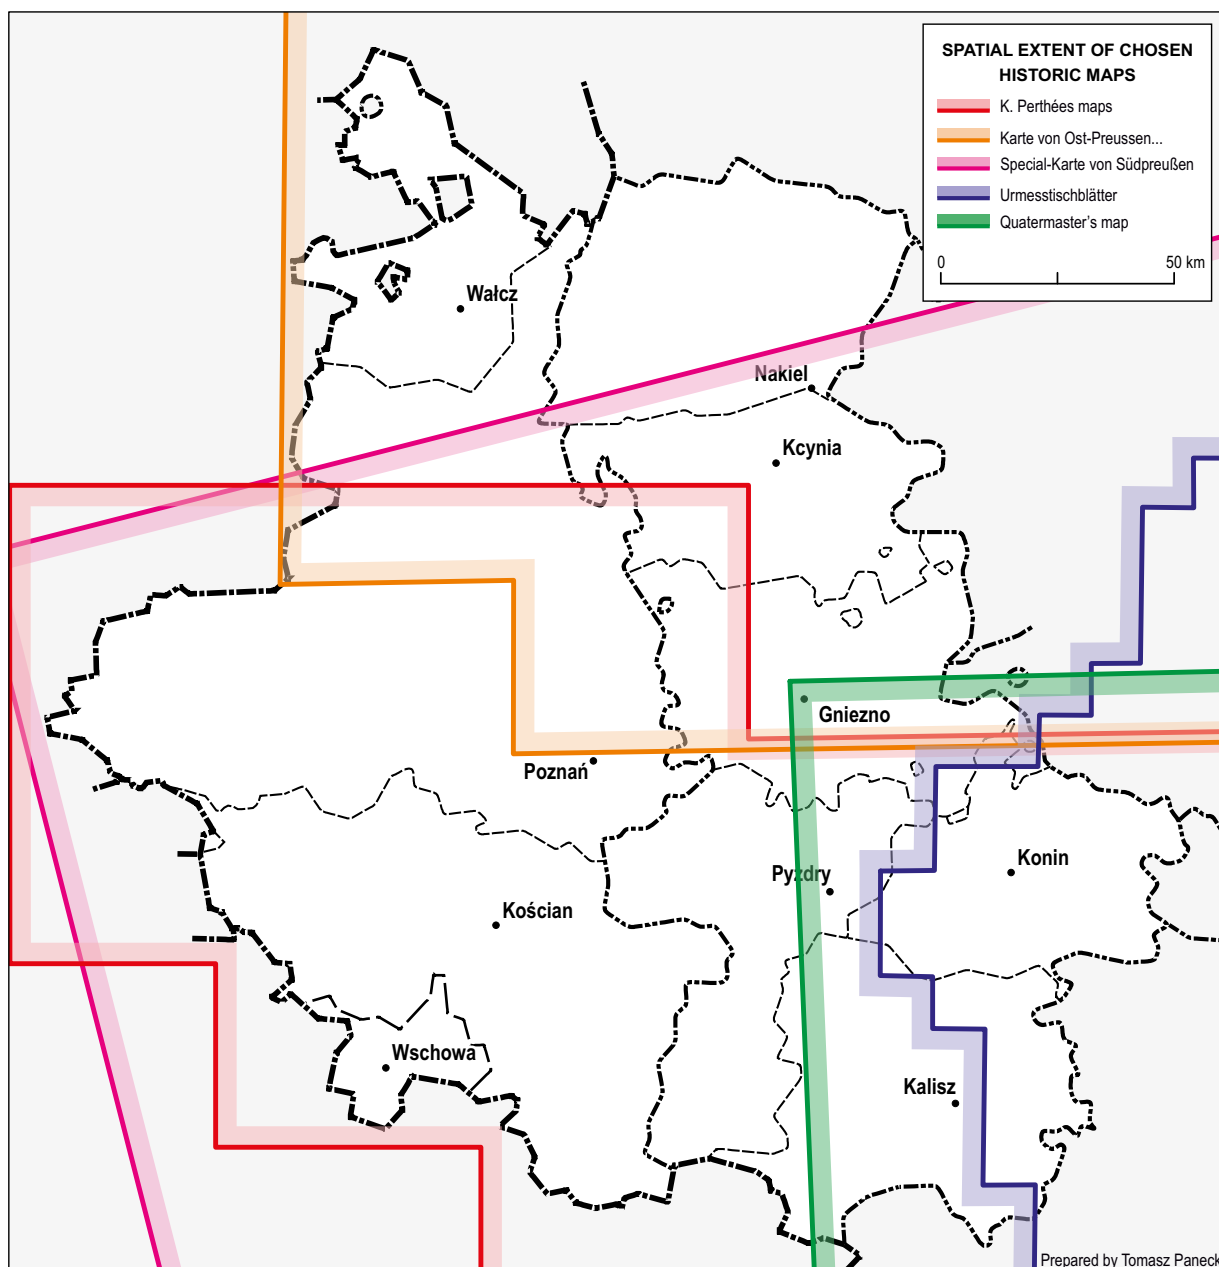

²⁶ So far used by the Historical-Geographical Dictionary of the Polish Lands in the Middle Ages in Poznań.

²⁷ *Mappa topograficzna wojskowa i statystyczna części Wielkopolski, która dziś Departament Poznański składa wydana przez Edwarda Raczyńskiego Posła Poznańskiego i jego kosztem nowo układana w roku 1807–1812*. There are two known independent set of the map. The first is located in the State Archive in Poznań (two sets, AP Poznań, sig.: 53/992/0/3/M.w.36_I–VIII_1 [8 sheets] and 36_I,III–VIII_2 [7 sheets]), the second in the Raczyński Library (sig. M II 796; 7 sheets) and a copy of this set is at the University of Wrocław; also see: B. Olszewicz, *Polska kartografia wojskowa*, pp. 81–82; W. Zyszkowska, *Mapa Wielkopolski Edwarda Raczyńskiego z lat 1807–1812*, [in:] *Kartografia polska XIX wieku w dorobku Bolesława Olszewicza*, ed. J. Ostrowski, W. Wernerowa, Wrocław–Warsaw 2000 (Z Dziejów Kartografii, vol. 12), pp. 105–120; eadem, *Mapa Departamentu Poznańskiego Edwarda Raczyńskiego jako źródło w badaniach stanu i zmian środowiska Wielkopolski*, [in:] *Dawne mapy jako źródła historyczne: Biblioteka Polskiego Przeglądu Kartograficznego*, vol. 3, ed. B. Konopska, J. Ostrowski, J. Paślowski, P.E. Wespiański, Warsaw 2012, pp. 36–44. Currently, the map is the subject and the basis of a research grant from the NCN for the development of a methodology for the digital editing of old: T. Panecki, P. Kann, *The „Gaul/Raczyński” Map of Greater Poland (1807–1812). A Project for a Digital Edition*, [in:] *Die Geschichte im Bild*, ed. H. Flachenecker, K. Kopiński, J. Tandecki (Editionswissenschaftliches Kolloquium 2015), pp. 239–255.

²⁸ Based on the measurements on the sheets from AP Poznań, the scale of approx. 1:75,300 can be calculated, while the BRacz ones suggest a scale of approx. 1:175,984. B. Olszewicz (who had access to the original) established it to be at 1:125,000, idem, *Polska kartografia wojskowa*, pp. 81–82.

³⁰ *Special Karte von Südproussen: mit Allergrösster Erlaubniss aus der Königlichen grossen topographischen Vermessungs- Karte*, Berlin 1802–1803 (13 sheets).

Map 1. Spatial extent of chosen historic maps

The scope of five maps that were the source for the reconstruction of the road network, physiography and the localization of settlements. Four of them were the foundation for the rendering of objects, and one (the Perthées map) was a significant reference for road categorization

voivodeships, which after the second and third partition became the province of South Prussia.³¹ The map is a reduced version of the manuscript map at a scale of 1:50,000 from the end of the eighteenth century, although it should be noted that the generalization does not retain the exemplary character of the topography, which is especially visible in the presentation of the buildings.³²

³¹ B. Olszewicz, *Polska kartografia wojskowa*, p. 59–60; K. Buczek, *Prace kartografów pruskich*, p. 176; T. Paćko, W. Trzebiński, *Wieloarkuszowe mapy topograficzne*, entry 33; B. Medyńska-Gulij, D. Lorek, *Pruskie mapy topograficzne*, pp. 29–42; H. Rutkowski, *Źródła kartograficzne*, pp. 291–292.

³² As for the shape of the buildings, the survey from 1793 is more similar to the drawing on the so-called Reymann map at the scale of 1:200,000. For this reason, according to scholars, the map does not match other Prussian maps of that period in terms of accuracy; T. Paćko, W. Trzebiński, *Multi-sheet topographic maps*, entry 33.

On a legible, black and white copperplate engraving, the typical topographic content has been embellished with postal information – stations and categories of roads and postal routes, with seven road categories in total developed by Wilhelm H. Matthias.³³ Gilly's map served as a source for the location of settlements and the delineation of the road network and physiographic elements.

An important study was the so-called *Urmessischblätter*, i.e., a manuscript version of the topographic survey conducted in Prussia in the 1820s and 1830s at a scale of 1:25,000.³⁴ The main feature of this maps as a source for historical and geographic research is its accuracy stemming from the conducted field measurements and triangulations as well as its level of detail, which is the effect of the map's large scale and resulting in an almost the full range of content. The plan to develop a multi-scale topographic map of Prussia was born in 1816, when General Friedrich Karl Ferdinand von Müffling became the Head of the General Staff of the army. On his order, the Prussian state underwent triangulation, which allowed for a precise determination geodetic network on which the map was to be based. Officers of the Prussian army carried out field measurements using the plane tabling method, by placing on the sketch almost all landscape elements thanks to the large scale and limited cartographic generalization. It is worth mentioning that the result of the survey was a manuscript map that was not intended to be published, but only to be used as source material for the development of maps in smaller scales. The scope of the map's content is significant and includes 169 content categories; its mathematical accuracy is very high. Errors in the distance between objects (linear distortion) were determined at approx. +/- 56 m (approx. 1.8 mm in the map's scale).³⁵ Due to the very large scale of the study, the map was used in the works on AHP to verify questionable places in small scale maps. It is also important to note that the landscape in the 1820s and 1830s was already quite significantly transformed in relation to the one from the turn of the eighteenth and nineteenth century, thus this map was not always applicable in the retrogressive method.

Where the reach of the *Urmessischblätter* ended, we also used the Quartermaster's Map, i.e., *Topograficzna karta Królestwa Polskiego*.³⁶ This map, considered a monumental work of Polish cartography and the nineteenth century, was developed in two stages, before and after the November Uprising. In the years 1822–1830, the General Quartermaster's Office of the Polish Army carried out works with the use of Prussian and Austrian triangulation networks for the development of the mathematical foundation of the Polish topographic survey. The mathematical foundation of the map was Bonne's projection, with the Walbeck ellipsoid as the reference surface, and the prime meridian was counted from the Warsaw meridian. The measurements themselves were made on a three times larger scale (1:42,000), which provided a high accuracy of the drawing on the map. The November Uprising interrupted the work – it was only possible to complete 25 out of the 60 sheets, as well as conduct field measurements for another six.³⁷ In the years 1833–1839, the map was completed by the Russian Corps of Topographers under the leadership of General Karol Richter. It was published in Russian with subtitles in Polish and French in 1843 but dated to 1839. On its basis, physiographic elements and the road network were added to the AHP. It was also useful for localizing settlements.

Moreover, in order to mathematically determine the potential accuracy of the main map developed by us in the Greater Poland volume of AHP, we performed the analysis of the mean square error of the locations of objects for three maps that were the main sources of geometric data: *Karte*

³³ H. Rutkowski, *Źródła kartograficzne*, p. 292.

³⁶ It was used as a data source in all the earlier volumes of AHP; see H. Rutkowski, *Źródła kartograficzne*, pp. 283–297, pp. 295–296.

³⁷ B. Olszewicz, *Polska kartografia wojskowa*, pp. 119–140; B. Krassowski, *Topograficzna Karta Królestwa Polskiego (1822–1843)*, Warsaw 1978 (Zabytki Polskiej Kartografii, vol. 1); T. Paćko, W. Trzebiński, *Wieloarkuszowe mapy topograficzne*, entry 104.

von Ost-Preussen, *Spezialkarte von Südpreußen* and *Topograficzna karta Królestwa Polskiego*.³⁸ These maps were georeferenced in ArcGIS 10.3 using affine transformation.³⁹ This transformation consists of indicating points from the old map and identical points from the reference material, most often from a modern accurate map.⁴⁰ Afterwards, the coordinates from the georeferenced map are transformed into the coordinates from the reference map using mathematical formulas. In the case of affine transformation, this algorithm keeps straight lines as straight and does not distort the angles, but only minimizes, shifts and rotates the image the georeferenced map.

The evaluation of the georeferencing quality is determined, among others, by mean square error (RMSE, *Root Mean Square Error*). This is the relative error in the difference of the location of georeferenced points on the georeferenced map before and after georeferencing, informing about the distance (in meters) which these points have been moved in order to match the map to the reference material. The error is calculated as the average for all control points. The root mean squared error should not be confused with accuracy of the map, although there is of course a certain relationship between the two values. The error may be reduced to zero using higher degree polynomial transformations, but it does not mean that the georeferenced map becomes accurate.⁴¹

The RMSE was calculated for three maps and 15 control points were designated for each of them. The results of the analysis are presented in the tab. 2.

Table 2. Results of the analysis of the georeferencing of three maps. The values are given in meters. RMSE – root mean square error, STD – standard deviation, MIN – minimum error value, MAX – maximum error value, Pietkiewicz – error in object localization calculated by prof. Stanisław Pietkiewicz

	MSE	STD	MIN	MAX	Pietkiewicz
<i>Karte von Ost-Preussen</i>	378.13	279.58	133.24	1,161.93	approx. 600
<i>Spezialkarte von Südpreußen</i>	560.28	408.09	30.22	1,612.79	approx. 1,400–4,200
<i>Topograficzna karta Królestwa Polskiego</i>	657.75	330.74	371.61	1,429.9	approx. 750

The analysis demonstrates that the best georeferencing result was achieved for *Karte von Ost-Preussen* with an average error of 378.13 m. It may seem surprising that the Quartermaster's Map did not achieve a particularly good result. Although it was compiled several decades later than the Schrötter-Engelhardt map, the accuracy of its georeferencing is almost twice as bad. Converting these errors in the scale of the AHP main map, we get the respective errors: 1.51 mm, 2.24 mm and 2.63 mm, but considering the thickness of cartographic symbols, e.g., a road as approx. 1 mm, it turns out that these errors can be viewed as minor (for a scale at 1:250,000).

These results were also compared with the results of the accuracy analyses of maps carried out at the Chair of Cartography at the University of Warsaw by Prof. Stanisław Pietkiewicz.⁴² As has already been emphasized, while the RMSE error should not be equated with the mathematically calculated accuracy of the map, there is a certain correlation between these values. Results similar to those of Pietkiewicz's research were obtained for the Quartermaster's Map, for the Schrötter-Engelhardt map the result was improved by over 200 m, and in the case of the Gilly map, they were repeatedly better (tab. 2). The differences in error can be the result of many factors, including the analysis of various map

³⁸ The topic of the georeferencing of old maps has been a popular subject for several years. Research generally concerns the possibility of georeferencing old maps (B. Jenny, L. Hurni, *Studying Cartographic Heritage. Analysis and Visualization of Geometric Distortions*, „Computers & Graphics”, vol. 2/35, 2011, pp. 402–411), maps based on and not based on geodetic networks (A. Affek, *Georeferencing of Historical Maps using GIS, as Exemplified by the Austrian Military Surveys of Galicia*, „Geographia Polonica”, vol. 4/86, 2013, pp. 337–390), the georeferencing of multi-sheet maps (T. Panecki, *Problemy kalibracji mapy szczegółowej Polski w skali 1:25 000 Wojskowego Instytutu Geograficznego w Warszawie*, „Polski Przegląd Kartograficzny”, vol. 2/46, 2014, pp. 162–172).

³⁹ J. Urbański, *GIS w badaniach przyrodniczych*, Gdańsk 2008, pp. 78–83.

⁴⁰ In this case, these were topographic maps from Geoportal (www.geoportal.gov.pl, accessed: 22.10.2016).

⁴¹ B. Jenny, L. Hurni, *Studying Cartographic Heritage*, pp. 402–411.

sheets executed with different precision, measurement methodology, and even the shrinkage of paper or the quality of the scans on which the georeferencing and analysis of RMSE error was conducted.

Finally, the fourth group is composed of the so-called reference maps developed in the twentieth and twenty-first centuries, which were the main spatial reference for all data obtained from other maps. According to the tenets of the AHP series, the settlements and all elements of the drawing should be localized and placed on a map at a scale of 1:100,000. Both pre-war and post-war maps and used for this purpose.⁴³ Afterwards, the drawing of the applied elements was generalized to the target scale of the main map (1:250,000). This methodology was developed in the works on AHP from the first post-war volume and is continued today. However, a discussion about the reference material for AHP and its modernization by using current topographic data, e.g., for the location of a settlement or road rendering and physiography.⁴⁴

When creating the final map, we additionally used reference data, that fell within the scope of the National Geodetic and Cartographic Resources, made available, among others, via the state-owned Geoportal (www.geoportal.gov.pl, accessed: 19 October 2016). This volume of AHP, unlike previous ones, makes full use of GIS software (Geographic Information System) enabling the collection, analysis, visualization and sharing of spatial data within a common data model, scale, projections, etc.⁴⁵ In our work, GIS was used both for obtaining data from old maps and for the cartographic development of the main and overview maps. Although the concept of using tools so far reserved for geographers is still a new one, it greatly facilitates work on the study and development of historical maps.⁴⁶

II.2.6 CUYAVIA AND DOBRZYŃ LAND

Katarzyna Słomska-Przech

The cartographic sources used when working on this AHP volume were selected on the basis of a library query.¹ Each and every selected map had already been used in previous volumes of the AHP series.² In reference to the division adopted in AHP Greater Poland, the maps of the area discussed herein fall within four groups:³

1. maps not used or used to a minimal degree;
2. maps used for general spatial relation analysis;
3. maps serving as data sources for road network and physiography outlines, partly for locating settlements;
4. reference (base) maps.

Table 1. List of maps used in works on the AHP

Name of map	Author	Scale	Date	Group
<i>Mappa in qua illustrantur ditones Regni Poloniae ac Magni Ducatus Lithuaniae pars</i>	B. Wapowski	approx. 1:1,000,000	1526	1

WIG Tactical Map	Military Institute of Geography (WIG)	1:100,000	1919– 1939	4

Sixteenth-century maps fall within the first group and shed light on how space was perceived and constructed at the time. Many reasons rendered it impossible to use these maps for AHP purposes. The main hindrance is that sixteenth-century maps have low accuracy and fail in presenting a great level of detail. Furthermore, they constitute sources of imprecise nature. Owing to their scale range (from 1:1,000,000 to 1:1,950,000), the scope of content provided is limited.

Among the first group, *Mappa in qua Illustrantur Ditiones Regni Poloniae ac Magni Ducatus Lithuaniae Pars* ranks as the first and foremost cartographic work. This map has a scale of 1:1,000,000 and dates to 1526. Bernard Wapowski authored the *Mappa...*, Florian Ungler published it in Cracow, and Karol Buczek reconstructed the title we now use.⁴ Only two copies of fragments of the map have survived to date⁵ – and one covers Cuyavia and some of Dobrzyń land. The map presents the settlement network, the hydrography, and the borders. This last category is marked with an atypical line symbol resembling a row of trees.⁶ A closer look at the region of interest reveals not only twenty cities, but also the clearly demarcated Gopło Lake and the following rivers: the Vistula, the Drwęca, the Brda, and the Noteć. A careful observer will also spot one village, Warzymowo (n), in the analysed area. Quite exceptional, yet understandable once one learns that sixteenth-century Warzymowo was the main seat of the Sokołowski family, who had vast holdings in Cuyavia.⁷ Before attracting the Sokołowskis, the village was known as the homeplace of Brześć Castellan Mikołaj of Warzymowo, Pomian Coat of Arms (d. 1455) and his sons – Tomasz, Andrzej and Jakub – who took office as the Deputy Pantlers (*podstoli*) of Brześć one after the other.⁸ Stanisław Pietkiewicz analysed the accuracy

of Bernard Wapowski's map. The errors in distances between Cuyavian cities oscillate between 3.5 km (Inowrocław–Włocławek) and 33 km (Bydgoszcz–Inowrocław).⁹ Inowrocław is marked with some degree of precision – it is a kilometre from its actual location.

Wacław Grodecki availed himself of Bernard Wapowski's map to create his *Tabula Poloniae* (title known indirectly). He published this remake of Wapowski's map in Basel, probably in 1562.¹⁰ The reworked map falls short of the quality presented by the original, as Grodecki reduced the contents and the scale to about 1:1,680,000. Grodecki did not escape some pitfalls, e.g. he labelled Vistula as Drwęca (*Drwenzca fl.*). Gopło is the only lake marked in *Tabula Poloniae* within the area concerned by our studies.¹¹ A comparison of the extant remains of Wapowski's map and Grodecki's map show that the latter author omitted several cities. However, he marked Bydgoszcz twice – once as *Biggifa* in its correct location on the banks of Brda River, and then again as *Bromberg* to the north of Koronowo (*Corunau*).

Andrzej Pograbka reprised this error in *Partis Sarmatiae Europaeae, quae Sigismundo Augusto Regi Poloniae Potentissimo Subiacet, Nova Descriptio*, which was published in Venice in 1570. Pograbka based his map on the cartographic works of Wacław Grodecki and Gerardus Mercator.¹² It ought to be noted that Pograbka annotated Vistula River correctly, and mapped the cities which are missing in the 1562 map. Still, he misplaced some localities. For example, Pograbka placed Przedecz directly south of Gopło Lake.

Another group comprises maps created two centuries later, used mainly for general spatial relation analysis. *Gross Polen Aufgenommen durch den Conducteur Kayser um 1770 auf Veranlassung des Generals von Reitzenstein* is one such map.¹³ The catalogue card claims that *Gross Polen...* is a 1:100,000 scale map, yet both Karol Buczek and Andrzej Konias indicate that 1:120,000 is the correct scale here.¹⁴ The 25-sheet map is the result of the work performed by Conductor Kayser on General Karl Erdmann Reitzenstein's orders ca. 1770. In cartographic terms, the map is assessed as rather poor. Its value lies in the highly correct spelling of names, which stands out positively against other German cartographic works dating to that period.¹⁵

The *Militärische Karte von Gross-Polen* aided us in determining settlement locations.¹⁶ Work on this map was performed between 1772 and 1773, under the supervision of Major Theodor von Pfau.¹⁷ The cartographic efforts of Major von Pfau's team were aimed at mapping the lands which were to be incorporated into Prussia once Poland was partitioned. The outcome, a 41-sheet map at a scale of 1:87,500, covers all of Brześć Voivodeship and the southern part of Inowrocław Voivodeship.

The second group of cartographic sources includes also the maps of individual voivodeships, prepared by Karol Perthées at a scale of 1:225,000 in the years 1783–1804. This series is the greatest achievement of Polish cartography under the reign of Stanislaus Augustus Poniatowski.¹⁸ The maps were based on the cartographic materials available at the time. However, data was gathered mainly through surveys sent out to Roman Catholic parishes. The survey was carried out in the years 1783–1784. It focused on detailed topographic objects, such as settlement location and ownership relations,

Map 1. Spatial extent of chosen historic maps

outbuildings, roads, fords and bridges, physiographic objects (lay-out of land, hydrography, forestation), and toponyms. While working on the present AHP volume, we used the sheets which were among the first to have been created: in 1784 (*Detailed Map of Płock Voivodeship and Dobrzyń land*)¹⁹ and 1785 (*Detailed map of the Voivodeships of Brześć Kujawski and Inowrocław*).²⁰ The map of Płock Voivodeship was printed in 1802 in Paris. The *Detailed Map of the Voivodeships of Brześć Kujawski and Inowrocław* covers a fragment of Inowrocław Voivodeship after the First Partition, but does not reflect its sixteenth-century shape. These maps were not used directly to draw up the contents of the main map, but helped gain a holistic view of the analysed lands. They aided us in reconstructing the settlement network, roads, administrative borders, and ownership.

We used maps of the third group to locate settlements and vectorise the physiographic layer and the road network. All these maps were elaborated in the first half of the nineteenth century. Although Karol Perthées's work preceded them only shortly, these maps are much more accurate. Map 1 shows the area covered by each map series of the third group within Brześć and Inowrocław Voivodeships, and Dobrzyń land.

Chronologically, the map titled *Karte von Ost-Preussen nebst Preussisch Lithauen und West-Preussen nebst dem Netzdistrict*, drawn up on the initiative of Friedrich Leopold Schrötter in years 1796–1802, is

¹⁹ Biblioteka Jagiellońska, sign. M 47/12.

²⁰ AGAD, sign. 1/403/0/-/AK 108.

the oldest map of group three. Friedrich Bernhardt Engelhard supervised the cartographic works.²¹ The 1:150,000 map (based on a 1:50,000 topographic survey) shows the area taken from Poland in the First Partition, and some of the territory annexed in the Second Partition. Some of the 25 sheets cover most of Inowrocław Voivodeship, along with parts of Brześć Voivodeship and Dobrzyń land. The map was printed in Berlin in the years 1802–1812, by means of the copper plate engraving technique.²² In the case of this volume, we put it to the purpose of reconstructing physiography and the course of roads.

The 1:150,000 *Special Karte von Südproussen aus der Königlichen Grossen Topographischen Vermessungs Karte* is another map belonging to this group.²³ The copper plate engraving technique was used to print this thirteen-sheet map between 1802 and 1803.²⁴ David Gilly oversaw its elaboration, which was based on a 1:50,000 topographic survey taken between 1793 and 1796 of the area annexed in the Second and, in part, the Third Partition. Researchers rate the accuracy of this map as low.²⁵ Its contents are both topographic and thematic, as it marks main and post roads in detail, and shows post houses and the distance between them.²⁶ The map covers the entire Brześć Voivodeship and part of Inowrocław Voivodeship up to Flisa River. In the fragment covering Dobrzyń land, the map shows only settlements, rivers and forests nearby Vistula River.

One more map of this group is *Topographisch-Militärische Karte vom vormaligen Neu Ostpreussen*, which was issued by Daniel Friedrich Sotzmann in Berlin between 1806 and 1807.²⁷ The map was based on a 1:33,300 topographic survey taken in the years 1795–1798. Work on the map was directed by von Stein, while Levin von Geusau supervised the project. Johann Christoph Textor elaborated a generalised version of this map, which consisted of thirteen sheets. The authors failed to agree on its scale: Karol Buczek believes it is 1:155,000, Tadeusz Lankamer calculated it to be 1:152,500, whilst Teresa Paćko and Wojciech Trzebiński claim 1:150,000. The map was compiled for part of Second-Partition and all Third-Partition Poland. In terms of the territories discussed in this volume, the map depicts Dobrzyń land, save for its most northerly tips.

The *Topographic Map of the Kingdom of Poland*, also called the Quartermaster's Map after its author—the General Quartermaster's Office of the Polish Army—also belongs to the third group.²⁸ It is considered to be the most important work of nineteenth-century Polish cartography, *i.a.* for its level of detail. The map covers the area of the Kingdom of Poland, which was established in 1815. The year 1822 saw the outset of work on the field survey, set at a scale of 1:42,000. A 1:126,000 map was developed based on the measurements and existing topographic maps, *i.a.* those by Heldensfeld, Gilly and Textor. The plan was to draw up on 59 sheets. The fall of the November Uprising put a halt to the Quartermaster's Office work. By 1830, 27 sections had been completed, and eight were in progress. Russians worked with the assumptions formulated by Poles, and finished the map. The map was etched into metal plates at Karl Friedrich Minter's workshop in the years 1831–1843, though its sheets bear the date 1839.²⁹ Concerning the area of interest in this volume, the map depicts most of Brześć Voivodeship and Dobrzyń land, as well as a small fragment of Inowrocław Voivodeship.

The most accurate and detailed pre-industrial map is the 1:25,000 plane table map (initially called the *Urmessstischblätter*),³⁰ executed in the years 1820–1876 according to instructions by General Friedrich Karl Ferdinand von Müffling, the Head of Prussian General Staff. Originally, the manuscript sheets were not intended for publication. They were to serve as the basis for a small-scale general map. New topographic survey efforts, set at the scale of 1:25,000, were initiated in 1875. The process of their lithographic reproduction began a year later. The sheets of this Prussian plane table map are referred to as the *Messtischblätter*, a name derived from the German term for ‘measuring table’ (*Messtisch*).³¹ These sheets helped determine the course of roads running near cities and precisely locate the settlements discussed in this volume.

The locations presented in the three maps which served as the source of geometric data, *i.e.* the maps by Textor, Schrötter and the General Quartermaster’s Office, were analysed in terms of the Root Mean Square Error (RMSE). This enabled determining the mathematical accuracy of the compiled AHP main map. We used the ArcGIS 10.3 programme to georeference the maps by using affine transformation (first-order polynomial), as we did during work on the previous volume.³² The quality of each map georeferencing was evaluated based on RMSE, *i.e.* the control points localisation error in the georeferenced map – before and after the georeferencing. Calculation results give information on the discrepancies between actual and map positions, and help adjust the maps to the reference map. RSME is calculated as the mean value for all control points. It is not tantamount to map accuracy, it only identifies georeferencing accuracy. In all three maps, we located control points so as to cover areas with similar density (from 1.4 to 1.5 points/thousand km²).

Table 2. Results of georeferencing accuracy analysis of three maps

Map	RMSE	STD	MIN	MAX	Pietkiewicz
<i>Karte von Ost-Preussen</i> (F.L. Schrötter)	586	306	49	1,353	approx. 2,400–3,300
<i>Topographisch-Militaerische Karte vom vormaligen Neu Ostpreussen</i> (J.Ch. Textor)	838	496	117	1,896	approx. 1,300
<i>Topographic Map of the Kingdom of Poland</i> (Quartermaster’s Map)	1,027	548	138	2,072	approx. 750

Legend: Values in metres. RMSE – Root Mean Square Error, STD – Standard Deviation, MIN – Minimal Value of Error, MAX – Maximal Value of Error, Pietkiewicz – error in object location calculated by Stanisław Pietkiewicz.

For Schrötter and the Quartermaster’s Map, the result is analogous to the outcomes obtained when performing calculations for AHP Greater Poland – the error in the older map is nearly twice lower.³³ Calculations showed that the lowest error occurs in *Karte von Ost-Preussen* (586 m), and the largest – in the *Topographic Map of the Kingdom of Poland* (1,027 m). Owing to the scale of our map (1:250,000), errors may range from 2.35 mm (Schrötter’s map) to 4.11 mm (Quartermaster’s Map). Aided by twentieth-century maps and modern databases, we succeeded in removing some of the errors.

We compared our results with those obtained by Stanisław Pietkiewicz. According to Pietkiewicz’s analyses, the mean error for control points in Schrötter oscillates between 2,400 and 3,300 m. In some areas, however, it is smaller. For example, in Middle Pomerania it is about 600 m, in the vicinity of Ostróda it equals 900 m, and near Pisz it is 1,300 m.³⁴ RMSE calculations show that this error is also lower and comparable with the results obtained by Stanisław Pietkiewicz for Middle Pomerania. Less divergence is observed in Textor, for which Pietkiewicz established the point localisation error to be

³⁴ G. Bonatowski, *Działalność profesora S. Pietkiewicza*, p. 64.

about 1,300 m, while georeferencing with the Dobrzyń land sheet of this map revealed an error of only 838.5 m. It is worth mentioning that Tadeusz Lankamer also performed calculations for Textor's map,³⁵ and his mean localisation error 1,542 m – was similar to that identified by Pietkiewicz. Disparities in the Quartermaster's Map hover around 320 m.

Last but not least, the final category is formed by reference (base) maps drafted in the twentieth and twenty-first centuries. We used them for reference purposes when transferring content from older maps. In line with AHP assumptions, all objects must be marked on the map at an accuracy of 1:100,000. That is one of the reasons why we mainly used the detailed tactical map set at a scale of 1:100,000, which covers the whole area discussed in this volume. This map was created in the years 1919–1939 by the Military Institute of Geography. We also used contemporary spatial data from the National Geodetic and Cartographic Resource (*Państwowy Zasób Geodezyjny i Kartograficzny*, which is available *i.a.* at the Geoportal.³⁶

The cartographic sources used for developing city plans have been discussed in the chapters on those plans.

II.2.8 PODLASIE VOIVODESHIP

Tomasz Panecki

The selection of cartographic sources for work on this volume of the AHP was decided upon based on archive preliminary research and biographical studies resulting in the nine series of maps as presented in Table 1. The preliminary research was conducted at the Staatsbibliothek in Berlin, while the bibliographical studies was based on an inventory,¹ and monographic approach² as well as drawing on the series in its hitherto existing form.³ Not everything was of relevance for our work as such; hence the decision to divide the whole into four groups reflecting the relevance and applicability of the said:

1. Maps not used or employed only to a minimal degree;
2. Maps used in an analysis of general spatial relations;
3. Maps constituting the sources for road network and physiographic outlines, partly for locating settlements;
4. Reference (base) maps.

Table 1. List of maps used in work on the AHP

Name	Author	Scale	Date	Group
<i>Poloniae Tabula</i>	W. Grodecki	approx. 1:1,680,000	1562	1

The first group comprised maps that only to a minimal degree provided data and input to this volume of AHP. Here the matter concerned first and foremost the absence of mathematical precision, too small a scale, or the display of too limited a content scope. This group includes first and foremost the oldest works. From amongst which it is worth noting maps based on the work of Bernard Wapowski:⁴ the map by Waclaw Grodecki printed circa 1562 at a scale of around 1 : 1,680,000⁵ and Andrzej Pograbka's work (circa 1:1,950,000, 1570).⁶ These maps did not prove to be useful with regard to our requirements despite their chronological closeness with regard to the period of our research. As an example, on Grodecki's map 8 towns are shown,⁷ when in fact there were 23 settlements with town status.

An important place amongst maps as yet not precise and yet ones still conveying a definite perspective of spatiality is held by *Mappa szczegulna województwa podlaskiego* (1:225,000, 1795), this being the work of Karol Perthées. This map has been assigned by us to the second group.⁸ The map of the Podlasie Voivodeship was not produced in a printed version and has survived until our day in manuscript form alone.⁹ The basic sources of data for the map were the so-called parish surveys or reports which on the order of the Bishop of Płock and subsequently primate Michał Jerzy Poniatowski were to have been worked on and drawn up by their parish priests.¹⁰ The parish survey was organised on the basis of a uniform questionnaire that ultimately comprised 9 points, within the framework of which determined were the positions (in miles and according to the directions of the compass) of all the important anthropogenic objects within the area of each parish – first and foremost settlements and objects of economic worth such as farmsteads, but also roads, bridges and fords. The transition stage between the questionnaire and the creation of the descriptions on its basis and the map were the so-called parish sketches (Perthées's Sketches), which we have also employed in our labours and here in effect at each of the various stages.¹¹

⁴ *Mappa in qua illustrantur ditiones Regni Poloniae ac Magni Ducatus Lithuaniae pars* (approx. 1:1,000,000, 1526); cf. S. Pietkiewicz, *Mapa Polski – „milionówka” Bernarda Wapowskiego (1526)*, Warsaw 1980 (Studia i Materiały z Dziejów Nauki Polskiej, Seria C, no. 24), pp. 37–62; *Grodecki Waclaw [in:] Polski wkład w przyrodoznawstwo i technikę. The parish questionnaire method results in a fairly high level of detail in the map and here with regard to the number of objects marked and the reliability in the qualitative characteristics as presented. What suffers though is exactness with regard to the absence of precise and exact terrain measurements as well as the notable generalisation resulting from the scale of the map (1:225,000), particular in comparison with the partition maps from the analogical period. The way of working on the 'detailed maps' series had its disadvantages when compared to Prussian and Austrian works of this time: ones that were based on territorial measurements employing a surveyor's table and triangulation. Nonetheless even after taking into consideration the shortcomings of these detailed maps with regard to their accuracy, they do serve in the AHP series as an important source first and foremost with regard to the reconstruction of road networks and the naming of physiographic objects.¹²

The third group contains maps that we have employed to draw physiographic elements or the localisation of settlements. As a rule they give a spatial image that is precise enough; for within the framework of a certain error in location they may be used not merely as a source of descriptive attributes, but also for the geometry of the objects themselves. One may vectorize (copy and generalise to the desired scale of the reconstructed map) on the basis of these roads, forests and woods, or even rivers. This sub-section contained four maps from the period 1795–1875, whose scope in relation to the area covered by the Podlasie Voivodeship in the sixteenth century is presented on Map 1.

The oldest map on this list is that by von Stein (1:33,333, 1795–1800)¹³ named after the head of the topographic work – Major von Stein. While the map's full title may be seen in one of the sheets as: *Krieges Karte der Provinz Neu Ost Preussen enthaltend das nunmehrige Plocker und Bialystoker Cammer Departement Angefertigt in den Jahren 1795 bis 1800*. The map is composed of 135 (122 according to Eugen Kossmann¹⁴) hand-written, coloured reports held at the National Library in Berlin.¹⁵ The scope of the work covers the so-called lands of New Eastern Prussia (the departments of Białystok and Płock), that is the area of the II and III Prussian partitions. The compilation of the map resulted from none too exact triangulation, while the topographic work was undertaken by Polish officers serving in the Prussian Army through the employment of a plane table (including Kruszewski, Przegaliński, Wróblewski).¹⁶ Fairly typical is the extent of the map's contents and here covering the road network together with a notation on road conditions, land use (in red – built-up areas, dark grey – forests and woods, green – meadows, while blue signifies water), the names of topographic objects – though often distorted, as well as the lay of the land presented by means of hachures. The map is most detailed, which is visible first and foremost with regard to the representation of hydrography, however errors do occur; for example, according to this map the River Liza links the Nurzec and the Narew, something that in reality would have been impossible with regard to the relative relations in altitude.

On the basis of von Stein's map a smaller scale printed version was produced (1:152,500, 1806–1808); this work being compiled by Johann Christoph von Textor, and printed by Daniel Friedrich Sotzmann.¹⁷ According to Bolesław Olszewicz, Textor not only generalised and edited the map, but also carried out his own measurements along with correcting the mistakes in the original topographic photograph.¹⁸ According to Tadeusz Lankamer's detailed calculations, the scale of the map was 1:152,500¹⁹ though

Map 1. Spatial extent of chosen historic maps: covering Textor (and von Stein), Heldensfeld and that of the Quartermaster against the actual extent of the Podlasie Voivodeship in the sixteenth century. Perthées' map and the Russian 'Three-verst' map covered in their scope the entire area

in the subject literature scales of 1:150,000²⁰ and 1:155,000²¹ are also given. The printed map was to have been in accordance with the scale and sheet-size cut of Schrötter-Engelhardt's map and to have been compiled at the exact same time.²² The content in terms of scope for Textor's map does not differ from other Prussian maps of the turn of the nineteenth century. On a legible, coloured copperplate one can find marked the most important topographic objects from a military-administrative perspective: roads, settlements, forests, woods and water. Yet the lay of the land has been marked with hachures. Both maps, the topographic survey and its reduction, were the main source for enabling settlement location and to enable the sketching of the relief for the part of the voivodeship located to the north of the River Bug, which following the III Partition was to constitute the border between Prussia and Austria (cf. Map 1).

The area occupied by Austria was to be cartographically documented within the framework of the First Military Survey also known as the Josephine survey.²³ *Karte von West-Gallizien*, upon which Colonel Anton Mayer von Heldensfeld conducted topographic work for the period 1801–1804, is a manuscript map of a scale 1:28,800 comprised of 275 sheets.²⁴ On the basis of the photograph Hieronim Benedicti was able to develop two reductions: one at a scale of 1:172,800 (1803–1809; 12 sheets)²⁵ and the second at a scale of 1:288,800 (1809–1811; 6 sheets).²⁶ The development of the map had been preceded by astronomical-trigonometric measurements, which ensured a fair degree of accuracy. The content and graphics do not differ much from that seen in other maps of this epoch, but the names employed are often erroneous and with far more mistakes than would be the case in Prussian maps; something caused by the fact that the measurements were conducted exclusively by officers who only spoken German.²⁷ In our work on the AHP we have employed Heldensfeld's map to locate settlements and to draw up the geomorphology for that part of the Podlasie Voivodeship situated to the south of the River Bug.

Our work on the Podlasie volume of AHP has also employed the later Quartermaster's map i.e., *Topograficzna karta Królestwa Polskiego*.²⁸ This map was devised in two stages: before and after the November Uprising of 1830/1831. In the first period (1822–1830) the General Quartermaster of the Polish Army determined the mathematical bases of a topographical photograph, here employing Prussian and Austrian triangulation networks. Selected was the Bonne's projection, Walbeck's ellipsoid as the reference surface, while the central meridian has been calculated on the basis of the Warsaw meridian. The field survey was conducted in a scale three-times greater (1:42,000), which enables for excellent precision in the illustration on the map. As a result of the outbreak of the November Uprising work was suspended but it had been possible to this date to assemble 25 sheets from amongst the

60 planned, and for a further six to be taken.²⁹ From 1833 to 1839 the map was completed by the Russian Topographic Military Corps. It was published in Russian with Polish and French notations in 1843, though dated 1839. On the basis of the Quartermaster's map, physiographic elements were entered onto the end map along with the road network. It was also helpful in the locating of settlements.

The Quartermaster's map was reprinted and brought up to date many times. Based on it, the Russians produced the so-called Three-verst map i.e., *Военно-топографическая карта европейской России* in the same scale (1:126,000, 1855–1863), which has also been utilised in this volume of the AHP. Work conducted on the said and called *Three-verst* as a result of the scale employed (three *versts* in one single English inch) was commenced in 1845 and published in sections for the various parts of the Russian Empire.³⁰ The map was revised and brought up to date many times and published right up until the beginning of the twentieth century. The scope within which it has been employed in our work has encompassed first and foremost the localisation of settlements; as opposed to earlier works this map shows, for example, wilderness and desolate areas. This is the only map that covers the former Voivodeship of Podlasie in its entirety bar the non-cartometric map by Perthées.

As a result of using GIS as a tool, and here with the aim of establishing the accuracy of the data developed by us for the main map, carried out was analysis of the average error of the square positioning of the objects for the five maps cited, these constituting the main sources of geometric data: von Stein's map (1:33,333, 1795–1800), Textor's map (1:152,500, 1806–1808), Heldensfeld's map (1:28,800, 1801–1804), and the so-called Quartermaster's map (1:126,000, 1839–1843) as well as the Three-verst (1:126,000, 1855–1863). The question of the georeferencing of old maps i.e., adjusting them to contemporary geographical coordinate systems has been for several years an eagerly undertaken research area; and here both in the context of the accuracy of the undertakings themselves as in the instruments serving the process of georeferencing.³¹ Any georeferencing of a map involves the indication of points from the old map and their identification with points from the reference material, most commonly a contemporary precise map.³² Next the coordinates from the old map are transformed to the coordinates from the reference map by means of mathematical formulae. The methodology employed in the work was as follows: as a result of the constant dimensions of the particular sheets, they were initially combined into a whole in a graphic program, and then the mosaic therein devised was subjected to georeferencing in the ArcGIS 10.5 program by means of affine transformation (of first degree polynomials).³³

The evaluation of the quality of the georeferencing is determined by means of Root Mean Square Error (RMSE). This shows the difference in the positioning of the control points from the map before and after georeferencing, informing one as to the distance (in metres) these points were moved in order for the map to match the reference materials. Error is calculated as the average for all the control points. It does not follow to identify RMSE error with the accuracy of a map, although there obviously exists a certain relationship between these two values. For this error may be reduced to zero through the application of higher degree polynomial transformations though this does not mean that the georeferenced map becomes precise.³⁴

For each of the maps control points are marked (crossroads, churches) so that they cover the area with a similar density (around 1.5 points/ thousand km²). The results of the analyses are presented in

Table 2. The results of analysis of the exactness in the georeferencing of three maps (in metres)

Map	Σ CPS	RMSE	STD	MIN	MAX	Other
<i>Krieges Karte der Provinz Neu Ost Preussen</i> (von Stein)	17	434	189	61	750	140
<i>Karte von West-Gallizien</i> (A.M. von Heldensfeld)	9	97	30	52	149	200–400
<i>Topographisch-Militaerische Karte vom vormaligen Neu Ostpreussen</i> (J.Ch. von Textor)	30	1,849	955	263	2,830	1,542
<i>Quartermaster's Map</i>	50	747	456	199	1,914	750
<i>Three-verst map</i>	80	566	237	135	964	100–200

Legend: values given in metres, Σ CPS – number of control points, RMSE – root mean square error, STD – standard deviation, MIN – minimal value of error, MAX – maximum value of error, other – error in object positioning calculated by other researchers.

The best results were obtained for Heldensfeld's map – approximately 97 m, which should be considered an extremely good result confirming the map's high level of accuracy and precision. The others are characterised by a greater level of error, oscillating from approximately 434 m (von Stein's map), through 566 m (the 'Three-versts'), 747 m (the Quartermaster's map) to 1,849 m (Textor's map). In the case of the latter, attempts were also conducted to georeference the individual sheets in order to identify the source of such a margin of error. The results oscillated within the band of 300 and 400 m, while such a large degree of error for the entire map results from the propagation of inaccuracy between the attached sheets. However, it does follow to note that in the case of the other maps whose sheets were joined in the same way this phenomenon was not observed. In calculating the errors obtained by the scale of the main map we obtained errors in the positioning of objects equivalent to: 0.38 mm, 1.73 mm and 2.26 mm, 2.98 mm and 7.4 mm. However, these errors should be considered minimal for a scale of 1:250,000 taking into consideration the dimensions of cartographical signs as well as the fact that the drawing was corrected on the basis of newer and more accurate maps.

The results obtained were also compared with the previous results of map precision analyses of the maps conducted by Stanisław Pietkiewicz,³⁵ Andrzej Konias,³⁶ and Tadeusz Lankamer.³⁷ Fairly similar values were obtained for the maps of the Quartermaster and Textor. The accuracy in Heldensfeld's map was almost twice that which had been shown in hitherto analyses of precision. While, in turn, for von Stein's map and the Three-verst map worse results were obtained. However, the differences might have been the result of an array of factors including a different way in conducting the research or the fact that hitherto errors in positioning had been analysed on the area of individual sheets and not across the expanse of the entire map as joined. Certainly of significance is the shrinking and contraction of the paper or the quality of the scans upon which the georeferencing and RMSE analysis was conducted.

The fourth group of studies were the so-called reference (base) maps, drawn up in the twentieth and twenty-first century, which constituted the main point of spatial reference for all the data obtained from the other maps. In accordance with the assumptions adopted for the AHP series, all the elements of the drawing should be ultimately localised and placed on the map in a scale of 1:100,000, and with this aim pre-war maps (WIG), as equally post-war maps have been used. Next the drawing of the marked elements was generalised to the desired scale of the main map (1:250,000). Such an approach has been developed in work on the AHP and here already since the appearance of the post-war volume and is continued to this day, although it should follow to discuss the reference materials and their updating

II.2.9a ROYAL PRUSSIA

Marian Biskup

From the cartographic materials from the sixteenth century, the great map of Prussia by Kasper Hennenberger from 1576, covering the area of Chełmno and Malbork Voivodships and part of Pomeranian Voivodeship,¹ was of no use for us due to its general nature and inaccuracy. In the absence of appropriate cartographic records from the seventeenth century, later materials from the end of the eighteenth century, could serve as base maps. Schrötter's atlas of Prussian lands played a leading role here.² This work is the most important achievement of Prussian cartography for the Pomeranian lands. Work on it was initiated by the Prussian quartermaster, which in the years 1796–1802 carried out triangulation measurements of the then East and West Prussia (i.e. Royal Prussia together with the Noteć region). Measurements in the area of Royal Prussia were done by Jan Krzysztof von Textor. They were then used by the Prussian minister L. Schrötter who, with the help of F.B. Engelhardt, created a survey of Prussia to the scale of 1:50,000 on 144 sheets. It was published generalised on the smaller scale of 1:150,000 in Berlin in 1803–1810 and included 25 sheets, made by copper plate.³ Despite some inaccuracies in measurements, Schrötter's Atlas is an indispensable cartographic source for the Pomeranian lands of the eighteenth century.⁴ It recreates the physiography of the area (forests, swamps, rivers, and lakes), as well as the settlements, road network, borders of larger administrative units and economic categories of individual settlements and their shapes. For these reasons, these data could serve primarily as a basis for delineating the extent of forest cover, meadows and swamps, and hydrography (lakes, rivers, the Baltic shoreline) of Royal Prussia, as well as for locating individual settlements, especially the lost ones.

Other, even earlier cartographic sources could only play a supplementary role or slightly correct the results of Schrötter's Atlas. The maps of the Leniwka and Nogat branches by J. Strackwitz (1553 and 1582)⁵ should be mentioned among the sixteenth century ones. For the area of Żuławy, the maps of Samuel Donnet (1722)⁶ and J.F. Endersch (1753)⁷ were used as an auxiliary source, first of all in order to establish the political borders in the area, since in terms of accuracy and precision they are

III. METHOD AND RESULTS

III.1 GEOGRAPHICAL ENVIRONMENT

III.1.1 CRACOW VOIVODESHIP

Elżbieta Rutkowska

Three basic physiographic elements were included in our presentation of the geographic environment on the map of Cracow Voivodeship: the layout of the land, water network and forestation. In accordance with the rules assumed for this series of the Atlas, the reconstruction of the water network and the range of woodlands was prepared on the basis of earliest cartometric and relatively detailed cartographic materials from the turn of the eighteenth and nineteenth century.

Contour lines illustrate the **layout of the land**. Due to large differences in the layout of the land and significant amplitude of the heights, various intervals were used in particular areas. As in previous volumes of the Atlas,¹ in the lowland, northern part of the voivodeship, where heights do not exceed 400 m AMSL, the contour intervals equal 50 m. In the middle, highland part of the voivodeship, up to 1,000 m AMSL – 200 m, and 500 m in the mountain areas above 1,000 m AMSL. Characteristic elevation points were also marked. These include the lowest point in the Vistula valley, by the mouth of the River Uszew, situated 178 m AMSL, and the highest peak shown on the sixteenth century maps – Babia Góra, at 1,725 m AMSL.²

In Marcin Kromer's description of Poland from the second half of the sixteenth century we read (translated from Latin): 'Sarmackie Mountains, which separate Poland and Ruthenia from Hungary, are steep and covered with forest. They are quite well known also to ancient geographers and historians. The Carpathians, which we call – if I am not mistaken – Krępak, are the most famous of them all'.³ The author relates the name 'Carpathians' (singular – 'Carpathus' in Latin original) and its Polish equivalent to the Tatra Mountains. We do not know, however, the range of these highest mountains, and whether it could be related to modern times. It should also be noted that at that time the entire mountain crest, or range, was treated as one mountain, and individual peaks were not differentiated. The name 'Tatra', omitted by Kromer, and the name 'Krępak' appear in the inspection of royal estates of Cracow Voivodeship from 1564.⁴ The Tatras were shown on Waclaw Grodecki's map of Poland (around 1562), but their range seems extensive, and perhaps they were identified with the Carpathians.⁵

Cracow Voivodeship covered a large and geographically diverse territory in the sixteenth century, from the Tatras and the Beskids in the south, through sub-Carpathian basins, to Silesian-Cracow and Lesser Poland highlands in the north. As such, the areas within the voivodeship borders differed significantly in terms of their geologic structure, which determines the diversity of the relief, the water network, and consequently – also climate. The detailed image of the physiographical division of the voivodeship⁶ was presented on a separate map 'Physiographical regions of Cracow Voivodeship' (p. 72).

The borderline between the Polish Highlands situated in the north and the Western Carpathians and Podkarpacie (*Subcarpathia*) in the south runs through the territory of the voivodeship.

turning north-east. Its many tributaries flow from the highland region (Przemsza, Prądnik, Szreniawa, Nida) and from the Carpathians (Soła, Skawa, Raba, Dunajec).

The Outer Western Carpathians subprovince (Zewnętrzne Karpaty Zachodnie) stretches farther south. It consists of limestone, conglomerate and slate deposits (from the Paleogene and Late Cretaceous period), popularly known as the Carpathian Flysch Belt.

The southernmost subprovince of Cracow Voivodeship, the Central Western Carpathians province, includes the following macroregions: the Orava – Podhale Depression and the Tatra Mountains. The Tatras consist of mountain chains formed from igneous and metamorphic rocks, covered by sedimentary rocks, mostly limestone and dolomite.

Due to diversity of geologic structure and changeability of land formation processes the macroregions were divided into numerous, small and diverse regions called mesoregions. However, their description falls beyond the range of this study. It is a fact though, that many types of terrain can be found in Cracow Voivodeship, from high Tatra mountains and post-glacial, karst Western Tatras, to the foreland depressions of the Sub-Tatra Furrow, the average-height Beskid Mountains, and the lowland terrain of the basins in the north, up to loess highland terrains with karst elements. Such diversity could be found in no other sixteenth century voivodeship.

Soils. The diversity of geologic structure and origin, and of petrography must inevitably result in wealth and diversity of the soil cover.⁸

The best soils are found in Nida Basin (Lesser Poland Highlands) near Miechów and Proszowice. Fertile chernozem soils formed here on thick loess cover, and agriculture flourished early on in this area. A large part of the voivodeship, especially the Oświęcim Basin and Silesian Highlands, is covered mainly with podsollic and podsollic – gley soils, formed from sands. The area of Cracow – Częstochowa Upland is covered with rendzina soils, which originated from Jurassic rocks, and with brown and podsollic soils, formed from the loess. On the other hand, fertile alluvial soils and muds can be found at the bottom of the Vistula valley and the valleys of its main tributaries. Mountain areas of the Beskids are covered mainly with acidic brown soils, podsollic soils and, in higher parts of the territory, soils in the primary stage of development. They are characterized by less defined soil layers, larger amounts of rocks and much less fertility than the soils from upland areas. Alpine soils, which formed from the usually scant grass vegetation, can be found in the areas above the tree line. Mountain basins are covered with chernozem, muds, alluvial soils and brown soils.

In terms of the value of soils,⁹ i.e. the evaluation of their usefulness for cultivation, the best area is the western part of the Lesser Poland Upland, dominated by class I and II soils, and the areas of Sub-Carpathian Basins and the Carpathian Foreland, where the soils belong to class IIIa and IIIb. However, the dominant part of the voivodeship is covered with class IV and V soils, of average and poor fertility.

Water network. The entire area of the sixteenth century Cracow Voivodeship lay in the drainage basin of the Baltic Sea.¹⁰ The north-eastern part of the voivodeship is crossed by the first class water divide between the Vistula and the Oder. The map shows that (p. 76) only the western part of Lelów district lies in the basin of the Warta, the largest tributary of the Oder.

The Vistula forms the main hydrographical axis of the voivodeship. It flows along the sub-Carpathian subsidence, from the south-west due north-west. It gathers waters both from the Carpathians, and the highland areas.

The Carpathian region is distinguished by its high density of the water network (1 km of a river per 1 km²). The Dunajec, 274 km long, is the main river of this area. The River Poprad is its tributary, it gathers water from the south-eastern slopes of the Tatra Mountains. Of major rivers, The Raba (132 km long), Soła (89 km long) and Skawa (96 km long) flow into the Vistula from the south. All rivers in this region are characterized by significant falls. The upland area, in contrast to the Carpathian region, is characterized by a smaller quantity of surface water. The density of the water network is much lower (below 0.6 km of a river per 1 km²). The main tributaries of the left bank of Vistula in

⁸ S. Białousz, *Gleby – klasyfikacja genetyczna*, [in:] *Atlas Rzeczypospolitej Polskiej*, tabl. 41.1.

¹⁰ Today the River Czarna Orawa, running from the Babie Góry chain and flowing into the Wag belongs to the drainage basin of the Black Sea.

the voivodeship are: Przemsza (88 km long), Szreniawa (80 km long), Dłubnia (49 km long), Rudawa (36 km long) and Prądnik (33 km long).

In the northern part of the voivodeship the water network was reproduced on the basis of the Topographical Map of the Kingdom of Poland (or ‘the Quartermaster’s Map’) from 1822–1830 (at a scale of 1:126,000) and Mayer von Heldensfeld’s map from 1801–1804 at a scale of 1:28,800. The area south of the Vistula was prepared on the basis of Friedrich von Mieg’s map from 1775–1783, at the same scale.¹¹ The detailed presentation of the course of the rivers in these source materials allowed us to introduce many corrections to the base map (WIG Tactical map 1:100,000). For instance, the course of the Dunajec between Nowy Sącz and Zakliczyn could be thoroughly reconstructed, especially in the vicinity of the present-day Rożnowskie Lake. Many oxbow lakes and river broads near Filipowice and Melsztyn were added, and the river bed was moved west and led near the castle in Czchów.

The course of large rivers changes because of floods. In case of the Vistula it is particularly visible, and the changes can be linked with specific floods. One of them occurred in July 1593, and is attested to in many historical sources.¹² Krzysztof Zellner, a chronicler from Cracow, also mentions a flood that came five years later and caused many losses and changes in the course of the Vistula. The shifts of the course of the Vistula are relatively well attested to in both written and cartographical sources.¹³ Changes of riverbeds of minor rivers are smaller and much more difficult to trace. They can be better documented only near the mouths, where the rivers often use old riverbeds of ‘great’ rivers. The area in the vicinity of Jankowice (Babica parish) could be an example here – the River Płazianka runs through an old meander of the Vistula.

The presentation of once-numerous ponds caused many difficulties. Written sources often mention larger and smaller ponds and pools near particular settlements, e.g.; ‘there are two ponds, of which one is called Rudne, and is dried every third year. They take from it more than the manor needs [...]’.¹⁴ However, it would not be possible to show such small bodies of water on a map at a scale of 1:250,000, especially as their precise location was not described. Only large groups of ponds near Oświęcim, Zator and the River Soła could be shown on the map, although with some degree of approximation. Most of them have individual names (usually the biggest ones): Stary, Borowy, Boner, Dąbrowny. The 1564 inspection lists several ponds and provides their approximate location (e.g.; ‘on a rampart which runs from the estates of the Gierałtowski family’), description (‘Dąbrowny pond [...] overgrown with reed this year, meant to be stocked with fry this spring and left two years until next spring’), and the function they performed (e.g. ‘spawning’).¹⁵

Many fish-breeding ponds were created in royal estates in Silesia district in the sixteenth century. The fishing industry in this area was the most developed in entire Europe. It focused mostly on the needs of the internal market, but exports were beginning to grow.¹⁶

Forestation. The reconstruction of the forests in the southern part of Cracow Voivodeship was based on the aforementioned map by Friedrich von Mieg. We used photocopies of the map. As such, we were not able to distinguish the signatures,¹⁷ and only forests were marked. Forests and thickets were marked in the northern part of the voivodeship, reconstructed on the basis of the Topographical Map at a scale of 1:126,000, as in the previous studies. In order to preserve the clarity of the map, the smallest forest complex presented on the 1:100,000 map was 4x4 mm (around 16 ha in the field).

Progressive devastation of old woodland areas accompanied the development of settlement. The exploitation of the forests several centuries ago usually was wasteful. This relates both to the uncontrolled actions of local peasants, and to the exploitation of the land owners. Natural vegetation dwindled and gave place to fields, other types of cultivation and settlement. Forests survived mostly on steep mountain slopes, valley slopes and least fertile soils. The settlers coming to the valleys, and

Map 2. Watersheds of Cracow Voivodeship

later slopes of the Beskids, could not survive only from agriculture (given the unfertile soils), and so their main source of income was herding and often spontaneous exploitation of forests. The settlers felt especially unrestricted in Żywiec land. In order to gain arable ground they cut down forests and reclaimed land. Their closest market was Cracow. Timber delivered there from the Carpathian region was sold for instance to royal officials for salt mines and saltworks in Bochnia and Wieliczka (the forests near those towns had been cut down earlier), as well as the royal manor and demesnes. Timber was also bought by lightermen, who needed it to build their rafts used to float salt and other goods down the Vistula.

In 1554 Jan Komorowski confirmed the 1448 privilege of Duke Przemysław, concerning the right to claim timber. According to the above document, the burghers of Żywiec were granted the right to cut five *izby*, i.e. 50 trees from the castle forest every year.¹⁸

The devastation of the forests is also mentioned in the 1564 inspection, e.g. in the passage on Krzczów forest: ‘the forest was severely devastated and cut down’.¹⁹ Further wasteful exploitation of woodland areas was reduced over time, with the decrease in their size. In the inventory of the duchy

¹⁸ MS, Żywiec Museum, no. inv. 816.

¹⁹ LK 1564, part 1, p. 66.

of Oświęcim from 1557 it was frequently underlined that the local people ‘had the right to cut down trees, but only for their own needs’, not for sale.

Not only were the forests a rich source of timber, they were also inhabited by many animals. Niepołomicka Forest, situated relatively close to Cracow provided an excellent hunting area, it was a place of many a royal hunt.²⁰

Dense forest complexes cover the southern part of the voivodeship, near the border with Silesia and Hungary, on the borderline with Sącz and Szczyrzyc district, along the valleys of the Rivers Kamienica and Lepietnica, and also in the fork of the Poprad and the Dunajec, from Piwniczna in the east, to Krościenko and Tylmanowa in the west. Niepołomicka Forest is clearly visible, stretching eastward from Niepołomice and to the north-east from Krzyżanowice and Mikłuszowice. The district of Proszowice, north and north-east from Cracow, is definitely the least-forested area, with very dense settlement. In Szczyrzyc district the poorly forested areas are situated south of Cracow and Wieliczka, and south of Lanckorona, Myślenice and as far as Jordanów.

Names of larger forest complexes rarely appear in available cartographical sources. Written sources, however, mention Niepołomicka Forest, or rather ‘las niepołomski’ (‘Niepołomski Forest’).²¹ Otherwise the inspections record only the names of smaller complexes, usually related to names of nearby villages, like ‘lasy kleteckie’²² (‘Kleteckie Forest’) near Kletcza, today Klecza Dolna (Silesia district), ‘lasy jaroszowskie’ (‘Jaroszowskie Forest’) situated south of Jaroszowice on the right bank of the Skawa, or a forest near Krzepice, called Jagniętno. The name Żywiecka Forest does not appear in inspections before the seventeenth century.²³

Settlement names often prove that a forest used to grow in the area, they are quite frequently both in the northern (Buk, Smoleń),²⁴ as well as the southern (Leszczyna, Dąbrówka, Buczyna) part of the voivodeship.²⁵ These could have been large forest complexes, but were not necessarily so.

III.1.2 SANDOMIERZ VOIVODESHIP

Krzysztof Chłapowski

The following physiographic elements have been presented on the map of the Sandomierz Voivodeship in the second half of the sixteenth century: the layout of the land, the water network and forestation. These elements have been prepared according to the similar to those applied to the map of Mazovia in the sixteenth century, with only some modifications.

The lay of the land of the Sandomierz Voivodeship, where there are many heights, has been presented with contour lines using 20 m intervals up to 200 AMSL and 50 m intervals thereafter. This was done in order to clarify the cartographic picture and remove secondary elements given the main purpose of the map. Thus, the approach assumed was different than in the case of Mazovia, where using 20 m intervals throughout was justified because of the lay of the land in that region (no mountains).

Geographic regions. The area of the Sandomierz Voivodeship covers:¹ part of the Middle-Polish Lowlands, 2) the Middle-Lesser Poland Uplands, 3) part of northern Subcarpathia (the Sandomierz Basin), 4) part of Outer Western Carpathians (Central Beskidian Piedmont).

The northern part of the territory physiographically consisted of the south eastern part of the Middle-Polish Lowlands. This is a lowland, densely forested area (Jedlnia Forest, Stężyca Forest), divided by the broad valley of the Vistula. The many oxbow lakes and backwaters are traces of the many changes of the river channel in the past.

The Middle-Lesser Poland Uplands, stretching from the north west to south east between the Pilica and the Vistula is divided into three regions: Przedbórz Upland, Nida Basin and Kielce-Sandomierz Upland. The part of Przedbórz Upland within the borders of this voivodeship stretches along the Pilica. The central part of the upland is covered by hills (Opoczno Heights, Łopuszno Heights, and Przedbórz-Małoszycz Heights) and a waterlogged area in the south (Włoszczowa Basin). The area is partly forested (Przedbórz Forest).

The River Nida forms the axis of the Nida Basin, the southern border of the basin is marked by the Vistula. Karst phenomena, like crevices, channels, grottos and caves, occur in the region.

Kielce-Sandomierz Upland is characterized by the large diversity of the relief. Świętokrzyskie Mountains occupy the central area. Folded lands lie to the north (Iłża Piedmont): in the south Szydłowskie Foot-hills lower than 300 m AMSL and Sandomierz Upland, essentially a flat area, declining towards the east.

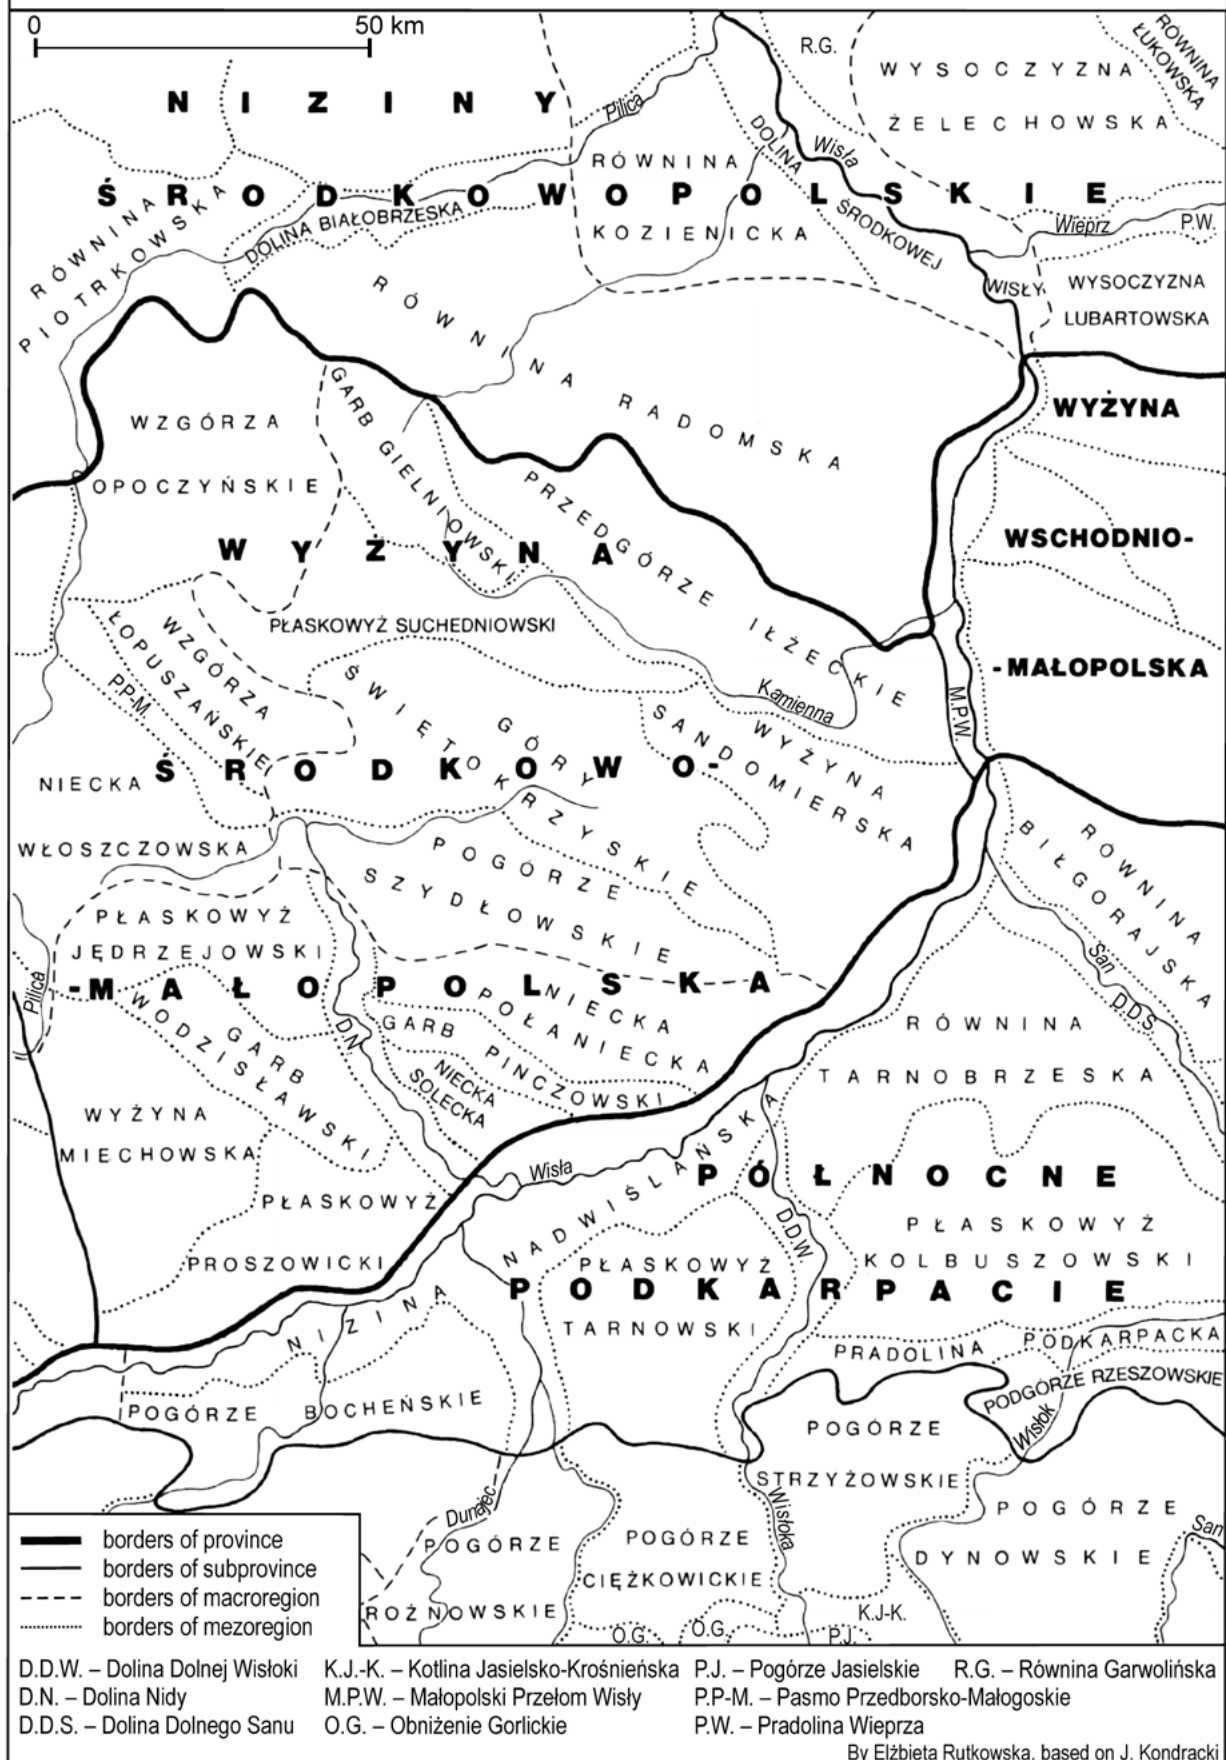

Świętokrzyskie Mountains² is an old rock mass, largely destroyed by the long-lasting influence of climatic factors. Hence the comparatively low relative altitudes, gentle slopes, quartzite debris (stone runs) and other similar phenomena. Malachite, azurite, limestone, marble and other building rocks can be found here, as well as iron ore and ores of non-ferrous metals, like lead and copper, that were exploited in the past.³

PHYSICO-GEOGRAPHIC REGIONS OF SANDOMIERZ VOIVODESHIP

Map 1. Physico-geographic regions of Sandomierz Voivodeship

Świętokrzyskie Mountains consist of many low mountain ranges, cut by canyon-like river valleys, running from the north west towards the south east. The main range of around 60 km is divided into: Masłowskie Mountain Range (Radostowa Mtn. 452 m AMLS, Masłowska Mtn. 440 m), Łysogóry Range and Jeleniowskie Mountain Range (Jeleniowska Mtn. 531 m, Szczytniak 552 m). Two highest peaks of Świętokrzyskie Mountains are situated in Łysogóry Range – Łysica (611 m) and Łysa Góra, or Łysiec (593 m). Garb Gielniowski, Suchedniowskie Heights, Klonowski Range (Bukowa Mtn. 478 m) are located north of the main ridge, and numerous small ranges, e.g. Zgórskie Mountains, Dymińskie Mountains (Dąbrowa Mtn. 450 m), Chęciny Range, Zelejew Range – to the south.⁴ Fir and larch forests grow in Świętokrzyskie Mountains (Świętokrzyskie Woods); also, relics of steppe vegetation can be found there. Apart from Świętokrzyskie Woods, there are other large woodland areas in Kielce-Sandomierz Upland, like Szydłów Woods.

The broad and diverse Sandomierz Basin, covering a large part of Pilzno, Sandomierz and Wiślica districts, is cut by wide, densely forested (Radłów Woods, Mędrzechów Woods, Sandomierz Woods) river valleys.

Sandomierz Voivodeship also covered a fragment of Central Beskidian Piedmont, the highest peak of which is Liwocz Mountain (561 m), situated already outside the border of Sandomierz Voivodeship.⁵ The piedmont, like the entire Beskids, is an alpine formation, consisting of sandstone, and – in lower regions – shale, poor in minerals.

Soils. Many types of soils can be found in the area of the voivodeship, especially in the mountains and uplands.⁶ The usefulness of soils in agriculture depended on the tools used by the peasants, therefore it varied in different historical periods. The value of soils was mentioned in the royal property inspections, and some examples are provided in the footnotes. Podzolic soils, sandy and sandy/clayey, poor or average are dominant in Stężycza, Radom, Opoczno and Chęciny districts⁷ and in Sandomierz Basin.⁸ Poor and average mountain soils occur in Świętokrzyskie Mountains. Layers of good soils can be found near Bodzentyn and Kielce.⁹ Good and very good soils – loess, chernozem and rendzina – are situated in Sandomierz Upland (Sandomierz district) and in the northern part of Nida Basin (Wiślica district).¹⁰ The valley of Vistula, and similarly – valleys of other rivers, is mostly covered by alluvial soils (good soils) along with airborne sands, alluvial fans, wetlands and quagmires.¹¹ In the northern part of Nida Basin we encounter a large variety of soils, usually not very rich.¹² Finally, the southernmost part of the voivodeship is covered mostly by fertile, loess soils. The density of the settlement in Sandomierz Voivodeship was related closely to agricultural usefulness of soils. The areas in which the land was fertile were more densely populated already in the early Middle Ages.¹³ Negative changes in soil structure occurred as a result of the predominance of cereal production since the late Middle Ages, the changes in the range of surface water and the level of groundwater, climatic changes and progressive deforestation.

Climatic changes in Polish lands between the sixteenth and twentieth century have long been the subject of debate.¹⁴ Some researchers assume that the sixteenth century was a transition period

⁴ E. Massalski, *Góry Świętokrzyskie*, Warsaw 1967.

⁵ Długosz also mentions this mountain in his *Annales* I, p. 103.

⁶ The map of soils was based on Konecka-Betley, *Polska, mapa gleb*, oprac. K. Konecka-Betley, R. Truszkowska, 1:700,000, Warsaw 1960 (wall map). We also used *Mapa gleb Polski*, comp. B. Dobrzański, S. Kowaliński, F. Kuźnicki, T. Witek, S. Zawadzki, 1:1,000,000, Warsaw 1974.

Map 2. Soils in Sandomierz Voivodeship

between an earlier warmer and dryer period and a colder and more humid one. In the area covered by Sandomierz Voivodeship there are, and undoubtedly were in the sixteenth century, climatic differences between physiographical regions related to the lay of land. The climate of Świętokrzyskie Mountains is harsher than in the plains, as can be seen in the longer period of snow lingering (currently 80 days a year), frost and ground-frost (currently 130 days a year), and – as a result – a shorter vegetation period. From west to east the climate becomes more continental.¹⁵ Higher insolation of southern slopes of the many heights and hills was and is important to agriculture. Old forest complexes and the Świętokrzyskie Mountains played an important role in the shaping of climatic differences between the northern and southern part of the voivodeship.

The water network of Sandomierz Voivodeship was reconstructed on the basis of the oldest detailed cartographic records from before 1839. The records depict their state preceding the period of important regulation and improvement work. Because of the scale of our work the choice of water elements was based on maps at a scale of 1:300,000. Dykes and canals dug in the nineteenth and twentieth century to dry the swamps were removed and corrections of the range of surface waters were made. Changes of stream channels of minor rivers are usually small and difficult to mark on a map of our scale, as such their course was presented according to topographical maps of WIG ('Military Institute of Geography').¹⁶

The courses of major rivers (Vistula, San, Pilica, Wieprz, Dunajec, Radomka) were based on the Topographical Map of the Kingdom of Poland and Mieg's map, with several exceptions. The course of the River San near the mouth of that river flowing into the Vistula was reconstructed on the basis of the traces of an oxbow lake that survived on WIG map at a scale of 1:100,000. We decided to make this deviation from our accepted rule due to source records mentioning the changes in the stream channel of this river in the modern era. The lower San defined the borderline between Sandomierz and Lublin Voivodeships and its present course separates several villages from the territory of the old Lublin Voivodeship.¹⁷ Gorzyce and Motycze – two villages that are today situated far from the River San – lay by the river, according to the fifteenth century sources.¹⁸ The mouth of the San flowing into the Vistula moved from the area of Sandomierz north, almost to Zawichost, in the beginning of the eighteenth century. It is shown on the draft map of the old and the new mouth of the San made in 1775 by K. Perthèes. In the map key he emphasizes that: 'San took a new course not long ago, some 70 years, during the reign of Augustus II'.¹⁹ The changes in the course of the above-mentioned fragment were presented on a separate map.

The reconstruction of the fragment of the middle Vistula – where it constituted the borderline between the Partitions – was also difficult. The present-day course of the Vistula is different in many places from its earlier one, as some fragments of its stream channel between Niepołomice and Zawichost were regulated on the basis of the Austrian-Russian 1864 agreement. Additionally, detailed depictions of the banks – the left one shown on the Topographical Map and the right one on Mieg's map – do not overlap. As such, the image obtained is in fact hypothetical to some degree. Oxbow lakes of the Vistula between the mouth of the Wieprz and the mouth of the Pilica were presented according to their state from the Topographical map. Earlier maps, e.g. D.G. Reyman's map from 1797, were also used.²⁰

The course of the Dunajec, reconstructed on the basis of Mieg's map, is much different from its present-day state. Also, the course of the Uszwia, the Vistula's right tributary, is a reconstruction. F. Bujak, in his monograph on his family village Maszkienice, claims that this river had two stream

¹⁹ AGAD Zbiory Kartograficzne, 574–2: *Carte géographique sur la confluent du San et de la Vistula*; a copy of this map – AGAD Arch. Kor. War., Dz. Cesarski, box 31d/1, p. 617. W. Pałucki showed me these records. See Piasecka 1978, p. 26, copy of a fragment of this map. The old stream channel of the San was also marked by Perthèes on his map of Poland from 1770. J. Kwiatkowski made a general reconstruction of the course of this fragment of the San, Kwiatkowski 1933; see J. Kwiatkowski, *Ujście Sanu a Sandomierz*, [in:] idem, *Sandomierskie*, Sandomierz 1933; see also, *Wisła pod Sandomierzem*, Sandomierz 1919, pp. 12 f.

Map 3. Reconstruction of San River course in 16th century

channels starting from this village.²¹ The western one, being still the main one then, was called Uszew and ran west of Rajsko and through Rzerzechowa; much of its previous fragment defined the border between Cracow and Sandomierz Voivodeships.²²

The eastern channel ran through Borzęcin and joined the western channel near the mouth flowing into the Vistula. Today the former right channel, called Uszwica since the eighteenth century,²³ is a tributary of the left arm of the river, that is still called Uszew.²⁴ Before the nineteenth century the two arms of the river joined temporarily during the period of high water, but the construction of a railway track on an embankment put that to an end. Because of the lack of knowledge about the previous course of the river, the name Uszwica was administratively given also to the middle and

²¹ F. Bujak, *Maszkenice wieś powiatu brzeskiego. Stosunki gospodarcze i społeczne*, Cracow 1902 (Rozprawy Wydziału Historyczno-Filologicznego AU, vol. 41), p. 82.

²² LDK, p. 29: 'to the river that is called Usseph, there Cracow land meets Sandomierz land'.

²³ Liesganig's map, Chrzanowski's map, SGKP, vol. 12, p. 857. In literature the name Uszwica is often, wrongly, associated with the western, border channel, i.e. Uszwia.

²⁴ In the fifteenth century this name appears upstream (Długosz LB, I, p. 613; ZDM, II, p. 367, III, p. 298; *Lustracja województwa krakowskiego, 1564*, vol. 1, ed. J. Małecki, Warsaw 1962, p. 95) and near the mouth into the Vistula (Długosz LB, II, p. 151).

upper Uszew. And yet, records from the late Middle Age period and Modern Era clearly show that the source of the Uszew was situated south from a bishopric village Uszew (located in pre-partition Cracow Voivodeship, Szczyrzyc district), which – as shown by this village’s court ledgers – lay by the River Uszew.²⁵ The matter of the course of the Rivers Uszew and Uszwica was settled by W. Pałucki.

The course of another tributary of the Vistula, the Breń, also required reconstruction. There are two rivers of this name today. One of them flows into the Vistula near Ziempińów, and the other flows into the Wisłoka near its mouth into the Vistula. Given the lay of the land, site names (especially the name Zabrnje) and the picture presented on a 1910 map at a scale of 1:300,000, we decided that the source data from the turn of the medieval and modern period refers to one river, and the mouth near Słupiec (Ziempińów) was created as a result of improvements of this boggy area in the eighteenth and nineteenth century. On the basis of Mieg’s and Heldensfeld’s map it was determined that after the nineteenth century the Breń flowed into the Vistula’s arm that joined the Wisłoka, encircling a large island in the valley of the Vistula near Połaniec. In the nineteenth century it was cut from the Vistula by flood banks and today the Breń flows here into the River Wisłoka.

The course of the River Wieprz near Łysobyki and Kock was presented on our map on the basis of the state shown on maps from the eighteenth century (detailed maps of Lublin Voivodeship and Sandomierz Voivodeship by K. Perthées) and the first third of the next century (Heldensfeld’s topographical photography at a scale of 1:28,000 and the Topographical Map). Therefore, we did not follow Stefan Wojciechowski, who tried to reconstruct the hypothetical course of the river in this area in the sixteenth century, suggested undoubtedly by the name of one of the arms of Wieprz on Perthées’s map: ‘Starzec czyli R. Stara’ (‘Old man, that is Old River’; map of Lublin Voivodeship) or ‘Starzec czyli Stara Rzeka’ (map of Sandomierz Voivodeship). According to these maps it separated from the main course near Luszawa and joined it near Wola Skromowska; still, as noted by S. Wojciechowski, today it is the main channel of the Wieprz. However, this suggestion to identify the course of the eighteenth century Stara Rzeka with the main course of the River Wieprz in the sixteenth century does not take into account the description of Długosz, who mentions that the Tyśmienica flowed into the Wieprz near Górka village, and that probably represents the earlier state as well, signified by the borderline between Łuków and Lublin districts. This corresponds to the layout of the water network in the eighteenth and nineteenth century, which therefore should be assumed for the sixteenth century. The River Wieprz flowed here through a wide and boggy valley, and so – as rightly pointed by S. Wojciechowski – it was possible that during the spring floods ‘the river flowed into a new channel’ and new arms were created that after some time lost their connection with the main course. The Starzec lost its connection to the Wieprz near Luszawa at the beginning of the nineteenth century, as seen in Heldensfeld’s and the Topographical map. Near Kock another arm was created, marked on the map of the Kock area from 1824. Perhaps the older arm was called ‘Starzec’ or ‘Stara Rzeka’ in order to distinguish it from one of these newer arms created in the eighteenth century. It must be added, that near Łysobyki an arm called Mentula probably shows us how the Wieprz ran in the fifteenth–sixteenth century, as would be suggested by the course of the border between Lublin and Sandomierz Voivodeship.²⁶

Sandomierz Voivodeship lies entirely in the drainage basin of the Vistula. The river flows through a wide valley. There are many cases where our sources mention that the river channel changed from time to time.²⁷

²⁵ *Księga sądowa Uszwi dla wsi Zawady 1619–1788*, comp. and ed. A. Vetulani, Wrocław 1957, pp. 234, 240 – ‘River Uszew’, ‘field called Uszwica’.

Pałucki *Borders of state territorial units*, [in:] AHP Sandomierz, III.2.1.2 in this edition.

²⁷ Brzeście, Sieciechów parish, Długosz Liber, III, p. 269: ‘a flumine Vistula alias Visla, alveum suum variis circumlacionibus variante, absorpta est’: Parchocin, LS 1660/4, vol. 2, p. 100: ‘island of their own land, which was taken by the Vistula’, ‘opposite to their lands it returned’; Sworoń and Niecieczka, y. 1774, AGAD, Dz. XVIII, 70, f. 46: ‘which lands, having created other passages in the ground, the Vistula moved to the other side and separated from the village Przykopa’. The 1589 inventory, ASK, LVI, S 5/II, p. 326 defines Swaroń as a village situated on the opposite bank of the Vistula; 1789, ASK, XL VI, 55b, ff. 12v: ‘the Vistula took a substantial piece of the land, with Gać village belonging to Niekurza’; Gać village was created in the seventeenth century.

Floods also destroyed banks and took land.²⁸ In the sixteenth century there were oxbow lakes in the valley, and sometimes the river flowed in several streams, creating islands. Long fragments of the Vistula, as well as the Rivers: Pilica, Wieprz and Nidzica constituted the border of the voivodeship. On some, short fragments, the Rivers San, Wisłoka and Jasiołka were also border rivers.

The most important left tributaries of the Vistula in the voivodeship are: the Nidzica, the Nida, the Kamienna, the Iłzanka, the Radomka and the Pilica. The Kamienna River in its upstream fragment was especially used for moving the ore mines. The Rivers Dunajec, Wisłoka, San and Wieprz should be distinguished among right tributaries of the Vistula. The width of the valley of the Pilica did not exceed 300 m in its downstream. This river often overflowed,²⁹ so there are many boggy meadows and moors in its valley. The right tributaries of the Vistula, running from the mountains (the Rivers Dunajec, Wisłoka and San) are of lowland character in their Sandomierz Voivodeship parts. They caused great damage during the period of rising water.³⁰

According to several sixteenth century constitutions of the Seym, the main rivers of Sandomierz Voivodeship should have been adapted for navigation.³¹ Perhaps the efforts to provide good sailing conditions on the Vistula near Sandomierz, where starosta's ship-mills were located, required serious engineering investment: leading the water from the city of Pokrzywnica to Sandomierz through a channel along an embankment, so for around 15 km. Royal mills near Samborzec and Sandomierz were situated by this channel, also called 'Pokrzywianka', whose fragments were led on artificial embankments 2 ells high. The hypothetical reconstruction of this channel was based on some mentions in the sources and on the few traces of it still visible on Heldensfeld's map.³² Navigation on the tributaries of the Vistula, except for the Pilica from Przedbórz on, was impeded by the construction of weirs, mills, etc. Thanks to the possibility of shipping crops on the Vistula to Gdańsk, Sandomierz in the sixteenth century was counted among the areas with a highly-developed demesne economy, focused on cultivation of corn.³³

There were no larger lakes in Sandomierz Voivodeship. Over a dozen ponds mentioned in the inspection were marked on the map. The outlines of bigger ponds near Mielec were reconstructed on the basis of Mieg's map and the present-day range of the moors. The swamps and waterlogged terrain marked on the map covered a small area, only in wide river valleys and near the junctions of minor rivers, e.g. Drzewiczka and Wąglanka.

Forestation of the area north of the Vistula upstream of Sandomierz was presented according to the state shown on the Topographical Map, and according to the state presented on Mieg's map from around 1779 south of the Vistula (the border between the Partitions). We refrained from recon-

²⁸ Here are some characteristic source records: 'nuper per Wistulam, qui subter illam decurrit absorpta' (Mistrzowice, Holy Trinity parish – Długosz Liber, I, p. 239); 'all these villages lie on the Zawisłe side, and when the flood takes them, they are freed from tax' (Korczyn starosta's district – LS 1564/5, p. 336); 'Podzamcze was almost entirely taken by the Vistula' (Zawichost – LS 1660/4, vol. 1, p. 197); See also W. Pałucki, *Borders of state territorial units*, [in:] AHP Sandomierz, III.2.1.2 in this edition.

²⁹ LS 1660/4, vol. 1, p. 14: the mill in Podlaskowa Wola village 'was abandoned five years ago due to an overflow of the River Piłeczka'.

³⁰ ASK, I, 9, f. 277, y. 1577: 'Otwinów minor divided by Dunajec, there is not just one Otwinów now'; ASK, I, 67, ff. 724, 820, y. 1673 and 1674: 'Dunajec took Roślawice'; LS 1660/4, vol. 2, p. 201: 'the River Wisłoka took the meadow'; ASK, XL VI, 99B, f. 396, y. 1616: 'village [Zaosice] taken by the San'.

structuring the state of forestation shown on Perthès's map from the end of the eighteenth century due to mistakes in the situational drawing and major gaps in comparison to more precisely detailed maps. As in the case of the map of Mazovia in the sixteenth century, we kept the distinction between forests and thickets, which usually signify the previous range of the forest. Thickets are often a relic of the forests, created as a result of the agricultural use of the edge of the forests. Because of the 1:250,000 scale and the readability of the map, the minimal area of the forest marked on the map at a scale of 1:100,000 was an area at least 4 mm × 4 mm, i.e. around 16 ha.³⁴

In contrast to the situation in Mazovia, the inspections of the royal estates in Sandomierz Voivodeship from the sixteenth century contain little information about the range of the forest, their character and devastation.³⁵ Also, for Sandomierz Voivodeship we do not possess such an excellent source such as the inspection of Mazovian forests from 1566. In the sources concerning the royal estates in Sandomierz Voivodeship the names of woods were rarely given in full,³⁶ as in case of Jedlnia Forest.³⁷

According to the description in the 1567 inventory, Jedlnia Forest, now often called Radom or Kozienice Forest, stretched from Ryczywół in the north to Tczów and Zwoleń in the south and from the rivulet Pacyna near Radom in the west to the Vistula in the east.³⁸ Part of the forest was named Kozienice Forest when in 1596 Kozienice became a separate royal estate.³⁹ This name was first attested to in the sources in its full wording in 1656.⁴⁰

Świątokrzyska Forest (only recently given this name) covered a large area. Today this name specifies forests in four former districts: Radom, Sandomierz, Opoczno and Chęciny.⁴¹ The major part of the forest belonged to the Cracow bishopric and Saint Cross Abbey.

The royal forest called Sandomierz Forest occupied a large territory south of the Vistula. On the opposite, right bank of the San it joined the forests that separated Lublin Voivodeship from Sandomierz and Ruthenian Voivodeships. In the second half of the sixteenth century it was settled by royalty and, to a lower degree, by the nobility.⁴²

In the part of Wiślica district situated over the Vistula there was a forest called Mędrzechów Forest in the 1572 inventory.⁴³ It belonged to Korczyn starosta's district. The westernmost part of Pilzno district was covered by the forests belonging to the bishop of Cracow, called Radłów Forest in the 1757 inventory. This name was probably used earlier.⁴⁴ Perthès used the name Rytwiiany Forest for the forest belonging since the seventeenth century to the Camaldolese monks from Rytwiiany. This name was probably used also earlier to denote the forest of the Rytwiiany estates.⁴⁵ The inspections from 1565, 1569, 1602, 1616 and 1629 did not provide many names of the forest complexes, the following rule was assumed to determine the names of other complexes. Taking into consideration

³⁵ LS 1564/5, p. 59, 152; on the devastation of the forest, ib., pp. 116, 205, 225.

³⁶ LS 1564/5, p. 144 (by the description of Szydłów): 'when the merchants' oxen come here, through the forest'.

³⁷ LS 1564/5, p. p. 258: 'on the edge of Jedlnia forest'; AGAD ASK, XL VI, 41, f. 31, y. 1566: 'on the edge of Jedlnia forest'. Also J. Gacki, *Jedlnia w niej kościół i akta obelnego prawa*, Radom 1874 uses the name: Jedlnia Forest. The name of the forest does not appear in seventeenth century inspections.

³⁸ AGAD, Dz. XVIII, 30, f. 362. The description of the forest is, noteworthy, given here by the description of Jedlnia village.

³⁹ About Kozienice royal estate see W. Pałucki, *Drogi i bezdroża skarbowości polskiej XVI i pierwszej połowy XVII w.*, Warsaw 1974, pp. 179 f.

⁴⁰ MK, 196, ff. 190v–191. See R. Zaręba, *Puszcza Kozienicką w XVII w.*, KHKM, vol. 11, 1963, pp. 257–269; idem, *Puszcza Kozienicka*, [in:] *Dzieje lasów, leśnictwa i drzewnictwa w Polsce*, Warsaw 1965, pp. 630–641. The name: Radom Forest, introduced in the literature by K. Potkański (*Pisma pośmiertne*, vol. 1, Cracow 1922, p. 107–221) does not appear in the sources we used. It does, however, find justification in the tradition of naming forests from the seat of the gord starosta's districts, to which a given forest belonged. Still, this rule was not always obeyed (e.g. Kampinowska Forest, Zagajnica Forest, Niepołomska Forest).

⁴⁴ About this forest see J. Szczudło, *Z przeszłości Puszczy Radłowskiej*, [in:] *Prace z dziejów Polski feudalnej ofiarowane R. Gródeckiemu w 70 rocznicę urodzin*, Warsaw 1960, pp. 545–561.

⁴⁵ The table of the Church property on *Mapa szczególna województwa sandomierskiego* (K. Perthées 1791).

1660–64 inspections, and especially the 1789 inspection, that contained descriptions of forested areas, and other sources, we included the royal forests that, given their size and importance, undoubtedly had their own name. For these complexes we assumed the names that do not, in fact, appear in the sources in their exact wording, but that could be accepted with high probability on the basis of indirect data. As such, we have assumed the following names of the forests: Stężycza Forest, Przedbórz Forest, Szydłów Forest and Bratkowice Forest.⁴⁶ The case of the forest that is called Świętokrzyska Forest today proved the most problematic. The name of the forest was usually related to its ownership. When the name Świętokrzyska, or rather Łysogórska, forest was used, it could denote only a part of the present-day forest. However, the inspection of the bishopric property from 1789 does not provide the name of the bishop's part of the forest.⁴⁷ As such, we have assumed that most likely there was no uniform name of the forest and left this forest without a name.⁴⁸ On the other hand, we have introduced the name Łysogóry that was probably used for a long time to denote not only the mountain range but also the slopes covered by forest.⁴⁹

(1993)

Translated by Agata Staszewska

⁴⁶ An example from the 1569/1570 inspection, AGAD, DZ. XVIII, 29, ff. 264v: 'There is a forest near Bratkowice, 3 miles wide between Bratkowice and Przewrotna, and 2 miles from Mister Głowa's to Mister Przemyski's lands'.

⁴⁷ ASK, XL VI, 53a, 54, 55a, 55b, 65, 66, 6, 69.

⁴⁸ Still in 1815 the Benedictines from Świętokrzyskie Voivodeship in the report of the authorities listing the forests belonging to the order did not use the name Świętokrzyska Forest (J. Gacki, *Benedyktyński klasztor ś. Krzyża na Lysej Górze*, Warsaw 1873, p. 263). Gacki uses the name Łysogórskie Forest. This name does not appear on the Topographical Map of in SGKP.

⁴⁹ We have resigned to mark on the map the names of small forests near villages that are mentioned by Długosz, inspections, border documents, and the documents of ownership conflicts. R. Mochnecki put these names on his map: R. Mochnecki, *Zasięg pralasu na Wyżynie Kielecko-Sandomierskiej*, Cracow 1937; cf. idem, *Zasięg pralasu na średniogórze polskim*, „Sprawozdania PAU” 1923, no. 8. The map used by M. Dobrowolska, *Przemiany środowiska geograficznego Polski do XV w.*, Warsaw 1961, Appendix map no. 23.

III.1.3 LUBLIN VOIVODESHIP

Stefan Wojciechowski

Lay of the land

The lay of the land was depicted by means of contour lines at 20 m intervals. Selected elevation points were also marked on the map.

The physiography of the Voivodeship of Lublin was quite diversified.¹ The south was occupied by the part of Sandomierz Basin called Biłgoraj Plain. To the north of the line of the settlements Borów, Słupie, Biała, Kocudza and Radzięcín there lies the Roztocze in the east, and the Lublin Upland in the west. Only the western part of Roztocze lies inside the borders of the old Lublin Voivodeship, the heights here reach 333 m amsl (north of Goraj), and the relative heights in the valley of the River Por are also the greatest in the entire area. The village Sulów defines the north-western boundary of the Roztocze. The northern border of the Lublin Upland runs from Włostowice (Puławy) to the east through Krasienin, then encompasses a bulge on the right bank of the River Wieprz, and continues along the river towards the southeast. The following regions constitute the Lublin Upland: the Urzędów Heights, the Chodel Basin, the Bełżyce Plain, the Nałęczów Plateau and the Łuszczów Plain situated north of the Giełczew Hill ('Wyniosłość Giełczewska', the village Krzczonów lies almost in its centre). On the side of the Zamość Valley ('Padół Zamojski'), the Depression of the River Por wedges between the Giełczew Hill and the Roztocze.

The so-called South Mazovian Lowland and the Lublin Polesia lie north of the Lublin Upland. The fragments of the following regions of the Polesia are situated within our area: the Dorohusk Depression along the right bank of the River Wieprz, the Łęczna – Włodawa Lakeland lying to the north of the depression, and then the Parczew Plain further to the north. The remaining territory of Lublin Voivodeship, from the edge of the Lublin Upland to the north is occupied by parts of the South Mazovian Lowland: the Lubartów Plain, the Ice-marginal Valley of the Wieprz and the Siedlce Upland.

The land relief of Lublin Voivodeship is the outcome of the previous geological periods, the Cretaceous and the Tertiary period. The lay of the land formed then was covered with glacial formations, which adjusted to the older formations. Even if the area of the voivodeship had heaved upward in the Tertiary period, the former land relief did not change. The Lublin Upland remained inclined from the south to the north (from 300 to 190 m amsl), the waters still flow between and across bars and rock steps to the north and west.²

The soils in Lublin Voivodeship³ are partially indigenous, but usually formed from post-glacial material. The indigenous soils are the rendzina in the south-western part of the Lublin Upland, formed from weathered limestone. The remaining part of the Upland and the Roztocze is covered with loess

soils, alluvial soils in river valleys, or soils of swamp origin and sands, sometimes even dunes (Krężnica Jara, Powiśle). Podsolich soils, clayey sands, sands, lowland bogs, and even muds occupy the northern, lowland areas.

Bodies of water

The map of Lublin Voivodeship in the sixteenth century could not present the water bodies in their sixteenth century shape, as the oldest available cartographic sources come from a much later period. The hydrographic network was drawn on the basis of modern maps, but according to the Quartermaster's Map, which recorded the situation from around 1830.

In the case of two fragments of rivers an attempt was made to go back to the sixteenth century. The old stream channel of the River San near its mouth flowing into the Vistula and the stream channel of the River Wieprz near the estuary of the Tyśmienica were reconstructed. This was connected with significant shifts, changing the location of many villages in relation to the river. Some older records, particularly the maps of Perthées, which mark oxbow lakes in these places, justify the decision to abandon the state from the 1830. The lay of the land, and most of all the surviving traces of such courses of the rivers (in case of the Wieprz it is its current main channel, different from the one from the eighteenth–nineteenth century) fully confirm the outlines marked on the old maps. Although the existence of these channels already in the sixteenth century is hypothetical, but at least in case of the San it is further confirmed by the contemporary administrative affiliation of settlements. Several villages (including one parish: Wrzawy), situated between the current and old stream channel of the San, belonged to the Voivodeship of Lublin, so the old current – unlike the later one – did not separate them from the territory of the voivodeship.⁴

On a map of our scale, small rivers flowing in narrow valleys did not change their channels for ages, so their presented course can easily be applied to our period. On the other hand, large rivers – the Vistula, the San and the Wieprz – are a completely different matter. Their course changed many times, particularly in certain places, and the version presented on our map may have been only temporary, still – it is unavoidable. The described changes were the result of the surge of water in the spring (in particular) and summer. Ice floes blocked the overflowing water, and the current was diverted to a new channel.⁵ In the valleys of the Vistula and the San, the sands settled, and the growing plants solidified the sandbanks. Their loose structure allowed the current to change. In the valley of the River Wieprz the post-glacial sands were rather denudated and moved to the Vistula's channel, whereas the siltformations settled, and peat bogs and swamps formed with time on the sandbars and in oxbow lakes. The situation in the valley of Tyśmienica, which drained the northern part of Łęczna – Włodawa Lakeland, was quite similar.

Because of the aforementioned changes of the stream channels of the Rivers San, Vistula and Wieprz, the settlements were located either on one, or on the other bank of the rivers. Moreover, the flowing water destroyed many old villages. Such destructive processes had already occurred earlier,⁶ they are therefore not directly related to our research. However, it seems appropriate to list here all these settlements, which were destroyed by rivers, and mark the time when it probably happened. And so, the Vistula destroyed Komorzyn (in the seventeenth century), Ochodza (end of the eighteenth century), and Pstrągi (end of the fifteenth century), all of which lay across from Zawichost. Further to the north, in the vicinity of Świeciechów: Dobieszów and Szczepanów were lost in the first half of the fifteenth century, Świątniki similarly in the fifteenth century, and Wola Świeciechowska after 1615, while Jaworzec near Kazimierz before 1450. In the sixteenth century the River Wieprz destroyed Rogalice situated south of Łańcuchów.⁷

⁴ Perthées, the quoted map; his Sandomierskie, 1791; Liesganig, quoted map. On our map the eighteenth/nineteenth century stream channels were marked with a dotted line next to the reconstructed course of the Rivers San and Wieprz.

⁵ Detailed analysis of the changes in the channels of the Vistula and the Wieprz since the twelfth century was included in the quoted study 'Krajobraz dawnej ziemi lubelskiej' Wojciechowski 1929a.

⁶ S. Wojciechowski, *Zaginione osady w Lubelskiem*, „Pamiętnik Lubelski”, vol. 1, Lublin 1929, pp. 27, 31, 35–39.

⁷ In 1540 they appear in the sources for the last time, AGAD, ASK, I, no. 33.

The entire territory of Lublin Voivodeship lies in the river basin of the Vistula. The waters of Biłgoraj Plain, including the River Bukowa (called Branew in the sixteenth century), flow into the San, and partially directly to the Vistula. Only the middle and downstream fragments of the River Wieprz flow through the area of the old Lublin Voivodeship, whereas its main tributaries: Bystrzyca, Tyśmienica, and smaller Giełczew do not reach beyond the borders of the voivodeship. Minor direct tributaries of the Vistula, flowing westward from the uplands, like Sanna, Wyżnica, Chodelka, Bystra and Kurówka, also run solely through the Voivodeship of Lublin. Northern Bystrzyca, one of Tyśmienica's tributaries, flowed almost entirely within the borders of the voivodeship. On the other hand, only the upper current of the River Krzna, running east towards the Bug through Łuków land, remains in the area of the voivodeship. In the north, the River Liwiec along with its tributary Muchawka running north towards the Bug constitute the western, northern and eastern border of a forward headland of Łuków land.

It should be added that the river network of Lublin Voivodeship is not particularly complex, especially to the south, in the Upland and the Roztocze.⁸ Because of the permeable surface, rainwater soaks the soil, and there is no water which could form more numerous rivers, streams, or waterways. In the sixteenth century, when the forest cover was much richer than now, much more water was stored in the ground covered with dense forest, than currently, when the surface is almost bare.

Karst springs, which have a very large and rapid discharge, could be found, just like now, in places where the limestone bed was situated not too deep under the surface. These springs were located in deep river valleys near Kazmierz (Wierzchoniów), Wąwolnica (Bochotnica – now Nałęczów), Lublin (Sławinek), Urzędów, in Wierzchowiska, Batorz, Krzczonów, Chodel, Łęczna and many other settlements.

In valleys of smaller rivers, like Kurówka, which flow slowly, and the decline of their channel is not significant, barrages were built and numerous ponds were created, providing water to mills, fulleries, and sawmills. This was usually done on minor rivers, where the amount of water was otherwise insufficient to run mills, needed in almost every village. The land of Łuków can be an example here, small watercourses in the area served utilitarian purposes. Even just outside of Lublin a dam was built downstream of the castle, in a small depression through which the River Bystrzyca flowed from the south-west to the north-east. The dam caused the water to bank up, and the entire eastern part of the valley was flooded, thus creating a large pond used for fish breeding to fulfil the needs of the castle. Apart from this Great Royal Pond, which was reconstructed, our map shows only these ponds, which were attested on the Quartermaster's Map, e.g. the large Siemieński Pond on the Tyśmienica, which in fact appears already on Perthées's map.

Lakes were presented in a similar manner, i.e. according to the situation from around 1830 (except for the reconstructed lake Raczo, which had already ceased to exist at the time). Their names, however, were provided partially in their modern wording, and partially in their older version from the sixteenth or fifteenth century, when they were known. The nomenclature of some 20 lakes in Łęczna–Włodawa Lakeland was recorded in the inspections from 1565 and 1570 and in *Chronografia* by Jan Długosz,⁹ and the names appearing in both sources were provided alike. As such, also those names from Długosz's book which do not appear in the inspections, can be considered up-to-date one century later, in the period depicted on our map. It should also be emphasized that only some of old names differ from modern ones. Below we list names of lakes from *Chronografia* by Długosz, from the inspection of 1565 or 1570, from the Quartermaster's Map, and modern times. We would also introduce corrections to the identification and localization of lakes mentioned by Długosz to the often erratic study of J. Kornaus.¹⁰

The size of lakes provided by Długosz for Lublin land and Łęczna – Włodawa Lakeland (and other areas) was given in miles. If these were considered Italian miles (Roman miles, 1,478 m), the fifteenth century picture of lakes would agree with the current one, whereas if these were counted as geographic miles (7,420 m), as J. Kornaus did, we should acknowledge the existence of colossal

⁸ About the morphology of river valleys see A. Jahn, *Zarys morfologii Wyżyny Lubelskiej*.

⁹ J. Długosz, *Historia Poloniae*, vol. 1, ed. A. Przewdziecki, Cracow 1873, pp. 30, 32, 33; cf with. T. Wilgat, *Jeziora Łęczyńsko-Włodawskie*, Annales UMCS, sectio B, vol. VIII 3, 1953.

¹⁰ J. Kornaus, *Jan Długosz geograf Polski XV w.*, Lwów 1925. Identifications by this author became the foundation for the proper commentary to the translation of Jan Długosz's history, *Roczniki czyli kroniki sławnego Królestwa Polskiego*, Warsaw 1961, pp. 144–5. I conducted the correct identification, the results of which were shown in the table, already in 1929.

bodies of water, which could not even fit the area.¹¹ Still, we must emphasize that not only the exact length of a mile, but also the accuracy of the information provided by Długosz, could raise doubts.

Table 1. Lake names

Długosz	Inspection	Quartermaster's Map	Modern name
Jedlino	Jedlino	Stagińskie	Ściegienne ¹²
Czarne	Czarne	Czarne	Czarne Uścimowskie ¹³
Raczno	–	does not exist	does not exist ¹⁴
Głębokie	Głębokie	Głębokie	Głębokie
Uścimów	Uścimowiec	Uścimowiec	Uścimowiec
Rozkopaczów	–	Matycze	Mytycze (Matycz)
Dratów	–	Dratów	Dratów
Trzaczano	–	Ciesieczyn	Ciesacin ¹⁵
Nadryb	–	Nadrybie	Nadrybie
Ostwisz	–	Uściwierz	Uściwierz
Bieszce	–	Bikcze	Bikcze
Ostwiszek	–	unnamed	Uściwierzek ¹⁶
Rykaczów	–	Rotcze	Rotcze ¹⁷
–	Długie	Uścimowskie	Uścimowskie
–	Orzechowiec	Orzechówek	Orzechówek
–	Krasne	Krasieńskie	Krasne
–	Białe	Białe	Białskie
–	Humieniec	Zagumieniek	Gumienek
–	Obradowskie	unnamed	Obradowskie ¹⁸
–	Kleszczów	Kleszczów	Kleszczów
–	Okunin	Miejskie	Miejskie ¹⁹
–	Płocice	Czarne Gościnnieckie	Czarne Gościnnieckie

Even despite the complete disappearance of some lakes, we must assume that the changes which occurred since the fifteenth or the sixteenth century to the twentieth century were usually not significant, as concluded after comparing the size of certain lakes recorded in the 1570 inspection (measured in *tonie*)²⁰ with their current size. The changes were small, because the lakes were exploited only as fishing areas, and no major work was conducted which would have modified the natural environment.

Lakes of the type found in Łęczna – Włodawa Lakeland should grow smaller with the natural development of the landscape, if the outlet of waters is lowered because of erosion. Some of the lakes in the area disappeared completely (Raczno), others became smaller, and some – larger. In general, the lowering of the surface water level should also result in the shrinking of natural lakes of this type. In this case the lakes which grew smaller were those situated higher, in which the outflow of water was more swift, and the erosion could occur more easily, i.e. Rozkopaczowskie Lake – Mytycze, now situated at 164 m amsl, while the River Tyśmienica – below the outflow of water from this lake,

¹¹ S. Wojciechowski, *Krajobraz dawnej ziemi lubelskiej*.

¹² This is not Zagłębokie lake, as claimed by Kornaus, but Ściegienne laks, situated a little to the east from the village Jedlanka, which in the fifteenth century was called Jelino. On the other hand, the village Jelino by Zagłębokie lake did not exist back then.

¹³ 1.5 km north of Uścimów, not 11.5 km east of Ostrów, because that is where lake Czarne Sosnowieckie lies.

¹⁴ Not localized by Kornaus, and incorrectly acknowledges as Zagłębokie in the said edition of Długosz. This is in fact lake Radzie, which still appears on Heldensfeld's map, and later disappears. It was situated 7.5 km to the north of Łęczna.

¹⁵ Trzaczano could not have been identical with the lakes Raczno and Głębokie, as Kornaus would have it, nor with lake Krzezeń, like F. Bujak claims (review of J. Kornaus's study in *Kwartalnik Historyczny* 1926, p. 71), but this is the present-day lake Ciesacin, located east of Nadrybie lake and south of Uściwierz lake (T. Wilgat, *Jeziora Łęczyńsko-Włodawskie*, p. 84). In *Liber beneficiorum* by Długosz (III, 267) it is called Teszacin.

¹⁶ Ostwiszek minus appears in *Liber Beneficiorum*, III, 267. It is a small lake between the lakes Nadrybie and Uściwierz, disappearing, or perhaps completely gone. See T. Wilgat, *Jeziora Łęczyńsko-Włodawskie*, in the description of lake Ciesacin.

¹⁷ Rykaczów – in Łaski *Liber Beneficiorum*.

¹⁸ Of the two Obradowskie lakes appearing in the 1570 inspection one existed around 1900 under the same name, east of the village which had already changed the name to Buradów. The other lake disappeared.

¹⁹ In SGKP, vol. 7, p. 441: lake Okuniew or Miejskie.

²⁰ WAPL, the register of the 1570 inspection, ff. 70, 73, 78, 81, 88.

at 153 m amls. Lakes situated in similar surroundings, namely: the Czarne, the Uściwierzek, the Głębokie and the Ściegienne, also grew smaller. Almost every other lake, thanks to the very slight incline of terrain which prevents outflow of water and significant erosion of the bottom, as a result of the competition for the water divide in the entire area between various tributaries of the River Tyśmienica and the basin of the River Bug, could – even with little effort on the side of man – stop their development, i.e. the decrease of water level and size, or even begin to grow and cover larger area (lakes: Dratów, Nadrybie, Bikcze and Uściwierz). This process was caused here by fish management, as these waters were unfit for any other exploitation.

Swamps were presented on the basis of the Quartermaster's Map, just like other water bodies shown on our map of Lublin Voivodeship in the sixteenth century. That is not to say we abandoned retrogressive inquiry about earlier situations, even if only in a more general outline. In the sixteenth century there were still many swamps in the Voivodeship of Lublin. They were connected with depressions in the surface of the land: in the uplands in broad, eroded river valleys, in the lowlands in both: in the river valleys of then-current rivers, and in earlier valleys, abandoned by wild, untamed rivers (like the supposed original valley of the River Wieprz, running from Leszkowice, through Firlej, and towards Giżyce. In Sandomierz Basin all valleys of rivers flowing towards the San were to a large degree boggy, here there were – and still are – large swamps situated in the middle of the forest.

A surviving trace of swamps, if they no longer exist, but did exist near a settlement founded in the past, can often be found in settlement names.²¹ Probably all old villages called Białe and Białki derive their name from 'biel' (old Polish: 'waterlogged, boggy area') or 'błoto' ('mud'). As such, the following site names attest to a nearby swamp: old Biała by the River Biała at the foot of western Roztocze, Biała and Białka near Kozirynek (Radzyń) and Białka, once a large parochial village situated by a huge swamp southeast of Łęczna, Białka located to the southeast of Parczewo, just by the voivodeship border, Biała southwest of Rudno by a wide and boggy valley of the River Minina, and Białki situated south of Siedlce.

Forests

Forestation was depicted according to the state from around 1830, i.e. based on the Quartermaster's Map, and with some help from H. Maruszczak's study.²² Heldensfeld's map would be an older source allowing us to reconstruct the range of woodland areas in Lublin Voivodeship with satisfactory exactness, not only because it offers a detailed picture of the range of forest around 1800, but also for its descriptions accompanying each section, which provided precise species composition of the tree stand of each part of the forest. However, the map could not have been fully utilized²³ and we decided to copy the forest range from the Quartermaster's Map from the 1830s, as the state presented there did not differ much from the one recorded by Heldensfeld. Intensive deforestation began in the Voivodeship of Lublin only after 1830.

Almost the entire area covered with woods in 1830 must have been forested also in the sixteenth century, and the differences occur only in places which were forested between the sixteenth and the nineteenth century. This was a natural process on formerly cultivated and later abandoned arable land. Sources provide us with information concerning such areas, deserted because of natural disasters, peasants' escapes or land sterilisation, but we are unable to assess the size of area cultivated during the period presented on our map, but forested before the nineteenth century. It seems, however, that

²¹ A. Brückner, *Słownik etymologiczny języka polskiego*, Cracow 1927; S. Wojciechowski, *Zaginione osady w Lubelskiem*; idem, *Krajobraz dawnej ziemi lubelskiej*.

²² H. Maruszczak, *Stan i zmiany lesistości województwa lubelskiego w latach 1830–1930*, copy from Annales UMCS, sectio B, vol. 5, Lublin 1951, map apart from the text.

²³ Many years ago in Kiregsarchiv in Vienna, the author omitted Łuków land, because someone else was meant to work on it, hence the lack of Heldensfeld's materials for this district. The comparison of the forestation presented by Heldensfeld with the forestation from around 1900 shows its earlier curvature, woodland areas joining and forming continuous strips. But it was exactly the opposite: small areas, usually loess in the area of Radzięcín–Biała–Batorz, near Kraśnik and by the downstream Bystra, south and east of Włostowice and north of Lublin were covered with forest in 1900, but bare in 1800.

this was a relatively small territory, in analogy with the small area forested between 1830 and 1930.²⁴ Broadly speaking, it is safe to say that our map generally presents forests which existed until the nineteenth century from time immemorial, since the primordial landscape.²⁵

Another aspect of the issue is the fact that in the sixteenth century forests had grown in many areas where there were no forests around 1830. We suppose that there are certain gaps in our depiction of forestation, particularly in the case of woodless areas situated far from settlements. Again, a question arises as to the degree of changes between the sixteenth and the nineteenth century, what area was deforested then, deprived of the forest cover, or cleared and turned into arable land. We can only provide a general answer, that in the sixteenth century the area covered with forests was larger (or perhaps it should be said – much larger) than in the period presented on our map.

The forestation of Lublin Voivodeship did not depend on soil type, as forests can grow on all soils found in the voivodeship. The lay of the land was also unimportant. To the south, in the strip of hills reaching above 300 m amsl, the forest was absent only from the valleys of various watercourses. There were fewer forests in the northern part of the territory, as the Lublin Upland was a concentration of the oldest settlements, and the land was cultivated there for centuries. There were many forests in the lowlands, and only in Łuków land, where settlements of farm gentry were numerous already in the middle of the sixteenth century, large woodland areas were cleared (Trzebieszów).

Forestation depends on settlement, and one of the symptoms of this relationship is the survival of forests in areas less fit for cultivation, either because of poor soil, higher altitudes, or some other conditions (e.g. in the vicinity of Kazimierz the forest covers the diversified limestone-loess plate, surrounded from the south and north with poorly sculpted land with sandy soils, which were deforested and developed).²⁶

The largest woodland area in the voivodeship was the old forest situated on the southern frontiers of Lublin Voivodeship, now called Solska Wilderness. The inspections mention also the royal Parczów Forest, drained by the River Tyśmienica and its tributaries, the Piwonia and Gozdnicza. We also find relatively large forest complexes in other areas. For instance, in Łuków land larger forest concentrated in the borderlands.²⁷

²⁷ An attempt at reconstructing the original forestation based on the chronology of founding settlements with attention to their names was conducted in the quoted work: *Krajobraz dawnej ziemi lubelskiej*.

III.1.4 GREATER POLAND

Elżbieta Rutkowska

Three primary physiographic elements of the geographic environment were included on the map of Greater Poland in the sixteenth century: the terrain relief, the water network and the forestation. In accordance with the rules of this series of the AHP, the reconstruction of the water networks and the range of the forests was based on the earliest cartometric and fairly detailed cartographic data from the turn of the eighteenth and nineteenth century, allowing for a recreation of a plausibly accurate representation of those elements. That said, it must be remembered that this depiction represents the state dated to almost two centuries later than the historical content discussed in this volume. We must accept this due to restrictions imposed on us by a lack of earlier historical sources, and assume that changes in the geography, especially those caused by human activity, were much less intense and rapid than they are currently. The technique used for the reconstruction of both elements is analogous to the one used in the previous volumes of the series.

Contour lines illustrate the terrain relief, and while the final result may be similar to the maps of the Cracow, Sieradz and Łęczyca voivodeships developed earlier, it was created using a completely different method. Instead of tracing the individual contour lines by hand from prewar WIG maps at the 1:100,000 scale, a numerical model of the land was used (NMT or DEM, *Digital Elevation Model*) made available to us by the Main Geodetic and Cartographic Documentation Center (Centralny Ośrodek Dokumentacji Geodezyjnej i Kartograficznej). The model is composed of elevation points arranged in a regular grid every 100m in the coordinate system “1992”. The resolution offered is sufficient from the perspective of the development of the main map because individual points, placed at 0.4mm intervals in the map’s scale (1:125,000), allow for their interpolation to the contour lines. This work was done in ArcGIS 10.2 using the ANUDEM algorithm, which takes into account not only elevation points, but also the distribution, position and shape of the hydrographic network.¹ Thanks to this, the generated contour lines are aligned with the shapes of rivers and lakes. This greatly shortened the length of the process of developing the contour lines, mostly due to the bulk of the work being automated.

According to Jerzy Kondradzki’s physico-geographical classification,² the historical territory of Greater Poland lies in the reach of two subprovinces: the South Baltic Lake Regions (Pojezierza Południowobałtyckie) and the Greater Polish-Silesian Lowlands (Niziny Wielkopolsko-Śląskie), which partly border each other along the latitudinal course of the Warta west of the Koło region. The aforementioned lake regions include the West Pomeranian Lake Region (Pojezierze Zachodniopomorskie), the South Pomeranian Lake Region (Pojezierze Południowopomorskie) and the Greater Polish-Kuyavian Lake Region (Pojezierze Wielkopolsko-Kujawskie), separated by the Toruń-Eberswald *Urstromtal* (Pradolina Toruńsko-Eberswaldzka). The West and South Pomeranian Lake Regions (Krajenka [Pojezierze Krajeńskie], Wałcz [Pojezierze Wałeckie], Drawsko [Pojezierze Drawskie] and the Wałcz Plain [Równina Wałecka]), located north of the *Urstromtal*, which now contains the Noteć River Valley, had its landscape shaped by the Fennoscandian Ice Sheet during the Weichselian glaciation. The visible

² J. Kondracki, A. Rychling, *Regiony fizycznogeograficzne*, [in:] *Atlas Rzeczypospolitej Polskiej*, Warsaw 1993, table 53.3.

hills of the terminal moraines, kame mounds, eskers, outwash plains and multiple ribbon and kettle lakes are characteristic of the late glacial landscape. Located north-west of Drawsko Lake and rising to a height of 219 m AMSL, the peak is the hill of the frontal moraine of the Pomeranian stadial. It is simultaneously the highest point of the sixteenth century Poznań Voivodeship, as well as the entire region studied. Other major elevations, such as the moraine hill with its 193m AMSL peak Dębowa Góra is located in the high, northern edge in the middle of Noteć River Valley, as well as the elevations west of Piła that extend to Wałcz and Nakielno and reach over 200m AMSL are all results of the glacier stopping while it was receding during the Krajna phase of the Poznań Stadial during the last ice age.

The region stretching south of the Noteć Plain, i.e., the Poznań, Chodzież and Gniezno Lake Regions (Pojezierze Poznańskie, Pojezierze Chodzieskie, Pojezierze Gnieźnieńskie) and the Września Plain (Równina Wrzesińska), owe their landscape to the Poznań phase of the Weichselian Glaciation. Its maximal range is marked by the terminal moraines ranging from the Trzemeszno area, through Gniezno, Poznań and in the direction of Lwówek and Pszczew. The entire landscape is characterized by a large variety of features. There are large clusters of ribbon lakes with long, narrow and deeply indented banks, like the lakes Popielewskie (Luben), Dymaczewskie (Będlewskie), Lednica and Chłop. In places where the glacier stopped for a longer time, its melting edge created a latitudinally placed terminal moraine. Near Chodzież, the stratified moraines of the Chodzież subphase reach their highest peak on Gontyniec Hill (192 m AMSL), while the highest point north of Kcynia is Dębianka Hill (160 m AMSL).³

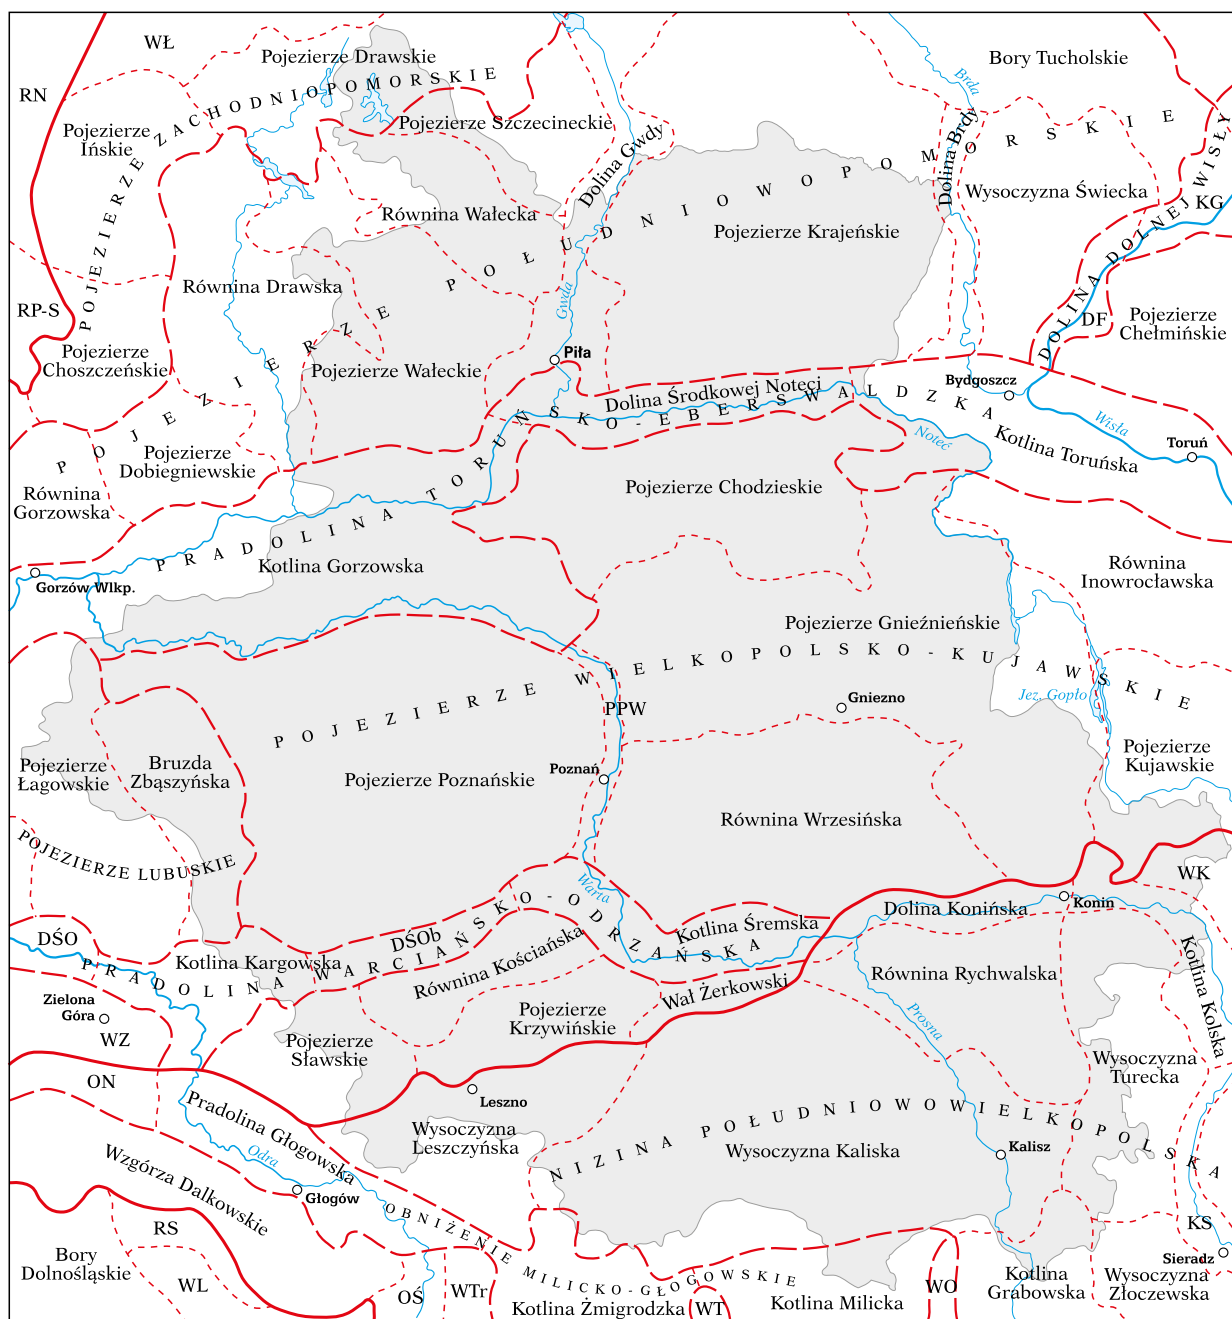

Another clear line of moraines stretching from Konin through Żerków (Łysa Góra, 161 m ASML) in the direction of Leszno and north of Wschowa are a result of a stop of the glacier in the Leszno phase, i.e., within the maximum extent of the last glaciation. As a result of the accumulation of glacial deposits, moraine hills formed from glacial tills, sand and gravel, as well as kames formed, reaching the height of 160m AMSL. The most characteristic feature of the landscape is a significant number of lakes: Dominickie (Dominice) and Przemęckie lakes in the Sława Lake District (Pojezierze Sławskie), and neighbouring with it to the east – the Krzywińskie Lake District, with Dolskie Wielkie (Banie), Wonieść and Grzymysławskie (Drzonkowskie) lakes.

One of the most noticeable features of Greater Poland's landscape are wide latitudinal depressions. In the north, there is the Toruń-Eberswald *Urstromtal*, and in the south it is the Warta-Oder *Urstromtal* (Pradolina Warciańsko-Odrzańska), connected to the Konin Valley (Doliną Konińską). These vast recesses were formed by the westward outflow of glacial and river waters along the edge of the ice sheet. They currently form the river valleys of middle and lower Noteć, as well as those of middle Warta and Obra. These are also the lowest points of Greater Poland. For example, the bottom of the Warta River Valley near the mouth of the Prosna finds itself at around 70 m AMSL and gradually lowers itself westward, reaching 26 m AMSL at the mouth of the Oder.

From the south-east, the aforementioned features (Lake Regions and *Urstromtals*) border the Southern Greater Poland Lowlands (Nizina Południowowielkopolska), formed by the earlier Riss Glaciation. The mesoregions in this area identified by Kondracki are the Leszczyńska, Kaliska and Turecka *Hügellands* (Wysoczyzna Leszczyńska, Wysoczyzna Kaliska, Wysoczyzna Turecka), as well as the Rychwalska Plain (Równina Rychwalska) between them – a monotonous plane with very little diversity in its landscape. They form mostly flat regions of the ground moraine, with an altitude between 100 m and 160 m AMSL. The total lack of lakes is an indisputable fact that points towards an early glacial genesis of the landscape, which got its modern features from the lengthy denudation.⁴ There are only a few scattered moraines from the Glaciation, like the Cieszkowskie Hills (Wzgórza Cieszkowskie), stretching south from Krotoszyn, reaching 180 m AMSL, or the elevations near Ostrów (185m AMSL). Only the northern part of the Turecka *Hügelland* shows some variation in its landscape, with the elevations reaching 100m relative to the Warta River Valley, with Złota Góra, placed between Konin and Tuliszków, as the *Hügelland*'s highest point at 191 m AMSL.

Map 1. Physico-geographic regions of Poznań and Kalisz Voivodeships

The terrain, and especially the lithology of its surface area, is deeply tied to the types and distribution of soils. The soils of Greater Poland were primarily formed from sandy and clay postglacial formations. The *Hügelland* regions are dominated by brown forest podzolic and rusty soils, formed in the processes of lessivage, podsolization and darkening. Slightly smaller areas are covered by brown soils, made from moraine till clays, characterized by a distinct topsoil advantageous for agriculture. They are found to the north and northwest of Poznań and on the Kalisz *Hügelland* in the Gostyń – Pleszew – Krotoszyn triangle. At the confluence of the Warta and Noteć, along the Prosna south of Kalisz or to the north-west of Wolsztyn, the soils are primarily poor: podzolic soils and podzols intertwined with rusty and gley soils. In the river valleys, the floodplains are dominated by alluvial soil with organic mucky soils, wetland soils and peat. The largest complex of these soils is found along the river valley of Noteć from Nakło to Wieleń, as well as several depressions and around lakes. The most fertile soils of Greater Poland, the black soils, which developed in small areas to the south-east of Poznań, in the belt running from Gniezno in the direction of Konin and from Powidz to Lake Gopło.⁵ Black soils are classified as good agricultural soils, belonging to the class II and III. Despite this, the majority of Greater Poland's soils are of poor agricultural use, as they are class IV and V soils.⁶

And inseparable part of the landscape is the water network – rivers and lakes. The most important river in the area is the Warta: the greatest tributary of the Oder to its right, whose middle and lower section separates Greater Poland into the north-west and south-east sections. From Koło, through Konin and Pyzdry, to Śrem, it flows almost latitudinally from the east, then turns to the north, passing under Poznań, to turn westward again using the Toruń-Eberswald *Urstromtal* up to its confluence with the Oder. Similarly, other larger rivers, such as the Noteć or Barycz, bordering Silesia, use the lower terrain of the *Urstromtal* in their latitudinal sections. Other rivers, the tributaries of the aforementioned ones, e.g., the Prosna, Obra in the south or the Drawa and Gwda in the north, as well as the upper section of the Noteć, have a mostly meridional course, which is why we can consider the river system in Greater Poland to follow a perpendicular drainage pattern.⁷

Greater Poland is the site of a major drainage divide, between the drainage basins of the Vistula and the Oder, but only a small, northeastern section of the Nakiel district drain into the basin of Vistula. The Kamionka and Sępólna (Sampolna) Rivers, through the Brda River, flow into the Vistula. The rest of Greater Poland drains into the Oder, especially the area of the watershed of Warta.

The reconstruction of the hydrographic network was based on cartographic data from the turn of the eighteenth and nineteenth century, before any extensive land development or riverbed alteration had begun. The largest alterations to the flows of rivers happened in the valleys of the Warta, Noteć and Prosna. The best cartographic source for the recreation of the water network of northern Greater Poland was Friedrich Leopold Schrötter's map⁸ from the turn of the eighteenth and nineteenth century (in a 1:150,000 scale). The rest of the network was reconstructed from the David Gilly and Cron (Krohn)⁹ map from the years 1793–1800 (1:50,000) and Gilly's¹⁰ reduction of the same map from the years 1802–1803 (1:150,000). Due to its precision and wealth of content, the lesser-known Gaul/Raczyński¹¹ map, which covers the Poznań and Kościań districts, was also very useful for reconstructing the environment. The *Topograficzna karta Królestwa Polskiego* (The Quartermaster's map),¹² published in 1822–1831 at the scale 1:260,000, was useful for the reconstruction work of the southeastern parts of the Kalisz and Konin districts. In a few cases, when a river's course was uncertain, more detailed materials were used specifically *Urmesstischblätter* done in the 1:25,000¹³ scale. Of course, as in the previously published volumes, the WIG topographic maps at the 1:100,000 scale¹⁴ were used as the basis.

¹⁴ Topographic maps, scaled at 1:100,000, published by the Military Geographical Institute (WIG).

During the analysis of the rivers' layout on the aforementioned source maps, discrepancies were noted and caught while comparing them to the WIG maps, which show the state from the interwar period including, depending on the source materials, sheets depicting the situation preceding WWI. We know that the river's layout on the map shows its state in that particular year, and we know for sure that said state did not last for an extended period of time. The rivers of Greater Poland have typical lowland watercourses, with a very slight incline. They are often called "erring rivers" because they split into multiple distributary channels and arms. The slight incline impeded any quick outflow of excess water, which sometimes covered the entirety of the fluvial terraces. In the case of the Noteć, this area can from about 2 to 8 kilometers wide. During the accumulation of water, multiple new distributary channels and arms often altered the main riverbed. Old cartographic sources allowed us to observe major differences in the course of the river.

It must be noted that from the end of the sixteenth century to the publication of the aforementioned source maps an additional 200 years had passed and the state of the water networks had very likely changed from the one in the sixteenth century. This is confirmed by the major differences that appeared in the 130-year period between the start of the nineteenth century and the publication of the WIG maps. For example, on Karol Perthées's¹⁵ or Gilly's maps, the confluence of the Lutynia and Warta was at the level of Cieszewo, while on the WIG map, the confluence is at the level of Orzechowo, nearly 2.5 km away. Similar changes in the lower course of a river can be seen in the case of Powa (a tributary of the Warta) near Konin and Rumin. These changes can also alter the course of the main stem rivers, i.e., the river the tributary flows into. An example of this is the old Trzebina, which was a right-bank tributary of the Noteć, but currently (under the name Człopica) is a left-bank tributary of the Drawa, with the confluence to the northwest of Krzyż Wielkopolski.

We can also encounter a change in the river category. A main river carrying more water can sometime change roles with its tributary, which took on the role of the main stem due to an increase in water flow.

The river Bawół, also called the Czarna Struga, a left-bank tributary of the Warta, can serve as an example of that phenomenon. In the present day, it flows north from Stawiszyn and has a confluence with a right tributary, the Biała Panieńska, near Królików. The situation is reversed on Gilly's map: the Biała, which flowed from the village Przyranie to the Warta, and had its own, several kilometer long left tributary that merged with it near Królików, while a river called Czarni (Czarna Struga on Gilly's map) flowed from Stawiszyn towards the northwest and flowed into the Prosna near Chocz. Due to the increase of water in the Czarni and probably human intervention, it had changed its course and combined its main stem with Biała Panieńska's left tributary's source near Jarntowo and Lipice and shifted its direction towards the Warta. The change in water flow to the Biała Panieńska altered the character of the river junction near Królików. Now, the Białą Panieńska, known as the Czarna Struga, flows into the Bawół.

Based on the abovementioned source maps, several meanders and river bends were reconstructed in the middle course of the Warta, which due to later intervention have been made shallower or completely cut off from the main stem river. Between Czeszewo and Pogorzelica, the length of the Warta was reduced from 11 to less than 6 kilometers. East of Skwierzyna, between Świniary and Głusków, the riverbed had also been greatly straightened, reducing the length of the river in half. After the reconstruction, the image of the Warta on the map of Greater Poland is a close approximation to its course at the end of the eighteenth century.

The reconstruction of Obra's riverbed presented a major obstacle. Its drainage basin was once a vast and inaccessible wetland called the Wielki Łęg Obrzański. Wawrzyniec Surowiecki wrote in the early nineteenth century that the Obra was a river "without a riverbed, without an incline, its waters go in every direction and drench immeasurable plains, turning them into inaccessible swamps and streams".¹⁶ Land development here had already begun in 1799 with the creation a row of channels improving the water drainage and drying out the central part of the Obra's drainage basin. Written sources contain a lot of information on this subject, but, even so, in some cases it is impossible to unequivocally identify a particular watercourse and to reconstruct its course after so many hydrotechnical changes. Examples

¹⁵ Perthées Kalisz.

¹⁶ W. Surowiecki, *O rzekach y splywach krajów Xięstwa Warszawskiego*, Warsaw 1811, p. 74.

of this include the streams: Bystra Rzeka, Zarosła, Dęba, Kłodziawa and the Witna, the Odra's tributaries near Prochów, as well as the Ziemina and Prochów in the Kościan district.¹⁷

The presence of multiple lakes is a noticeable feature of the landscape of Greater Poland, especially in the north and central region, which were formed during the regression of the most recent glaciation. The lake districts include latitudinally-oriented, long and deep ribbon lakes (the Kórnicko-Zaniemska is 17 km long), as well as large, but shallower, moraine lakes with well-developed shorelines.

The number of water reservoirs has been constantly reducing over the centuries. Human interference into the environment greatly lowered the water level. At the same time, the drying out process and siltation have led to an accelerated rate of vegetation overgrowth, sometimes leading to their "disappearance" from the landscape. Already from an inspection in the mid-sixteenth century, we can find out that "there is a small lake, but it grew over, there used to be a fishing area there".¹⁸ Shallow and flow-through lakes were primarily touched by these processes. A good example is a lake near Wiskitno in the Krajeń Lake Region (18 km east of Więcbork), which on Schrötter's map from 1802 is a large reservoir called Glusza See. Currently, it is a wetland, swampy area called Bagno Glusza with only a few small water-filled pits. Sometime the process of lake overgrowth is so advanced that it is impossible to identify former lakes on modern maps. There are multiple examples of this in Greater Poland.

Written sources often mention the existence of ponds and pools near surveyed settlements, e.g., "a small pond in Kęszczica, with carps in it, [from which other ponds take fry]".¹⁹ There is little point in looking for them on even the most precise modern maps, so their locations would have been approximated, but the 1:250,000 scale does not allow for the depiction of such small bodies of water. It should, however, be noted that on the map of Greater Poland, we were able to locate and depict clusters of small lakes, particularly those that were well-identified and named. In many cases this was made possible by credible written sources, which suggested the locations and search area on the map. The detailed descriptions of the boundaries of properties made possible the identification of physiographic elements, especially lakes and ponds. This sometimes led to such an overflow of names and descriptions, that it was necessary to dismiss some of them. For example, this involved the borders of the lands owned by the Czarnkowki family or several properties of the Pszczew key of estates.

The next landscape element depicted on the map of Greater Poland was the forestation. The forested areas have been steadily declining over time, as a result of the expansion of agriculture and the growth of settlements. The lumber gained from deforestation was used as a resource for the construction of settlements, bridges and causeways, as well as being the primary source of fuel. At the start of the sixteenth century, the Gniezno district housed the Moków Forest (Puszcza Mokowska) near Mąkownica and Witków and a forest called Trzuskolom,²⁰ which was a part of a uniform forested area that stretched eastwards towards Lake Gopło and southwards to Słupca. In the present day, it is difficult to find any remains of these woods.

During the reconstruction of forest complexes according to their state at the turn of the eighteenth century, the aforementioned maps by Gilly and Schrötter, as well as the Quartermaster's map, were used. Due to the chosen scale (1:250,000) and for the purpose of ensuring the map was readable, the minimum size of a depicted forest region had to be 4 x 4 mm on the working scale of 1:100,000, which comes to around 16 ha, in accordance with the previous volumes of AHP.

The largest forest complex is the Noteć Forest in the Poznań district. This territory, stretching across the confluence of the Warta and Noteć River, did not have a name in the Middle Ages, with the exception of the term *silva magna* as it was described with in 1296.²¹ The poor, sandy soils that formed on outwash plains are dominated by pine forests. Large, although greatly scattered, forests appear around Człopa (Człopska Puszcza, i.e., the forests of the Człop estate) and Chodzież, between the rivers Plitnica and Piława (Pilawa), east of Owieńsk in the direction of Głębozec, in the area of Puszczykowo and Rogalinek. In the Wałcz district, forests dominate west of Wałcz and north of

¹⁷ SHGPoz, pt. I, issue 1, p. 161.

²¹ SHGPoz, pt. III, issue 2, p. 299.

Drawsko Lake, as well as near the border with the Poznań district. The Kościan and Wschowa districts are less forested, with larger stretches of forest south of Mosina, between Żabno, Brodnica and Iłowiec Mały, as well as between Dolsk and Jeżew. In the Kalisz Voivodeship, there is no forest complex comparable to the Noteć Forest. The east part of the voivodeship is considerably more forested than the rest of it. Besides the woods sprawling along the Noteć Valley, the majority of the forest complexes in the Kcynia district can be found to the east. The part of the Konin district south of Warta's valley is densely forested, up to the border with the Kalisz district, as well as the southeastern edge of the voivodeship, in the belt from Giżyce to Iwanowice.

Looking at the placement of forests and settlements in Greater Poland, it is difficult to ignore the "white spot" in the Poznań Lake Region, south of Tomyśl, devoid of both woods and settlements. This is linked to the later Dutch type settlement, which started in the eighteenth century, who moved into difficult regions that required deforestation or land development. It is likely that these settlers cleared out forest that were there earlier.²² There are similar cases in the rest of Greater Poland, such as near Nekla and Czerniejewo in the Pызdry district²³ or Skwierzyny and Międzyrzecze in the Poznań district, where the Dutch type settlement greatly impacted the natural environment.

The names of settlements, which are quite numerous throughout Greater Poland, often hint at the historical presence of forests. One set of names informs us about the trees that could be found in the area (Brzezcie, Bukowiec, Dąbrowa, Grabowo or Lipnica – respectively refer to birch, beech, oak, hornbeam and linden trees), while another points to the method used to create the settlement – the felling of trees (Rąbino) or deforestation by burning (Pożegowo, Opalenica, Pogorzelica, Popielewo).

A separate problem that was very important for the preparation of the map was the issue of names. Only a few physiographic elements are described on old maps. This included mostly large rivers and a handful of lakes. Written sources from this time, such as the tax registers, lack these names while inspections from the sixteenth century would only name the largest rivers. Small ponds or pools are named, but their location is rarely precise and often ambiguous. In the area of Świerczyna and Górzno in the Kościan district, during the demarcations of estates in 1563 many local streams were mentioned: Dobierz, Skrzypaniec, Łekno, Samica Górzńska.²⁴ These names, however, cannot be presently attributed to any of the stream currently found there.

This work uses material from both the Historical and Geographical Dictionary of the Poznań Voivodeship in the Middle Ages (*Słownik historyczno-geograficzny województwa poznańskiego w średniowieczu*), and the files of the Section for the Historical-Geographical Dictionary of Greater Poland IH PAN in Poznań.²⁵ The in-progress Digital dictionary of Polish hydronyms (ESHP)²⁶ was also a great help in our research.

Sometimes, over the course of 200 years, multiple names can be found for one item, which of course makes identifying it more difficult. A good example is the river Pokrzywnica, a left tributary of the Warta, currently called Powa. In the inspections of 1564 and 1765, it is called the Pokrzywnica, and also has this name in the *Słownik geograficzny Królestwa Polskiego i innych krajów słowiańskich*. On Perthées's map it figures as "Koprzywnica", on Gilly's map – "Rudzina Flug", on the Quartermaster's and WIG maps – "Powa", while Wojciech Chrzanowski²⁷ and Daniel Gottlob Reymann²⁸ call it "Ostrowa" on their maps.

This diversity of names also stems from the fact that specific sections of a river had different "local" names. Typically, they were related to the name of the town or lake they flowed through. For

example, the modern Mała Wełna, which passes through multiple lakes, used to change its name along its path (Radusz, Sława, Dębica, Peda or Wełnianka).

Oftentimes the changes in the names of rivers or lakes can result in serious mistakes while trying to interpret them, as was in the case of the Moskawa and Żrenica, which flow near Środa. Moskawa was changed to Schrodaer Fliess, and again later renamed to Średzka Struga after returning to Polish nomenclature, which caused the upper section of the old Moskawa to become Średzka Struga, while the river Żrenica, a left tributary of the old Moskawa, became the upper course of today's Moskawa.²⁹

Most of the region of Greater Poland is characterized by variety in terrain, vegetation and landscape, which undoubtedly influences the natural and scenic attractiveness of the land. The most unique and valuable parts of the region are under the protection of multiple national and landscape parks, and nature reserves. It is in these areas that we can see how the landscape of Greater Poland once looked.

III.1.5 SIERADZ AND ŁĘCZYCA VOIVODESHIPS

Małgorzata Wilska

Three physiographic elements were presented on the map of Sieradz and Łęczyca Voivodeships in the second half of the sixteenth century. They were: natural topography, waterway network and forestation. As in the previously published volumes of this series of AHP, for the turn of the eighteenth and nineteenth century the waterways and forests have been reconstructed on the basis of earliest, detailed cartographic records from the first three decades of the nineteenth century. The relief was presented using contour lines with 20 m intervals up to 200 m AMSL and 50 m intervals above this level. Selected elevation points have also been marked.¹

Regions. The area of Sieradz and Łęczyca Voivodeships comprises physiographic regions belonging to three subprovinces: 1) Mid-Polish Lowlands, 2) the Silesian-Cracow Upland, 3) the Lesser Poland Upland.² The Mid-Polish Lowlands are here divided into macroregions: the South Greater Poland Lowland, the Trzebnica Ridge, the Middle Mazovian Lowland, the South Mazovian Heights.

Within the range of the Mid-Poland Lowlands, the largest part of our territory belongs to the South Greater Poland Lowland, to its nine macroregions. These are: the Koło Basin, the Kłodawa Upland, the Sieradz Basin, the Turek Upland, the Łask Upland, the Grabów Basin, the Złoczew Upland, the Szczerców Basin, the Wieruszów Upland.

The Koło Basin covers the widening of the Warta River valley in the spot where the river changes its course from longitudinal to latitudinal, and the mouth of the proglacial valley of the River Ner. The Kłodawa Upland is situated in the northern part of the Łęczyca Voivodeship. At the base of this upland lies the Cuyavia Tectonic Ridge with a salt dome, exploited in Kłodawa. The Sieradz Basin constitutes the longitudinal fragment of the Warta River valley, south of the Koło Basin. This area, sometimes called ‘Sieradz Trough’, widens near the city of Sieradz. The basin adjoins the Turek Upland to the west and the Łask Upland to the east. The meadows and forests on the terraces of the Warta River and moraine plains near Sieradz form the natural landscape.

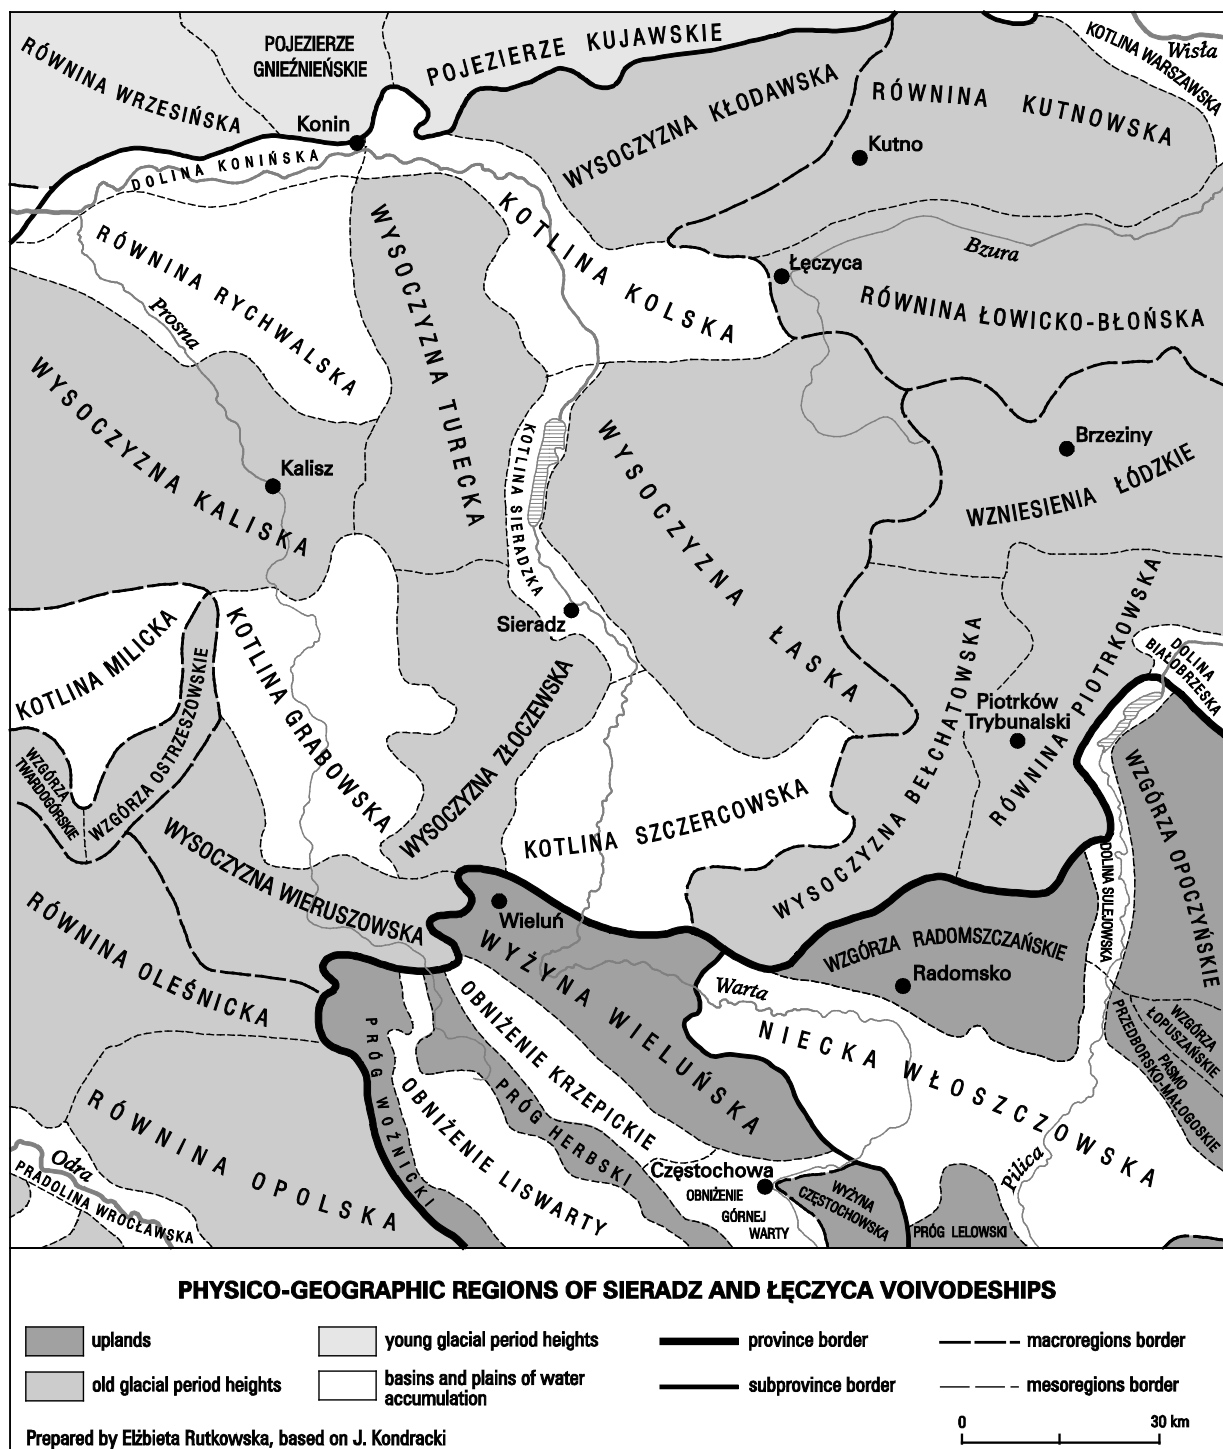

The Złoczew Upland is a moraine plain lying between the Prosna and Warta Rivers. It separates the Sieradz Basin from the Grabów Basin. The latter is a trough-like depression, with the axis along the course of the River Prosna. The bottom of the basin is covered with sands and sand dunes. The Szczerców Basin is the next basin in this macroregion. It is a plain situated in the glacial cirque, covered with varved clay and sands, partly waterlogged. Two rivers flow through its bottom: the Warta and its tributary Widawka.

The Wieruszów Upland, cut by the upper course of the River Prosna, forms a kind of bridge between the Wieluń Upland and Ostrzeszów Heights. The latter belong to the Trzebnica Ridge macroregion. The heights are also known as ‘Cat Mountains’ or ‘Crooked Mountains’ (the name Crooked Mountains refers especially to the heights situated to the southwest of Ostrzeszów, that surround the villages Ligota and Kobyla Góra.

Dunes on the both sides of the heights are covered by forests. The highest elevation point is the Kobyla Góra – 285 m ABMS and Bełczyna – a hill near Parzynów, with 278 m ABMS. The greatest

¹ See AHP Sandomierz.

² The names of the physiographic regions were taken from *Atlas Rzeczypospolitej Polski*, Warsaw 1993.

Map 1. Physico-geographic regions of Sieradz and Łęczyca Voivodeships

relative height under Kobyła Góra is 80 metres. The steepest slopes are situated in the south, where the inclination angle reaches 20 degrees.

The next macroregion belonging to the Mid-Poland Lowlands subprovince is the Middle Mazovian Lowland. It covers the south-eastern part of the Łęczyca Voivodeship, including a fragment of the Łowicko-Błońska Plain and a fragment of the Kutno Plain. Two Bzura tributaries flow through this area: Ochnia and Słudwia.

The last macroregion in the Mid-Poland Lowlands in our area are the South Mazovian Heights, which comprise the following mezoregions: the Łódź Heights, the Piotrków Plain, the Belchatów Upland and the edge of the Białobrzegi Valley.

The highest elevation between Łódź and Białobrzegi is 273 m AMSL. This mezoregion is built of moraine clay and glaciofluvial sands. The terrain to the north and west descends in well-defined

steps, and to the east it gently slopes towards the River Rawka. The differences in elevation reach even 100 m, dry valleys and suspended troughs cut into steep slopes, and the vast stony fields created in periglacial conditions – all this creates unfavourable conditions for settlement. The presence of easily exploitable iron ore can be explained by the old and Jurassic rocks found on the surface of this area. Kitchen salt deposits created in the Permian were exploited in the Modern Age.³

The Piotrków Plain adjoins the Bełchatów Upland to the west, and to the east it adjoins the valleys along the Pilica River, to which the River Luciąża flows near Sulejów.

The south-western part of Sieradz Voivodeship comprises the Woźniki-Wieluń Upland macroregion, belonging to the Silesian-Cracow Upland subregion. The Woźniki-Wieluń Upland is built of Jurassic and Later Triassic rocks, that create alternating low steps and depressions, used by the Rivers Mała Panew, Prosna, Liswarta and upper Warta. All heights in this area could be described as low and high hills. Ożarowskie, and in the middle section Jaworzyńskie, Hills are the high ones. Działoszyńskie Hills, sometimes called Działowski Mountains, are situated in the bend of the Warta. Low hills, the so-called Mykanowskie Hills, are situated between the Rivers Kocinka and Warta. Its highest absolute elevation reaches 260 m AMSL.

Another mezoregion is the Liswarta Depression that was created in the low-resistant rocks of the Lower and Middle Jurassic period. The upper course of the Liswarta and the Prosna flow through the depression. The Liswarta turns north near Ługi and then crosses the Wieluń Upland, the Prosna flows through the rest of the depression. A small part of the southern part of our area enters the Krzepice Depression.

The Lesser Poland Uplands subprovince is divided into several macroregions. The south-eastern part of Sieradz Voivodeship covers the Przedborska Upland macroregion, which comprises the following macroregions: the Radomszczańskie Heights, the Sulejów Valley, the Włoszczowa Trough and a small part of the Lelowski Rock Step. The highest point of the Radomszczańskie Heights is the Chełmo Mountain with its 316 m AMSL. It is also the highest absolute elevation in the territory of Sieradz and Łęczyca Voivodeships. The lowest point of the described area (92 m AMSL) is situated west of Sobota.

The geological construction of Sieradz and Łęczyca Voivodeships is largely of Quaternary origin. However, in many places the older bedrock is very close to, or even – on the surface. Such is the situation in the area of Przedborze and Działoszyn, where there is Jurassic limestone in the bend of the River Warta, and in the area of Widawa near Wielka Wieś and Borzyków, as well as in the vicinity of Burzenin. Cretaceous rocks can be found near Poddębice and Uniejów.

The geological past defined the placement of the resources. These are the limestone-quartzite minerals, chalks, sands, gravels, clays, muds, brown coal, iron ore, kitchen and potassium salt. Some of these were exploited in the sixteenth century, e.g. salt near Kłodawa and ore and coal in the Wieluń land.

Soil. It is assumed that in the period from the Middle Ages to our times the structure of the soil did not change significantly.⁴ It could be said that soil was more fertile then than it is now, as black earth and alluvial soils are considered extremely fertile. However, they rarely appear in the area of Sieradz and Łęczyca Voivodeships. The alluvial soils cover narrow passages along the rivers, e.g. the Prosna and the Warta, in Sieradz Voivodeship, and the Ner and the Bzura in Łęczyca Voivodeship.⁵

Fertile black earth can be found in a small area in the northern part of our region. Rich alluvial soils were light, easy to cultivate even with primitive tools. As a result, the earliest settlements developed in river valleys. Assuming B. Dobrzański's six-class classification of soils,⁶ we can see that the soil in our area is mainly the 4th class one, i.e. average. According to the soil structure assumed by J. Kondracki,⁷ we can say that the dominant ones are brown and pseudopodzolic soil, made of loose sands and light clay.

Water network. The water divide between the river basins of the Vistula and the Oder crosses the area of Sieradz and Łęczyca Voivodeships. In the south of Sieradz Voivodeship, in the Radom district, it crosses the sixteenth century parishes: Dąbrowa, Wszeborzyce, Borzykowa, Żytno, Kobile and goes between villages Kodrąb and Rzejowice.⁸ In the Piotrków Plain the watershed runs between Bodganów parish and Grocholice, then runs through Srockie, Tuszyn and Rzgów parishes. In the uplands it crosses Łódzia and Bełdowo parishes (present-day Łódź is situated on this watershed). In the northern part of our area the water divide runs between Chociszew and Parzęczew parishes, then between the parishes of Solca Wielka and Leźnica. Because of the line of the divide, the streams and rivulets flow from the Łódź Heights in every direction, towards the valleys. Near Łęczyca, the land descends even more toward the bottom of the Warsaw-Berlin proglacial valley. The lowest point at the bottom of the Bzura River valley is 99 m AMLS. In the vicinity of Łęczyca the bottom narrows down to 2 km. In the area of terminal moraines near Drzykozy village it ascends to 163 m AMLS. The water divide between the basins of the Rivers Oder and Warta is very low closest to the River Bzura, the tributary of the Vistula and the Ner. Between Łęczyca and the settlement at Pełczyńska, situated near the River Ner, the height of the water divide does not exceed 116 m AMLS.⁹

The most important rivers of the Vistula basin are, apart from the boundary Pilica and Bzura, Wolbórka that flows in Pilica, Mroga and Moszczenica. The Oder basin comprises the Warta and all right tributaries of the latter – Widawka, Ner and Proсна. In the south-eastern part of Sieradz and Łęczyca Voivodeships the rivers flow in the longitudinal direction. For instance, the River Proсна from Bolesławiec to Kalisz, or the Warta north of Działoszyn to Koło. This longitudinal arrangement of the rivers changes to latitudinal near Łęczyca and further on, in the northern part of our area.

The water network of the described Voivodeships was presented on the basis of the oldest precise cartographic sources from before 1839. They depict the state of the bodies of water before the commencement of large-scale canalization and irrigation works. Due to the scale of our study, the choice of water elements was based on the maps using 1:300,000 scale ratio. Trenches and canals, built in order to drain the swamps in the nineteenth and the twentieth century were removed from the base map, and some corrections in the range of surface waters were made. The reconstruction covered mostly large and medium rivers. Because the changes in the river beds of small rivers, especially those flowing through narrow valleys, are marginal and difficult to mark on the map on our scale, we accepted their flow presented on topographic maps on a 1:100,000 scale.¹⁰ The course of large rivers (Warta, Proсна, Bzura, Pilica) was presented according to the Topographical Map of the Kingdom of Poland and Gilly's map.

The course of the Bzura River in the vicinity of Łęczyca, as well as its many beds and broads, was reconstructed on the basis of the Topographical Map of the Kingdom of Poland. Before the eighteenth century its main river bed ran from the area around Leśmierz and Mierzyn almost directly North towards the Ostrów Tumski terrace, which it encircled, and then went back in the north-eastern direction. On our map it was drawn according to 'Stara Woda' ('Old Water') designation on the Topographical Map of the Kingdom of Poland. In similar fashion, on this basis, the range of the great belt of 'Łęczyca Mud' and the muds and swamps situated north-west of Łęczyca, along the course of the Rivers Warta and Ner was reconstructed. In several places the course of the Warta took a different direction from the way it runs today. And so, in the upper course near Karczewice, the flow of the Rivers Warta and Wiercica is presented according to the Topographical Map of the Kingdom of Poland. Next, near Sieradz, the main flow runs through the oxbow lake. Near Pławno the course of the River Warta was different in the sixteenth century than it is today, the mouth of the River Ner, where it flows into Warta, also looked different. In the sixteenth century, large rivers had significantly more arms and broads than they had following regulations and the building of trenches and canals in the nineteenth and the twentieth century.

⁸ See the map of state and ecclesiastical borders and the main map. About waters in the area of Łódź see S. Lipka, *Zanikanie wód na obszarze Łodzi*, „Czasopismo Geograficzne”, vol. 29, 1958, p. 373.

¹⁰ See AHP Mazovia and AHP Sandomierz.

The inspection sources show that a large number of ponds has been created in the oxbow lakes, e.g. in the broads of the River Warta south of Brzeźnica or the Warecki Pond near Wąsosz, mentioned in the 1564 inspection.¹¹ The ponds near Piotrków – Bugaj and Wierzeje, were reconstructed.¹²

The water level was higher in the sixteenth century. This means that even smaller rivers were significantly deeper and broader than they are today. The information about a mill situated on some river proves that in the sixteenth century the size and speed of the flow were enough to move the mill (supported by artificial damming up of the water). Having made such assumptions and using the Topographical Map of the Kingdom of Poland as a base, we lengthened some of the watercourses. For instance: Pisia – a rivulet near Brzeźnica, starts west of Pajęczno on the Topographical Map, and today: not before Wistka.

Establishing the course and name of right tributaries of the Moszczenica – the rivulets Malina and Kostrzynia, flowing from the south towards the village Piątek, caused many difficulties.¹³ Twentieth century maps on a 1:100,000 scale show the Malina flowing into the Moszczenica near Łazin. The Kostrzynia is not named and its mouth was hard to identify (it could have been a tributary of the Moszczenica or the Malina). We accepted, following the Topographical Map, the course of the River Malina, a right tributary of Moszczenica flowing into it downstream of Piątek. The second rivulet, called ‘Mościenica R czyli (that is) Cessanka’ on the Topographic Map, should be identified with the sixteenth century name Kostrzynia, characterizing the watercourse flowing into Moszczenica River east of Gieczno near Sypin.¹⁴

Smaller rivers, causing many difficulties when it came to identifying and establishing their names, are: Brodnia-Pichna, a right tributary of the River Warta; Sadkówka, Pichna (flows into Prosna near Kalisz); Olszyna; Swędr-Kręcica, a left tributary of Widawka. It is worth emphasizing that Swędnia is one of the oldest names in our area, one of Lithuanian origin.¹⁵

There were no large lakes in Sieradz and Łęczyca Voivodeships. Several unnamed ponds were marked on the map, known to us from inspections, e.g. in Ostrzeszowskie Voivodeship.¹⁶

Forestation. The forests were presented according to the Topographical Map of the Kingdom of Poland and Gilly’s map. As it was in the case of the map of Sandomierz Voivodeship, the difference between forests and thickets was maintained. Thickets are often a relic of forest, because they originated as a result of agricultural use of the border of woodland area. For the sake of the readability of the map, the minimum assumed during the transfer of small forest relics was at least 4x4 mm on a 1:100,000 map, that is 16 ha of terrain.

For Sieradz and Łęczyca Voivodeships we possess source information about primeval forests, but their names are not provided.¹⁷ Research on the development of settlement allows us to recreate the

¹¹ LWWK 1546, part 2, p. 83: ‘There is a lake in Wąsosze, that is called Warczki Staw, by the dike across, 45.5 ells and not much broader in other places, along 8 furlongs, deep, stocked from the Warta and the fish come each year’. Probably, this was a part of a dead arm of the Warta, cut off from the main basin – on present-day maps on scale 1:100,000 many oxbow lakes can be seen. Apart from this, there are numerous (around 10) ponds mentioned in this inspection, situated in the vicinity of Stara Brzeźnica (LWWK 1564, part 3, pp. 73, 82 f.). One of those was situated where perhaps today the mill Borowiec – ‘Borowy pond on the River Skłęczca (now Pisia), it is 8 furlongs long, and 20–15 rods in the broadest place, and good and deep, stocked by itself’. Also, in the area of Wróblów village in Wieluń Voivodeship numerous ponds, e.g. Kuźniczysko on the Prosna (LWWK 1564, part 2, p. 93, footnote 205), probably near the Królewska Góra demesne marked on the 1:100,000 map – on Gilly’s map we can find Wróblewski Młyn.

¹² See the commentary to the plan of Piotrków, III.6.21.5 in this edition.

¹³ My thanks to prof. Andrzej Tomczak for helping me identify these rivers.

¹⁴ On the Topographical Map it was ‘Cessanka’ – it is a mistake that should be corrected to ‘Cesarka’, what is proved by the existence of a village Cesarka in the sixteenth century in Skorszewy parish, of which only a mill of that name remained in the nineteenth century (SGKP, vol. 6, pp. 727 f.). The place where the Kostrzynia flows into Moszczenica was taken from A. Tomczak, *Zarys dziejów parafii Gieczno do roku 1939*, Toruń 1997, p. 15.

¹⁵ Swędnia, earlier: Swędra, see: *Słownik starożytności słowiańskich*, vol. 5, Wrocław 1975, p. 499. This name belongs to the group of balto-slavic names, and is attested in the sources in 1136 – aqua Zvandri.

¹⁶ Numerous unnamed ponds, apart from those listed in the inspections of Wieluń Voivodeship, near Sieradz, Piotrków, Szadek, Bolesławiec, Radomsko, Grabów, Łęczyca, see LWWK 1564, part 2, pp. 24, 41, 46, 51, 67, 100, 112, 122, 156.

¹⁷ In the inspections covering the area of Sieradz and Łęczyca Voivodeships there are no names of forests – contrary to Mazovia and Sandomierz Voivodeship. Usually a name of coniferous forest is mentioned, or a forest along with the information that is stretched from some settlement, e.g. ‘of which forest there are 8 furlongs of length and 4 in the widest place, 2 in the thinnest. The forest starts from the Szadek road, which runs from Zagorzice, up to the border mound in the corner, that lies on the borderline of Stronie, Zapole and Świerziny’ (LWWK 1564, part 2, p. 116) or – like in case of Komorów in Ostrzeszów district: ‘Woods, forests in this area are a mile long and half a mile broad, of these there is no use, because other

stages of the decline of the size of forests. Cleared were mainly forests that covered good soils and those in the areas close to important roads. Later, the settlement occupied areas with worse soil. The change in the type of the stand of trees was a secondary effect. Deciduous trees require better soil than coniferous trees, which grow on sandy area and dunes. K. Buczek divided forest formations into four categories: park, forest-field, forest and swamp.¹⁸ The last category could be found mostly in the northern part of Łęczyca Voivodeship, in the valleys of the Rivers Bzura, Ner and Warta.

On the southern border with Silesia the forest covered the area between Praszka and Żytniów, and between Żytniów and Starokrzepice. East of Ruda, the forest formation combined with swamp formation, reaching Wierzchlas, Olewin and Sieniec. In small fragments it wedges between Nietuszyn, Czarnożyły, Świątkowice, Pilchowice. Dense woodland covered the area south of Brzoza, Młynisko, Rostów and Żdzary, coming to a halt on the line of arable fields of Słupsk, Skomlin and Wójcin.¹⁹

In Ostrzeszów Voivodeship, on the borderland of Silesia, the forest covered a large area, as it reached the Silesia Forest. And so, the forest grew on the area between the Rivers Niesób and Pomianka in the south, and in the middle-eastern part it stretched from Wyszarów and Skarydzew, via Rudenica towards the rivulet Struga.

East of Ostrzeszów, the ironworks ('kuźnica'), such as Kuźnica Bobrowska or Kuźnica Skakawska contributed to the thinning out of the forest. Primeval forest grew on the southern and eastern slopes of the Ostrzeszów Heights. To the west, between Ostrzeszów and Mikstat it joined the forest in the Odolanów basin, which covered the upper course and the valley of the River Barycz, outside our voivodeships.²⁰

To the south of Wieluń, on the borderline with the Cracow Voivodeship, the forest stretched to the south-east of Działoszyn, covering the bend of the Warta River, and then through the passage between the Rivers Biała Olsza, Kocinka and Warta. Between Radomsko and Pławno this complex joined the forest of the Radomsko Heights, situated on the water divide and heading north. In the vicinity of Kamieńsk, the water divide, along with the line of the forest, moves west. The settlement moving from the west through the valleys of the Rivers Wolborka and Luciąża, toward Będków and Tuszyń merged on the line of the divide with the villages situated in the forests between the valleys of the Rivers Widawka and Ner, from the direction of Pabianice, Spicymierz and Sieradz. This narrowed down the forest area. However, Długosz wrote that in the area of Pabianice castellany an animal lair is easier to find than arable soil.²¹

The exploitation of woodland in order to obtain ash, charcoal and pitch intensified in the sixteenth century. The workers built settlements on the borders of the forests, or even in the forest, where the trees had been cut down or burned, as is proven by the names of the villages, such as Smolice (Brzeziny and Łęczyca districts), Smolny młyn (Ostrzeszów district) and Węgielnice (Wieluń district).

Narrowing down of the woodland area sometimes occurred in stages, e.g. near the rivulet Niesób we find villages abandoned in the sixteenth century, which were repopulated again in the seventeenth century (Skakawa, among others). New steel mills seized more and more woodland area.

A lesser forest complex grew on the Łódzkie Heights in the sixteenth century. It remained there till the end of the eighteenth century.²² The settlement in this area stopped growing mostly due to

villages have enough woods and forests' (ibidem, p. 120). There are also numerous mentions of forests without a name in Łaski's Liber beneficiorum (Łaski LB p. 491 et al.). See also: K. Buczek, *Ziemia polskie przed tysiącem lat*, Warsaw 1960, pp. 26 f.; M. Dobrowolska, *Przemiany środowiska geograficznego Polski do XV wieku*, Warsaw 1961 (and map); S. Zajęczkowski, *Studia nad terytorialnym formowaniem się ziemi łęczyckiej i sieradzkiej*, Łódź 1951, pp. 40 f.; J. very inconvenient geographical conditions (great relative heights, steep slopes of dry valleys), which protected this area from the thinning out of the forest and transformation into fields. Rocks lying below the surface of the ground wander up as a result of the processes occurring in the seasonally frozen land and are found during ploughing even today.²³

In the northern part of Sieradz and Łęczyca Voivodeships the woodland area was already scant in the sixteenth century, as these swamp valleys had been inhabited for centuries.²⁴

In terms of geobotanic division, Sieradz and Łęczyca Voivodeships belonged to the Baltic region. The areas surrounding the river basins of the Bzura, Ner and Warta included flora typical of the belt of great valleys, and the flora in the remaining part of the described area was typical of the middle uplands. As such, mixed forests were dominant, with a large percentage of oak trees, lindens, sycamores and fir trees with hazel and guelder rose undergrowth. Pine and pine-oak mixed forest grew on sandy areas. Hornbeam, alder and birch forest were dominant in the damp valleys, e.g. of the rivulets Grabia, Widawka and Wolbórka. In the broad swamp valleys of the Rivers Warta, Ner, Prosna and Bzura there were alders and peat bogs, typical of waterlogged areas.

III.1.6 CUYAVIA AND DOBRZYŃ LAND

Katarzyna Słomska-Przech, Tomasz Panecki

The layout of land, hydrography and forestation are the three physiographic elements presented in the map covering Brześć and Inowrocław Voivodeships, and Dobrzyń land. In keeping with AHP assumptions, the water network and woodland were reconstructed to reflect their distribution at the turn of the eighteenth into the nineteenth century. In the absence of sixteenth-century sources suitable for recreating the layout of physiographic elements, our work was based on the oldest cartometric and cartographic sources.¹ Thus, the main map's physiographic layer and its data on settlement and Catholic Church administration are separated by two centuries. This should be kept in mind when using the map. Forestation and water network reconstruction was based on a method similar to that employed in previous AHP volumes. Contour lines illustrate the layout of the land. The final effect resembles that of previously compiled maps, yet it was achieved by semiautomatic contour line generation from a digital elevation model (DEM) using the ANUDEM algorithm.²

Ryszard Kukier³ and Bożena Degórska⁴ were among those who discussed the environmental changes occurring in Cuyavia and Dobrzyń land since the eighteenth century. Zbigniew Zyglewski⁵ assessed Jan Długosz's hydrography of Cuyavia from the second half of the fifteenth century from the perspective of current knowledge.

The AHP volumes published to date discuss Poland's physico-geographical division by referring to Jerzy Kondracki's body of work.⁶ In 2018, Jerzy Solon's team⁷ verified and established the details of the existing division into regions, by referring to the theoretical basis. For most regions, the team only specified borders in relation to the current geomorphological and geological data. The number of mesoregions was increased to 344 from Kondracki's 316. The data is also available in GIS file format.⁸

Both divisions locate the areas discussed in this volume within two subprovinces. The bulk of this area lies in the South-Baltic Lakeland (Pojezierze Południowobałtyckie), whose early post-glacial landscape is intersected by the Vistula, Brda and Drwęca Rivers. The southern borderlands of the area

Map 1. The physico-geographical regions of Cuyavia and Dobrzyń land

discussed (Brześć Voivodeship) pass through the Central Polish Lowlands (Niziny Środkowopolskie). They border directly on the north-eastern tip of Dobrzyń land. The current division of the analysed area is presented further on, and below on Map 1.

Of the areas presented in this volume which fall within the boundaries of the South Baltic Lakeland, the South Pomeranian Lakeland (Pojezierze Południowopomorskie) is the northernmost part. On the northern tip of Inowrocław Voivodeship, it encompasses two early post-glacial uplands (South Krajna Lakeland (Pojezierze Południowokrajne) and Świecko Upland (Wysoczyzna Świecka)), split in two by the Brda Valley (Dolina Brdy). The north-eastern tip of this voivodeship cuts into the Lower Vistula Valley (Dolina Dolnej Wisły) macroregion (Fordon Valley (Dolina Fordońska) mesoregion), which spreads to the vast Toruń-Eberswalde Glacial Valley (Pradolina Toruńsko-Eberswaldzka) macroregion in the south, and runs across the analysed area from the north-west towards the south-east. The glacial valley is divided into three mesoregions. The first of those is the Toruń Basin (Kotlina Toruńska), a sandy terrace between the basins of the Vistula and the Noteć, overgrown by the primeval Bydgoszcz Forest. The second mesoregion, the Vistula River Gorge of Nieszawa (Nieszawski Przełom Wisły), was classed as a separate region in 2018 and sits in the south-eastern part of the Toruń Basin. Last but not least, the third mesoregion of the Płock Basin occupies the Vistula's left bank. The Płock Basin (Kotlina Płocka) is an extensive sandy terrace with post-glacial kettle lakes and the Włocławek-Gostynin Forests.

The Toruń-Eberswalde Glacial Valley shares its north-eastern boundary with the Chełmno-Dobrzyń Lakeland (Pojezierze Chełmińsko-Dobrzyńskie) macroregion, where Dobrzyń land houses three

macroregions. In this area, local basin-like broadening and narrowing of the Drwęca Valley (Dolina Drwęcy) is observed. The adjacent Dobrzyń Lakeland (Pojezierze Dobrzyńskie), which borders on the Drwęca Valley from the south-east, boasts a diverse landscape with terminal moraines, kames, eskers, and drumlins. The sandur Urszulewo Plain (Równina Urszulewska) sits in the eastern part of Dobrzyń land, and is for the most part covered with woodlands called Skrwilno and Lidzbark Forests today. The Urszulewo Plain part west of Bryńsk Lake is where the analysed area rises up to its highest natural elevation (about 159 m AMSL).

To the south, the Toruń-Eberswalde Glacial Valley borders with the Greater Poland Lakeland (Pojezierze Wielkopolskie) macroregion, which comprises the mesoregions of Inowrocław Plain (Równina Inowrocławska), Cuyavia Lakeland (Pojezierze Kujawskie), and Żnin-Mogilno Lakeland (Pojezierze Żnińsko-Mogileńskie). The last mesoregion listed above was carved out of the Gniezno Lakeland (Pojezierze Gnieźnieńskie) in 2018. The Inowrocław Plain is a flat moraine upland whose sandy eastern part has grown over with woodlands. The mesoregion's western part is low-sloped and poorly drained, which resulted in excessive soil moisture. This led to the formation of black-coloured soils, which gave this area the name 'Black Cuyavia'. To the south of the plain lies the Cuyavian Lakeland with two latitudinally situated ranges of moraines. Between them stretches the plain which outlines the course of Noteć River, which then flows into Gopło Lake in Żnin-Mogilno Lakeland.

The southern frontiers of Brześć Voivodeship run through the Central Polish Lowlands, in the South Greater Poland Plain (Nizina Południowowielkopolska). The northern tip of the Kłodawa Upland (Wysoczyzna Kłodawska) macroregion marks the boundary of the Vistula Glacial Stage, which explains the early post-glacial nature of the area concerned in this study.

As I conclude describing the physico-geographical regions and their layout, I find it worth mentioning that the 1564 Dobrzyń land inspection mentions one land elevation – Truminy Hill⁹ – which was probably located nearby present-day Truminy (approx. 6 km north-east of Bobrowniki). Still, this information does not simplify the task of identifying one of the contemporary hills as Truminy Hill. The hamlet lies between several elevations, the closest rising to about 100 m, and those further away – 117.6 m above mean sea level.

The early post-glacial layout of land is not without effect on the distribution and density of soils. Clay-illuvial soils and colluvial soils are the dominant soil types in the analysed area.¹⁰ Podzols and brunic arenosols cover the outwash plains and sandy river terraces. Muck and peat soils can be found in the initial reaches of Mień River, as well as the valleys of the Noteć, Zielona, Rypienica and Bachorza Rivers. Fluvisols occur in the valleys of the Vistula, the Brda, the Drwęca and the Skrwia. Black earths formed in the flat upland near Inowrocław and Radziejów. Today they are believed to be the most fertile soils in the entire area. The contemporary soil quality classification, however, fails to provide reliable data on the sixteenth-century agricultural yields in this area.¹¹ Differences in soil usefulness arise from changes in crop cultivation and fertilisation techniques. Water circulation patterns were also different at the time, adding to the discrepancies.

Descriptions of the soils appear *i.a.* in the 1564–1565 inspection. The lands near Dobięgniewo (Dobięgniew, r) and Dąb Wielki (Dąb, r)¹² situated on the banks of the Vistula were described as sandy. This area saw the formation of brunic arenosols in the terraces of the glacial valley. The inventory of the estates held by the bishop of Włocławek, which dates to the early seventeenth century, sheds more light on the soil types present at the time.¹³ The inspection books start by describing the Vistula's western bank – an area with fluvisols – state that the soils in the villages of Siarzewo (Psarzewo, c),¹⁴ Tupadły (n),¹⁵

¹⁵ *Ibidem*, p. 6.

and Brzoza (n, situated further to the north-west),¹⁶ were ‘sandy’ (‘piaskowate’). An additional annotation was made for Siarzewo that the soil there was good before the flood. Different soil types appear further to the west, near Raciążek (Raciąż, c) – fluvisols of the Vistula Valley, brunis arenosols, podzols and clay-illuvial soils, as well as a swathe of gleysols to the south of the town. The inventory describes the soils of this settlement as ‘unsatisfactory, roe-like, sandy and wet at times’,¹⁷ while the land south to Dąbrówka Village (c)¹⁸ was defined as ‘quaggy’,¹⁹ and black in some places. Village lands situated further to the west, near Brzeźno (c)²⁰ and Mleczkowo (c),²¹ were also reported to be quaggy. Those in the vicinity of Chlewiska (c)²² and Straszewo (c)²³ were said to be partly sandy. Some villages, such as Brudnia (Brodnia, c),²⁴ Wanorze (Wonorze, c),²⁵ Parchanie (Parkanie, c)²⁶ and Szadłowice (Szawłowice, c),²⁷ were only graced with the note ‘good land’. The source also mentions the ‘good, black soil’ of the land belonging to Sławsk Wielki (Sławsko, c) Village.²⁸ Contemporary soil maps of this area indicate black earths. It is important to note, however, that the source record referenced above describe only a small fragment of the analysed area, and any discussion on its soil structure is determined by the manner in which those sources were drafted.

Poland’s largest river, the Vistula, passes through the analysed area. First, it flows through the Toruń-Eberswalde Glacial Valley, then turns to the north-east, where it follows the Lower Vistula Valley. Drwęca and Skrwa are its main right-bank tributaries, and Brda and Zgłowiączka are the largest to enter the left side of the Vistula. Noteć, a tributary of the Warta, has its source in Brześć Voivodeship. Most of this terrain forms the Vistula’s catchment area.²⁹ Not all of it, though, as the western parts of Brześć and Inowrocław Voivodeships drain into the Oder—thanks to the Noteć. The catchment’s water divide cuts through Brześć and Inowrocław Voivodeships, entering the area from the north-west and exiting the south-east. Adam Wróbel’s paper discusses the origins of river names used in this area.³⁰

River courses were reconstructed on the basis of cartographic sources dating to the turn of the nineteenth century. The Vistula’s course and the location of its aits overgrown with trees (*kępy*) was determined on the basis of Schrötter’s map and the Quartermaster’s Map. Corrections were introduced in the vicinity of Siarzewo and Słońsk. It follows from Textor’s and Gilly’s maps that certain changes occurred in that part of Vistula’s course. The floodplain is broader here, which facilitates riverbed shifts.³¹ Lucjan Koc mentioned that some seventeenth- and eighteenth-century maps locate Słońsk on the right—not the left—bank of the Vistula. Unfortunately, he did not list any specific sources.³² Zielona Kępa, currently a vast ait marked on WIG maps and present in the State Register of Geographic Names (PRNG), was depicted as a markedly smaller element in the early nineteenth century (see Ill. 1). Early seventeenth-century sources mention a new eyot (*ostrów*) on the Vistula near Siarzewo,³³ as well as a lake (‘where there was once a depression, a lake appeared’), which had formed near Tupadły Village.³⁴

Sources also mention river aits near Dobrzyń-upon-Vistula (Dobrzyń, r)³⁵ and Brzoza Village (c).³⁶ The 1626 inspection lists four such aits (Koziniec, Strzapska, Sarka, Goździenka) held by Dybów Castle.³⁷ A tree-overgrown ait in the Vistula belonged also to Zieleniec, a mill settlement. Today, both Dybów and Zieleniec constitute part of Toruń.³⁸ Several aits in the Vistula were the property of Fordon (Fordan, c, now part of Bydgoszcz).³⁹ The early seventeenth-century inventory of Włocławek Bishopric

holdings also refers to an island (*ostrów*) in the River Drwęca near Ciechocin.⁴⁰ Regrettably, it proved impossible to locate it on the maps.

Floods are featured several times in the sources, though of course the Vistula could have overflowed annually. One mention concerns the already introduced Dobięgniewo and Dąb, and 1564–1565 events.⁴¹ Readers can also come across 1598 reports of the Vistula flooding Siarzewo fields,⁴² and later confirmations of that event.⁴³ Similar references to flooding were entered for Słońsk, a village situated further downriver from the nearby Siarzewo.⁴⁴ The 1573 flood, probably caused by frazil ice or ice floe in the Vistula, was mentioned in relation to the surroundings of Dybów Castle.⁴⁵

In Cuyavia, Zgłowiączka River is one of the Vistula's main tributaries. Zgłowiączka's spring area is located in an arm of Głuszyn Lake (Orle Lake on the map).⁴⁶ Old maps, *i.e.* those by Perthées, Gilly and the Quartermaster's Office, locate the beginning of this watercourse between Witowo (c) and Samszyce (Samszyce Małe, n, and Samszyce Wielkie, n). Presently, this waterway is called Głuszyn Canal. Modern cartographers place its headwaters near Płowce—slightly further than early nineteenth-century maps. The South Bzura River⁴⁷ is in an inverse situation. In the past, its course was probably much longer. Early nineteenth-century maps only show the short section right next to where it joins the Vistula, near Duninowo Nowe (Duninowo, c). On Perthées's map, the riverhead lies somewhere near Dziankowo Village (Dziankowo Wielkie, n).

When reviewing Cuyavia's hydrography, it is also worth discussing the source of Noteć River. The contemporary Noteć starts its run to the west of Kromszewskie Lake and Chodecz Lake. However, AHP source maps (Gilly's and Quartermaster's) place the riverhead further down the river near Arkuszewo (Jarkuszewo, c). The remaining part of the rivercourse is identical. The Noteć passes through Przedecz, Modzerowo, Długie and Brdów Lakes, then flows towards the north-west, and bends towards the south-west in the vicinity of Mąkoszyno (n). In this part of its course, a tributary from Lubotyń Lake—mentioned already by Jan Długosz⁴⁸—joins Noteć, and the river turns towards Gopło after a few kilometres. Władysław Mrózek referred to the 1772 map by von Pfau and the Geographical Dictionary of the Kingdom of Poland (SGKP)⁴⁹ when writing on changes in Cuyavia's hydrographic network, which also encompassed the headwaters of Noteć River. Based on these sources, Mrózek established that the source of Noteć was situated to the south of Lubotyń Lake at the time. In contrast to existing data, Mrózek classified the surroundings of Brdów, Modzerowo and Przedecz Lakes as the drainage basin of the Vistula River (Zgłowiączka's channel head). The researcher explained that these changes, considerable in relation to the contemporary perception of the hydrographic network, were caused by agricultural land improvement and vertical movements of the Earth's crust. It is worth noting that on Perthées's 1785 map, the river also runs longitudinally, and connects the Brdów and Długie Lakes with Zgłowiączka. Andrzej Tomczak disagreed with Władysław Mrózek's conclusions. Tomczak questioned Mrózek's cartographic sources by referring to Karol Buczek's findings,⁵⁰ and confronted them with the hydrographic layout of *i.a.* Gilly's maps and the Quartermaster's Map.⁵¹ Tomczak also pointed out a wide range of remarks in sixteenth-century sources, mainly inspections carried out in royal estates in the 1560s, which show proof that these maps reflect the river's course. As a result, the Noteć course put forward by Andrzej Tomczak is the generally accepted one.

⁵¹ A. Tomczak, *Źródła Noteci w dobie historycznej*, ZK, vol. 2, 1968, pp. 5–18.

Let us take a closer look at an interesting tributary of the Noteć: the Kwieciszewica River, also called Kwieciszówka. Today, the river is referred to as Noteć Mała (Small Noteć). Długosz wrote that this river outlined the border between Cuyavia and Greater Poland.⁵² Early seventeenth-century inspections⁵³ include a mill on Kiianica River in their description of Gębice (r). The *Electronic Dictionary of Polish Hydronyms* (ESHP) states that the river no longer exists,⁵⁴ but its course coincides with that of Kwieciszewica River. This may suggest that both names refer to the same waterway.

The Bydgoszcz Canal also merits mention as the waterway connecting the Noteć and the Brda or, in other words, the Oder and the Vistula. Although the Bydgoszcz Canal is marked on the maps used to reconstruct the hydrographic network, we did not draw this watercourse on the main map, owing to the fact that it is an artificial waterway built between 1773 and 1774.⁵⁵ Earlier, extensive marshes occupied this area. The main map reflects this pre-canal landscape. In his paper on the Bydgoszcz Canal, Walenty Winid listed examples of nineteenth-century findings which upheld the view that this once boggy terrain could have been used as a water crossing.⁵⁶

Inspections dated to the sixteenth and seventeenth centuries list lower-order watercourses, e.g. Chodeczka⁵⁷ and Rypienica⁵⁸ Rivers, alongside such main watercourses as the Vistula and the Zgłowiączka. These sources provided the information required to use the old name of Rakutówka River, called the Ciemięga⁵⁹ at the beginning of the seventeenth century. They also helped reconstruct names of the rivers, which remained nameless on the maps used to compile this volume and in the State Register of Geographic Names (PRNG). One example is the Rzeczyca⁶⁰ (Rzeczica) watercourse which flows into Gopło Lake to the south of Mietlica (n). Two more waterways were mentioned in the listing of mills situated near Dybów. The Dulowie Stream⁶¹ is mentioned in passages on the Dulew and Jasin mills. The nearby Chrzast mill sat along Wierdziałowie River (also referred to as 'Zielona').⁶² Another case in point is the description of lands belonging to Gnojno Village (r) in Dobrzyń land. It mentions a watercourse called Kolano,⁶³ which joined the Vistula near Bobrowniki. There is also mention of the Gnoynicza Brook⁶⁴ (*struga*), yet determining its course proved impossible. Wilkoria, a watercourse listed in the 1564 inspection, also remains unidentified.⁶⁵ It was situated in the vicinity of Kubłowo Village (r). The source's publishers suggested that Wilkoria was probably a tributary of the Ochnia River.

Although the analysed area has an early post-glacial layout, its lake count is relatively low. Most are located in the Dobrzyń and Cuyavian Lakelands, and Płock Basin.⁶⁶ Those are glacial lakes originating from the last glacial stage. Currently, the lakes are gradually disappearing. The anthropogenic impact exerted in the last 240 years has caused a decrease in both surface area and water volume of Gopło and Ostrowskie Lakes.⁶⁷

Gopło is Cuyavia's largest lake, and in all likelihood boasted an even larger surface in the past. It can be plausibly assumed that the lake reached its highest water level in the early Middle Ages, which

started sinking in the twelfth or fifteenth century.⁶⁸ In the sixteenth century Kruszwica, Mysia Wieża, and the early medieval gord were separated by water. The 1564 inspection describes the lake as a water body spanning Warzymowo (n), Noć (rn) in the south, and Mątwy (rn) in the north.⁶⁹ Two centuries later, Perthées's map shows that Gopło spreads out to the Szarlej settlement. Researchers consider Szarlej Lake to be a historic part of Gopło Lake. This belief is substantiated by written sources.⁷⁰ Much like when working on reconstructing the course of the Vistula, we used Schrötter and the Quartermaster's Map to draw Gopło's coastline. However, the Quartermaster's Map already shows Szarlej Lake as a separate body of water. In all probability, Gopło had a larger surface area than the main map suggests. River regulation and agricultural land amelioration have led to a 6.2-metre drop in water level in the period from the fifteenth to the twentieth century.⁷¹

In the sixteenth century, higher water levels probably made it possible to cross from the Vistula to Gopło over water.⁷² It is likely that the route passed through Zgłowiączka and the wetlands, and was available for some months of the year. Inspection records show the Bachorza River ('on the River *Bachorzej*') under both Brześć district lands⁷³ and holdings of villages in Inowrocław district.⁷⁴ Perthées placed the meandering watercourse in the centre of marshy terrain. In his map, the river starts near Wola Wapowska (c) and joins Zgłowiączka near Falborz (rt). Gilly marked a shorter, discontinued watercourse whose source is situated south of Gosławice (n). Between 1836 and 1858, the Bachorze Canal, also called the Piastowski Canal, was completed in this area.⁷⁵ Cezary Wawrzyński made an attempt to gather comprehensive information on this structure.⁷⁶

A sixteenth-century inspection contains extensive descriptions of the localities situated near the Gopło and Bachorze marsh. The lands belonging to those settlements had been constantly flooded for 30 years,⁷⁷ which makes it reasonable to embark on a joint discussion of the marshy grounds spreading from Gopło to Zgłowiączka. The issue was also raised at the Piotrków General Sejm (Diet) in 1567.⁷⁸ Meadows and arable land had been destroyed due to the construction of a levee and mill at the level of Mątwy Village. The inspections enumerate 85 settlements hit by the build-up of water. Three villages are missing from the text: Grodztwo, Świątniki, and Probstwo. However, the description mentions them as 'arable lands, meadows, fodder also of the Kruszwica parish priest, and of the dean, and a meadow of the cantor, and a demesne with a threshing floor of Kruszwica Castle'.⁷⁹ One might be concerned about the absence of Karczyn, a village situated between the flooded settlements. On the map (Map 2), we marked 79 localities whose precise location we succeeded in establishing. Moreover, we attempted to reconstruct the course of Bachorza River from Gopło's side on the basis of a list of villages situated on the right and left banks of the brook (*struga*).

Sources contain numerous mentions of lakes in the Płock Basin mesoregion. These waterbodies formed in tunnel valleys and in depressions left by blocks of dead ice.⁸⁰ The early seventeenth century inventory of Włocławek Bishopric's holdings lists seven lakes scattered across the woodlands surrounding Łęg Village.⁸¹ On the AHP map, we located and marked Rybnica, Łąki, and Radyszyńskie Lakes. We failed to determine the location of Łomno, Czarne Wielkie, Czarne Małe, and Dziemi-onek Lakes. Nevertheless, we established that Dziemi-onek Lake lay between Rybnica Lake and the

Map 2. Settlements listed as flooded in 1564 inspection

nearby Witomski Lakes (currently called Wikaryjskie Lakes).⁸² Of the lakes named by sources in the vicinity of Dobiegniewo, the following can be identified beyond doubt: Gościąż, Wierzchoń, Święte, Chrapka, Łąkie, and Mrokowo.⁸³ Mrokowo was not marked on WIG maps or the Quartermaster's Map, but modern topographic maps enabled establishing its location. Information on Kowal district were also available. Gilly's map shows one body of water in the place of the contemporary Rakutowo and Krzewent Lakes, while the Quartermaster's Map depicts two separate lakes surrounded by extensive marshes. Most inspection remarks refer to Krzewent Lake.⁸⁴ The name 'Krzewent' is also used by Jan

⁸² See: www.eshp.ijp.pan.pl/search/results/70667 (access 7.06.2020).

⁸³ LWWK 1564, vol. 2, p. 185.

⁸⁴ Ibidem, p. 230; LWWK 1616, vol. 1, pp. 259, 264.

Długosz.⁸⁵ It is hard to say whether the lakes once formed a single water body or if one name was used for both lakes and the adjacent boggy terrain. Zbigniew Zylewski presumes that the lake split into two as its water level fell.⁸⁶ Goreńskie, Lubiechowskie, and Telązna⁸⁷ are the names of other large lakes listed in inspection files. These were located and marked on the map. We did not succeed in locating Długie Lake. According to the ESHP, this name was sometimes used in reference to Krzewent Lake.⁸⁸ Moreover, Perthées's 1785 map uses this name for a body of water situated to the north-east of Krzewent settlement.

Name-related inaccuracies also concern Skulsk Lakes located near Skulsk (Skulsko, r) and Skulska Wieś (Skulsko Małe, r). Presently, they bear different designations derived from the names of both settlements. Perthées's maps and the Quartermaster's Map mark them jointly as 'Skulskie'. The 1616 inspection uses the name 'Białe' for the lake near Skulska Wieś.⁸⁹

Some of the lakes listed in inspection records began disappearing already in the sixteenth century, which renders the task of placing them on maps troublesome. Let us provide the example of two water bodies near Bodzanowo Village (r), evaluated by sources as not very useful.⁹⁰ One of them, called Okrażek or Okrasek in the inspection, lay to the south of the village. The second lake was located to the north of Bodzanowo. The Quartermaster's Map depicts a small wetland in this area. Zolwincza and Koczielka Lakes⁹¹ near Gnojno (Lipno district) also posed some difficulties in localisation.

Sources also give information on sixteenth-century ponds. Ponds are often mentioned in passages on mills and fishing. Ponds were present *i.a.* in Raciążek,⁹² Włocławek (Włocław, c),⁹³ Gębice,⁹⁴ Lipno (r),⁹⁵ Zalesie (r),⁹⁶ and Przedecz (n).⁹⁷ The 1564 inspection lists some ponds in the neighbourhood of Brześć. It mentions Piaseczny Pond⁹⁸ upriver from Piaski Mill, and Swarowski Pond which lay close to what is now Bachórka Village (sixteenth-c. Swarowo, n). It ought to be emphasised that without the ESHP, in many cases it would not have been possible to use sixteenth-century names or names as similar as possible to those used in the sixteenth century.

The above marshes which once occupied areas that are now developed (Bydgoszcz Canal, Bachorze Canal) are not the only large wetlands in Cuyavia. Large bogs were nestled between the riverbeds of Jezuicka Struga and Zielona Struga, and marshes surrounded the lakes of the Płock Basin. Smaller wetlands lay e.g. to the east of Szadłowice, between Gniewków and Inowrocław. Sources mention them also as fishing grounds for small fish.⁹⁹ Although records on Gnojno land presentation do mention Kaliska, Owisska and Łaziska marshes,¹⁰⁰ we did not succeed in localising them. As Ryszard Kukier noted, 'the specific geological structure of tertiary and quaternary substrates made the analysed area conducive to form more extensive marshlands.'¹⁰¹

Forestation was reconstructed on the basis of partition maps dating to the turn of the eighteenth century. We used the maps by Schrötter, Gilly and Textor, and, less frequently due to its later elaboration date, the Quartermaster's Map. Owing to the publishing scale of our map (1:250,000) and in order to preserve the main map's legibility, we adopted similar assumptions as in previous AHP volumes: woodlands must be at least 4 x 4 mm at a working scale of 1:100,000, which corresponds to ca. 16 ha.

Two larger forest complexes can be identified in Cuyavia. These woodlands still grow along the Vistula Valley as they did in the sixteenth century.¹⁰² Nestled in Toruń Basin of Inowrocław Voivodeship, the primeval Bydgoszcz Forest (also called the Royal Bydgoszcz Coniferous Forest, or *die Konigliche Bombergsche Forst* on Schrötter's map) stretches from areas to the south of Brda and Vistula, and from Ślesin, through Bydgoszcz and Podgórze, to Raciążek. In the eighteenth century, the forest was administered by Bydgoszcz vogts (*wójt*). The sources of revenue bestowed on the vogts formed part of Bydgoszcz Gord Starosty.¹⁰³ Sources on periods close to sixteenth-century realities confirm that the primeval Gniewków Forest¹⁰⁴ and the coniferous Dybów Forest¹⁰⁵ once grew in this area. The Włocławek-Gostynin Forest in Płock Basin is the second largest woodland in this region. Sources confirm that they were referred to as the coniferous Dąb Forest and the coniferous Dobięgniew Forest in the sixteenth century.¹⁰⁶ Both are made up of mainly coniferous trees growing on podzols, *i.e.* soils of poor agricultural value. Up to the late eighteenth century, one could find forestation in abundance across Dobrzyń land (ca. 75%). Larger swathes of arable land occupied only the north and west of this area, the rest was covered with woodland.¹⁰⁷ Forest complexes presented a rather insular pattern in southern Cuyavia.¹⁰⁸ Acquiring new arable land was the main driver of deforestation. The forests of Inowrocław and Radziejów districts were logged relatively fast. Still, scattered forests prevailed in Brześć district and Dobrzyń land up to the first half of the nineteenth century. Kowal and Bydgoszcz retained large forest complexes until late eighteenth century, as the soil of these districts was of lower agricultural usability.¹⁰⁹

The role of forests, however, was not limited to hampering settlement. Woodlands played a vital economic role: settlers ventured into the woods to carve out tree hives and keep wild bees, burn tar and charcoal, fell trees later used as building material, and extract bog iron.¹¹⁰ Royal forest exploitation was subject to a forest-use fee called *borowe*, which could be paid in cash or in kind.¹¹¹ Forest usability depended on its species composition, and on how well it was suited for construction and economic purposes. Oaks were the most highly valued species, whilst coniferous forests¹¹² were least desired. Birches and alders¹¹³ can also be found in the records. In Inowrocław district, Gniewków burghers logged trees to obtain building material under the 1450 privilege, which granted them access to the nearby primeval Gniewków Forest.¹¹⁴ Gniewków was not the only city permitted to 'chop wood freely'. This privilege was also granted to the millers of Kukiełka Mill in the coniferous Dybów Forest, and the villagers living in Nieszawka (Nieszawka Wielka and Nieszawka Mała), Rudak and Gosorzyn (Inowrocław district).¹¹⁵ Ephemeral pitch production settlements are proof that Cuyavian forests were also a source of pine tar. According to seventeenth-century references about Lipno district (Dobrzyń land), 'a pitch burner once lived' in Wilczenie, and 'only a pitch burner live[d] in the woods' of Celiny.¹¹⁶ A pitch production settlement (Dębowa Góra, Bydgoszcz district) lay to the

east of Koronowo, and it was mentioned that pitch burners were also present in Dąbrówka Kościelna (Bydgoszcz district).¹¹⁷

There are copious reports on shortages of quality wood caused by forest overexploitation, mainly overfelling, in royal property inspections and inventories. In the early seventeenth century, many settlements complained about overfelling, especially in periods directly preceding the entries made. In Włocławek, millers cleared the coniferous forest. In Łęg Village, ‘previous years hath seen’ such felling that no quality wood was left to serve as building material. Before they were logged, ‘good and thick’ forests once grew in the vicinity of Modzerowo, Wieniec, Lubotyń and Orle in Brześć Voivodeship.¹¹⁸ The surroundings of Gnojno and Bobrowniki in Dobrzyń land also suffered intense clearing in the seventeenth century.¹¹⁹

Forest exploitation was not always tantamount to felling. Wild beekeeping and foraging had a less degrading effect on the environment. Records mention wild beekeepers in eleven settlements of Brześć and Inowrocław Voivodeships at the turn of the seventeenth century. Most localities had one or two wild beekeepers. Dęb and Duninowo (Kowal district) had the highest bee-keeper count: eight¹²⁰ and seven,¹²¹ respectively. Łęg and Modzerowo villages (Brześć district) had more than 200 and more than 300 tree hives, respectively.¹²² We have also determined that in 1598 there were 110 bee hives in the forests around Brzozie (Inowrocław district), 29 of which were in use.¹²³ There are also references of wild bee-keepers in Dobrzyń land (Lipno district): 85 of Ciechocin’s 95 tree hives stood empty in the late sixteenth century (similar fraction as in Brzozie),¹²⁴ and ‘not one settled serf, solely keepers of wild bees give 30 florins to the castle. It is their duty to care for the castle hives.’¹²⁵ The duties of bee-keepers involved more than just acquiring honey from tree hives. In return for acting as keepers of the forest, they were exempt from paying rent.¹²⁶ Cuyavian woodlands were also a source of dried goods and acorns, which were fed to cattle and swine. Such use of forest resources, however, was not free—one had to pay the *borowe* forest-use fee.¹²⁷

III.1.7 MAZOVIA

Józef Humnicki, Kazimierz Pacuski

In accordance with the assumptions accepted for this series of the AHP, the waterbodies and forests were reconstructed for the turn of the eighteenth and nineteenth century on the basis of the earliest detailed cartographic resources from the first three decades of the nineteenth century.

The lay of the land was depicted on the map of Mazovia by means of contour lines at 20 m intervals, generalized on the basis of 1:100,000 maps, and prepared for the map at a scale of 1:500,000. Selected elevation points were also marked.

Because of the lay of the land and other physiographic elements, the territory of historic Mazovia can be divided into three geographic regions: the North Mazovian Lowland, the South Mazovian Lowland and the western part of the Podlasiian Lowland.¹ The North Mazovian Lowland stretches north from the parallel course of the Rivers Vistula, Narew and Bug to the village Brok and the eastern foot of the moraine embankment of Czerwony Bór ('red forest'). To the east and north it borders on a lake region. Four major regional units are commonly distinguished in this lowland: Płock and Ciechanów uplands, the Kurpiowska Plain, the Międzyrzecze Łomżyńskie, and two smaller lowlands: Pradolina Raciąska ('Raciąż Ice-marginal Valley') and Downstream Narew Valley.

Płock Upland is a moraine plain with a hilly belt of moraines near Płońsk. The moraine belt runs parallel to the valley of the Vistula from the Skrwa to the downstream Wkra. The valleys of various tributaries of the Vistula, e.g. the Brzeźnica or the Mołtawa, cut deep into the upland. Pradolina Raciąska lies to the north – it is a sandy and swampy lowland between the valleys of the upstream Skrwa and downstream Wkra. Ciechanów Upland lies to the north-east. Three terminal moraine areas can be found here: the southern one near the towns Nasielsk and Serock, a bit more elevated area around Ciechanów, and the northern one in the Zawkrze ('the land on the other side of the River Wkra') near Mława and in the loop of the River Orzyc – with the highest elevation points, including the highest elevation point of the historic Mazovia: Dębowe Góry (around 235 m above mean sea level)² in the district of Przasnysz in Ciechanów land.

Kurpiowska Plain stretches between the middle fragment of the River Orzyc and the River Pisa. It is an outwash plain with swampy areas, as well as some older moraine formations and dunes. In the south it becomes the Valley of the Downstream Narew, the broadest part of the valley lies near Rożan.

¹ J. Kondracki, *W sprawie terminologii i taksonomii jednostek regionalnych w geografii fizycznej Polski*, „Przegląd Geograficzny”, 1961, no. 1, pp. 23–38; see also: J. Kondracki, *Geografia fizyczna Polski*, Warsaw 1965, pp. 337–353, bibliography there.

² The name Dębowe Góry is known from the twentieth century. Another elevation point of Mazovia – outside the area of Dębowe Góry – is located in Czerwony Bór (227 m above mean sea level). In the western part of the Zawkrze, probably near the village Nick by the Wkra, or perhaps near the present-day Nicgóra, there is a mountain Nicko, mentioned in Długosz's *Chronografia* as the only hill in Mazovia, fortified in 1466 by the Teutonic Knights. This entry recorded by Długosz is not very precise: 'Item Niczko, mons Masoviae proper Szarnow et Radzanow oppida consistens, quem fluvius Wkra abluit, sub tempore guerrarum incastellatus a Cruciferis, sed a Masoviae militibus expugnatus, omni Cruciferorum desiderato aut capto presidio.' Długosz *Opera Omnia*, X, pp. 45–46. See also XIV p. 457 (year 1466). The localization at Nicko finds support in the River Wkra and the neighbouring border between the territory of Mazovia and the Teutonic Knights, the localization at Nicgóra – the fortified settlement, which could have been used by the Teutonic Knights in 1466, as well as the location in relation to Sarnów and Radzanów (but not the Wkra).

The flat Międzyrzecze Łomżyńskie is situated between the valleys of the Rivers Narew and Bug. The moraine embankment of Czerwony Bór borders the area to the northeast.

The Southern Mazovian Lowland is comprised of the Kutnowska Plain, the Warsaw Basin, and Rawa and Siedlce Upland. Only part of the Kutnowska Plain belongs to the historic territory of the Mazovia, it is a denudated area, sloping towards the southeast.

The small Gostynin Lakeland lays to the north. It is the sole fragment of the South Baltic Lakelands in Mazovia. The Warsaw Basin occupies a broader part of the parallel ice-marginal valley of the Vistula and the Bug, together with the fragment of the valley of the Vistula upstream of Warsaw. In the west it reaches the valley of the River Bzura, and in the north – the edge of the uplands by the Vistula, the Narew and the Bug. In the remaining directions it gradually turns into uplands. The northern part of the basin, situated in an ice-marginal valley, is mostly covered with low, sandy terraces with strips of dunes and swamps (especially in the Kampinoska Forest). The flat Błońska Plain comprises the south-western part of the basin. It is built of moraine formations and edges over the valley of the River Vistula. On the other hand, the lower Praski Terrace, occupies the eastern part of the basin. The Rawa Heights is a ground moraine plain, diversified by some terminal moraine hills (reaching 210 m above mean sea level). To the south, the height ends with an edge over the valley of the River Pilica. Siedlce Height is a broad moraine plain, stretching between the ice-marginal valleys of the Rivers Vistula, Bug, Wieprz and Krzna. Its north-western part belonged to the Mazovia. The highest point of the upland was situated north of Kałuszyn (223 m above mean sea level). The valleys of Liwiec and Kostrzyń defined a clear borderline with the eastern part of the upland.

The Podlasian Lowland in the territory of the historic Mazovia encompassed the Kolno Upland, part of the Upper Mazovian Upland, and Biebrza Basin. Kolno Upland is a hilly area, where denudation processes formed broad valleys with gentle slopes. The Biebrza Basin is a broad lowland with great swamps and moorlands. The Rivers Narew and Biebrza drain water from the basin. The Upper Mazovia Upland lays east of the upland Międzyrzecze Łomżyńskie. The Upland is a hilly area, diversified only in the northern part by a strip of terminal moraines.³

Soils⁴ in Mazovia formed mainly on post-glacial formation and are mostly of average, or poor quality.⁵ In the uplands, the soils are usually fertile, podsollic, formed from till and sand on clay and loam. Outwash plains and accumulative terraces of the ice-marginal valleys are covered with poorer podsollic soils made from various types of sand and gravel, and peat, swampy and silty soils. A large part of Mazovia is covered also with fertile podsollic soils formed on silt formations of water origin, particularly in the southern region of Płock Upland (lands of Płock and Wyszogród), large areas of Rawa Uplands (western part of Czersk land, Rawa land), and in Błońska Plain (part of Warsaw and Sochaczew lands). Błońska Plain has a rich supply of fertile black soils, formed from sand, clay, silt, and silt formations of water and swamp origin. Black soils can also be found in Ciechanów Upland (Ciechanów and Zakroczym land), near Drobin in the land of Płock, and in the Zawkrze to the south of Mława. Alluvial soils, usually rich in humus, accumulated in the river valleys of the Vistula, the Bug and the middle Narew. In addition to the already mentioned soil types, small layers of brown soils can be found, particularly heavy and fertile soils formed from clay in the vicinity of Ciechanów.

The assessment of soil quality changes over the course of history, at least to some extent. Among other factors, it depends on farming tools available and the system of cultivation. However, the comparison of the evaluations of arable land found in the sixteenth century inspections of royal estates in three Voivodeships of Mazovia with modern evaluation for the same territories shows their visible correlation. According to the inspectors, the soil in Mazovian royal estates was mostly good (even very good in the vicinity of Sochaczew). Average and poor soils were in the minority.⁶ Royal and Church estates usually had much better soils than settlements which belonged to the nobility (petty gentry in particular).

³ J. Kondracki, *Geografia fizyczna Polski*, pp. 516–522.

⁴ Soils and climate were not marked on the map of Mazovia.

⁵ See A. Musierowicz et al., *Gleby województwa warszawskiego*, „Roczniki Nauk Rolniczych”, 1956, ser. D, vol. 75, pp. 1–237; J. Kostrowicki, *Środowisko geograficzne Polski*, Warsaw 1957, pp. 331–388, bibliography there; *Mapa gleb Polski 1:300,000* IUNG ed. A. Musierowicz, Warsaw 1961; B. Dobrzański, *Zarys geografii gleb*, Warsaw 1966.

⁶ A. Wawrzyńczyk, *Gospodarka chłopska na Mazowszu w XVI w. i na początku XVII wieku*, Warsaw 1962, p. 10.

Undoubtedly, as a result of the growing number of demesnes and their expansion in the sixteenth century, as well as the growth of cereal production obtained as a result of extensive farming, Mazovia was affected by the gradually more intensive process of soil impoverishment and the decrease of harvest efficiency. In the second half of the sixteenth century the process was delayed only in the areas of new settlement, in the eastern part of the lands of Czersk and Warsaw, in Liw and Nur land, and in certain regions in north-eastern Mazovia, where it intensified in the seventeenth century.

Soil changes were also related to various climatic changes occurring at the time mainly due to local changes of the range of surface waters and the level of subsoil waters, increased deforestation, or climatic changes encompassing larger areas.

The basic features of the Mazovian climate in the second half of the sixteenth century were probably close or similar to the state from the nineteenth and twentieth century, although recently a discussion has arisen on the problem of climatic changes in Polish lands.⁷ This state was characterized by the average annual temperature reaching 6.5°–8°, which is lower than that in the southern and south-western territories of Poland. Rainfall was also lower than in other areas, and the lowest in the valley of the Vistula and in the Płock part of Mazovia, the highest – in the uplands of the eastern Mazovia. The highest rainfall occurred in the summer, and winter rainfall was small, but frequent, melting quickly and supplying the soil with water. As a result, the snow layer does not linger long, some 50–60 days; in the eastern part of Mazovia the snow lingers longer, and there are more frosty days. The growing season in Mazovia is quite long: over 200 days. To the east, the climate gradually gains more and more continental features.⁸

The waters in Mazovia were reconstructed for the turn of the eighteenth and nineteenth century on the basis of the oldest detailed cartographic records prior to 1830. These sources record the state of the water network before the period of important canalization and irrigation works of the last 150 years.⁹

Certain issues concerning the reconstruction of the course of particular rivers and the range of surface waters occurred while marking water elements on the map of Mazovia. When possible, we tried to solve these issues using fragmentary data from written sources on the hydrography of Mazovia from the fifteenth and sixteenth century.¹⁰

The hydrographic network of Mazovia was drawn on the detailed basis of the Polish topographic maps at a scale of 1:100,000 (WIG), and reconstructed on the basis of earlier maps of the occupants. The selection of hydrographic elements – due to the scale of our map of Mazovia based on a map at a scale of 1:300,000 – consists also of minor rivers, if they had been listed in the sixteenth century sources (such as Czeta, Długonoga, Sienica and other rivers).¹¹

Ditches and channels dug in the nineteenth and twentieth century in order to drain swamps were removed from the basic map, and the range of surface waters was corrected. The reconstruction encompassed mostly large and average-size rivers. Changes of channels of minor rivers, usually running in narrow valleys, are mostly small and difficult to mark on a map of our scale. As such, we accepted their course depicted on the topographical maps of WIG at a scale of 1:100,000.¹²

⁷ Compare with M. Strzemiński, *Przemiany środowiska geograficznego Polski jako tła przyrodniczego rozwoju rolnictwa na ziemiach polskich (od połowy trzeciego tysiąclecia p.n.e. do naszych czasów)*, KHKM, vol. 9, 1961, pp. 331–335. Often, conflicting theories are accepted during the assessment of climatic conditions in Europe – so also in Poland – between the sixteenth and the seventeenth century. This is because the research on meteorological phenomena from the period before regular measurement of the weather and precipitation never left the stage of preliminary trials. The scholars supporting the thesis that the climate of Poland underwent significant changes in the last millennium usually assume that the sixteenth century was a transitory time between the earlier hotter and dryer period and the later – cold and humid. See H. Mitosek, *Zagadnienie zmian i wahań klimatu po epoce lodowej*, KHKM, vol. 14, 1966, no. 2, pp. 243–252.

⁸ J. Kostrowicki, *Środowisko geograficzne Polski*, pp. 274–330 (bibliography there); J. Kondracki, *Geografia fizyczna Polski*, pp. 89–118; T. Lijewski, *Województwo warszawskie. Zarys geograficzno-ekonomiczny*, Warsaw 1968, pp. 21–24.

⁹ While describing average rivers one should mention the meanders of the lower Bzura before 1830, the floodplains of Orzyc near Drażdżewo, the other stream channel of the lower Łek (Elk) in the marshes of Biebrza. In case of large rivers, the changes in the valley of the Vistula are particularly important.

¹⁰ During our source query we used, among others, the entries collected in the File of SHGM, the notes from the archives of Płock diocese gathered by rev. W. Mąkowski regarding the hydrography of Mazovia, and printed source publications, of which the most important were the inspections of royal property from the sixteenth century. Regional studies also proved useful, e.g. J. Warężak, *Słownik historyczno-geograficzny księstwa łowickiego*, no. 1, Wrocław 1961, no. 2, Łódź 1967.

¹¹ LM 1565 vol. II and III (index).

¹² Smaller rivers were drawn imprecisely on earlier cartographic records, they were shown in a schematic and often incorrect manner – e.g. the rivulet Rządza on the Quartermaster's Map.

In several cases the reconstructed river valleys or swamps no longer exist, or are just a relic form of the previous state. We endeavoured to identify the rivers, lakes and ponds (when they were not given an individual name on the map, or the name was changed) on the basis of the sixteenth century source entries by analysing the location of these objects on detailed maps from the eighteenth/nineteenth century. Afterwards, they were interpolated on the working map at a scale of 1:100,000.

In this manner we managed to reconstruct the outlines of Lake Krusko,¹³ a large fishing pond near Latowicz and the channels of now dry rivers: Korycianka¹⁴ and Rybnica.¹⁵ Mazovia, situated in the river basin of the middle Vistula, covers over a sixth part of the entire river basin. This fragment of the Vistula (some 200 km from the Radomka to the Skrwa) runs in the so-called Noteć ice-marginal valley.¹⁶ To this day, the river flows in a broad, unregulated channel 600–1,000 m wide.¹⁷ The current often moves from one side of the channel to the other, and the river meanders. As such, ice floe sometimes caused local blockages, and the masses of flood water moved into a new channel. This situation was strongly influenced by numerous sandbars and grass clumps moving along the channel, which formed from sand brought down the river by the current. Over time, marshes and swamps formed in the oxbow lakes.

Fragmentary data found in written sources from the sixteenth century suggest there were some local shifts in the channel of the Vistula. In 1565 it was recorded that in Buraków ‘a field was taken by the Vistula’,¹⁸ whereas near Modlin the River Narew ‘washes the bank and meadows... are taken and washed with sand’.¹⁹ Later sources, especially from the eighteenth century, offer a better depiction of such changes in the Vistula’s channel.²⁰

In the sixteenth century, the records of floods in the river basin of the Vistula appear irregularly, usually at several-year intervals.²¹ Summer floods caused the greatest damage, particularly because the flood waves moving down the Rivers Vistula, Narew and Bug cumulated. This damage can be seen especially along the fragment from Zakroczym to Wyszogród.²²

The main tributaries of the Vistula – the River Narew with the Bug (and the Wkra) – flow into it northwest of Warsaw, creating the main water junction of Mazovia. The River Narew²³ enters Mazovia west of the town Tykocin in Podlasie. In the valley of this river one could distinguish swampy basin-like fragments (e.g. near Wizna and Ostrołęka) and narrow gorges (e.g. near Łomża). The width of the Narew’s channel varies, usually reaching several dozen metres. To this day, this river is wider than the Bug, and entirely navigable inside Mazovian territory. As a lowland river it is characterized by a small drop in altitude, particularly between the mouths of the Rivers Biebrza and Pisa.

The important tributaries of the Narew are: the Biebrza with the Ełk, the Pisa, which drains the lake Śniardwy, the Szkwa, the Rozoga, the Omulew, the Orzyc, the Wkra, and the most important:

¹³ In the beginning of the nineteenth century this lake was called Serafin after the village, maps at a scale 1:100,000 from the 1930s show a small lake of this name, now just muds.

¹⁴ A rivulet flowing through the village Korytnica (LM 1565, vol. II, p. 187), not only a small, nameless middle fragment of the river can be seen on the map; its old course was reconstructed on the basis of the Quartermaster’s Map, where the river appears still as a tributary of the Liwiec.

¹⁵ River mentioned in 1565 in the description of the Zagajnica Forest (LM 1565, vol. II, pp. 92 and ff.), its course was roughly reconstructed on the basis of Perthées’s map, as it does not appear on later, more detailed cartographic records.

¹⁶ See J. Kostrowicki, *Środowisko geograficzne Polski*, pp. 218–234; J. Kondracki, *Geografia fizyczna Polski*, pp. 119–139.

¹⁷ The stream channel of the Vistula was artificially narrowed down to some 340 m only in the territory of Warsaw, see J. Kostrowicki, *Środowisko geograficzne Polski*, p. 222; J. Kondracki, *Geografia fizyczna Polski*, p. 125.

¹⁸ LM 1565, vol. 1, p. 27.

¹⁹ Ibidem, vol. 1, p. 153.

²⁰ We have a piece of information from 1765 mentioning the shift of the Vistula’s stream channel in the vicinity of Zakroczym, what affected the town’s economy (AGAD, ASK XLVI 159, pp. 1–12). In 1789 the inspection protocol of Czersk district noted that some of the grounds of Radwankowo village were taken by the Vistula when its channel shifted (ASK XLVI 170, ff. 1–44).

²¹ See A. Waławender, *Kronika kłęsk elementarnych w Polsce i w krajach sąsiednich w latach 1450–1586*, vol. 1, Lwów 1932, part 1, pp. 39–54, part 2, pp. 55–161.

²² Compare with the changes between the state recorded in the beginning of the nineteenth century and on the 1:100,000 maps of WIG.

²³ J. Wiśniewski, *Narew*, [in:] *Słownik starożytności słowiańskich*, vol 3, pp. 350–352; see also: *Narew*, [in:] SGKP, vol. 6, pp. 907–909.

the Bug,²⁴ which defines the border between Mazovia and Podlasie between the estuary of the River Nurzec up to Małkinia. The downstream Bug flows through a broad, flat valley in large, changing meanders. Its channel is some 100 m wide, and the drop is larger than that of the River Narew. The Narew, on the other hand, carries more water than the Bug, and that is why it gives the name to the common fragment of the two rivers, and has long had better navigation and floating conditions than the Bug. Two of the major Mazovian grain trade centres in the sixteenth century: Pułtusk and Łomża, flourished on the banks of the Narew, and one: Nur, by the Bug.²⁵ The Narew's tributaries, like the Biebrza with the Łek (Elk), were larger and used for floating, and navigation on the river developed.²⁶

The river basin of the Wkra covers the major part of the land of Płock. The upstream Wkra, called Nida and then Działdówka, drains the southern slopes of the Lubawa Embankment. The basin of the middle and downstream Bzura encompasses a large part of southern Mazovia. The most important left tributary of the Vistula is the Pilica, which flows in a channel reaching 300 m in width downstream. In the sixteenth century, the force of this river was used by large mills, located particularly near Warka, and the river was rarely used for floating.

Minor river, like the Orzyc, the Liwiec, the boundary Skrwa, or the Rawa (Rawka), with their numerous tributaries fulfilled an important utilitarian role as a driving force for corn mills and other production machinery using water.²⁷

Pojezierze Gostyńskie (Gostynin Lakeland) is the only large lake concentration in our area. Its eastern part was situated in Gostynin land in the Voivodeship of Rawa. The two largest lakes were the Zdworz (now Zdvorskie) and the Białe. The inspection of the Voivodeship of Rawa Mazowiecka conducted in 1564 lists 14 royal lakes in the vicinity of Gostynin, but the names of other great lakes, apart from the great Lucińskie lake (40 tonie), were not mentioned. Outside the land of Gostynin only Lake Krusko and two other lakes: Rybno in Zagajnica Forest and Maliszewo in Zambrowska Forest were of reasonable size. Many fishing ponds also come from this period.²⁸

Because of the high level of ground water, the sixteenth century swamps and marshlands marked on the main map occupy a large area. The biggest swamps were the Wizna, called Wielka Biel in 1472,²⁹ situated in the valley of the middle Narew, the Pulwy in the valley of the Narew, and Niemyje in the Zawrze, east of Mława. Land improvement works are being conducted in these swampy areas, therefore the more complete image of old marshlands could be obtained thanks to detailed soil maps, distinguishing soils of swamp origin.

Forestation was presented according to the state shown on the Quartermaster's Map from around 1830, in some cases supplemented with Prussian and Austrian depictions from after the Partitions. The reconstruction of the forestation earlier than the beginning of the nineteenth century is impossible due to the lack of suitable cartographic records and the fragmentary nature of the written sources from the sixteenth century. However, the most valuable information found in the inspections of royal property proves the state from the first half of the nineteenth century to bear much resemblance to the state from the second half of the sixteenth century. The same data show us the extent of the destruction of the forests, caused mostly by the adjacent settlement of the nobility. The sixteenth century names of forest and other physiographic elements found in the inspection were used and, when possible, marked on the map.

The range of forestation presented on Perthées's map from the end of the eighteenth century was rejected due to mistakes in the situational drawing and significant gaps in relation to more thoroughly

²⁴ SGKP, vol. 1, p. 450.

²⁵ T. Chudoba, *Z zagadnień handlu wiślanego Warszawy w XVI w.*, PH, vol. 50, 1959, pp. 297–301.

²⁶ In the fifteenth century the places where the wood was prepared for floating down the River Biebrza were mentioned: *Pomniki prawa*, vol. 5, ed. A. Włodarski (Metryka. Mazowiecka, vol. 1, Warsaw 1918, no. 470) and down the River Łek (MK no. 335, p. 68), In 1551, an entry in the description of the borders of bestowed lands: 'circa fluvios Lek et Byebrza usque ad navigium seu portorium per dictos fluvios sub Gonyądz iacentes,' MK, no. 79, ff. 392v–394. See also J. Wiśniewski, *Dzieje osadnictwa w pow. augustowskim, od XV do końca XVIII w.*, [in:] *Studia i materiały do dziejów Pojezierza Augustowskiego*, Białystok 1967, pp. 145, 270, 272.

²⁷ Compare with the recent review note by Wiśniewski 1970a. Additionally, it is worth to mention the drying of small watercoursed, recorded in the inspections from the sixteenth century; the evolution of these processes in larger area should be studied.

²⁸ See especially J. Warężak, *Osadnictwo kasztelanii łowickiej*, part 1, Łódź 1952, pp. 48–56.

²⁹ MK, no. 6, f. 7 – bestowed estates by the River Kalinówka.

detailed maps.³⁰ The post-partition Prussian and Austrian photographs from the turn of the eighteenth and nineteenth century provide a much more valuable image, even though they vary and are sometimes imprecise. A uniform, precise presentation can be found on the Quartermaster's Map, which used earlier, detailed field photographs.³¹

As the cartographic correctness of this work, exceptional for its times, does not fulfil modern requirements, a special method had to be used in order to transfer the image of the forestation on topographic maps at a scale of 1:100,000 (WIG), which constituted a working basis for our map.

Following the accepted rules, all forest remnants clearings and thickets marked on the Quartermaster's Map, suggested the old range and size of the forest prior to the nineteenth century. The majority of cartographic sources from this period differentiate between high forests and the so-called *krzaki*, i.e. thickets: felling of various age and relics of large clearings. As such – unlike in the Voivodeship of Cracow and WP – we decided to keep this distinction between forests and thickets, introducing it on the map of Mazovia. Thickets appearing near settlements were attested to by the sixteenth century inspections, thus confirming that marking this element, a relic of an old range of forest, on the map of Mazovia was a correct decision. In the first quarter of the nineteenth century thickets are usually a result of the devastation of edges and forest clusters caused by many years of grazing and incorrect farming. They are therefore inwardly connected with forests and together form the proper image of the forestation.³² For this reason, the distinction was kept on the map of Mazovia, allowing the reader to control individual forest elements, and at the same time marking the directions in which deforestation occurred prior to the nineteenth century. Such a solution seems more appropriate in terms of methodology as it avoids uncertain reconstruction of the old state of the forestation.

The cartographic presentation of forest on the map of Mazovia does not follow the pattern of the maps of Cracow Voivodeship and WP, where the borders of woodland area were marked with small, black dots. Dotted lines were used only for technical reasons – it allowed for a greater control over the range of the forest during printing. As on the map of Lublin Voivodeship, the forests on the map of Mazovia were only marked with two shades of one colour (on the map of LV – just one), without dotted borderlines of woodland areas. A deeper shade of green was used for the forest transferred from the Quartermaster's Map, lighter shade – the thickets. We refrained from marking modern forests on our map, which were included on the map of WP for comparison.

While transferring the range of the forests from the Quartermaster's Map, we tried to include even small forest relics, which provided information on the old range of woodlands. Due to the scale of our map (1:250,000) and necessary clarity, the minimum accepted on the 1:100,000 map was an area of at least 4 mm × 4 mm, i.e. around 16 ha in the field.

According to the geo-botanical divisions, identical with the division of physical geography, Mazovia can be divided into three large units: the North and South Mazovian Lowlands, belonging to Western Europe and the Baltic botanical sphere, and Podlasian Lowlands, which belong to the East European geologic platform and the northern botanical sphere.³³ In terms of geo-botanic, W. Szafer calls the major part of the river basin of the middle Vistula 'Mazovian land' ('kraina Mazowiecka').³⁴

The largest forest in sixteenth century Mazovia³⁵ covered the eastern part of the North Mazovian Lowlands, on the borderline with the Duchy of Prussia, particularly on the sandy outwash plains of the southern foreground of the Mazurian Lakes. Precisely this outwash area, entirely grown with pine forest, was called Zagajnica.³⁶ The forest occupied the whole Kurpiowska Plain from Przasnysz to Kolno, i.e. around 45 × 80 km.³⁷ To the west it joined with Mazuch Forest by the middle Orzyc.

³⁰ Perthées's shows much less forests than later maps, e.g. the forests in Młociny and Bielany do not appear on his map.

³⁷ In both inspections the size of the forest was definitely exaggerated: 30 miles long and 12 miles wide.

The forest and larger woodland areas grew mostly on sandy-dune, second valley terraces, as for example the forest later called Biała in Międzyrzecze Łomżyńskie, consisting of pine and mixed woods.³⁸ To the north it bordered on Rożańska Forest in the valley of the downstream Narew. The eastern edge of Międzyrzecze Łomżyńskie, i.e. the terminal moraine embankment of Czerwony Bór, was covered with pine forest. Smaller woodland complexes grew in Pradolina Raciąska – an area covered with sand, dunes and bogs. On the other hand, the fields and forest dominated from the early Middle Ages in the landscape the more fertile moraine plains³⁹ In Płock Voivodeship, the most forested area in the sixteenth century was Zawkrze. The contemporary inspections from this territory list Mławska Forest, grown with mixed woods covering the outwash valley of the River Mławka. The relatively small forest was subject to rapid devastation at the time and did not survive to our times.⁴⁰

The South Mazovian Lowlands were almost as forested as northern Mazovia. Forests, usually pine and pine-oak, grew on both banks of the middle Vistula and on the left bank of the River Bug, on the infertile sandy soil with numerous dunes, bogs and marshes. Gostyńska Forest stretched on the older, sandy dunes terraced on the left bank of the Vistula, as well as on the moraines, eskers and dunes of Gostynin Lakeland. Młodzieska Forest lay west of the mouth of the River Bzura, mostly pine, but with some deciduous parts,⁴¹ and farther to the east – the vast Kampinoska Forest, consisting almost entirely of pine trees.⁴² In the sixteenth century, the wide forest cover almost completely encompassed the sands and dunes of the Praski Terrace, from Nowy Dwór and Nieporęt to the River Świder. It consisted of the following forests: Słupieska (Słupińska), between Słupno and Bródno, Dębska by the Rivers Mienia and Świder, and others.⁴³

Osiecka Forest, also called Kaczków, covered the Otwock-Karczew terrace with pine wood and mixed forest.⁴⁴ Stromiecka Forest grew on the left bank of the Vistula, on the so-called Zapilcze (the area on the other side of the River Pilica), between the downstream Pilica and the River Radomka (Radomierza). The Bolemowska, Wiskicka and Jaktorowska forests stretched over the southern part of Błońska Plain, on the sandy and poorly clayed soil. The forests reached towards the Vistula to the upstream Mrowa (now Utrata) and the woodlands surrounding Nadarzyn, usually mixed forests. The forests Wiskicka and Jaktorowska were treated partially as a protective area for the aurochs, already extinct in Poland except for this region.⁴⁵ Smaller forest complexes, mostly birch, appear in Rawa Uplands in the strip of terminal moraines near Mszczonów and Grójec running parallel to the valley of the River Pilica.

Deciduous forest, with no beech or larch trees, grew along the pine forest on the more fertile grounds of Siedlce Uplands. In the fifteenth and sixteenth century, the fertile podsolcic soils near Liw were being cultivated at the cost of the nearby Korycka Forest. This area, still densely forested in the early Middle Ages, was now covered only with smaller forests, like Jadowska that is Obrębska, Starogrodzka by the Świder, Sulejowska with adjacent forests by the upstream Rządza between Wiśniewo and Stanisławów.⁴⁶ Strips of woodland, like the Dybła Forest in the fork of the Rivers Biebrza and Łek

³⁸ Lately M. Żywirka, *Puszcza Biała, jej dzieje i kultura*, Warsaw 1973. Contrary to the author's opinion (p. 35), the name Puszcza Biała was introduced to the literature not in 1929, but already in the nineteenth century; see B. Chlebowski, *Biała Puszcza*, SGKP, vol. 1, 1880, p. 182.

³⁹ See K. Buczek, *Ziemia polskie przed tysiącem lat*, Wrocław 1960, *ibidem* map. In the vicinity of Płock and Bielsk, the lack of timber was particularly problematic. See J. Świącicki's remarks on this subject (*Opis Mazowsza* [in:] W. Smoleński, *Pisma historyczne*, vol. 1, Cracow 1901, pp. 95–96).

⁴² Recently, K. Heymanowski described this forest: K. Heymanowski, *Rozwój sieci osadniczej w dobrach kampinoskich od połowy XV do połowy XIX wieku*, KHKM, vol. 17, 1969, no. 3, pp. 417–429.

⁴³ Compare Lustracja lasów 1566, ff. 110v–111v and LM 1565, vol. I, pp. 21, 24. In the fifteenth century part of this woodland area near the villages Bródno, Targowe and Kawęczyn was called Zabiele, see A. Wolff, *Najstarsze osadnictwo Warszawy prawobrzeżnej*, [in:] *Dzieje Pragi*, Warsaw 1971, pp. 123–124.

⁴⁴ Descriptions of this forests in Lustracja lasów 1566, ff. 111–111v and LM 1565, vol. I, p. 67 prove that the exploitation was intense.

⁴⁵ W. Pałucki, *Ziemia sochaczewska w wiekach XIV–XVIII*, [in:] *Dzieje Sochaczewa i Ziemi Sochaczewskiej*, Warsaw 1970, pp. 63–64 and LR 1564, p. 64 and LR XVII, p. 75 – the last entry mentioning aurochs.

⁴⁶ Descriptions of said forests in LM 1565, vol. II, pp. 79–80, 150, 162, and also Lustracja Lasów 1566, ff. 111v–112, 115–155v.

(Ełk), stretched on the ground moraine plains of north-eastern Mazovia, formed mostly from morainic clay and covered with quite fertile podsollic soil, in the Kolno Uplands and the Upper Mazovian Uplands. They consisted of pine and spruce forests, and swamp woods and alder forest in waterlogged areas. Pine trees of the Gać Forest grew on the sandy outwash plain, neighbouring the Czerwony Bór moraine in the east. They joined with the mixed Zambrowska Forest.

The development of settlements in Mazovia in the late Middle Ages, particularly the re-escalated settlement of eastern Mazovia, led to the diminishing of the woodland area, which occupied the bulk of the territory of the voivodeship at the time. Further rapid development of settlement in this region, until the end of the sixteenth century, reduced the forested area significantly. This process was the result of an unplanned and sometimes spontaneous exploitation of forests from the second half of the fourteenth century, especially disastrous to the old stand of trees.⁴⁷ Forest clearing in hilly areas and on river scarps devastated the local landscape, exposing it to strong denudation and erosion, e.g. in the vicinity of Zakroczym,⁴⁸ and resulting in the destruction of surface layers of soil.

The local climate remained under the influence of the woodlands, particularly deciduous and mixed forests. Humidity, higher than nowadays, was one of the distinctive features of this climate, affecting the state of groundwater and surface waters, and therefore the range of the forestation and the structure of the forest stand. Today, the structure of the forests bears little resemblance to the reality from the sixteenth to the eighteenth century. The main differences can be found in the range of mixed forest, then clearly dominant over purely pine or spruce forests, and the range of deciduous forest stands, the so-called *grądy*. These deciduous forests grew on more fertile podsollic soils and constituted the bulk of strongly deforested areas.

III.1.8 PODLASIE VOIVODESHIP

Tomasz Panecki

On the map of the sixteenth-century Podlasie Voivodeship three basic physiographic elements are presented: the lay of the land using contours together with the most important elevation points, the water network system with marshes and forestation. In accordance with the hitherto adopted principles for the AHP series, the water network and forestation have been reconstructed on the basis of the very earliest detailed cartographical materials i.e., the first topographical surveys made by the partitioning powers. These maps enable one to present fairly reliably the state of the environment at the turn of the nineteenth century, although not exactly the picture of the situation in the sixteenth century one nevertheless close enough. According to Henryk Rutkowski, any hydrography thus presented may be deemed close to the state in the sixteenth century, something that most obviously cannot be said for the forests, the reconstruction of which for earlier centuries is possible only for certain areas abundant in particular source materials.¹ The lie of the land is shown through contours with the end effect being indeed similar to previous AHP maps, with the difference being its semiautomatically generation of contours from a Digital Elevation Model (DEM) with the application of the ANUDEM algorithm.²

In previously published volumes of the AHP the physical geographical regionalisation of Poland has been described on the basis of the works of Jerzy Kondracki.³ In 2018 a team led by Jerzy Solon verified and made more detailed the hitherto division, while making reference to his theoretical bases.⁴ In the case of the majority of instances the only necessity was to be more precise in relation to the course of boundaries of current geomorphological and geological data, while the number of mezoregions was extended from 316 to 344. These data are available also in GIS files.⁵

According to both regionalisations, the area of the sixteenth-century Voivodeship of Podlasie lay within the reach of three sub-provinces bordering each other latitudinally: to the north the Eastern Baltic Lake District (Pojezierze Wschodniobałtyckie), the Podlasie-Belarusian Heights (Wysoczyzna Podlasko-Białoruska) as well as the Central-Polish Lowlands (Nizina Środkowopolska), and within their expanse five macro-regions (Map 1).⁶ The largest part of the voivodeship (circa 7,080 km²) lies on the territory of the macro-region of the North Podlasie Lowlands (Nizina Północnopodlaska) lying to the north of the River Bug. To the south of the river the South Podlasie Lowlands (Nizina Południowopodlaska) open out, of which the Podlasie Voivodeship takes up around 2,891 km². The northern fragment of the voivodeship (circa 420 km²) lies within the Mazurian Lake District (Poje-

zienie Mazurskie), while the western (circa 162 km²) on the territory of the Central Mazovia Lowlands (Nizina Środkowomazowiecka). A very small piece in the north-east (the area of Augustów, circa 9 km²) is in the Lithuanian Lake District (Pojezierze Litewskie). The lie of the territory that comprises the historical voivodeship is fairly diverse – from young glacial morainal and kame heights in the north, through outwash plains, valleys and river valleys (the Biebrza, the Narew and the Bug), a plain landscape resulting in rolling countryside in the south. The highest elevation point in historical Podlasie is the upland with the modern designation ‘Signal Hill’ (217 m AMSL) close to the village of Rozbity Kamień (Drohiczyn district).⁷ On the WIG and KdWR maps this is marked as an elevation without being named, while on earlier maps (The Quartermaster’s map, Heldensfeld) it is difficult to identify it from amongst the other hills represented by the line method. Another elevation extending above 200 m is Uszczna hill nearby Mielnik (204 m AMSL).

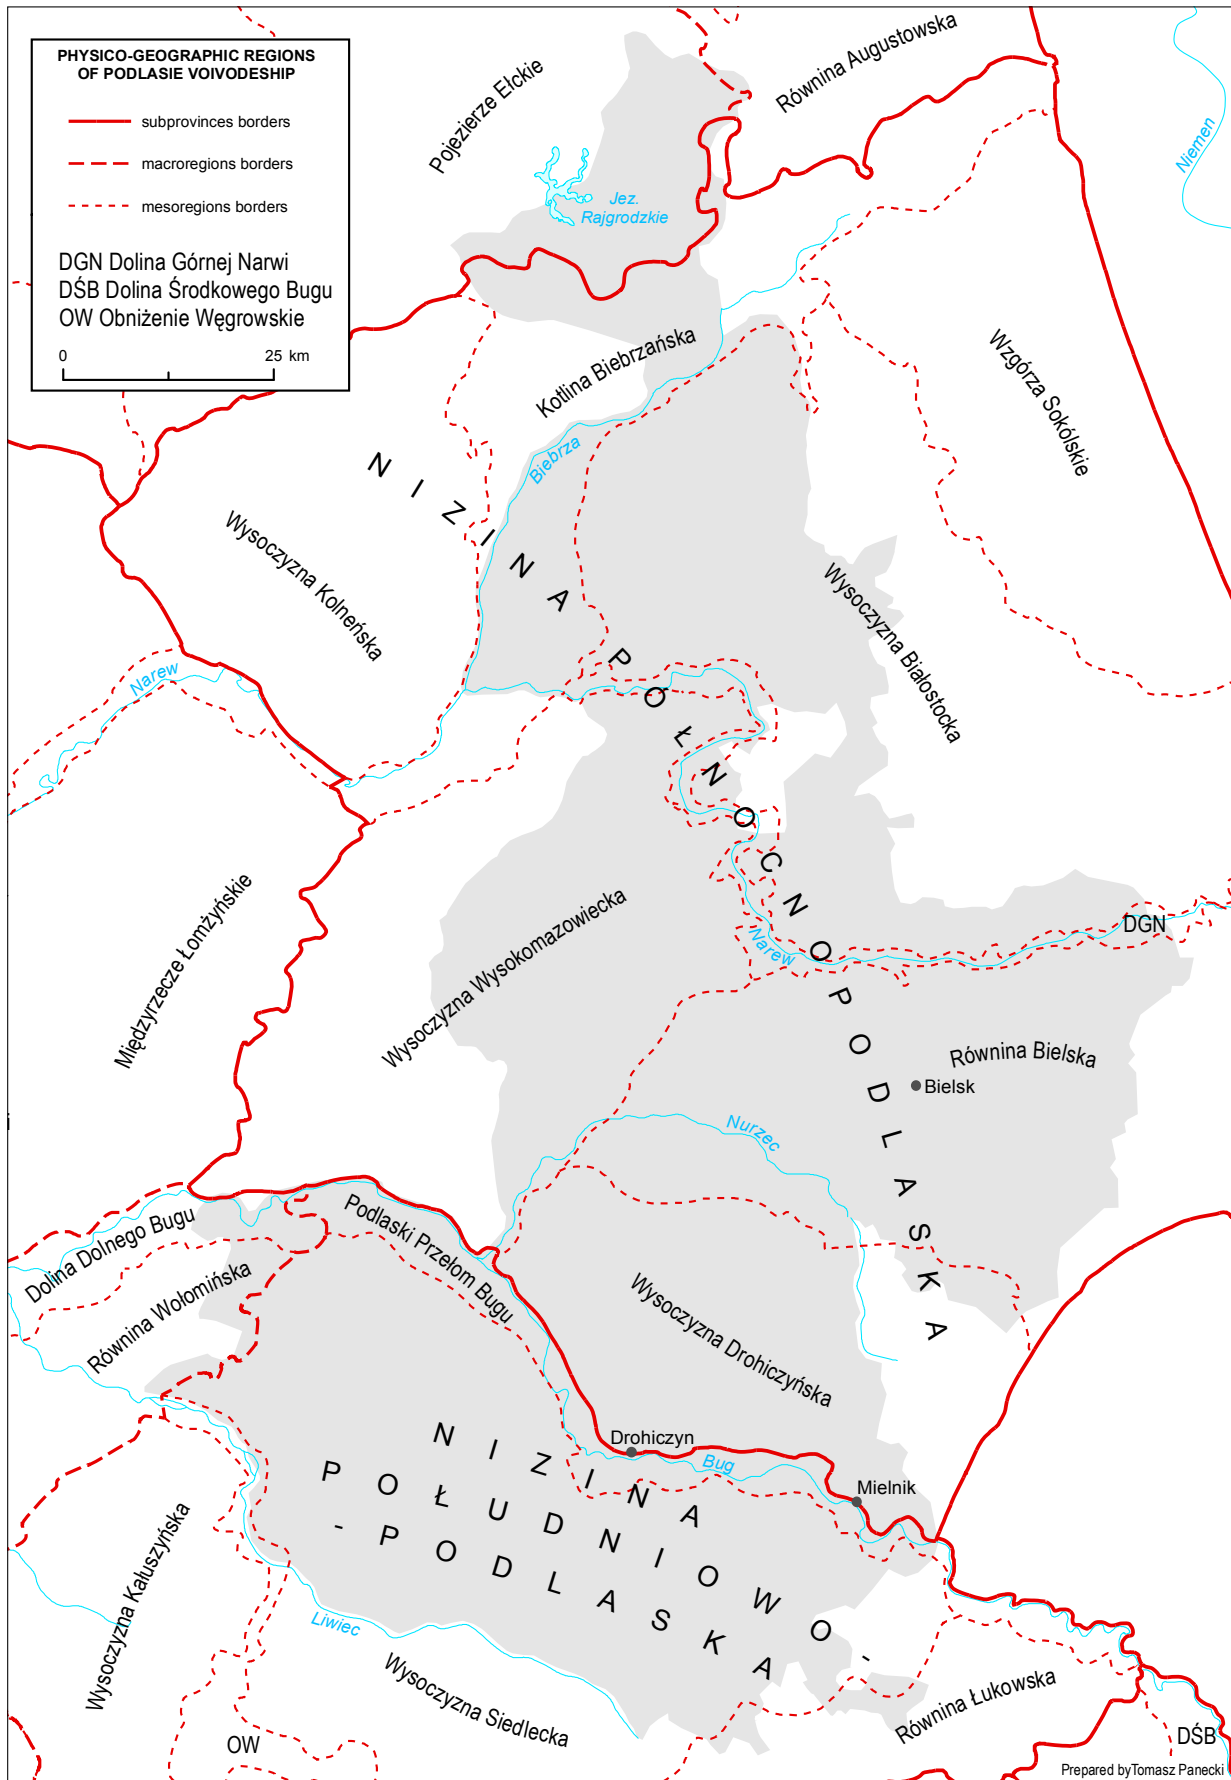

The largest part of the voivodeship extends over the North Podlasie Lowlands which as a result of their continental climate (with a high temperature fluctuation obtaining a range contemporary to 23 degrees Celsius) as well as the location within the subboreal forested zone of Eastern Europe is incorporated within the sub-province of the Podlasie-Belarusian Heights. However, in relation to the shaping of the terrain itself it bears similarity to the Central Polish Lowlands influenced by the *Warthanian* glaciation. The northern border of the macroregion shows the extent of the last period of glaciation, to the west the Pisa Valley, the right hilly area of the Narwa Valley and the eastern foot of the Czerwony Bór ridge, to the south – the hills of the Bug Valley, while to the east – the environs of Grodno and Świsłocz. The North Podlasie Lowlands divide themselves into eight microregions, of which six are to be found within the area of the sixteenth-century Podlasie Voivodeship.⁸

The Biebrza Valley (Kotlina Biebrzańska) is an extensive and marshy lowland area with an area of circa 2,600 km², a length of over 100 km and in width extending from 10 to 20 km. During the period of *Vistulian* glaciation it functioned as a urstromtal with melt water channels taking away the fluvioglacial waters to the Narew, but this water movement ceased during the later ice ages resulting in the development of peat deposits of a dozen or so metres in depth. The marshy regions of the Biebrza Valley are home to peat bog plants, riparian forest, alder forest, broadleaf forest and woods, as well as tundra vegetation relics. To the south of the Valley are to be found the Białystok Heights (Wysoczyzna Białostocka) of a varied post-glacial landscape including moraine and kame uplands exceeding at times 200 m AMSL as well as outwash and moraine fields. The valley of the Upper Narew (Dolina Górnej Narwii) constitutes a marshy region of the urstromtal in which the Narew meanders, separating the Białystok Heights from the Upper Mazovia Uplands (Wysoczyzna Wysokomazowiecka) – an area of varied landscape through the presence of gravel knolls left behind after denudation (circa 150 m AMSL). To the west of the Upper Mazovia Uplands and in the south of the Upper Narew Valley is the Bielsk Plain (Równina Bielska) whose landscape is varied by moraine knolls. Within the territory of the Plain, though here beyond the boundaries of the sixteenth-century Podlasie Voivodeship per se, is the Białowieża Forest. Between the Nurzec and the Podlasie Ravine of the Bug River extends the Drohiczyn Heights (Wysoczyzna Drohiczyńska). This upland area is characterised by elevations exceeding 200 m AMSL, for example the already mentioned Uszczna hill near Mielnik (204 m AMSL).

The second macro region with regard to area, and on whose territory the sixteenth-century Podlasie Voivodeship was situated, is the Southern Podlasie Lowlands, a part of the sub-province of the Central Polish Lowlands. Across the centre of the Lowlands runs the boundary of the *Warthanian* glaciation (just beyond the area of the voivodeship itself). The climate here is somewhat cooler from those areas lying to the west; this being impacted by the winter months. In terms of the geobotanical profile the area is closer to the Lublin Uplands (Wyżyna Lubelska), while the landscape is marked by firs as is characteristic for the southern part of Poland as such. The Southern Podlasie Lowlands border to the north, through the Bug valley with the North Podlasie Lowlands, to the east with Polesie, to the south with the Lublin Uplands, while to the west they bound the Central Mazovian Lowlands.

Map 1. Physio-geographic regions of Podlasie Voivodeship

The macro-region divides itself into eight micro-regions, three of which were to be found within the territory of sixteenth-century Podlasie.⁹

The most northerly located part of the Southern Podlasie Lowlands is the Podlasie Bug Ravine (Podlaski Przełom Bugu). The width of the river valley oscillates from 1.3 to 6 km over its length of approx 180 km, while the depth of the cut into the elevation varies from 30 to 60 metres. At present the floodplain is between 4 and 8 metres above the surface of the river. To the south lies the Siedlce Upperlands (Wysoczyzna Siedlecka), which are found within the terminal moraines from the *Warthanian* glaciation and its subsequent periods of retreat, reaching in height to around 200 metres AMSL. The southern part of the voivodeship lies within the area of the Łukow Plain (Równina Łukowska), which is a sandy area within the sphere of fluvial-glacial waters directed somewhat in a south-easterly direction.

Small fragments of the Podlasie Voivodeship lie within the territories of three other macro-regions: the Mazurian Lake District, the Lithuanian Lake District as well as the Central Mazovian Lowlands. Within the composition of the first are the Ełk Lakes (Pojezierze Ełckie) encompassing the northern part of the voivodeship.¹⁰ This area is characterised by its diversity in terrain and lakes, the largest of which being Lake Rajgród. The Ełk Lakes border to the east the August Plain (Równina Augustowska), which enters into the composition of the Lithuanian Lake District.¹¹ This is an outwash plain that lowers in height towards the north from Suwałki to Augustów and has numerous lakes which were not a part of the voivodeship and in the sixteenth century fell with the economic scope of Grodno.¹² The western fragment of the voivodeship lies upon the Central Mazovian Plain: Wołomin Plain (Równina Wołomińska) and the Lower Bug Valley (Dolina Dolnego Bugu).¹³

The landscape, together with the lithology of the surface areas, is closely linked to the types and distribution of soils. The soils of Podlasie were created first and foremost from sandy and clayey post-glacial deposits. For the most part the terrain is dominated by poorly fertile gley soils being deprived of oxygen which came into being as a result of shallow meteoric water and the process of gleyfication. The northern extremes of the voivodeship are the most noticeably touched by glaciation, between Rajgród and Augustów, and here brown soils predominate; ones formed from moraine glacial tills that are characterised by their fairly good humus levels, and which are advantageous for cultivation. Over river valley areas we are dealing with half-bog peaty soils with the greatest concentration of these soils dominating along the Biebrza, Narew and Supraśl River valleys. Most advantageous for agriculture are the river alluvial soils that have formed along the course of the Bug River, though equally along the banks of the Brok and Ślina Rivers. On the rolling hill areas of central and northern Podlasie we have sizeable stretches of poor soils and podzolic soils. In a part of the Siedlce Upperlands, to the south of the Bug are to be found lessivés based on clays and clayey sandy soils.¹⁴ The decisive majority of Podlasie territory is characterised by soils poor in agricultural worth, chiefly belonging to the fourth or fifth class in soil classification. Only on high cliff areas where the mother base rock are clays or clay-sandstones do we have third class soils, and on only a small area between the Rivers Orłanka and Nurc – do second class appear.¹⁵ Nevertheless we cannot draw any conclusions as to the degree of fertility simply basing ourselves on a contemporary soil classification, for agricultural usefulness could result from the employment of former varieties in cultivation techniques and fertilization, as well as different water factors than those we experience today.¹⁶

Within a limited scope we are able to attempt to assess the value of soils in an approximation for the period of interest to us by analysing surveys of royal lands and holdings. For 185 settlements information on soil quality was given, here the most frequently being classified as: **poor**¹⁷ (marshy/boggy soil, sandy, poor, poorer, bad), **average** (average, good in half with average) and **good** (good, worthy

¹⁷ The terms in brackets are of a source character.

of cultivation, excellent).¹⁸ It is possible on the basis of examining royal holdings to state that within the landscape of the Podlasie Voivodeship there dominated poor soils (56 locations) and average (43). Only in the case of 25 settlements did those conducting the survey deem the soil to be good. By way of comparison in nearby Mazovia 94 settlements had good soil, 49 – average, while 42 – poor.¹⁹ The soil conditions, but first and foremost climatic factors, also allowed for the cultivation of vines at the castle vineyard in Drohiczyń, which was covered and mentioned by the surveys of 1570, with this possibly dying out as a result of the severe winters that occurred in the second half of the sixteenth century.²⁰

While on the matter of soils it is worth recalling the mineral components. Podlasie is an area wanting in minable resources, and of the few that do occur we may enumerate chalk, marl, limestone and peat. Chalk was mined in the sixteenth century and here chiefly in Mielnik, Radziwiłłówka, Suraż as well as in smaller quantities at Knyszyn.²¹ Metal working smithies were able to make use of the turf iron ore that occurred in Podlasie.²²

The entirety of Podlasie lies within the Vistula basin which in turn lies within that of the Baltic. The chief rivers include first and foremost the Bug (in the southern part of the voivodeship) together with its major tributaries (the Nurzec and Brok) as well as the Narew (in the central and northern parts) with the tributaries: the Sidra, Brzozówka, Neta (Netta) and Łęk (Ełk). Across the territory of Podlasie, the Biebrza and Narew meander in peaty river valleys, while the Bug flows within a deeply cut valley, the width of which can run to several dozen metres. The network of lakes is not extensive and covers several basins to the north between Rajgród and Augustów. The hydrography of Podlasie is characterised by marshes, bogs and wetlands, particularly at the mouth of the Biebrza as it enters the Narew. In the modern epoch the level of waters was presumably higher than is the case today, something that positively influenced the transport potential and navigability of the rivers though had at the same time negative consequences for land transport, e.g., as a result of the increased boggi-ness.²³ This is borne out by, among other things, the presence of a river port at Drohiczyń on the Bug, mentioned in the survey of 1570.²⁴

The reconstruction of the sixteenth-century hydrographic network is based on cartographic materials from the turn of the nineteenth century i.e., before the period when large scale drainage, irrigation and regulation of river channels took place. The greatest undertaking in terms of altering natural navigational courses was the construction of the Augustów Canal, although this investment covered merely a northern fragment of the sixteenth-century Podlasie Voivodeship.²⁵ As a result of the low-lying and boggy character of the Biebrza and Narew Rivers, changes in their river bed are pronounced and may be observed also to this day. Problematic was especially the reconstruction of the Narew, which as an anastomotic river that flows through many channels, but its cartographic image is very similar on both contemporary and old maps. Consequently, it is difficult to unequivocally point to the river's main corridor. And as a result fundamental here is the question of generalisation: for there is no way in which one may accurately transfer the drawing of all the channels from the source maps to the scale of the main map. Therefore, it has been decided to draw the corridors by means of broad ribbons as well as the most important secondary corridors distanced the furthest from the main river corridor channel so that the character of the river and the surface area it covers is conveyed as fully as possible.

In the case of the Biebrza there was no such problem, although here the WIG maps showed greater detail (meanders, old river beds) than on, for example, the von Stein map drawn up on a scale several times larger. The River Bug is a river of a different character again, the image of which as presented on maps from the eighteenth and nineteenth century clearly differs from that presented on WIG maps as a result of the old river bed's derivation from numerous meanders. This river appears as equally on the Prussian map of von Stein, as the Austrian map by Heldensfeld. In the AHP series, in accordance with the method employed, we have adopted the image from the old map corrected through a map from the interwar years, and here paying attention to preserve the correct spatial relations between the river and settlements.

Detailed problems also arose when attempting to reconstruct the course of the rivers. Of interest in the light of former cartography (von Stein, Textor, the Quartermaster's map) was the joining of rivers – the Markowa (the Nurzec basin) and the Liza (the Biebrza basin). Such a cartographic representation in which the two flows form one would suggest that there exists a channel between the Narew and the Biebrza, which, from the hydrological point of view, would be an impossibility. On later maps (those from the partitions, WIG), both rivers are presented as separate water flows; and so they have been drawn on the main map.

Lakes constituted the main part of the landscape of northern Podlasie, i.e., the environs of Rajgród and Augustów. The largest (circa 1,412 hectares) was Lake Rajgród, which has an additional two offshoots, both in the Prussian direction: Stacer and Przepiórka. Besides Lake Rajgród, 11 other lakes may be noted lying between the Elk River and Augustów (Dręstwo, Jezioro, Krassiowo Wielkie, Kukowo, Póljeziorko, Reszki, Serwy, Ślepe, Tajno, Toczyłowo and Woźnawieskie). Also it is impossible not to mention the Augustus Pond (today: Zygmunt August Lake or Lake Czechowizna) – an artificial reservoir constructed on the River Nereśl.²⁶

It follows to suppose that the network of Podlasie lakes was greater in the period of the early modern era than is the case today. It has not been possible to locate on the maps Lake Małe Błotne (Little Marsh) mentioned in the inspections.²⁷ It does not appear on either maps from the turn of the nineteenth century nor on modern maps. It therefore follows to assume that it dried up; something suggested by its name, or that such was the designation in historical sources of a part of nearby Lake Tajno. A lot of the material that concerns the region's hydrography has been supplied by the *Descriptions of Parishes* developed for Karol Perthées's ('Perthées's Sketches'), detailed mapping needs, but that said the actual location of the physiographical objects indicated is in point of fact an impossibility.²⁸ The description of August deanery has brought with it significantly more details, in particular concerning place names than is the case with the Knyszyn deanery. And thus in the parish of Bargłowo (Bargłów Kościelny) is to be found Lake Paluchowo – approximately 2.5 km to the south-west of Bargłowo. There does not appear on any of the maps a reservoir at this spot, yet equally some similarity to Lake Póljeziorko nearby cannot be ruled out. Six lakes with their own nomenclature have been mentioned in the parish of Trzciane (Trzcianne),²⁹ and these have not been located even on maps from the turn of the nineteenth century, and here more than likely because they were on the whole marshy and boggy lakes which could have been only seasonal in their lake-like existence.

We have stumbled upon the problem of the drying up of two lakes located to the north of the Narew River in the environs of Tykocin. The first to the north of Zajki (approximately 59 hectares) and the second located along the side of the Nereśl (approximately 235 hectares). Both were to have found representation on maps from the turn of the nineteenth century (von Stein, Textor, the Quartermaster's map), yet already with the appearance of the WIG map, as well as on the contemporary map, we have only a river in this same place with certain areas of marsh. Written sources do not point to the existence of any water bodies to the north of Tykocin, and as a consequence they remain unnamed.

All in all marked on the map of the Podlasie Voivodeship have been 21 lakes of which 17 have the name specific for the Old Polish Epoch.

Mentioned in the reports are equally numerous small lakes and ponds of an economic function which must have disappeared over the course of 200 years and for which there was no possibility of cartographic representation. Here the matter concerns ponds at Drohiczyn,³⁰ Goniądz,³¹ Knyszyn,³² Huzyki (Użyki),³³ Płoski,³⁴ Bargłówka,³⁵ and Kuraszewo.³⁶ It is worth adding that the ponds, small basins, as well as rivers and lakes served Podlasie for fishing. Attention also is drawn to the need to restock these fish ponds to allow for further exploitation,³⁷ all the more in the ponds at the castle in Drohiczyn ‘not many of them are catching fish, little more than for a lunch or three will there be’.³⁸ Of particular importance was fishing to the economy of Knyszyn and the *starost* of the same name: besides Augustus Pond, we have ponds at Kobylanka, Bobrówka and Tołkaczówka,³⁹ two spawning ponds at Knyszyn as well as 40 small ponds.⁴⁰ Numerous commercially operated ponds are also enumerated in ‘Perthées’s Sketches’.

An important part in the hydrographical network is played by marshes and wetlands, which in Podlasie are to be found first and foremost along the lengths of the Biebrza and Narew Rivers.⁴¹ All in all they constitute approximately 10% of the surface area of the voivodeship according to the state of play at the turn of the nineteenth century. Reports and surveys on the Podlasie Voivodeship also supply us with information about meadows and their use for agricultural purposes by Podlasie inhabitants, with many of these being meadows situated on marshland and boglands.⁴² It is worth enumerating some of the largest Podlasie areas of wetland singled out either spatially or onomastically. Coming from the north there is a large area of marshland that runs along the banks of the Ełk River right up until it enters the Biebrza, while its inaccessibility is borne out by the information on Perthées’s map: ‘significant bogs which are impassable in the summer period though possibly in winter.’ Similar information may be found on Austrian and Prussian maps. On von Stein’s map we have to the north-east from Goniądz a road which has been marked: ‘Bey ausserst durren Sommer nur mit Bauerwagen zu passieren’, while on the map by Heldensfeld between Treblinka and Wólka Okrąglik we have the notation ‘Dieser Sumpf ist nie zu passieren.’

Of especial note is the outlet of the Biebrza to the Narew River and the bogland that stretches out from Bór Dobarz northwards to Puszcza Czarna (Tykocin district) in the south (the present-day Ławki marshlands).⁴³ Despite its inaccessibility this was an area of interest to local inhabitants as a result of the hay that could be obtained.⁴⁴ On von Stein’s map information is placed that the bogland may be crossed only in summer. A sizeable description of the area can be found in ‘Perthées’s Sketches’: boggy meadows were to have stretched from the Biebrza to the Nereśl and (to the villages of Wiszowate and

⁴⁴ LWP 1570, 1576, pp. 140–142.

Bajki), in the south approximately 15 *staj* (about 14 km,⁴⁵ i.e., right to the Narew, which is in accordance with the maps of the period), and to the north in the direction of the villages of Szorce, Chojnowo, Mroccki Kulesze.⁴⁶ The place names tell of the use made of the land – Głuchowszczyzna (Silentlands) and Urbanowski backwater (unidentified).⁴⁷ There were equally salt workers and stockaders identified according to the publishers of the report of 1576, and here with the territory of Solniki,⁴⁸ while salt workers (*solnicy*) are also recalled in the report covering the *starost* of Goniądz from the year 1571 (‘Solnicy też nadto snadź do Raigroda wozić beli powinni kogo kazano (...)’).⁴⁹

The information from the inspection has allowed us to add to the main AHP map some proper nouns for smaller boglands, for example the Augustów Boglands (a marsh at the outflow of the River Turewka to the Netta)⁵⁰ or the place named Somaczki⁵¹ (the Sumiackie reserve on the WIG map situated to the south-west of the town of Narew, Bielsk district). The names of marshlands also appear in inventories but it is either impossible to locate them or the degree of accuracy in so doing is uncertain.⁵² In the ‘Inventory for the Goniądz starost’ for the year 1571 we have four proper names of bogs in the area of Bór Dobarz.⁵³ From amongst these it has been possible to identify the Orle marshlands (the Orli Grąd wilderness on the WIG map). Equally ‘Perthées’s Sketches’ provide us with significant toponymic material equally difficult in the location and identification of places. In the parish of Augustów we have a bog ‘more significant than’ Zgniłka as well as Pogrzałka.⁵⁴ The localisation of the former coincides with the ‘Augustów Boglands’, but one cannot be categorically certain at this, while the latter remains unidentified. In the parish of Bargłowo we have the marshes of Zgniłki, Paluchowo and Trokiele, while the latter may be identified with the source of the River Turewka.⁵⁵ In the parish of Goniądz it has been possible to localise the marshland Łosia Biel stretching from Downarów to Goniądza along the banks of the River Biebrza.⁵⁶

In order to reconstruct the level of forestation, employed were partition maps from the turn of the nineteenth century – those of von Stein/Textor, Heldensfeld as well as the Quartermaster’s map). Given the publishing scale of our undertaking (1:250,000) and the readability required adopted in the presentation was the premise, in a way similar to earlier volumes of the *AHP*, that wooded and forested areas of a minimal dimension of 4 x 4 mm would on a working scale of 1:100,000 correspond to approximately 16 hectares.

On the basis of the assembled data one may state that the northern part of the Podlasie Voivodeship (to the north of the Narew and Supraśl Rivers) was far more wooded than was the south. Attention is drawn first and foremost by the wooded areas between Rajgród and Dolistowo – the former areas of the Puszcza Grodzieńska (Grodno Forest) marked on old maps as a marshy forest in the Biebrza Valley known as ‘Netta Bruch’ (Textor) or ‘Bagno Netta’ (the Quartermaster’s map), Bór Dobarz⁵⁷ (called Puszcza Leśnictwa Goniądzkiego *Goniądz Forestry Woodlands*⁵⁸) situated to the south of Goniądz along the banks of the Biebrza, the boggy Puszcza Czarna *the Black Forest* (Tykocin or (Black Forest) Las Czarny⁵⁹),

the Knyszyn Forest stretching between Knyszyn, Tykocin, and Dobrzyniewo Puszcza⁶⁰ as well as the Lada Forest constituting a throw back to the Bielsk Forest.⁶¹ The Białowieski Forest that stretches along the eastern border of Podlasie constituted from 1569 the border between the Crown and Lithuania.⁶²

The plants and vegetation of Podlasie were formed within the context of climatic changes and human activity that may be dated from around 5,000 years ago.⁶³ According to Kazimierz Ślaski, the degree of forestation during the Middle Ages should be considered at about 65–70%,⁶⁴ while according to Józef Śliwiński forests made up 70% of the surface area of the Nieman River basin.⁶⁵ From the fifteenth century forestry officials looked after the management of forest resources, who acting on behalf of the starosts took care to enact a rational forestry economy. These vast forests were divided into so-called *puszcze* (royal forests) subject in administration to royal officials, while direct forest protection was the realm of the so-called *osocznicy* (foresters), whose lands could be exempt from taxation in exchange for their villeinage.⁶⁶ Within the process of shaping settlement in Podlasie, making room for villages and homesteads, forests were felled and cleared resulting in the creation of smaller forest units from dense and extensive swathes of woodland. Not without significance was also the economic reform known as the Voloč Reform, where the land of particular villages was measured, forest-based settlements were eradicated and the villeinage of peasants was made uniform.⁶⁷ In the sixteenth century the lands of the two largest royal forests – Grodno and Bielsk – were reduced in size and were divided, resulting in the creation of smaller forested areas including Dobarz (Goniądzka), Knyszyńska, Tykocińska (Czarna) or Ładzka.⁶⁸ In the first stage it was chiefly deciduous trees that were felled, broadleaf-oak forests which had grown on fertile soils suitable for agricultural practices.⁶⁹ The most important example of the almost total felling of a forest is that of Puszcza Bielska, which as a result of the development of agricultural settlement had in effect ceased to exist by the end of the eighteenth century, with a small remnant being Puszcza Ładzka.⁷⁰ In the sixteenth century Puszcza Bielska was still clearly distinct from the Białowieża forest.⁷¹ Other forested areas to be felled during the medieval period include Puszcza Choroszcz that extended from the mouth of the River Supraśl and from the Narew to the River Niewodnica, and Puszcza Błudów on the Supraśl.⁷² The extensive Grodno Puszcza had also been deprived of its most valuable forestry stock as a result of the Radziwiłł family's programme of settlement. Already by the end of the fifteenth century it had started to be divided into smaller units: the forests of Puszcza Nowodworska and Perstuńska (Grodzieńska).⁷³ Here and there small pockets of forest have survived but these are no more than islands in a sea of cultivation, these include: Bór Koniewo, Bór Rybczyzna, Bór Bełda, Bór Czarny (Czarny Las – The Black Forest), Bór Pasznia (woods), or the wooded marshland of Błota Pieńczykowskie.⁷⁴

In sixteenth-century Podlasie in operation were four forest administrative regions, these being subject to starosts: the Bielsk (20 settlements), Tykocin and Goniądz (five), Knyszyn (one). They were divided up as a result of the introduction of the so-called 'Forestry Act' regulating the economic management and running of forests and woodlands.⁷⁵ The Bielsk forest administrative region encompassed villages located in the area of Puszcza (royal forest) Ladzka, as well as its remnants scattered to the east of Bielsk itself. The villages encompassed on average from about 10 to 30 voloks of land, and one of the very few mentions are taxation categories that indicate a forestry orientated economy.⁷⁶ In four cases the reference is to tree trunks hollowed for bee hives, in three, hunters' divisions (*osocznicy*), while in two, shooters.⁷⁷ The Tykocin and Goniądz forest administrative regions, which encompassed in total five settlements covered the territories of Bór Dobarz as well as the Czarna Puszcza (royal forest), and also the Podlasie-Lithuanian border region (Krzywa, Krukowszczyzna). Only a single village was mentioned in respect to the Knyszyn forest administrative region – Pogorzalki.

The remains of the medieval forests may be reconstructed on the basis of 'Perthées's Sketches', but even then their precise identification is often impossible. In the parish of Dolistowo (Augustów deanery) mentioned is the Dąbrowa Forest as well as Grzędy with both of them being referred to as small (unlocated).⁷⁸ In the Goniądz parish we have most likely located the forests: Kramkowski, Krzeczkowski, Kułakoszczyzna, Puszkarze and Rybacki.⁷⁹ In the parish of Jasionówka we have Gaj Zapowiedz – a borderland object between Podlasie and Lithuania, which '(...) has in itself oaks, alder groves, birch, osier'.⁸⁰ In the parish of Rajgród mentioned is a single forested area: 'bushes called 'gorstwinarze' (Gorstwiny in the sketch), but it was not possible to locate them despite their fairly exact description.⁸¹

In the sixteenth century the forests in Podlasie constituted a significant part of the economy: in remote reserves were to be found tree-trunk hives, tar and charcoal were produced, bog iron was extracted.⁸² Honey hunters were mentioned in the inspections for the Tykocin Puszcza,⁸³ from where also honey trees were used in the Dobarz Bór in which the honey gatherers were unable to assemble fifteen 'hands' i.e., three barrels of honey as taxation.⁸⁴ Following the inclusion of Podlasie within the Polish Crown the honey trees from Goniądz Puszcza were cut down and transported to the castle at Goniądz, and the local gentry were forbidden to exploit them further.⁸⁵ Possibly this led to instances whereby these honey trees were destroyed and the honey stolen.⁸⁶ The exploitation of this inaccessible area is borne out by the forest dweller settlements marked on Perthées's map (Budy Doboskie, Rudkowskie Budy) as well as the winter roads running parallelly.

Bog iron and wood for charcoal were obtained in, among other places, a location called Turowszczyzną (*Thurowszczyzna*), being a smithy settlement, which we have been unable to locate. One could suppose that it might have been located in the environs of Zygmuntów (Bielsk district), more than likely within the territory of Puszcza Ladzka.⁸⁷ This village also paid 'felling money' – the equivalent of work in forest tree felling.⁸⁸ We also have testimonies to various types of forest work in the environs of Augustów.⁸⁹ We have in our possession more detailed information for the Knyszyn Puszcza where at least two timber mills were in operation (testified to in 1574 and 1578): one near Knyszyn on the Jaskranka River, while the second at Dobrzyniewo on the Supraśl. There was also

a sawmill in Borsukówka.⁹⁰ Forests were obviously a place of hunting, most often in the backwoods which were exploited economically in no other way bar the hunting.⁹¹ It is also worth recalling the manor house at Knyszyn where the king would often stay while hunting. In the village of Dawidowo (Bielsk district, Puszcza Ładzka) mentioned are shooters and the earlier mentioned *osoczniczy*, as those whose job it was to protect and watch over the forest as well as participate in the hunting itself.⁹² Equally in Goniądz, according to the inventory of 1571, we have shooters (25 persons) whose duty was ‘to travel to the forest with the starost or with the gamekeeper forester when ordered while also being obliged to perform other duties.’⁹³ It is important to note that all of the above mentioned ways of forest exploitation concern those areas situated to the north of the River Narew or in their vicinity (Puszcza Ładzka). Roads also ran through the forest which, as a result of the specific nature of Podlasie forests, required the construction of their own form of causeways (*gaci –fascine roads, haci*), where the road had timber laid on it to facilitate movement.⁹⁴

Forest exploitation was equally hunting, something the last Jagiellon, Sigismund August, readily and enthusiastically engaged in, often visiting the forests in the environs of Grodno, Knyszyn, Tykocin and Białowieża. An important problem that the monarchy tried hard to eradicate was that of poaching, formally forbidden on the basis of the so-called ‘Forest Act’ of 1567; not that this resulted in any noted curbing of the activity.⁹⁵ In order to fight poaching effectively and to protect, for example the European bison, special sanctuaries were set up, and permission to kill them was required from the king himself. Nevertheless in the second half of the sixteenth century, and here according to inspections, Bór Dobarz had been so decimated that large game was wholly absent and hunting in the forest had become pointless.⁹⁶

A significant problem in drawing up the main AHP map were questions of onomastics. Only a few physio-geographic objects (rivers, lakes, marshes, forests) had their names given on old topographic maps. These are chiefly the larger rivers, a few lakes and some marshes and wetlands, the names of which are often distorted as a result of the maps’ Prussian or Austrian origin. In written sources, for example in recruitment and draft registers, there is an absence of information of this type; while in the reports and surveys on royal property and goods from the sixteenth and beginning of the seventeenth century as well as in inventories any information provided refers to either only the largest rivers or – on the other hand – small ponds or water flows, and even then information as to their localisation is vague and with the same often ambiguous. Given the above state of affairs extremely useful as material for the reconstruction of territorial names has been the *Electronic Dictionary of Polish Hydronyms* (ESHHP), a work still in progress,⁹⁷ as well as toponymic works.⁹⁸ And the principle, in accordance with that adopted for the AHP series as a whole, has been for any preference in compiling the map to be for a sixteenth-century name, while in the event of its absence the adoption of the earliest possible to be authenticated.⁹⁹

In general on the map for the Podlasie Voivodeship marked have been the names of 124 rivers, 18 lakes, 13 areas of forest, seven marshes and wetlands and two nature reserves/wildernesses. From amongst the rivers, 68 have authenticated names from the period up to 1650, 22 to 1850, while 34 have been given later names. Sometimes there occurs a fairly noticeable difference between the contemporary and historical name. For example, the brook flowing through Goniądz being the left bank tributary to the River Biebrza is the Goniądzka according to ‘Perthées Sketches’, but later (and

III.1.9a ROYAL PRUSSIA

Marian Biskup

Geomorphological outline of Royal Prussia

The following outline provides a necessary introduction to the geomorphology of the area under consideration, and helps with understanding the main map and thematic maps supplementing it. The outline was constructed on the basis of the *Przeglądowa mapa geomorfologiczna województwa bydgoskiego* by R. Galon and L. Roszkówna as well as *Przeglądowa mapa geologiczna Polski* to the scale of 1:300,000 (Toruń, Bydgoszcz, and Gdańsk maps).¹

The outline depicts major geomorphological elements of Royal Prussia, which, as mentioned previously, was divided into three voivodeships: Chełmno, Malbork, and Pomeranian. All three lay in northern Poland, the relief of which had been shaped during the latest Ice Age.

Two latitudinal belts of lowlands can be distinguished in northern Poland: Coastal Lowland Belt (known as the Baltic Lowland Belt) and the Pomeranian Lakeland Belt. The first one spans from the western border of Poland in the area of Szczecin and Świnoujście to the eastern border with the Soviet Union [as of now, the area of Russia – K.S.-P. note], while the second spans from the Oder in the west to the Nemen in the east. The border between the two is fairly apparent, with a significant drop in the height of the terrain and the change in landscape, the distinguishing feature being the glacial lakes, generally absent in the Coastal Lowland Belt.

Both belts are naturally divided into several distinguishable regions, though only those which fell within the borders of Royal Prussia, will be discussed below.

The coastal region – the so-called Kashubian Coastline (*Pobrzeże Kaszubskie*) – is a till plain interrupted by numerous, broad and boggy glacial ice-terminal valleys marked with lumpy holms (*kępa, kępy*). The largest of these glacial valleys is called the Reda-Łaba Rivers Pradolina (*pradolina rzek Reda-Łaba, Urstomt*), a broad glacial valley).

To the east of Lake Żarnowieckie spans an elevated till plain, falling steeply into the bogs of Błota Karwieńskie in the north and the east into the bogs of Płutnica River Glacial Valley (*Pradolina Płutnicy*). Smaller gorges slash the plain itself, while the holms of Kępa Żarnowiecka, Kępa Sławoszyńska, and several minor ones, can be distinguished as notable terrain elevations.

Kępa Swarzewska, to the east of the Płutnica River Glacial Valley, ends in a steep ridge towering above the Baltic Sea and the Bay of Puck. To the south of the Bay is Kępa Pucka, enclosed from the west by Darżlubie Forest (*Puszcza Darżłubska*). Near the village [as of now, Reda is a town – translator's note] of Reda, the Reda-Łaba Glacial Valley bifurcates, the prongs enveloping the hillock of Kępa Oksywska. Modern-day Gdynia is located where the southern arm terminates into the sea at the foot of a characteristic seashore holm, Kępa Redłowska, and, partially, near the elevated Kamienna Góra.

The seashore area under consideration can be divided into two types of terrain: elevated till plain, etched by valleys forming holms, which falls into the sea either in steep, tall cliffs and flat, low

¹ This chapter is mostly based on research by S. Lencewicz, *Geografia fizyczna Polski*, Warsaw 1955 and M. Kielczewska-Zaleska, *O powstaniu i przeobrażaniu kształtów wsi Pomorza Gdańskiego*, Warsaw 1956, Prace Instytutu Geografii PAN, no. 5, pp. 25 f.

boggy shore that can be found where the glacial valleys meet the sea. Along the latter, low seashore spans a belt of low dunes, mostly covered by vegetation; this is especially visible from the beach line. The Bay of Puck is enclosed from the northwest by Hel Peninsula – a long, mostly forested sandspit, narrow at the base and up to three kilometres wide towards the tip, formed by the nearby sea current.

An analogous ground moraine shoreline can be found along the Vistula, south of Gdańsk, spanning towards the town of Nowe. This region borders with another type of lowland terrain, occasionally dipping beneath sea level – Żuławy Wiślane (Eng, “*the Vistula Fens*”), located at the Vistula delta. To the east, the Coastal Lowlands Belt borders the ridge of the Masurian Lake District and the Elbląg Upland. The delta is, for the most part, fan-shaped, 50 kilometres long and with the estuary base 40 kilometres wide. The terrain is remarkably flat, with only slight dips towards the northern estuary and to the sides, at its highest point rising only to nine metres above sea level and dipping to 1.8 metres below sea level. The delta, crisscrossed by numerous manmade irrigation canals, is separated from the sea by a belt of forested dunes, spanning from the town of Sopot and expanding into the Vistula Spit (*Mierzeja Wiślana*).

The last region in the Coastal Lowland Belt is the Prussian Lowland, towards the east of Żuławy Wiślane. The western part of the Lowland within the borders of what was once Royal Prussia is represented by the so-called Elbląg Upland, similar in nature to the holms of the Kashubian Coast. Elbląg Upland encompasses close to 200 km² of an undulating ground moraine, with elevation reaching up to 198 metres above sea level, steeply sloping into Żuławy Wiślane and the Vistula Lagoon (*Zalew Wiślany*).

To the south of the Coastal Lowland Belt, on both sides of the Vistula, stretches a vast lakeland (*pojezierze*) plain, formed by the ice-marginal accumulation of the latest Ice Age, mainly in the form of terminal moraines, ground moraines, and outwash plains. The frontline of the post-glacial terrain is marked by ridges of terminal moraines, running parallel to the Baltic Sea coastline; this swathe of land spanning between the Oder and the Vistula is called the Pomeranian Lake District, while its continuation from the Vistula to the Nemen – the Masurian Lake District. Parts of both lakelands that once fell within the scope of Royal Prussia will be the areas of interest. The eastern border of the Pomeranian Lake District, where the elevation of the terrain reaches its peak, is called the Kashubian Lake District, and culminates around the area of the towns of Kartuzy, in the form of Szymbark Hills (*Wzgórza Szymbarskie*), with the highest peak being Wieżyca (331 metres above sea level). Several chains of terminal moraines make for the highest ice-marginal accumulation of glacial debris, spanning from Bytów to Kartuzy and Sopot. Numerous, mostly elongated and narrow, post-glacial ribbon lakes, decorate the landscape. Towards the southern and eastern parts of the Lake District, the plain slopes to a lower elevation, and the forms of terrain become sparser, the lakes less frequent and smaller in size.

South of the terminal moraine ridge – from Białobór and Bytów all the way to Kościerzyna, Nowe, and Tuchola – spans, almost uninterrupted, a vast landscape of Pomeranian outwash plain, lined with lake basins and fragments of the ground and terminal moraines towering above the land. This type of terrain can be observed in the area surrounding Brusy, Wiele, and Czersk. It reaches the Vistula in a narrow splinter, northeast of Świecie. Formed by post-glacial sand and gravel accumulation, the outwash soil is mostly infertile, of little worth to agriculture, and thus vast swathes of forests cover the land. A major area of woodland, Tuchola Forest (*Bory Tucholskie*), surrounds the basins of the rivers Brda and Czarna Woda. The aforementioned ground moraine stretching from Gdańsk to Nowe, emerges from beneath the alluvial outwash in a mass of clayey soils, especially around Świecie district, though it remains irregular, interwoven with patches of outwash sands.

The Pomeranian outwash plain stretches up to the south with long arms along the basins of the Brda, the Głda, and other, minor rivers, enveloping a large stretch of a ground moraine, spanning from the town of Czarne, through Człuchów, all the way to Tuchola. There, they reach the hilly terminal moraine terrain, which fails to reach the impressive heights seen in the Kashubian Lake District. The lakes in the area become less numerous and smaller in size, with a notable exception of one of the largest lakes in the entirety of the Pomeranian Lake District – Charzykowskie Lake, located northwest of Chojnice, far north, already in the outwash plains.

In the east, along the Vistula, spans the vast landscape of the Masurian Lake District; sixteenth-century Malbork Voivodeship and Chełmno Voivodeship were located in the western reaches of the Lake District. The northern part of Malbork Voivodeship fell within the aforementioned Żuławy Wiślane and Elbląg Upland, while the southern part ran along the Vistula and reached Dzierzgoń, comprising

of a stretch of the undulating ground moraine with small offshoots of terminal moraines branching off from the one in the north of the Masurian Lake District.

To the south of Malbork Voivodeship, flanked by the rivers Ossa and Drwęca, spans one of the westernmost regions of the Masurian Lake District, the Chełmno Lake District, which used to almost entirely fall within the borders of Chełmno Voivodeship.

The Masurian Lake District slopes gently towards the Vistula, with its highest peaks located in the east of the region, near Lubawa; however, the highest elevations of this western part of the Lake District fall outside of the historical borders of Royal Prussia, in the erstwhile Duchy of Prussia.

Ground moraine formations constitute much of the Chełmno Lake District terrain, slightly undulating and elevated to the height of 90 to 100 metres above sea level. The middle part comprises a sizeable chain of terminal moraines, beginning in the area of Wąbrzeźno and reaching towards Iława. The outwash plains stretch to the south of Wąbrzeźno, east of Biskupiec, and towards the area surrounding Lidzbark Welski; however, they were not as large as those of the outwash plains in the Pomeranian Lake District.

Main map

The main map's basic role is to depict two chief issues of this research: the most important geographic elements of Royal Prussia and, based on that data, the most important elements of settlement networks. The geographic elements include terrain, hydrography, as well as forest cover, meadows, and wetland.

Geography

Terrain

The highest peaks in Royal Prussia were marked with spot heights for clarity, foregoing contour lines entirely. The highest general elevation within Royal Prussia, as mentioned before, fell within the Lake Districts; it exceeds 200 metres above sea level, then gently slopes downwards both towards north and south. The terrain of the Coastal Lowland Belt is varied due to the numerous glacial valleys in this area.

The southern part of Pomerania consists mostly of outwash plains, with a generally monotonous terrain – a handful of moraine bumps and dunes notwithstanding – the terrain only shifting in the areas with distinct moraines. General altitude oscillates around 150 meters above sea level, often dropping to less than 100 metres above sea level towards the Vistula basin. The Vistula delta is flat, elevated to the height of only several metres above sea level, and at times dipping into patches of depressions.

The western parts of Chełmno Voivodeship remain fairly flat, with the terrain being affected by a strip of a ground moraine, the so-called till plain. Further east, the terrain becomes more varied, with altitudes rising from 100 metres above sea level near the Vistula to more than 200 metres in the east near Lubawa.

Hydrography

As mentioned before, the hydrographic network of Royal Prussia was based on eighteenth-century cartographic sources (Schrötter Atlas), with some corrections derived from even later maps. This formed the basis for an approximate depiction of sixteenth-century Royal Prussia, which includes major hydrographic changes between the sixteenth century and the seventeenth century and between the eighteenth and the twentieth century.

The only major river under consideration in the region of Royal Prussia is the Vistula River, which cleaves in two the Baltic Lakeland Belt, an area in itself constituting a major watershed for the entirety of northern Poland. The rivers originating in the Lakeland are usually short, with steep, and sometimes irregular gradient. Some of the rivers with their sources in the lakeland areas flow into

the Baltic Sea, others are tributary to the Vistula or its tributaries. The rivers flowing into the sea, the Łeba, the Radunia, and the Reda, generally follow the course of broad, boggy glacial valleys, which are remainders of post-glacial alluvial drainage. Tributaries to the Vistula include the Wierzyca, the Czarna Woda, and the Brda, while the Vistula's affluent, the Noteć, is supplied by Głda. The rivers emerging in the Elbląg Upland (whose western natural border runs along the river Elblążka, which has its source in Lake Drużno) are short and all flow into the Vistula Lagoon (*Zalew Wiślany*).

Żuławy Wiślane, comprising of the Vistula's distributaries leveed at the banks, also feature both minor natural streams, flowing either into the Vistula Lagoon, or to one of the Vistula distributaries, and artificial irrigation canals.

Among the major rivers of Royal Prussia, there was the Drwęca, which formed a natural border of Chełmno Voivodeship along its downstream stretch, with the source found in the northern slopes of Dylew Hills (*Wzgórza Dylewskie*), at the border of the Duchy of Prussia (near the town of Ostróda). The Drwęca flows down a steep slope, meandering heavily and following a deep, narrow basin; its largest tributaries – the Gierłozia, the Wel, the Brynica, are left-bank tributaries. Another major river in the voivodeship is the Ossa, which takes its source in the lakes near Brodnica and flows into the Vistula north of Grudziądz.

While the rivers without a doubt played an important role in communications and the economy, another significant feature within all three voivodeships were the lakes. The Pomerania Lake District and the Masurian Lake District are rich in post-glacial lakes, with an abundance of elongated, narrow ribbon lakes, sometimes of considerable depth. The lakes are much scarcer in the Coastal Lowland Belt, with the largest being Lake Żarnowieckie (15 km²). At the foot of the Elbląg Upland lies Lake Drużno, a leftover of a lagoon, now completely separated from the sea by the Vistula delta. Among the largest lakes of the Pomeranian Lake District in the former Pomeranian Voivodeship is Lake Wdzydze (14 km²); characteristic of its complex shoreline, the lake was formed from two perpendicular ribbon lake basins. Additionally, there are Lake Charzykowskie (13.7 km²) and Lake Raduńskie (8.5 km² in size and 18 kilometres long), which actually comprises two lakes divided by a dyke, Lake Ostrzyckie (2.5 km²), which lies at the foot of Mount Wieżyca, and Lake Karsin (5.8 km²), Lake Gowidlino (5 km²), and others. There are numerous minor lakes, commonly occupying dips in the moraine terrain, many of them endorheic basins.

In comparison, lakes in the Chełmno Lake District are less plentiful. Among the largest ones are Lake Wieczno (4.4 km²) and Lake Chełmżyńskie (4 km²); additionally, numerous minor lakes can be found north of Brodnica.

Cartographic sources can often help in tracing changes that have occurred in the hydrographic network of former Royal Prussia over the last several centuries. Some of the changes are minor and, outside of the Vistula delta, observable in lakes, of which many decreased in size or vanished altogether.

In the region upstream of the Vistula's bifurcation into its two branches, the Leniwka and the Nogat, the river's basin has not undergone any major changes in its course; some minor changes are seen where the basin deviates from banks of the valley. The old course of the river is evidenced by the existing oxbow lakes, which are most common north of Fordon, where the course has drifted significantly to the east from the left bank of the valley.

According to H. Bindemann, centuries ago, the Nogat used to be a separate river terminating at the Vistula Lagoon, rather than being one of the Vistula's distributaries channels.² Some evidence for this claim comes in the form of an existing stream, the Stary Nogat ("*the Old Nogat*"), which flows into the Vistula just before it bifurcates into distributaries. The former Nogat would have had its source around the town of Gardeja (Duchy of Prussia) and flowed up north, parallel to the Vistula. Around the village of Biała Góra, the Nogat approximated the Vistula, then meandered sharply northeast, towards the Vistula Lagoon.

The confluence of the Nogat with the Vistula already existed in the mid-sixteenth century.³ The incorporation of the Nogat into the Vistula might have been caused by a major flood, with the Vistula's levees breached and the water spilling across a wide area. Anthropogenic interference – the widening

² H. Bindemann, *Die Abzweigung der Nogat von der Weichsel*, Gdańsk 1903 (Abhandlungen zur Landeskunde der Provinz Westpreussen, no. 12) (maps).

³ Evidenced by the Strackwitz maps from the mid-sixteenth century, published in the works of H. Bindemann.

and perhaps deepening of the junction to allow for easier navigation and water transport – is certainly also a possibility. In time, the flow of the Vistula itself increased into the river's new distributary, weakening its original one, the Leniwka. Already in the seventeenth and eighteenth centuries, attempts were made to stop this process, as the use of the Nogat had its negative sides – the Vistula Lagoon was too shallow for many of the contemporaneous ships, and its only debouche into the open sea at Piława was seen as being too far from the Vistula estuary.

In the mid-nineteenth century, an exceptionally powerful spring estuarine flood directed the flow of the river into the Leniwka and breached the dune line, exiting into the sea and forming another, the nearer estuary at the Bay of Gdańsk, in a branch known as the Wisła Śmiała. However, the newly-formed estuary waterway was not navigable, which prompted the building of a canal that would connect the Leniwka with the open sea in the north. The water flow in the old riverbed of the river, terminating around Gdańsk, was greatly weakened and dubbed the *Martwa Wisła (the Dead Vistula)*. To prevent the water flow from once again redirecting into the Nogat, a system of sluices was put in place to cut it off from the Leniwka altogether.⁴

The once-regular coastline of the Bay of Gdańsk, stretching from the Leniwka estuary all the way to Piława, now exhibits two distinct bulges: one around the Wisła Śmiała estuary, and one around the new canal. These formations are the result of alluvial accumulation around the estuaries of the Leniwka distributaries. Some of the most dramatic changes to the coastline as compared to its shape in the eighteenth century are the changes to the Vistula Lagoon, along the estuaries of both the Nogat and one of the Leniwka distributaries, the Szkarpa, which flows into the Lagoon. Both the Nogat and the Szkarpa flow into the Lagoon by branching off to more than a dozen distributaries, carry alluvial sediments which have accumulated in the delta over the centuries, shifting the coastline further north and east, decreasing the size of the Vistula Lagoon. Thus, in the cartographic depiction of its state in the sixteenth century, it was necessary to move the coastline both south and west compared to its present-day state.

As mentioned, lakes underwent changes as well – some decreased in size, while others vanished altogether. The second phenomenon affected smaller, most probably shallower lakes. Lake Drużno exhibits evidence of significant changes to its shoreline, especially along the eastern shore, which has shifted significantly to the west over the centuries; minor changes are also observable along the southern shore of the lake. Changes to major lakes of the Pomeranian Lake District are less evident, as the region features mostly deep ribbon lakes, the depth which slowed down the effects of vegetation overgrowth and making it less prominent. Some decrease in size can be seen in several lakes in Świecie district, especially Lake Radodziej and Lake Łąkoć, whose former narrow bays have turned into a wetland. The vanishing of small lakes has been observed in Człuchów district, near Pawłowo (northeast of Chojnice). The disappearance of lakes is a phenomenon observed mostly in Malbork and Chełmno Voivodeships and only affecting small lakes. Some of the lakes that have vanished include a lake near Nowy Targ in Malbork Voivodeship, and lakes near Wąbrzeźna, Chełmża, and Kowalewo. In place of the vanished lakes are now boggy meadows, often rich in peat.

Vegetation

Reconstructing the forest cover of mid-sixteenth century Royal Prussia is particularly difficult because of the lack of contemporaneous cartographic data available; only its shape from the eighteenth century could be recreated, on the basis of the Schrötter Atlas, which is a late eighteenth-century source, and modern maps. Some depictions were informed by historical data on forest use from the sixteenth to the eighteenth century. The resulting picture shows a far-ranging woodland, chiefly in the western reaches of Royal Prussia – regions of Pomeranian Voivodeship covered by an immense woodland complex of the Tuchola Forest and the so-called Darżlubie Forest in its northern part. On the other hand, woodland remained scarce in the western reaches of Malbork Voivodeship, where heavily-forested areas could only be found in the south-eastern region of the Elbląg Upland and west of Sztum. In Chełmno Voivodeship, woodland was found mostly in the eastern part, in the region of Brodnica and, to a lesser extent, surrounding the rivers Vistula and Drwęca.

⁴ S. Lencewicz, *Geografia fizyczna Polski*, p. 188.

The most prominent loss in forest cover since the end of the eighteenth century compared to its present-day state has occurred in Chełmno Voivodeship, and especially in its western part. There is a high probability that woodland cover in the region during the sixteenth century was already rather small, as the soil in these parts is generally fertile and has long been utilised in agriculture. The last few centuries have seen the loss of forests around Toruń, towards Łązyn and Biskupice, and north of Chełmża; these regions have become virtually forest-free in the present day. Narrow strips of woodland remain where agriculturally poor soils can be found, in some parts of the Vistula valley – around Toruń, Ostromecko, and Grudziądz, where dunes could be found; forests around Wąbrzeźno and Wonne have been entirely felled. A large loss in woodland can also be observed in the voivodeship's largest woodland complex between Brodnica and Biskupiec, with almost the entire previously forested western part having been levelled, the deforestation reaching far west towards Dębowa Góra and Osieczek. Smaller losses can be seen in the eastern part of the voivodeship, in the area of Lubawa and Lidzbark Welski.

Forest cover in Malbork Voivodeship has not seen much significant change, barring the heavy loss of woodland areas in its northeast part, in the Elbląg Upland.

Pomeranian Voivodeship shows two distinct types of changes in forest cover: some parts exhibit a significant loss in woodland areas, while others have seen forest growth. However, the losses remain far greater than any recent gains, which have mostly been observed along the Baltic coastline. Extensive afforestation of coastal dunes, which has continued since the eighteenth century until the present day, has created an almost uninterrupted woodland belt that spans from Piaśnica to the tip of the Hel Peninsula, and from Gdańsk, along the Bay of Gdańsk, encroaching into the Vistula Spit. These changes seem almost insignificant when compared to the scale of deforestation between the eighteenth and twentieth century. The effects of intense grubbing can be observed in the northern and middle part of Pomeranian Voivodeship. Until at least the late eighteenth century, a mostly uniform woodland belt stretched all the way from Lake Żarnowieckie to the forests of the Kashubian Lake District, which at the time had a much more widely spread forest cover, especially in the region of Lake Raduńskie and between Lake Raduńskie and Lake Gowidlino.

East of Kościerzyna, forests did not constitute uniform woodland complexes, forming small, insular patches instead. Tuchola Forest survived in a similar size to its state from the end of the eighteenth century, with only narrow strips at the edges grubbed; the area of Brusy, Wiele, and Czernik have been similarly cleared. Another major woodland complex in Pomeranian Voivodeship spanned between Białobór and Człuchów and has not seen any major changes throughout the last few centuries.

It must be emphasised that the extent of woodland cover established towards the end of the eighteenth century did not necessarily reflect its probable state from the second half of the sixteenth century, especially in Pomeranian Voivodeship. The period between the sixteenth and eighteenth century saw extensive grubbing in the region.⁵ Forest overexploitation occurred alongside the so-called second wave of German colonisation in Pomerania and the emergence of numerous small settlements, including industrial ones, such as ironworks, especially in the region surrounding Skarszewy, Kościerzyna, and Gdańsk.⁶ These phenomena on one hand consolidated the settlement network in Pomeranian Voivodeship, and on the other caused massive deforestation. This discrepancy between late eighteenth-century sources and the probable sixteenth-century state is why there are striking empty spots in the forest cover in the cartographic depiction of Pomeranian Voivodeship where there were also no existing settlements; such is the case of the regions surrounding Kościerzyna (Tczew district) and Człuchów (Człuchów and Tuchola districts), which in the sixteenth century would have still been covered by forests.

The discrepancy between source material and probable reality affected the interpretation of how much area could have been covered by wetlands, meadows, and bogs in Royal Prussia. The data informed by the Schrötter Atlas shows that the widest range of meadows and pastures occurs around the course of the Vistula, especially in Chełmno Voivodeship, as well as Świecie and Nowe districts in Pomeranian Voivodeship. Another cluster can be found in Malbork Voivodeship, especially in the south-eastern part and in Żuławy Wiślane; the third major area of meadows and pastures can be found

⁵ F. Mager, *Geschichte der Landeskultur Westpreussens und des Netzebezirks bis zum Ausgang der polnischen Zeit*, Berlin 1936, pp. 114 f.

⁶ M. Kielczewska-Zaleska, *O powstaniu i przeobrażaniu kształtów wsi*, pp. 126 f.

in the territory of the town of Gdańsk (Szkarpada and the area surrounding Gdańsk itself) and along the Baltic coastal area in Puck district.

Wetlands and bogs occur chiefly in Chełmno Voivodeship (around Lakes Wieczno and Wąbrzeźno, as well as near the town of Grudziądz) and in the valleys of the Drwęca and the Brynica, east of the Brodnica river. Another important wetland and bog area can be found in the northern parts of Pomeranian Voivodeship in the region of Puck (the Reda valley, Błota Karwieńskie). However, whether this range of occurrence of meadows and wetland corresponds entirely with the state from the sixteenth century or not, is questionable. The settlement colonisation from the sixteenth to the eighteenth century, the so-called Dutch settlement, heavily impacted the Vistula valley and Żuławy, prompting the transformation of old pastures and wetland into arable land.⁷ This phenomenon is especially evident in Malbork Voivodeship, around Lake Drużno, which in the sixteenth century mostly constituted of boggy pastures, while the following centuries brought the emergence of more than a dozen settlements. Similar processes affected depressions around the town of Elbląg, between the Nogat and the Elbląska, as well as around the Wisła Elbląska.⁸ These settlement processes might explain the lack of wetlands and bogs in Malbork Voivodeship towards the end of the eighteenth century, though wetlands would have surely been there in the sixteenth century.

In conclusion, the range of meadows and wetlands, informed by cartographic sources from the eighteenth century, only minimally corresponded with the probable state of things from the second half of the sixteenth century, especially in the case of Malbork Voivodeship.

(1961)

⁷ A recent, detailed list of Dutch settlements in Royal Prussia can be found in W. Maas, *Zur Siedlungskunde Westpreussens 1466–1772*, Marburg 1958, pp. 37 f. (map: *Holländersiedlungen in Westpreussen*).

⁸ An instructive image of these transformations can be found on Map II in Bertram, *Eindeichung, Trockenlegung und Besiedlung des Weichseldeltas seit 1300*, which showcases the sharp increase in the number of settlements between late sixteenth until the eighteenth century; similar process is evident in maps in W. Maas *Holländersiedlungen in Westpreussen oraz Besiedlung Westpreussens 1466–1772*.

III.2 ADMINISTRATIVE DIVISIONS

III.2.1 BORDERS OF STATE TERRITORIAL UNITS

III.2.1.1 CRACOW VOIVODESHIP

Henryk Rutkowski

This chapter focuses on the outer and inner borders of the described territory. The borderline of Cracow Voivodeship finally settled in 1563 and 1564, when the duchies of Oświęcim and Zator were incorporated into the Crown and the voivodeship. Earlier, these were separate lands, annexed to Poland in the fifteenth century, when they were purchased from Silesian dukes by the kings Casimir Jagiellon and John Albert.¹ In 1564 one district, Silesia, was formed from these two lands, but the title ‘duchy’ was preserved. The district, subordinated to the Cracow assembly, was included in Polish jurisdiction and administrative organization.²

Voivodeships, as well as lands in some of them, were main units of the political division of the Crown territory. They served the state administration, which was relatively weak, and the developing selfgovernment of the nobility.³ In voivodeships there was a hierarchy of land offices, and the *sejmiks* (dietines) functioned. All clerks were nominated by the king, but in the sixteenth century they had already become practically irremovable, and could only be promoted to a higher office. Most of the offices were only honorary titles. The structure of voivodeships and lands, which formed during the previous several centuries, was already stable from the sixteenth to the eighteenth century, and so were the borders of these territorial units (the incorporation of the Silesian duchies was an exception).⁴

As already mentioned in the introduction to the commentary, this volume of the *Atlas*, apart from Cracow Voivodeship, is also devoted to the Duchy of Siewierz, a private property of the bishops of Cracow. In 1443 it was bought by Zbigniew Oleśnicki from Wenceslaus, the duke of Cieszyn. The legal and political situation of the duchy remained unsettled. In Poland it was the monarch who designated candidates for bishops, and the bishops of Cracow (like all ordinaries of Roman Catholic dioceses) were also senators. In Siewierz, however, they enjoyed an independent authority. This situation, tacitly approved by Polish kings, lasted until 1790.⁵

Because of a certain feature of the administrative division of Cracow Voivodeship into internal territorial units, i.e. districts (‘powiaty’), some more general topics were also raised in this chapter.

The districts were created as judicial units of the nobility. Land courts did not possess authority over royal and Church property – in fact, the districts encompassed only those villages, which belonged to the nobility and were recorded in land court registers only when they appeared as a subject in a court case.

Contrary to districts, the districts of gord starostas constituted a part of the administrative division of the sixteenth century state. These districts varied in terms of size and their relation to districts. A starosta passed his powers over to the deputies he nominated: the *podstarości* (vice-starosta) and

the gord judge, who in turn had various functionaries at their disposal (in the chancellery and elsewhere). The gord court had specified jurisdiction over the nobility (within the scope of the so-called *four starosta's articles*). For instance, the gord office was obliged to provide supervision over public roads and to execute verdicts of the court.⁶ New entries were recorded in gord court books every day by the town chancellery. In the sixteenth century the importance of starosta's gords grew, but at the expense of land courts, which were losing cases.⁷ At the end of the century, gord chancelleries of Cracow Voivodeship obtained the right to grant perpetuity to the authenticated document. Before, they could grant such rights only to entries recorded in land court books. Additionally, the starostas collected certain taxes. These powers show that gord starostas, as well as the clerks they hired, had good orientation in the territory under their authority.

This also applies to their knowledge of district borders. Although the districts did not encompass royal and Church property, for practical reasons they were used to determine the location of royal villages, of which early examples were provided by Juliusz Bardach.⁸ The division of voivodeships into districts was also employed during tax collection and the registration of taxpayers. Church organization – parishes – also helped to cover all settlements and create accurate records.

In the sixteenth century, the *Sejm* (Diet) levied special taxes, under a common name 'pobór'. The highest income from these taxes came from land tax, i.e. *lan* tax, and then from liquor excise tax. Tax proclamations usually appointed separate tax collectors for every voivodeship (or also land). Towards the end of the century, with the growing decentralization of the fiscal system, the election of tax collectors became one of the functions of *sejmiks* (dietines). As such, the collectors ('egzaktorowie') were temporary land clerks, members of the landed gentry from a given voivodeship; usually they were elected from the deputies present at a *sejmik* (dietine).⁹ The collectors hired their representatives – subcollectors, scribes. 'The taxes were usually brought to the district town, where the tax collector collected them on selected dates'.¹⁰ In order to collect tax from all cities and towns, the collector, or rather his subcollectors, had to visit all those settlements with town rights.

The collector accounted for all the money with the Treasurer of the Crown, and also with the *Sejm* (Diet). However, it was often decided in the proclamation that he should first account for the tax with his *sejmik* (dietine). The money did not flow to the state's treasury immediately, because many taxpayers were behind with their payments. 'The collectors write down the overdue amounts and sue those who are late to the starosta, and he executes the payment quite fast and efficiently'.¹¹ The overdue taxes ('retenty') were regulated within a couple of years. For instance, only 47% of money from the 1564 tax was paid that year, 40% in the next, and 13% in 1566.¹² The recoverability rate of special taxes varied in different years. This can be seen in the changes of the number of lans noted in tax registers and summaries in Cracow Voivodeship.¹³ The universal tax reform conducted during the 1562–1563 *Sejm* (Diet) in Piotrków resulted in an especially large increase of income to the State. The reform changed the tax rate and, removing the possibility of issuing payments according to 'the old bills' ('stare kwity'), it introduced the principle of current evidence of value as the base for the taxation.¹⁴

⁶ Professional military unit began to appear in Poland after the first interregnum in 1572. They were formed by sejmiki (dietines) or gatherings of higher level. These units, meant to support town officials in protecting internal safety, were usually called district soldiers, although districts did not participate in the formation of the units; D. Kupisz, *Wojska powiatowe samorządów Małopolski i Rusi Czerwonej w latach 1572–1717*, Lublin 2008, pp. 23–71, 309–311.

¹⁴ The sources which shed some light on this subject in Cracow Voivodeship between 1563 and 1565 were described by A. Wyczański, *Uwarstwienie społeczne*, pp. 13–20.

The registers of *Sejm* (Diet) taxes, i.e. tax registers ('rejstry poborowe'), were made by the collectors, or rather: their scribes. Around the middle of the sixteenth century the general form of such registers was established, they were written before the collection began. Here is a quotation from a tax proclamation from 1565: 'The collectors are to record all villages, listed according to their parish, and also inns, mills and all other taxes, which they are to collect diligently, noting every piece, how much from whom they take'.¹⁵ Tax registers were then kept in the office of the Treasurer of the Crown, where they were used to control the rate of a new tax levied and chosen. The 1629 tax, as well as later taxes, was based on the 1578 registers, and the rates collected were the multiplied rates from 1578.¹⁶

Here we quote a fragment from Irena Gieysztorowa, who analysed tax registers thoroughly. 'The administrative structure used by the collectors performed only auxiliary functions to the Treasury administration, helping to identify the payers. Its constant updating of the range of parochial and district borders would only cause unnecessary obstacles to the collectors, or scribes, due to possible omission of a village. [...] This universal, as it seems, conservative tendency of tax accounting does not, however, rule out the possibility of individual initiative of the collectors, or scribes, aiming at particular simplification of administrative divisions, inconsistent with reality'.¹⁷ The footnote to the previous sentence provides an example from a register from Cracow Voivodeship, concerning the border between Cracow and Silesian districts. In 1565 the collector moved in his register some parishes or villages to the Silesian district, so that they would not be divided between districts. This deviation in the administrative division occurred only in this register, the registers which followed again agreed with the former state.¹⁸

Despite their flaws and gaps, the tax registers, meant to list all settlements, remain our only source, which provide us with relatively precise knowledge about the borders of State administration units in the sixteenth century. On the other hand, the reconstruction of parochial borders should be based mainly on Church sources, beginning with the oldest visitation documents. However, they also do not always contain the necessary data on all parishes. It should be emphasized here that in this series of the *Atlas* the elements presented are either certain, or hypothetical to varying degrees, as noted in respective chapters of the commentary.

The land court for the nobility was presided over by the land judge or his deputy ('podsędek'), and the chancellery was run by the land scribe. All three were nominated by the king from the candidates presented by the *sejmik* (dietine). The Silesian district, created in 1564, had its own land court, seated in Zator. Apart from this, there was only one land court, in Cracow, held four times a year, consecutively in the capital of each district.¹⁹ Such was the situation from the fifteenth century to the second half of the seventeenth century. Since 1655 the land court of Cracow ceased to operate for exactly one hundred years, in contrast with gord courts, whose range of jurisdiction broadened. Between the fifteenth and the seventeenth century, there were six judicial districts (without Silesian): Cracow, Proszowice, Książ, Lelów, Czchów, Biecz.²⁰ The *subcamerarius* of Cracow passed verdicts on all border issues in the voivodeship, including Silesian district. He nominated border execution officers in the districts.²¹

Since 1564 the voivodeship was divided into four starosta's districts. This term was not taken from the sources – these districts were called 'lands', which is an imprecise term.²² Gord starostas were equal in terms of authority, although in the sixteenth century the starosta of Cracow was granted the title

¹⁵ Next, the universal specifies the norms of levying a tax, to which the collectors and starostas had to obey. VC, vol. 2, part 1, p. 189.

of the general starosta of Lesser Poland. He supervised four districts: Cracow, Proszowice, Książ and Lelów. The starosta of Nowy Sącz, with his seat in Nowy Sącz, executed his power in Czchów district. That is why we can sometimes find a double name in the sources: Sącz, that is Czchów, district.²³ The land of Sącz had often been granted to royal widows and formed a separate administrative and judicial unit. In the middle of the fifteenth century it was included in the judicial district of Czchów.²⁴ In 1520 gord starosta's district of Biecz was pledged to Seweryn Boner. The Crown did not repurchase it, so until 1673 the members of the Boner family and later their successors, the Ligęza family, occupied the office of the starosta.²⁵ It should be emphasized that in the sixteenth century this office became more and more similar to land offices, and in 1611 it was formally acknowledged as one of them. The fourth starosta's district in Cracow Voivodeship was Silesian district, with the seat in Oświęcim.²⁶ By analogy to lands in other voivodeships, only Cracow district could purport any rights to the name of land, to a lower degree: the land of Sącz and the duchies of Oświęcim and Zator.

As the tax collectors made use of State territorial division, the districts listed in the registers usually correspond with these divisions, known from land court books. Such was the case in, for example, the Voivodeships of Sandomierz and of Sieradz. However, the situation in Cracow Voivodeship was different, and some discrepancies occur in certain parts of its territory. It was already noted by Stanisław Kutrzeba, who assumed that in the sixteenth century there existed three categories of division within voivodeships: administrative division used apparently in tax registers, districts of land courts, and districts of gord courts.²⁷ Newer historiography accepts the differentiation between judicial (land) and fiscal (sometimes called administrative) districts.²⁸ This division was applied by Jerzy Wiśniewski,²⁹ or Stanisław Cynarski and Alicja Falniowska-Gradowska.³⁰

Comparing fiscal districts of Cracow Voivodeship with judicial districts in the second half of the sixteenth century, it could be stated that the majority of corresponding districts from both categories overlap. Without further research on this subject, for the sake of precision we must say that this matter is here treated generally, and no possible minor differences were examined. The following districts were of the judicial/fiscal type: Książ, Lelów, Czchów that is Sącz (the latter name appears in the registers), Biecz and Silesia. The combined territory of two remaining judicial districts – Cracow and Proszowice, overlapped with the area of two fiscal districts – Proszowice and Szczyrzyc. Proszowice fiscal district consisted of Proszowice judicial district and the northern part of Cracow district. Such a combination appears already in the first half of the sixteenth century. Szczyrzyc district is the southern part of Cracow judicial district, situated on the other bank of the Vistula.³¹ We find the following names of the first of the fiscal districts in tax registers from the second part half of the sixteenth century: 'the first part of Cracow district on this side of Kleparz, together with Proszowice district' (1564), 'the first part of Cracow district alias Proszowice district' (1565), 'Cracow district behind Kleparz alias Proszowice district' (1576).³² The registers from 1577 and 1580 fail to provide any title of this district, but the 1581 register (published in *Źródła Dziejowe* by Adolf Pawiński), as well as subsequent registers until 1595 mention 'Proszowice district'. A separate register for the district of Proszowice (the title was given by an eighteenth century scribe), written in 1612, covers the same area as in the sixteenth century.³³ The change occurred after this date.

The fiscal district of Szczyrzyc was created certainly because of the large size of Cracow district. Szczyrzyc district encompassed the majority of the area of Cracow district situated south of the Vistula. In the fifteenth–seventeenth century there was no separate judicial district here, and the name

for the fiscal district was taken from the Cistercian abbey called Szczyrzyc. The district of Szczyrzyc existed at least since 1485.³⁴ By checking its range on the basis of parochial seats listed in the land tax register for this district from 1490 we were able to establish that the data from this period agrees with the data from the second half of the sixteenth century.³⁵

The same could not be said about Cracow district in this register – the parochial seats listed were situated also in Książ and Lelów districts.³⁶ It seems that the composed of two parts register from 1490 covered the district of the gord starosta of Cracow, who – as already stated – participated in the levying of taxes. The list of villages, which paid the land tax, included in the 1564 inspection, looks similar. Four districts were mentioned in this register: Cracow (identical with Proszowice district in tax registers), Książ, Lelów and Szczyrzyc.³⁷

In general, the nobility knew in which district and voivodeship they lived. The *sejmik* (dietine) bills for Cracow Voivodeship (from 1572–1620) mention judicial districts, but the district of Czchów had an alternative name of Sącz in 1574, and Silesian district always appears as Oświęcim-Zator district, or similar.³⁸ It could be assumed that things looked different for fiscal districts – if they were not identical with judicial districts, only a group of people was aware of their existence. Still, the territories reflected in tax registers belonged to historical reality. They constitute a part of what we present in the *Atlas* as State territorial divisions in the second half of the sixteenth century, especially at the end of that century. The maps show borderlines of fiscal districts, which usually overlap the borders of judicial districts. Two capitals were marked in the district of Sącz: Nowy Sącz (Sądecz Nowy) and Czchów, and in Szczyrzyc district there is no district capital.³⁹

The first change of fiscal districts occurred between 1612 and 1620, perhaps in 1620, when the *sejmik* (dietine) of Cracow Voivodeship, traditionally gathered in Proszowice, levied taxes and elected six collectors, one for each of the six judicial districts.⁴⁰ This meant the unification of fiscal and judicial districts by separating Cracow and Proszowice districts and the elimination of Szczyrzyc district. This did not last long. Already in 1626 the southern part of Cracow district was restored as the fiscal district of Szczyrzyc, but the Cracow–Proszowice border was kept.⁴¹ Thus ended the formation of the administrative division of Cracow Voivodeship (disregarding minor changes in the course of the borders). This territorial organization survived until 1772, that is until the First Partition of the Commonwealth.⁴²

The 1629 tax register allows us to draw the borderline between Cracow and Proszowice district.⁴³ The same course was confirmed in the register from 1680. The textual map (p. 134) disregards the fact that after 1620 Sieciechowice parish belonged not to the fiscal district of Cracow, but to Książ. The affiliation of five other villages included in Cracow district should remain an open case. These are: Wrzodowa Góra (now Górka Kościelnicka, with a parochial church), Kościelniki (omitted in the registers), Węgrzynowice, and Stanisławice (from Rusiec, i.e. Ruszcza, parish) and Wrożeńica (Pobiednik parish). The settlements listed were situated in Proszowice district in the second half of the eighteenth century.⁴⁴ Wrzodowa Góra, Kościelniki and Stanisławice were affiliated to the judicial district of Proszowice also in the fifteenth century.⁴⁵ In the sixteenth century they belonged to one

owner from the upper stratum of the noble class: first to the family Kurozwęcki, then to the family Lanckoroński, and at the end of the century to Sebastian Lubomirski.⁴⁶ Węgrzynowice and Wrozenia were the property of monasteries for many centuries.

Słownik historyczno-geograficzny województwa krakowskiego w średniowieczu ('The historical and geographical dictionary of Cracow Voivodeship in the Middle Ages'), based mainly on court books and documents, provides district affiliation of settlements according to tax registers, including the published register from 1581. As such, it does not limit itself to judicial districts, but accepts the fiscal district of Szczyrzyc and – less consistently – the expanded Proszowice district. In the introduction to *Słownik*, Jerzy Wiśniewski wrote that from 1477 the division of the voivodeship into judicial districts remained unchanged, but the borders of these districts were not stable, and the affiliation of borderland villages often shifted.⁴⁷ Therefore, we should ask ourselves, if such an opinion was not influenced too much by the data from tax registers. The comparison of information relating to districts from various categories could suggest some changes, when in reality these differences could be the result of careless treatment of district borders by the tax collectors.⁴⁸

Inconsistencies in the course of borderlines in Cracow Voivodeship appear still in the sources from the last quarter of the eighteenth century. 'It happens quite often that the sources, even when they are official, include an entire parish of a key of property to this district, or voivodeship, in which the parochial church of the seat of this key (starosta's lease) was located, despite the fact that this village was situated already in the territory of neighbouring district or voivodeship'.⁴⁹ The memory of the large Proszowice district probably still confused some parsons in 1787 as to their current affiliation of Cracow district.⁵⁰ In 1765, the land court in Cracow was re-established after a hundred-years break, but soon changes were being introduced in its functioning and the old division into six judicial districts was not restored.⁵¹ Only fiscal, i.e. administrative, districts survived in the part of the voivodeship kept during the first partition. Most likely, they were not used very often, and so not many people were aware of their existence.

Tax registers from the second half of the sixteenth century were used as basic sources, allowing us to fulfil the program for this series of the *Atlas*, and in the first place this is the reconstruction of the sixteenth century settlement network. As such, the presentation of the administrative division is also based on the same type of sources. The origin of this program should be found already in the initiative of Adolf Pawiński and Aleksander Jabłonowski and their publication of selected tax registers. This in turn inspired Stanisław Smolka to give a paper in 1880, entitled 'O przygotowawczych pracach do geografii historycznej Polski' ('Concerning the preparatory works in historical geography of Poland').⁵² The published issues of *Słownik historyczno-geograficzny województwa krakowskiego w średniowieczu*, providing a large supply of information from sources which would be difficult to use, could not convince us to change our assumptions. If this voivodeship had a prepared borders of judicial districts in the sixteenth century they could have been included in *Atlas* as an additional component.⁵³

In our presentation of the borders of fiscal districts we decided to make one exceptional deviation from this rule. This is the case of Ogródzieniec (city and castle), along with Ryczów Leśny in its parish. These settlements constituted a part of the large estates owned by the Boner family

⁴⁶ During the Sejm Walny (General Diet, 1788–1792), the key of Kościelniki, which also included the nearby Wolica, belonged to Elias Wodzicki.

⁴⁷ SHGK, part 1, no. 1, p. VIII.

⁴⁸ The doubts were raised by explanations concerning the transfer of some settlements from Lelów district to the neighbouring districts in the sixteenth century. SHGK, part 3, no. 3, p. 521–523.

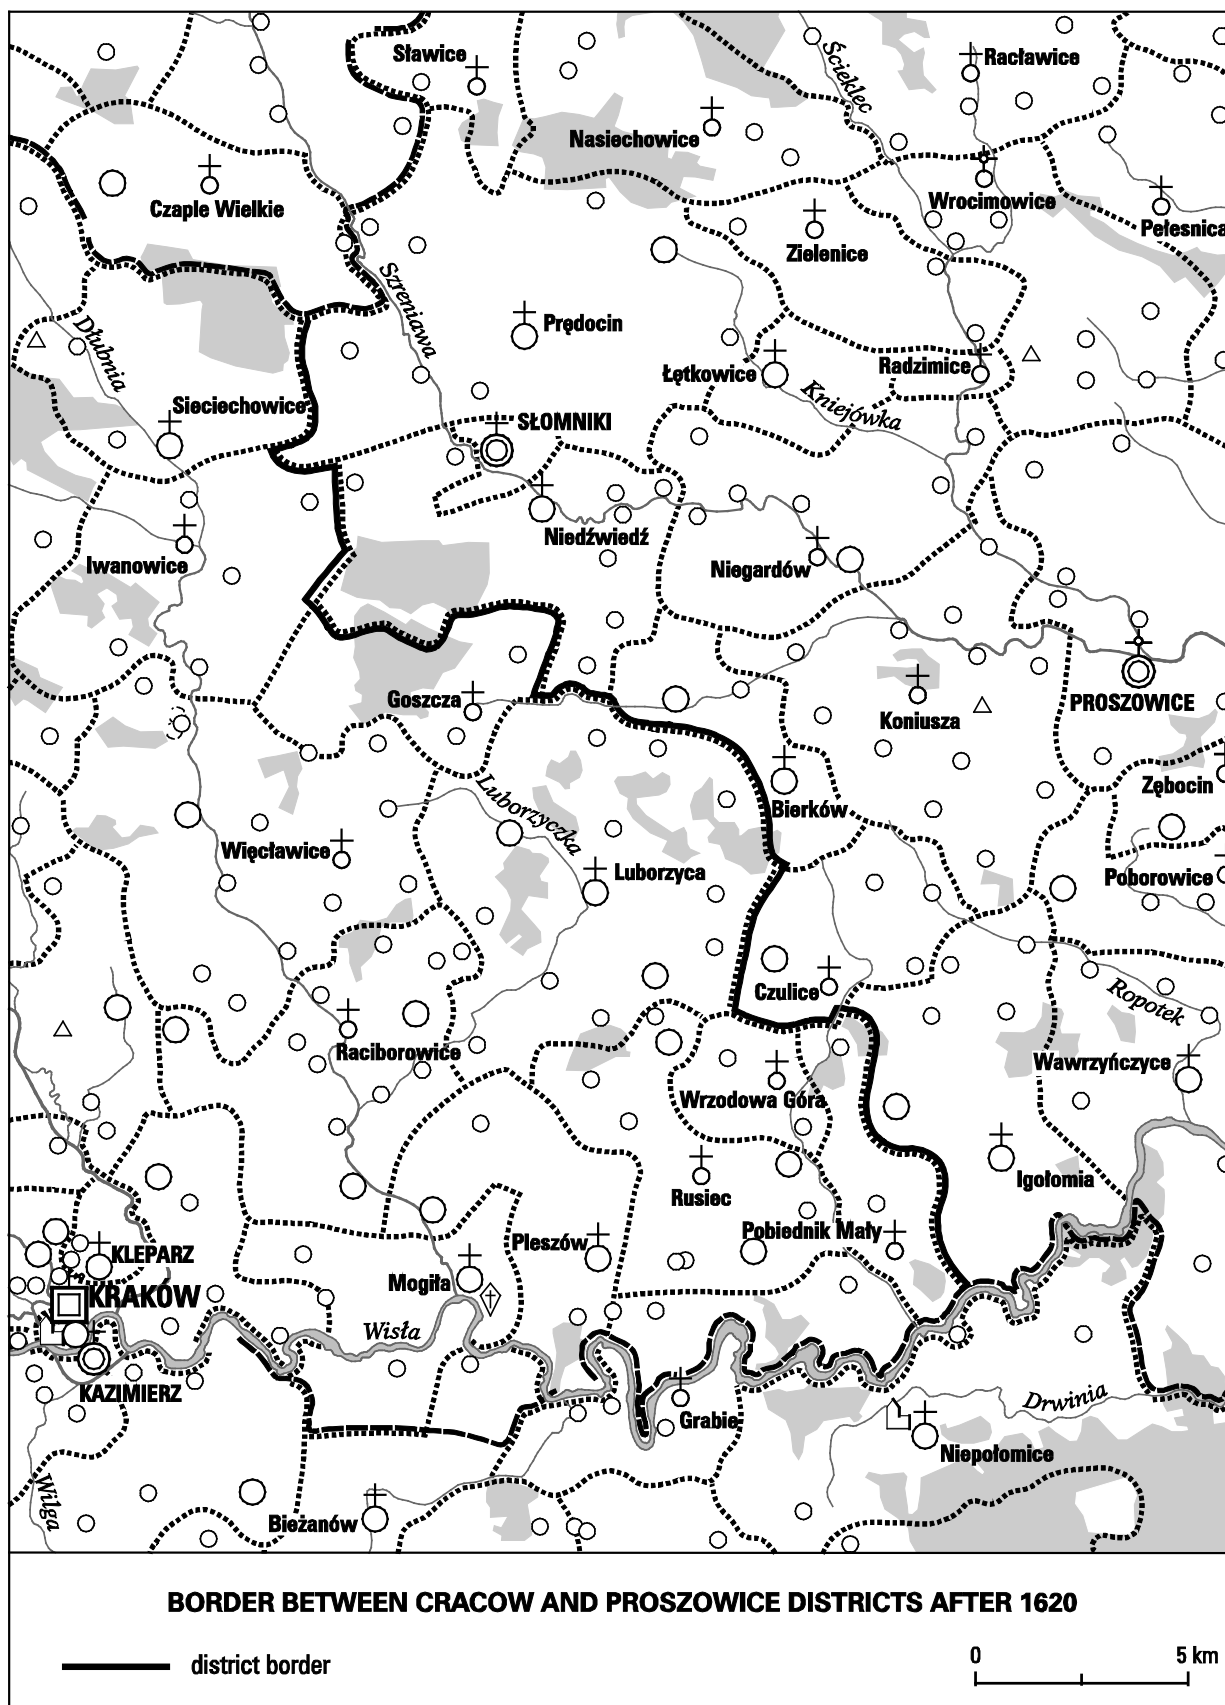

⁴⁹ Buczek, MWK, p. 87. Several examples: Krzepice, Krzesławice, Krzywopłaty, Kujawy, Kwilina – see *ibidem*.

⁵² About: H. Rutkowski, *Atlas historyczny Polski*, [in:] *Towarzystwo Naukowe Warszawskie. Sto lat działalności*, ed. E. Wolniewicz-Pawłowska, W. Zych, Warszawa 2009, pp. 121–122.

⁵³ After we finished the reconstruction of the borders, we were able to read the manuscript of a yet unfinished thesis of Mariusz Lubczyński 'Granice powiatu ksiąskiego w XVI w. Problem podziału administracyjnego województwa krakowskiego w okresie wczesnonowożytnym' (50 pages). It confirms our belief that the borders of fiscal districts cannot be replaced with different borders of judicial districts, also because the latter cannot be determined precisely in many places. We thank the author for providing us with the manuscript.

Map 1. Border between Cracow and Proszowice districts after 1620

and Mikołaj Firlej at the end of the sixteenth century. The estates lay in three fiscal districts: Lelów, Proszowice, and Książ, usually in the borderlands between these territories. If we disregard the 1.5 km distance between the borders of Ogrodzieniec and Bydlin parishes, this was a single complex, comprising three cities (apart from Ogrodzieniec: Kromołów and Włodowice) and twelve villages. All tax registers from the second half of the sixteenth century, as well as the 1629 register, list both these parishes in Książ district. Ogrodzieniec and Ryczew Leśny are situated in such a way, that if we relied on the registers, we would create an enclave of Książ district in the territory of Lelów district. That is why we corrected the district border, in agreement with the information on the affiliation of Ogrodzieniec with the judicial district of Lelów, attested to in the fifteenth century court records and data from the Crown Metrica until 1524.⁵⁴ Bydlin and Załęże were also attested to in Lelów judicial district in 1520,⁵⁵ but we made no change in the course of the fiscal border in this case.⁵⁶ It could be added that such a situation, such as in this place on the map, continued until the second half of the eighteenth century – Ogrodzieniec and Ryczów Leśny then belonged to Lelów district, and Bydlin, Domaniewice and Załęże belonged to the district of Książ.⁵⁷

According to the visitations, Borowna village, located in the borderlands between the districts of Szczyrzyc and Sącz, was divided between two parishes: Chronów and Lipnica. Tax registers, which put Borowna in Wiśnicz Wielki parish and Szczyrzyc district, list the lords of Wiśnicz and petty gentry as owners in this village. In the 1567 register we read: ‘There are parts belonging to petty gentry here, but they paid and continue to pay in the district of Sącz in Chronów, because they are on the same grounds’.⁵⁸ Leon Białkowski provided an example of uncertain district affiliation of several villages in the borderlands of Biecz and Sącz districts.⁵⁹

The borders were reconstructed with the use of the same method as in the previously published volumes of the *Atlas*. The results it offers are not certain, but – in general – these are highly probable results. More precisely: the accuracy of the course of the borders varies in different places, and some fragments can be deemed certain (e.g. along the rivers).

The southern border of Cracow Voivodeship was also the border of the State. It separated the Kingdom of Poland from the Kingdom of Hungary. It was natural and ran through the Carpathians, just as did the border of Galicia in 1772–1918, and current border between Poland and Slovakia, with small exceptions.⁶⁰ It was around 400 km long.

In the west, the State border shown on the maps from this volume separates Cracow Voivodeship and the Duchy of Siewierz from Silesia, which belonged to the Habsburg Empire. The eastern border of this duchy was marked like the voivodeship border. The State border was around 210 km long, 150 km in Cracow Voivodeship, and 60 km in the Duchy of Siewierz. The borderline between the voivodeship and the duchy was some 80 km long.

A fragment of the border between Cracow Voivodeship and Silesia ran along the Biała River, a right tributary of the Vistula.⁶¹ The villages Mikuszowice, Biertołtowice and Komorowice were situated on both banks of the river, so they were divided by the State border.⁶² Therefore, we assumed it did not separate each village into two parts of different state affiliation, but ran between villages of the same name. This solution finds its confirmation in the nineteenth century situation – these were separate villages then, belonging to different political territories, and its traces can still be found today in the nomenclature (Mikuszowice Krakowskie and Mikuszowice Śląskie – Cracow Mikuszowice and Silesian Mikuszowice – and similarly Komorowice).⁶³ It could be added that Żebrazca village,

⁶¹ SHGK, part 1, no. 1, p. 61.

⁶² For instance, in the visitation from 1598 it was written: ‘Est capella in villa Mikuszowice, quam dividit fluvius Biała, dislimitans regnum Poloniae a Silesia, et ex ea ratione media villa seu una pars villae iacet in regno Poloniae, alia vero medietas villae in Silesia’. AV Cap. 17, f. 13.

⁶³ SGKP, vol. 6, pp. 415–416, vol. 7, p. 146; SHGK, part 1, no. 1, pp. 105–106, part 2, n. 4, pp. 727–729.

in the sixteenth century listed in Oświęcim district, was situated on the right bank of the Biała, near its mouth near Kaniów (today Żebracza lies on the left bank).⁶⁴ From the mouth of the River Biała the State border continued to run along Rivers: the Vistula, the Przemsza, and the Brynica. The final fragment of this border ran along the Liswarta.

From the north and the east, Cracow Voivodeship neighboured the following Voivodeships: Sieradz, Sandomierz, and Ruthenia. The border between the Voivodeships of Sieradz and Cracow was some 110 km long. It was presented on the map in the previously published volume of the *Atlas*. Certain issues concerning the course of the border were explained in the commentary.⁶⁵ The same should be said about the border between Cracow and Sandomierz Voivodeships, described in details in the commentary.⁶⁶ Several fragments of this long border, some 400 km long, ran along rivers. These were: the Nida and the Nidzica north of the Vistula, and the Uszwica, the Wisłoka and the Jasiołka in the southern part (disregarding short fragments of other rivers). The Jasiołka defined almost the entire borderline between the Voivodeship of Cracow and Ruthenia, more precisely: the border of Biecz district with Sanok land. The point situated the farthest to the north-east in Cracow Voivodeship was the town Jaśliska, an enclave in the land of Sanok.⁶⁷ The borderline between Cracow Voivodeship and Ruthenia was around 40 km long, and 16 km long around Jaśliska.

Apart from the State and voivodeship capital in Cracow, the capital of the duchy in Siewierz, and the capitals of judicial districts (i.e. except for Szczyrzyc district), the map shows seats of gord starosta's districts (listed above). Also, as in previous volumes of the *Atlas*, the place where the voivodeship *sejmik* (dietine) gathered – Proszowice – was marked, as well as Zator, the seat for the subordinate land *sejmik* (dietine).⁶⁸ The settlements related to the offices (titles) of castellans were given an individual sign. These were: Biecz, Cracow, Nowy Sącz, Oświęcim, and Wojnicz.

'Okazowanie', i.e. the presentation of the readiness of the nobility to participate in the Noble Host ('pospolite ruszenie') was convoked from time to time. In Cracow Voivodeship it was set 'in Cracow, before Kazimierz', and in 1587, exceptionally 'in Proszowice'.⁶⁹

III.2.1.2 SANDOMIERZ VOIVODESHIP

Władysław Pałucki

Sandomierz Voivodeship, situated in Lesser Poland, derives from the former ducal province of the Piast dynasty, centred around Sandomierz Province, that can be found in the sources from the eleventh/twelfth century.¹ Many historians hold the opinion that in the twelfth century the following lands were joined to the province: the land of Wiślica, three castellanies situated by the Pilica (Małogoszcz, Żarnów and Skrzynno) and the northern, forest areas of the land of Radom.²

Already 80 years ago K. Potkański realized there was a ‘striking’ inaccuracy of the borders of Sandomierz Voivodeship with previous, hypothetically reconstructed, tribal divisions,³ and J. Natanson-Leski, perhaps a bit too strongly, added that ‘the borders of Sandomierz Voivodeship from the fifteenth–sixteenth century do not have much [our emphasis] in common with the previous borders’,⁴ primary ones. It is, however, interesting that not only ‘bits’, but also large fragments of these borders defined in the Middle Ages, despite later changes especially in the nineteenth and twentieth century, survived until 1975.⁵

The territory of Sandomierz Voivodeship bordered Mazovia in the north along the lower Radomka (Radomierza) and a latitudinal fragment of the Pilica, leaving the so-called Zapilcze on the Mazovian side.⁶ The border with Łęczyca and Sieradz Voivodeships ran along the Pilica, and with Cracow Voivodeship north of the Vistula – along the Nidzica. In the south Sandomierz Voivodeship included a part of Wiślica land situated over the Vistula and the former district of Tarnów (later: Pilzno district), which contained Dębica deanery, called ‘forest deanery’.⁷ In the south east the border with Red Ruthenia (and Sanok and Przemyśl lands) ran along the broad strip of the ancient Sandomierz Forest. In the east the voivodeship crossed the Vistula almost until the end of the Middle Ages period and covered the large lands of Lublin and Łuków. Only in 1474, after Lublin Voivodeship was created (separated from Sandomierz Voivodeship), the borders of our voivodeship from the mouth of the San to the mouth

¹ Gallus Anonymus (II,7,16) lists Sandomierz among ‘sedes regni principales’. S. Zajączkowski elaborated on the then division into provinces: S. Zajączkowski, *Uwagi nad terytorialno-administracyjnym ustrojem Polski XII w.*, CPH, vol. 7, 1955, he mentions (p. 295), among others, the 1198 document record: ‘in Sandomiriensi provincia’.

⁴ J. Natanson-Leski, *Zarys granic i podziałów Polski najstarszej*, Wrocław 1953, p. 204.

⁵ With some differences on the Pilica: Łęczyca near Inowódz and Sieradz near Sulejów, on the Vistula near Zawichost and Solec, shown on the maps of political-administrative divisions from nineteenth–twentieth century up till the last one: *Polska Rzeczypospolita Ludowa, mapa administracyjna*, 1:500,000, PPWK, Warszawa 1974.

⁶ According to Natanson-Leski (idem, *Zarys granic i podziałów*, p. 42), Mazovia lost Zapilcze to Sandomierz after 1138. This matter has recently been viewed by A. Świeżawski, *Przynależność terytorialna Zapilcza po 1359*, „*Zeszyty Historyczne UŁ*”, 1966, no. 45, pp. 37–49. He claims, in agreement with earlier conclusions of Wolff 1962, p. 26, that Zapilcze belonged to Sandomierz Voivodeship only between 1345–1348; ultimately Casimir the Great gave it back to Siemowit III in the treaty of 1359.

⁷ *Monumenta Poloniae Vaticana*, vol. 2, ed. J. Ptaśnik, Kraków 1914, p. 157: ‘Decanatus de Silvis seu Dambicia’.

of the Kurówka was set on the Vistula.⁸ However, the densely forested and colonized future land of Stężyca, situated in the extreme north east remained within the borders of Sandomierz Voivodeship.⁹

The term ‘Stężyca land’ requires some explanation. Until the end of the sixteenth century this area, alternatively called *terra* (land) or *districtus* (district), belonged to the land of Radom. Since the beginning of the seventeenth century until the end of the old Republic it was usually defined, especially in official sources (constitutions, lauda of the *sejmiks* (dietines)) as Stężyca land. However, this did not mean (I will return to this matter at the end of the chapter) that ‘terra Stenzicensis’ gained political-administrative rights within Sandomierz Voivodeship, similar to the rights possessed by Wieluń land in Sieradz Voivodeship, Wschów land in Poznań Voivodeship, Dobrzyń land in Inowrocław Voivodeship or the land neighbouring on Stężyca – Łuków land in Lublin Voivodeship. It was called Stężyca land due to its peripheral geographical situation (on the other side of the Vistula and the Wieprz) in relation to its province, and later voivodeship. A similar situation was Nakło land (over the Noteć) in Kalisz Voivodeship or Zawkrze land (over the Wkra) in Płock Voivodeship.

Stężyca land, situated east of the Vistula and named after the main judicial gord, covered formerly densely forested territories, where the clearing and colonization were organized from two directions: from the Mazovia and the land of Radom. As such, these areas were still called Podlasie or Polesie in the sixteenth century,¹⁰ Jędrzej Świącicki correctly determined that for Garwolin district, which neighboured on Stężyca land.¹¹

Such was, in summary, the territorial range of Sandomierz Voivodeship prior to 1772. It must be emphasized, however, that the shape of the borders of this voivodeship was influenced, apart from natural, physiographic conditions, to a large, or even decisive, degree by the political, as well as social and economic situation: the development of the settlement in forested areas, that originally had no owner and later belonged to the monarch; bestowals of and on the Church and nobility; and appropriation (as came to the light during the so-called revision of letters in 1564¹²) and the emergence of mixed ownership relations that accompanied the bestowals.

The role of the forests in defining natural borders was frequently noted in historiography – ever since the publishing of K. Potkański’s wonderful work on this subject¹³ – when dealing with territorial issues. It is especially visible when the forest used to dominate in the territory of Sandomierz Voivodeship: Jedlnia (Radom) Forest in the north that separated the voivodeship from Mazovia, and Sandomierz Forest in the south east that separated Polish lands from the territory of Red Ruthenia.

Rivers played a similar role in determining the borders of Sandomierz Voivodeship. Although rivers, especially when they flowed through ethnically uniform or related areas, did not separate, but connected the settlement, defining the main directions of its development; they were, however, often used for administrative and political divisions. For the outer borders of Sandomierz Voivodeship such rivers, their longer or shorter fragments, were: the Vistula, the Radomka, the Pilica, the Nida, the Nidzica and the lower San. The role of Pilica was noticed quite early by Potkański, who concluded

⁸ W. Pałucki, *Studia nad uposażeniami urzędników ziemskich w Koronie do schyłku XVI w.*, Warszawa 1962, p. 138. A mistaken belief concerning the date of the creation of Lublin Voivodeship can still be found in some works, it was taken from Niesiecki, *Herbarz Polski*, vol. 1, Lipsk 1839–1846, p. 184 repeated by Z. Gloger, *Geografia historyczna dawnej Polski*, Kraków 1900, p. 187. According to this belief the creation occurred in 1471; see M. Stankowa, *Księgi sądu kasztelana lubelskiego w Wąwolnicy*, „Rocznik Lubelski”, vol. 1, 1958, p. 248; eadem, *Powiat urzędowski w Polsce przedrozbiorowej pod względem prawnoustrojowym*, [in:] *Z dziejów powiatu kraśnickiego*, Lublin 1964, p. 49.

⁹ In 1793 there was a project, raised during the diet of Grodno, to include Stężyca land in Lublin Voivodeship (VL, vol. 10, p. 311). Obviously, due to the Second Partition, the project was not realized.

¹⁰ LS 1564/5, p. 200: ‘Regestrum exactionis fumalium villarum poleskich’; *ibidem*, footnote 339; LR 1529, p. 407–422, lists the villages situated in Stężyca land, noting that they lie ‘in Podlasze’. In the document of Ladislaus Jagiello from 1388 the king allows the townsmen of Ryczywół to sell their good ‘in Polyessie ducere, emere et vendere’, that this mean the lands of Stężyca and Łuków is testified by the instruction issued simultaneously to the starostas of Sieciechów and Łuków to obey the privilege – ZDM, VI, no. 1537.

¹¹ *Najstarszy opis Mazowsza Jędrzeja Świącickiego*, ed. S. Pazyra, Warszawa 1974, p. 143 ‘ultra Vistulam aliquanto latius patet, vocatur ea regiuncula Polesie, quod excisis sylvis non ita pridem coli ceperit’. About the separation of a judicial district in Stężyca see p. 168.

¹² AGAD, *Metryka Litewska*, IV B, 7, f. 44v: ‘There are many who, not having settled borders with the king’s estates, and not allowing the commissioners on the borders, appropriate royal land and benefits, especially in the forest, where there was clearing and sheep pastures, His Royal Highness find the starostas should protect...’.

¹³ K. Potkański, *Puszcza Radomska*, passim.

that during the reign of Casimir the Just (or perhaps even in the times of Prince Henry of Sandomierz) ‘the water line of the Pilica turned out to be a better and more distinct border, and as such it was chosen and acknowledged’.¹⁴

As in the case of the map of Mazovia in the sixteenth century, the reconstruction of the political-administrative borders (of the voivodeship and the districts) was based on tax registers. However, this source basis, very useful in our work, has also often proven insufficient due to, for instance, a mistake in assigning a settlement to a parish or district. It was therefore necessary not only to verify the data from the tax registers using other sources, but also to supplement it with the settlements that for various reasons (e.g. a several years of tax relief for newly located villages) did not appear in the registers. The situation of such newly located settlements, if they had been located near political-administrative borders, made correct marking of some fragments of the borderline easier. In this we have mostly used Church sources, especially the valuable visitation of the Cracow diocese of the Radziwiłł family from 1596–1598, which – apart from earlier hamlets – also includes settlements located in the last years of the sixteenth century. Yet, from our point of view, this source is incomplete for Sandomierz Voivodeship, as it does not include Kurzelów archdeaconry belonging to Gniezno archdiocese, i.e. the major part of Chęciny district and the entire Opoczno district and the north western part of Radom district.

Additionally, Church visitations list the settlements according to their parish, without district affiliation (the parishes often did not lie within borders of one district). Also, determining the borderlines running through wilderness and forest caused some difficulties. Given the lack of settlement that could be a point of reference, we had to take into consideration physiographic features of the area, marked on the oldest topographical maps on a detailed scale. Of older works, K. Perthès’s ‘Mappa szczegulna województwa sandomierskiego’ from 1788–1791 showing voivodeship and district borders, was the most useful.¹⁵ This peak achievement of Polish cartography of the Stanislaus period, at a scale close (1:225,000) to the one used in this series of the Historical Atlas of Poland maps, has its drawbacks as well. Disregarding the cartographic inaccuracies, obvious given the period of its creation, it should be remembered that it presents the geographical environment and the historical and political landscape from the end of the eighteenth century, already significantly changed in relation to the end of the sixteenth century.¹⁶ However, what for us was more disadvantageous was the fact that this map, prepared after the first Partition in 1772, does not include the part of Sandomierz Voivodeship situated on the other bank of the Vistula.

In these southern areas of the voivodeship some fragments of the borderline, running through territories which were poorly, or not at all, inhabited in the sixteenth century (Sandomierz Forest), can be somewhat hypothetical, as we verified them on the basis of later sources and cartographic works of A. Jabłonowski, M. Korduba and A. Fastnacht.¹⁷

For the entire voivodeship we did not omit the maps accompanying the subsequent volumes of the inspections of royal property in Lesser Poland, especially the one prepared by H. Rutkowski for the inspection of Sandomierz Voivodeship from 1564–1565. Additionally, when determining the borderline between Sandomierz and Cracow Voivodeships we used the maps of Cracow Voivodeship from the eighteenth century prepared by E. Trzyna, S. Żyga, and Z. Rzepa,¹⁸ the inspection of the roads of Cracow Voivodeship from 1570 published by B. Wyrozumska, and including (for the areas

¹⁴ Ibidem, p. 116.

¹⁵ Earlier, beautiful cartographic work of K. Perthès, namely ‘Polonia’ from 1770, covering the entire territory of the Republic, at a scale 1:893,000, did not prove so useful for us, as the borderlines were marked inaccurately, and in some places (with Mazovia and Sieradz Voivodeship) even incorrectly. For the same reasons we did not use the beautiful map prepared and published two years later by J.A. Rizzi-Zannoni *Carte de la Pologne, divisée par provinces et palatinatus*, scale. 1:692,000, London 1772.

¹⁶ For instance, the lower San and its mouth into the Vistula flows through the new channel, moved north in relation to the old one. See K. Chłapowski, *Geographical environment*, [in:] *AHP Sandomierz*, in this edition III.1.2.

north of the Vistula) the precious *Mapa województwa krakowskiego z doby sejmu czteroletniego, 1788–1792*,¹⁹ and *Taryfa mostowego i grobelnego województwa lubelskiego z r. 1767*.²⁰

The exact course of the border of Sandomierz Voivodeship ran as follows. Beginning in the north east, i.e. from the point where the borders of three voivodeships met: Lublin Voivodeship (Łuków land), Mazovia (Czersk land) and Sandomierz (Stężyca land), due west until the point of junction of the borders of Rawa Voivodeship, Łęczyca Voivodeship and Sandomierz Voivodeship (Opoczno district), the northern borderline of our voivodeship has already been marked on the map of Mazovia. Its middle part, on the lower Radomka, is well attested to in the sources.²¹ The inclusion of Olszowe village (Wyszemierzyce parish) on Perthès's 'szczegulna' map on the Mazovian side, that belonged to Sandomierz Voivodeship according to the sixteenth century sources, was probably a result of eighteenth century changes.

The River Pilica, after it left the south western edge of Mazovia, was used – already in the Middle Ages – to separate Sandomierz and Łęczyca Voivodeships, and then Sieradz Voivodeship. The border with Łęczyca Voivodeship in the sixteenth century ran on a short (around 20 km) fragment of the river, except for a small area on the right bank of the Pilica near Inowłódz belonging to Łęczyca Voivodeship. This deviation of the borderline from the course of the river survived, notably, until 1975, despite the later territorial and administrative changes.

The mouth of the Wolborka flowing into the Pilica marked the beginning of the border of our voivodeship with Sieradz Voivodeship; it ran south along the channel of the Pilica to the junction of these two voivodeships north west of Nowopole (present-day Koniecpol) with Cracow Voivodeship. On this quite long and well attested in the sources²² border fragment Sieradz Voivodeship crossed the Pilica near Sulejów and covered a large area on the right bank of the river, belonging to Sulejów,²³ and at the same time – again: notably – this state survived until 1975. However, the Cistercian monastery (because the northern borderline of this quasi-enclave of Sieradz ran just outside the monastery) was situated within Sandomierz Voivodeship.²⁴

In some, especially older, cartographic works there appears another deviation of the voivodeship border from the course of the Pilica, in the vicinity of Przedbórz. This small area, covering several square metres west of the River Pilica, was included into Sandomierz voivodeship on the basis of the tax registers of this voivodeship from 1527–1530 and 1576 that mention a village Wola, belonging to

krakowskiego w latach 1660–1670, 1:400,000, ed. E. Trzyna, appendix to: idem, *Położenie ludności wiejskiej w królewskich woj. krakowskiego w XVII w.*, Wrocław 1963.

¹⁹ Under the supervision of W. Semkowicz, prepared by K. Buczek, Cracow 1930.

²⁰ Z. Góralski, *KHKM*, vol. 3, 1956, pp. 543–574.

²¹ Najstarszy opis Mazowsza, p. 138: 'tractus qua Radomirria flumen decurrit: Sandomiriensen provinciam tangit'; LS 1660/4, I, p. 126: 'to the River Radomierza that separates Sandomierz land from Mazovia'. In the collection of the King Stanislaus Augustus there was 'Mappa rzeki Radomierzy, graniczącej Województwo Sendomierskie od Mazowieckiego od Sidlowiec [s] aż do Wisły de anno 1788'; see *Prace kartografów pruskich w Polsce za czasów króla Stanisława Augusta*, Kraków 1935 (Prace Komisji Atlasu Historycznego Polski, vol. 3), p. 298.

²² Długosz, *Annales*, I, p. 78: 'Pilcza [...] terram Sandomiriensem a Sradensi in aliquibus locis disterminans'.

²³ The initial location of Sulejów (on the left or right bank of the Pilica?) has long been a controversial matter in historiography, S. Arnold, *Z dziejów średniowiecza*, p. 312 and map: *Małopolska w XII–XIII w.*, and J. Mitkowski, *Początki klasztoru w Sulejowie*, Poznań 1949, p. 176, believed that in the beginning Sulejów was situated on the right bank of the Pilica. S. Zajęczkowski (Uwagi nad terytorialno-administracyjnym ustrojem, p. 305) located the city on the left bank of the river. Earlier K. Potkański, *Pisma pośmiertne*, vol. 1, p. 141, footnote 5, also included Sulejów in Sieradz Voivodeship, adding: 'although Sulejów later (i.e. from the fourteenth century on) belonged to Sandomierz land, I believe this is a later change'. The difficulty of this matter resulted from the lack of knowledge that we are dealing here with two settlement units: the city located on the left bank of the Pilica, and the Cistercian monastery, situated from the very beginning on the right bank, belonging to Sandomierz Voivodeship; see especially S. and S.M. Zajęczkowscy, *Materiały do słownika geograficzno-historycznego ziem łęczyckiej i sieradzkiej do 1400 r.*, part 2, Łódź 1970, pp. 124–127.

²⁴ This is confirmed by two reliable, though later (from the end of the eighteenth century), cartographic sources: 'Wykaz dóbr duchownych' included in Perthès's map lists among villages belonging to the Sulejów Abbey in this voivodeship also 'Sulejów monastery'. In *Geograficzno-statystyczne opisanie parafii Królestwa Polskiego*, on the page entitled: 'Województwo Sieradzkie, powiat Piotrkowski, parafia Sulejów miasteczko' (cartographic draft) there were '19 huts in Sandomierz Voivodeship and a monastery a 1000 steps from the parochial church' listed among the settlements under the name Sulejów, similarly under the name Strzelce – 'over the River Pilica, in Sandomierz Voivodeship'; mkf. And photography of the Sulejów page in the collection of IH PAN.

Przedbórz starosta's district,²⁵ which was rightly identified with Wola Przedborska, situated outside the town on the left bank of Pilica. The solution of this matter was made difficult by the lack of inventories and inspections of Przedbórz starosta's district from the sixteenth century (it was then burdened by mortgage) and complicated by M. Kromer. In his description of the last days of the reign of Casimir the Great (hunting in Przedbórz Forest) and the fall from the horse, resulting in the king's death (on an unknown basis, as the most reliable Vice-Chancellor Janko of Czarnków does not mention that) Kromer added – incorrectly – that Przedbórz belonged to Sieradz Voivodeship.²⁶ However, on the document from 1488 concerning the royal mill near Przedbórz located 'super fluvio Pyleza', it was stated that the mill was situated 'in rippa terre Siradiensi, terram ipsam a Sandomieriensi dividens'.²⁷ The book of benefits of J. Łaski mentions among the meadows near Przedbórz – one, situated on the left bank of the Pilica in Sieradz land.²⁸ The inspection of Sandomierz Voivodeship from 1660 does mention a demesne called Wola,²⁹ not marking its affiliation to Sieradz Voivodeship, yet the very thorough inspection of this voivodeship from 1789 clearly states that the demesne lay in Sieradz land.³⁰ Finally, K. Perthès on his map of Sandomierz Voivodeship from 1788 marked the borderline between Sieradz and Sandomierz Voivodeships near Przedbórz along the River Pilica and – more convincingly – did not mention Wola Przedborska in the annex to this map, which included a list of royal estates in Sandomierz Voivodeship, Przedbórz starosta's district among others. Only in the period of the changes in the administrative division of the Kingdom of Poland following the instructions of the Government Committee of Internal Affairs from 25 November 1823 were the hamlet Widoma and demesne Wola Przedborska moved from Radomsko district in Kalisz Voivodeship³¹ to Końskie district in Sandomierz Voivodeship.³² The borderline near Przedbórz defined at this time survived till 1975, which suggests that it was determined in the pre-Partition period.

The border between Sandomierz Voivodeship and Sieradz Voivodeship ended on the level of Wąsosz village (in Cracow Voivodeship), then the border with Cracow Voivodeship began. It left the River Pilica and ran east, separating the grounds of the villages: Zwlecza, Bichniów, Bałków (Chęciny district) from Krzepice, Bieganów (Cracow Voivodeship), reaching north of Dzierzków (Dzierzgów, Cracow Voivodeship) to Biała Nida, but the border village Podłazie lay on the Cracow side, 'where Sandomierz land is separated from Cracow land',³³ then the borderline ran east along the Biała Nida until the border between Bizeręda (Cracow Voivodeship) and Bizerędka (Sandomierz Voivodeship). This fragment of the voivodeship borders partially did not overlap with diocese borders, the more twisting ones. Cierno parish cut deepest into Cracow Voivodeship, the parish belonged to Kurzelów archdeaconry of Gniezno archdiocese (only Popowice village, situated on the northern bank of the Nida lay in Sandomierz Voivodeship). These differences in the course of the borders have not yet been satisfactorily explained in the literature.

Also unclear are the origins of a narrow wedge, where Cracow Voivodeship cut into Sandomierz Voivodeship near Bizeręda.³⁴ From this point the borderline ran east, bending south, between Mokrsko

²⁵ P. Małopolska, p. 276, 573. Perhaps this convinced S.M. Zajączkowski, *Studia nad osadnictwem dawnych ziem łączyskiej i sieradzkiej*, „Studia z Dziejów Osadnictwa”, vol. 4, 1966, map: 'Powiat radomszczański w połowie XVI w.' to affiliate Wola Przedborska to Sandomierz Voivodeship.

²⁶ M. Cromeri, *De origine et rebus gestis Polonorum*, Bazylea 1558, p. 326: the king Casimir, on his return from Ruthenia, where he went hunting, arrived at Przedbórz, 'quod oppidum in Siradiensi tractu est'.

²⁷ MK, 14, f. 247.

²⁸ Łaski LB I, p. 617: 'item secundum [pratum] habet in alia parte fluvii in terra Siradiensi inter prata regalia haereditatis quondam Wola'.

³³ LDK, p. 69.

³⁴ Bizerędka does not appear in the tax registers from the sixteenth century because it was treated as a hamlet belonging to Mzurowa; in the poll tax register from 1676: 'Mzurowa cum Bizorenda', The Princes Czartoryski Library, Łoyko MS, no. 1099, p. 403. Mentions from the sixteenth century, see MRPS, vol. IV, no. 16918, 23237, Paprocki 1858, p. 257 (according to the document from 1419).

Górne (Chęciny district) and Mokrsko Dolne (Cracow Voivodeship) the middle Nida, and then – along the course of this river – reached the mouth of the Mierzawa, whose fragment of around 10 km separated Wiślica land from the lands of Cracow already in the early Middle Ages. Between Wrocieryż (Cracow Voivodeship) and Zagajów Mały (Wiślica land) the border turned south and, creating two smaller wedges, reached the River Nidzica south of Działoszyce. From this point the River Nidzica constituted the border between Sandomierz Voivodeship and Cracow Voivodeship, until its mouth flowing into the Vistula near Ławy hamlet. This fragment of the voivodeship border on the River Nidzica,³⁵ well attested to in the sources, differs in three places from the state presented on the map of Cracow Voivodeship from the period of the Great Sejm. On this map the villages: Jastrzębniki (Wola Suszczycka parish), Grodzonec (Dzierżążna parish) and Sokolniki (Skalbmierz parish) were included in Cracow Voivodeship; in fact, as attested to from the fifteenth century on, these villages belonged to the lands of Wiślica. The authors of this map actually mention that in the materials to the Dictionary, explaining their mistake.³⁶

It was necessary to specify the course of the border near the mouth of the River Nidzica flowing into the Vistula, as in the fifteenth–eighteenth century sources the aforementioned village Ławy appears either on the Cracow³⁷ or on the Sandomierz (Wiślica)³⁸ side. Thorough analysis of the sources has shown that at the same time there existed two villages bearing the same name: the one on the right bank of the river was the village Ławy that belonged to Korczyn starosta's district, but was actually situated in Cracow Voivodeship; the other settlement, on the left bank of the river, was a village with an inn, also called Ławy, which belonged to a noble family and lay in Wiślica district. Moreover, according to 'Mapa części Województwa Sandomierskiego położonej nad Wisłą, począwszy od wsi Trzebnicy, aż do rzeczki Ławy' by F. Podoski dated 1790 ('Map of the part of Sandomierz Voivodeship, by the Vistula, beginning with Trzebnica village until the rivulet Ława')³⁹ and some later detailed maps, the River Nidzica flowed – as in the sixteenth century – in two channels for several kilometres before its mouth flowed into the Vistula, the left (eastern) arm was called old river in the sixteenth century sources. As such, we have decided to draw the borderline of the voivodeship along the older channel.

From the mouth of the Nidzica flowing into the Vistula the border between Sandomierz and Cracow Voivodeships ran upstream of the Vistula for a while, until the mouth of its right tributary – Uszew. Next – along the channel of this river, attested to in the sources.⁴⁰ Near the village Bielcza (Pilzno district), meandering around the village Wokowice (Pilzno district) situated west of the River

³⁵ Długosz, Liber, II, p. 149: 'fluvius Nidzicza, qui terram Cracoviensem a Sandomiriensi et archidiaconatum Sandomiriensem [...] a praepositura Vislicensi determinat'; Długosz, Annales, I, p. 78: 'Item Nydzicza cuius fons in villa Zandowicze, hostia circa villam seu locum Lawy terram Cracoviensem a Sandomiriensi dividens'. LDK, p. 29: 'we arrived at a village, which is called Ławy, which belongs to Nowe Miasto starosta's district. They told us there, that they duty there, but they showed us nothing; we measured the highroad and ordered them to fix it. From there we returned, because there the border separated Cracow land from the lands of Sandomierz'.

³⁶ MWK, p. 68 (footn. 2), 80 (footn. 6), 287 (footn. 1).

³⁷ P. Małopolska, p. 10 (y. 1581); ASK LVI 2, II, p. 22 (y. 1581): 'the village Ławy that belongs to Przemyków demesne, there three inns, also a mill [...] on the River Nyda'; Tax register of Cracow Voivodeship from 1629, p. 103; tax register of Cracow Voivodeship from 1680, p. 102; MWK, Materiały, p. 168. However, in *Lustracja woj. krakowskiego 1789*, ed. A. Fałniowska-Gradowska, I. Rychlikowa, part 1, Kraków 1962, p. 215 n., the inn in the former royal village Ławy by the Nidzica belongs to Piotrowice village. And on Heldensfeld's map Ławy were marked only on the left (eastern) bank of the Nidzica. A. Wyczański (Studia nad gospodarką starostwa korczyńskiego 1500–1660, Warszawa 1964, p. 139) mentions '3 inns in Ławy by the busy road running south-west along the Vistula (from the north-east) were used as guesthouses for the travellers'.

³⁸ P. Małopolska, p. 490 (y. 1508): 'taberna in Lavy'; distinction between the royal village Ławy and the village Urzuty belonging to Tynec monastery in 1508, MK, 22, f. 147. LS 1564/5 p. 48 n.: 'Villa sive taberna Lavy in via publica Cracoviensi. [...] Rzeka Nydzicza graniczy inter villam regiam Lavy et inter villam Morawyany nobiulium Dunyn sive Jordan. Na nowy rzece buduje starosta most i gacią drogę naprawuje, a na satary rzece, która graniczy dziedziny, buduje most i drogi naprawuje haeres de Morawyany. Na które mostów i drogi naprawowanie jest nadane mostowe iuxta contenta decreti Warszaviensis; które mostowe trzymają arendą, rok z królewski strony, a drugi [rok z] strony ziemiański, karczmarze, a mostowe na poły dzielą'. Similarly with small differences ASK LVI, 2, I, f. 35, y. 1572: 'As the border of Mr. Jordan came from the village Morawiany [Wiślica district] to the other side of the river of the bank of Nidzica, on which he has an inn, from which they are building the other half of the bridge'.

³⁹ A photographic copy of the map can be found in the cartographic collection of the Historical Atlas of Poland section of IH PAN.

⁴⁰ LDK, p. 29: 'we crossed the Vistula and arrived at a village, which is called Gorka and which belongs to Mr. Morski. There we travelled through his lands until we reached the river they call Usseph, and there Cracow land meets Sandomierz land'.

Uszew, the border turned south east and between Wojnicz (Cracow Voivodeship) and Łukowa (Pilzno district) near the village Isep (Pilzno district) it reached the River Dunajec.⁴¹ For 4 km this river set the border between the two voivodeships.

S. Arnold paid attention to this fragment of the border, having thought that Wojnicz castellany could have had covered the area east of the Dunajec and only the expansion of the settlement from the Sandomierz Voivodeship changed the former state of things.⁴² This issue has not yet been resolved, but it must be noted that two source records provide completely contradictory data regarding the political-administrative affiliation of Wojnicz, the capital of a greater castellany of Cracow Voivodeship, situated on the left bank of the River Dunajec, just by the border with Sandomierz Voivodeship. According to a sixteenth century transumpt of a document of Louis I of Hungary from 1381 that shifted Wojnicz from Neumarkt to Magdeburg rights, it was said that Wojnicz belonged to Sandomierz Voivodeship, and yet in the eighteenth century copy of this document it was stated that Wojnicz belonged to Pilzno district of Cracow (sic!) Voivodeship.⁴³

The border left the river and ran south east for a while, encircling the village Lubienia which belonged to Pilzno district, then it zigzagged east between the villages Rychwałd and Meszna, the town Tuchów, villages Zalasowa, Wola Lubecka, Lubcza Górna, Zwanowa (present-day Dzwonowa) and Kawęczyn, all situated in Pilzno district, and the villages: Jodłowa Polska, Lewin, Dąbrówka, Bestwiszowa, Kowalowa, located in Biecz district. South of Kawęczyn the border turned south east and south of Skorowa (on the Pilzno side) it reached the River Wisłoka, it ran along the channel of this river until its mouth into the River Jasiołka, near Ulaszowice (Pilzno district).

For merely 1 km the border ran along this river near its mouth, and then turned north (leaving the village Ulaszowice in a wedge belonging to the territory of Pilzno district) and went around the villages of Jasło starosta's district: Gorajowice and Brzeszczki (Biecz district), passing the village Rostoki (Biecz district) and reached the River Jasiołka. From now on the river defined the borderline (except for a fragment of Pilzno district on the eastern bank of the river near Jedlicze), until the eastern grounds of the village Zręciny (Biecz district), where the borders of three Voivodeships met: Cracow, Sandomierz and Ruthenia.

From Zręciny the border turned north east and, leaving Krosno and Odrzykoń (Sanok land) on the Ruthenian side, and Polanka and Turosszówka (Pilzno district) on the Sandomierz side, it reached the River Wisłoka east of the village Turosszówka. After some 4 km it left the river near the village Bratkówka (Pilzno district),⁴⁴ and in a sharp wedge it encompassed this village and turned back east, leaving Węglówka Ruska and Krosna on the Pilzno side; through a still large woodland area the borderline reached Domaradz Niżny, formerly called Zakobyl.⁴⁵ The other name Domaradz was taken from a stream running south, that flowed into the Stobnica River. Here the stream separated Sandomierz land from the land of Sanok.⁴⁶

After Domaradz the voivodeship border turned east, and then – leaving the village Barycz (Ruska) on the Sanok side – north, and then finally north west. The village Gwoźnica Górna lays in the territorial wedge formed this way. Further in the same direction the border ran through the forest between the villages: Blizna, Barycz (Polska), Połomia, Wyżne and Babica (Pilzno district) and Straszydla and Lubienia (Przemyśl land) and reached the River Wisłok east of Czudec village (Sandomierz Voivodeship). This river was used only on a short fragment (around 5 km). Next, leaving the villages: Lutoryż, Zarzecze and Boguchwała⁴⁷ in a wedge, the border, with small deviations, ran north east until it reached the royal village Mrowla in Pilzno district.

⁴¹ ZDM I, no. 58, y. 1349.

⁴⁵ *Ibidem*, p. 515: 'Domaradz Inferior seu Zakobila'. On the Ruthenian (Sanok) side there was another Domaradz, Wyżny.

⁴⁶ AGZ, vol. 8, no. 94, y. 1480: from this place, 'ubi Zakobila, qui dividit terras Sandomiriensem et Sanocensem inter praedictas villas caedit in fluvio Stobnycza'. See also A. Fastnacht, *Osadnictwo ziemi sanockiej*, p. 20.

⁴⁷ ZDM I, no. 142, y. 1373: 'eadem haereditas mediat limites Sanocenses et Sandomirienses'.

Beyond Mrowla the border ran east on a short fragment of the river of the same name (Mrowla),⁴⁸ one of the left tributaries of the Wisłok River, but already near Rudno Wielkie (Przemyśl land) the border suddenly turned north west along Osina (left tributary of the River Mrowla), After some 3 km it again turned north east on the lower Rogoźnica – the Osina’s tributary, then east of Zabajówka, then it passed Głowów (Pilzno district) and ran north to cross the nearly impenetrable forest that separated Polish lands from Ruthenia (streams could have existed there in the High Middle Ages).

Having run through the territory of the village of Wola Zielonka (Sandomierz district), the border of the district and Voivodeship of Sandomierz turned east, and near the village of Górno (Sandomierz Voivodeship) – south east, encompassing the village of Dołęga (Sandomierz district), then it turned north east again. On this quite long fragment, leading through the edge of the Sandomierz Forest, the border ran east of the villages Łowisko, Łętownia and Tarnogóra (Sandomierz district), then it turned first east and then north. Before the village of Kopki (Sandomierz district)⁴⁹ at the level of Krzeszów (Przemyśl land) it reached the channel of the River San.

We could not base the border between Sandomierz Voivodeship and Ruthenia, and then Lublin Voivodeship in Zasanie, solely on tax registers from the sixteenth century, because it ran through an almost entirely forested area. The settlement process in this territory began quite late and intensified only in the eighteenth century. As such, it did not provide sufficient number of points of reference for our period, which would have allowed us to trace the border course.

Already during our work on the map of Lublin Voivodeship, for which our assumed period of reference was around 1564, our emphasis was on the southern border of this voivodeship that ‘it was not entirely precisely drawn here, because the settlements on both sides of the borderline were situated far on the edge of the forest, so the course of the borderline on the map should be treated only as a probable range’ of the neighbouring voivodeships.⁵⁰

That is why this time we supplemented the lack of direct sources (tax registers) with later sources from the second half of the seventeenth century⁵¹ and cartographic works from the turn of the eighteenth and nineteenth centuries. The latter (Perthèes, Liesganig, Heldensfeld) are especially valuable for this part of our Atlas, as they present the course of the border of the southern part of Lublin Voivodeship in a quite detailed way, which is additionally attested to in surviving reports of the Delimitation Committee from 1776.⁵² The reports sent to Warsaw show that the then borders, defined after the first Partition – except for the lower San, which changed its channel and mouth flowing into the Vistula around 1706⁵³ – ran in the remaining Zasanie fragment of Sandomierz Voivodeship along the southern border of Lublin district.⁵⁴

The border of Sandomierz Voivodeship, beginning in the east after it left the River San between the villages Kopki (Sandomierz Voivodeship) and Kamionka (Przemyśl Voivodeship), ran north east. The following villages, listed in the reports, remained on the Sandomierz side: Bieliny, Kurzyna and Golce, and the following remained on the Przemyśl side: Hucisko, Sieraków and Huta Krzeszowska.

⁴⁸ Ibidem III, no. 697, y. 1367: ‘super fluvium Mrowla [...] in districtu Sandomiriensi’.

⁴⁹ Archiwum Sanguszków, vol. V, no. 113, y. 1521: ‘villa Kopki in terra et districtu Sandomiriensi’.

⁵⁰ AHP Lublin, in this edition III.2.1.3.

⁵¹ ASK I 67, Rejestr pogłównego generalnego woj. Sandomierskiego z lat 1662–1664; Library of the Princes Czartoryski, Cracow, Łoyko MS, no. 1099, part 2, Rejestr pogłównego generalnego Małopolski z r. 1676.

⁵² About the value of J.Liesganig’s and M. Heldensfeld’s map see chapter Cartographic Sources. And Perthèes’s *Mappa szczegulna woj. lubelskiego* published in 1786 is admirably detailed, especially in southern regions of the voivodeship, as it shows many villages, small hamlets or even individual huts, with the name of the owner, exactly near the border with Przemyśl land. What is important, the same villages can be found in the reports of the Polish Delimitation Committee from 1776.

⁵³ AGAD Archiwum Koronne Warszawskie, Dział cesarski, box 31c/1, p. 239–249, 264–265. See *Geographical environment* in this volume.

⁵⁴ The Crown Chancellor A. Młodziejowski replied to the question that was sent to Warsaw (‘What to do in case of an argument – between the Polish and the Austrian committee – about the borders of the voivodeship?’) and 31 March 1776 sent Paweł Thubicki, a lieutenant colonel of the Crown artillery and the head of the Polish border committee the following order: ‘In case of an argument about the border of Lublin Voivodeship, should the imperial engineers be unwilling to prove their rights providing statement of the citizens inhabiting the area of the demarcation, in this point Thubicki is to contact the Department of Foreign Affairs. Meanwhile, just in case, a query about the borders of this voivodeship will be conducted in the Royal Metrica will be conducted’ – AGAD, Archiwum Koronne Warszawskie, Dział cesarski, box 31c/1, p. 6.

Then the border reached the village Buczek,⁵⁵ the territory of which, in the form of a small wedge, belonged to Lublin Voivodeship, where the borders of three Voivodeships (Sandomierz, Lublin and Ruthenia) met.

The junction point of the aforementioned borders in the area of the present-day Golce village is attested to by the commissioners' document from 1566, that separated the estates of Stanisław Górka, namely the villages Biała and Zwola (in Lublin Voivodeship) from the estates of Sandomierz starosta's district.⁵⁶ The place called 'Cielczowa Góra' mentioned in the document, and the forest 'Miessicza' situated in the royal estates, left their mark as names of the places that to this day remain near the villages Golce and Kurzyna.⁵⁷ The neighbouring Maziarnia was created in the seventeenth century within Krzeszów estates, so it should be placed in Ruthenia.⁵⁸ A certain Maziarnia was in fact mentioned in the register of Sandomierz Voivodeship Pysznica parish, but there could have been many small hamlets of this kind in the forests near Kurzyna.

Here we should suspend our description of the borderline of Sandomierz Voivodeship for a moment in order to present the course of the southern fragment of the border between Lublin Voivodeship and Ruthenia; given our assumption that between the second half of the sixteenth century and the eighteenth century there were no major changes here. There are no records of any changes, and it would be difficult to believe that this kind of change would not be mentioned in suitable documents of the Sejm and local assemblies, when – as we mention in the description of the border between Sandomierz and Lublin Voivodeships – even the possibility of small changes caused strong outcries during the assemblies.

So, on the basis of the aforementioned eighteenth century maps and reports of the Polish Delimitation Committee from 1776, we are drawing now the course of the border between Lublin Voivodeship and Ruthenia from the already mentioned village Buczek, created after the sixteenth century. This border ran east slightly bending to the north, and near the village Kiszki (Lublin Voivodeship in the eighteenth century) it turned north, surrounding the old, large starosta's district of Krzeszów (Przemyśl land) and reached the River Tanwia west of the village Łazory (Lublin Voivodeship in the eighteenth century). For the map of Lublin Voivodeship, which presents the state from around 1564, it was assumed that the borderline on the side of Przemyśl land was then similar to the diocese border, and so the area of Biłgoraj, a city located in 1578, remained outside Lublin Voivodeship.⁵⁹ Now, in accordance with our previous remark about the lack of data concerning changes in the sixteenth century borderline, we believe that the territory of the later Biłgoraj district belonged to this voivodeship at the end of that century, and perhaps even already in the fifteenth century. Therefore on our map we led the border the way it ran in the eighteenth century: along the River Tanwia until its mouth flowing into the Łada, and then between Tanwia and Łada, and the Czarna Łada, leaving on the Lublin side the villages mentioned in the eighteenth century: Biedaczów, Sól, Ruda Solska and Derażnia, and on the Przemyśl side' Majdan Księżopolski and Brodziaki.⁶⁰ From this village, situated near the mouth of the River Rotwica into the Czarna Łada, the border turned north, and east of Rapy village (Lublin Voivodeship in the eighteenth century) it reached a point of junction at the borders of Chelm and Przemyśl lands, both belonging to Ruthenia.

Returning to the place where we suspended our description of the borders of Sandomierz Voivodeship to specify the course of the borderline between Lublin Voivodeship and Przemyśl land, we led the course of the last fragment of the borderline of our voivodeship in Zasanie north west from the village

⁵⁵ AGAD Archiwum Koronne Warszawskie, Dział cesarski, box 31c/1, p. 214, 264. The villages mentioned, except for Kurzyna and Sieraków, were created after the sixteenth century. The affiliation of the villages: Bieliny, Kurzyna and Golce was the source of a heated argument between the Polish and Austrian Commissioners, which caused a several-day break in the works of the committee in 1776.

Map 1. South eastern borderlands of Lublin Voivodeship in the end of 16th century

Buczek: from the village Bigos (Lublin Voivodeship in the eighteenth century)⁶¹ along the western bank of the River Bukowa, and from the village Bąk (Lublin Voivodeship in the eighteenth century) bending slightly north (a change in relation to what had been presented on the map of Lublin Voivodeship) between the villages Branwica (Lublin Voivodeship) and Jastkowice and Bartnia Łąka (Sandomierz Voivodeship, now: Księżę Kolano) to the San near the mouth of the Bukowa. The borderline north and north east of Jastkowice was drawn with respect to the fact that several small hamlets, created after the sixteenth and mostly in the nineteenth century, situated in the vast forest complex that belonged to the village. From the mouth of the Bukowa flowing into the San the border ran along the old channel of the River San until its mouth flowing into the Vistula near Sandomierz.

⁶¹ In 1776 the Austrians questioned also the affiliation of Bigos village to Lublin Voivodeship.

Like the River Pilica in the west – with Sieradz Voivodeship, from 1474 the Vistula constituted the border between Sandomierz and Lublin Voivodeships in the east, from the mouth of the San until the mouth of Vistula's right tributary Kurówka (near Puławy). The course of the border along the Vistula, except for two now corrected fragments, was already presented on the map of Lublin Voivodeship. The border on the Vistula, probably accepted on the basis of the old division between the former lands of Sandomierz and Lublin, before the latter was raised to the rank of the voivodeship, was natural, which made any violations difficult. If that happened 'and was harmful to our voivodeship, because it significantly lowers our tax income', as was mentioned in a 1685 resolution of the nobility of Sandomierz Voivodeship, the reaction was immediate.⁶²

The border between the voivodeship set on the Vistula in 1474 did not, however, eliminate the deviations from the main stream channel that existed in the administrative division. Since Długosz⁶³ we have been encountering source records claiming that Vistula changed its course in some places, and as a result many villages lying near the banks were either completely flooded by the new course and thereby disappeared, or found themselves on the opposite bank of the river, from where they had been located. This could explain some surprising deviations from the main course of the Vistula that appear on the long fragment of the river that separated Sandomierz and Lublin Voivodeships in sixteenth–eighteenth century.

North of Zawichost the borderline did not follow the Vistula, but its oxbow lake that can be seen on old maps. It added the village Janiszów,⁶⁴ situated on the right bank of the river, to Sandomierz Voivodeship and returned to the main channel before reaching Mistrzowice village, located on the left bank, in Sandomierz Voivodeship.

The next distinct deviation of the borderline, this time west of the present-day main channel of the Vistula, encompasses the village Ostrów, that belonged to Lublin Voivodeship. More notable was the deviation that occurred near Solec. Here, for around 12 km, the voivodeship borderline ran east of the right arm of the Vistula (that flowed in two channels near Solec) and placed the villages: Kamień, Braciejowice, Zakrzów and Jaruntowice within the borders of Sandomierz Voivodeship.⁶⁵

⁶² This resolution was made because in 1685 the owner of the village Wrzawy (Lublin Voivodeship), situated near the mouth of the San into the Vistula 'against all rights in our voivodeship and in Sandomierz district, following an unjust bestowal of Lublin Crown Tribunal, part of the estates in the village Wrzawy or Strachocin, belonging on this side of the Vistula to our voivodeship, to our lands and heritage, between the village Słupca on one side and Dwie Kozy (Dwikozy) or Boży Dar on the other, where there were peasants on these grounds, and thickets and forests, which were later dug and on these diggings several huts built, and the grounds and plains sowed, which are from voivodeship far and to Lublin Voivodeship closer, and was harmful to our voivodeship, because it significantly lowers our tax income, then we have asked [...] our brothers [names of three officials from Sandomierz], who will arrive at these lands and inspect it in a proper and thorough way, whether it should to our, Sandomierz, or Lublin Voivodeship belong according to the written Crown laws, and which land should gather the tax' (Library of PAN, Cracow, MS 8338 – Teki Pawińskiego 21, Lauda sejmikowe woj. sandomierskiego, f. 716. The case was long, because still in 1693 (ibidem, f. 783) in dietine lauda from Sandomierz Voivodeship it was ordered 'that a revision of grounds belonging to our, Sandomierz, Voivodeship, situated between Słupca and Wrzawy was marked per commissarios, procurant by the emperor's legates'. Probably, 'according to Crown laws' the argument was settled in favour of Sandomierz, and traces of the reasons behind the entire matter could be seen in old maps from the second half of the eighteenth and the first quarter of the nineteenth century (loop of the Vistula near the villages Słupca and Bożydar).

⁶³ Długosz LB, III, p. 266, 272.

⁶⁴ P. Małopolska, p. 177. The village Janiszów, situated on the eastern bank of the river, originally belonged to Zawichost castellany, and then to Zawichost starosta's district (LS, 1564/5, p. 155). A dried-up arm of the Vistula that constituted the border of Sandomierz Voivodeship east of Janiszów, was still mentioned in 1767: 'Old Vistula called bridge' (Taryfa mostowego i grobelnego woj. lubelskiego z r. 1767, ed. Z. Góralski, KHKM, vol. 3, 1956, p. 566). The characteristic conservatism is worth noting: the part of Sandomierz Voivodeship situated on the other side of the Vistula near Janiszów later, for obvious reasons, belonged to Lublin Voivodeship (and then Russian province). However, the tradition won, because by the 19 December 1843 regulation the village Janiszów was moved from Kraśnice circuit of Zamość district of Lublin province to Sandomierz circuit, district and province – W. Trzebiński, A. Borkiewicz, *Podziały administracyjne*, p. 64.

⁶⁵ The affiliation of the villages situated east of the Vistula: Kamień, Braciejowice, Zakrzów and Jaruntowice to Sandomierz Voivodeship is attested e.g. in: ZDM VII, no. 2144, document of Ladislaus Jagiello from 1433: 'Kamyen, Jarunthowice [...] in terra Radomiensi'; his document from 1432, ibidem, no. 2096 regarding the purchase of the estates of Solec starosta's district 'Jarunthowice, Kamień in terra Sandomiriensi', 'Kamyen, Jarunthowice, [...] in terra Radomiensi'; in 1552 'Kamien villa ad capitaneatum Solecensi, hec villa contributionem in Radom solvit', ASK I, 33, f. 397, see also LS 1600/4, vol. 1, p. 192; LS 1789, part. 1, p. 29. The village Kamień, situated between the old and new channel of the Vistula (there was an old customs house by the ford on the Vistula, that belonged to Solec starosta's district in terms of possession, but to Sandomierz Voivodeship in terms of political-administrative affiliation), treated by the nobility of both voivodeships as a convenient place

The case of political-administrative affiliation of the village Wojszyn, that belonged to Kazimierz starosta's district and was situated on the left bank of the Vistula, requires more explanation. Historiography followed a piece of information provided by Długosz, who – on the basis of the 1254 document of the Zwierzyniec Norbertine Sisters monastery in Cracow – noted that Wojszyn, along with other villages situated near the Vistula that were mentioned in the document, lay in Lublin land.⁶⁶ However, no one noticed that the document does not claim that Wojszyn belonged to Lublin land, so Długosz's words cannot be decisive this time. Further analysis of source records on Wojszyn would grow into a long article, so we limit ourselves to providing the most important records.⁶⁷ The affiliation of Wojszyn in sixteenth century to Lublin Voivodeship is attested to only by one tax register from 1563,⁶⁸ and for the seventeenth century – the registers from 1626⁶⁹ and 1676.⁷⁰ Wojszyn does not appear in the tax registers from Lublin Voivodeship from 1533, 1543 and 1552. And the affiliation of Wojszyn to Radom land is attested to three times in the royal commissioner borderline act from 1539–1546.⁷¹ The village Trzcianki, founded around 1580 in the woodland territory of Wojszyn and belonging to Kazimierz starosta's district was also situated in Radom land.⁷² Both these villages, situated on the opposite bank of the Vistula, belonged to Radom district in the eighteenth century.⁷³ This would support the alleged affiliation of Wojszyn to Sandomierz Voivodeship also in the second half of the sixteenth and in the seventeenth century when the contemporary leaseholders of Kazimierz starosta's district (in the hands of the Firlej family from 1509 until 1650s) listed this village in the registers of Lublin Voivodeship for their own convenience. Taking these divergences into consideration, we decided to present two variants of this fragment of the borderline on the map, unlike on the map of Lublin Voivodeship: the main variant was led along the Vistula, and it included Wojszyn into Sandomierz Voivodeship, the other variant (no line) – was a means to show the fact that Wojszyn appeared in 1563 register books of Lublin Voivodeship.

The case of political-administrative affiliation of Gołąb starosta's district, situated in the fork of the Rivers Vistula and Wieprz, also requires some explanation. Historical literature has long assumed that this district belonged to Lublin Voivodeship, even though reliable sources confirm that the Gołąb lease belonged to Stężyca starosta's district in the first half of the sixteenth century.⁷⁴ Stężyca district had earlier constituted a part of large estates of Radom starosta's district. Without thorough research, such

for more important gatherings, e.g. during the interregnum. In 1576 a regulation of Sandomierz and Lublin Voivodeship was invoked 'according to Solec constitution and decided near Kamień' (Library of PAN, Cracow, MS 8338, Teki Pawińskiego, no. 21 *Lauda sejmikowe woj. sandomierskiego*, f. 24). Similarly in 1577 the constitutions of both voivodeships were passed 'sub oppido Solec et villa Kamień' (*ibidem*, f. 28).

⁶⁶ Długosz LB, III, p. 59: 'villas suas ducales iuxta Vistulam fluvium in terra Lublinensi sitas, videlicet: Skowyszyn, Wyetrzna góra, Krampa, Woyszyn, Rzeczicza, Jaworzec cum utraque littore Vistulae'; Jaworzec had already disappeared in Długosz's times, it was taken by the Vistula (*ibidem*, p. 59).

⁶⁷ KDKK, vol. 1, no. 40: 'Skowyszyn, Vetrngora dicta in terra Lublinensi cum adiacentibus haereditatibus id est cum Krampa, Woyszyn, Reczicza, Yaworze cum utraque littore Wisle'.

⁷⁰ P. Małopolska, p. 22a.

⁷¹ MK 71, f. 126–145: 'Limes inter bona regia Woyszyn et palatinum Lublinensem [Piotr Firlej of Dąbrownica] Janowiec confirmatur'; according to the record in the document of 1539: 'villa Woyszyn in terra Radomiensi et Janowiec, Oblasy, Mszadl etiam in terra Radomiensi', and according to the record from 1541: 'villa Voyszyn in terra Radomiensi et Janowiec [...] oppidum Kazimierz et Zaszczytow, Seroczko, Leskowcze in terra Lublinensi'. The commissioner's court was composed of: Sebastian Branicki the bishop of Poznań, Bernard Maciejowski the castellan of Lublin, Andrzej Lasota of Łopiennik chamberlain and subiuDEX of Lublin, Jan Gołuchowski subiuDEX of Sandomierz, Piotr Kochanowski gord judge and bailiff of Radom office of Sandomierz chamberlain Stanisław Tęczyński, so of the people who mostly, due to their occupation, had to be well-oriented in the course of the borderline between Sandomierz and Lublin Voivodeships.

⁷² ASK I 33, f. 76 from 1580: 'Trzcianki in dilatione'; Trzcianki, Janowiec parish (Radom district) – P. Szafran, *Rozwój średniowiecznej sieci parafialnej w Lubelskim*, Lublin 1958, p. 200, on the basis of the document of Lublin consistory from 1603, pp. 112–113. For 1674 see P. Małopolska, p. 58a.

⁷³ *Spis ludności diecezji krakowskiej z r. 1787*, ed. J. Kluczycki, Kraków 1894 (Archiwum Komisji Historycznej AU, t. 7), p. 394, 446.

⁷⁴ S. Arnold's work (S. Arnold, *Z dziejów średniowiecza*), is an exception here. The map of Lesser Poland shows Gołąb starosta's district in the sixteenth century as a part of Stężyca land.

opinions were probably based on the incorrect interpretation of tax registers from 1531⁷⁵ and 1676⁷⁶ published by A. Pawiński as well as on K. Perthès's and F. Czajkowski's maps from the second half of the eighteenth century.

Already during the pre-press preparations of the map of Lublin Voivodeship in the second half of the sixteenth century this matter did not seem so obvious to us. That is why, 'apart from the border proper of the voivodeship along the Rivers Vistula and Wieprz, we marked, less clearly [discontinuous line] the range of the area that bore some relation to the neighbouring voivodeship⁷⁷'. Now, having conducted a thorough source query, we are able to resolve this issue in a more precise way. The affiliation of Gołęb to Lublin Voivodeship is mentioned in tax registers from 1531, 1552, 1563,⁷⁸ and the 1765 inspection of Lublin Voivodeship.⁷⁹ The majority of tax registers from 1507–1790⁸⁰ include Gołęb in Sandomierz Voivodeship, Stężyca land, as do all the inventories, revisions and – except for 1765 – inspections of royal property from 1507–1789,⁸¹ and finally the wintering tariff from 1716;⁸² quarter bills from 1631–1652;⁸³ revisions of infantry lans from 1658 and 1772;⁸⁴ Crown Metrica from 1505–1621;⁸⁵ books of *Referendaria Koronna* from 1606,⁸⁶ 1781–1782,⁸⁷ eighteenth century written sources,⁸⁸ and the Church visitation of 1748.⁸⁹

Even though the vast majority of sources, not only in terms of numbers, but also in terms of their importance, confirm that Gołęb starosta's district belonged to Stężyca land, it must be explained why some of the so-called consents for Gołęb starosta's district, recorded in the Crown Metrica, mention its location in Lublin Voivodeship. Specifically, for eight such records from 1586–1621, on the occasion of the change of the possessors of the starosta's district, three inform that the villages of this district: Skoki, Bałtów and Nieciecza, lay in Lublin Voivodeship. Well, apart from usual mistakes in the chancellery, which are not so rare in the Metrica when it comes to the location of settlements (the aforementioned Wojnicz could be an example), these three records with incorrect location do not apply to the entire Gołęb starosta's district, but its south eastern part (three villages). Also, one

⁷⁵ In the tax register of Lubin Voivodeship (P. Małopolska, p. 360) only the village Gołęb is listed, the village Kośmin, situated in Gołęb parish and belonging to petty gentry is listed separately (p. 371). Kośmin did in fact belong to Lublin Voivodeship.

⁷⁶ P. Małopolska, pp. 19a–21a; the tax register of Lublin Voivodeship from 1676 lists 19 villages in Gołęb parish, but other villages of this parish: Skoki, Nieciecza, Bałutów, Wola Gołębaska, Gromki and Gołęb itself were omitted, obviously because they were situated in Stężyca district (ASK I 67, f. 207).

See also: *Krótkie zebranie historii i geografii polskiej*, Supraśl 1767, p. 317, where the last name on the list of non-gord starosta's district in Sandomierz Voivodeship is 'Gołęb'.

⁸⁹ AKM, rkps Wizytacja biskupa A.S. Załuskiego, vol. 11, Kazimierz decanate. My thanks to prof. dr. Stanisław Litak for this information.

of these documents was issued in 1609 for Piotr Borkowski by the vice-chancellery in the camp near Smoleńsk,⁹⁰ where it was easy to make such a mistake, intentionally or not.

The most important and decisive mistakes in the Metrica is the consent for Gołąb starosta's district issued for Jerzy Ossoliński in 1621. Ossoliński, the future Treasurer of the Crown, then Vice-chancellor, and finally the Great Chancellor of the Crown bought this starosta's district from Jerzy Grudziński for 22,000 *złoty*.⁹¹ He made sure that all villages of this, united again after a short break, starosta's district (Gołąb, Bałtów, Skoki, Nieciecza, Wola Gołąbska and Gromki) were correctly recorded in the Metrica as belonging to Stężyca land in Sandomierz Voivodeship.⁹²

In old historiography, the opinion on this matter was largely influenced, apart from the suggestive geographical location (the fork of the Vistula and the Wieprz allegedly created a natural territorial border in this place), by the inspection of the Crown property from 1765, in which Gołąb starosta's district was recorded. This mistake was corrected in the last inspection from 1789,⁹³ the best and most detailed of the inspections conducted in royal estates after 1664. It must be added, that the best and last record of hearth tax in the history of the Polish finances, made in 1790 by the Civilian-Military Ordinal Committee states clearly: 'Gołąb parish in the land of Stężyca'.⁹⁴

The aforementioned inspection of royal estates in 1765, conducted in much haste, was frequently and eagerly used by politicians and political writers, who exploited the register of income from royal estates made on the basis of the inspection and published in 1771⁹⁵ and reprinted several times. All this contributed to popularizing the mistake mentioned. Finally, let us add that nobody has hitherto paid attention to the fact that beginning with *Platy wojska...* from 1771, all subsequent publishers of the register repeated another mistake concerning Gołąb starosta's district, clearly visible even for a laic. Namely: the Gołąb and Bałtów lease was placed in Chęciny district.⁹⁶

The last case, marginal in terms of territory, yet still problematic, was the political-administrative affiliation of the village Borowa. This settlement, situated in the fork of the Rivers Vistula and Wieprz, was the only village of the nobility in the area, surrounded from the south east by the vast Gołąb starosta's district. In the fifteenth century it was listed either in Lublin district,⁹⁷ or near Stężyca.⁹⁸ In the sixteenth century, the basic period for our chronology, it was also mentioned in Stężyca district, and in Lublin district, and in the seventeenth and eighteenth century – in Lublin district.⁹⁹ We found an interesting piece of information in *sejmik* (dietine) lauda of Sandomierz Voivodeship from 1678. It proves that the case of the affiliation of Borowa had long been controversial. The nobility of the

⁹² MK 165, f. 161v–162: 'in Palatinatu Sandomiriensi et districtu Stanzicensi'.

⁹³ LS 1789, I, p. 275: 'The description of Gołąb starosta's district. This district in Sandomierz Voivodeship, belonging to Stężyca land [...] is best kept of all royal estates in the land of Stężyca'. The publisher (p. XII) emphasized – without providing any source – that (supposedly between 1765 and 1789) a change occurred in the administrative division of Stężyca land. She added (footnote 37): 'Gołąb starosta's district did not belong to Stężyca land in 1765'. However, two subsequent inventories of the district from 1771 (for Jacek Ogrodzki, the Great Scribe of the Crown) and from 1772 (Ogrodzki's transfer to Stanisław Kostka Krajewski, the Crown's Instigator) both claim: 'It happened on the Gołąb estates of His Royal Majesty, situated in Sandomierz Voivodeship' – ASK LVI G, 12, f. 32.

⁹⁴ Before 1944 this record was kept in AGAD, but it was completely destroyed during the Warsaw Uprising. Excerpts made before the War are kept in the files of the historical-geographical dictionary of Lublin Voivodeship from the eighteenth century, in the collection of IH PAN.

⁹⁸ *Ks. ziemskie lubelskie*, I, p. 228, y. 1446, quotation according to above mentioned *Słownik*.

⁹⁹ Borowa was not listed in tax registers of Lublin voivodeship from 1541 and 1543. In 1540 it was mentioned in tax register of Radom land, ASK I 83, f. 127, in 1673 – in the register of Lublin Voivodeship (WAP Lublin, book 239, f. 141v); similarly in 1676 (P. Małopolska, p. 19a).

Voivodeship instructed their representatives to convince the Sejm to send a committee to settle the matter of the border between Sandomierz and Lublin Voivodeships in the fork of the Rivers Wieprz and Vistula, because the latter had cut a part of the village Borowa, that – it was feared – could have influenced the course of the voivodeship borderline.¹⁰⁰ As a result of this request of the Sandomierz nobility, the Sejm in that year appointed a mixed committee, because ‘we were informed by the representatives of the land that the Vistula disturbed the borders between Stężyca and Borowa village’; the committee’s role was to prevent ‘the confusion of the voivodeship borders’.¹⁰¹ We do not know the outcome of the committee’s work, because the court books of the nearest, proper gord of Stężyca, in which such a committee document should have been recorded, were destroyed in the last War. However, in later independent eighteenth century sources we have found some traces of this ‘confusion’ of the borders: the mention of about four huts situated on the left bank of the Vistula and belonging to the village Borowa;¹⁰² a point on K. Perthès’s map put on the left bank of the Vistula with an explanation: ‘hut to Borowa’.¹⁰³ It is also worth adding that during the last inspection of Gołąb starosta’s district from 1789 the overseers of this district swore the reliability of the recorded income ‘in presence of the minister Grzegorz Gabryolka from the village Borowa’,¹⁰⁴ and – as we know – the minister was appointed by the voivode, this time probably the voivode of Sandomierz. However, having observed that the majority of evidence proves the affiliation of Borowa to Lublin Voivodeship, we have decided to treat this administrative-political curiosum as an enclave of Lublin Voivodeship on Stężyca land.

The last of the fragments of the border of Sandomierz Voivodeship described here is quite a long part of the borderline that encompassed Stężyca land from the east until the place where it joined Mazovia. We assumed the course of the border ran along a forest tract marked on the map of Lublin Voivodeship, however: with a small correction. Namely, we moved the fragment of the River Wieprz between Kock and Łsobyki (Jeziorzany) partly to the north, towards the old channel of the river, because we assumed that in the past the River Wieprz flowed here slightly to the north of the village Mścisk, which belonged to Rudno parish in the fifteenth century, and in the seventeenth century – to Kock parish in Lublin Voivodeship.¹⁰⁵ We were unable to specify when the stream channel of the Wieprz changed, but according to the Polish border laws, if a river that defined the border of a land changed its course, the borderline should nonetheless follow the old channel. This old channel, called Mentula,¹⁰⁶ according to old maps (e.g. Heldensfeld-Benedicti) still existed in the first half of the nineteenth century.

The remaining issue is the description of district borders. Sandomierz Voivodeship was divided into seven districts, and the borders of each district overlapped with the voivodeship border. As in the commentary to the map of Mazovia in the sixteenth century, we will limit ourselves to listing only the most important issues, that required solution during the delimiting of internal district borders. We will describe the characteristic features of their course in the area.

Beginning with the north east, the border between Radom and Stężyca district was a natural one – defined by the Vistula. It flowed here in several channels that changed their location. In the early period of Piast dynasty rule, the main current was situated closer to the south western edge of the valley, and in the Middle Ages and the Modern Era – closer to the south eastern edge. These changes in the course were mentioned in the discussion on the affiliation of the village Borowa. The deviations of the border between Radom and Stężyca districts from the Vistula channel presented on our map according to the state from the turn of the eighteenth and nineteenth centuries constitute

¹⁰⁰ Biblioteka PAN Kraków, MS 8338, Teki Pawińskiego no 21, Lauda sejmikowe woj. Sandomierskiego, p. 624: ‘And because the executions from Lublin Voivodeship cross through Stężyca land to separation and through the Vistula confinium of Radom land, and as a result they have to change the borders of the voivodeship, the representatives will try to prevent this confusion, so that they were marked on this sejm comisarii’.

a proof of the changes in the course of the river that had occurred earlier.¹⁰⁷ In the sixteenth century the border between Radom and Stężyca district ran partly along the Vistula's oxbow lakes, marked on some of the older maps (Czajkowski, Perthées), and partly along the main course.

Between Radom and Opoczno district the border ran in a north western direction and bent irregularly to the west. Its northern, quite long fragment (with deviations near Nieznamierowice) was set on the lower and middle Drzewiczka. Further on, in the south – a several kilometre fragment of the rivulet Gielniówka flowed into the Drzewiczka; next, after zigzagging through then uninhabited region of old forest, east of Wól ironworks (present-day Wołów in Opoczno district), the borderline reached the River Kamienna, where the borders of three districts met: Radom, Opoczno and Sandomierz. From this point the border between Radom and Sandomierz districts ran due east in a wavy line. However, here the border did not reach the present channel of the Vistula, but its oxbow lake near the village Ostrów, before the mouth of the Kamienna. The village, as mentioned, was situated on the left bank of the Vistula (earlier in the fork of the river), but belonged to Lublin Voivodeship.

Opoczno district, situated in the north western part of Sandomierz Voivodeship, was a neighbour of the already-described Radom district, in the south east it bordered Sandomierz district, and in the south – Chęciny. The borderline of the district was the shortest with Sandomierz district, around 7 km. From Wól ironworks by the River Kamienna it ran south west in a straight line through then uninhabited areas, probably until it came to the hill marked today as Δ 388.2. From this place, where the border with Chęciny district began, it turned north west. Here a fragment of the borderline of Opoczno district with the district of Chęciny was presented alternatively on the map, because the sixteenth century sources mention Szałas ironworks, a property of the bishops of Cracow situated in this area, either on the Opoczno side, or on the Chęciny side. This being the case, two versions of the border were presented on our map – one marked with a broader line, which included the controversial area (around 40 km²) of Szałas to Chęciny district, and the other one, marked with a thin line, south of Szałas ironworks, incorporating it into Opoczno district.

The eastern part of Chęciny district was a neighbour of Sandomierz and Wiślica districts. From the place where Chęciny and Sandomierz districts met, the borderline between these two districts ran south west through Świętokrzyskie Mountains (via the peak of Łysica), leaving Święty Krzyż monastery on the Sandomierz side; between the villages: Belno (Chęciny district) and Lechów (Sandomierz district) it reached the River Bielnianka (Nidzianka), there the borders of three districts met. From this point the borderline between Chęciny and Wiślica district ran west along the Bielnianka, until the mouth of its left tributary Pierzchnianka, and then – due south, and finally reached the River Nida in a gentle curve between the village Kije (Wiślica district) and the stream flowing from Chwałowice village. It must be added that near Czechów (Wiślica district) the Nida flowed in two channels. In the middle of the island, some 5 km long) there was a gord of Czechów castellany in the Middle Ages, and the border between Chęciny and Wiślica district in the sixteenth century crossed the Nida ¼ km north from the mound that remained of the above-mentioned gord.¹⁰⁸ The explanation of the reasons behind leading the borderline between Chęciny and Wiślica districts right outside the former gord of Czechów castellany, whose territory has been defined only hypothetically, would exceed the scope of our commentary. It was probably due to ownership relations, just as in the case of Raków (see below), when smaller court districts: Stopniów and Szydłów, were being liquidated.

The district of Wiślica bordered in its southern part on the other bank of the Vistula in the Pilzno district. There were some unexpected deviations in the course of the boundary between Pilzno and neighbouring districts, related not only to natural conditions (waterlogged, forested area, where the settlement still developed gradually in the seventeenth and eighteenth centuries), but also, and perhaps mainly, as a result of complicated ownership relations. Two irregular territorial wedges, opposite each

¹⁰⁷ About the changes in the stream channel of the Vistula in the eighteenth–nineteenth century near Sieciechów monastery see J. Gacki, *Benedyktyński klasztor w Sieciechowie*, Radom 1872, p. 9. A quite detailed study of Sieciechów settlement centre, supplemented by photocopies of old maps, see T. Wąsowicz, *Wczesnośredniowieczne przeprawy przez środkową Wisłę*, KHKM, 1957. Recently E. and W. Kalinowscy, *Zaginione grodzisko w Radomskim*, KHKM, vol. 21, 1972, p. 245, after thorough field research determined that Sieciechów gord was situated opposite to the mouth of the Wieprz into the Vistula, 100 m east of railway station Zajezierze. It would agree with earlier findings of K. Potkański, *Pisma pośmiertne*, vol. 1, p. 143, that this gord was once located on an island created by one arm of the Vistula, which separated from its main channel here.

¹⁰⁸ W. Pałucki, *Kasztelania czechowska*, Warszawa 1964, 1964, pp. 81–89.

other, draw our attention. One of them, belonging to Pilzno district, reaches the Vistula near Połaniec in two places: north of Surowa and Gliny villages. Another – located west of lower Wisłoka – belongs to Sandomierz district. Two small fragments of this wedge, squeezed into the northern wedge of Pilzno district near the Vistula, cross the river: the western, larger one, covering the villages Otałęż and Wola Otałęska, and the smaller one, barely several km², with the village Bystrzamowice.

The border between the districts of Wiślica and Sandomierz also had some unnatural deviations on the left bank of the Vistula that are difficult to explain. West of Połaniec, the wedge of Sandomierz encompassed the village Zdziec. Next, we have led the borderline the way that would place Ruda village in Sandomierz district, in accordance with the registers from 1538, 1577, 1578, 1662, 1676. However, this village was listed in Wiślica district in 1579 and 1585. Therefore, we have also marked (without a line) its affiliation to the district of Wiślica. Further on, in the south western direction, we used the River Czarna three times to separate the districts of Wiślica and Sandomierz. The borderline of Raków, a city well-known from the sixteenth century on, that belonged to Polish Brethren, marked the westernmost wedge of Sandomierz district, driven into Wiślica land. It probably originated from the time of the liquidation of Szydłów district. There were no major difficulties in defining the course of the border between Pilzno and Sandomierz districts running east from the Wisłoka, even though, for obvious reasons (forested, a mostly uninhabited area), the course of some fragments was presented only as a hypothesis.

The lands of the former Sandomierz Voivodeship, in terms of its military and judicial administration, were divided into castellanies. Later, from the second half of the sixteenth century – into judicial and financial districts. The number of castellanies, 11 during the reign of Casimir the Great,¹⁰⁹ dropped to eight in the second half of the fifteenth century: Sandomierz – greater, and minor castellanies: Wiślica, Radom, Żarnów, Zawichost, Małogoszcz, Połaniec and Czechów. This was the result of the reforms in the political-administrative organization of the country. The first was conducted in 1434–1438, and brought ‘co-equation’ of the number of castellanies in every province of the Crown,¹¹⁰ the second, in 1474, removed – as we have already mentioned – the lands of Lublin and Łuków that lay on the other bank of the Vistula from Sandomierz Voivodeship. The lands created Lublin Voivodeship.

As we know, judicial land districts began to replace the castellany system in the second half of the sixteenth century. These districts were called *powiats*. However, the newly created districts did not always overlap the boundaries of the former castellanies. There were also districts, such as Pilzno, that had not previously had their own castellany. Also the castellanies of Zawichost, Połaniec or Czechów had already lost their districts. In the case of the mobilisation (*pospolite ruszenie*), the nobility of the district that did not have its own castellany, was led by another castellan, ‘without assignment’, as in 1506, when the castellan of Połaniec was ordered to lead the nobility from Pilzno.¹¹¹

One glimpse at the map, along with what has already been said, shows that a large part (around 1/6 of the whole) of the former Voivodeship of Sandomierz, situated between the Rivers Vistula and Wisłok, did not have a castellan or a castellan’s gord. This could be, I believe, explained only by what S. Arnold assumed,¹¹² that in some unspecified time, probably in the fourteenth century, part of Wojnicz castellany east of the River Dunajec was separated from Cracow Voivodeship and appropriated to Sandomierz Voivodeship. The remaining, larger, part of territories between the rivers was covered by almost entirely uncolonized forest during the organization of the castellany system of administration and gords, where there was no need to place a castellany. Probably, this area belonged to Wiślica castellany at that time. The fact that royal villages Bratkowice and Mrowla until the second half of the sixteenth century belonged to Korczyn starosta’s district (Wiślica castellany?) only supports this thesis.¹¹³

We do not attempt to resolve this matter, just to signal it. It would require thorough research and separate study. There are some hints in the sources, which could attest that in the second half

¹⁰⁹ Z. Kaczmarczyk, *Monarchia Kazimierza Wielkiego*, vol. 1: *Organizacja państwa*, Poznań 1939, pp. 193–295, omitted Łuków castellany, see W. Pałucki 1964, *Kasztelania czechowska*, p. 94.

¹¹⁰ W. Pałucki, *Kasztelania czechowska*, pp. 91–98.

¹¹² S. Arnold, *Z dziejów średniowiecza*, p. 358.

¹¹³ During the revision of letters in 1563 it was said that the villages Bratkowice and Mrowla lie in Sandomierz land, AGAD, Metryka Litewska, IV B, 7, p. 53; there was also an exchange of property (frymark) in 1554 (*ibidem*, p. 174) of the village Siedlce in Cracow Voivodeship for ‘royal villages Bratkowice, Mrowla in Pilzno district in Nowy Korczyn starosta’s district’.

of the fourteenth century and in the first half of the fifteenth century the southern part of Sandomierz lands, situated on the other bank of the Vistula, was covered with forest that was later, perhaps after the judicial reforms in Sandomierz Voivodeship in 1456–1476, incorporated into Pilzno district, like the bestowal of Sandomierz castellany located in this district, ‘beyond the harrow’.¹¹⁴

Lands were on a higher level in the political-administrative hierarchy and the terminology used in the sources. Sometimes the area they covered was larger than that of a castellany, or later: a district. In Sandomierz Voivodeship there were three such lands: Sandomierz, Wiślica and Radom. Their ‘land’ character derived from the period of the Piast dynasty. With time these larger lands became districts of the judiciary system of the nobility of the higher instance, called ‘wiec’ or ‘roki sądowe’. In the sixteenth century Sandomierz land constituted of Sandomierz (Sandomierz and former Opatów districts) and Zawichost castellanies; Wiślica – castellanies of Wiślica, Małogoszcz and Czechów and the territories of the judiciary district of Tarnów and Pilzno situated over the Vistula; Radom – castellanies of Radom, Żarnów (Opoczno district) and former Sieciechów (Stężyca).¹¹⁵

This state was proven in the 1589 constitution.¹¹⁶ According to the constitution, the *roki* of Sandomierz Voivodeship were to be held in six terms, interchangeably: two in Sandomierz, Radom and Wiślica. However, the extension of authority of starostas, e.g. by including land transactions in gord court books (purchase, sale, and inheritances), especially from 1611, when they became not only royal officials, but also land officials, as well as the creation of Crown Tribunal in 1578 weakened the land judicial system, although it was not formally annulled. That is why the 1685¹¹⁷ bill appointed only two judicial districts for Sandomierz Voivodeship: in Sandomierz and in Radom.

Sandomierz land played the main role in the political-administrative and judicial system of our voivodeship. In sources the designation land appears with two meanings: in a broader sense it denoted the entire voivodeship,¹¹⁸ so the authority of some officials (such as a judge or *subcamerarius*) spread over the entire voivodeship. This was reflected in titles by the addition of the term ‘general’ (e.g. *subcamerarius terrae Sandomiriensis generalis*).¹¹⁹ Official, royal titles also followed.¹²⁰ In a strict sense Sandomierz land encompassed the large district of Sandomierz.

The places where the *roki sądowe* of the land were held were decisive in the formation of the units of political-administrative division. Originally, Sandomierz Voivodeship was divided into nine judicial districts (Sandomierz, Wiślica, Radom, Chęciny, Opatów, Szydłów-Stopniów, Stężyca, Pilzno and Tarnów). During the reforms of the organization of the land judicial system in the voivodeship, conducted in 1465 and 1476, the number of districts was decreased to seven, the district of Szydłów-Stopniów (incorporated into Wiślica) and of Tarnów (incorporated into Pilzno) were liquidated.¹²¹ As a result, the following districts remained in our voivodeship: Sandomierz, Wiślica, Radom, Chęciny, Opoczno, Pilzno and Stężyca.¹²² The territory of Stężyca (from the end of the sixteenth century consequently called Stężyca land) belonged to the former Sieciechów castellany in the Middle Ages,¹²³ and in one of the documents from the fifteenth century the term ‘Sieciechów land’ was already used.¹²⁴ After Sieciechów castellany was liquidated, and gord and land courts were created in Stężyca

in the fifteenth century for the nobility of this land, there was a prolonged break in the functioning of this court at the beginning of the sixteenth century. Namely, after three great Tatar invasions, that afflicted not only areas along the right bank of the Vistula (Lublin Voivodeship) between 1500 and 1502, but also reached Opatów, Kunów and Łagów,¹²⁵ the courts and their registers were moved from Stężyca to Radom. Only in 1563 did the offices and the registers, which ‘quondam propter hostium incursionem’ were taken to Radom, return from Stężyca, at the request of the nobility from the land of Stężyca ‘propter itineris in Radom longitudinem, tum propter fluvii Vistulae, que districtus Stenzycensis a Radomiensi seiungitur’.¹²⁶

As I have already mentioned, the term ‘Stężyca land’, appearing in various source records from the sixteenth–seventeenth centuries was also used by some of the authors to describe the territory of old Poland, as well as by statisticians of the Republic.¹²⁷ Z. Gloger, living a little closer to our times, noted that ‘Radom land had indeed more rights to the title [of ‘land’] than Stężyca, because it was over three times bigger than the land of Stężyca, and had land courts in Radom and several districts’.¹²⁸ Disregarding here the matter of the changes in the system and organization of territorial, land and gord courts, this merely terminological, not institutional, distinction of Stężyca territory is worth a mention. On the map all units of financial and judicial division are treated as equal districts (*powiats*), with respect to the system of the old Republic.

Castellany seats, apart from administrative centres, were marked on the map of Sandomierz Voivodeship (similarly to the map of Mazovia), as well as the places where the general (provincial) and particular *sejmiks* (dietines) gathered, and the seats of the gord starosta’s district. From the fifteenth century, general *sejmiks* (dietines) for the entire Lesser Poland were already taking place in Sandomierz Voivodeship – in Nowe Miasto Korczyn,¹²⁹ and particular *sejmiks* (dietines) – in Opatów. An attempt made in 1510, during the reign of Sigismundus the Old,¹³⁰ to move particular *sejmiks* (dietines) to Skrzywno failed. In 1519 the *sejmiks* (dietines) in Skrzywno were annulled and from this point they were to gather in Opatów, in accordance with the old custom.¹³¹ Army inspections of the knights from the entire voivodeship took place in Pokrzywnica (Koprzywnica).¹³² Finally, the gord starosta’s districts: there were six of them in Sandomierz Voivodeship: Sandomierz, Radom, Nowe Miasto Korczyn, Chęciny, Opoczno and Stężyca.

III.2.1.3 LUBLIN VOIVODESHIP

Stefan Wojciechowski

The borders of Lublin Voivodeship, separated from Sandomierz Voivodeship in 1474, and its internal administrative division were reconstructed around 1564. We made one exception from this rule: Podlasiian Voivodeship was placed not in the Grand Duchy of Lithuania, but already in the Crown, where it belonged after 1569. On this side the range of our territory was marked with voivodeship border, and the border of the Crown was marked only at the junction with the Voivodeship of Brześć Litewski.

The map shows the administrative division of the State and the Roman Catholic Church, the latter without deaneries. The borders of the smallest units – the parishes form the core of the divisions, all higher-rank Church borders, and the majority of State borders, overlap with the parochial borders.

Settlement files, providing parochial affiliation of settlements, was our starting point in presenting the course of the borders. The settlements were marked on a carbon paper (on the basis of a 1:300,000 map) and then the parochial borders were drawn, first by means of interpolation, so in approximation.

The first difficulties occurred while localizing parochial seats. This happened in the case of Białka, which lies 13.5 km to the southeast of Łęczna – only after reviewing data from tax registers from 1563 and 1564 with a small entry from the fifteenth century were we able to identify this parochial village.¹ Parishes located in Czemierniki offer a different example – these were two settlements, a village by the River Wieprz, and a town in Tyśmienica's loop. In the fifteenth century and the major part of the sixteenth, the two parishes were not differentiated, and the villages belonging to them were listed under one parochial settlement. Two separate Church districts were clearly defined in 1580.²

The information on the parochial affiliations of many settlements found in tax registers – the basic source for our map – is often contradictory. Fiscal administration of the State did, in fact, use units of Church administration in the documents, but it paid little attention to the actual, real range of parochial districts. From this arise not only the contradictions found in the data, when one settlement is ascribed to different parishes by different registers, but also instances where a village was linked to a remote parish, possibly due to ownership relations, without any confirmation in Church sources. Thereby the registers often show the old, invalid parochial range. We tried, when possible, to correct these inaccuracies of our source basis, which made it difficult for us to present the correct course of borders, with available sources of Church origin,³ as well as with data from later tax registers, from the seventeenth century, especially when such records would suggest there was an enclave of a given

¹ One name of the owner appears in all these records: Witalis. In 1485 Witalis was one of the owners of Jaszców and Białka (Lubelska księga podkomorska piętnastego wieku, ed. L. Białkowski, Lublin 1934, p. 97), and in 1563 and 1564 Jan Witalis appears a one of the owners of the parochial village Białka (AGAD, ASK I 33, f. 486v, 508). This, together with the location of Białka parish in the 1564 register between Piasek and Krzczonów told us to look for it near Piasek, and more precisely: near Jaszców. In 1611 Białka appears in Biskupice parish (Archiwum Kapituły w Krakowie, Wizytacje, no. 65, f. 540). Still at the close of the nineteenth century there were two small lakes near Białka: Bieleckie and Księżę, whose names would suggest that there was a parish there (SGKP, vol. 1, p. 165).

² Długosz LB, II, p. 550; ASK I 33, f. 753, 790. After 1626 (or earlier) the parish in Czemierniki village ceased to exist, and the village was put in Biskupice parish. More about the identification of both these settlements in the author's paper: 'Czemierniki Lubelskie' presented at the meeting of Polskie Towarzystwo Historyczne in Lublin in 1952. Cf. P. Szafran, *Rozwój średniowiecznej sieci parafialnej w Lubelskiem*, Lublin 1958, pp. 132–135.

³ For that purpose we also used: P. Szafran, *Rozwój*; S. Litak, *Formowanie sieci parafialnej w Łukowskiem do końca XVI wieku*, "Roczniki Humanistyczne", vol. 12, 1964, no. 2.

parish inside a parochial district of another parish, or when a village was situated far from its parochial church. The north-western part of Lublin district caused us the most difficulties (parishes: Baranów, Gołab, Klementowice, Końska Wola, Kurów, Mnichów, Ostrów, Rudno, Włostowice). For instance, having compared our data with the 1603 visitation,⁴ we decided to place the following villages from the huge – according to the registers – Końska Wola parish (currently: Końskowola) in Baranów parish: Kotliny, Żerdź, Wilczanka and Pogonów; in Gołab parish: Żyrzyn, Borysów and Niebrzegów, and in Włostowice parish: Puławy, Wola Puławska and Wólka Profecka.

It should be emphasized that our comparison of parochial ranges with information found in other sources, i.e. not in sixteenth century tax registers, was only fragmentary, and usually the borders presented on our map agree with the registers, as this particular element of our map is not a special study on Church organization, in which at the time there were various conflicts regarding the parochial affiliation of many villages.⁵ What is more, it is meant to make orientation of the huge number of settlements easier, in the same way that it used to facilitate the collectors' work.

Such an assumption has two other consequences. Firstly, subsidiary churches which had their own individual districts were treated as parochial seats (Karczmiska, subsidiary of Kazimierz; Ratozszyn, subsidiary of Chodel; Włostowice, subsidiary of Jaroszyn). Secondly, our map disregards the fact that around 1564 many parochial churches in Lublin Voivodeship were occupied by Protestants, that is – according to catholic terminology – they were 'profaned'.⁶ In such case the parish did not function, and the worshippers sought services offered by the clergy of other churches. For example, the already-mentioned parish in Białka disappeared as a result of the Reformation before 1565⁷ and was never reactivated later, just like the parish in the village Łucka, which appears in the 1565 visitation as 'not profane yet', but soon afterwards (prior to 1595) it was seized by the Protestants.⁸ Let us also add that the Protestant movement, really active in the Voivodeship of Lublin, also built new temples – congregations (the Polish word for a Protestant temple is 'zbór'), many of which became catholic parochial churches decades later (Dąbrowica, Firlej, Rawa). Additionally, the map does not show Eastern Orthodox churches mentioned in the registers.

Having established the parochial affiliation of settlements, we began to define precisely the course of the borders of each parish. Our basic assumption was that the territorial borders of older settlements generally remained unchanged for centuries, or the changes introduced were minor. In cases where a new settlement was founded near an older one, the new settlement functioned on grounds separated from the territory of the old settlement. For that purpose we utilised the map of communes of modern Lublin Voivodeship⁹ and analysed the range of each individual parish thoroughly, with the help of records prepared beforehand. The files contained source data on the history of all settlements in the Voivodeship of Lublin. We were thus able to trace the relations between newer settlements and older parishes, and thus to establish the range of each sixteenth century parish in a more precise manner. We then revised the schematic parochial borders drawn earlier, which were now led also with regard to physiographic elements (rivers, forest complexes).

Voivodeship, land and district borders, as well as borders of archdeaconries and dioceses, were defined on the basis of the borders of parochial networks. The differences between these borders and parochial borders were only fragmentary. As at the close of the eighteenth century the borderlines were

⁹ The map of communes in Lublin Voivodeship according to the state from 1952 at a scale 1:300,000, study of prof. Fr. Uhorczak at UMCS in Lublin. I would like to express my gratitude to the author for allowing me to use the map. The described method of parochial borders reconstruction was used before T. Ładogórski suggested it in the review of M. Biskup and A. Tomczak's work, see: T. Ładogórski, *ZH*, vol. 21, no. 3–4.

usually the same as in the sixteenth century, the course of the voivodeship border was determined on the basis of Perthées's map, and some information concerning borderland settlements.¹⁰

The southern border of Lublin Voivodeship in the second half of the sixteenth century ran through a strip of woodland now called Solska Wilderness. The border must not have been precisely defined here, as the settlements on both sides were situated quite far from each other, on the edges of the forest. As such, the course of the borderline presented on the map should be considered only an approximate range of influence of neighbouring voivodeships, which could have become more precise with the development of settlement. The western fragment of the border ran along the River Bukowa, leaving it only near Jastkowice, a village in Sandomierz Voivodeship. In the east, the border probably reached beyond Bukowa, where the voivodeship borders met with the borders of two other Voivodeships, of Sandomierz and Ruthenia, possibly near the present-day village Golce.

The longest fragment of the border was the one with Sandomierz Voivodeship. From the estuary of the River Bukowa the boundary line ran along the River San, at the time leaving Skowieszyn, Wrzawy and other settlements on the Lublin side. From the mouth of the River San to the mouth of the River Wieprz the borderline was set on the Vistula. The river, carrying more water than it does now, could easily change its channel in the broad valley without any man-made intervention, thereby deviating from its defined border. Compared with the course of the Vistula marked on the map, one could find such deviations in several places, of which one could be explained by the old river channel. This concerns the undoubted affiliation of the village Wojszyn to Lublin Voivodeship.¹¹ The village lies on a high bank over the River Vistula, across from Kazimierz. In this case the administrative border of the State (just like the parochial border in fact) overlapped with ownership relations, i.e. the fact that Wojszyn belonged to the starosta's district of Kazimierz.

Gołąb parish situated at the fork of the Rivers Vistula and Wieprz belonged to the Voivodeship of Lublin, but exactly in the period shown on our map several villages in this area were associated with the Voivodeship of Sandomierz, or more precisely: with Stężyca district (originally Radom district). There were the royal villages: Gołąb, Wola Gołębska, Skoki, Nieciecz, and Bałtów, and one village belonging to the nobility, Borowa.¹² As such, apart from the voivodeship border proper, led along the rivers, our map shows also the range of the area associated with the neighbouring voivodeship, marked with a less-distinct symbol.

The border between the Voivodeships of Lublin and Sandomierz continued along the River Wieprz, then departed from it near Kock, dividing several parishes between the neighbouring voivodeships along the way (parishes: Kock, Wojcieszków, Wilczyśka), and finally reached the point of junction with Mazovian Voivodeship near Płozy, that is Szyszki.

The relatively short borderline separating the Voivodeship of Lublin from Mazovia ran partially along the River Muchawka, and ended with its estuary into the Liwiec on the northern frontiers of our territory. There in turn began the even shorter border with Podlasiian Voivodeship, set on the River Liwiec.

From the village Sobicze in Zbuczyn parish to Uhnin in Parczew parish the Voivodeship of Lublin neighboured on the Grand Duchy of Lithuania, or actually with the Voivodeship of Brześć Litewski which belonged to the Duchy. A short fragment of the border ran along the River Pivonia, which divided the villages Chmielów, Przewłoka, and other villages inhabited by farm gentry into parts belonging to Poland (Lublin Voivodeship) and Lithuania (Brześć Voivodeship).¹³

¹¹ ASK I 33, f. 475, 776v.

¹² The villages listed appear in the sixteenth century sometimes in the registers of Lublin Voivodeship, but usually in the registers from Sandomierz Voivodeship, like in 1569 (P. Małopolska, vol. 3, pp. 334, 338–9). In 1552, in the register of unpaid debts it was recorded that Gołąb, Nieciecz, Bałtów and Borowa 'ad districtum proprium Lublinense non solvent, sed in Radom' (ASK I 33, f. 394v). According to the inspection of Sandomierz Voivodeship conducted in 1564/65, which encompassed these villages, Bałtów and Skoki belonged to Radom starosta's district, and Gołąb with Wola constituted a separate lease. In the tax register of Lublin district from 1626 and poll tax register from 1676 there are no royal villages in Gołąb parish. Gołąb and Wola Gołębska were listed in Stężyca land still in the tax register from 1711, see also: LS 1789, pp. XIX and 273.

¹³ M. Dogiel, *Limites Regni Poloniae et Magni Ducatus Lituaniae...*, Wilno 1758, pp. 22–33, 67–78; A. Wawrzyńczyk, *Rozwój wielkiej własności*, pp. 18–22, 58–60 and map outside the text.

The border with Ruthenia began in Uhnin. First it separated the voivodeship from Chełm land, and then from Przemyśl land. Contrary to Z. Gloger's writings,¹⁴ and what later became established in historical cartography thanks to W. Semkowicz,¹⁵ Lublin Voivodeship in the sixteenth century did not border on Bełz Voivodeship, which did not separate Chełm land from Przemyśl land.¹⁶ The south-eastern part of the border of Lublin Voivodeship at the close of the sixteenth century differed from the 1564 state, when the area of Biłgoraj probably still belonged to Ruthenia. Biłgoraj was founded in 1578 and a parish was established there. The town was annexed to the Voivodeship of Lublin, but remained in Chełm diocese.

To conclude our description of the outer borders of Lublin Voivodeship, we would like to underline that these were mostly natural borders. The Rivers Bukowa and San in the south, the Vistula in the west, the downstream Wieprz, the Muchawka and the Liwiec in the north, and in the east short fragments of the Rivers Piwonia and Wieprz, and also the forests in the east (Parczew Forest) and in the south (Solska Wilderness) divided our voivodeship from the neighbouring ones.

The Voivodeship of Lublin consisted of three districts: the district of Lublin in the centre, the district of Urzędów in the south, and the district of Łuków in the north. The latter formed a separate land in fact.

It was easy to determine the border between Lublin district and Łuków land, as the tax registers from the sixteenth century, as well as the sources from the fifteenth or seventeenth centuries, clearly set the border of the Rivers Wieprz and Tyśmienica.

The border between the districts of Lublin and Urzędów was quite a different matter. Apart from the tax register from 1531, all other registers failed to define a clear border between these districts. Perhaps this was caused by the fact that the same people collected taxes from both districts, so there was no need to define the border and determine the area of collection. The border was drawn on the basis of earlier records: the 1531 register in the first place, the border of Church jurisdiction (archdeaconry border) – preserved and well-protected by the Church – on which the border between the districts of Lublin and Urzędów was probably based. Beginning with the Vistula near Piotrawin, we decided to leave the following parishes on the Urzędów side: Rybitwy, Boby, Urzędów, Popkowice, Kraśnik and Batorz, and on the Lublin side: Piotrawin, Kliczkowice, Chodel, Ratoszyn, Wilkołaz, Kiełczewice, Bychawa, and Targowisko, as well as two parishes, Biała and Goraj, situated south of the elevation of the Western Roztocze. The affiliation of the two last parishes, the only two in this south-eastern part of our territory, to Lublin Voivodeship is well-recorded, even despite the lack of any territorial connection with the rest of the district.¹⁷

The planimeter allowed us to calculate the area of parishes. The sum for each district was as follows:

Lublin district	6,666 km ²
Urzędów district	1,929 km ²
Łuków land	2,089 km ²
Lublin Voivodeship	10,684 km ²

(1966)

¹⁶ *Ziemie ruskie: Ruś Czerwona*, p. 22; A. Jabłonowski, *Ziemie ruskie*.

¹⁷ M. Stankowa, *Powiat urzędowski w Polsce przedrozbiorowej pod względem ustrojowo-prawnym* [in:] *Z dziejów powiatu kraśnickiego. Materiały sesji naukowej*, ed. K. Myśliński, J. Szaflik, Lublin 1964, pp. 49-55, following M. Baliński, T. Lipiński, *Starożytna Polska*, and SGKP, presents a different version of the border between the two districts. The author supported her thesis by the fact that a person not from Urzędów district, when they appeared before the court in Urzędów, 'resign from the jurisdiction of their own district and enter the jurisdiction of Urzędów district'. As such, it would be proper to assume that the inhabitants of Lublin district who appeared before the court in Urzędów, if it was not emphasized clearly in their case that they resign from the jurisdiction of Lublin court, decided on the author's inclusion of their mother parish entirely into Urzędów district. The data provided by Baliński – Lipiński and SGKP could not, in this case, be considered sufficient. Stankowa's thesis is not justified enough to make us change the course of the border, based on Pawiński. We do not deny that at the close of the sixteenth century, or later, the borders between the two districts could change and Urzędów district could double in size, as at the turn of the sixteenth and seventeenth century Biłgoraj parish was adjoined to Lublin Voivodeship. Moreover, either new parishes were created in this area (Prawno, Zaklików, Branew, Frampol, Radzięcín, Radomyśl), or the seats of the old ones were moved nearby, like from Biała to Janów, Słupie to Modliborzyce. However, this occurred later, in the period not included on our map. As such, the borders described by Stankowa, or similar, did in fact exist, but later, like on Perthées's map.

III.2.1.4 GREATER POLAND

Michał Gochna

This chapter discusses the administrative borders of the Poznań and Kalisz Voivodeships. Both were part of “proper Greater Poland”. More broadly, it also encompassed the Sieradz, Łęczyca, Brest-Kuyavian, Inowrocław Voivodeships, as well as the Wieluń and Dobrzyń lands. In the broadest sense, as one of the three provinces of the Commonwealth, next to Lesser Poland and the Grand Duchy of Lithuania, it included the voivodeships in Mazovia (Płock, Rawa and Mazovia) as well as Royal Prussia. In that context, it was under the jurisdiction of the Royal Tribunal in Piotrków (established in 1578). Due to certain ties between the nobles of Podlasie and the general sejmik in Koło, Greater Poland sometimes included Podlasie.¹ For the purposes of this text, we will operate under the assumption that the term Greater Poland signifies only the Poznań and Kalisz Voivodeships.

The borders of both voivodeships were mostly formed in the fourteenth century. The Poznań Voivodeship had the Wschowa land added in 1343,² and the Wałcz territory in 1368.³ The complicated story of the second region did not allow for its borders to stabilize for some time. This process was only finalized in the fifteenth century, more precisely after the conclusion of the Thirteen Years’ War in 1466.⁴ Even in the sixteenth century, its northern and western reaches were the reason for disputes between Poland and the Duchy of Pomerania and Brandenburg.⁵ The administrative division reconstructed for the end of the sixteenth century remained mostly intact until 1768, when the Gniezno Voivodeship was established, encompassing the Gniezno and Kcynia districts.⁶ Among the noteworthy territorial changes before the partitions is the claiming of the Drahim starosta’s district by Frederick Wilhelm, the elector of Brandenburg, in 1668.⁷

Sadowski, *Sprawa starostwa drahimskiego i jej odzwierciedlenie na sejmiku lubelskim na tle stosunków polsko-brandenburskich za panowania Michała Korybuta Wiśniowieckiego*, „Res Historica”, vol. 17, 2004, pp. 29–39. The Drahim starosta’s district was given to the elector of Brandenburg in 1657 as a deposit, through the Treaty of Bromberg. After 1668, despite multiple attempts, it could not be retaken; *Urządnicy wielkopolscy XVI–XVIII wieku. Spisy*, comp. A. Bieniaszewski, ed. A. Gąsiorowski, Wrocław 1987, pp. 7–8.

The territories of both voivodeships were divided into districts. In terms of the treasury administration, the Poznań Voivodeship was composed of four units: the Poznań, Kościan, Wałcz and Wschowa districts (Wschowa was the only one to be designated as a “land” – see below). The Kalisz Voivodeship was divided into six districts: Kalisz, Konin, Pyzdry, Gniezno, Kcynia and Nakło.

From the point of view of the land’s courts, which were located in Kalisz, Poznań and Wschowa, there were nine districts in Greater Poland. These districts were the location of court rulings, in Kalisz, Konin, Pyzdry, Gniezno, Kcynia and Nakło in the Kalisz Voivodeship, and Poznań, Kościan and Wschowa in the Poznań Voivodeship. We did not perform complex studies of the differences between the borders based on the treasury and judicial sources; although in most cases of specific settlements we analyzed, with very minor exception, both types of sources were in agreement as to which district their border settlements belonged to.

The exception is the Poznań judicial district, which contained the treasury districts of Poznań and Wałcz. This was caused by the unique fate of the Wałcz territory, which belonged to Brandenburg from the late thirteenth century to 1368. Its long relationship with that state, a large German population compared to the rest of Greater Poland and different legal traditions prevented the formation of a land court. Due to this, the term *districtus*, used to describe these territories in sources dated to the fifteenth century and onwards, was probably not designating a judicial district, understood as linked to the land court operating within it,⁸ but rather as the territories around Wałcz, without a defined border.⁹

Some changes in the area were made in 1554, with the creation of a gord starosta’s district in the place of the Wałcz lease, with the right to accept perpetual acts. The starosta’s district was granted by royal privilege, earned by the Wałcz lease holder Łukasz Górka, and his brothers Andrzej and Stanisław, along with the right to designate a deputy (*surogator*), chosen by the starosta, and nominated by the king. Already in early 1555, protests were formally raised by Janusz Kościelecki, the general starosta of Greater Poland, arguing that this was a curtailment of his prerogatives. His actions were fruitless, and the Wałcz starosta’s district began to operate.¹⁰ We cannot incontrovertibly answer the question of which lands precisely were under the jurisdiction of the starosta of Wałcz. Our research only allows us to assume that it in some measure overlapped with the treasury district. This is hinted at by the Wałcz tax registers of 1579 and 1582: “Exactio Contributionis Regalis in Conventu Warszewiensis laudatae ex pagis **ad Castrum Valczense pertinentibus** per Generosum Dominum Andream Bilenczki sive Karchowski exactorem in Annum Domini 1579” and “[Exact]io contributionis Regalis [in C] onventu Warsewienis Anno Domini [158]2 in palatinatu Posnanensis [la]udatae. **De villis ad castrum Walczense pertinentibus** [highlighted by M.G.]”.¹¹ The phrase used in these citations to describe the villages belonging to Wałcz Castle does not solely refer to the Crown’s properties overlooked by the starostas of Wałcz, for they contain incomes from all the settlements in the treasury district of Wałcz (except for the ones that were regularly omitted in tax registers). We can therefore deduce that this was meant to indicate the settlements under the jurisdiction of the Wałcz starosta, which, as noted earlier, allows us to assume that the range of this jurisdiction corresponds to the range of the Wałcz district outlined by the treasury sources.

One unique aspect of Greater Poland was the office of the general starosta, which was formed in the fourteenth century in the place of the Poznań and Kalisz starostas. This is not the place to discuss in detail his administrative and judicial competences but we can state that while it did not differ much from the prerogatives of the other starostas within the Crown, this position was quite sought after due to the vast lands that came under it.¹² The primary residence of the “General of Greater Poland”, as the general starosta was occasionally called, was Poznań, where his replacement – the deputy – also

For more on the changes in competencies from the late medieval ages to the sixteenth century, see A. Gąsiorowski, *Urzednicy zarządu lokalnego w późnośredniowiecznej Wielkopolsce*, Poznań 1970, pp. 170–201.

presided, taking part in court proceedings and accepting deeds and disputes.¹³ The general starosta oversaw the gords' offices in Kalisz, Kościan, Pyzdry, Konin Gniezno and Kcynia. At the beginning of the sixteenth century, he still visited all of these locations, but in the 1520s he began to operate exclusively in Poznań. The other locations housed his replacements. In Kalisz, much like in Poznań, there was a deputy, nominated for the first time in 1523.¹⁴ The other gords, that is Kościan, Pyzdry, Konin, Gniezno and Kcynia, all had burgraves at first, who lacked the ability to accept entries of perpetual acts. The Konin burgrave answered to the Kalisz deputy.¹⁵ After the general starosta stopped his trips, the burgraves' importance in the administration diminished in favor of notaries, who were then supplanted in the mid-seventeenth century by regents.¹⁶

The other districts – Wałcz, Nakło and Wschowa – had independent starostas. The Wałcz starosta was already mentioned. The area of the Nakło district, also called Krajna,¹⁷ was subject to the gord starosta in Nakło. This position was already mentioned in the fourteenth century. Its creation was related to the role this territory played in the disputes between Władysław I Łokietek and the dukes of Głogów.¹⁸ The starost of Nakło was independent from the Greater Polish general starosta, making him the only independent gord starosta in the Kalisz Voivodeship. Nakło castle housed his deputy – the burgrave and from 1519, when the gord court was established, the deputy.¹⁹

The presence of the gord starosta in Wschowa is directly linked to the uniqueness of what was the smallest administrative division in the Crown.²⁰ It was annexed by Poland in 1343, and soon after, the starosta of Wschowa was mentioned for the first time in 1349. The starosta of Wschowa only became a permanent position in the fifteenth century.²¹ Polish law, including land courts and the post of the chamberlain (*podkomorzy*), which vanished in 1546, was introduced in 1422 by Władysław Jagiełło.²² It functioned this way also in the sixteenth century but had an uncertain hierarchy of offices (it was only filled in in 1670).²³ The Wschowa gord was the headquarters of the starost's deputy – the deputy.²⁴ In the second half of the sixteenth century, the territorial properties of the Wschowa district appeared to be uniform, both in terms of the land judiciary, as well as the starosts's and treasury administration.

While discussing the territorial situation of Wschowa, it must be noted that the terminology used to describe the Wschowa region was not standardized. Sources use both “district” and “land”. These terms coexisted over time, but one or the other was used more or less at different periods.²⁵ This volume uses the term “Wschowa land”, following Arkadiusz Borek's outlines.²⁶ It is therefore the only district designated as “lands” in this volume. It must, however, be remembered that the Wschowa land were not equal to other lands in the Crown.²⁷

The situation of Nakło and Wałcz districts, which were often called “lands” in literature,²⁸ was somewhat different. It seems that the name did not refer to a concrete administrative unit – “lands”

¹³ The Poznań deputy began functioning full-time in 1524; J. Bielecka, *Inwentarze*, p. 32.

¹⁴ *Ibidem*, p. 54.

¹⁵ *Ibidem*, p. 66.

In the fourteenth and first half of the fifteenth century, the existence of Konin starosta was noted. According to A. Gąsiorowski they were at first Konin burgraves, who cannot be equated to the sixteenth century burgraves, who were deputies of the starosta. The role and responsibilities of these burgraves were not fully defined. After 1430 they were only representatives of the general starosta. A. Gąsiorowski, *Urzednicy zarzadu lokalnego*, pp. 150–155.

Map 1. Gord starosta's boroughs in Greater Poland in the second half of the 16th century

(such as the Wschowa land or lands in Mazovia), but rather an approximate territory called “lands”. This is especially visible in the case of Wałcz district, which, as was already mentioned, was not a judicial district, but a treasury one, and from 1554, territoriality corresponding to the starosta’s jurisdiction formed during that period. At the time multiple terms were used then, which was confirmed by sixteenth century court documents. They contain such terms as “Wałcz district”, “The Wałcz territories of the Poznań district” or “the Poznań *vel* Wałcz district”.²⁹ The term “lands” was only found in one record from 1541, and disappeared later on, and from the latter half of the sixteenth century

district, calling it a “district or lands”, or as he did with Wschowa district, “district-lands”; idem, *Urządnicy zarządu lokalnego*, pp. 148–149; J. Bielecka, *Inwentarze*, pp. 93, 97; Bąk, *Wałcz*, esp. p. 11.

²⁹ K. Górńska-Gołąska, T. Jurek, *Wałcz – terytorium i powiat*, p. 501; TD, 3640a (no. 1392), 1514, „w teryt. wałec., pow. pozna. (!)”; TD, 6445 (no. 894), 1553, „w pow. pozna., a w teryt. wałec.”; TD, 6939 (no. 896), 1555, „w p. pozna. i teryt. wałec.”; TD, 41 (no. 21), 1559, „p. pozna. a teryt. wałec.”; TD, 8924 (no. 1396), 1560, „w p. pozna. *vel* wałec.”; TD, 49 (no. 21), 1560, „w teryt. wałec.”.

the term “district” takes hold.³⁰ It also appears in the tax registers from 1563 and 1567.³¹ Some of the autonomy of the Wałcz territory caused legal issues regarding the territorial powers of the Poznań gord office.³² This explains away the use of the term “lands”, especially unclear in this context, in some papers.³³ The existence of a gord starost in Wałcz could also be a reason for the existence of the term. It must be stated though, that for the Wałcz territory, the proper term seems to be district. It is used in this volume of AHP. The same term is used for the Nakło district. We could not find the term “Nakło lands” in the notes in *Teki Dworzaka*, while “Nakło district” appears in them constantly from the fifteenth century. Tax registers always present it as a *distictus*.³⁴ It is likely that even in this case the use of the term “lands” in regard to the Nakło district could have been dictated by the existence of a gord starosta or its compact border region.³⁵

Having outlined the administrative divisions of the two Greater Poland voivodeships, let us now examine their borders. First, we will begin with the national border. It corresponded to the north, west and south borders of the Poznań Voivodeship, and for brief segments with the southern border of the Kalisz Voivodeship. Its course will now be laid out. The description should be started at Lędyczek, where the borders of the Kalisz Voivodeship, the Crown’s Pomeranian Voivodeship and the Duchy of Pomerania, ruled by the Gryfit dynasty, meet. The border moved south along the Gwda separating the Kalisz Voivodeship from the Duchy of Pomerania, to meet the border of the Poznań Voivodeship 10 km further down. From this point, its border and the national border are the same. It then heads northwest and west, until it reaches Nowy Worów on the Polish side, and Gawroniec (Gersdorf) (roughly 100 km., some segments were along the Samborka River, in the sixteenth century – the Brzeźnica and Dębica, in the sixteenth century – the Damica), where the Crowns border with Brandenburg began. It stretches for 300 km, up to the area around Boryszyn (Borszyn in the sixteenth century) in the Poznań district and Lubrza (Liebenau) in Silesia (sometimes along the Rivers Płociczna and Drawa). Next, a segment is formed by the Crown’s border with Silesia’s Świebodzin area (around 30 km), to then once again separate Poland from Brandenburg, near Brudzew and Koźminek, until it reaches Chwalim (18 km). The Polish-Silesian border resumes here, stretching for about 250 km (through Lipiec – in the sixteenth century Obrzyca and Śląski Rów – in the sixteenth century Rów Graniczny) until it reaches the area of Odolanów, where it meets the border of the Sieradz Voivodeship. A little before this, the border of the Poznań Voivodeship ends, turning into the Kalisz Voivodeship border.

This was a rough description of the external national borders that corresponded to the borders of the Poznań and Kalisz Voivodeships in the second half of the sixteenth century. In most cases, it corresponded to the lines plotted out on the maps of Karol Perthées, David Gilly, UMTB and MTB.³⁶ Nevertheless, a few cases do warrant further attention.

The northern part of the national border was not completely stabilized. In the sixteenth century, border conflicts were waged with the Duchy of Pomerania. In the second half of the sixteenth century, the border commission produced two protocols. Each contained one side’s proposed borders. The Polish claim’s outline is more or less in accordance with the course described above. The only divergence is near the segment from the present-day wilderness (*uroczysko*) Stare Borno to Lędyczek. According to the Polish protocol, the border runs straight to Lędyczek, cutting the Plitnica River, reaching the Czarna River and along it to Gwda. On our maps the border curves southeast from Stare Borno, where it reaches the Samborza, and beyond Samborsk (which in the sixteenth century was on the Pomeranian side) turns northeast, leaving Jastrowie in the Polish side, then reaching the Gwda.

The Pomeranian protocol begins by leaving Popielowo (Popielowo Małe in the sixteenth century) on the Pomeranian side. It then runs similarly to the Polish protocol and our map, along the Dębica but turns south at its fork with the Karsina (Karsin in the sixteenth century). It then goes southeast, placing the Lakes Dębno (Damecz in the sixteenth century), Brody and Pile in the Duchy of Pomerania. Moving further south, it reaches the eastern border of the Brandenburgian enclave of Turze Błoto, along which it arrives to the southern leg of the Margrave's Road. It runs along the road to the Samborza, and along that river to Gwda. With that border arrangement the villages of Dudylany (Duderak in the sixteenth century) and Nadarzyce (Nadorycz in the sixteenth century) along with the town of Jastrowie would have been in Pomerania, but it is known that in the latter half of the sixteenth century they belonged to the Crown.³⁷

While discussing the Polish-Pomeranian border, the uncertain affiliation of Popielewko must be explained. The disputes are related to the placement of the terrain's waterways. The Polish protocol from 1549 indicates that the border ran beyond the fields of Popielewo Małe, along the Bliska Struga (a river that no longer exists), which flows into the Dębica. The Pomeranian protocol places the border on the then-called Drewniana Struga (currently wrongly called Bliska Struga, and Holzbach in the sixteenth century).³⁸ The 1564–1565 inspection indicates that Bliska Struga flows into the Drewniana Struga (Holzbach), and then into the Dębica River.³⁹ A similar picture is presented in the 1630 commissar decree on the Polish-Pomeranian border, attached to the 1628–1632 census.⁴⁰ The UMTB map shows two streams flowing into the Drewniana Struga – one through Popielewko, the other west of the village.⁴¹ Because the Polish protocol from 1549 mentions that the Bliska Struga flows behind the settlement's fields, then the latter of the two rivers would be designated, placing Popielewko on the Polish side. It is worth reminding that the 1564–1565 census claims that the disputed settlement “lies within the Crown, but is held by the Pomeranians, on Pomeranian land”.⁴² Popielewko appears in the 1577 tax register, paying a tax from a millwheel and two farmers, and in 1631, a hearth tax from four homes.⁴³ In 1676, the tax was paid together with Popielewo.⁴⁴ This data, especially the tax in 1577, and the fact that this tendency was maintained in the following decades, led to the decision to keeping Popielewo in the Crown.⁴⁵

³⁷ A. Wielopolski, *Polsko-pomorskie spory*, pp. 68–75, 100. Under the term “Greater Poland” in SHGPoz, the final stretch of the border was drawn according to the Polish protocol, which did not take Samborsk into account; T. Jurek, *Wielkopolska*, pp. 584–588. In its reconstruction of 1628 properties, the Historical Atlas of Pomerania leaves multiple settlements in Pomerania, which in the sixteenth century were within the Crown's border: Zacharzyn (which in the latter half of the sixteenth century found itself in the Brandenburgian enclave of Turze Błoto), Liszkowo (Altenwalde in 1628), Międzyziesie (Atlmühl in 1628), Uradz (Örden in 1628), Stare Koprzywno (Koprieben in 1628, our reconstruction has the border going through the future village), Popielewko (Popowo Małe in the XVIth century; Klein Poplow in 1628 in the Pomeranian atlas); *Historischer Atlas von Pomern: Karte 1 (neue Folge), Besitzstandskarte von 1628*, ed. W. von Schulmann, F. Engel, Köln–Graz 1959.

³⁸ Polish protocol: „Incipit a flumine quod fluit in campo retro Poplow minus quod apellatur flumen vulgariter Polonice, Blysscha Struga, quod flumen, minus Poplow adherere regno Poloniae significat. Hoc ipsum flumen incidit in fluminum Damice dictum”. Pomeranian protocol: „Et primum quidem fluviolus Holtbeck dividit maiorem et minorem Populonia in ita ut maior ad inclitum Regnum Poloniae et minor Populonia ad Ducatum Pomeraniae pertineat. Distinguiturque Regnum Poloniae et Ducatus Pomeraniae per eundem fluviolum Holtbeck eousque [sic! – MG], quo se in flumen Dametze exonerat”. A. Wielopolski, *Polsko-pomorskie spory*, pp. 68, 102–103. For more on the names of Bliska and Drzewiana Struga see K. Górka-Gotaska, *Bliska Struga*, [in:] SHGPoz, pt. I, p. 61; eadem, *Drzewiana Struga*, [in:] SHGPoz, pt. I, p. 417.

³⁹ “[...] from this marsh [Niedźwiedzie Gniazdo, unidentified – M.G.] to the stream, called Westen Fleth in German, Bliska Rzeka in Polish; it leads to a second stream, called Helthbeczk, in Polish – Drewniana Struga; this one leads to the Damecz River near Małe Popielewo, which still lies in the Crown, but the Pomeranians hold it in the Pomeranian land”, LWWK 1564, p. 208.

⁴⁰ „[...] et ab eodem loco [Niedźwiedzie Gniazdo – M.G.] ad torrentem dictum polonice Bliska Struga et germanice Nestflit. Inde ad alium torrentem Olbek dictum, qui incidit in fluvium Magnum Damic. Quo ductu per longissimam planiciem pervenerunt ad fluvium praefatum Magnum Damic sub gaio quircineo circiter 5 stadiorum a villa Popielewo a dextra parte ductus villa eadem Popielewo utraque iacente”, LWWK 1628, p. 58.

⁴⁴ Poll tax poz. 1676, f. 1467–1467v.

⁴⁵ Comp. to Teki Dworzaczka, 802 (no. 79), 1629, “G. Egard, Henryk and Michał Popielewski from W. Popielewo 35 (?) houses, with the Bruczna demesne – 3 cottages, Popielewo M., – – a mill and 3 cottages (f. 380v)”.

There were three Brandenburgian enclaves in the Poznań Voivodeship, all within the Wałcz district: Bolegorzyn (Bulgrin), Turze Błoto and Próchnowo with Piecnik.

The fact that Bolegorzyn belonged to Brandenburg in the second half of the sixteenth century did not raise any doubts. The 1564–1565 census confirms that the settlement did not belong to Poland.⁴⁶ It was only returned in the seventeenth century.⁴⁷ The neighboring Nowe Wronowo was in Polish hands in the sixteenth century, similarly to Kluczewo (Kalusewo in the sixteenth century).⁴⁸ There are some doubts as to the size of the enclave. It was closed in by Worów from the west and Kluczew from the east, with the northern border not reaching too far.⁴⁹ The southern and southwestern borders' situations are not quite as clear, as some border protocols indicate that Bolegorzyn was not an enclave in the Crown but was connected to Neumark by a thin corridor between Nowy Worów and Drawsko lake. The course of the border here is not clear, so Bolegorzyn was marked as an enclave on the main map.⁵⁰

Turze Błoto was the second enclave. It was located southeast of Czaplunek. The unsettled area (a tavern was built only in the sixteenth century⁵¹) was the property of the von Borcke family and was part of their Falkenburg (Złocieniec) properties. At the turn of the fifteenth century the noble house accepted the overlordship of the Brandenburgian margraves, which resulted in the exterritoriality of Turze Błoto within the Crown. In 1505, King Aleksander Jagiellon allowed his courtiers to purchase these and other von Borcke properties, but in the case of Turze Błoto, the transaction never happened.⁵² Our reconstruction of the boundaries of the enclave was based on the descriptions contained in the falsified documents allegedly from 1251, an inspection from 1564–1565 and the entry *Turze Błoto* in SHGPoz.⁵³ The enclave stretched between the settlements of Broczyno (Brocz in the sixteenth century), Jeziorna (Flokesia in the sixteenth century) Machliny, Nowa Wieś (Schönholtzig in the sixteenth century), Bysze (no longer exists⁵⁴) Nadarzyce (Nadorycz in the sixteenth century) and Dudylany (Duderlak in the sixteenth century). The area outlined here diverges slightly from the enclave's borders found in the map under the term *Wielkopolska* found in SGHPoz.⁵⁵ The main difference is the localization of the village of Bysze, which was part of the Crown in the latter half of the sixteenth century, near the present-day Businowskie Lake.

The third enclave within the Wałcz district was composed of the Brandenburgian settlements of Próchnowo (Prochenow) and Piecnik (Petznick), placed between Wałcz and Mirostawiec (Frydland in the sixteenth century). The enclave was closed in by the Crown's villages of Bronikowo (Brunkowo in the sixteenth century), Hanki (Henkendorf in the sixteenth century), Toporzyk (Langendorf in the sixteenth century), Laski Wałeckie (Laczka in the sixteenth century), Górnica (Hohenstein in the sixteenth century), Jabłonkowo (Apfelweth in the sixteenth century), Pilów (the Pilawka mill settlement in the sixteenth century), Nakielno and Marcinkowice (sixteenth century).⁵⁶

⁴⁶ LWWK 1564, p. 183.

⁴⁷ The 1628–1632 census indicates that this happened in 1624. L. Bąk however points to 1629, when along with Bolegorzyn, the settlements of Cieminko (west of the Crown's border, near Nowy Worów) and Lipno (part of the Bolegorzyn enclave) apparently were returned to Poland; LWWK 1628, p. 41; Bąk, Wałcz, p. 57; see K. Górską-Gołaską, *Bolegorzyn*, [in:] SHGPoz, pt. I, p. 87.

It was similarly presented in the historical atlas of Brandenburg and Berlin; *Historischer Handatlas von Brandenburg und Berlin*, sheet 36; *ibidem*, sheet 26: *Verwaltungsgliederung*, ed. G. Heinrich, Berlin 1969.

Keeping with the description of the country border, a few remarks should be made about the villages that composed the property of the Knights Hospitaller's commandery with the center in Łągów, which itself lay outside of the Crown's borders. The villages were Boryszyn (Borszyn in the sixteenth century), Templewo, Wielowieś (Langfuld in the sixteenth century) and Zarzyń (Żarzyn in the sixteenth century). Contrary to the conclusions of the team at SGHPoz, we included these territories in the Crown.⁵⁷ This solution is backed by several noteworthy facts. First of all, these villages regularly paid a tax in the latter half of the sixteenth century. Furthermore, the 1567 tax register notes that the brewers of Templewo, Borszyn, Zarzynin and Wielowieś, as residents of those villages, paid the alcohol tax. Other registers included payments made by the Międzyrzecze starosta or the Łągów cantor. If these settlements fell outside of the Crown's borders, they not only would not have paid Polish taxes, but they could not have been paid by the Międzyrzecze starosta.⁵⁸ The lack of payments from these settlements was noted in the 1631 hearth tax register, and the 1676 poll tax register clearly states that they belong to Brandenburg.⁵⁹

It remains an interesting fact that in 1629 Jan Opaliński, the Poznań voivode, sent a letter to the elector of Brandenburg, containing a reference to the 1251 forgery and an acknowledgment that the four settlements in the commandery were actually a part of Neumark, rather than Poland. This indicated that prior to this, the Polish side held a different position, which Brandenburg had to respect. Only when the elector approached Poland with the proper request, as we can assume, the forgery played a key role.⁶⁰

While finishing the national border's description, two more border settlements, whose allegiance to the Crown was uncertain, must be noted: Nowy Dworek (Nowy Dwór in the sixteenth century) and Jordanowo (Jordan in the sixteenth century), which were endowments to the Paradyż Cistercians.

⁵⁷ K. Górka-Gońska, *Boryszyn*, [in:] SHGPoz, part I, p. 98; idem, *Langenpfuhl*, [in:] SHGPoz, part II, pp. 572–573; T. Jurek, *Templewo*, [in:] SHGPoz, part V, pp. 285–287; idem, *Wielkopolska*, pp. 594, 601, map sheets 3 i 4. The last two terms bear the most information. On sheet 3 of the map attached to the term *Wielkopolska*, Trzemeszno Lubuskie (Czarmyśl in the sixteenth century) and Grochowo, whose inclusion in the Crown at the time bears little doubt, were omitted. Based on the Polish-Brandenburgian border drawn on that map, one could think that those villages belonged to Brandenburg. For more on Trzemeszno's and Grochów's inclusion in the Crown, see J. Luciński, *Grochowo*, [in:] SHGPoz, part I, pp. 675–676; G. Rutkowska, *Trzemeszno*, [in:] SHGPoz, part V, pp. 359–361; RPWP, pzn. 1553, no. 84, 151; RPWP, pzn. 1563, no. 103, 190; RPWP, pzn. 1567, no. 113, 350; RPWP, pzn. 1576, no. 98, 165; RPWP, pzn. 1577, no. 103, 179; RPWP, pzn. 1580, no. 109, 180; RPWP, pzn. 1581, no. 108, 174; RPWP, pzn. 1583, no. 102, 177. Later maps also include them in the Poznań Voivodeship; Perthées Poznań; Gilly-Cron; Gilly 1802; Gaul/Raczyński. The villages of Czarmyśl, Grochowo, Wielowieś, Templewo and Boryszyn were differently presented in the sheets of the *Historischer Handatlas von Brandenburg und Berlin*. Sheet 4 (*Neue Siedlungen in Brandenburg 1500–1800*) includes all of them in Brandenburg. On sheet 26 (*Verwaltungs-gliederung 1608–1806*) Czarmyśl and Grochowo were included in the Crown, with the rest being placed in Brandenburg, with the caveat that in the years 1608–1806 the region was in contention. Sheet 36 (*Die Mark Brandenburg 1319–1575*) Czarmyśl and Grochowo are within Brandenburg's borders, much like the villages of the Łągów commandery, with the annotation, that during the fifteenth century they belonged to Poland; *Historischer Handatlas von Brandenburg und Berlin*, sheet 4: *Neue Siedlungen in Brandenburg 1500–1800*, ed. B. Schulze, H.K. Schulze, Berlin 1960; *ibid*, sheets 26 and 36.

⁵⁸ The primary reason for authors of SGHPoz to acknowledge Boryszyn, Templewo, Wielowieś and Zarzyń as Brandenburgian, is the information found in the forgery from 1251, which places the mentioned settlements on the Brandenburgian side. E. Syska was correct in stating that these were mere claims and did not represent the actual conditions: *ibidem*, *Rzekoma umowa*, pp. 150–151. The argument that the Polish-Brandenburgian agreement of 1527, which decreed that the Międzyrzecze starosta was to not raise the burden placed on the inhabitants of these villages, proves that they belonged to Brandenburg, is similarly unclear. Provisions for the starosta's district were maintained. We must also reject the opinion of the author of the term *Templewo*, T. Jurek, that the payments made by four of the villages mentioned were dues owed to the Międzyrzecze starosta's district. Just because they had these obligations, does not mean that they were obliged to pay extraordinary taxes. Payments made to Międzyrzecze resulting from old agreements are different from national taxes passed by the sejm; see T. Jurek, *Templewo*, p. 287.

⁵⁹ Hearth tax, poz. 1676, p. 1355: „Par[ish] Langfuld. It belonged to the Margraviate it did not pay [the tax – M.G.]”; *ibidem*, p. 1378 „Par[ish] Templewo to the Margraviate”; *ibidem*, p. 1384: „Par[ish] Zarzyn, Borszyn to the Margr[aviate]”. Similarly, Templewo in the 1673 poll tax register: „Templewo do Margrabstwa cessit”; Poll tax poz. 1673, p. 1192. There is little surprise in the fact that Boryszyn, Templewo, Wielowieś and Zarzyń find themselves in Brandenburg on the maps of Perthées, Gaul and Gilly. As at the time of their creation, the villages actually found themselves there; Perthées Poznań; Gaul/Raczyński; Gilly 1802; Gilly-Cron.

⁶⁰ E. Syska, *Rzekoma umowa*, p. 134; W. Freier, *Das Land Sternberg. Brandenburgische Geschichte mit besonderer Berücksichtigung der Neumark*, Zielenzig 1892, p. 461. E. Syska's view (p. 153), that the falsified document could have influenced the resolution of border disputes, finds no basis in the document accepted by the attorneys of both sides, as it does not even have suggestions as to the layout of the borders of either country; idem, *Rzekoma umowa*, p. 153; *Codex Diplomaticus Brandenburgensis*, vol. 6, pub. A.F. Riedel, Berlin 1858, pp. 346–348.

Nowy Dworek only appeared in the Poznań district's tax registers once in 1553, when a tax was raised from a tavern.⁶¹ Jordanowo appears three times – twice, in 1580 and 1581, when only the name is mentioned in registers, and once, in 1583, when a tax was actually paid (from two mills, 120 sheep, eight landed smallholders, four landless peasants and four free peasants).⁶² Similar payments were recorded for Paradyż in 1580 and 1581. Earlier years (1553, 1567, 1570, 1576, 1577) from Paradyż only included taxes from mills.⁶³ We can assume that the appearance of sheep, smallholders and *coloni* (seasonal workers) in the register was caused by the introduction of new fares into the tax system in 1578, causing an update to the tax base. It was also then that, in the first available after “the reform” register for Poznań in ASK from 1580, the name Jordan appears, which suggests that the settlement belonged to the Crown in the second half of the sixteenth century. Neither settlement appears in the 1631 hearth tax registers and the poll tax registers of 1673 and 1676. Franciszek Czaykowski's register marks them as part of the Poznań Voivodeship.⁶⁴ On Perthées's map (Nowy Dworek as Neudorf and Jordanowo as Święta Anna/Jordanowice), they are outside Polish borders; they were also excluded from the list of clerical property attached to the map. Similarly, the maps of David Gilly (Neuhof and St. Anna), Ernest Gaul (Neuhof and St. Anna) and UMTB (Neuchoefchen and Jordan). The last of the aforementioned maps had two mills marked along the Paklica – one on its northern side, the other in the middle of the river, which could be the mills mentioned in the Poznań registers from the latter half of the sixteenth century. Taking all of this information into account, we chose to leave Jordanowo and Nowy Dworek within the Crown. The border in this region most likely passed through the wilderness south of Paklica, leaving both of the settlements in question on the Polish side, and area near the present-day village of Glińsk (Leimnitz in UMTB)⁶⁵ on the Silesian side.⁶⁶ Jordanowo and Nowy Dworek were most likely claimed by Silesia in the seventeenth century.⁶⁷

Let us now move on to the description of the voivodeships' borders. We already mentioned the northern, western and southern border of the Poznań Voivodeship while describing the national border. Let's return to the area of Jutrosin, where the borders of the Poznań and Kalisz Voivodeships met with those of Silesia. From this point, the border separating the two Greater Polish administrative units ran north. It relied on waterways, such as the Obra or the Warta, for brief segments. Only once it reached the Noteć after around 300 km, it ran for a longer distance along the Gwda, between Grodna and Łędeczek, becoming the previously mentioned national border between the Kalisz Voivodeship and the Duchy of Pomerania (around 70 km from Ujście to Łędeczek). Turning east, it went along the Rivers Dobrzyńka and Kamionka, separating the Kalisz and Pomeranian Voivodeships, reaching the Brda (around 70 km). The Kalisz Voivodeship's border then ran south, reaching the area of Mąkowarsk and Hamer (roughly 10 km). From here it separates the Kalisz and Inowrocław Voivodeships, running, among others, along the Płytwica, Noteć and Kwieciszówka on over about 150 km. Around Kwieciszewo began the border with the Brześć Kujawski Voivodeship, stretching out for about 80 km until it reaches the area of Brdowo. Next is the border with the Łęczyca Voivodeship, lasting about 50 km, passing into the Kalisz and Sieradz Voivodeships border around latitude of Brudzewo. Around that town it turned west and stretched to the aforementioned point near Odolanów, where the national border with Silesia began (together around 200 km).

Two enclaves must be mentioned in addition to the borders of voivodeships' description. Mirosławice – an exclave of the Gniezno district of the Kalisz Voivodeship in the Kruszwica district of the Brześć

Janczak, T. Ładogórski, Wrocław 1976 (several maps).

⁶⁷ This could be supported by the 1671 letter sent by King Michał Korybut Wiśniowiecki to the Głogów starost, in which the Polish ruler underlines that these settlements belong to the Crown despite them paying their taxes to the Habsburgs; T. Warمیński, *Urkundliche Geschichte des ehemaligen Cistercienser-Klosters zu Paradies*, Meseritz 1886, pp. 203–204, 261.

Kujawski Voivodeship⁶⁸ and Lechlin (Lechnino in the sixteenth century) – an exclave of the Poznań district and Voivodeship in the Gniezno district of the Kalisz Voivodeship.⁶⁹

One case on the border of the Poznań and Kalisz Voivodeships, and more precisely on the border of the Poznań and Nakło districts, requires a more precise explanation. The village of Dobrzyca, found along the Gwda, was included into the Poznań Voivodeship (today it holds the same name and occupies both sides of the river). The village belonged to the Ujście-Piła starosta's district and was first mentioned in 1590.⁷⁰ The sixteenth century tax registers only record one payment from 1591 in the Nakło district register, noting that it was newly established.⁷¹ It was also present in the 1618–1620 Nakło tax records. A payment was not made, despite listing the specific tax categories into which it was supposed to be paid.⁷² However, in the 1631 hearth tax register it finds itself in the Poznań district.⁷³ The 1673 and 1676 poll tax registers make no note of it in either voivodeship. The transfer of Dobrzyca from the Nakło district in 1591 to the Poznań district in 1631, its uncertain status in 1618–1620 when taxes were not collected, the fact that it was part of the Ujście-Piła starosta's district whose settlements found themselves in both districts⁷⁴ – everything raises doubts when trying to ascribe Dobrzyca to one of the fiscal districts. The deciding factor in its inclusion into the Poznań district was its location on the Poznań side of the Gwda.⁷⁵

In the case of Greater Polish districts, their borders were only based on natural boundaries in a few segments. The Nakło district was unique in this regard – it was surrounded by waterways on all sides. Its southern border was based upon the Noteć, the west on the Gwda, the north on the Debrzynka and Kamionka, leaving Dawnica (Łędycezek in the sixteenth century) and Debrzno-Wieś (Debrzno in the sixteenth century) in the Nakło district,⁷⁶ and the east on the Płytwica. Only on a short segment to the north and east did it not follow waterways. A similar situation was present in the case of the Kcynia district, encompassing the Pałuki region.⁷⁷ Its northern and eastern borders were almost

⁶⁸ The inclusion of the noble-owned village of Mirosławice in the Gniezno district raises few doubts. It is constantly recorded in the district's tax registers in the latter half of the sixteenth century; RPWK, gzn, 1564, no. 393, 609, 610; RPWK, gzn, 1565, no. 392, 610, 611; RPWK, gzn, 1576, no. 365, 554–556; RPWK, gzn, 1577, no. 355, 522; RPWK, gzn, 1579, no. 177–180; RPWK, gzn, 1580, no. 482–485; RPWK, gzn, 1581, no. 409, no. 604–606; RPWK, gzn, 1582, no. 378, 552–554; RPWK, gzn, 1583, no. 383, 553–555; RPWK, gzn, 1588, no. 407–410. Judicial records from the fifteenth to seventeenth century also ascribed it to the Gniezno district; TD, 10047 (no. 11, gr. 1388) 1494, 10062 (no. 11, gr. 1388) 1494, 5575 (no. 19) 1511, 596 (no. 262) 1534, 4748 (no. 335a) 1534, 6995 (no. 34) 1549, 8652 (no. 1418) 1634. Mirosławice are absent from Perthées's map of Brześć Kujawski and Inowrocław Voivodeships; K. Perthées, *Mapa szczególna wojewodstw brzeskiego kujawskiego y inowrocławskiego*, 1785, around 1:222,500, AGAD, AK 108 (Zb. SA 6), www.rokmapy.pl/pl/galeria-map/200-rocznica-smierci--pertheesa/mapy-pertheesa#r8 (access: 21.03.2017).

⁶⁹ The village of Lechlin, belonging to the bishop of Poznań, appears in the Poznań district's tax registers, rather than Gniezno's; RPWP, pzn, 1553, no. 265; RPWP, pzn, 1563, no. 332; RPWP, pzn, 1567, no. 220; RPWP, pzn, 1576, no. 326; RPWP, pzn, 1577, no. 356; RPWP, pzn, 1580, no. 359; RPWP, pzn, 1581, no. 357; RPWP, pzn, 1583, no. 365. It was also included in the Poznań district under the term in SGHPoz; K. Górka-Gołaska, *Lechnino*, [in:] SHGPoz, part II, pp. 577–579. On Perthées's map is already included in the Gniezno district and Voivodeship; Perthées Poznań.

⁷⁰ Żmidziński, p. 58.

⁷¹ RPWK, nkl, 1591, no. 204; ASK I 4, f. 771v: „Novę villae sequuntur/Dobriza ad Usczie”.

⁷² Parczewski, p. 292. Dobrzyca was named in the Łobżenica parish.

⁷³ Hearth tax 1631, f. 4r.

⁷⁴ LWWK 1659, p. 58: „Villa Borki alias Dobrzyca in districtu [sic!] Ustensis existens”.

⁷⁵ The 1627 Ujście district inventory mentions Dobrzyca. There is mention of the extension of the villages borders in the direction of Łubianka, Krępa and Hamer (Pilski), which were all on the Poznań side of the Gwda, confirming the correctness of our assumption; AP Poznań, Ujście town records, I/1, p. 31.

⁷⁶ Dawnica, also called Łędycezek Szlachecki, was located on the southern side of the Debrzynka, and constantly appeared in the tax registers. On the other side of the Gwda, in the Człuchów district of the Pomeranian Voivodeship, was a separate parish municipality, Łędycezek; RPWK, nkl, 1564, no. 61; RPWK, nkl, 1576, no. 78; RPWK, nkl, 1577, no. 62; RPWK, nkl, 1578, no. 88; RPWK, nkl, 1579, no. 80; RPWK, nkl, 1580, no. 85; RPWK, nkl, 1581, no. 84; RPWK, nkl, 1582, no. 79; RPWK, nkl, 1591, no. 63. P. Szafran, on the other hand, claims that these were Łędycezek's outskirts; Szafran, p. 140. Schmettau's map has it under “Landeck”, Schrötter's and Messtichblatt's have it as “Adel. Landeck”; Schrötter; Schmettau, blat 32; Messtichblatt. It was similar in the case of Debrzno-Wieś, neighboring Debrzno/Frydland and did not form one organism. Debrzno lying in the Nakło district appeared as that in the tax registers from the latter half of the sixteenth century; RPWK, nkl, 1564, no. 62; RPWK, nkl, 1565, no. 74; RPWK, nkl, 1576, no. 79; RPWK, nkl, 1577, no. 63; RPWK, nkl, 1578, no. 89; RPWK, nkl, 1579, no. 81; RPWK, nkl, 1580, no. 86, 87; RPWK, nkl, 1581, no. 85, 86; RPWK, nkl, 1582, no. 80; RPWK, nkl, 1591, no. 64; comp. to Szafran, pp. 136–167. German maps clearly indicate that the villages were separate, labeling Debrzno in Nakło district “Dobbrin”, and Debrzno in Pomerania as “Friedland”; Schrötter; Schmettau Blatt 33, Messtichblatt.

⁷⁷ H. Rutkowski, *Jednostki terytorialne*, pp. 114–115.

completely formed by the Noteć, and the western border on the Wełna. Another larger inter-district border segment that runs along a river is the one between the Kościan and Pyzdry districts, which are separated by the Warta for some of its length.

Other than rivers, the borders of administrative regions were sometimes based on larger forest complexes. The biggest ones were the forests separating the Konin and Kalisz districts, stretching from Grzymiszew to Pyzdry and Łądek, in its final segment forming the border between the Konin and Pyzdry districts. Slightly smaller forested border areas include sections of the border of the aforementioned districts at the latitude od Raszków and Rozdrażew. It was also the case between the Pyzdry and Kościan districts – between Pogorzela and Strzelce Wielkie.

Woods also stretched around the western part of the Poznań-Kościan border, from Opalenica through Rogoziniec to Międzyrzecz. Our map does not have part of it marked on Nowy Tomyśl Plain, which is a result of the premises of this AHP series, in which the afforestation was reconstructed in accordance with its state at the end of the eighteenth century.⁷⁸ The lands of Nowy Tomyśl Plains were subject to intense Dutch settlement in the eighteenth century which led to the deforestation of large tracts of woodland that had been present there in the sixteenth century. The reconstruction of the border was based on the eighteenth century settlement relations.⁷⁹

In many cases the borders' shape was dictated by ownership.⁸⁰ This is visible on the border between the Poznań and Kcynia districts, near Budzyń and Chodzież, where on the Poznań side lay the villages of Rataje, Podanino and the mill of Krąpka, which were part of the Ujście starosta's district, as well as the village of Podstolice and Budzyń, part of the Rogoziniec starosta's district, while on the Kcynia side – as the nobility's properties, the villages of Stróżewo, Ostrówek and Huta demesne. A similar situation was found on the border between the Wałcz and Poznań districts. The border between the property of the Ujście-Piła starosta's district, and those, that belonged to the Wałcz starosta's district was at the same time the border between the Wałcz and Poznań districts.

In a few cases, except for the aforementioned villages of Mirosławice and Lechlin, we noted the presence of one district's exclaves in another. In the Kalisz Voivodeship, an exclave of the Gniezno district was marked down in the Kcynia district – Chomiąża in the Ostroszcze parish. This settlement in the sixteenth century was the property of the Żnin parish, which was the property of the suffragan of the Gniezno diocese. It was called Chomiąża Księża (*Spirituale*) in order to differentiate it from the parochial village Chomiąża in the Kcynia district, which was owned by the gentry. It always appears in the tax registers of the Gniezno district, rather than the Kcynia district, in the latter half of the sixteenth century.⁸¹ The 1618–1620 tax register also attributes it to the Gniezno district.⁸² What's more, the settlement is missing in the 1635 Kcynia district hearth tax register (only the Chomiąża Szlachecka appears) which could indicate that at the time it was attributed to the Gniezno district, as the register only contains payments made in the Kcynia district. The 1673 and 1674 poll tax registers it was also counted, as empty space, as part of the Gniezno district.⁸³ Due to this evidence found in the sources, we chose to denote Chomiąża in the way described above.⁸⁴

⁸³ Poll tax kal. 1673, f. 59, „Chomiąża desertum”; Poll tax kal. 1674, f. 200v, „Chomiąża desertata”.

⁸⁴ The reasons for this settlement's administrative distinctiveness. Two other villages of the Żnin parish, Rydlewo and Skarbienice (Skarbienica in the sixteenth century) only appear in the tax registers of the Kcynia district, and their payments are sometimes merged (1579, 1581, 1582); RPWK, kcn, 1564, no. 253, 254; RPWK, kcn, 1565, no. 254, 255; RPWK, kcn, 1576, no. 217, 218; RPWK, kcn, 1577, no. 258, 259; RPWK, kcn, 1578, no. 273, 274; RPWK, kcn, 1579, no. 256, 257; RPWK, kcn, 1581, no. 256, 257; RPWK, kcn, 1582, no. 248, 249; RPWK, kcn, 1583, no. 246, 247; RPWK, kcn, 1591, no. 248, 249. We therefore do not have a situation where the location of the payment influenced how the settlement was assigned to a district. Comp. to M. Piber-Zbieranowska, *Powiat kcyński w drugiej połowie XVI w.*, SG, vol. 3, 2015, p. 93. The author assigns Chomiąża to the Kcynia district.

Radłowo of the Słaboszewo parish was an exclave of the Kcynia district in the Gniezno district. This settlement was written down only in the Kcynian tax registers.⁸⁵ We can also find it in the district's 1618–1620 register (here in the Chomiąza parish), as well as the Kcynia district 1635 hearth tax registers and 1673 and 1674 poll tax registers.⁸⁶ Radłowo's administrative separation was also visible in the judicial records. Notes assigning it to the Kcynia district appear in the land and gord courts records for the sixteenth, seventeenth and eighteenth centuries.⁸⁷

The parochial village of Ryszewko, along with the nobility's Ryszewko, both belonged to that same parish, was another exclave of the Kcynia district found in the Gniezno district. This settlement, part of the properties belonging to the Canons Regular of Trzemeszno, appears only in the Kcynian tax registers from the latter half of the sixteenth century.⁸⁸ In this district, the settlements paid taxes according to the following registers: 1618–1620 *lanowe* tax, 1635 hearth tax and 1673 and 1674 poll tax (null in the last two).⁸⁹ Meanwhile, the remainder of the Trzemeszno monastery's properties in this index (Gąsawa, Głowy, Oćwieka, Konratowo, Łysinino, Szelejewo), located to the north of Ryszewko, lie in the Gniezno district, and always appear in its registers.

Along with Ryszewko, the enclave was also formed by Ryszewo of the Ryszewko parish, appearing only in the Kcynian registers of the sixteenth century.⁹⁰ The Kcynia district's 1618–1620 tax register denotes that Ryszewko lay outside of the district, but the Gniezno district's register does not contain it in this time period.⁹¹ The village is missing from the Kcynia district's 1635 poll tax register, which could mean it was part of the Gniezno district at that time. This assumption is supported by the 1673 and 1674 poll tax registers, in which Ryszewo is marked as part of the Gniezno district.⁹² The judicial administration is uncertain, inscriptions in the land and gord courts records from the sixteenth and early seventeenth centuries place it in both districts.⁹³ Czaykowski's register has both villages, Ryszewo and Ryszewko, as part of the Gniezno district.⁹⁴

Czartowo of the Skulsko parish was an exclave of the Konin district in the Gniezno district. This settlement's situation most likely stems from the fact that it was a part of the Kazimierz estates. Almost all of that property lay within the Konin district, where their taxes were paid. Judicial sources also place Czartowo in the Konin district.⁹⁵

Two settlements – Bochlewo of the Kazimierz parish and Tokarki of the Dobrosółowo parish – were exclaves of the Pyzdry district wedged between the Gniezno and Konin districts. They were the

property of the Bishop of Poznań, and later of the Poznań and Kalisz Jesuits. They only appear in the Pyzdry district's tax registers from the second half of the sixteenth century, as well as the 1618–1620 register.⁹⁶ They appear in the Konin district in Perthées's map but are absent from the attached list of clerical property, as at that point in time, they belonged to the nobility.⁹⁷ The 1673 and 1674 poll tax registers, as well as Czaykowski's register, also attribute it to the Konin district.⁹⁸

The next exclave of the Pyzdry district was Kosowo of the Giewartowo parish, which lay in only one district – Gniezno. The settlement was part of the Ciężen-Słupsk cluster of estates belonging to the bishops of Poznań. It always appears in the Pyzdry tax registers, including the 1618–1620 ones.⁹⁹ The 1673 and 1674 poll tax registers make no mention of it. In both Perthées's map and Czaykowski's register, Kosowo is a part of the Pyzdry district.¹⁰⁰

The only interdistrict enclave in the Poznań Voivodeship was Koźminek par. *loco*. This settlement was an endowment of the Paradyż abbot. Tax payments are noted by the Poznań registers of 1567, 1570, 1576, 1577, 1580, 1581, 1583.¹⁰¹ The 1563 and 1565 Kościan registers mention that Koźminek paid its taxes to the Poznań district, with the 1563 entry noting the tax categories and amounts, while in 1576 and 1580 only the settlement's name was recorded.¹⁰² Koźminek is not mentioned in the 1631 hearth tax register, while in the 1673 and 1676 poll tax registers it is attributed to the Poznań district.¹⁰³ On Perthées's map the settlement is situated in the Kościan district, but it must be remembered that Perthées did not mark interdistrict enclaves. The index of clerical property attached to the map has Koźminek in the Poznań district.¹⁰⁴ SGHPoz also states that Koźminek was a part of the Poznań district.¹⁰⁵

The border between the Poznań and Kościan districts raises a few questions.¹⁰⁶ Its entire length was almost solely on land, only near Opalenica did it rely on the Mogilnica for a short segment, and near Mosina – that same river again, as well as the Warta. Between Bukowiec Mały and Łomnica it ran through the wilderness of Nowy Tomyśl Plain. These natural obstacles caused problems when assessing district affiliation. It was worst with villages along the land borders. Doubts are raised by the fact that these settlements appear in the tax registers of both districts,¹⁰⁷ as well as changes of their affiliation

¹⁰⁶ A. Gąsiorowski had already brought attention to this; *ibidem*, *Powiat w Wielkopolsce*, p. 79.

¹⁰⁷ The 1563 Kościan district tax register caused some confusion. Some settlements in the Kościan district had notes informing that the tax was paid in the Poznań district (most commonly in the form of: „solvit Poznaniae”), despite all the tax categories being mentioned, along with the amount due. One can assume that the payment was already made in Poznań and presented the receipt to the subcollector in Kościan district, and that data was recorded. Regardless of the reason of the annotation's appearance, it does not resolve beyond doubt that a settlement belonged to the Poznań district. A closer analysis of this and other Kościan tax registers allow us to conclude that this was merely an annotation about the tax payment being made in the Poznań district, and not the settlements' actual territorial affiliation. A clear example of this can be found in Konary par. *Loco*, which in the 1563 Kościan register had the „solvit Poznaniae” annotation next to its entry. Due to its placement in the southern part of the Kościan district, it would have been impossible for it to belong to the Poznań district. The information on the payment made in the Poznań district is very likely linked to the individual named Jan Konarski, the Poznań chamberlain at the time, who is noted in the 1567 register as the taxpayer for the settlement at the time. He had numerous properties in other Greater Polish districts, so he could have potentially paid in Poznań for all or some of his villages; RPWP, ksc, 1563; RPWP, ksc, 1563, no. 78; RPWP, ksc, 1567, no. 206. A similar phenomenon happened with Kretowice of the Pępowo Małe parish and Góreczka Żabia of the Czesram parish, located on the Kościan and Pyzdry districts border, Gaj of the Błociszewo parish – near the Kościan-Pyzdry border, Chobienice of the Zbąszyń parish and Mszczyczyna of the Dolsk parish; RPWP,

in the judicial records. Ultimately, naming the most doubtful of cases, we left Kuślin (Kuślino in the sixteenth century) and Witowle (Witobel in the sixteenth century) in the Kościan district. Lutol Mokry, Rogoziniec, Wąsowo and Witlowe Małe are considered to have been in the Poznań district.

A tax payment from the first of the settlements listed above in the Kościan district – Kuślin of the Michorzewo Mokre parish – have been recorded in two of the district's records – 1565 and 1567. In 1563 and 1576 the Kościan records noted that the tax was paid in the Poznań district. The 1580 Kościan record only mentions the settlement's name. Meanwhile the Poznań records make note of payments from Kuślin in 1567, 1576, 1577, 1580, 1581 and 1583.¹⁰⁸ This situation was most likely caused by the fact that the maker of the payment in Kuślin, Jan Strzeżmiński, only paid taxes in the Poznań district, also for other properties he most likely owned (including Brody, Trzcianka, Krobielewo, Lubikowo, Ninino). In 1580, he paid the taxes for Kuślin, Lubikowo and Brodów on the same day (18 April), in 1581 from Brodów, Trzcianki, Kuślin and Lubikowo on 20 April, from Krobielewo on 21 April and from Ninino on 24 April.¹⁰⁹ Judicial notes also attribute Kuślin to different districts.¹¹⁰ In the 1631 hearth tax register the settlement appears in the Kościan district, similarly to the 1673 and 1676 poll tax registers, the Czaykowski register and Perthées's map.¹¹¹

The affiliation of the nobility's village of Witowle of the Łódzia parish to the Kościan district in the sixteenth century, while the Witlowe Małe mill settlement was part of the Poznań, is quite clear in the financial records.¹¹² Judicial records attribute them to different districts.¹¹³ In Czaykowski's register, Witowle (as Witobel) were listed in the Kościan district.¹¹⁴

Lutol Wodny (also known as Lutol Mokry) of the Zbąszyń parish, which belonged to the Paradyż abbot, is considered to be part of the Poznań district as it appears in its records from 1567, 1570, 1576 and 1577. The district's 1580 and 1583 registers lack tax payments, with the latter one containing a note that it was paid in the Kościan district. It appears in the Kościan registers in 1563 (with an annotation that the payment was made in the Poznań district, while the tax categories and amount due are recorded), 1565 (no payments, but like with the last one there is a memo that it had been paid in the Poznań district), 1576 (no payments, the tax was actually collected in the neighboring district), 1580, 1581 and 1583 (a payment was recorded).¹¹⁵ The 1631 hearth tax register implies that it belonged to the Poznań district, much like the 1673 and 1676 poll tax records.¹¹⁶ Perthées's map has Lukol Mokry

ksc, 1563, no. 81, 183, 434, 594. An analogous situation (an „ad Poznaniem/ad Posnaniem” annotation) appears in the 1565 register in the case of Chociszewice par. *loco*, Koźminek par. *loco*, Lutol Wodny of the Zbąszyń parish, Rogoziniec par. *loco* and Wąsowo of the Wytomyśl parish; RPWP, ksc, 1565, no. 149, 156, 157, 604, 663.

¹⁰⁸ RPWP, ksc, 1563, no. 380; RPWP, ksc, 1565, no. 266; RPWP, ksc, 1567, no. 47; RPWP, ksc, 1576, no. 393; RPWP, ksc, 1580, no. 431; RPWP, pzn, 1576, no. 328; RPWP, pzn, 1577, no. 358; RPWP, pzn, 1580, no. 361; RPWP, pzn, 1581, no. 359; RPWP, pzn, 1583, no. 367.

¹¹⁰ Teki Dworzaczka, 9345 (no. 11, gr. 1388) 1493, 15848 (no. 1403) 1600, 5312 (no. 1406) 1607, 5784 (no. 1406) 1609, 2626 (no. 1408) 1613, 1738 (no. 164) 1639, 2986 (no. 59) 1660, 5003 (no. 1426) 1672.

¹¹¹ Hearth tax 1631, f. 48v; Poll tax poz. 1673, p. 1235; Poll tax poz. 1676, p. 1429; Czaykowski, p. 726; Perthées Poznań; comp. to the term *Kuślin* in SHGPoz, where in 1435 Kuślin is in the Kościan district, and in 1580 in the Poznań district; T. Jurek, *Kuślin*, [in:] SHGPoz, part II, pp. 562–563.

¹¹² RPWP, ksc, 1563, no. 362; RPWP, ksc, 1565, no. 366, 367; RPWP, ksc, 1567, no. 456, 457; RPWP, ksc, 1576, no. 372, 373; RPWP, ksc, 1580, no. 409, 410; RPWP, ksc, 1583, no. 426, 427; RPWP, pzn, 1563, no. 646; RPWP, pzn, 1567, no. 444; RPWP, pzn, 1576, no. 634, 635; RPWP, pzn, 1577, no. 676; RPWP, pzn, 1580, no. 672, 715; RPWP, pzn, 1581, no. 663; RPWP, pzn, 1583, no. 673, 718, 719. Hearth tax 1631, f. 22, names Witowle only in the Poznań district. Due to the presence of a mill in the records, which had not been paid for in the Witowle in Kościan district, we must treat the Witowle listed in the hearth tax as the Witowle Małe mill settlement. In the poll tax registers, Witowle only appears in the Poznań district's register, probably as a single village; Poll tax poz. 1673, p. 1191; Poll tax poz. 1676, p. 1376.

¹¹⁶ Hearth tax 1631, f. 13; Poll tax poz. 1673, p. 1172; Poll tax poz. 1676, p. 1355.

on the Kościan side of the border, but on the index of the Paradyż Cistercians' estates attached to the map, the settlement was categorized under the Poznań district.¹¹⁷

The next disputed settlement on the Poznań and Kościan districts border, which we ultimately placed in the Poznań district, is Rogoziniec par. *loco* of the Międzyrzecz starosta's district. The settlement appears in the Poznań district's registers in 1553, 1567, 1576, 1577, 1583, with only the 1553 and 1576 registers recording a tax payment. In all the other cases only the name was noted. Kościan registers mention Rogoziniec in 1563 and 1565, noting both times that the tax was paid in the Poznań district, although in 1563 the tax categories and tax amount were written down, and the 1565 register only featured its name – same as in 1576 and 1580.¹¹⁸ The 1631 hearth tax register, as well as the 1673 and 1676 poll tax registers, along with Perthées's map and the index of crownlands attached to it, also count Rogoziniec as part of the Poznań district.¹¹⁹

Similar doubts are brought up by the nobility's village of Wąsowo of the Wytomyśl parish. Payments from here are recorded in Poznań registers from 1553, 1563, 1576, 1577, 1580, 1581 and 1583. No payments were recorded in the Kościan registers of 1563 (only the name), 1565 (annotation on the payment being made in the Poznań district) and 1576 (only the name).¹²⁰ Wąsowo's affiliation to the Poznań district is also pointed to by the 1631 hearth tax register, as well as the 1673 and 1676 poll tax registers.¹²¹ The writings in land and gord courts records imply that Wąsowo belonged to the Kościan district, but a few, especially those from the eighteenth century, attribute it to the Poznań district.¹²² Czaykowski's register also places it in the latter.¹²³ Perthées's map has Wąsowo in the Kościan district, but this is the segment of the border running through the Nowy Tomyśl Plain that Perthées plotted out completely differently from our map (he includes the entirety of the Wytomyśl parish to the Kościan district).¹²⁴

Other than the interdistrict enclaves described above and disputed border settlements between the Poznań and Kościan districts, some doubts in district affiliation, which were results of either the settlement's placement in another district, discrepancies between treasury and judicial sources, or for other reasons, were noted in the case of a few other settlements.

In two cases we observed the shift of a district border affecting an entire group of settlements. The first case was Łęgowo and Sienno of the Łęgowo parish and Ochodza and Łaziska of the Wągrowiec parish. These settlements were part of the Wągrowiec Cistercians' endowment. At first, in the 1560s, they were recorded in the Kcynia tax registers. Later though, from the 1570s, treasury sources consistently place them in the Gniezno district, and do the same in the seventeenth century.¹²⁵ Only Czaykowski's register states that Ochodza and Łaziska belong to the Kcynia district.¹²⁶

¹¹⁷ Perthées Poznań. In SGHPoz Lutol Wodny was placed in the Poznań district based on tax registers (1508 – Kościan district, 1566 – Poznań district); see T. Jurek, Lutol Mokry, [in:] SHGPoz, part II, p. 687–688.

¹²³ Czaykowski, p. 775.

¹²⁴ Perthées Poznań. Wąsowo's placement in the Poznań district is also confirmed by SGHPoz, having noted that three judicial records from the fifteenth century did place it in the Kościan district; G. Rutkowska, *Wąsowo*, [in:] SHGPoz, part V, no. 3, pp. 532–534.

¹²⁵ RPWK, kcn, 1564, no. 281–284; RPWK, kcn, 1565, no. 282–285; RPWK, gzn, 1576, no. 426–429; RPWK, gzn, 1577, no. 423–426; RPWK, gzn, 1579, no. 419–422; RPWK, gzn, 1580, no. 571–574; RPWK, gzn, 1581, no. 477–480; RPWK, gzn, 1582, no. 89, 444–447; RPWK, gzn, 1583, no. 447–450; RPWK, gzn, 1588, no. 480–483. These settlements are not present in the hearth tax register of the Kcynia district in 1635. The 1673 and 1676 poll tax registers (with the exception of Sienno in the 1673 register, that makes no mention of it) attribute it to the Gniezno district.; Poll tax kal. 1673, f. 64, 67; Poll tax kal. 1676, f. 208v, 212, 217; Czaykowski, [sygn.]

¹²⁶ Czaykowski, p. 97.

The second case are the settlements in the Kobierno parish: Biadki (Biejatki in the sixteenth century), Tomice, Gorzupia (Gorzub in the sixteenth century), Dąbrowa and the parochial village of Kobierno itself. Dąbrowa and Gorzupia appear in the 1563, 1564, 1565 and 1576 Kalisz registers, and in the case of Dąbrowa it was always noted, that it belonged to the Pyzdry district, while Gorzupia only had the annotation once, in 1564. The villages only made their payments in the Pyzdry district, same in the seventeenth century.¹²⁷ It was similar in the case of the parochial village of Kobierno. The 1563 and 1576 Kalisz registers mention it, noting at the same time that the village found itself outside of the district. Payments were always made in the Pyzdry district, with the same being the case in the seventeenth century.¹²⁸ Tomice was a different case. The settlement was recorded in the aforementioned Kalisz registers (additionally in 1552), but in 1563, 1564, 1565 and 1576 its taxes were actually paid in that district. Only from 1578 were they permanently paid in the Pyzdry district.¹²⁹ The seventeenth century registers also count Tomice as part of the Pyzdry district.¹³⁰ The youngest village of the group was Biadki, mentioned in the 1563 Kalisz register as “settled for a few years”. This is the settlement’s first appearance in the tax registers from the latter half of the sixteenth century. From 1578 it was consistently recorded in the Pyzdry registers.¹³¹ In the light of the seventeenth century registers, Biadki was also a part of the Pyzdry district.¹³² Perthées’s map has all of the abovementioned villages in the Kobierno parish as part of the Pyzdry district.¹³³

A similar phenomenon of border shifting can be observed with the settlement of Koźlanka of the Mieścisko parish. In 1564 and 1565 it is recorded in the Gniezno tax registers, but later it can only be found in the Kcynia district.¹³⁴ The seventeenth century registers count it as part of the Kcynia district.¹³⁵

While bringing the description of district borders to an end, some attention should be given to the district affiliation of a few settlements. This was how the main agglomeration of the Mosina starosta’s district, the town of Mosina par. *loco*, found itself in the Poznań district, but the Mosina voithship found itself in the Kościan district. The 1580 and 1583 Kościan registers list the voithship’s size as 1 lan, the Crown estate’s census has it at 2 *ślady* (a measurement of an area less than *lan*), that were farmed by the peasants of the village of Krosno (Krosna in the sixteenth century) from the same starosta’s district, in the Kościan district.¹³⁶

The nobility’s village of Brenno par. *loco* in the Kościan district always appears in this district’s registers from the latter half of the sixteenth century onwards. At one point in 1567, the tax payment was registered in the Wschowa tax register, where it was clearly written, that the settlement lay in the Wschowa district and land.¹³⁷ The 1631 hearth tax registers and the 1673 and 1676 poll tax registers count it as part of the Kościan district.¹³⁸ Judicial records have it noted once in the Kościan district,

and another time in the Wschowa land.¹³⁹ Perthées's map has it in the Kościan district.¹⁴⁰ After taking these source materials into account, we placed Brenno in the Kościan district.

A similar situation took place with the gentry village of Stare Szczepankowo (Szczepankowo in the sixteenth century) of the Charbielino parish. This settlement was consistently recorded in the Kościan registers, and once – in 1563 – it was named in the Wschowa register, but contrary to Brenno, it was only named. The 1631 hearth tax register, along with the 1673 and 1676 poll tax registers attribute it to the Kościan district.¹⁴¹ Land and gord courts records list different district affiliations in the sixteenth century while in the seventeenth century the records are clearly dominated by notes attributing Stare Szczepankowo to the Kościan district.¹⁴²

Two settlements in the Wschowa land – Śmieszkowo and Potrzebowo, both of the Lgiń parish – do not appear in the tax registers from the latter half of the sixteenth century, due to their being settled at a late time – the turn of the sixteenth century.¹⁴³ The 1631 hearth tax register only names Potrzebowo, counting it as part of the Wschowa land.¹⁴⁴ The 1673 and 1676 poll tax registers have both of the villages as part of the Wschowa land.¹⁴⁵ Judicial records point to divergent district affiliation.¹⁴⁶ Perthées's map has both Śmieszkowo and Potrzebno in the Wschowa land.¹⁴⁷

In the Pyzdry district, near the border with the Kościan district, found itself the clerical village of Rogusko (Rogosko in the sixteenth century) of the Solec parish. It was part of the bishop of Poznań's endowment. This settlement was not recorded by the tax registers of the second half of the sixteenth century. It is mentioned by the 1564 inventory of the bishop of Poznań's estate.¹⁴⁸ Poll tax registers attribute it to the Pyzdry district, along with Czaykowski's register and Perthées's map.¹⁴⁹

The settlement of Buka (Nowa Wieś in the sixteenth century) of the Zakrzewo parish, which lay in the Nakło district, appears in the tax registers of the second half of the sixteenth century only from 1578 as a newly settled village. A tax was paid from this village for half of a millwheel belonging to the Nakło district (*ad Crainam*). The wheel's other half, according to the registers, belonged to the Człuchowki or Tucholski district in the Pomeranian Voivodeship (*ad Ducatum Prussiae*).¹⁵⁰ The object's actual location, along with the reason for this situation, are unknown. The mill was most likely found along the Stołunia or Kamionka rivers.

Doubts are also raised by the district affiliation of the village of Rataje of the Chodzież parish, part of the Ujście starosta's district. This settlement, placed in the Poznań district, forms the tip of the wedge sticking into the Kcynia district near Chodzież. It appears in the tax registers of both districts. Kcynia's registers have it marked down in 1564, 1565, 1576, 1577, 1578 and 1579, while only in 1564

¹³⁹ Teki Dworzaczka, 7856 (no. 902) 1560, 8958 (no. 1396) 1560, 11577 (no. 1398) 1575, 722 (no. 10) 1587, 416 (no. 204) 1607, 5856 (no. 1406) 1609, 1322 (no. 25) 1609, 560 (no. 205) 1615, 3596 (no. 1107 III) 1684, 5042 (no. 87) 1738. SHGPoz states that Brenno was part of the Kościan district, based on the judicial records; K. Górka-Gońska, *Brenno*, [in:] SHGPoz, part I, pp. 103–105. Czaykowski's register places Brenno broadly in the Poznań Voivodeship; Czaykowski, p. 828.

and 1565 did it pay a tax there. In 1591 it was noted that it lay outside of the district.¹⁵¹ In Poznań's registers, it was marked twice – in 1563 and in 1576 – that Rataje lay in another district. The next two registers – 1577 and 1580 – do not record any taxation. It was only paid in 1581 and 1583.¹⁵² It can be therefore assumed, that the district affiliation of this village was only stabilized in the final quarter of the sixteenth century. This assumption is supported by the seventeenth century registers. The 1618–1620 tax register does not list Rataje as belonging to the Kcynia district, which could indicate that the settlement belonged to the Poznań district. The 1631 hearth tax register, along with the 1673 and 1676 poll tax registers also attribute it to the latter.¹⁵³

Occasionally the doubts about settlements' district affiliation stem from discrepancies between the treasury and judicial records. The village of Krzekotowo of the Słaboszewo parish is an example of this.¹⁵⁴ This settlement appears in the registers as part of the Gniezno district.¹⁵⁵ The Kcynia district's 1635 hearth tax register does not make mention of it, which could indicate that also in that year it belonged to the Gniezno district. This district affiliation is confirmed by the 1673 and 1676 poll tax registers.¹⁵⁶ But the sixteenth century judicial records constantly place it in the Kcynia district. From the 1620s onward, land and gord court records make mention of the settlement belonging to the Gniezno district.¹⁵⁷

A similar situation takes place in the southern part of Kcynia district's southern border. The gentry village of Pokrzywnica of the Prusce (Prusca in the sixteenth century) parish, situated to the north of the border of River Welna, consistently appears in the Gniezno tax registers.¹⁵⁸ The 1618–1620 register only contains the village's name, with no tax categories or payments listed.¹⁵⁹ The hearth tax register makes no notice of the settlement, which could indicate it belonging to the Gniezno district. The 1673 and 1674 poll tax registers place in that very district.¹⁶⁰ Everything indicated that Pokrzywnica should be attributed to the Gniezno district. This is how we marked it on the primary map. Judicial records place it in the Kcynia district from the second half of the fifteenth century, through the sixteenth and seventeenth centuries in their entirety, rarely placing it in the Gniezno district. Only in the eighteenth century do they describe it as part of Gniezno district.¹⁶¹

On the main map we marked **the capitals of both voivodeships** in Poznań and Kalisz, along with **the capitals of treasury districts** – Wałcz, Poznań, Kościan, Wschowa, Kalisz, Konin, Pyzdry, Gniezno, Kcynia, Nakło. In the case of **gord starosta's districts**, we marked those, where starostas operated from. These were the offices in Poznań, Wschowa, Wałcz and Nakło. Offices under the general starosta of Greater Poland, i.e. Kalisz, Kościan, Pyzdry, Gniezno, Konin and Kcynia, were not marked as gord starosta's districts. This is caused by the fact, that in this series, the primary map includes gord starosta's

districts understood as the headquarters of the active starosta that had the ability to receive deeds.¹⁶² A separate map of gords with their subordination to the general starosta can be found in this chapter.

The map also has the **seats of castellans** marked down. In the Poznań Voivodeship, these are Poznań, Krzywiń, Międzyrzecz (second in the hierarchy of lesser castellans), Przemęt, Rogoźno and Śrem, and in the Kalisz Voivodeship: Kalisz, Biechowo, Gniezno, Nakło, Kamień Krajeński and Łąd.¹⁶³ The Poznań and Kalisz castellans belonged to the greater castellans, with the rest being lesser castellans.¹⁶⁴ In Greater Poland there existed also the titular office of the Santok castellan, referencing the fact that Santok was once part of the Crown. The settlement was removed from Poland in the fifteenth century.¹⁶⁵

The Poznań and Kalisz voivodes participated in the senate, along with the aforementioned castellans. The former took precedent in the hierarchy of voivodes, alternating with the voivode of Cracow, but always above the voivode of Vilnius, while the latter was fifth – after the castellan of Vilnius, who was included in this hierarchy, but before the voivode of Trakai. The clergymen that held senate offices were the archbishop of Gniezno (before the archbishop of Lviv) and the bishop of Poznań, who was fourth in the hierarchy of bishops, alternating with the bishop of Vilnius.¹⁶⁶ In total, Greater Poland had 15 senatorial offices (the voivode of Gniezno was added in 1768), the most out of all the voivodeships and lands of Poland, and two clerical offices.¹⁶⁷

The traditional location for sessions of the **land sejmik**, for which the nobility of the Poznań and Kalisz Voivodeships attended, was Środa. These congresses saw twelve representatives elected to the Sejm.¹⁶⁸ The **general (provincial) sejmik** gathered in Koło. The participants of its discussions were the aforementioned nobility, as well as that of the Łęczyca and Sieradz Voivodeships, and those from Kuyawia and the Dobrzyń land.¹⁶⁹ The nobility of the Płock and Rawa voivodeships, and occasionally even that of the Podlasie Voivodeship, had some connections to the meetings in Koło.¹⁷⁰ The sejmik in Koło began losing its significance already in the sixteenth century, and disappeared completely in the eighteenth century, although the Greater Polish nobility demanded that it be reactivated the entire time. This was not an isolated incident, as a similar situation occurred, amongst others, in Nowe Miasto Korczyn.¹⁷¹

Okazowanie, that is the review of the nobility ready for a “pospolite ruszenie” (mass mobilization), was to take place in Pyzdry for the nobility of the Kalisz Voivodeship, and Poznań for the nobility of the Poznań Voivodeship, by the decree of the sejm’s constitution of 1563.¹⁷² In 1587 Środa was designated as the location of the *okazowanie* and in 1631 it was changed to the capitals of the districts.¹⁷³

III.2.1.5 SIERADZ AND ŁĘCZYCA VOIVODESHIPS

Henryk Rutkowski

Of the two voivodeships described in this study, Łęczyca Voivodeship was the same as Łęczyca land, and Sieradz Voivodeship consisted of Sieradz land and Wieluń land. The name of Sieradz Voivodeship was used in two different ways. Mostly it denoted Sieradz land, but in our study, in order to avoid misunderstandings, we shall assume the broader sense of this name. The lands of Sieradz and Łęczyca were created in the sixteenth century as a continuation of two district duchies that had existed since 1262. In the beginning of the fifteenth century Wieluń land was incorporated into the Kingdom of Poland for good. As a consequence, this land became part of Sieradz Voivodeship.¹

Łęczyca Voivodeship was divided into three districts: Łęczyca district, Brzeziny district and Orłów district. There were four districts in the land of Sieradz: Sieradz, Szadek, Piotrków and Radomsko districts. The last one was called ‘radomski’ district in the sixteenth century, but we assume the newer form of the adjective created from the name ‘Radomsko’ (‘radomszczański’) was in order to maintain the difference between this district and the one with the seat in the city of Radom (‘radomski’). Wieluń land was divided into two districts, also called lands: Wieluń district and Ostrzeszów district. The borders of voivodeships, lands and districts were still undergoing changes in the fifteenth century, later they stabilized until the end of the eighteenth century, the time of the Partitions of Poland (not taking into account exceptional shifts of single villages).

The common border between the Voivodeships of Sieradz and Łęczyca was approximately 150 km long. It was almost entirely determined by two Rivers: the Ner and the Wolbórka. Additionally, Łęczyca Voivodeship bordered on the Voivodeships of: Kalisz, Brześć Kujawski, Rawa and Sandomierz. Sieradz Voivodeship bordered on Sandomierz and Cracow Voivodeships, then on Silesia, that belonged to the country of the Austrian Habsburgs. As such, the voivodeship indirectly bordered on the Holy Roman Empire (only Wieluń land bordered on Silesia) and then on the Voivodeship of Kalisz. The outer borderline of the two voivodeships was approximately 880 km long, of which the border with Silesia was 120 km, with Kalisz Voivodeship it was 230 km (including 200 km of the borderline of Sieradz Voivodeship), with Brześć Voivodeship it was 50 km, with Rawa Voivodeship – 220 km long, with Sandomierz Voivodeship – 150 km (including 110 km of the borderline of Sieradz Voivodeship), and with Cracow Voivodeship it was 110 km long. The border with Sandomierz Voivodeship was set on the Pilica River, and part of the border with Silesia – on the Prosna.

As in previous volumes of the Atlas, tax registers, providing information on the administrative affiliation of settlements, formed the main basis for the reconstruction of the course of the borders. In case of uninhabited or sparsely inhabited areas Perthées’s maps were found useful, as they show settlements founded in the seventeenth and eighteenth centuries near the borders of voivodeships and districts. There are maps drawn by Perthées that cover the area of Łęczyca Voivodeship and the voivodeships surrounding it. This, to a small degree, could substitute for the lack of any map of Sieradz Voivodeship by this cartographer. We have also used twentieth century maps, showing commune borders, and thus

were able to identify fragments of the sixteenth century borderline. The outer border of our territory was naturally correlated with adequate borderlines from previous volumes of the Atlas.² We have also compared them with the borderlines established in various studies on other neighbouring territories.³

The north-western and north-eastern parts of Ostrzeszów district could provide an example of an inhabited but forested area. The former part bordered on Kalisz Voivodeship, the latter – also on Sieradz land. There were only three villages in the north-eastern part of the district, east of the Proсна River. These were: Kraszewice, Kuźnica Grabowska – then: Kraszewicka, and Czajków. As crown lands, they belonged to the Grabów *starosta's* lease. This was the last area annexed to Sieradz Voivodeship, it was separated from Kalisz Voivodeship probably not before the turn of the fifteenth and the sixteenth centuries.⁴ The borders of the voivodeships were marked on the basis of Perthées's map of Kalisz Voivodeship, including commune borders. It must be emphasized that the administrative affiliation of villages presented by Perthées is rarely inconsistent with our knowledge regarding the state of the settlement in the sixteenth century. For instance, Szydłowice in Turek parish was assigned to Sieradz district by this eighteenth century cartographer, when in fact in the sixteenth century this village belonged to Konin district in Kalisz Voivodeship.⁵ In the case of such inconsistencies we are either dealing with a change of the course of the borderline between the sixteenth and eighteenth centuries, or a mistake in Perthées's map. The presented method of border reconstruction does not provide unquestionable results, yet – generally speaking – these results are highly probable. Or more precisely: in different places the certainty level of a given borderline is different, and some fragments could be acknowledged as certain (e.g. along the course of larger rivers).

The course of the border in some places requires a commentary. We begin with the state border with Silesia. The village Ligota (old name: Lgota) in Kobyla Góra parish belonged to Ostrzeszów district between 1420 and 1424, but in 1531 it was Silesian.⁶ We do not possess any data from the latter part of the sixteenth century, but in tax registers from 1663 and 1673 Ligota is counted among villages in Poland.⁷ That is why we assumed that also at the end of the sixteenth century it was situated within the borders of the Commonwealth, in Ostrzeszów district.

The authors of the studies on Sieradz Voivodeship have concluded that the parish village Dobrów belonged to Sieradz land in the sixteenth century, as it was in 1357.⁸ Sources from this century say, however, that Dobrów was situated in Konin district of Kalisz Voivodeship, as like in the seventeenth and eighteenth centuries.⁹

In relation to the map of Mazovia, published as an earlier volume of the Atlas, we have made a small revision of the course of the border between Łęczyca and Rawa Voivodeships, east of Kutno. As a result the localization of a border village Bielawki, situated in Gostynin land (in the sixteenth century called Gostyń land) was corrected. However, we have made no changes to the voivodeship border near Brzeziny, which would be required, had we accepted identification of the sixteenth century Bilanowo with Bielanki, accepted by the Zajązkowscy after the publisher of Łaski's *Liber beneficiorum*.¹⁰ Bilanowo, listed as an abandoned village in some of the registers from Brzeziny district in the second half of the seventeenth century, does not appear on the maps from the turn of the eighteenth and nineteenth centuries. Only in the 1827 Table do we find 'Zalesie belanow', placed by Chrzanowski on his map under the same name.¹¹ Our solution was an estimated localization, obtained by combining the Bilanów and Zalesie marks. Additionally, we made no changes in the nearby fragment of the border running between Będzelin in Brzeziny district and Długie and Redzeń villages in Rawa district.

¹¹ Cf. SGKP, vol. 14, p. 332.

Będzelin belonged to Włocławek bishopric; according to the inventory of the bishopric's property from 1598, a public road leading to Lublin determined the property borderline (that is also the voivodeship borderline) here. This road was marked using later cartographical sources.¹² On our map, the border runs only partially along the highroad, and yet we saw no need for a complete alignment as the inventory shows the bishopric's stand on the matter of argument.

The Sieradz – Cracow Voivodeship border near Dąbrowa parish ran a little differently from what is shown on Perthées's map, or on the map of Cracow Voivodeship of the Four-Year *Sejm* (Diet) period: the village Knieja situated near the border belonged to the Voivodeship of Cracow, not Sieradz.¹³ It could be added here, that in 1606 a Bernardine monastery dedicated to St. Ann was erected nearby (now Święta Anna village). It was built exactly on the borderline between the voivodeships and at the same time between Gniezno and Cracow dioceses.¹⁴ The former monastery near the voivodeship border was situated in Mstów. It was located on the site where a few kilometres of the borderline were defined by the River Warta. The Regular Canons Monastery on the left, northern, bank of the river belonged to Sieradz Voivodeship, and the town on the right bank to Cracow Voivodeship.¹⁵

Around Mykanów in Wieluń district the voivodeship border ran along the River Kocinka and its right tributary Sękowica. There was a village Rybna, among others, in Mykanów parish, which belonged partly to Sieradz and partly to Cracow Voivodeship, or more likely: there were two villages of the same name, situated on two banks of the border river, as Perthées's map suggests. The division originating from the political border existing since the thirteenth century was strengthened by different ownership affiliation: Rybna on the Sieradz side constituted a part of the property of Cracow Monastery of the Sisters of St. Clare, and Rybna on the Cracow side belonged to the gentry.¹⁶ This complicated situation caused many mistakes in old tax registers, as well as in historical works.¹⁷

Ryszard Rosin included the uninhabited area on the left bank of the Kocinka (up to Biała Olsza) in Wieluń land, thus connecting Mykanów area with Wąsosze, that is with the core of the Wieluń land.¹⁸ Taking into account the complete lack of settlement in this part of land, and therefore – lack of any source information, such hypothesis is acceptable, though rather for earlier centuries. We believe that our method of border reconstruction provides more reasonable results. As such, we have assumed that the border in the sixteenth century ran as it did in the eighteenth century. Consequently, the areas of Mykanów, Kruszyna and Kłomnice formed an enclave of Wieluń land in Radomsko district.

Having dealt with the voivodeship borders, there remain a few other places worth commenting on, beginning with Wilamów parish (former Wielanów). It was a cause of particular difficulties when it came to establishing the course of state administration borders. Wilamów was situated on the Warta in Sieradz Voivodeship, in the area neighbouring on Łęczyca and Kalisz Voivodeships. All sixteenth century tax registers from Sieradz Voivodeship fail to mention the south-western part of this parish, i.e. several villages appearing in Łaski's *Liber beneficiorum* and in the 1636 visitation. Of these villages Podłużyce is noted in the registers from Konin district in Kalisz Voivodeship.¹⁹ Tax registers of Sieradz district from 1674 and 1676, and of Szadek district from 1662, 1674 and 1676 confirmed that Kozubów, Sarbice and Łęg Wielki (former Wielgiłak) belonged to Szadek district, and Radyczyny to Sieradz district.²⁰

¹⁹ P. Wielkopolska, vol. 1, p. 229; L. Polaszewski, *Własność feudalna*, p. 157.

²⁰ ASK I 74, f. 292, 402, 419v; BCzart, MS 1100 (microfilm in the National Library no. 1856), pp. 216, 221; Zajączkowski, *O kształtowaniu się*, p. 144, counted Kozubów, Sarbice and Radyczyny to Szadek district; Rosin, *Rozwój*, p. 428 placed these three villages and Łęg Wielki in Sieradz district.

Męcka Wola (former Wola Męcka) in Męka parish does not have a definite affiliation to any of the districts. It belonged either to Sieradz or to Szadek district (the former affiliation is more likely). Ostrówek (former Ostrów) in Uników (Unków) parish belonged either to Wieluń or to Sieradz district. Two villages near Wieruszów: Kuźnica Skakawska and Dobrygość were situated either in Wieluń or in Ostrzeszów district.

Apart from the capitals of voivodeships, lands and districts, the residencies of gord starosta's districts – places of great importance in state administration – were also marked on the map. Until the second half of the sixteenth century they were situated only in capitals of lands: Łęczyca, Sieradz, Wieluń, and Ostrzeszów. The small Ostrzeszów district was sometimes treated as a land. In 1557 the *Sejm* (Diet) decided on the establishment of a gord starosta's district in Piotrków, but it was also stated then that the same person would become the starosta for both: Sieradz and Piotrków. Piotrków and Sieradz districts were actually separated in 1569, and the starosta supervising the districts of Piotrków and Radomsko was elected.²¹

The *sejmik* (dietine) of the Łęczyca Voivodeship gathered in Łęczyca.²² The *sejmik* (dietine) of the Sieradz land – the main one, relating to the *Sejm* (Diet) – was held in Szadek. Only the election *sejmik* (dietine), during which the candidates for land offices were selected (chamberlain, judge, sub-udex, and the land court scribe) took place in Sieradz.²³ The Wieluń land *sejmik* (dietine) gathered in Wieluń.²⁴ After the creation of the Crown Tribunal in 1578 the deputy *sejmiks* (dietines) were created as well. Their task was to elect the judges for this tribunal (deputies); in Sieradz land the deputy *sejmik* (dietine) gathered in Sieradz, and from 1598 also in Piotrków. Before 1569 Piotrków was a conventional place for the gathering of the *Sejm* (Diet), and in 1578 it became one of the two seats of the Crown Tribunal (the other seat was Lublin).²⁵

Settlements related in the sixteenth century to castellan offices (titles) were marked on the map. In Łęczyca Voivodeship these were: Łęczyca, Brzeziny and Inowódz, in Sieradz land – Sieradz, Rozprza and Spicymierz, in Wieluń land – Wieluń.²⁶ It is worth adding, that in the hierarchy of lands defined by the established order of the voivodes and castellans in terms of dignity, Sieradz Voivodeship was higher in rank than Łęczyca Voivodeship.

III.2.1.6 CUYAVIA AND DOBRZYŃ LAND

Wiesława Duży

The aim of this chapter is to present the course of state administrative borders in Cuyavia and Dobrzyń land in accordance with the guiding principles of the AHP series. Having adopted the assumption that the lands of the Crown were divided into provinces, one ought to class the analysed area as part of Greater Poland in its broadest sense. Such a classification has a two-fold basis: the borders of this province were shaped by Casimir IV Jagiellon's 1456 statute, and fell within the geographical jurisdiction of the Crown Tribunal in Piotrków, which was established in 1578.¹

In the early Polish state, Cuyavia was probably limited to an area around Kruszwica and was included to Greater Poland, understood broadly. In the twelfth century, its territory might have expanded to include Mazovian borderlands.² In all likelihood, the first Duchy of Cuyavia was created in 1186, and it was ruled by Bolesław, who died in battle in 1195³ and was the son of Mieszko III the Old. Cuyavia found itself also under the rule of Mazovian Duke Konrad I, who came to power approximately in the year 1200, and carved Cuyavia out as a separate duchy for his son Casimir in 1230. Dobrzyń land, which had been part of Mazovia, ceased to belong to this ducal district in 1248, after being incorporated into the Duchy of Cuyavia (a separate duchy since 1287). After the death of Casimir I in 1267, Cuyavia was divided into two ducal districts: Brześć in the south and Inowrocław in the north. In the early fourteenth century, the latter was further divided into Gniewków and Wyszogród (Bydgoszcz) Duchies. These, however, failed to survive long, and perished before the end of the century. Many sections of Cuyavian and Dobrzyń land borders remained volatile for long periods of time.

Part of the analysed area was temporarily ruled by the Teutonic Order as well.⁴ Starting from the first half of the thirteenth century, Cuyavia and Dobrzyń land witnessed the development of a castellany network, which directly impacted the later structure of Cuyavian and Dobrzyń land districts, and which to a certain extent overlapped with district duchy range. Of the thirteen castellanies active in the thirteenth century, five ceased to exist by the first half of the fourteenth century. Other castellanies (save for Słońsk) – Bydgoszcz, Inowrocław, Kruszwica, Włocławek-Brześć, Kowal, Dobrzyń and Rypin – laid the foundation for later starosties (*starostwo*) and districts (*powiat*). Lipno district in Dobrzyń land and Przedecz district in Brześć Voivodeship were exceptions. Part of the former probably fell within Słońsk Castellany from the second half of fourteenth century. The latter probably evolved from the borderlands of Przedecz territory in the second half of the fourteenth century.⁵ The borders of Cuyavia's voivodeships reached their final shape over the fifteenth century, after the merger of Gniewków and Inowrocław Voivodeships, and the end of the wars against the Teutonic Order.

In the sixteenth century, Cuyavia was divided into two voivodeships: Brześć and Inowrocław. Lower-rank administrative division units were called districts (*powiaty*) in both Cuyavia and Dobrzyń land. Cuyavia and Dobrzyń land differed, though, as the latter did not establish the office of voivode.

This calls for an explanation of the status held by Dobrzyń land. It is still open to debate whether Dobrzyń land was equal in standing to other voivodeships of the Crown, or whether it formed part of Inowrocław Voivodeship.⁶ Titles are of little help here, as sixteenth-century sources used *terra* to denote not only Dobrzyń land, but also the Cuyavian voivodeships of Brześć and Inowrocław. For example, in the first half of the sixteenth century, both Cuyavian voivodeships were referred to as *terras* (in 1507 Gębice was situated ‘in terra Juniwladislaviensi’,⁷ in 1524 Płowce lay ‘in terra Brzestensi et districtu Radzieoviensi’,⁸ and in 1525 Niemowejko was located ‘in terra Juniwladislaviensi’⁹). Selected sources dating to the second half of the sixteenth century describe Cuyavia in its entirety as a *terra*, sometimes disregarding the division into voivodeships. Let us look at some interesting examples. The first such mention concerns the abandoned village of Pniewy ‘in terra Cuiaviensi et palatinatu Brzestensi’. In 1552, Pniewy was granted for life-long use to Inowrocław Chamberlain Mikołaj Trzebuchowski of Roszki.¹⁰ It is referred to again in 1554, when it was bestowed as ‘fundum seu hereditatem snostram [sic!] desertam Pniewy dictam in pallatinatu et capitaneatu Brzestensi sittam’.¹¹ Another example is that of the 1564 annotation about the royal villages of Świętosławice, Sarnowo, and Skaszyn being situated ‘in terra Cuiaviae et districtu Predecensi’.¹² In 1566, Gniewków was mentioned to lie ‘in terra Cuiavie et districtu Juniwladislaviensi’,¹³ and in 1569 – ‘in terra et districtu Juniwladislaviensi’.¹⁴ Still, the indicated chronological division is not a rigid one, as proven by a 1552 record locating Tupadły Village ‘in terra et districtu Juniwladislaviensi’.¹⁵ It ought to be added that *terra* also designated territorial units less independent than Cuyavia and Dobrzyń land. For example, the hierarchy of administrative divisions would class Wschowa closer to a district rather than a voivodeship. However, the analysed sources show that using the term *terra* did not rule out calling Wschowa Land a *districtus*.¹⁶ Dobrzyń land was an independent administrative unit with a full hierarchy of administrative offices (save for the office of voivode), active land courts and a separate dietine (*sejmik*) of Dobrzyń land nobility. We therefore class Dobrzyń land at a par with other voivodeships.¹⁷

Cuyavia and Dobrzyń land did not border other sovereignties, hence the absence of a state border on the main map. The border with the Duchy of Prussia ran about 6 km from the north-eastern tip of Dobrzyń land. However, it was Royal Prussia, not Dobrzyń land, that bordered on Mazovia, thus the state border bypassed our area of interest. All outer borders of Cuyavia and Dobrzyń land were voivodeship borders.

The border between Cuyavia and Dobrzyń land ran along the Vistula, with some minor departures. The most prominent discrepancies are noted in Nieszawa Town area (**Nowa Nieszewa, r**) of Lipno district in Dobrzyń land, situated on the left bank of Vistula River. Both Cuyavian voivodeships (Brześć and Inowrocław) shared a border with Kalisz Voivodeship of Greater Poland in the west. To the north, Inowrocław bordered on Pomerania Voivodeship in Royal Prussia. In the south, Brześć Voivodeship adjoined Łęczyca and Rawa Voivodeships. Dobrzyń land shared its northern border with Chełmno Voivodeship in Royal Prussia, and its eastern one with Płock Voivodeship of Mazovia. Most of Cuyavia’s and Dobrzyń land’s outer voivodeship borders have been discussed in previous AHP

volumes. They do not require revision. Still, it is worth recalling relevant findings made to date and providing more detail.

The Cuyavia-Greater Poland border between Inowrocław and Kalisz Voivodeships ran from Mąkowsko and Hamer (situated in Greater Poland) along numerous lakes, and Płytwica and Noteć Rivers. At this point, some information about the course of the Noteć near Pakość needs to be added. It cannot be excluded that this issue exerted influence on border shifts in this very area, which I discuss below. The Pakość town square was placed on an island separating the distributaries of the bifurcating Noteć River. Today, the riverbed is situated to the east of the square, but the UMTB shows a canal passing by the square on the west (Blatt 1651). Confirming this information in other cartographic sources poses significant difficulties. A Noteć canal or distributary is not found on Schrötter, although one may infer the existence of a bifurcation just upstream of Pakość. Henryk Münch's reproduction of the 1836 Pakość town plan also does not suffice for reconstructing the canal's course. Nevertheless, it is worth noting the area to the west of the chartered city, between Pakość and Ludkowa Village, where the Ludkowa Meadow wetlands are marked.¹⁸ It is highly likely that changes to land development, erosion of the town's smaller island and disappearance of a Noteć distributary were brought about by agricultural land improvements made in the 1860s.¹⁹

Coming back to the Cuyavia-Greater Poland border, its next section passed along Trląg Lake and Kwieciszówka River for about 150 km, all the way to the vicinity of Kwieciszewo. The border shared by Brześć and Kalisz Voivodeships started there and ran to the north-east for about 80 km, to the vicinity of Brdów in Greater Poland, Psary Village at the southern tip of Modzerowo Lake, and Korzecznik Village and the lake bearing the same name.²⁰ The border with Łęczyca Voivodeship was short, approx. 50 km. First, it ran to the south-east from Przedecz to Łążek Village, and then slightly to the north-east to the River Ochnia.²¹ The nearby wetlands mark the end of the Cuyavia-Łęczyca border, and the starting point of the Cuyavia-Mazovia border. Here, Cuyavia borders Rawa Voivodeship. The border runs to the north-east, to Białotarczek Village, Trzebowo Lake, and further on to the Vistula, parallel to the Mazovian lands held by the Płock Norbertine Monastery²² on the banks of Soczewka Lake and Skrwa River.

The already mentioned Greater Polish settlement, Hamer, marked the outset of the Cuyavia-Prussia border. This short section passed along the River Brda (up to the vicinity of the Prussian Suski Młyn settlement), meandered through a strip of woodlands to Struga Graniczna, the border river with Prussia, and probably ran further on to Kołomierzycza River near Nieciszewo Village. Next, the border turned towards the south-east, surrounding the villages held by Koronowo Cistercians: Trzeciewiec (Cietrzewiec, c) and Włóki (c), all the way to the Vistula. The last section of the Cuyavian-Prussian border passed along the Vistula, and turned into the border with Dobrzyń land upriver of Toruń, between Kaszczorek and Złotoryja.²³

The border between Cuyavia and Chełmno Land ran along the Vistula, and divided the numerous overgrown islands of this river section. Traditionally, a large part of the islands was held by Fordon²⁴ and Toruń, in line with the medieval land grants made to the Teutonic Order.²⁵ The further section of the border, which passes along the Vistula, between Cuyavia and Dobrzyń land – was determined *i.a.* as a result of court disputes. Let us look at an example. In 1545, Sigismund Augustus approved a verdict issued by a committee ruling on how the Vistula should be divided between Bobrowniki (r) in Dobrzyń land, and Kucierz Village (c) held by the Włocławek Chapter and situated on the Cuyavian bank. Still, the case was not closed until a few years later.²⁶

Almost the whole border between Dobrzyń land and Royal Prussia passes along rivers. The River Drwęca outlines a long section of this border – from Złotoryja up to the north of Radziki Małe, Łapinózek (Łapinos Mały, n) and Łapinóż (Łapinos Wielki, n) Villages. Rypienica, a tributary of Drwęca, marked the next section of the Dobrzyń land-Prussia border. The border overlapped with Rypienica only for a short while, as the River Pisa took over at Łapinózek Village. The next section set out west of Księża and Gołkowo, and passed through the set of Górzno property held by the bishop of Płock. It circled Grażawy Village and ran further on to Brynica River towards the east, up to Wkra River.

Within Cuyavia, the border between Brześć and Inowrocław Voivodeships started to the west of Łąkie Village (see below) and ran towards the northern tip of Gopło Lake, and then on to Bachorze marshes and muds, to Sędzino and Koczkowo Villages near the headwaters of Bachorza River.²⁷ The next section shot up to the north, and meandered between Cuyavian and Dobrzyń land settlements. Near Starogrąbie Village, at the south boundary of the primeval Gniewków Forest, the border turned to the east. The border continued to meander across different settlements, until it reached its end near Nieszawa (Nowa Nieszawa, r), which fell within the administrative boundaries of Dobrzyń land, even though it lay on the left bank of the Vistula.

The administrative affiliation of several border settlements in particular requires further comment.

In his paper on ownership in Cuyavia, Zenon Guldon argued that **Górki Górne (Górki, n)**, a village of Białotarsk Parish (Białotarczek, c) was situated within Kowal district in the Brześć Voivodeship of Cuyavia.²⁸ Work on AHP Mazovia had led to questioning Guldon's findings, and to claiming that the village was administratively affiliated with Gostynin district of Rawa Voivodeship in Mazovia.²⁹ It follows from extant sources that Górki paid some tributes to both voivodeships. On the main map, thus, the border reflects this double affiliation.

The Cuyavian village of **Łąkie** held by the Norbertine Monastery in Strzelno found itself in a similar position. Based on numerous Cuyavian tax registers, we determined that the administrative affiliation of this settlement was also double in its nature. Dual administrative affiliation is suggested already by the 1489 land tax register, which clearly states that half of Łąkie paid tax to Kruszwica district, and the other half – to Inowrocław district.³⁰ Two-fold affiliation was determined only after we ascertained that Łąkie was taxed by both Kruszwica district in Brześć Voivodeship in Ostrów Parish, and Inowrocław district of Inowrocław Voivodeship in Rządkwini Parish. Łąkie's bifold affiliation is confirmed by 1553, 1577, 1581, 1582 and 1583 registers of the two parishes (Rządkwini and Ostrów).³¹ In years when Łąkie appears in the records of just one parish, the number of taxed lans was always lower than in those registers which stipulated the tax paid on both village parts. The entry for 1570 is an exception to this rule: tax on eleven serf lans was paid only to Rządkwini Parish in Inowrocław district.³² Several registers took note of tax paid by Łąkie only in one parish. Łąkie was classified as a village belonging to Rządkwini Parish in 1552, 1563, 1564, 1565, 1570, 1573 and 1576.³³ Łąkie fell solely within Ostrów Parish in 1557, 1567, 1579, 1580 and 1589.³⁴ So as to reflect this situation, the main map shows that Łąkie is a village situated on the border shared by Brześć and Inowrocław Voivodeships.

Łąkie is not the only proof that the formation of the border between Inowrocław and Brześć Voivodeships was a process. **Strzelno** is another case in point. The same 1489 land tax register states that this small town paid tax on both its parts – that belonging to Kruszwica district and that forming part of Inowrocław district.³⁵ Tax registers dating to the second half of the sixteenth century consistently

class Strzelno as the property of the Norbertine Monastery in Strzelno, and take note of the taxes paid to Kruszwica district in Brześć Voivodeship.

These are not isolated cases. Administrative affiliation and border lines were also gradually established near the town of **Przedecz**.³⁶ Part of Przedecz Gord Starosty (incl. Kłodawa) was situated within Łęczyca Voivodeship.³⁷ Royal property inspections confirm this statement by listing Przedecz as one of the royal estates in Łęczyca, not Brześć.³⁸ Although the town was chartered under German law around the middle of the fourteenth century, the 1489 land tax inspection refers to Przedecz as *Wola Parzysz* in Boniewo Parish in Brześć Voivodeship in Cuyavia.³⁹ From the second half of the sixteenth century onwards, tax registers consistently classify Przedecz as a town with its own parish, founded in Brześć Voivodeship.

The vicinity of **Pakość** also became the stage for shifts in voivodeship borders between the fourteenth and sixteenth century. In this case, sources note an administrative affiliation change from Gniezno district in Kalisz Voivodeship to Inowrocław district in Inowrocław Voivodeship. There is some ambiguity about the Cuyavia-Greater Poland border in this area. When the town was chartered under German law in 1359, it was stipulated that the settlement be established ‘in fundo sue ville Pakoscz in terra Cuyaviensi situuate’.⁴⁰ Pakość, however, is not to be found in the 1489 land tax register for Brześć and Inowrocław Voivodeships. In 1512, however, the settlement appeared in the list of Cuyavian towns where Brześć burghers were exempt from customs.⁴¹ Sources fail to elucidate the matter, as files from 1520 on the case of Anna Krotowska of Kościelec and her dowry state that Pakość was a town (*oppidum*) situated in Gniezno district of Greater Poland. The same dowry encompassed numerous estates in Inowrocław and Gniezno districts, in part also in Pakość.⁴² The 1534 and 1535 tax registers noted that Pakość paid municipal property tax in Gniezno district.⁴³ Nevertheless, court books from the 1540s provide information on its affiliation with Inowrocław district of Cuyavia.⁴⁴ Some entries suggest that in 1541, at the request of the town’s owner, King Sigismund Augustus moved Pakość to Inowrocław Voivodeship.⁴⁵

Mieszczk (n) is an interesting example of a locality straddling two voivodeships and the Skrwa River. This settlement is mentioned in sources made in both Rypin district in Dobrzyń land, and Sierpc district in Płock Voivodeship. We placed two points on the main map for Mieszczk to differentiate between different settlement types: the Mieszczk of Dobrzyń land is a village held by nobility, recorded in all Rypin district tax registers dating to the second half of the sixteenth century. The village had an inn, but a mill was not mentioned. Masovian Mieszczk was a mill settlement with a hereditary mill. Both settlement names shared the same parochial affiliation—they belonged to Sierpc Parish (Sieprc, n), hence the presumption that Mieszczk could have been divided into two separate units. Still, it is infeasible to determine whether and when exactly such a division could have been introduced; the matter is resolved by neither the information gathered in the *Historical and Geographical Dictionary of Płock Voivodeship in the Middle Ages* (SGH Płock), nor Adam Wolff’s files containing SGH Płock materials. Czaykowski enumerates two separate localities.⁴⁶

Information on voivodeship borders is complete with a discussion of **Mirosławice** Village, an exclave of Gniezno district (Kalisz Voivodeship) situated in Kruszwica district of Brześć Voivodeship. Mirosławice was mentioned in Gniezno district tax registers dating to the second half of the sixteenth century. On this basis, we identified this village as part of the Gniezno district administrative structure.⁴⁷

Cuyavian and Dobrzyń land lower-rank administrative divisions were more complex. District borders were of much less formal nature, and less often overlapped with natural environment features. As a result, the administrative affiliation of some settlements was volatile or difficult to determine clearly on the basis of available sources.

One such example is **Arciszewo** (n) in Cuyavia. In the fifteenth century, inspectors registered two noble-held demesnes, Arciszewo Lasota and Arciszewo Krczonka, in Brześć district.⁴⁸ Next, the 1531 tax register lists Arciszewo Rozdziałowe and Arciszewo Pagowe as property held by the serfless gentry of Przedecz district.⁴⁹ Over subsequent years, the situation became even more complicated. The 1539 tax register recorded Arciszewo as part of Boniewo Parish in Brześć district, and Arciszewo Rozdziałowe in the census of serfless gentry in Przedecz district.⁵⁰ Later, the 1553 register notes that tax was paid in two instalments, and both payments are accompanied by information that Arciszewo formed part of Boniewo Parish in Brześć district;⁵¹ the 1557 register confirms this administrative affiliation.⁵² However, only a decade later, the 1567 tax register enumerates two settlements, Arciszewo Rozdziałowe and Arciszewo Długoszowe, in the list of serfless gentry in Przedecz district.⁵³ The 1577 register reflects the same state of affairs.⁵⁴ Yet two years later, when the next register was made, Arciszewo Rozdziałowe and Arciszewo Długoszowe were assigned to Boniewo Parish in Brześć district, only to return to the list of serfless gentry in Przedecz district in 1580, 1581, 1582, 1583, and 1589.⁵⁵ In the second half of the seventeenth century, both Brześć and Przedecz district registers listed Arciszewo Rozdziałowe and Arciszewo Długoszowe. It was only in 1673 the latter was entered into the Brześć district register as *deserta*, and the tax was paid on the Arciszewo Długoszowe assigned to Przedecz district. Arciszewo Rozdziałowe was in a reverse position: it paid tax to Brześć district, and was listed as 'abandoned' in the Przedecz register.⁵⁶ A few references in post-visitation reports may suggest that these settlements enjoyed a small degree of independence. Eighteenth-century visitations refer to the villages of Arciszewo Maior and Arciszewo Minor, which renders their identification more troublesome.⁵⁷ The 1779 visitation sheds some new light on this matter, as it contains information on 'Wolka Paruszevska cum Jarciszewo Długoszowe deserta' and 'Jarciszewo Rozdziałowe villa.'⁵⁸ Czaykowski's 1783 *Regestr* and Perthées's map place Arciszewo in Brześć district.⁵⁹ The analysed sources covering the sixteenth century do not suffice to settle the issue of administrative affiliation, as it seems that the serfless gentry listed in the register lobbied in favour of the village being assigned to one of the districts. Later sources provide only a partial elucidation. Already in the eighteenth century, they class both villages as part of Brześć district. Devoid of unambiguous information in the second half of the sixteenth century, we assumed that the main map should show both said villages on the border shared by Brześć and Przedecz districts, with the Index reflecting alternative affiliations to Brześć or Przedecz district. This decision is backed by several arguments. First, the fact that the villages were entered into registers of serfless gentry. Second, eighteenth-century records clearly assigned the villages to Brześć district. The third reason behind this conclusion impacts the nature of this settlement's location. As mentioned above, one of the analysed villages was registered as Arciszewo Pagowe in the 1530s. Pagowo

appeared twice in the 1630s as a separate locality, independent of Arciszewo. The 1634 hearth tax register referred to this settlement as Pągowo Grodzkiy in Zgłowiączka Parish,⁶⁰ and the 1639 visitation – as Pągowo in Boniewo Parish.⁶¹ The latter constituted the last mention of this sort. Owing to the nature of the 1639 source, we should assume the parochial affiliation stated therein to be correct, and dismiss the location indicated in the hearth tax register as the effect of accepting payment from Grodzki (from Grójec?). One might suppose that Pągowo once constituted one of the two Arciszewo villages, and became independent for a short period of the seventeenth century. Pągowo's independence is indicated by the name of the settlement, as well as the information provided in Gilly, where Pągowo neighbours on Arciszewo from the north. This is the only mention of this locality identified in cartographic material. Pągowo was probably connected with Arciszewo Długoszowe, as the analysed source mentions make us consider this village to be equivalent with Arciszewo Pągowe. It follows from a later (1779) visitation that Arciszewo Długoszowe became deserted. As a result, one may assume that Arciszewo Demesne, visible in the WIG map, is tantamount to Arciszewo Rozdziałowe. Arciszewo Demesne (as the only settlement of this name) was entered into Table 1827.⁶² Arciszewo Długoszowe (Pągowe) can be identified based on Perthées's map, however, the map fails to provide a precise location. Pągowo was also discerned, since an independent settlement was recorded under this name for a short while. As Pągowo is only mentioned in the years 1634–1639, it was not included in the main map.

A group of settlements on the border of the Cuyavian districts of Brześć and Radziejów can be held up as another example of administrative affiliation changes. In all likelihood, irregular shifts occurred near Drwalewo, Faliszewo, Powalkowice Wielkie, Powalkowice Małe, Sadług, Sadłużek and Torzewo in the seventeenth century. The 1489 land tax inspection registered six of those villages (save for Drwalewo) as part of Radziejów district in Witowo Parish.⁶³ Tax registers dating to the second half of the sixteenth century carry all these villages under Brześć district. The district border is marked on the main map in line with those records. The 1634 hearth tax register lists Faliszewo and Drwalewo under Radziejów district, and the rest of the villages as part of Brześć district.⁶⁴ Further fluctuations took place in the seventeenth and eighteenth centuries; the above listed villages were more often classed as units of Radziejów district.⁶⁵ The borders in Perthées's map place all these villages in Radziejów district.

Gąska and Tornuczka were two mills that operated in the discussed area. Both were listed in the 1598 visitation to Witowo Parish. These mills may be considered equivalent to the nameless mills listed in tax registers covering Sadług and Sadłużek Villages. Two nameless mills also appear in later visitations to Sadług, Sadłużek and Faliszewo. Their parochial affiliation formed the basis for establishing their administrative affiliation with Brześć district.

Jarantowice and Jarantowiczki are in an analogous position. In 1489, these villages were registered with Radziejów district,⁶⁶ but tax registers dating to the second half of the sixteenth century place them in Brześć district. In the seventeenth century, both villages had the same administrative affiliation.⁶⁷ Similar changes in administrative affiliation between Radziejów and Brześć districts were observed for Borek Village (c, Orle Parish), which the 1634 hearth tax register classed as part of Radziejów district, although earlier sources assign them to Brześć district. Nagórki and Szalonki, assigned to Radziejów district in the 1489 land tax register, formed part of Brześć district in later sources.⁶⁸ Doubts concerning the administrative affiliation of Wola Zagajkowa resulted in assigning this village to Brześć district. The 1489 land tax register and Perthées's map class Wola Zagajkowa as a unit of Radziejów district.

⁶⁸ Lustracja 1489, p. 136; for more on Szalonki Village cf. Z. Guldon *Osadnictwo powiatu radziejowskiego*, p. 250, where the author assigns this village to Radziejów district.

This village is listed in the 1531 tax register – in a deleted entry – under Brześć district, where it is placed by the 1673–1674 register as well.⁶⁹

Several mills marked the course of district borders. One was situated in Orle and entered into 1531–1557 registers as part of Brześć district, although **Orle Village** (c) lay in Radziejów district.⁷⁰ We identified three mills on the border shared by Brześć and Przedecz districts, which were classed as part of Brześć district: the mill in Ryn Village (n) is listed under Brześć district in 1531–1557 registers,⁷¹ despite the fact that the village belongs to Przedecz district; the mills in Kołatki (n) and Kucice (n) Villages mentioned in the 1557 register appear in Brześć district, while Kołatki mill settlement and Kucice Village appear in registers dating to the second half of the sixteenth century as part of Przedecz district.⁷²

Between Kowal and Brześć districts, the border witnessed changes *i.a.* near **Lutoborz Village**.⁷³ The 1489 land tax register lists this village under Kowal district, yet tax registers dating to the second half of the sixteenth century place Lutoborz in Brześć district. It follows from the 1634 hearth tax register that Lutoborz was divided into two units of ownership: one in Kowal district, one in Brześć district. Other seventeenth- and eighteenth-century materials, including Perthées's map, place Lutoborz in Kowal district.⁷⁴ Owing to the administrative affiliation indicated in tax registers, the main map presents the village in Brześć district.

Determining administrative affiliation, and thus outlining borders in the second half of the sixteenth century, is sometimes complicated not only due to changes in legal status, but also owing to how individual localities were recorded in the sources we analysed. To give an example: 1577–1589 tax registers (save for the 1579 register) place **Nakonowski Młyn (Mill)** in Kowal district. This record can be found at the end of an entry about Kłótno Parish. At the same time, other sources assigned the mill to Nakonowo Village in Brześć district.⁷⁵ It is highly likely that Nakonowski Młyn was in fact the mill in Nakonowo, which is confirmed by the 1579 tax register.⁷⁶ Its entry on Nakonowo in Brześć district mentions a mill with two wheels – identical to the one placed in Nakonowski Młyn by other sources. At the same time, the entries made to the 1579 register on Kowal district do not contain any mention of Nakonowski Młyn. Nakonowo Village and its mill are also referred to in the 1639 visitation.⁷⁷ Later cartographic sources clearly stipulate that the Nakonowo mill did not constitute a separate spatial unit. Therefore, contrary to tax registers, the mill should be assigned to Nakonowo Village in Brześć district, and register entries ought to be construed as the effect of the mill being leased by a taxpayer residing in Kowal district.

Żórawice is another example of a village whose existence is insufficiently founded in source information. This locality was listed under Kowal district (in Wola Pierowa Parish) in 1577, 1580–1583, and 1589 tax registers as a village with *hortulani* (smallholders) and a windmill.⁷⁸ It ought to be assumed that the village fell prey to an error upon its entering into Kowal district records, and the data presented in Kowal sources refer to Żórawice Village in Przedecz district, Chodzież Parish, as this settlement appears in later tax registers and Church sources.⁷⁹ In registers dating to the second half of the sixteenth century, Żórawice in Przedecz district is mentioned only once in the 1579 register.⁸⁰ A village bearing this name is absent from the same source, which covers villages of Kowal district.

⁸⁰ ASK I 29, f. 485.

On this basis, we decided to draw the border between the districts, and to include Żórawice Village in Przedecz district.

Further doubts fuelled by ambiguous source data arise in the case of **Grażawy**, a settlement situated in the Dobrzyń land-Prussia borderlands. In keeping with the findings of Zenon Guldon and Jan Powierski, the village was chartered under German law in 1322. It served as the seat of the parish in Rypin Deanery established in the 1330s. In the early fifteenth century, the area where this village was situated (along with other neighbouring villages held by the Bishop of Płock) was referred to as the Teutonic Order's territory, which is probably the effect of some confusion in the past. At the beginning of the fourteenth century, the Teutonic Order received 200 lans in this village, but later on it was revealed that the village was the property of the Płock Bishop (and formed part of the Górzno set of property). To resolve the dispute, the Teutonic Order received rent from an identical surface of arable land in Księża Village.⁸¹ Sixteenth-century tax registers of Dobrzyń land do not mention Grażawy. The village is also absent from the 1570 Prussian tax register covering Michałów. In MRP, Marian Biskup emphasizes that Łaszewo Village of Michałów belonged to Grażawy Parish situated in Dobrzyń land.⁸² Guldon does not count Grażawy as an element of the Górzno set of property, a list which he formulated based on the 1595 inventory of assets held by the Płock Bishop. Guldon states that Grażawy (and other villages) belonged to Rypin Deanery only between 1506–1510.⁸³ Nevertheless, Grażawy Village (of Grażawy Parish) was mentioned in the 1597 visitation, which gives information on an abandoned church in a village of Rypin Deanery. By 1618, the church had been already staffed.⁸⁴ The village appears in the 1662 hearth tax register of Rypin district, and is placed in Księża Parish. The entry, however, is not clear – not only because a parish had been functioning earlier in Grażawy, but also because it was the only village listed under Księża Parish.⁸⁵ Perhaps this entry should be construed as information on a bishop's village added by the writer to a form created on the basis of earlier forms which had not contained mention of Grażawy. The village can be found in 1673 and 1674 poll tax registers,⁸⁶ whereby the latter source contains the annotation *Jankowo seu Grażawy* – despite the fact that only a year before Grażawy and Jankowo were listed separately, similarly as in the 1662 hearth tax register.⁸⁷ All in all, owing to its repetitive recording in fiscal sources, we decided to place Grażawy Village within the borders of Dobrzyń land in Rypin district.⁸⁸

The mereology of individual borderland localities is one more factor influencing the course of territorial administration borders in the second half of the sixteenth century. Let us illustrate this meronymic relation with the example of the village (or part of the village) **Wilkowia** situated near two villages: Mysłakowo in Lipno district and Mysłakówko in Dobrzyń district in Dobrzyń land. Initially, Wilkowia was a separate village. Next, it became part of one of these two other villages. Still, it is infeasible to determine when it ceased to be a separate locality. Therefore, we class it as a settlement belonging to the Mysłakowski family.⁸⁹ Antoni Biliński states that, at least in the years 1564–1568, Wojciech Mysłakowski Świeszek was heir to Wilkowia. Biliński adds that he was 'heir to a part of Mysłakówek, that was called Wilkowja', but Wilkowia Village does not appear in tax registers dating to the second half of the sixteenth century. Biliński further informs that Wilkowia belonged to Ligowo Parish in Lipno district.⁹⁰ The 1609 visitation confirms such parochial affiliation of Wilkowia, as it lists the village under 'Villae Parochiales in Ereptione originali contentae', along with Mysłakowo.⁹¹

⁹⁰ A. Biliński, *Szlachta Ziemi Dobrzyńskiej za ostatnich Jagiellonów. Studium historyczno-heraldyczne*, comp. Z. Wdowi-szewski, Warszawa 1932, pp. 116–117.

⁹¹ ADP, sign. 6, Akta wizytacji z 1609, p. 345.

The problem lies in the fact that the same visitation lists both villages also as localities affiliated with Tłuchowo Parish.⁹² Conversely, Mysłakówko is absent from both entries on these parochial villages, but is carried in Dobrzyń district tax registers under Tłuchowo Parish. It could be that Mysłakówko and Wilkowiec should be considered to constitute one settlement (*i.e.* one should go beyond stressing their meronymic interdependency). Still, this approach is not confirmable, as both names could have been used in the sixteenth and seventeenth centuries, should one adopt Biliński's findings. Thus, the decision was made in favour of Wilkowiec's independence. The border passes between Lipno and Dobrzyń districts, encircling the village within Dobrzyń district – as indicated by information on the administrative affiliation of Mysłakówko.

The main map shows the capitals of both Cuyavian voivodeships (Brześć and Inowrocław) and Dobrzyń land (Dobrzyń), as well as the capitals of fiscal districts. In Brześć Voivodeship these were Brześć, Kowal, Kruszwica, Przedecz, Radziejów, and in Inowrocław Voivodeship: Bydgoszcz and Inowrocław. The map also presents the following as seats of Dobrzyń land districts: Dobrzyń (also capital of Dobrzyń land), Lipno, and Rypin. We also marked the **seats of gord starostas** on the main map. Cuyavia also had cities which served as district seats: Brześć, Kowal, Kruszwica, Przedecz, Radziejów, Bydgoszcz, and Inowrocław. The seat of the gord starosta situated in Dobrzyń land and covering all of Dobrzyń land was situated in Bobrowniki, and the seats of Dobrzyń fiscal districts doubled as seats of non-gord starostas.

Cuyavian **land dietines** (*sejmik ziemski*) convened in Radziejów.⁹³ Lipno was where the Dobrzyń land dietine gathered.⁹⁴ This information is presented on the main map. The main map also marks the **seats of castellans**. As determined by senatorial precedence, these were (starting with the most important): the greater castellans of Brześć and Inowrocław, and the minor castellans of Dobrzyń, Bydgoszcz, Kruszwica, Kowal, Rypin, and Słońsk. Naturally, the voivodes of Brześć and Inowrocław sat on the Senate.⁹⁵

The dietine passed constitutions to specify where the nobility was to **present its readiness to serve** (*okazowanie szlachty*). In the case of Cuyavia, these acts of law regularly sent the nobility to the voivodeship capitals of Brześć and Inowrocław. Inspections of Dobrzyń nobility were carried out in Lipno.⁹⁶

Map 1. Gord starosties in Cuyavia and Dobrzyń land in the second half of the 16th century

III.2.1.7 MAZOVIA

Anna Dunin-Wąsowiczowa

In the sixteenth century the territory of Mazovia was divided into three voivodeships, which differed significantly in size. The voivodeships formed as a result of the gradual incorporation of Mazovian duchies to the Crown. Some lands were created earlier, as a result of the political division of ducal Mazovia and the organization of land courts of the nobility in the fourteenth century. Districts (*powiats*), i.e. smaller judicial units emerged in almost every land of Mazovia. High fragmentation of lands and districts, caused by the long-lasting political autonomy, numerous divisions into small ducal districts, and – above all – by the growing number of petty gentry, remained the characteristic feature of Mazovia.

Apart from their role in the judiciary system, districts also constituted an important part of the fiscal structure, as centres for the collection of state taxes and administration, e.g. for calling the general levy (*pospolite ruszenie*). The population of royal and Church estates did not come under the authority of land courts, yet it benefited from other functions of the districts, thus contributing to the consolidation of their territory and boundaries.¹ In the second half of the sixteenth century, the borders of the districts had usually already been stabilized, and any change required the king's decree. Certain extraterritoriality of areas dominated by the Church or royal property (e.g. Zagajnica Forest) was probably the result of the original, judicial character of districts. Church estates were granted judicial immunity. For instance, the estates of the archbishop of Gniezno in Rawa Voivodeship were listed in tax registers among lands, not districts.²

Tax registers, when possible verified against other sources, comprised the general basis for the reconstruction of the course of voivodeship, land and district borders.

Range and – hypothetical – linear boundaries of the smallest unit of Church administration, parishes, served as a starting point for the reconstruction of the administrative borders, both Church and State, on the map of Mazovia in the sixteenth century.

Two types of sources were used during the reconstruction of parochial borders: sources of Church origin in the first place (parish visitations, parish foundation documents, etc.), and fiscal sources, in which taxes were registered in the following pattern: voivodeship, land, district, parish.³

Even though the general outline of the parochial network in Mazovia had already been formed in the course of the fifteenth century,⁴ in the sixteenth century the development continued. It can be

¹ Wolff, p. 11–16; A. Gąsiorowski, *Powiat w Wielkopolsce XIV–XVI w.*, Poznań 1965 (Prace Komisji Historycznej PTPN, vol. 21, no. 2), reviewed by T. Lalik, KH, 1966, no. 3, pp. 703–706; J. Bardach, *Powiat w Polsce późnośredniowiecznej*, CPH, vol. 19, 1967, no. 2, pp. 142–143.

² Introducing the more general comparative material, we should emphasize that since the middle of the sixteenth century one can discern a general trend in the Republic's legislation to stabilize and revise the borders, starting from State borders (cf. VL, vol. 2, f. 596, §30), and finishing with district borders. It is also worth emphasizing that in 1589, when the district borders of Braclaw district were being defined, it was clearly stated that the border encompassed both: royal estates and the estates of the nobility (VL, vol. 2, p. 371).

³ Apart from the generally known tax registers, there survived a register of Warsaw land from 1563 mentioning the parochial arrangement, ASK O I 27, f. 208.

⁴ A. Dunin-Wąsowicz, K. Pacuski, W. Pałucki, H. Rutkowski, *Problèmes de l'histoire de l'Église dans l'Atlas Historique de la Pologne du XVI siècle sur l'exemple de la Mazovie*, in: Colloque de Varsovie, 27-29 octobre 1971, sur la cartographie et l'histoire socio-religieuse de l'Europe jusqu'à la fin du XVIIe siècle, Louvain 1974 (Bibliothèque de la Revue d'Histoire Ecclésiastique, 61).

seen in the increase of the number of parochial churches, particularly in the areas of newer settlement, still undergoing colonization and organization. Therefore the fiscal sources had to be used in a critical manner during the reconstruction of parochial borders. For some regions the parochial visitations from the sixteenth century are incomplete, thus we had to resort to retrogression in order to reconstruct the range of a given parish.

An obvious advantage of having fiscal sources is the fact that they encompass the entire territory of our interest, but they require a more critical approach to their credibility. Additionally, the data they provided had to be updated with information regarding the foundation of new parochial churches, as the collectors usually copied the pattern from old book forms, which depicted the state from the beginning of the sixteenth century, omitting parishes erected in the meantime. Also, the registers often grouped settlements belonging to the king or the Church in keys of property within the entire district of the county or even the land, without specifying their parochial affiliation. Similar cases had to be verified against later materials: fiscal sources from the seventeenth century (hearth and poll tax) and the eighteenth century (hearth tax rates from 1789–1790), and Church sources from the eighteenth century.⁵ Moreover, as the parochial network of Mazovia survived almost unchanged until the second half of the nineteenth century, we sometimes resorted to cartographic sources and dictionaries from the nineteenth century.⁶ In case of further doubts, we signed the parochial affiliation in the List of settlements with an alternative: *par.x* or *par.y*.

The parochial borders were interpolated after the settlements, which belonged to a given parish in the sixteenth century, were determined and marked on the map at a scale of 1:100,000. In the cases of areas uninhabited in the sixteenth century situated between two or more parishes, a schematic borderline was controlled against the forest range marked on old cartographic records from the eighteenth–nineteenth century, and the parochial affiliation of settlements founded between the seventeenth and the nineteenth century, assuming they were subject to the parochial law of the Church, to which the area where they were erected had belonged in the past. The hypothetical sixteenth century border was compared with modern borders of communes and communities (*gromada*), with which it was identified in justified cases.

The higher-rank borders of Church administration (deaneries, archdeaconries and dioceses), as well as borders of districts, lands, and the voivodeship were determined on the basis of parochial borders marked at a scale of 1:100,000. District affiliation of individual settlements situated near the border was thoroughly checked, especially when the parish was divided between several units of State administration.

The main framework of Mazovian district division was accepted as a legacy of the ducal period. The changes, which occurred in the sixteenth century, only concerned the isolation of four new districts (of Sierpc around 1538, of Garwolin in 1539, of Radziłów in 1548, and of Serock in 1567), which however did not fulfil any fiscal role during the entire sixteenth century, apart from the district of Serock, where tax was exceptionally collected in 1591 and distinguished in the lan tax register from the taxes collected in the districts of Zakroczym and Nowe Miasto. It should also be mentioned that Biała district in Rawa Mazowiecka Voivodeship fulfilled probably only a fiscal role and played no part in tax recording in the sixteenth century, in contrast to the districts of Gąbin and Mszczonów, which appeared (although rarely and inconsistently) in register forms of the lands of Gostynin and Sochaczew in the examined period.

The example of the sixteenth century Mazovia shows us that the relation between a district and royal or Church estates was closer in areas, where the settlement was older, as well as in districts which had a longer tradition. Tax registers are quite consistent in their division of the estates of Płock bishopric and royal estates of this territory – which had a long settlement history – between the districts of Nur and Kamieniec. And likewise – we encountered severe difficulties while reconstructing district borders, resulting from various discrepancies in the data recorded in different types of sources concerning district affiliation of settlements situated in the borderlands of the newly-created districts in the sixteenth century, like Serock and Radziłów, as well as in the areas newly-colonized, where there were also complexes of royal property. The same difficulties occur in these areas also during the reconstruction of the borders of lands, which certainly were an administrative unit.

⁵ Taryfy 1789–1790; Czaykowski.

⁶ Table 1827; SGKP.

It seems that the border was defined precisely only by the new settlement in woodland areas – such as between the lands of Liw, Nur, and Warsaw. In uncertain cases, district affiliation was determined by means of retrogression on the basis of the sources from the eighteenth and nineteenth centuries, especially K. Perthées's map, and hearth tax rates from 1789–1790.

The outer border of Mazovia in the sixteenth century constituted the political border of the Mazovian fiefdom before it was incorporated into the Crown. In the north it was identical with the State border, i.e. the border between the Crown and the fiefdom of the Duchy of Prussia. The fragment of the border between Mazovia and Podlasie was also the border of the State until 1569. After the Union of Lublin it remained only a borderline between the Voivodeships of Mazovia and Podlasie. Mazovia bordered also on Lesser Poland, Greater Poland, Cuyavia, the land of Dobrzyń and the Kingdom of Prussia.

The border between Mazovia and other lands of the Crown was reconstructed after the settlement of the three Voivodeships: Mazovia, Rawa and Płock, was marked on the map at a scale of 1:100,000. The strip of lands surrounding Mazovia was also charted, and the settlements from the parishes which bordered on Mazovia were placed on the working maps. These settlements were located in the following voivodeships and lands: Lublin Voivodeship (land of Łuków), Sandomierz Voivodeship (districts of Stężyca, Radom and Opoczno), Łęczyca Voivodeship (districts of Brzeziny, Orłów and Łęczyca), Cuyavia Voivodeship (the district of Kowal), Dobrzyń land (districts of Dobrzyń, Lipno and Rypin), and the Voivodeship of Chełmno (land of Michałowo). The neighbouring territories were charted on the basis of tax registers, published in subsequent volumes of 'Źródła Dziejowe' (*Polska XVI wieku*).

The line demarcating Mazovian settlements from other settlements, situated in neighbouring Crown lands, (after its course was controlled and possible differences between the sixteenth and eighteenth century state were explained with help of Perthées's maps) was accepted as the border of Mazovia inside the Republic.

The lack of sources allowing us to control the course of the borderline with the range of Prussian settlement at the close of the sixteenth century forced us to apply a different method in order to determine the course of **the fragment of the State border between Mazovia and the Duchy of Prussia**.⁷ The method used was retrogression, based on the assumption that the border was linear, stable and did not run between the lands of Mazovia from the lands of the Order in the fourteenth century and the period in which the course of the borderline could be read from the cartographic sources. We can support this assumption with the following argument: the separation of Mazovia from the lands of the Order was conducted in areas poorly inhabited at the time.⁸ The colonization of these territories from the Prussian side began in fact no sooner than the fifteenth century, and on the Mazovian side still at the close of the sixteenth century long fragments of the border ran through the forest. This being said, the linear border between Prussia and Mazovia probably stabilized already in the fifteenth century, or even earlier, as attested by numerous entries in Mazovian court books concerning border marks with Prussia.⁹ A similar course of the border is proven by the fact that certain border elements, listed both in the fourteenth century documents and in the sixteenth century sources, are identical (such as the River Orzyc, or the River Łek – although for short stretches). Relative stabilization of the border did not, however, mean that it remained unchanged. We find records mentioning the appointment of various committees to define the border between the Duchy of Prussia and the Voivodeships of Mazovia and Podlasie in the constitutions of the Sejm from the first half of the seventeenth century. These traces provide a testimony that there were some controversial parts of the border between

⁷ J. Małek, *Granice państwowe, kościelne i administracyjne Prus Książęcych w XVI wieku*, „Komunikaty Mazursko-Warmińskie”, 1966, no. 1(91), p. 131.

⁸ Records from the first half of the fourteenth century concerning the course of the border between Mazovia and the lands of the Teutonic Order define the same border area, based on the physiographic elements of the territory: forests and rivers. One of these records uses the term *signa* to denote the border marks, and at the same time emphasizes that these marks were not permanent (Preussisches Urkundenbuch, vol. 2, 882, documents from 1314–1335; vol. 3, no. 1, 417; no. 2, no. 613, 616, 617, documents from 1343). The settling of the borderline delineated between the Order and Mazovia could be confirmed by the fact that in the fourteenth–fifteenth century the colonization of the borderland woodland areas on Prussian side was supervised by the officials from the Order, even though the settlers came mostly from the Polish Mazovia (W. Kętrzyński, *O ludności polskiej w Prusiech niegdyś krzyżackich*, Lwów 1882, pp. 225–226, 309–331, 331–357, 384–404, 420–448, 448–467).

⁹ Wolff, pp. 15–16.

Prussia and Mazovia at the time.¹⁰ Minor changes in the course of the border, caused by ownership relations within individual villages, are also noted in various sources from the eighteenth century.¹¹

While reconstructing the border with other lands of the Crown, some difficulties arose in the case of the border with **Podlasie**. These were related to the high number of controversial points attested to in the sixteenth century. In 1546, the royal commissioners of the Crown, appointed by Sigismund Augustus, prepared a document containing both testimonies and complaints of the owners of borderland estates, the list of title deeds to estates situated near the border, and finally, the description of various alternative versions of the borderlines, provided by both sides: Poland and Lithuania.¹² The document was meant as a project forming a basis for a future decision on the exact course of the border. Although the decision was not delivered separately, it is usually accepted, that the result of the commissioners' work from 1546 was validated over time.¹³

The comparison of the 1546 border between the Great Duchy of Lithuania and Mazovia with the range of Mazovian and Podlasiian settlement, reconstructed on the basis of tax registers from the end of the sixteenth century,¹⁴ allows us to observe that the border moved back to the west significantly; still in the first half of the sixteenth century it reached territories situated east of the River Biebrza.¹⁵ The changes were particularly prominent in the forks of the Rivers Biebrza and Narew.

Given the above, the Mazovian border at the close of the sixteenth century was drawn on the basis of the range of the settlement at the time, with the following assumptions: firstly, the demarcation conducted in 1546 was not valid, and secondly, in the sixteenth century, border arguments between the inhabitants of Mazovia and Podlasie could each be settled by a court verdict, such as the regulation of the border between Niwiska and Wołyńce, which lasted throughout the sixteenth century on the Mazovian side, and between Chodów and Siedlce on the Podlasiian side, where the borderline was set on the River Żytunia;¹⁶ thirdly, the records of taxes collected in controversial borderline settlements from the tax registers of Mazovia or Podlasie from the end of the sixteenth century became our basis for determining the course of the border between these voivodeships. Thus, we assumed that the division of competences between land offices of the voivodeships Mazovia and Podlasie was appropriate.¹⁷

The reconstruction of the border in peripheral regions, where the settlement was scattered, was particularly problematic in the case of the area separating the Mazovian complex of estates belonging to the chapter of Warsaw from the estates of Podlasiian nobility from Lipki and Maliszewo. The arguments lasted here throughout the sixteenth century. In the middle of the sixteenth century this fragment of the borderline still remained undefined. Old ownership marks on trees with wild beehives (as the arguments concerned woodland area) were destroyed during the clearings, which were extremely intense at the time, and connected with the production and export of forest goods from the chapter's estates.¹⁸

¹⁰ The constitutions from 1607 (VL, vol. 2, p. 444), 1609 (ibidem, p. 467), 1611 (VL, vol. 3, p. 14), 1613 (ibidem, p. 91), 1616 (ibidem, p. 144).

¹¹ There is an entry in the inspection of the village Dąbrowa, which bordered on the village Pruskie Rozłogi. It offers a testimony of small shifts of the border between Prussia and Mazovia: 'Along with all its grounds it neighbours on Prussia, and some of its grounds were in the past given to the village called Pruskie Rozłogi' (Lustracja starostwa ostrołęckiego 1789 r., AGAD XLVI 166, f. 9/307).

¹⁶ Year 1509, MRPS IV/1, no. 603; year 1609, VL, vol. 2, p. 394.

¹⁷ In 1546 the village Trzciana was divided between Lithuania and Mazovia ('via per medium praedictae villae Trzciana, quam inter Ducatus praefatos rivulus quidam illic oriundus usque ad montem dividit,' Dogiel, p. 3). In the end of the sixteenth century the village paid taxes in Bielsk district in Podlasie Voivodeship (Podlasie I pp. 118, 155). We have no data about the payment of lan tax from Wola Dobarska, situated in 1546 in a controversial area between Mazovia and Podlasie, but in 1571 Dobarz Forest was included in the starosta's district of Goniądz (ibidem, p. 178), and at the same time the coniferous forest Dobarz was inspected in Podlasie Voivodeship (LWP 1570, 1576, p. 142 and footnote 284, p. 123). Schoczowie is a village Szorce Cibarzewo, which in 1580 paid tax in Bielsk district in Podlasie Voivodeship (Podlasie I, p. 118). About the village Zayki Bykowiec it could be said at least that the village Zajki paid tax in 1580 and in 1591 in Tykocin parish, Bielsk district (ibidem p. 120, 154). We were unable to identify Bykowiec, but it is not village Byki in Kulesze parish (ibidem, pp. 100, 201).

¹⁸ Ulanowski, *Acta coll. Vars.*, no. 3, p. 35 and no. 59, p. 61, from 1521–1526.

Particularly fierce border arguments in this area, (with cases of Podlasiian nobles murdering the chapter's serfs), resulted in several instances of demarcation between 1526 and 1551.¹⁹ Except for the names of two Rivers – Kołodziej and Ugoszcz, the documents of the demarcation committee did not, however, contain any names of topographical elements, which would survive to this day, and could allow us a precise reconstruction of this boundary line.²⁰ Therefore this fragment of the border was based on its eighteenth century course presented on Perthées's map from 1789–1791.²¹

There were no further difficulties in determining the course of Mazovian borders with other lands of the Crown. The short fragment of the border with **Lublin Voivodeship**, at the junction with **the district of Liw and Łuków land** was treated differently in this work than in LV, because of the localization of several Mazovian settlements: Dropie, Domanie, and Bębenek, attested to by the unpublished tax register from 1578.

In woodland areas the reconstructed border between Mazovia and the lands of the Crown is more hypothetical, for instance along the border with Sandomierz Voivodeship. This border was violated by the nobles from Radom district in the fifteenth century, who cleared and appropriated portions of land (*włóki*) in Stromecka Forest, which belonged to Mazovia.²²

It must be emphasized that the map of Mazovia introduces certain changes in **the border between Mazovia and Cuyavia** in comparison to Z. Guldon's publication.²³ These changes are minor, usually linear, resulting from our method of work, namely the fact we based fragments of borderline on administrative borders from the eighteenth–twentieth century. Unlike Z. Guldon's work, the map of Mazovia ascribes two borderland villages Piotrowo and Rębowo, and part of the village Górka in Białotarsk parish to Gostynin district. All these villages were incorrectly placed in Cuyavia by the said author.²⁴

The area of Mazovia in the sixteenth century, within the reconstructed borderlines, was 33,493 km². The difference between our measurements and those obtained by A. Pawiński can be explained by the higher precision of modern maps, on which we based our calculations,²⁵ and the fact we included a greater variety of sources in our work, what allowed us to determine the number of known sixteenth century Mazovian settlements on 6,679, which is some 600 settlements more. Part of these settlement lay in the borderlands of Mazovia and could, perhaps, broaden the range of the voivodeship.²⁶

Moving towards the description of the reconstructed borders within Mazovia, we provide a list of all lands and districts in all three voivodeships, which offers a general orientation as to their range, as well as the administrative structure of Mazovia in the sixteenth century. There were 10 lands and 27 districts in the Voivodeship of Mazovia, two lands and eight districts in the Voivodeship of Płock, and three lands and six districts in the Voivodeship of Rawa. Altogether, there were 15 lands and 41 districts inside Mazovia.²⁷

The map of Mazovia in the sixteenth century reconstructs the borders, marks the central points of lands and districts, as well as seats of gord starosta's districts²⁸ and castellanies.²⁹ It also identifies

¹⁹ Ibidem, no. 3, p. 35 (Rażny Lipki year 1517); and no. 104, pp. 30, 123, pp. 33, 124 p. 33 (Kołodziej – Lipki 1526), no. 46, p. 54; cf. MK 80, f. 47v; MRPS, V/2, no. 5346.

²⁰ Apart from the River Kołodziej mentioned in the committee document (Dogiel, pp. 19–20), and the River Ugoszcz mentioned in the document, which defined the border between the grounds of Kołodziej and Lipki in 1551, the following border marks were taken into consideration: the meadows called 'Roschewskie', the forest called 'Panów Kąth', the old oak called 'Trup', and the road from Węgrów to Rażny (MK 80 f. 45–47v).

²¹ H. Rutkowski, *Cartographic sources*, [in:] AHP Mazovia.

²² LM 1565, part 1, p. 59, Zbąski from Wierzchowiny in Radom district.

²³ Z. Guldon, *Rozmieszczenie własności ziemskiej na Kujawach w II poł. XVI w.*, Toruń 1964.

²⁴ Ibidem, pp. 25, 65 and map. All settlements listed above pay tax in Gostynin district, so in Mazovia, throughout the sixteenth century. Z. Guldons justification concerning the affiliation of Górki village to Kowal district seems only partially grounded, because this village paid land tax in the fifteenth century and lan tax in the sixteenth century for part of their lans in the Voivodeship of Brześć, and for the remaining lans – in Mazovia (Lustracja 1489, p. 121; P. Mazowsze, p. 196, P. Wielkopolska, vol. 2, p. 19). The source quoted by the author, referring to Piotrów and Rembów villages, confirms the affiliation of these villages to Włocławek diocese, but does not specify the district.

²⁵ Pawiński conducted his measurements on the Quartermaster's Map at a scale 1:126,000, and obtained the result 31,847.26 km². P. Mazowsze, introduction, p. 5; see Annex I – the administrative structure and area of Mazovia.

²⁸ In Płock Voivodeship – Płock, in Rawa Voivodeship – Rawa, Gostynin and Sochaczew, in Mazovian Voivodeship: Warsaw, Czernsk, Wizna, Wyszogród, Zakroczym, Ciechanów, Łomża, Rożan, Liw, Nur.

²⁹ Płock, Raciąż, Sierpc, Rawa, Sochaczew, Gostynin, Czernsk, Warsaw, Ciechanów, Zakroczym, Wyszogród, Wizna, Liw.

places where the general³⁰ and particular³¹ *sejmiks* (dietines) gathered, but does not mark places where land courts were held, as they were usually district centres.

The northern **border of Rawa Voivodeship**, at the junction with the voivodeships of Płock and Mazovia, ran along the Vistula and in the sixteenth century left the river only for short sections near Dobrzyków, Troszyn,³² and Kamion.

The villages Troszyn and Dobrzyków (both parochial seats) consistently paid taxes in Płock Voivodeship, as did other villages in these parishes – to the collectors from Gostynin land.³³ This is confirmed by inspection sources: in the sixteenth and seventeenth centuries, Troszyn was inspected, as a royal village, by the inspectors from Płock Voivodeship, not from the Voivodeship of Rawa.³⁴ In the sixteenth and seventeenth centuries, Kamion and Przeclawice (both royal villages), situated on the left bank of the Vistula, paid taxes in Wyszogród land, and were inspected in 1565 in Mazovian Voivodeship.³⁵

Such a state of affairs – originating probably from the fact that these villages were connected, in terms of ownership, with estate complexes in the Voivodeships of Płock and Mazovia³⁶ – survived until the third quarter of the eighteenth century³⁷ and was the reason for which, probably by mistake, the neighbouring villages in the district of Gąbin were ascribed in fiscal registers either to Płock Voivodeship, or to Mazovian Voivodeship. And so, the village Grabie in Dobrzyków parish paid the 1564 tax to the district of Płock (probably because it lay close to Dobrzyków), and Młodzieszyn – a parochial centre at the time – which neighboured on Kamion parish, was ascribed in 1576 to Wyszogród district and Wyszogród parish by the collectors from Mazovian Voivodeship.

The border between Płock Voivodeship and Mazovian Voivodeship divided several settlements, namely: Bodzanowo (leaving the town in Wyszogród district, but placing the suburb in Płock district), and the villages: Gąsowo, Mąkolino (between the districts of Płock and Wyszogród), and Gardlino Racibory (of which part lay in the district of Mława, and another belonged to the district of Przasnysz).

The border between Mazovian Voivodeship and the Voivodeship of Rawa Mazowiecka divided the village of Grzegorzewice between Sochaczew land and Tarczyn district.³⁸ A small shift of this border occurred in the second half of the sixteenth century, when by royal decree of 1558 the village Darnów was moved from Biała district in Rawa land to the district of Grójec in the land of Czersk, Mazovian Voivodeship.³⁹

Our description of the borders of lands and districts is limited here to a commentary on fragments particularly difficult to reconstruct: insufficiently documented in the sixteenth century materials, or changing and fluid still in the sixteenth century. To simplify matters, we maintain the order in which we describe district borders inside individual voivodeships and lands, for methodological reasons beginning with Mazovian Voivodeship, as this was a territory of relatively late colonization, where the problems in determining the course of the borders were particularly visible.

³⁰ Raciąż, Bolimów, Warsaw.

³¹ Raciąż, Rawa, Sochaczew, Gąbin, Czersk, Warsaw, Wizna, Wyszogród, Zakroczym, Ciechanów, Łomża, Rożan, Liw, Nur.

³² Compare with WP, where it was signalled as a hypothesis (additional page added during the printing).

³³ Troszyn in examined years (1551, 1552–1553, 1567, 1578) paid tax in Płock district, Słupno parish; tax registers from Gąbin district note in 1563 and 1564 Trossin ad Ploczk attinet; similarly in the seventeenth century poll tax register from 1673 and 1674 Troszyn sola ad Płock. Dobrzykowo village in the same years paid tax in Płock district, Imielnica parish, and in the registers from Gąbin district we find analogous cases in 1563, 1564 and 1565 Dobrzykow sola ad Ploczk.

³⁴ See LP, pp. 10–11 (1565); pp. 40–41 (1570); p. 61–62 (1616) and other.

³⁵ LM 1565, vol. 2, p. 207.

³⁶ As confirmed e.g. by the 1472 privilege, which bestowed Mikołaj Dołęga, the Court Marshall, with a ducal village Dobrzyków, which belonged to Płock along with two banks of the Vistula and an old crossing. The privilege was granted already after Gostynin land was incorporated into the Crown in 1462 (MK, no. 6, f. 225–225v). The document specifies Dobrzyków as belonging to Gostynin land. However, we must remember that the privilege was granted by the duke Casimir III. If the village had indeed belonged to Gostynin land, the duke of Płock would not have had the right to decide on the lands of the Crown.

³⁷ The 1775 Sejm incorporated six villages to Gąbin district: ‘To satisfy the heir and possessors of the estates situated by the Vistula, dividing Płock Voivodeship from Gostynin land, the following villages: Kamion, Troszyn, Dobrzyków, Tokary, Radziwie, Popłacin, Brwilno, and Górki, which belongs solely to the nobility, shall be incorporated into Gąbin district’ (VL, vol. 8, p. 164). The fulfilment of this decision is clearly seen in the 1789 inspection: ‘Troszy. This village used to belong to Płock Voivodeship, but by the 1775 constitution it was incorporated into Rawa Voivodeship, Gostynin land’, LR 1789, p. 238.

³⁸ Also the Inspections in the Warsaw archive from 1598–1603 confirm the division of the village between two parishes: Mszczonów and Lutkówka.

³⁹ MRPS, V/2, no. 8538; MK 91, f. 577v.

The border of Ciechanów land consists of outer fragments of the borders of three districts belonging to this land: the districts of Ciechanów, Przasnysz, and Sączocin. There were some difficulties in determining the course of the boundary line on the basis of tax registers from the sixteenth–seventeenth centuries concerning the land of Rożan, at the junction of the borders of three districts: Przasnysz, Ciechanów, and Maków (see below); fiscal sources ascribed borderland settlements of this region either to one district, or to the other.

The southern part of Ciechanów land, reaching Czerwińsk by the Vistula, which comprised the district of Sączock, owes its complicated shape at the end of the sixteenth century to numerous border changes in the fifteenth and sixteenth centuries. Sączock district stems from the old district of Czerwińsk and its territory was probably identical. Zakroczym, and later Płońsk, became the places where courts were held. After the duchy of Płock was incorporated along with Płońsk into the Crown in 1495, Sączocin was designated in the same year as a new place for holding court sessions. The fact that Sączocin became the capital of the district did not please all inhabitants. In 1522–1524 some land owners, from lands situated in the farthest, southern end of the district – including the abbot of Czerwińsk – obtained permission of the dukes to incorporate their estates to the land of Wyszogród, and one village – Słotwin – became part of Zakroczym district.⁴⁰

In the course of the sixteenth century, we can observe a certain fluidity of the borderline at the point of junction of Sączock district and Ciechanów district. This meant that not only individual villages in the borderlands, but entire territorial complexes were in some years ascribed by fiscal authorities to one district, and at other times to the second district. Sączocin parish⁴¹ is particularly characteristic, as are also the parishes in Królewko⁴² and Gromadzino;⁴³ the village Kałęczyn (Nowe Miasto parish), whose parochial affiliation in the sixteenth century we were unable to identify,⁴⁴ was also situated in this transitory area, just like two villages called Niewiśl (Gromadzino or Płońsko parish), which we decided to localize in one location. One of them, Niewiśl Wielka, lay in Sączock district, and the other, Niewiśl Mała – in Ciechanów district. A village Konradziec (Sączocin parish) was located nearby, within the borders of Sączock district. Temporarily, in the beginning of the sixteenth century and then at the close of the seventeenth, the village paid lan tax in Ciechanów district. Rogatkowo (Krysk parish) was a village belonging to one of the bishops and listed in the sixteenth century – probably incorrectly – in the registers of the neighbouring district of Nowe Miasto (in 1530, 1531, and 1576). Placing the village inside this district on our map would have made it necessary to create an exclave of Nowe Miasto district in the area of Sączock district. The affiliation of this village to Sączock district was confirmed by the hearth tax register from 1789.⁴⁵

Similar fluidity in the sixteenth century can be found at the junction of the borders of the districts of Ciechanów and Przasnysz. This border was formally changed in 1548 at the request of the nobles from the borderland areas of the latter district, who wanted to incorporate their estates into Ciechanów district *ut propinquiore*. The change concerned the territories of the parishes Zeńbok and Lekowo, and

⁴⁰ In 1522 several villages of the nobility: Łazęki, Sobanice, Osiek, Raszewo, Glinice, Bitkowice, Gawarzec, Zrębino and Żukowo; in 1524 the estates of the abbot of Czerwińsk, along with the abbot's part of the town of Czerwińsk (perhaps it remained unrealized, because in the sixteenth–seventeenth century the abbot's part of Czerwińsk appears in the registers consistently in Sączock district in Ciechanów land), and the villages: Chmielewo, Bolino, Garwolewo, Janikowo, Parlino, Sielec, Komsin, both Wilkowyje, Żdżarka and Wilkowiec to Wyszogród and, whereas Słotwin village to Zakroczym land; A. Borkiewicz-Celińska, *Osadnictwo ziemi ciechanowskiej w XV w. (1370–1526)*, Wrocław 1970, pp. 22–24; Wolff, pp. 20–21.

⁴¹ Wola Wodyńska (Sączocin parish) – Sączocin 1564, Ciechanów: 1531, 1542, 1576, 1580, in the seventeenth century; Kuchary (royal) – Sączock district 1567, Ciechanów: 1531, 1532, 1542 and 1674; Rzy (royal) – Sączock: 1531, 1532, 1567, 1674, Ciechanów: 1542, 1576, 1580.

⁴² Przepitki – Sączock district: 1552, 1580, Ciechanów: 1564, 1567, 1573, 1674; Idziki – Sączock: 1580; Ciechanów: 1542, 1573, 1576, 1567, 1674; Bolęcino – Sączock 1580, Ciechanów: 1542, 1552, 1567, 1573, 1576, 1674; Królewko – Ciechanów: 1567, 1573; Królewo Wielkie – Sączock: 1564, 1576, 1577, 1580, Ciechanów: 1542, 1573, 1674; Pruszkowo – Sączock: 1531, 1542, 1552, 1564, 1580, Ciechanów: 1567, 1573, 1576.

⁴³ Kołoząb – Sączock: 1528, 1531, 1542, 1552, 1564, 1576, 1580, Ciechanów: 1567, 1573; Gromadzino – Sączock: 1542, 1552, 1564, 1576, 1577; Ciechanów: 1531, 1567, 1573; Kuchary (a village of the nobility) only in Ciechanów district 1542, 1567, 1573, 1674.

⁴⁴ Kałęczyn (nobility) did not pay tax in the sixteenth century; the information about the existence of this village is accidental and comes from a description of the surroundings of the royal villages Rzy and Kuchary (LM 1565, vol. 2, pp. 21–22), parochial affiliation taken from the 1609 inspection.

⁴⁵ Tayfy 1789–1790.

of two villages from Ciechanów parish.⁴⁶ Apart from the settlements listed,⁴⁷ there are many villages in the borderlands between these two districts, ascribed in the sixteenth century fiscal registers interchangeably to Ciechanów and Przasnysz district, namely: the entire group of hamlets of the village Żmijewo (Żmijewo Kościelne parish),⁴⁸ and nine villages from Koziczyno parish.⁴⁹ A group of villages sharing the common name Umiećcino⁵⁰ drifted towards Ciechanów district, as well as Obrąb, a village, which paid taxes in Ciechanów district (in the first half of the sixteenth century to 1552 inclusive).⁵¹

However, the most uncertain district affiliation in the sixteenth century can be observed at the junction of the borders of three districts: Przasnysz, Ciechanów and Maków (Rożan land), particularly in parishes: Karniewo, Gołymino and Krasne.⁵² The map distinguishes the most controversial area between Ciechanów and Przasnysz district with a separate sign. It was impossible to determine a definite majority of source entries for the second half of the sixteenth century, which would prove a lasting affiliation of the said parishes to one of the districts. We also note that a certain number of villages, situated outside the borders of this area, were temporarily ascribed to neighbouring districts. These villages included, above others, all remaining villages in Karniewo parish located in the district of Maków, which paid the 1567 tax in Przasnysz district⁵³ and over a dozen villages from Krasne parish in Przasnysz district, which sporadically appear also in Ciechanów district (e.g. a group of villages Mosaki and Zdryki).⁵⁴ These facts appear to prove that the borders in this area were not fully stable at the time, and fiscal authorities were disoriented as to the correct district affiliation of borderland villages.⁵⁵

The eastern border of Przasnysz district in the sixteenth century was lost in a great forest complex (around 2,000 km²) reaching the Prussian border in the north, and the lands of Łomża and Rożan in the east. We do not possess materials from the sixteenth century, which would allow us to reconstruct the course of this border. It should be considered, whether a border of State administration, which separated a territorial unit inhabited by the nobility with the seat of land courts, could have run through the forest

⁴⁶ In Lekowo parish the villages: Karniewo, Radzimino, Kozdroje (i.e. Radzimino Kozdroje), Trzcianka, Włostki (i.e. Radzimino Włosty), Targonie, Klicze Wielkie and Małe; in Zeńbok parish: both villages Jarłuty and Zeńbok and in Ciechanów parish the villages: Ropyle and Niecostoim (i.e. Niestum), MRPS, IV/3, no. 23042, see also A. Borkiewicz-Celińska, *Osadnictwo ziemi ciechanowskiej*, p. 25; the map was based on the 1599 inspection, which ascribed Radzimino Wielkie to Ciechanów parish, and of the registers from the second half of the sixteenth century, which also ascribed Trzcianka to this parish.

⁴⁷ According to fiscal registers, the following villages paid tax in Przasnysz district still in 1552: Jarłuty and Zeńbok (Zeńbok parish), and Klicze Małe and Klicze Wielkie, Radzimino Włosty, Radzimino Kozdroje and Targonie (in Lekowo parish).

⁴⁸ Żmijewo Włosty, Przasnysz district: 1528, 1577, Ciechanów district: 1567, 1580; Żmijewo Śręzogi, Przasnysz district: 1528, 1531, 1577, Ciechanów district: 1567, 1580; Żmijewo Zalesie, Przasnysz district: 1564, Ciechanów district: 1567, 1580; Żmijewo Mikły, Przasnysz district: 1531, 1542, 1564, 1577, Ciechanów district: 1567, 1580.

⁴⁹ Nieborzyno, Przasnysz district: 1531, 1542, 1552, 1564, 1576, Ciechanów district: 1567, 1573, 1580; Koziczyno, Przasnysz district: 1576 and 1674, Ciechanów district: 1552, 1564, 1567, 1573, 1576; Koziczyno Sulmierz, Przasnysz district (Sulmierz): 1576 and 1580 (Sulmierz Mł.); Lipa, Przasnysz district: 1576 and 1674, Ciechanów district: 1531, 1542, 1552, 1564, 1567, 1573, 1580; Wierzbowo, Przasnysz district: 1552, 1576 and 1674, Ciechanów district: 1531, 1542, 1552, 1567, 1573, 1577; Wola Wierzbowska, Przasnysz district: 1576 and 1674, Ciechanów district: 1531, 1542, 1577, 1580; Szczepanki, Przasnysz district: 1531, 1542, 1552 (later all three villages called Szczepanki were listed in Ciechanów district, but Szczepanki Pieski appear once more in 1576 in Przasnysz district).

⁵⁰ In 1542 Umiećcino Falki (or in fact Chrzony Falki, which we identify with Umiećcino) were listed in Ciechanów district, in 1564 – Umiećcino Ciężkie, and in 1573 – Umiećcino Andrychy.

⁵¹ Later consistently in Przasnysz district.

⁵² These are the following villages: Chełchy-Chabdzino, Chełchy-Wiechny, Chełchy-Klimki, Chełchy-Rutki (Karniewo parish), Chełchy Iłowo, Grabowo-Trojany (Zielona or Krasne parish), Karniewo-Malechy and Karniewo-Rafały (Karniewo parish), Korytki-Wierzchonie (Karniewo parish), Milewo-Byki, M. Bylice, M. Kulki, M. Leśne, M. Malonki, M. Mrzegędy, M. Nadolne, M. Płaczkki, M. Roszczyny, M. Mrozy, M. Wolmiry, M. Skubiele, M. Szwejki, M. Kwarty, M. Tabuły, M. Pogorzal, M. Wypychy, Korytki (Krasne and Karniewo parishes), Leśniewo-Karniewo (Karniewo parish) Łukowo-Łoś, Wola Wronowska (i.e. Wola Łosiów) and Wronowe-Łoś (Karniewo parish), Tłocznicza and Zalesie (Karniewo parish).

⁵³ Karniewo, Żabino-Karniewo, Byszewo, Ośnica, Chełchy-Dzierżki, Ch. Cibory, Ch. Kmiece, Ch. Wiechny, and Młodzianowo (Węgrzynowo parish) and Krzyżewo (Podosie parish) – compare P. Mazowsze, p. 34.

⁵⁴ Mosaki-Księżde and Mosaki-Skuczki, M. Gacz, M. Rukle in 1577, M. Iłowo in 1564 and 1577, Zdryki Gawronki, Z. Kurpięta, Z. Antonie, Z. Stara Wieś, Z. Kierzki, Z. Nowiny in 1577, Szczuki and Węzowo in 1580.

⁵⁵ The collectors permanently mistook their district affiliation. It seems, however, that one should not trust the 1573 register, which once ascribed to Ciechanów district a substantial number of villages located far from this district's border, namely: Górki, Pszczółki-Czubaki, Kołaki-Jaświeżino, Smoleń-Poluby, S. Górki, S. Trcianka, Tańsk-Kęsochy, T. Grzymki, T. Wasiły, Gadomicz-Wyraki, Ulatowo-Adamy and Ulatowo-Borzuchy.

already in the sixteenth century. As we know, this forest (part of which was called Kurpiowska Forest) had no agricultural settlements in the sixteenth century; the beekeepers from the villages – mostly royal – situated at the edge of the forest had the right to use the beehives at the forest range. The forest, as a property of the ruler, belonged to the following starosta's districts: Ciechanów (Mazuch Forest with the forest ranges: Sitwa, Leńska, Pięc Gai, Płodownica),⁵⁶ Płodownica lease,⁵⁷ Rożan starosta's district (Rożańska Forest),⁵⁸ Łomża starosta's district (Jednaczewo forest, forests surrounding Łomża, Zambrowska Forest, Czerwony Bór).⁵⁹ Zagajnica Forest remained partially a responsibility of the starosta of Łomża, and partially of the starosta of Ostrołęka.⁶⁰

It seems quite problematic to set district borders in woodland areas without settled nobility. It would mean that the inhabitants of the districts were subject to land courts. Most likely, the borders were defined during the colonization of forested territories.

The settlement in Przasnysz district reached the forest in the north first, near the border with Prussia. New villages were being founded there still at the close of the sixteenth century. They belonged to Chorzele parish (Zaręby and Krukowo).⁶¹ A parish was erected in Zaręby in the seventeenth century, which encompassed the quickly-colonized vicinity.⁶² Only settlements consisting of one manor, of industrial nature, like ores established by the River Omulew at the beginning of the seventeenth century, reached deeper into the forest. They quickly turned into larger settlements, like Brodowa Łąka and Oborzyska. Exceptional were only these settlements, which were situated deep into the forest, like Płodownica and Rupino, located between the Rivers Omulew, Płodownica and Grycz.⁶³ A little more to the south, the settlement in the Przasnysz district kept rather to the line of the River Orzyc in the seventeenth century (villages Olszewka, Rachujka and Jednoróżec).⁶⁴

In Ciechanów and Łomża lands, the earliest district division in woodland areas, formed as the settlement expanded, was marked with a separate, dashed sign on the map of Mazovia. The reconstruction of this division was based on the identification of district, or land, borders with the borders of the sixteenth–seventeenth century starosta's districts.⁶⁵ Next, the range of such defined districts was checked against the administrative affiliation of woodland settlements, found in later sources, especially in the eighteenth century.⁶⁶

⁶⁰ Ibidem, p. 44; LM XVII, pp. 100–101.

⁶¹ ADP, no. 6, f. 232 v.

⁶² Tax registers from the second half of the seventeenth century ascribe the nearby villages (e.g. Binduga) to Zaręby parish.

⁶³ The summaries of documents from 20 December 1570 and 15 June 1571 in: Pułaski 1915, p. 166; elements pointing to the location of these villages: VL, vol. III, p. 388; MK, no. 139, f. 252, and AGAD, Ciechanowskie wieczyste, no. 1, file III nlb. (around 1548–1566). On Łomża side the settlement did not reach deep into the forest, even still in the end of the seventeenth century, as proven by a remark made by an inspector in Nowogród parish in 1693: 'Several huts in the forests, known as Dobry Las, Pianki, Frydryszka, Osowiec, Zbojna' (Arch. Diec. Płoc. No. 47, f. 737).

⁶⁴ Poll tax register from 1674.

⁶⁵ This method is not, however, completely reliable, because, for instance, a village Ruda Skroda, which belonged to Łomża starosta's district was attested in 1627 not in Łomża district, but in the district of Kolno, MK, 173, f. 470v–471v.

⁶⁶ In the sixteenth century Ciechanów, not Przasnysz, was the seat of a starosta's district. There was also a starosta's district of Łomża and the Ostrołęka lease (LM 1565, vol. 2, pp. 25–28, 44, 71, 88, 92; LM XVII, pp. 100–101). All materials concerning Zagajnica Forest listed below were obtained thanks to doc. dr. J. Wiśniewski, who supported the thesis about an early (at least sixteenth century) division of the forest into judicial districts, identical with the eighteenth century state. The following villages were found in the eighteenth century in the forest in the vicinity of Kolno: Bączki, Dudy Puszczańskie, Ksebki, Piekło, Popiołki, Potasie, Ptaki Dolne, Pupki, Szablaki, Trzczańskie, Cherubin, Dudy Nadrzeczne, Górszczyzna, Klimagi, Koziół, Samule, Waszki. In the part of the forest, which surrounded Nowogród (i.e. the part subject to Łomża district) – Baliki, Gawrychy, Gaški, Gietki, Gontarze, Korwki, Kuzie, Morgowniki, Pianki, Poredy, Serwatki, Siwki, Szablaki (beekeeping books of Nowogród, the State Archive of Poznań and Poznań Voivodeship – Mnc, A, I–III, 254–256). The part of the forest ascribed to Ostrołęka occupied the area between the Rivers Omulwia and Szkwa, the part ascribed to Przasnysz – between the Rivers Omulwia and Orzyc. The following villages were located in this area: Brodowe Łąki, Budki, Czerwińsk, Jednoróżec, Oborzyska, Małowidz, Lipa, Łaz, Olszewka, Parciaki, Oględa, Połomia, Pościenie, Pruskołęka, Rachujka, Szla, Wólka Kobylak, Żelazna and Bakuła (L. Krzywicki, Kurpie, [in:] idem, Dzieła, vol. 6, Warszawa 1962). The following villages belonged to the Rożan part of the forest: Czarnotrzew, Dłutówka, Rzaniec, Wyszel, Grabówek, Budne, Perzanki. The following settlements lay along the border between Rożan land and Przasnysz district, on Przasnysz side: Czerwińsk, Baranowo, Jastrząbka; and on Rożan side: Czarnotrzew, Budna and Dłutówka.

The border of Czersk land with Warsaw land, where Grójec district touched Tarczyn district, ran through a village Cychry, dividing it into two parts. According to records found in both: Church and fiscal sources, this village belonged to two parishes: Jeziora Małe and Lutkówka⁶⁷ also at the turn of the sixteenth and seventeenth centuries.

Prior to 1539, Czersk land consisted of three districts: Czersk, Grójec, and Warka.⁶⁸ The nobles of Czersk district, who inhabited settlements situated on the right bank of the Vistula, were forced to cross the river in order to appear at court sessions in Czersk. In the first half of the sixteenth century settlement processes intensify in this area;⁶⁹ these processes might have accelerated the establishment of a new, separate court in Garwolin, and the division of Czersk district into two smaller districts: Czersk and Garwolin. The document of Sigismund I from 25 February 1539 specifies the territorial range of Garwolin district, limiting the authority of the court in Czersk to settlements located on the left bank of the Vistula, and to settlements belonging to the parishes Radwankowo and Karczew, which *iuxta veterem morem venire et ibidem causas suas agere debeant*.⁷⁰

Garwolin district was not isolated in fiscal registers from the sixteenth–seventeenth centuries and the court books of Garwolin from 1540–1683 were lost in 1944.⁷¹ The range of Garwolin district in the eighteenth century, known from hearth tax rates from 1789–1790 and Perthées's map, was already changed in comparison to the sixteenth century state (namely, the River Vistula became the boundary line of Czersk and Garwolin districts, whereas Czersk district expanded to the west at the cost of Grójec district) and could not be used as a basis for border reconstruction. As such, based on the 1539 document and our analysis of the location of parishes in the field, we accepted the following range for Czersk district: parishes Czersk, Góra, Cieciszewo, Jazgarzewo, Sobikowo, Chynowo, Karczewie, and Radwankowo; also – apart from these parishes – Chylice, a village from Piaseczno parish, and Falenica, a village from Zyrzno parish.⁷² The entire remaining area, placed in Czersk district by the sixteenth century registers, was considered a part of Garwolin district.

The border of Czersk district in the sixteenth century was relatively stable, apart from the isolation of Garwolin district in 1539. However, several borderland settlements paid taxes interchangeably in different districts, namely: Chylice (included in 1539 in Grójec district), Grębice (1563 – Warka district), and Duczoły (confirmed in 1564 in Czersk district, Cieciszewo parish, and in Grójec district, Prażmowo parish). We were unable to localize Duczoły on the map. The village appears in various parishes in the sixteenth century: Sobikowo parish (1569, 1573, 1577 and 1588), Czersk parish (1576), or Góra parish (1510). This section of the borderline is therefore uncertain.

The course of the boundary line between Warka district and Grójec district near the town Wyśmierzyce also remains dubious, as we cannot decide, to which district the city belonged in the sixteenth century, and the eighteenth century sources provide contradictory data.⁷³

The fragment of the border of Liw land is hypothetical at the junction with Nur land, because the sixteenth century sources did not allow us to determine the district affiliation of the following borderland settlements: Królowa Wola, Myszadła, Ruda, Rynia, Czernik, Wójtý that is Zawady, and Zawiszyn (see below).

The border of **Łomża land** was relatively easy to determine. The fragment of the border running through Zagajnica Forest was described above.

⁶⁷ In tax registers of Grójec district 1576, 1577 and 1588, Tarczyn district 1578, 1579, 1580 and 1581. In the visitation of the Archdeaconry of Warsaw 1598–1603 in two parishes (f. 100 and f. 121). This is confirmed by the state from the end of the eighteenth century: Tariffs 1789–1790 list some of the settlements in Grójec district in Jeziora parish, and some in Tarczyn district, Lutkówka parish. Czaykowski, *Regestr diecezjów*, mentions two separate settlements of this name, belonging to one owner: Cychry in Lutkówka parish and Cycherki in Jeziora parish.

⁶⁸ Compare with Annex I.

⁶⁹ Found e.g. in the settlement of Osiecka Forest, or the densification of the town network in this area.

⁷⁰ MK 55, f. 273v–275 (summary in MRPS IV, no. 19583 is imprecise, as it omits Radwankowo and Karczew parishes); T. Wierzbowski, *Krzysztof Warszawicki 1543–1603 i jego dzieła*, Warszawa 1887, p. 48; see also Wolff 1962, pp. 25–26.

⁷¹ Wolff 1962, pp. 25–26.

⁷² According to Tariffs 1789–1790 (and Perthées's map) Falenica along with Zyrzno parish belonged to Garwolin district, and the following parishes belonged to the district of Czersk: Chynów, Cieciszew, Czersk, Drwalew, Góra, Jazgarzew, Ostrówek, Pieczyska, Prażmów, Słomczyn and Sobików.

⁷³ In 1573 it appears in Warka district, in 1563 – in Grójec district. In the eighteenth century Perthées placed it in Warka district, Tariffs 1789–1790 – to Grójec district.

The reconstruction of the boundary line of **Nur land** is also hypothetical to some degree in peripheral territories: where it met the borders of Warsaw land and Liw land. This is the result of certain problems, which arose while trying to determine district affiliation of many settlements, particularly in various keys of royal property with newly-founded villages situated in the forest, that is in the borderlands of Warsaw land near the villages: Głęboczyca, Boruczka and Wólka Pieczęcina, and on the borderland of Liw land.⁷⁴

The most controversial area, with the villages: Zawiszyn, Królowa Wola, Ruda and Mysza, was isolated with double lines on the map.

In the estates of the chapter of Warsaw, especially in Sadowne and Stoczek parishes neighbouring Podlaskan Voivodeship, the course of the border of Nur land (identical with the border of Mazovian Voivodeship and Podlaskan Voivodeship, see above) was based on the eighteenth century cartographic materials.

Rożan land, consisting of two districts: Rożan and Maków, had an unstable border in the sixteenth century on the section separating Maków and Przasnysz district, which ran through villages: Młodzianowo – Krzyżewo – Chełchy – Karniewo, that is through three parishes: Węgrzynowo, Karniewo, and Podosie (compare with Ciechanów land).⁷⁵

We must express our doubts concerning the course of the border between **Warsaw land** and Nur land, particularly in Stanisławów parish, where we were unable to determine the district affiliation of several villages in the sixteenth century, and therefore decided to accept an alternative: Warsaw or Kamieniec district. The western borderline of Warsaw land ran through a village called Grzegorzewice, and divided this village into two parts, between Tarczyn district in Warsaw land and the district of Mszczonów in Sochaczew land, and so between Mazovian Voivodeship and the Voivodeship of Rawa.⁷⁶

There were three districts in Warsaw land: Warsaw, Błonie and Tarczyn. They were defined on the basis of the tax register, which (except for the published 1580 register) maintains the same district division quite consistently in all register forms of this land in the sixteenth century.

In the first half of the sixteenth century, **Wizna land** had two districts: Wizna and Wąsosz. The third district, Radziłów, was established in 1548.⁷⁷ However, this district was not isolated in the sixteenth century fiscal registers of Wizna land.

53 villages became part of the new district, when it was created in 1548. The villages had so far belonged to two other districts of Wizna land. Settlements situated south of the Rivers: Wissa, Słucz and Kubra belonged to Wizna district, and those north of the Rivers – to Wąsosz district.⁷⁸ Tax registers from the end of the sixteenth century, which failed to recognize the existence of a new district, record a different affiliation of borderland settlements than the one provided by the 1548 document.⁷⁹

Various changes occurred in the settlement of this area between 1550s and the end of the century. The number of settlements grew. The analysis of names and location of settlements allowed us to identify the villages listed in the 1548 documents with the villages mentioned in the sources from the close of the sixteenth century, and to accept a genetic relation of some newly-created villages with older ones. Here, we must mention the villages – hamlets sharing a common name, part of which were mentioned by the 1548 document. The affiliation of the remaining villages located inside a complex of settlements comprising Radziłów district (founded between 1548 and the end of the sixteenth century) was

⁷⁴ Rynia – a village newly-founded in the sixteenth century (LM 1565, vol. II, p. 198), according to fiscal registers from the end of the sixteenth century paid tax in Kamieniec district, Liw district, and even in Warsaw district once; Głęboczyca – in Warsaw district or Kamieniec district; Czernik – in Kamieniec or Liw district.

⁷⁵ Młodzianowo (Węgrzynowo parish), Chełchy – Cibory, Ch. Dzierżki, Ch. Wiechny, Ch. Kmiece (Karniewo parish), Krzyżewo Nadrzeczne, K. Podburzne, K. Jurki (Podosie parish) paid their taxed in 1567 to the district of Przasnysz, Karniewo also in the first half of the sixteenth century (in 1531 and 1542); see also footnote 53.

⁷⁶ Compare with footnote 38.

⁷⁷ The text of the document from 1548 is known from the 1613 validation in the court books of Wąsosz (in Kapica's copy), and was made available to the Department of the Historical Atlas of Poland by prof. dr. Jakub Sawicki.

⁷⁸ 'Dobroniewo, Slassy, Łoie, Brychy, Pluthy, Chyliny, Chrostowo, Supy, Polkowo, Mieczki, Olszewo, Góry, Wilkaszewo, Karwowa, Borawce, Chrzanowo, Kubra, Trzaski, Barwki, Pionki, Konopki, Brodowo de districtu Viznensi et Cyprki, Doliwy, Obrythe, Lissy, Klimki, Ramoty, Mieszki, Zalesie, Romany, Wilkanowo, Glinki, Niebrzydy, Słucz, Mikuty, Mroczi, Gardoty Grzymki, Bukowo, Rydzewo, Czerwonki, Konopki, Kownatki, Borawice, Świącienino, Klimaszewnica, Białasów, Kiliany, Łoje, Brzozowa, Mścichy, Karwowo, de districtu Wassosensi'.

⁷⁹ P. Mazowsze, pp. 356–359, 361–362, 364–365.

controlled – we checked whether they belonged to Radziłów district in the eighteenth century.⁸⁰ The comparison of the territorial range depicted by the 1548 document with the eighteenth century borders of the district recorded on two versions of Perthées's map and the hearth tax rates from 1789–1790⁸¹ shows many significant differences.⁸² Still, all three sources agree that in the eighteenth century Radziłów district was smaller than in the sixteenth century.⁸³

Radziłów district at the end of the sixteenth century encompassed the area isolated after the interpolation of the borders of the villages listed in the 1548 document and other villages founded in this territory in the second half of the sixteenth century.

The land border divided the town of Czerwińsk between **Wyszogród land** (the part, which belonged to the bishops of Płock) and Sączock district in Ciechanów land (property of the monastery of the Canons Regular in Czerwińsk).⁸⁴

Prior to 1567 Zakroczym land was divided into two districts: of Zakroczym and of Nowe Miasto. Serock district was officially separated from Zakroczym land at the *Sejm* of 1567 'at the request of the delegates from Zakroczym land, in order to reduce the distance to certain parishes, as it had been in the past...'. It was decided that 'land courts of the parishes, which had their court sessions there before, were gathered in the town of Serock'.⁸⁵

The settlements belonging to Serock district do not appear in tax register forms before 1591, and the data from this year is uncertain, as the villages marked on the map do not constitute a dense territorial complex.⁸⁶ The quoted fragment of the resolution suggests that the borders of the district created in the second half of the sixteenth century were identical to the borders of an earlier administrative unit with the court in Serock. We are unable to present its complete reconstruction, as the records of the court in Serock perished during the last war, yet the fragments published in K. Tymieniecki's works and the notes made by A. Wolff suggest that in the fifteenth century Serock was a centre of administration, which, however, did not fit into Mazovian land and district division; it was not a centre of the third district of Zakroczym land, but a court town in Nowe Miasto district also for the western part of Kamieniec district, the so-called Pobuże. According to A. Wolff, the court in Serock was not an ordinary land court, but rather a starosta's court, operating in the borderland territory between

⁸⁰ In Przytuły parish – 18 villages: Barwiki, Trzaski, Kubra, Cyprki, Dolliwy, Mroczyki, Borawice, Racibory, Ślasy-Czachy, Ś. Gręzki, Ś. Łoje, Pluty-Rogowo, Supy-Gręzka, Wilkesevo, Chrzanowo-Dusze, Ch. Stare, Ch. Wypychy, Pieńki-Grodzisko. In the sixteenth century, there were also two other settlements in this complex: Mieszki and Karwowo-Brychy, confirmed in Radziłów district by 1789–1790 Tariffs; in Romany parish – 12 villages: Obrytki, Lisy, Bagienice-Klimki, Romoty, Mieczki Suche, Zalesie-Pieniązek, Romany, Wilamowo, Gardoty, Grzymki, Olszewo Małe, O. Góry, and two villages confirmed by Tariffs 1789–1790: Żelazki and Brzostowo; in Słucz parish – eight villages: Glinki, Niebrzydy, Słucz, Mikuły, Bukowo Duże and Bukowo Małe, Rydzewo, Szlacheckie and R. Pieniązek; in Wąsosz parish: Czerwonki, Konopki a Wissa, Kownatki, Kiliany and confirmed by the hearth tax register 1789 village Kramarzewo, located between village Kiliany and Konopki and confirmed by the hearth tax register 1789 village Kramarzewo, located between village Kiliany and Konopki; in Radziłowo parish – Święcienino, Mścichy, Karwowo a Wissa, Borawice a Wissa, Konopki Brodowo a Wissa, and a village Miski, situated in Radziłowo parish, and Okrasino village, which belonged to this parish in the sixteenth century and was attested by Tariffs 1789–1790; in Białaszewo parish – Klimaszewica, Białaszewo, Łojewo, Brzozowo-Wólka, Gać-Brzozowo, Mścichy Brzozowo, and a village Pieniązki, confirmed in this parish; in Burzyno parish – Chyliny Kąty and Ch. Wity; in Jedwabne parish – Chrostowo, Polkowo, Karwowo-Byczki, K. Kubrzane, K. Pawelki, K. Stryjaszki, K. Wszebory and K. Zabłocie.

⁸¹ See the map below.

⁸² On Perthées's map, quite a long fragment of the north-eastern border of Radziłów district was set on the River Wissa, whereas according to the hearth tax register from 1789, five settlements in Białaszewo parish were ascribed to this district, even though they lay on the other bank of the Wissa. Different versions of district borders presented on both maps by Perthées was a result of imprecise localization of borderland villages.

⁸³ On Perthées's map Radziłów district encompasses the parishes Radziłów, Słucz, one village Wilamowo from parish Romany and the villages Chrzanowo, Wypychy, Kubra and Konopki Błonie in Przytuły parish. The hearth tax register, on the other hand, list 26 villages in Przytuły parish, 12 in Radziłowo parish; the following parishes were divided between Radziłów and Wąsosz districts: Białaszewo (five villages in Radziłów district), Romany (23 villages in Radziłów district), Wąsosz (five villages in Radziłów district), and Słucz (10 villages in Radziłów district), the parishes Burzyn (three villages in Radziłów district) and Jedwabne (three villages in Radziłów district) were divided between Radziłów and Wizna districts.

⁸⁴ Cf. footnote 40.

⁸⁵ VL vol. 2, p. 71.

⁸⁶ This register ascribes to Serock district only some of the villages in the following parishes: Koprzywnica (Bądostowo, Głniąca, Koprzywnica, Niestępowo, Piskornia, Witki), Dzierżenin (Dzbanice, Gzowo Wielkie, Karniewko, Komorowo, Mory, Obręb, Obrębek, Pogorzelec, Świeszewo), Zegrze (Izdbice, Niechronka, Skubianka, Wola Kiełpinska, Wyki and Zegrze), Pułtusk (Olbrachce), Serock (Zabłocie).

RECONSTRUCTED BORDERS OF RADZIŁÓW DISTRICT

Settlements listed in the 1548 document, which created the district of Radziłów

- ▲ - from Wizna district
- △ - from Wąsosz district

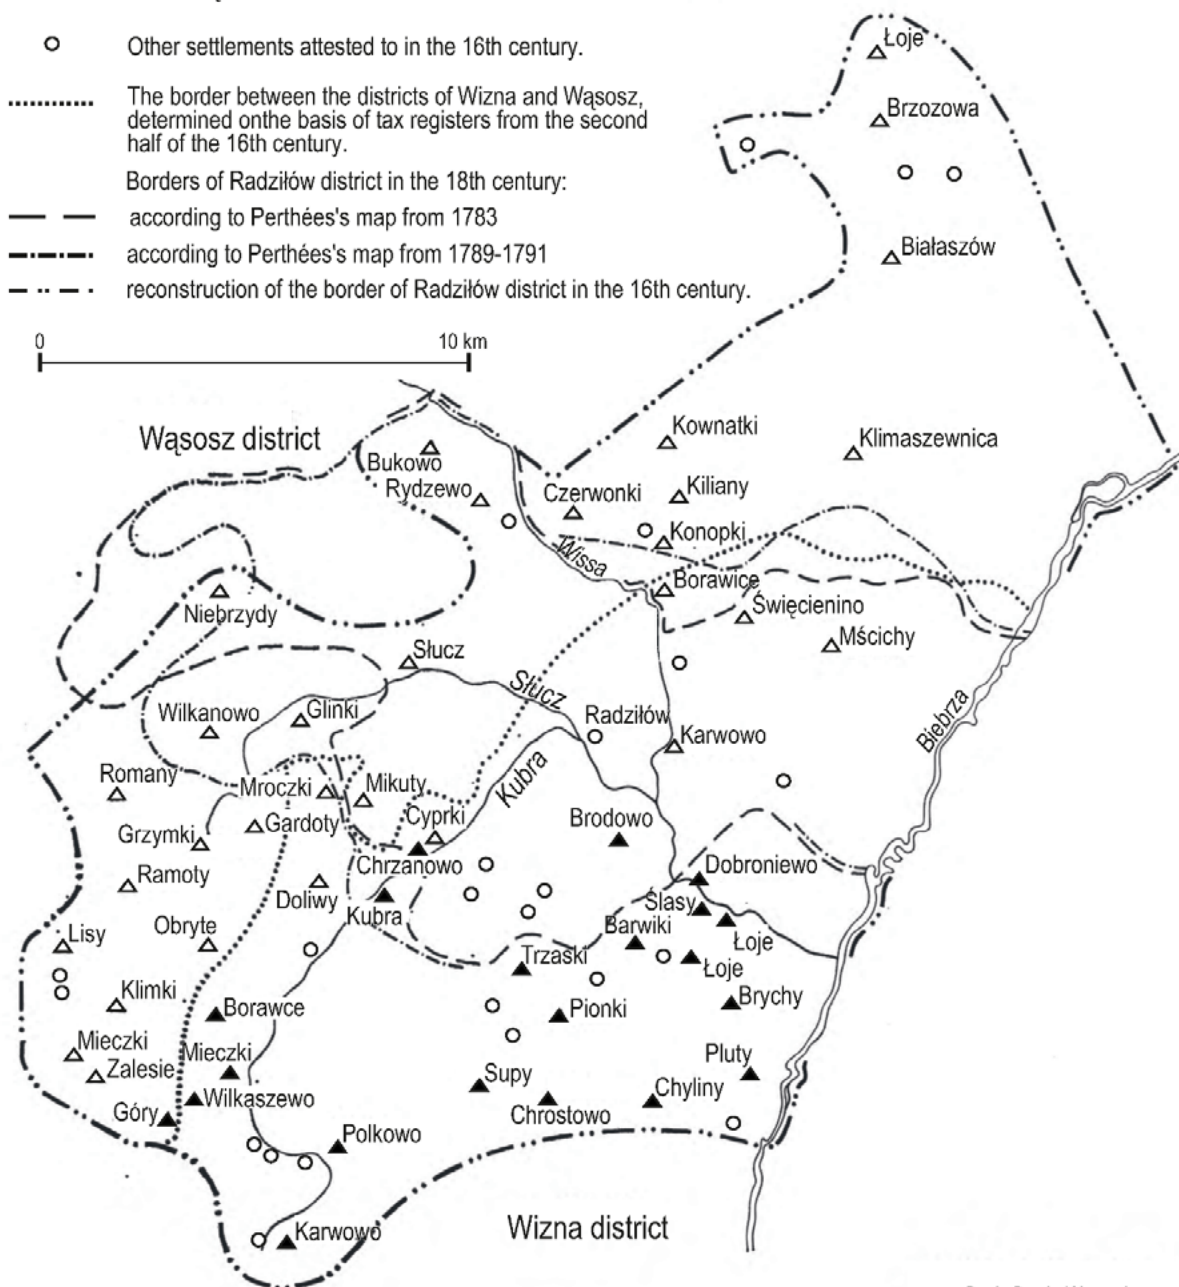

- Other settlements attested to in the 16th century.

..... The border between the districts of Wizna and Wąsosz, determined on the basis of tax registers from the second half of the 16th century.

Borders of Radziłów district in the 18th century:

- — according to Perthées's map from 1783
- - - - according to Perthées's map from 1789-1791
- · - · reconstruction of the border of Radziłów district in the 16th century.

Map 1. Reconstructed borders of Radziłów district

RECONSTRUCTED BORDERS OF SEROCK DISTRICT

Map 2. Reconstructed borders of Serock district

two lands.⁸⁷ A survey of materials from Zakroczym court mortgage registers after 1567 – that is after the district of Serock was created – reveals certain processes, which indicate that the border of Serock district was not yet stabilized at the time. On the one hand, the nobles who sued before the court in Serock proved their traditional right to answer before the court in Nowe Miasto, not Serock.⁸⁸ Yet on the other hand, the registers mention villages appealing to the court in Serock.⁸⁹

Given the above, we tried to reconstruct the borders of the said district by means of retrogression, referring to materials from the eighteenth century. Despite the chronological convergence, these sources convey three different versions of the borderline of Serock district. And yet, all eighteenth century records present a range incommensurately vast in comparison to the one determined on the basis of the source from 1591. The 1789–1790 Tariffs place the following parishes in the district: Dzierżenin, Pokrzywnica, Przewodowo, Serock, Smogorzewo, Winnica, part of Nasielsk, Pomiechów, Pułtusk and Zegrze parish, without Poniaty Cibory village.

Perthées's maps (1783 and 1789–1791)⁹⁰ move the borderline of Serock district to the west from the range defined by the hearth tax rates. The eighteenth century border in the north, encompassing at the time also a complex of bishopric estates near Pułtusk, called *districtus* still in the fifteenth century and granted – at least then – court immunity, seems to suggest that the eighteenth century range of Serock district was a result of evolution, which occurred no sooner than between the seventeenth and eighteenth centuries.⁹¹ The border of Serock district, determined for the end of the sixteenth century, presented on the map of Mazovia, encompasses the area confirmed by the 1591 register and some settlements supplementing the density of this area, whose affiliation to Serock district is attested by sources from the end of the eighteenth century, namely: the major part of Koprzywnica parish, part of Smogorzewo parish, Dzierżenin parish, Serock and Zegrze, within the borders, which belonged to Nowe Miasto district in 1567. An area between the districts of Nowe Miasto and Serock was also isolated on the map. There were 90 settlements in this area, but we were unable to determine their district affiliation for the end of the sixteenth century.⁹² A similar problem occurred while trying to determine the district affiliation of several villages not belonging to the nobility situated along the borderline of two districts: Zakroczym and Nowe Miasto.⁹³ Based on the eighteenth century data, we decided to place these villages in Zakroczym district.

In the Voivodship of Rawa in the sixteenth century, Gostynin land consisted of two districts: Gostynin and Gąbin. It was difficult to demarcate these districts within the borders of the land, as well as to reconstruct their borders, as the majority of fiscal registers from the sixteenth century recorded tax payments from the entire land. The division into districts can be found only in several registers from the 1560s (1563, 1564 and 1565), and the most complete register is the one from 1564. These registers place the villages from the following parishes inside Gąbin district: Gąbin, Kamion, Brochów

⁸⁷ Wolff 1962, pp. 27–34.

⁸⁸ AGAD, Zakroczymskie wieczyste, f. 61, f. 11: one Bieliński from Bielany, summoned before the court in Serock, argued that his ancestors had always answered to the court in Nowe Miasto, only 2½ miles from Bielawy, whereas Serock lay 3½ miles away. The Piotrków constitution from 1567 stated that only these villages answered to Serock, which lay closer to it and which were always summoned there (VL, vol. 2, p. 71).

⁸⁹ AGAD, Zakroczymskie wieczyste, f. 61, f. 26v, 29–50. Maciej Chądzyński's opinion that the entire Winnica parish was to answer before the court in Serock, *ibidem*, f. 62, c. 45–51, 164v; the court was moved from Nowe Miasto to Winnica because of the plague in 1571, *ibidem*, f. 69, f. 262.

⁹⁰ H. Rutkowski, Cartographic sources, [in:] AHP Mazovia.

⁹¹ Wolff 1962, p. 27. In 1591 – characteristically – a village Olbrachce, which belonged to a noble family and lay in Pułtusk parish was affiliated to Serock district, whereas all other settlements bordering on the district belonged to the bishop and were still ascribed to Nowe Miasto district. It is not accidental that the greatest difficulties in determining a district in the sixteenth century occurred in villages, which did not belong to the nobility at the time, because the population of royal estates answered to starostas' courts, and the inhabitants of the villages of the Church situated in large keys of property, e.g. the estates of bishops or archbishops, were subject to patrimonial courts because of judicial immunity, which often had long history within particular districts.

⁹² These belonged to the following parishes: Winnica (38 villages, i.e. the entire parish), Pomiechowo (nine villages, i.e. the part situated on the left bank of the River Narew), Nasielsk (21 villages, i.e. almost entire parish, except for one village situated in Zakroczym district), Pułtusk (10 villages), Przewodowo (eight villages, i.e. almost entire parish, except for three villages in Nowe Miasto district), and Ciekosyn (four villages, other in Nowe Miasto district).

⁹³ Property of the bishop of Płock: Gostolino, Juniec, Kawęczyn and Szumlino; estates of the monastery in Czerwińsko: Kossówko, Pomnichowo and Słocwino, and one royal settlement – Sobieszczki, which belonged to Nowe Miasto lease.

(part), Kiernozia, Jamno, Brzozów, Rybno, Sanniki, Dobrzyków, Sochaczew (part), Giżyce, Pacyna, Czermino, and Kozłów Szlachecki.

Apart from this data, the 1589 register groups villages of farm gentry into two separate lists, under the headings; *parochia Gąbin* and *parochia Gostynin*. The analysis of the location of these villages tells us that this does not mean parochial affiliation, but the affiliation of Gąbin and Gostynin district. The register lists – among the villages mentioned above in Gąbin district – the villages belonging to the parishes: Luszyn, Troszyn, Życko, Mistrzowice, and Osmolin.

The boundary line, separating the above-mentioned villages from Gostynin district, shows us the borders of Gąbin district with the parishes territorially connected with the district: Młodzieszyn, Złakowo, Kocierzewo, Łowicz – the parish of the Holy Virgin and Kapina. The sixteenth century tax registers fail to provide a direct confirmation as to whether these parishes belonged to Gąbin district, or not. However, having analysed the relationship of individual settlements with the district of Gąbin, we conclude that the silence of the sources is not a counterargument in this case. Młodzieszyn parish, which does not appear in the registers from Gostynin land in 1563, 1564, 1565, was included in Kozłów Szlachecki parish in records of overdue payments, and this parish belonged to Gąbin district. Estates belonging to the archbishopric of Gniezno were located in the four remaining parishes. Fiscal registers list those estates not under individual parishes, but in a separate list of archbishopric estates in Gostynin land. Such a situation likely occurred because there were no nobles in those villages, who would be subject to land court, so there was no reason to draw district borders in this area. Fiscal sources from the seventeenth century, namely the poll tax registers from 1673–1674, used only economic division, i.e. within the keys of property of Łowicz and Kapina. It is possible that the entire complex of archbishopric estates in Mazovia was still a separate administrative unit in the sixteenth century, and that the borders and laws of this unit were settled in the course of clashes with the dukes, and survived until the land of Rawa was incorporated into the Crown.

Such a possibility could be suggested by the term *capitaneatus*, frequently used to denote economic complexes of Church estates also in other areas of Mazovia, for instance in case of Wyszaków, Pułtusk and Brok estates of Płock bishopric. The traditional name of Łowicz castellany persisted as well within the estates of the archbishopric. In the fifteenth century, the name was used along with the term ‘Łowicz district’ (*in castellania sive districtu Lovicensi*), in opposition to Skierniewice district (*in districtu Skierniewicensi*).⁹⁴

Rawa Mazowiecka land was divided into two districts in the sixteenth century: Rawa and Biała. Even though the division was quite old – originating in the fifteenth century,⁹⁵ no sources survive, which would allow us to determine precisely the range of Biała district in the sixteenth century. The division was also avoided in fiscal sources. Therefore the reconstruction was based on the eighteenth century state.⁹⁶

Perthées’s map and hearth tax rates tariffs from 1789–1790 generally agree about the range of this district. The only difference concerns Sierzchowy parish, placed in Rawa district by the map of Perthées, and in Biała district by the tariffs. The analysis of the layout of parishes in the sixteenth century tax registers suggests that Biała parish was followed by all parishes, which undoubtedly belonged to Biała district in the eighteenth century, as well as parishes: Krzemienica, Czerniewice (both near Sierzchowy), and Białynin. Czerniewice and Krzemienica lay much closer to Rawa than Biała, which could mean their inhabitants answered before the court of Rawa also in the sixteenth century. And the location of Białynin parish totally rejects its affiliation to Biała district. As a result, we accepted the border shown on Perthées’s map as the sixteenth century border, marking an alternative for Sierzchowy parish.

It should be noted that Jaruzel, a parochial settlement, paid tax in two lands in the sixteenth century: Rawa and Sochaczew. The same situation occurred in the eighteenth century in hearth tax rates 1789–1790, where one part of Jaruzel, with presbytery, was listed in Mszczonów district, and the other – in Biała district.

Sochaczew land consisted of two districts in the sixteenth century: Sochaczew and Mszczonów. Tax registers outline Mszczonów district in 1552 and 1557, with the following parishes: Mszczonów, Chojnata

⁹⁴ Mostly Taryfy 1789–1790 and Perthées’s maps.

⁹⁵ Regesta theloniei aquaticae Wladislaviensis saeculi XVI, ed. S. Kutrzeba, F. Duda, Kraków 1915, pp. 64, 99, 111, 150, 171, 185, 196, 300, 342; Liber privilegiorum kapituły łowickiej, BN, microfilm no. 9205, f. 47, 101.

⁹⁶ Wolff, p. 17.

and Jaruzel (part), whereas the affiliation of two other parishes: Grodzisko and Osuchów, to the district was confirmed by the 1497 register, and of Grodzisko parish alone also by the document of the renewal of the establishment of the parish from 1590.⁹⁷

The reconstruction of the borders of **Płock Voivodeship** presented on the map of Mazovia shows some differences in relation to the map of WP. These differences result from the method of work applied and are only linear – showing different bends of the borderline – but also introduce corrections concerning parochial and district affiliation of several settlements. We must mention here an attempt to draw alternative borders of Kuklino parish, which created an exclave of Szreńsk district inside Mława district in the previous presentation.

At the beginning of the sixteenth century, there were two lands and seven districts in Płock Voivodeship. In the 1530s (probably around 1538) a new, eighth district was isolated from the district of Biała – Sierpc.⁹⁸

Several settlements situated in the borderlands of two districts were divided by the boundary line (our analysis of tax payments showed that these settlements paid part of their taxes to one district, and part to another), these were: Góra, located between the districts of Płońsk and Bielsk, and Strzegowo between Szreńsk and Raciąż district.

ANNEX I

Total area of state territorial units of Mazovia

Total area of the Voivodeships of Mazovia in km²

Voivodeship	km ²	according to Pawiński, in km ²

III.2.1.8 PODLASIE VOIVODESHIP

Michał Gochna

The present chapter is concerned with the administrative borders of the Podlasie Voivodeship in the second half of the sixteenth century to the extent that it entered into the composition of the Crown of the Polish Kingdom in 1569 yet it is presented within the boundaries that it attained at the end of the sixteenth century. This entity had been separated from the Troki Voivodeship of the Grand Duchy of Lithuania in the first half of the sixteenth century. Two dates are significant here: the year 1513 when for the very first time the Podlasie voivode is mentioned in the sources (Iwan Sapieha), and the year 1520, when the King Zygmunt Stary established the Podlasie Voivodeship with its capital at Drohiczyn. This area had been a part of the Grand Duchy of Lithuania and comprised the lands of Bielsk, Drohiczyn, Mielnik, Brześć, Kamieniec and Kobryń.¹ The newly created voivodeship was of a fairly extensive land area and one that in addition had an awkward southerly elongated shape that hampered its efficient administration. And in addition there were legal differences between the various parts. The north-western part of the then Podlasie Voivodeship in the course of the fourteenth and fifteenth century had come under the control of the Mazovian princes several times. The whole of Podlasie came under their jurisdiction for the short period of 1382 to 1383, and subsequently from 1390 to the beginning of the fifteenth century. In the years 1440–1444 the Drohiczyn lands were held by Prince Bolesław IV.² The environs of Goniądz and Rajgród fell to Mazovia as a result of the struggles with the Yotvingians (Sudovians), though with time these lands were to be incorporated into the Grand Duchy of Lithuania.³ The Mazovian Piasts supported the influx of settlers from Mazovia to the newly acquired territories, bestowing either properties upon their subjects or Polish rights for the local nobility.⁴ Following the subsequent inclusion of particular Podlasie lands into the composition of the Grand Duchy of Lithuania, the Lithuanian authorities confirmed on the settlers those rights given by the Mazovian princes. In 1445 Kazimierz Jagiellończyk confirmed the rights bestowed on Polish subjects from the Drohiczyn lands, and which had been granted under Witold and Zygmunt Kiejstutowicz. These lands

¹ A number of researchers, such as E. Dubas-Urwanowicz and W. Jarmolik, stand by 1513 as the date for the actual creation of the Podlasie Voivodeship. The year 1513 has equally been accepted by Tomasz Jaszczółt in discussions over the present commentary. Here we are inclined towards the views of Ł. Gołaszewski and A. Zakrzewski as well as the opinion of D. Michaluk and treat its arising as a process finalised in the document of 1520. *Urzednicy podlascy*, p. 13; W. Jarmolik, *Powstanie województwa podlaskiego*, „Białostoczczyzna“ 1989, no. 4 (16), pp. 6–9; Gołaszewski, Zakrzewski, *Ustrój*, pp. 195–196; Michaluk, *Granice województwa podlaskiego*, pp. 172–173. A. Jabłonowski has published the voivodeship founding document. *Podlasie III*, pp. 257–259.

² Jaszczółt, *Ziemia drohicka i bielska*, pp. 331–360. Following the rejoining of the Drohiczyn land to the Grand Duchy of Lithuania the Węgrów district was to have remained on the Mazovia side, sometimes mistakenly called a district, but the agreement was not kept and Węgrów and environs were to come under Lithuanian authority. *Urzednicy podlascy*, p. 8. T. Jaszczółt, *Granica pomiędzy ziemiami drohicką i liwską w świetle protokołów komisji z 1546 roku*, „Rocznik Liwski“, vol. 6, 2012/2013, pp. 17–19. See M. Gochna, *Węgrów*, in this edition III.6.30.8.

ultimately obtained Polish rights in 1516.⁵ In turn, in 1501, Aleksander Jagiellończyk bestowed Polish law, though here incomplete, on the lands of Bielsk, supplemented by the granting of full rights in 1547.⁶ The legal differences that were observed between north-west Podlasie and the south-east were connected with the ethnic and denominational differences that developed during the process of settlement. The Drohiczyn, Mielnik, and Bielsk lands were to a great extent characterised by Mazovian settlements and Catholicism as a denomination, while the lands of Brześć Litewski, Kamieniec and Kobryń were dominated by populations of Ruthenians who were Orthodox by faith. The last of the mentioned territories had managed to preserve the hitherto Ruthenian and Lithuanian legislation.⁷ So when at the Wilno Sejm of 1565–1566 the administrative reform of the Grand Duchy of Lithuania was passed, the Podlasie Voivodeship was reorganised in relation to the above mentioned divisions. The lands of Brześć, Kamieniec and Kobryń were in connection with the Turów-Pińsk dukedom to form the new Brześć Litewski Voivodeship with its capital at Brześć Litewski.⁸ The lands of Bielsk, Drohiczyn and Mielnik were to remain in the Podlasie Voivodeship. And it was in this form that the voivodeship was incorporated into the Crown in 1569.⁹ Following its incorporation the western and south-western border of the Podlasie Voivodeship was to become the border dividing it from other voivodeships entering into the composition of the Crown – Mazovia and Lublin. The eastern one not only separated Podlasie from the Voivodeships of Brześć Litewski and Troki, but also with the same became the border between the Crown and the Grand Duchy of Lithuania. The status of the northern section of the border did not change however – as it continued to be the state border with the Duchy of Prussia.

The Podlasie Voivodeship was initially joined to the province of Greater Poland while the representatives of Podlasie appeared at the general diet in Koło. At the turn of the seventeenth century the Koło general diet (assembly) declined, and from 1571 onwards and in the seventeenth century the representatives of Podlasie attended the Mazovia general diet.¹⁰ Diets were formally called into existence in Podlasie in 1565, however earlier still there had taken place assemblies of the Podlasie nobility, at which, among other things, local administrators were chosen. Three diets were in operation in Podlasie,

⁵ VL, vol. 1, pp. 174–175 (384–387).

⁶ Gołaszewski, Zakrzewski, *Ustrój*, p. 196; VL, vol. 1, pp. 287–288.

⁷ Michaluk, *Granice województwa podlaskiego*, p. 174. The Lithuanian nobility often made reference to laws in operation in Podlasie as the basis for demands advanced for administrative reforms. *Urządnicy podlascy*, pp. 14–15.

⁸ A. Kołodziejczyk, *Przemiany społeczno-gospodarcze na Podlasiu w XV i XVI wieku*, Olsztyn 2012, pp. 155–157. In this volume we have employed the name ‘Brześć Litewski’ to term the voivodeship. This functioned in the second half of the sixteenth century next to the form *brześciańskie* [‘Brestian’]. It appears that with time the first of the two forms started to gain prominence. Bartosz Paprocki employs the term “bereszczajskie”. Idem, *Herby Rycerstwa Polskiego Na pięcioro Xiąg rozdzielone* [...], Cracow 1584, p. 719. In Marcin Bielski the voivodeship is known as “brzeskie”. Idem, *Kronika polska Marcina Bielskiego nowo przez Ioach[im]a. Bielskiego syna iego wydana* [...], Cracow 1597, p. 7 (10). Within the hierarchy of senatorial offices from the sejm of 1569 the voivode is defined as “brześcieński”. Similarly the adjective “brześcieński” or “brześciański” was used in taxation register letters for the universal taxation levied in this same year, but already in 1578 it appears as “Brześć Litewski” (with this last term being repeated in subsequent proclamations, being in part a duplication of that of 1578 – in the years 1580, 1581, 1588). In turn from 1589 r. (in the years 1590, 1591 and 1593) tax collection was to be handed over to the collector in “Brześć Litewski”; VL, vol. 2, pp. 68 (777–778), 106 (805), 197 (993), 203 (1006), 218 (1036), 276 (1259), 303 (1316), 325 (1362), 339 (1392), 354 (1424); VC, 2, no. 1, pp. 239, 262, 429, 439, 461; no. 2, pp. 96, 135, 167, 189, 214. Analogically we have employed this version of the name in reference to the Brześć Litewski district. The many references in this volume to the Brześć Voivodeship are referrals to the unit belonging to the Grand Duchy of Lithuania, and not to the Crown voivodeship of Brześć Kujawski (Kuyavian Brest) unless stated otherwise.

⁹ VL, vol. 2, pp. 77–80 (745–752); VC, vol. 2, no. 1, pp. 216–200: The act „O ziemi podlaskiej. Przywilej przywrocenia ziemie podlaskiej do Korony Polskiej” of 5 marca 1569. Although the capital of the voivodeship was Drohiczyn this did not become its political centre. As a result of the extensive longitudinal nature of the voivodeship where additionally royal possessions dominated in the Bielsk land, several political-administrative centres were to form over time. J. Reder has enumerated amongst them, and here for the King Stanisław August Poniatowski period, Bielsk, Brańsk, Drohiczyn, Goniądz, Mielnik, Sokołów and Tykocin. Ł. Gołaszewski and A. Zakrzewski have also included amongst their number Suraż, losing with time its significance. J. Reder, *Podlasie. Z dziejów ustroju terytorialnego i nazewnictwa*, CPH, vol. 56, 2004, no. 1, p. 54; Gołaszewski, Zakrzewski, *Ustrój*, p. 209; VL, vol. 7, p. 153 (348–349).

¹⁰ J. A. Gierowski, *Sejmik generalny Księstwa Mazowieckiego na tle ustroju sejmikowego Mazowsza*, Wrocław 1948, pp. 23–25; E. Kalinowski, *Podlasianin Wielkopolaninem? Z nieznanych dziejów przynależności terytorialnej Podlasia po 1569 r.*, „Przegląd Historyczny”, vol. 106, 2015, no. 3, pp. 421–440; VL, vol. 2, pp. 197 (993), 207 (1004) and VC, vol. 2, no. 1, p. 439, where in the light of the tax universals of 1578 and 1580 Podlasie belonged to Greater Poland.

one for each of the lands. At each of these two deputies were selected. This number was maintained also after the incorporation of Podlasie within the Crown.¹¹

When in 1578 the Crown Tribunal was formed and the Polish state was divided into two provinces, Podlasie was assigned to the province of Lesser Poland with the seat of the Tribunal in Lublin (while Mazovia belonged to the province of Greater Poland). So consequently Podlasie was in various territorial unions – a different diet and a different tribunal one. This was to change around the mid seventeenth century when this area was permanently deemed part of the Lesser Poland province.¹² The deputy diet at Drohiczyn would choose two Podlasie deputies for the Tribunal.¹³ From 1611 one of these came from the Drohiczyn land, with the second alternately from the Bielsk and Mielnik lands.¹⁴ Such a situation was to generate disputes amongst the nobility of the Drohiczyn and Bielsk lands. The latter at the same time was the last in the hierarchy of the lands within the Podlasie Voivodeship that attempted to change this state of affairs. In 1699 the mentioned deputy diet in Drohiczyn was dissolved (called ‘the general’ although it had nothing in common with a general diet), with the selection of deputies remaining to the lands on an alternate basis.¹⁵ Only in 1764 was the Podlasie Voivodeship to be granted a third deputy which limited the hitherto noble disputes.¹⁶

As was recalled earlier, the voivodeship was divided into three lands – Drohiczyn, Mielnik, and Bielsk, with the capitals being respectively in Drohiczyn, Mielnik and Bielsk. Each of them was a separate fiscal district.

Drohiczyn was the capital of the Drohiczyn starosta, the gord office and court as well as for the land court.¹⁷ At the diet of 1631 Miedzna (Międzylesie) was designated as an additional place for court sittings. This act did not become binding with parliament carrying out its re-assumption in 1678.¹⁸ In the year 1764 the sejm decided on calling into being additional district court sessions in Mokobody (Mąkobody) and Sokołów Podlaski (Sokołów).¹⁹

The Mielnik land was initially a part of the Drohiczyn land. The process of their separation falls to the years 1530–1540.²⁰ The remains of this union were still visible in the sixteenth century in the form of a joint ensign bearer (this office was to be divided at the beginning of the seventeenth century) as well as in the organisation of the collection of *lanowe* tax.²¹ In the years 1576, 1577, 1580 and 1588 the collection in both of these lands was conducted by the same collectors – respectively: Maciej Pobikrowski, Arnolf Hlebowicz (Hlebowicz Korczewski), the Drohiczyn and Mielnik ensign bearer, Jan Grot, the Drohiczyn judge, and Nikodem Jałbrzyk Wyszyński – while the collection registers for the years 1576, 1580 and 1588 were one single whole for both lands.²² The seat of the starost, the gord court and office as well as where the land court sessions took place was the capital of the district – Mielnik.²³

The main gord office for the Bielsk land was to function in the sixteenth century not in the capital of the lands, but at Brańsk. However, it was formally referred to as the gord court of the Bielsk land, although it is highly probable that it never actually passed judgements in Bielsk itself.²⁴ Therefore, in the sources, the starost standing at its head and gord clerks were referred to by either the dual

designation of being of Bielsk and Brańsk, or of just one of these (and here already in the fifteenth century).²⁵ An impact on this situation could have had the surrounding settlement structure. Within the environs of Bielsk were to be found first and foremost large ducal estates, while in the vicinity of Brańsk it was the property of the small and medium-sized nobility that dominated. The conflict between the Bielsk nobility with the Bielsk starost Olbracht Gasztołd needs to be noted. Gasztołd strove to limit the political activity of the local nobility and for a time suspended the land courts. After many attempts the Bielsk nobility managed, in 1533, to buy out the starosty from Gasztołd. Bielsk was to decrease in importance at this time to that of a non-gord starosty.

The seventeenth century was to see certain changes in the gord courts of the Bielsk land. In 1667 the gord office in Goniądz was created as an answer of the district nobility to the problems connected with the necessity to overcome the significant distances involved, together with the crossing of the Narew, with the aim of making it easier to conduct administrative matters in Brańsk. This office operated as a branch, subordinating itself to the Brańsk starost and the clerks located there. With certain later amendments the office was to function in this mode until the end of the eighteenth century.²⁶

Land courts in the Bielsk land took place in Suraż, Brańsk, and Tykocin. At the beginning of the fifteenth century court sessions were held in Suraż, and from around the mid fifteenth century in Brańsk, wherein in both towns the same court composition passed judgement.²⁷ Given that court sessions were not conducted in the capital of the land – Bielsk – and consequently the courts in Suraż and Brańsk were district's land courts for the entire administrative area, clerks involved in the meting out of justice were alternately known as being of Brańsk, Suraż or Bielsk. Court sessions from 1581 also took place in Tykocin.²⁸ The question of land court sessions within the Bielsk land were defined by the sejm constitution of 1588, establishing the dates for the Brańsk, Suraż and Tykocin court sessions.²⁹ Hence the areas subordinated to those courts that came into existence in this way started to be called, particularly in the seventeenth and eighteenth century, *trakty* (estates) or analogically to the Crown units, districts.³⁰ The Suraż and Brańsk land courts were finally transferred to Bielsk in 1768, leaving the Tykocin court sessions in their former place.³¹

The administrative hierarchy in Podlasie reflected to a degree the mix of influences derived from the Crown and Lithuanian administrative traditions. In the sixteenth-century Podlasie Voivodeship there functioned next to the gord and land offices characteristic for the Crown (starosta, chamberlain and *wojski*; gord – judge, sub-judge and scribe; land – judge, sub-judge and scribe) offices characteristic for the Grand Duchy of Lithuania. Around 1513 besides the functioning of the Podlasie voivode noted also were the offices of Podlasie beaver keepers (castorarius), copsers (Pol. *hajewnik*) and foresters. These offices functioned equally in the sixteenth century in the Drohiczyn, Bielsk, and Mielnik lands. In turn amongst the Crown offices functioning in the Podlasie Voivodeship noted before the year 1569 was that of Podlasie referee (Pol. *referendarz*, Lat. *referendarius*), a position created to mediate, among other things, in disputes between the nobility and the district marshals. All of the above mentioned ranks and offices were to disappear along with the inclusion of Podlasie to the Crown, though the voivodeship maintained its hitherto hierarchy of land offices modelled on those of the Crown.³² Of interest in this context is the case of the Drohiczyn-Mielnik land ensign-bearer officer, who though in title comparable to the Crown land ensign officer, was in fact entrusted with somewhat different authority.³³ In the year 1578 the list of voivodeship offices was supplemented by the inclusion of the ranks of deputy sub-cup-bearer, pantler, cup-bearer, sub-pantler, while in the second half of the seventeenth century

added were equally the voivodeship offices of land ensign-bearer officer and *wojski*. The hierarchy of ranks and offices was only to stabilise in various Podlasie lands around the mid seventeenth century.³⁴

There were two senatorial offices in the Podlasie Voivodeship: that of the voivode and one castellan. The former of these had appointed a seat in the ducal council posterior to the Novogrod voivode.³⁵ Following 1569 the Podlasie voivode sat in the senate before the Mazovia voivode but after the voivode of Rawa. The Podlasie castellan was considered to belong to the circle of higher castellans, holding his place after the castellan of Czersk but before the Rawa castellan. This office was called into being only in 1566.³⁶

The Wilno Sejm of 1544 decreed that the Podlasie nobility were to conduct military rolls before the relevant starost.³⁷ Following the incorporation of Podlasie in 1569 the voivodeship preserved its hitherto military organisation that is general call ups of men to fight based on fields cultivated i.e., the providing of a single horseman for each 10 or 20 voloks depending on the type of equipment (relative to a Cossack or a hussar).³⁸ In 1587 Drohiczyn was designated a muster point in the Podlasie Voivodeship for the Drohiczyn and Mielnik lands while Suraz covered the Bielsk land, something confirmed by the acts of 1620 and 1632.³⁹

The creation of the Podlasie Voivodeship in the first half of the sixteenth century, the division of 1566 as well as its inclusion into the Crown in 1569 meant that the borders of this administrative unit at the end of the sixteenth century were not strictly regulated. Here a noticeable influence was exerted by ownership structure. The holders of estates straddling the border divide sought to reduce fiscal responsibility resulting in a common practice whereby magnates would one time consider their estates to be under Crown taxation while another under the jurisdiction of the Grand Duchy of Lithuania. As Dorota Michaluk has pointed out, and here on the basis of the Mielnik land, of importance in the resolving of border disputes was also the fact as to whether at the moment of the incorporation of particular estates and lands to Podlasie their owners had been individuals connected to the Crown either through positions held or estates owned.⁴⁰ To this needs to be added political animosity and the opposition of a part of the Lithuanian magnates in relation to Podlasie's inclusion within the Crown.⁴¹ The problem of the demarcation and stabilisation of the Podlasie Voivodeship's borders was to be wrestled with even during the first half of the seventeenth century. Sejms often called into being border commissions to demarcate the Podlasie Voivodeship in accordance with the borders of other neighbouring voivodeships especially the Lithuanian ones. Such decrees were issued in the years 1589, 1591, 1596, 1598, 1601, 1607, 1611, 1616, 1620, 1623, 1635, 1638, 1649, 1661.⁴² In connection with the above the administrative affiliation of several key estates and properties on the Podlasie border requires a more extensive commentary and coverage.

For a short period in 1569 the Łomazy-Wohyń estates (Pol. *trakt*) was incorporated into the Podlasie Voivodeship. This had been a disputed territory from at least the fifteenth century. In 1447 King Kazimierz Jagiellończyk separated it from the Lublin Voivodeship's Parczew starost, incorporating these lands within the Grand Duchy of Lithuania as a part of his ducal lands. In the mid sixteenth century those estates were a part of the Brześć Litewski starost, while after the reform of 1565–1566 they found themselves within the Brześć Litewski Voivodeship. Following Podlasie's inclusion into the Crown, attempts were made to join these territories to Podlasie. The lease of the Łomazy-Wołyn estates Ostafi

Wołłowicz was, however, not to swear loyalty to the Crown. In response the king gave the lands to Jan Tarło, the Radom castellan. Wołłowicz then changed his mind and swore allegiance which resulted in the inclusion of the estates within the Crown, and in 1570 he allowed for, though with resistance, their inspection. Shortly after the death of Zygmunt August these estates were once again joined with the Brześć Litewski Voivodeship (this was not covered, among other things, by the inspection of 1576), although disputes over its administrative affiliation were to persist.⁴³

Following the Union of Lublin also a demesne of lands with their centre at Choroszcz were not to be incorporated into the Podlasie Voivodeship. Their owner Grzegorz Chodkiewicz, the Wilno castellan, similarly to Wołłowicz, did not swear allegiance to the Crown.⁴⁴ Such a state of affairs was to continue until the partitions and these estates were to permanently enter into the composition of the Grand Duchy of Lithuania.

The administrative affiliation of the Międzyrzec estates was for a long time undefined and undecided on. Within the borders of the Podlasie Voivodeship it had been before 1566 included both within the district of the Mielnik district as equally as a part of the Brześć Litewski district. The controversy intensified following the division of the voivodeship in 1566. From that moment onwards the dispute raged not over course of the border between the two districts but between the two voivodeships. Finally, with the inclusion of Podlasie within the Crown in 1569, the dispute was to accentuate itself into a border conflict between the two states that made up the Commonwealth. Although an act of obedience through the swearing of an oath of loyalty to the Crown was also expected of the then owner of the Międzyrzec estates, Duke Stefan Zbaraski, he refused to take such an oath and so the estates were not incorporated into the Podlasie Voivodeship (it was to be only with his son, Piotr Zbaraski, that allegiance was finally sworn). In 1578, at the request of the nobility of the Brześć Litewski Voivodeship, a boundary committee was called into being, which was to judge the affiliation of the previously mentioned estates (as well as the Wołyn-Łomazy estates). These territories were to remain in the Brześć Litewski Voivodeship though this was not to be the final. Subsequent commissions were to meet in the years 1589, 1591, 1596, 1598, 1601, 1607 though to no avail. It was only to be the committee called in 1616 that was, by a decree of 1620, to incorporate the Międzyrzec as well as the Wołyń-Łomazy estates along with the Kozierady estates⁴⁵ into the Mielnik land of the Podlasie Voivodeship. This was to arouse opposition on the part of the Lithuanian nobility, but both the Międzyrzec estates as equally the Kozierady were to remain within the Podlasie Voivodeship up until the partitions.⁴⁶ At that time equally incorporated were the Rossosz and Horodyszcze estates that had hitherto constituted an exclave of the Mielnik land within the Brześć Litewski Voivodeship. The incorporation of the above mentioned territories, without the Wołyń starost, was confirmed in 1638.⁴⁷

As a result of the above comments the mentioned territories did not find themselves on the main map of the Podlasie Voivodeship, depicting the state of affairs at the end of the sixteenth century. The borders of the Podlasie Voivodeship formed in the first quarter of the seventeenth century were to survive without noticeable changes up until the third partition of Poland in 1795.⁴⁸

In accordance with the methodology devised for the current AHP series the boundaries of state territorial entities are plotted between two settlements of varied administrative affiliation.⁴⁹ In the

⁴³ LWP 1570, 1576 pp. XIX–XX, XXIII, 10–25, see the map of the Wołyń starost attached to the inspection; Michaluk, *Ziemia mielnicka*, pp. 36–47; Michaluk, *Granice województwa podlaskiego*, p. 182. Between the Wołyń-Łomazy estates were equally noble villages – Połubicze, Przewłoka, Chmielewo, Kopiny, Przegalino and Żelazna. Their owners attempted to join their estates to the Mielnik land, while earlier the creation of a separate district with its capital at Parczew, Łomazy or Wołyń, however these were ineffective attempts. Michaluk, *Ziemia mielnicka*, p. 40.

overwhelming majority of cases their exact course in the sixteenth century as it ran between neighbouring settlements remains unknown. Consequently they have been plotted on the basis of natural territorial obstacles, chiefly water networks. While where a boundary ran across land, interpolation has been employed. The boundaries of contemporary areas have been generalised depending on the situation and employed retrospectively.⁵⁰ The chief source that allows one to incorporate a given settlement into the borders of the Podlasie Voivodeship of land given to it came from the second half of the sixteenth century (tax registers, inspections, military rolls). In those cases where a territorial affiliation was not clear utilised have been sources from the seventeenth century (tax registers for the Bielsk land for the years 1634 and 1635, the Mielnik land for the years 1629 and 1627, the poll tax registers from the seventeenth century). The only cartographic material that showed the borders of the Podlasie Voivodeship and its particular lands were the maps of the voivodeships of Podlasie and Mazovia by Karol Perthées, together with sketches of the parishes and deaneries from these voivodeships. As far as possible recourse has been made to the demarcations known in the subject literature, as equally for voivodeships, as well as individual estates.⁵¹ Information from the court books and the collection of excerpts assembled from them by Ignacy Kapica (so-called “Kapicjana”) have been drawn on first and foremost by means of the subject literature especially provincial sources.

Let us now move onto a description of the borders of the Podlasie Voivodeship. We shall commence the said from the border at the most northernly point within the environs of the village of Grabowo. Here converged the borders of the Crown, (the Podlasie Voivodeship), the Grand Duchy of Lithuania (the Troki Voivodeship) as well as that of the Duchy of Prussia (Natangia). From the border point towards the north-west the land border from Grabów between Podlasie and Prussia ran in a south-western direction. On reaching Lake Rajgród it divided the lake, leaving the south-eastern part in the Crown and the north-western in Prussia,⁵² after which again on land it extended to the border with the Mazovia Voivodeship and here in the environs of the Podlasie village of Toczyłowo and the Mazovian settlement of Bogusze as well as the Prussian village of Prostki. The joining of the borders of the three states – the Crown, the Grand Duchy of Lithuania and the Duchy of Prussia – was marked out in August 1545 by a border post (one still existing to this day) at the settlement of Bogusze on the River Elk (Łek).⁵³ From this point the border ran to the south along the course of the River Elk, separating the Voivodeship of Podlasie from that of Mazovia. Subsequently at the mouth of the Elk and the Biebrza Rivers the border turned to the west and the south west, hugging the latter of the two rivers up unto its entry into the Narew. Further the border ran to the upper Narew in an easterly direction after which it took a southern turn following the course of the River Ślina entering into the Narew.

⁵⁰ T. Panecki, *Cartographic Modelling of Administrative Divisions in the “Historical Atlas of Poland”*, „Polish Cartographical Review”, vol. 52, 2020, no. 1, pp. 27–38.

⁵¹ In the case of the Podlasie-Mazovia border the greatest amount of information is on the delimitation of the Crown with the Grand Duchy of Lithuania of 1546 AGAD, Varia Oddziału I, catalogue number 55–56. The Polish protocol being printed in: M. Dogiel, *Limites Regni Poloniae et Magni Ducatus Lituaniae*, Wilno 1758, pp. 1–66 („Limites inter Regnum Poloniae ac Magnum Ducatum Lituaniae, nec non Prussiam”). On this demarcation and border disputes see T. Jaszczolt, *Granica pomiędzy ziemią drohiczką i liwską*, pp. 13–54; P. Sianko, *Granica mazowiecko-litewska do 1569 roku. Kształtowanie się, rola społeczna*, Białystok 2019, MS of a PhD thesis, pp. 290–332, 361–427. Reference was also made to the descriptions of the Grodno, Bielsk and Goniądz borders of 1529/1536. *Археографический сборник документовъ относящихся къ исторіи Сѣверо-Западной Руси издаваемый при Управленіи Виленскаго учебнаго округа*, vol. 1, Вильна 1867, no. 18, pp. 18–24. The north and north west section of the voivodeship has been sketched on the basis of the demarcation lines of 1358; H. Rutkowski, *Granica mazowiecko-litewska między Wizną a Grodnem z 1358 r.*, SG, vol. 5, 2017, pp. 140–155. Cf. discussion on the subject of this boundary section: E. Kowalczyk-Heyman, *O mazowiecko-litewskiej ugodzie granicznej z 1358 r. (głos w dyskusji)*, SG, vol. 7, 2019, pp. 213–226; H. Rutkowski, *Odpowiedź na krytykę artykułu o granicy z 1358 r.*, SG, vol. 7, 2019, pp. 227–233; P. Sianko, *Rozgraniczenie mazowiecko-litewskie z 1358 r. – nowe spojrzenie* [in:] *Granice i pogranicza*, ed. P. Guzowski, M. Liedke, W. Walczak, Białystok 2019, pp. 11–46; H. Rutkowski, *O dokumencie z roku 1358 raz jeszcze*, SG, vol. 8, 2020, pp. 215–219. For boundary changes within this section see J. Jakubowski, *Przykład zmienności granic administracyjnych na Litwie w wieku XVI*, „Ateneum Wileńskie”, 10, 1935, pp. 161–164.

⁵² See the border that still in 1422 demarcated along Lake Rajgród on Józef Naroński’s map of the Elk starost from approx. 1600 J. Szeliga, *Rękopiśmienne mapy Prus Książęcych Józefa Naronowicza-Narońskiego z drugiej połowy XVII wieku*, Warsaw 1997 (Studia i Materiały z Historii Kartografii, vol. 15).

⁵³ This post maybe seen on Kaspar Hennenberger’s map *Prvssia: Das ist des Landes zu Preussen Welches das herrlichste Theil ist Sarmatiae Europaeae, Eigentliche vnd Warhafftige Beschreibung* [...], reprinted in 1638 in Königsberg; <https://polona.pl/item/prvssia-das-ist-des-landes-zu-preussen-welches-das-herrlichste-theil-ist-sarmatiae,NDg5ODg0Nw/0/#info:metadata> (access: 12.05.2020).

Next beyond the Mazovian Zawady, at the level of the village of Podlasie Kapice the border departs from the river, runs landwards in a south-western direction, leaving on the Podlasie side the environs of noble Sikory, Wnory, Grodzkie, Kulesze, Gołacie and Tybory while on the Mazovian: Cibory, Zambrzyca and Kołaki.⁵⁴ Beyond the Podlasie environs of Miodusy the border turns south at the level of Rosochate taking a south-eastern turn, dividing the noble environs of Dąbrów, leaving its northern part within Podlasie and the southern – in Mazovia.⁵⁵ Beyond which it turned to the south, passing the Mazovia environs of Siennica (Sienica), Zawisty, Kutylowo, Boguty and Tymianki (Tymianka), and in Podlasie Łuniewo Wielkie, Małe (Łuniewo Szczubły), Usza (Wielka and Mała) among others, extending beyond Ciechanowiec and Kozarze to the River Nurzec.⁵⁶ The border was to run along the course of this river between the Voivodships of Podlasie and Mazovia right up to the River Bug. Next it ran along this river to the west, leaving it in a southerly direction beyond the settlement of Kiełczew (Kiełczewo). Further it directed itself to the south-west towards the Liwiec, leaving in Mazovia the villages of Morzyczyn Włościański (Morzyczyno), Orzełek, Kołodział (Kołodziałcz), Brzózka, Miednik, Zgrzebichy (Grzebichy), Stary Zambrzyńiec (Zembrzyńiec), Matały (Matałki) and Twarogi, while in Podlasie: Prostyń (Prostynia), Złotki, Stare Lipki (Lipki), Ugoszcz (Ugoszcza), Kozołupy, Kałęczyn (Kałęczynek), and Wólka Papińska (Zadnia Wola). Next the border ran up to the Liwiec, from the mouth of the River Muchawka (Żytina) separating the Voivodships of Podlasie from that of Lublin. Going further along the Liwiec distancing itself from the river at the settlement of Próchenki it moved to the east, separating the Mielnik land from the estates of Międzyrzec situated at the time in the Brześć Litewski district of the Brześć Litewski Voivodship. On this section on the Podlasie side were the villages of Korczówka, Krawce, Mostowo, Siliwonki (Sieliwonki), Dziadkowskie (Dzietkowskie) and Mielniki. On its reaching the River Krzywula the border heads north, beyond Huszlew and Wólka driving east and further to the south east, leaving Bokowicze in the Brześć Litewski Voivodship, while Nosów (Nosowo), Droblin, Koszelówka, and Stara Bordziłówka (Borzyłowa Wola) in Mielnik land. Subsequently running along the River Klukówka (Białka), avoiding Mielnik Witulin and Cicibór Mały (Cicibór), where it turned north beyond the last of these settlements.⁵⁷ After having passed by Ossówka (Wola Osowska) it headed north-west and with a broad arc it passed by the Kozierady estates and in

⁵⁴ The village of Krawce-Starawieś is marked for this section on Perthées's map as lying in the Podlasie Voivodship, however in the second half of the sixteenth century it found itself within the district of Zambrów in the Voivodship of Mazovia; ASK I 39, f. 117 (Mielnik tax register of 1577); AHP Mazovia (main map). The noble environs of Czarnowo were divided from the second half of the fifteenth century by initially state and later voivodship borders – Byki remained on the Podlasie side, Ondy on the Mazovian. Cf. Jaszczolt, *Ziemia drohicka i bielska*, p. 349.

⁵⁵ On this section the border ran through the village of Rosochate Nartoły (Rosochate Święck), which set out the delimitation of 1546. The Podlasie part of this village constantly appeared (as Rosochate Święcko or simply Rosochate) either in military rolls or in tax registers of the sixteenth century, though also in the list of oaths sworn by the Podlasie nobility in loyalty to the Crown in 1569. Popis 1565, pp. 335–336; Popis 1567, p. 934; AUPL, p. 289; ASK I 47, ff. 61v, 542v, 753; ASK I 27, ff. 931. Jaszczolt, *Ziemia drohicka i bielska*, p. 349; M. Dogiel, *Limites Regni Poloniae*, p. 14.

⁵⁶ The land boundary on this section was marked by means of 'posts' mentioned many fold in the delimitation of 1546, being more than likely vertical markers in the ground; see E. Kowalczyk-Heyman, *Czym były mazowieckie „plozy”?* (*uwagi wstępne*), SG, vol. 4, 2016, pp. 27–37. It appears that the course of the said 'posts' was visible in certain sections on Von Stein's map (a thin, dotted line), and sometimes also on contemporary surveying divisions. See the boundary in the environs of the village of Sikory Bartyczki.

⁵⁷ Unclear administrative affiliation concerned the village of Cicibór and Kajków, the latter is shown on the main map as related to the former. Cicibór is mentioned in the tax registers for the Mielnik land for the years 1577 and 1580. The latter mentions, beside Cicibór, also Kajków and is in principle the only hitherto known reference to this settlement from the second half of the sixteenth century. According to D. Michaluk this village belonged in the seventeenth century to the Brześć Litewski Voivodship. On Perthées's map while Cicibór is visible within the borders of this voivodship the village of Kajków is unmarked. ASK I 47, ff. 554 (Mielnik land tax register 1580), 765v (Mielnik land tax register 1577); cf. SGKP, vol. 3, p. 671; Michaluk, *Ziemia mielnicka*, p. 51. In turn the village of Nosów displayed a changed administrative affiliation in the first half of the sixteenth century. From the second half of the sixteenth century it was to find itself permanently within the Mielnik land. ASK I 47, f. 552 (Mielnik land tax register 1580), 755 (Mielnik land tax register 1588), 788v (Mielnik land tax register 1577); BOss, catalogue number 4279, ff. 6 (taxation tariff for the Mielnik land, 1627); APL, AWor., catalogue number 1, p. 3 (taxation tariff for the Mielnik land, 1629); Michaluk, *Ziemia mielnicka*, p. 28. The village of Bukowice (Bokowicze) neighbouring with Nosów from the south was already part of the Brześć Litewski Voivodship, although its administrative affiliation was disputed in the sixteenth century. Michaluk, *Ziemia mielnicka*, pp. 28–29, 43–44; A. Wawrzyńczyk, *Rozwój wielkiej własności na Podlasiu w XV i XVI wieku*, Wrocław 1951, pp. 27–28, 48–55; cf. AWAK 33, pp. 176–179, where in the light of the document of 1609 Bokowicze lay within the Mielnik land.

passing by the villages of Nosów (Nosowo), Stara Kornica (Kornica), Walim, Raczki and Gnojno it reached the River Bug. Next it separated Mielnik Niemirów (Niwicze) from Brześć Litewski's Krynki, directing itself north. Within the environs of Żerczyce it reached up to the River Nurczyk, along which it ran right up until it joined the River Nurzec.⁵⁸

Then the border headed up the River Nurzec, from which it departed in a south-easterly direction leaving Kalejczyce (Kaleczyce) as well as the Kleszczele leased villages on the Bielsk side.⁵⁹ Beyond the settlements of Czeremcha-Wieś (Nurzec) and Kuzawa (Babicze) the border turned in a north-eastern and northerly direction passing by villages of the Bielsk starost heading towards the Narewka. It ran for a short section along the river after which it headed in a north-westerly direction leaving in the Podlasie Voivodeship the leased Narew villages as well as the boyars villages of Hoźna and Żywkowo, while leaving the Zabłudów estates in the Troki Voivodeship. In the environs of the villages of Złotniki and Tryczówka it turned north passing the parish village of Juchnowiec Górny (Juchnowiec-Dwór) as well as the noble environs of Niewodnica. Subsequently arching its way in a north-westerly direction only in the environs of the village of Horodniany for it to then head north-eastwards up to the River Biały Stok. It was then to run downstream of this river, leaving the Białystok estates in the Bielsk land, after which it struck eastwards and reached the River Supraśl.

Here it follows to note that the course of the border in the environs of Białystok and Choroszcz has been reconstructed differently than how it was presented on Perthées' map. The fundamental change is the presentation of the Choroszcz estates as an exclave of the Troki Voivodeship within the Crown, without any territorial connection with the Grand Duchy.⁶⁰ This results first and foremost from the demarcation of the villages of Starosielce and the lost Parszyce (showed on the main map approximately) with the villages of Klepacze and Horodniany for the years approximately 1593–1594 and belonging to the Suraż starost.⁶¹ The settlements mentioned, as a result to them directly bordering each other excluded any possibility for the existence of a territorial corridor in this area.⁶²

The border runs from the River Supraśl between the Crown Voivodeship of Podlasie and the Lithuanian Troki in a northern direction along the length of the River Czarna, leaving the town of Wasilków within the Duchy.⁶³ Then the border approaches the River Brzozówka, which it hugs right up until it joins the River Biebrza.⁶⁴ It continues further along this river on a short section to the north, and subsequently along the Netta (Nety) that enters the River Biebrza. Beyond Augustów it turns to the north-west, running along the River Pruska and arriving at the point within the environs of Grabów from which we have commenced the present description.⁶⁵

⁵⁸ Michaluk, *Ziemia mielnicka*, p. 34, cites a fragment of description of this part of the border.

⁵⁹ In the demarcation of 1565 it is marked that Kalejczyce possessed a changed administrative affiliation, though the military rolls and tax registers from the second half of the sixteenth century and the first half of the seventeenth century consistently accredit it to the Bielsk land. Equally in the light of court books for the Bielsk land the Kalejczyce heirs were subject to the jurisdiction of this land (this information comes from Dr. T. Jaszczółt). It is visible within the Brześć Litewski Voivodeship on Perthées's map. Michaluk, *Ziemia mielnicka*, p. 34; Popis 1565, p. 318; Popis 1567, p. 1106; ASK I 47, ff. 261, 264v, 268 (Bielsk land tax register 1577), 796v (Bielsk land tax register 1591); APB, *Księgi grodzkie i ziemskie podlaskie*, catalogue number 1, ff. 10, 31v.

⁶⁰ Settlements in this area were not correctly marked on Perthées' map. The mutual spatial relations between particular settlements are disrupted. It follows to remember that over the course of two centuries there could have occurred changes in the settlement of this area, for the sixteenth century is a period of colonisation of this area, with the substantial majority being forest. See J. Maroszek, *Dzieje Białegostoku w latach 1547–1692*, [in:] *Historia Białegostoku*, ed. A. C. Dobroński, Białystok 2012, pp. 53–54.

⁶¹ ZZG, catalogue number 2, pp. 109–112.

⁶² Cf. H. Rutkowski, *Granica mazowiecko-litewska*, pp. 149, 151. As equally the Choroszcz and Dojlidy estates remained in the hands of Grzegorz Chodkiewicz, later his son Aleksander, hence possibly there could have resulted the conviction as to the territorial fusion of these estates which was to find reflection on Perthées' map. J. Maroszek, *Dzieje Białegostoku*, p. 61; cf. J. Suproniuk, *Lokalizacja miejscowości* in this edition III.3.1.8.

⁶³ Zygmunt August attempted to join Wasilków to Podlasie, yet this was not to end in success and the town was to remain in the Grand Duchy up until the partitions. J. Maroszek, *Dzieje Białegostoku*, pp. 58–60.

⁶⁴ Certain doubts arise on this section and here in relation to the village of Krukowszczyzna; see J. Suproniuk, *Location of settlements* in this edition III.3.1.8.

⁶⁵ For details on the permanence of the border and the controversies connected with its course see H. Rutkowski, *Granica mazowiecko-litewska*, pp. 140–155; E. Kowalczyk-Heyman, *O mazowiecko-litewskiej ugodzie granicznej*, pp. 213–226; H. Rutkowski, *Odpowiedź na krytykę*, pp. 227–233.

Before we move onto a description of the borders between the various lands of the Podlasie Voivodeship, it follows to devote a few words to the border of the mentioned Choroszcz enclave; a description of which starts from the mouth of the River Supraśl as it enters the Narew. The border runs upstream of the River Supraśl reaching the River Biały Stok after which it turns south following the course of the river and leaving the settlement of Bacieczki on the Lithuanian side.⁶⁶ Next at the level of the present-day estate of Wysoki Stoczek it continues further to the south, leaving Starosielce within the Crown.⁶⁷ Running further to the west and south-west, it has left within the Crown Oliszki, Czaplino and Mińce (Mińcze). Beyond the Lithuanian village of Baciuty it turns west, reaching the Narew from where it turns to the north beyond the village of Topilec belonging to the Grand Duchy of Lithuania. Leaving within the Crown the villages of Izbiszcze, Konowały, and Panki (Pańki), it reaches the Narew. Along the course of this river it takes a north-eastern direction, leaving Rogówek (Rogowo) with the Bielsk land, and reaching the mouth of the Supraśl as it enters the Narew.⁶⁸

We shall commence the description of the boundaries between the various lands making up the Podlasie Voivodeship with the demarcation of the Drohiczyn and Bielsk lands. The northern course of the border starts from the boundary of the Podlasie Voivodeship with that of Mazovia situated between the villages of Sanie-Dąb in the Łomża land (Zambrów district) and the villages of Tybory Uszyńskie (Tybory-Usza) in the Drohiczyn lands and Gołasze-Dąb (Gołasie-Dąb) in the Bielsk land.⁶⁹ From here the border runs to the south-east, leaving the noble environs of Gołasze (Gołasie) and Chojane in the Bielsk land, and the villages of Tybory-Wólka (Tybory-Wola) and Stare Osipy (Osipy) in the land of Drohiczyn. Beyond the town of Wysokie Mazowieckie (Wysokie) it turns south, leaving the environs of Długa Dąbrowa⁷⁰ as well as the village of Bryki within the Drohiczyn land, while the villages of Brzóska Stare (Brzóska), Mystki-Rzym (Mysłki), Plewki, Dąbrowa Dołęgi (Dołęgi) and the environs of Szepietowo in the Bielsk land. Next it passes by the noble environs of the Bielsk land – Wojny, Warele, Wyszonki and Kostry, and in the Drohiczyn land – Piętki, leaving the villages of Lubowicz-Kąty (Kąty), Lubowicz-Byzie and Lubowicz Wielki (Lubowicz) in the Drohiczyn land, after which it heads to the River Nurzec. Further on it follows this river upstream, between Patoki and Brański hitting a south and south-east direction and having passed Bielsk Brzeźnica and Drohiczyn Lubieszce (Lubieszka) it reaches the River Czarna between the settlements of Widźgowo in the Drohiczyn land and

⁶⁶ On Perthées' map Bacieczki is situated within the borders of the Crown, however no known sources show it belonging to the Podlasie Voivodeship at the end of the sixteenth century. A description of the Biały Stok parish, being here the basis for the mentioned map, in point 2 devoted to the neighbouring churches contains: "The Bacieczki Orthodox church on the borderland" – of the Chodkiewicz foundation, the property of the Basilian monks". *Rękopiśmienne opisy parafii litewskich z 1784 rok: dekanat knyszyński i dekanat augustowski*, compiled by W. Wernerowa, Warsaw 1996, p. 20. Perthées could not have known on which side of the border the settlement was situated.

⁶⁷ In the description of the Biały Stok parish (the Knyszyn deanery) the border between the Biały Stok and Choroszcz parishes ran to the west from the forest at the eighteenth-century Marczycki mill (Marczuk on von Stein's map). And in this way we have presented it on the main map. W. Wernerowa, *Rękopiśmienne opisy parafii litewskich z 1784 roku*, pp. 22–24.

⁶⁸ Rogówek was mentioned as Rogowo, in the military rolls of 1528 and 1565, in the first as a boyars village. It was equally mentioned in the register of 1591, the extract from the court books of 1602 as well as the tax registers for the years 1634 and 1635. Popis 1528, p. 139; Popis 1565, p. 314; ASK I 47, f. 799; APB, *Księgi ziemskie i grodzkie podlaskie*, catalogue no. 1, f. 18v, 37 Kondratiuk, p. 173; I. Halicka, *Nazwy miejscowe środkowej i zachodniej Białostoczczyzny: dzierżawcze, patronimiczne i rodzinne*, Warsaw 1976, pp. 147–148. The second Rogowo (of this name now as in the sixteenth-century) lay in the second half of the sixteenth century in the Lithuanian enclave around Choroszcz and belonged to the Chodkiewicz family. This village is included within the hearth taxation for the Troki Voivodeship of 1690, it may equally be seen on the Lithuanian side on Perthées's map; *Metryka Litewska. Rejestry podymnego Wielkiego Księstwa Litewskiego: województwo trockie 1690 r.*, ed. H. Lulewicz, Warsaw 2000, p. 92.

⁶⁹ On Perthées's map the village of Tybory Uszyńskie is seen in the Bielsk land, however the tax registers for the second half of the sixteenth century consistently included it within the Drohiczyn land; ASK I 47, 58v (Drohiczyn tax register of 1576), 557 (Drohiczyn tax register of 1580), 753v (Drohiczyn tax register of 1588); ASK I 27, f. 930 (Drohiczyn tax register of 1577).

⁷⁰ From amongst the villages lying on the border of both lands and entering into the composition of the environs of Długa Dąbrowa, in the case of the village Dąbrowa Moczydły the military roll of 1528 includes it within the Bielsk land. Payments from this settlement have also been noted in two tax registers for the Bielsk land for the years 1578 and 1579 as well as in the register of 1635. The remaining sources from the sixteenth century consistently include it within the Drohiczyn land. And it is in this way that Perthées's map presents matters. Popis 1528, p. 142; Popis 1565, p. 334; Popis 1567, p. 937; AUPL, p. 282; ASK I 47, ff. 59v–60 (Drohiczyn land tax register 1576), 367v (Bielsk land tax register of 1579), 466v (Bielsk land tax register of 1578), 542, 556v (Drohiczyn land tax register of 1580), 753v (Drohiczyn land tax register of 1588), 929v (Drohiczyn tax register of 1578); APB, *Księgi grodzkie i ziemskie podlaskie*, catalogue number 1, p. 29.

Klichy in the Bielsk. Next the border extends in an irregular shape into the Drohiczyn land reaching the River Leszczka (Licheza) and leaving on the Drohiczyn side the villages of Widźgowo, Puchały Stare, Spieszyn (Spieszyno), Chrościanka,⁷¹ Smolugi (Smoluhy), Siekluki and Żołącki, while on the Bielsk side Hołonki, Zamianowo, Siedlece (Siedlec), Sielc (Sielec) as well as the mill settlements of Solniki, Żegunia and Wojtki (Wojtkowic). Subsequently the border ran north along the course of the River Leszczka, where upon it turned to the east and partly following the River Nurzec it runs to where it joins up with the River Nurczyk.

Here it follows to examine more closely the course of the borders of the Drohiczyn, Bielsk and Mielnik lands in the environs of the town of Boćki. The village of Boćki lying on the southern bank of the Nurzec opposite the town of the same name has an unclear status. This village, known later as Zarzecze, at the beginning of the sixteenth century belonged administratively to the Mielnik land (the property of Stanisław Montewicz and Iwaszko Hlebowicz). In the year 1512 it was obtained within the framework of exchange by Iwan Sapieha, who incorporated it into the Boćki estate in the Bielsk land. Fiscal sources from the second half of the sixteenth century make no note of this settlement, while in Boćki itself a certain Zarzecka Street appears in 1577. Consequently one may conjecture that at this time the village became a part of the town of Boćki, with the subsequent change in the boundaries of both fiscal districts operating in this area.⁷² Additionally the course of the boundary modified the demarcation between the estate of Boćki and that of Andryjanki (Andrianki) of 1525. The former lay within the Bielsk land while the latter in the Drohiczyn. Given that in the light of the mentioned demarcation these estates directly bordered each other, then with the same the territorial connection of the villages of Skalimowo (Jakubowicze-Skolimowo) and Jakubowskie (Jakubowicze-Stara Wieś) with the rest of the Mielnik land did not exist, as a result of which these settlements by necessity had to form at this time a Mielnik land enclave.⁷³ And this is how it has been presented on the main map.

Let us move onto a description of the border boundary between the Drohiczyn and Mielnik lands, which we shall begin at the point where the Rivers Nurzec and Nurczyk converge. From here the border runs south-east, turning to the west in the environs of the Mielnik village of Lubiejka and Hornowo. Between Osmola in the Drohiczyn land and Dziadkowice (Dziadkowicze) in Mielnik it reached the boundary of the enclave of the Bielsk land, comprised of the villages of Brzeziny-Janowięta, Brzeziny-Niedźwiadki (Brzeziny-Chrościanka) and Wojeniec (Wojeńcze). From this point the border runs to the west and south-west, leaving Zaręby, Malinowo and Kłopoty Patry on the Drohiczyn side and Korzeniówka and Lipiny on the Mielnik.⁷⁴ Next the border hits a south-western direction, for it to turn south between the Mielnik villages of Żurobice and Tołwin (Tołwino) as well as the Drohiczyn ones of Wiercień Duży and Wiercień Mały (Wiercienie and Wiercienie Zabłotne), and beyond the villages of Baciki Średnie (Baciki) and Baciki Bliższe (Trzcieniec) to reach the River Mahomet.⁷⁵ After crossing over the river the border headed south-east, leaving the Siemiatycze estates along with Boratyniec

⁷¹ Chrościanka in the Drohiczyn land is mentioned in tax registers for these land for the years 1576, 1578, 1580. It is included in the Bielsk land only in the register of 1591. On Perthées' map Chrościanka is visible in the Drohiczyn land. ASK I 47, ff. 51v (Drohiczyn land tax register of 1576), 538v (Drohiczyn land tax register of 1580), 795 (Bielsk land tax register of 1591), 938 (Drohiczyn land tax register of 1578).

⁷² D. Michaluk and Z. Romaniuk have written about the shifting of the Bielsk land border in the environs of Boćki. Michaluk, *Ziemia mielnicka*, p. 29; Z. Romaniuk, *Boćki na Podlasiu. Monografia historyczna*, Boćki 2013, 17–18, 20; ASK I 47, ff. 112v (Bielsk taxation records of 1577); ZZG, catalogue number 337, pp. 9–10. The poll register of 1696 also notes the street Zarzecka in Boćki, while on von Stein's map this part of the town is visible as a suburb. Z. Romaniuk, *Boćki na Podlasiu*, p. 503.

⁷³ ZZG, catalogue number 337, pp. 10–12. On Perthées' map, though admittedly a connection can be seen, it is the mentioned delimitation however that straightens out matters on this section in the sixteenth century, and hence we are dealing with a similar situation to that of the course of the voivodeship border in the environs of Białystok and Choroszcz.

⁷⁴ Although the village of Lipiny undoubtedly lay within the Mielnik land once, and here in 1580, fief tax was noted as being paid in the Drohiczyn land. ASK I 47, ff. 539v (Drohiczyn land tax register of 1580). D. Michaluk includes Kłopoty Patry within the Mielnik land, but equally the military rolls for the years 1565 and 1567 as also the tax registers for the years 1576, 1580 and 1588 note it to be within the Drohiczyn land. Michaluk, *Ziemia mielnicka*, pp. 108, 120, 153, 162; Popis 1565, p. 321; Popis 1567, p. 879; ASK I 47, p. 38v (Drohiczyn land tax register of 1576), 505 (Drohiczyn land tax register of 1580), 744v (Drohiczyn land tax register of 1588).

⁷⁵ Possibly the border was based upon the River Mahomet at the level of Baciki. We have based our reconstruction of the course of the border along this section on Perthées' map, who on the western side of the river at the height of Baciki Średnie has located a tavern.

Ruski on the Drohiczyn side (to which they were incorporated in 1546), while Boratyniec Lacki on the Mielnik side, after which it turned to the south heading in the direction of the River Bug.⁷⁶ Further on it followed the course of this river to turn south close by Drażniew, heading towards the environs of the River Toczna and leaving on the Drohiczyn side the settlements of Drażniew (Drażniewo), Ruda, Tokary, Hruszew (Hruszewo), Myszkowice (Myszkowicze), Patków (Prussy), Patków Ruski (Padkowicze), while on the Mielnik side – Rusków (Ruskowo). Then it turned west, leaving in the Drohiczyn land Niemojki and Lipiny, with Zakrze and Stare Biernaty remaining in the land of Mielnik, for it to then head south so that in the environs of the village of Klimy (Bejdy Klimy) it joined up with the voivodeship border itself.⁷⁷

The Podlasie Voivodeship in the boundaries drawn had a surface area of 10,530 km², of which 5,811 km² fell within the land of Bielsk, 3,550 km² – Drohiczyn, and 1,169 km² – to the Mielnik land.

(2021)

Translated by Guy Russell Torr

⁷⁶ On the Moszczona River there were at the time six water mills that belonged to the Mielnik starost. Because these territories belonged already in the second half of the sixteenth century to the Mielnik starost we have drawn the border not directly on the River Moszczona but on its western side. Michaluk, *Ziemia mielnicka*, pp. 30, 67–68. For information about the settlement at Młynarze and about mills situated on the River Moszczona see M. Gochna, *Character of settlements* and J. Suproniuk, *localisation of settlements* in this edition III.3.1.8; AGAD, collection of parchment documents, no. 7644 (the royal privilege of the 5 November 1546 confirming the transfer of the Siematycze estates).

⁷⁷ The Drohiczyn-Mielnik border on the stretch from the River Bug to the environs of the village of Rzewuski Zawady and Bejdy Klimy was not closely regulated in the second half of the sixteenth century. Changeable administrative affiliation was experienced by the villages of Drażniew, Myszkowice, Patków Ruski and Niemojki. Drażniew, as equally in the Drohiczyn land as in the Mielnik, has registered military roll of 1565 as well as the tax register for 1576, subsequently in the Mielnik register of 1580, while in Drohiczyn in 1588. Myszkowice is included in the Drohiczyn land military roll for 1565, while in the Mielnik military roll for 1567. In 1569 Krzysztof Raczek of Myszkowice swore allegiance in the Drohiczyn gord office together with his brothers. This settlement was noted as being in the Mielnik land in 1580, while in Drohiczyn in 1588. Patków Ruski is included in the Mielnik land in the military roll of 1567 as well as in the tax registers of 1577 and 1580. The registers for the years 1580 and 1588 also include it in the Drohiczyn land. Niemojki twice appears in the tax register for the Drohiczyn land for 1580 and once for the Mielnik register for the self same year. It cannot be excluded that the border between the districts ran through the mentioned villages, which could explain their appearance in the registers of both lands (for example, in Myszkowice in 1580 Krzysztof Patkowski paid taxes in the Drohiczyn land while Piotr Patkowski and Wojciech Działkowski paid these in the Mielnik land). The exact course of the border along this section requires further detailed research taking into consideration information derived from court books. It also follows to remember that the owners of villages could pay taxation one time in the Drohiczyn land and one time in the Mielnik, which in turn would impact on the categorisation of these settlements in the registers for these lands in occurrence with where the tax payer made the said payment. The above mentioned settlements we have included in the Drohiczyn land through applying their seventeenth-century affiliation. For these settlements do not have noted any land tax registers for the years 1627 and 1629, while the poll tax registers for the years 1662–3, 1673–4 and 1676 consistently mention them being within the Drohiczyn land. These settlements are included within the Podlasie Voivodeship on Perthées' map. Popis 1565, pp. 319, 339, 350; Popis 1567, p. 976; AUPL, p. 289; ASK I 47, ff. 38v (Drohiczyn land tax register of 1576), 65 (Mielnik land tax register of 1576), 509 (Drohiczyn land tax register of 1580), 548v (Mielnik land tax register of 1580), 557 (Drohiczyn land tax register of 1580), 561v (Mielnik land tax register of 1580), 563 (Mielnik land tax register of 1580), 745 (Drohiczyn land tax register of 1588), 752v (Drohiczyn land tax register of 1588); BOss, catalogue number 4279, ff. 1–18; APL, AWor., catalogue number 1, pp. 1–5; ASK I 70, ff. 6, 10, 78v, 199v, 246; BCzart, Łoyko Collection, MS 1099 IV, pp. 573, 587–588, 622. On Perthées' map also the village of Czuchów (Czuchowo), is included into the Drohiczyn land, but in the second half of the sixteenth century and the first half of the seventeenth century it belonged to the Mielnik land. Popis 1567, p. 976; ASK I 47, ff. 562v (Mielnik land tax register 1580), 563 (Mielnik land tax register 1580), 766v (Mielnik land tax register 1577); BOss, catalogue number 4279, ff. 6v; APL, AWor., catalogue number 1, p. 4. Michaluk, *Ziemia mielnicka*, p. 50.

III.2.1.9a ROYAL PRUSSIA

Marian Biskup

Another vital part of the map comprises the elements connected to settlement. Among those are parochial seats with abutting settlements (only marked with dots). Consequently, the administrative divisions were presented on the scale of parishes, districts, and voivodeships. Additionally, the map includes royal administrative centres (castles) and local Prussian government seats, as well as the road network. The introduction to the topic of settlement should thus begin with the administrative division of Royal Prussia.

Royal Prussia in the second half of the sixteenth century constituted three voivodeships: Chełmno, Malbork, and Pomeranian. While Warmia was also considered to be a part of Prussia, it was, administratively a separate unit, under the direct rule of Warmia bishops. Thus, Royal Prussia consisted of territories of historical Pomerelia, Chełmno Land, Lubawa Land, as well as the northern territories of Żuławy Wiślane and the Powiśle (area of Sztum, Malbork, and Elbląg), which, in turn, constitute Malbork Voivodeship. Beyond the border of Pomeranian Voivodeship were territories of Bytów and Lębork, which from 1526 were fiefdoms of the Duchy of Pomerania.

The borders of Royal Prussia ran along the coast of the Baltic Sea in the north, along the border with the Duchy of Pomerania in the west, and along borders with Krajna (Kalisz Voivodeship and Nakło district), Kuyavia (Inowrocław Voivodeship), Dobrzyń land, and Masovia (Płock Voivodeship) in the south;¹ in the east, Royal Prussia bordered the Duchy of Prussia, which was held in fealty by the Polish Crown. Royal Prussia thus technically constituted the border of Poland only alongside the Baltic coast and, sporadically, on the western border (if we consider the vassal territories of Bytów, Lębork, as well as the tributary Duchy of Prussia as parts of the Polish State).

The borders of Royal Prussia in the north were entirely natural (the Baltic Sea). This was also partially true for the southern border, which ran alongside the river Drwęca. In the southern part of the western border, the natural border consisted of a forest belt around the town of Czarne and the river Głda.

The division of Royal Prussia into voivodeships was implemented via the Act of Incorporation of 1454, though they solidified into their final shapes after the Second Peace of Toruń in 1466. The voivodeships had been further divided into districts already in the Teutonic State period, or even earlier, during the reign of the Dukes of Pomerania (in Pomerelia). These divisions served mainly judicial purposes, though they were also useful in taxation and in forming *sejmiki* assemblies.² Besides districts, territories of major Prussian towns functioned as separate administrative units, which were granted such rights by Polish kings in years 1454–1526 (in Gdańsk, Toruń, and some in Elbląg) or were granted such rights by the Church, as was the case of the *latifundium* established by the Chełmno bishopric in Chełmno Voivodeship.

¹ For more in-depth description cf. M. Biskup, A. Tomczak, *Mapy województwa pomorskiego w drugiej połowie XVI w.*, vol. 1: *Rozmieszczenie własności ziemskiej*, vol. 2: *Sieć parafialna*, Toruń 1955, p. 24ff. The border between Chełmno Voivodeship and the Płock Voivodeship in Masovia was delineated with small errors by the authors of AHP 1958; the errors were amended using correction made by H. Rutkowski.

² M. Bär, *Die Behördenverfassung in Westpreussen seit der Ordenszeit*, Gdańsk 1912, p. 43.

Chełmno Voivodeship

In the second half of the sixteenth century, Chełmno Voivodeship stretched over 4,654 km². The borders of the voivodeship ran along the Vistula, the Ossa, and the upper Drwęca rivers in the north, and along the Działdówka in the east (constituting the border with the Duchy of Prussia). In the south, the voivodeship bordered with Dobrzyń land along the rivers Brynica, Pisa, and Rypienica, as well as the left bank of the Drwęca, until the point where the tributary flows into the Vistula nearby Toruń. Finally, the western border ran along the Vistula. The borders thus incorporated the erstwhile Chełmno Land, Lubawa Land, and Michałowo Land, as well as the southern part of Pomesania on the west bank of the Ossa.

In the second half of the sixteenth century, Chełmno Voivodeship was divided into two districts: Chełmno and Michałowo district; these did not, however, cover the area of the whole voivodeship, as some territories belonging to one of the major landholders in the region, the Bishopric of Chełmno (exempted bishopric) constituted separate administrative units. Likewise, the territory of the town of Toruń also constituted a separate administrative unit. Chełmno district stretched as far as the Lutryna river, even crossing it in the northern reaches in the western part of the voivodeship. The southwestern part of the district by the Vistula River was covered by the territory of the town of Toruń. Michałowo district covered the eastern part of the voivodeship, though a sizeable part of the eastern reaches belonged to the Chełmno bishopric, which held a wide range of estates around Lubawa, Kurzętnik, and Płowęż. Smaller estates owned by the bishopric within the voivodeship could be found in the area of Wąbrzeźno, Chełmża, Papów Biskupi, Starogród, and Chełmno.

The size of districts and administrative units of Chełmno Voivodeship is as following:

Chełmno district	2,065 km ²
Michałowo district	1,314 km ²
Chełmno bishopric territories	916 km ²
Territory of the town of Toruń	359 km ²
Altogether:	4,654 km ²

Malbork Voivodeship

Malbork Voivodeship's size was 2,096 km². In the west, its border ran along the Vistula and the Leniwka. Its northernmost regions were the territory of the town of Gdańsk and the Vistula Lagoon. In the east, the voivodeship bordered with Warmia and partially, along the line of the shorelines of Lake Drużno and Lake Dzierzgoń, with the duchy of Prussia; the southern border was also shared with the Duchy. This shape of the voivodeship was agreed upon in the Second Peace of Toruń in 1466. The voivodeship was a continuous stretch of land, incorporating Małe Żuławy and Elbląg Żuławy, Elbląg Upland, the regions of Tolkmicko, Sztum, and the western part of Dzierzgoń. Additionally, on the eastern shore of Lake Drużno, the village of Lipniki (Hansdorf) was an enclave of Royal Prussia, a remainder of the previous Teutonic Hospital in Pasłęk. Similarly, the meadows on the right bank of the Vistula near Gniew, belonging to the local *starostwo*, were considered a part of Pomeranian Voivodeship³ Two other enclaves belonging to Malbork Voivodeship were located in Royal Prussia: Rychliki and Stare Kusy, which had been territories of the Teutonic Hospital of the Holy Ghost in Elbląg.

The borders of Malbork Voivodeship remained unchanged from 1466 until the end of the Commonwealth, with the exception of the northeast region on the border with Warmia, where two settlements, Karszewo and Krzyżewo, which had belonged to the impoverished Bridgettines from Gdańsk, were located. These settlements were taken over by the Prince-Bishopric of Warmia in 1772.

³ A more comprehensive list in M. Biskup, *Podziały administracyjne województwa chełmińskiego w drugiej połowie XVI w.*, Poznań 1956 (SMDWP, vol. 1, no. 2), p. 126.

In contrast with the two other Royal Prussian voivodeships, Malbork Voivodeship was not consistently a relic of the older Teutonic administration, as it incorporated fragments of systemically different administrative units. However, some leftover structures of the old system remained in Małe (*Minor*) and Wielkie (*Major*) Żuławy, such as the vogt's office (*wójtostwo*) in Sztum (a remainder of the erstwhile Teutonic Malbork Commandery), lands surrounding Elbląg and Tolkmicko, which constituted the former Elbląg Commandery, as well as the land surrounding Dzierzgoń, part of the former Dzierzgoń Commandery.⁴

Malbork Voivodeship was not divided into districts. The reason for that was the small size of the voivodeship as well as the structure of land ownership and the distribution of territories. The majority of lands in the entirety of the voivodeship consisted of a royal demesne, while most nobility-owned lands were concentrated in the south because the district courts were established for local nobility, only one land court was established in Malbork Voivodeship, in Sztum, with the jurisdiction over all of the nobles in the voivodeship. Similarly so, the voivodeship's single town court was located in Dzierzgoń.⁵

The territory of the town of Elbląg and its enclaves constituted a separate administrative unit, effectively cleaving the voivodeship into two uneven parts: the central part including Malbork and Sztum, and the minor peripheral territory of Tolkmicko (with the exclusion of Elbląg's enclave, Brzezina). This way Tolkmicko constituted an almost separate territorial unit.

All things considered, the administrative division of the voivodeship given in km² would have been as follows:

Voivodeship without the territories of Elbląg and Tolkmicko	1,466 km ²
territory of Tolkmicko	118 km ²
together	1,584 km ²
territory of the town of Elbląg	512 km ²
altogether	2,096 km ²

Pomeranian Voivodeship

In the relevant period, the area of Pomeranian Voivodeship was around 12,907 km². The Baltic Sea coastline constituted the northern border, while in the west, the voivodeship shared a border with the territories of Łębork and Bytów, as well as the Duchy of Pomerania. Both the northern and western borders were simultaneously the borders of the Polish state. To the south, the voivodeship was neighbour to Krajna (Nakło district, Kalisz Voivodeship) and Kuyavia (Inowrocław Voivodeship), and to the east, the border ran along the Vistula, up to the bifurcation with the Elbląg Vistula, once expanding to the right bank of the river, forming a small enclave opposite Gniew. The whole area of the voivodeship (excluding the territories of Łębork and Bytów) corresponds with the historical shape of Pomerelia in the thirteenth to early fourteenth century.

Pomeranian Voivodeship further divided into eight districts, which were relics of the Teutonic period.⁶ The ninth, separate unit was the Territory of the town of Gdańsk.

district	area size
Człuchów	2,436 km ²
Gdańsk	661 km ²
Mirachowo	1,137 km ²
Nowe	720 km ²

⁴ L. Weber, *Preussen vor 500 Jahren*, Gdańsk 1878, p. 435ff.

⁵ M. Bär, *Die Behördenverfassung*, p. 41.

⁶ Aspects of administrative division in Pomeranian Voivodeship were expanded upon in M. Biskup, A. Tomczak, *Mapy*, p. 24ff. This compilation employs only the necessary data and corrections.

Puck	981 km ²
Świecie	1,473 km ²
Tczew	3,038 km ²
Tuchola	1,818 km ²
territory of the town of Gdańsk	643 km ²
altogether	12,907 km ²

The sheer vastness of Tczew and Człuchów districts, as well as the relatively big size of the territory of the Town of Gdańsk, is striking, especially compared to two of the smallest units – Gdańsk and Nowe districts. The explanation for this phenomenon lies in the past Teutonic administrative organisation of the area, which, in turn, had been borrowed from the previous division of the ducal period.⁷ The small size of Gdańsk district can be reliably explained by the emergence of the Territory of the town of Gdańsk in 1454.

In general, all of the administrative units in the voivodeship formed a consolidated whole,⁸ with the exception of the territory of the town of Gdańsk, whose main part consisted of the areas between Gdańsk, the Baltic Sea, the Vistula Lagoon, the Elbląg Vistula, the Leniwka, and the eastern border of Tczew district. The whole territory of Gdańsk was further divided into smaller administrative units: Gdańsk Upland, Royal Construction Office (*Urząd Budowlany*), Streblewo Żuławy (*Żuławy Streblewskie*) Szkarpada, and the Vistula Spit.

There were several enclaves in Streblewo Żuławy belonging to both the nobility and the Catholic Church, counted as parts of either Gdańsk district⁹ or Tczew district.¹⁰ Another enclave of Church property, adjacent to the town of Gdańsk proper, belonged to Gdańsk district.¹¹ Conversely, the southern part of Hel Peninsula (including the town of Hel) also belonged to the territory of Gdańsk, together with the two enclaves in Gdańsk district (Kowale and Lubiewo) and one in Tczew district (Warcz).

(1961)

Translated by Paulina Waclawik

⁷ Ibidem, pp. 26–28.

⁸ With the exception of: 1) the enclave of Trzebciny enclosed in Świecie district, but belonging to Tuchola district, and 2) settlements of Klonowo and Zamrzenica enclosed with Tuchola district, but belonging to Świecie district. Similarly, estates belonging to Grudziądz starostwo and Rogozin starostwo in Pomerania were counted as part of either Świecie district or Nowe – cf. ibidem, p. 18.

⁹ Settlements: Grabiny Duchowne, Krępace, Mokry Dwór, Nonnenhof, and Wiślina.

¹⁰ Settlements: Giemlice and Przejazdowo.

¹¹ Mainly the lands belonging to the Włocławek bishopric: Biskupia Górka, Chełm, Hoppenbruch, and Stare Szkoty.

III.2.2 CHURCH ADMINISTRATION BORDERS

III.2.2.1 CRACOW VOIVODESHIP

Marta Piber-Zbieranowska

As in previous volumes of this series of the Historical Atlas of Poland, centres and borders of the Catholic Church (Latin) administration at the end of the sixteenth century were presented on two maps: the detailed main map showing all settlements, and a special, reference map at a smaller scale (1:500,000). All centres of Church administration, i.e. diocese seats and the seats of the archdeaconries, deaneries and parishes, were marked on the main map, just like the borders of these units, but without deanery borders. These were shown on the additional special map (no. 2), which also contains the borders of dioceses and archdeaconries, but without parochial borders. Additionally, seats of all units of the Latin Church administration in Cracow Voivodeship and the Duchy of Siewierz at the end of the sixteenth century were included on this map (for the sake of clarity of the map, without a symbol for diocese seat). The main map and the additional map both show Church administration divisions according to the state from the end of the sixteenth century, with all changes in the course of deanery borders, which occurred in 1577–1596.

In our period, the territory of Cracow Voivodeship lay within the range of two dioceses. The vast majority of the area belonged to Cracow diocese, and the small fragments in the borderlands in the northern part of the voivodeship – to Gniezno diocese. Our territory bordered Wrocław diocese in two places: from the northwest on a small fragment, where the border ran partially along the Liswarta, and in the south-eastern edge of the voivodeship, where the diocese border ran along the River Biała (from its source, to its mouth flowing into the Vistula). In both these places the diocese border overlapped with the State border. The south-eastern border of the voivodeship was also the border of Cracow and Przemyśl bishoprics. The southern border of Cracow diocese was also the State border. Here it ran along the Carpathians from the future Zwardoń in the west to Jaśliska in the east. In this fragment the bishopric bordered on Ostrzyhom archdiocese, as well as Nitra and Eger dioceses in Hungary (today in Slovakia). They were separated by a wide mountain range, mostly uninhabited.¹ The area of Spisz, whose Church affiliation was disputed already from the thirteenth century, belonged to Ostrzyhom archdiocese in our period. In the beginning of the seventeenth century the jurisdiction over the Lubowla dominium, which belonged to the Polish Spisz starosta's district, was returned to the bishop of Cracow.² Only in 1643, during the diocese synod of Cracow, the seven parishes there were separated and incorporated by bishop Piotr Gembicki to the newly-created Spisz deanery, within Sącz archdeaconry.³

During our period, Cracow diocese was the most complex and diverse in terms of internal structure.⁴ The territory of Cracow Voivodeship, subordinated to Cracow bishopric, was divided into two main units: the archdeaconry of Cracow and the archdeaconry of Nowy Sącz. The range of these

archdeaconries went beyond northern and north-eastern borders of Cracow Voivodeship, into Sandomierz Voivodeship. Twelve deaneries of Cracow archdeaconry were situated entirely in Cracow Voivodeship: Dobczyce, Cracow, Lelów, Lipnica, Nowa Góra, Proszowice, Skąła, Skawina, Wieliczka, Wolbrom, Wrocimowice and Zator. The borders of four deaneries went beyond the area of the voivodeship: Andrzejów (Jędrzejów), Oświęcim, Witów, and Wojnicz. Small fragments of our territory belonged to deaneries situated outside Cracow Voivodeship. These were the deaneries of: Bytom (covering almost the entire Duchy of Siewierz), Sokolina (Proszowice district), and Tarnów (Biecz district).⁵ In Nowy Sącz archdeaconry five deaneries were situated entirely in Cracow Voivodeship: Biecz, Bobowa, Nowy Targ, Nowy Sącz and Żmigród. Two parishes in our voivodeship belonged to Pilzno deanery: Jodłowa and Brzyska.⁶

Small parts of northern Lelów and Książ districts belonged to the archbishopric in Gniezno. Krzepice parish belonged to Wieluń territory.⁷ Three villages from Cracow Voivodeship were situated in the territory of Uniejów archdeaconry. The villages Stary Kocin and Rybna in Lelów district belonged to Mykanów parish (Brzeźnica deanery).⁸ The village Knieja (Lelów district) lay in Dąbrowa Zielona parish, subject to Radomsko deanery.⁹ The territory of Mstów parish was divided between two dioceses: Cracow and Gniezno, which was a completely exceptional situation. The seat of the parish was situated in Klasztor Mstowski, in Sieradz Voivodeship. Villages from Cracow Voivodeship belonging to this parish and situated north of the River Warta were subordinated to the archbishop of Gniezno (Brzeźnica deanery), but those south of the river (including Mstów town) – to the bishop of Cracow (Lelów deanery).¹⁰ Two parishes in our voivodeship belonged to Kurzelów archdeaconry: Kuczków (entirely in Lelów district), and Cierno (six villages in Książ district, one in Sandomierz Voivodeship).¹¹

The archdeaconry of Cracow was created probably at the end of the eleventh century, originally encompassing the entire diocese. Before the first quarter of the fourteenth century ended, other units were gradually formed from it, covering the entire territory, or larger parts of the future Voivodeships of Sandomierz and Lublin.¹² Despite these changes, the area subordinate to the archdeacon of Cracow was still huge (around 17,500 km²) and densely populated, with over 500 parishes in 1437.¹³ That is why in 1448 cardinal Zbigniew Oleśnicki, the bishop of Cracow, erected the archdeaconry of Nowy Sącz, while funding the collegiate of St. Margaret in this city. Cardinal Oleśnicki, having obtained the agreement of the archdeacon of Cracow, Dzierśław of Borzymów, and the provost of Wiślica, Dzierśław of Krzyżanowice, removed the deaneries of Nowy Sącz, Biecz, Bobowa, Nowy Targ and Jasło from the jurisdiction of the archdeacon of Cracow, as well as Pilzno deanery from Wiślica provosty, and gave them to the newly-elected archdeacon of Nowy Sącz (the area subordinated to him was 8,780 km² then).¹⁴

⁵ Tarnów deanery encompassed 17 parishes in the end of the sixteenth century, but 10 of them belonged to the provostry of Tarnów, which was directly subject to the bishop. Parishes Pleśna, Tuchów and Ryglice, in which there were village from Cracow Voivodeship, belonged at the time to Tarnów deanery, subject to the archdeacon of Cracow, see AV Cap. 7, f. 17–24v. This situation changed in 1616, when bishop Piotr Tylicki incorporated the parishes from Tarnów deanery to the provostry. From then on the borders of the provostry overlapped with the borders of the deanery; B. Kumor, *Prepozytura tarnowska. Opracowanie materiałów źródłowych do Atlasu Historycznego Kościoła w Polsce*, ABMK, vol. 12, 1966, pp. 215–216; Kumor, *Dzieje*, vol. 4, p. 91.

¹⁴ B. Kumor, *Archidiakoniat sądecki*, pp. 285–286; Kumor, *Dzieje*, vol. 4, pp. 37–40.

The first records about deaneries in Cracow diocese come from the middle of the thirteenth century. At the end of the fourteenth century there were already 18 of them in our area, and in the fifteenth century an additional two were added.¹⁵ Between 1513 and 1577 the following deaneries existed in the territory of Cracow Voivodeship: Andrzejów, Biecz, Bobowa, Bytom, Dobczyce, Jasło, Lelów, Lipnica, Nowa Góra, Nowy Sącz, Nowy Targ, Oświęcim, Pilzno, Pleszów, Skąpa, Skawina, Sokolina, Tarnów, Wieliczka,¹⁶ Witów, Wojnicz, Wolbrom, Wrocimowice and Zator.¹⁷ In 1563, during the Council of Trent, the institution of the dean, whose authority had been diminished in the previous centuries, was strengthened. The Church's aims in the era of the Reformation: the intensification of religious life and the spiritual renewal of worshippers, were easier to achieve in smaller deaneries. The deans were obliged to inspect churches and clergy in their deaneries. Cracow deanery had to wait until the pontificate of cardinal Jerzy Radziwiłł (1591–1600) for the broader reception of these resolutions.¹⁸ In 1593–1598 the cardinal reorganized and developed the division of his diocese into deaneries, creating new units. Because of the current general visitation, new deaneries were elected just before 1596 in the archdeaconry of Nowy Sącz: Żmigród was separated from the vast Jasło deanery, and the deanery of Pilzno was divided into three smaller deaneries: Pilzno, Mielec and Ropczyce. The deanery in Wieliczka was restored in Cracow archdeaconry.¹⁹ A new deanery, situated in Proszowice was formed from parishes separated from three deaneries: Skąpa, Pleszów and Witów.²⁰ Cracow agglomeration constituted as separate deanery, comprised of 11 parishes. In 1598–1599 the so-called borderland archdeaconries, i.e. Sandomierz, Zawichost, Lublin, Kielce (formed Radom archdeaconry) and Kielce provostry, were divided into deaneries.²¹

The visitation conducted by the order of cardinal Jerzy Radziwiłł in 1595–1599 was our main source for determining the course of the borderlines of Church administration units, and especially of the range of individual parishes in Cracow diocese.²² This visitation was accepted as a basis for our presentation of parochial borders. In unclear cases, or when there was no information concerning the range of a parish, usually when the church was taken by Protestant denominations, we resorted to the book of benefits of Cracow bishopric by Jan Długosz²³ and other visitations from the territory

¹⁵ Borders and seats of deaneries often changed in this period; see Kumor, *Rozwój sieci dekanalnej w południowej części diecezji krakowskiej do 1772 r.*, „Roczniki Teologiczno-Kanoniczne”, vol. 9, 1962, pp. 77–89; Kumor, *Dzieje*, vol. 4, p. 143–147; S. Litak, *Organizacja*, p. 31; also: J. Szymański, *Dekanat wojnicki w świetle niektórych uwag o organizacji dekanalnej diecezji krakowskiej w XIII–XVI w.*, „Roczniki Teologiczno-Kanoniczne” vol. 8, 1961, no. 1, pp. 75–77; J. Chachaj, *Pierwotna średniowieczna sieć dekanalna w diecezji krakowskiej*, ABMK, vol. 71, 1999, pp. 379–384.

¹⁶ See footnote 19.

¹⁷ Kumor, *Dzieje*, vol. 4, pp. 148–149, table: *Sieć dekanatów w diecezji krakowskiej w latach 1513–1577*. The author probably based his compilation of the retaxation books from 1513, 1527, 1539, 1561 and 1577. See also B. Kumor, *Prepozytura tarnowska*, pp. 219–220.

¹⁸ H.E. Wyczawski, *Studia nad wewnętrznymi dziejami kościelnymi w Małopolsce na schyłku XVI w.*, „Prawo Kanoniczne”, vol. 7, 1964, no. 1–2, pp. 45–49; H. Rutkowski, *Church administration borders*, [in:] AHP Sieradz, in this edition III.2.2.5.

¹⁹ *The temporary suspension of the functioning of this deanery could be confirmed by the fact that it is absent from the retaxation books 1561, 1577 and 1602*; AKap., Liber beneficiorum retaxationum 1561 (sign. Reg. C. 6); 1577 (Reg. C. 7); 1602 (Reg. C. 8). Parishes from this deanery were listed under Lipnica deanery; see Kumor, *Dzieje*, vol. 4, pp. 146, 151.

²⁰ This could be assumed on the basis of the records from retaxation books from 1561 and 1577 (the book from 1602 r. only copies the structure), according to which the affiliation of parishes from the future Proszowice deanery (its range was described in the Radziwiłł visitation, and confirmed by later visitations) was as follows: Raciborowice and Więclawice Stare (Skąpa deanery); Niegardów, Koniusza, Proszowice, Biórkowa Wielka, Luborzycza, Czulice, Górka Kościelnicka, Ruszcza, Grabie (Witów deanery); Pleszów, Pobiednik Mały, Igołomia, Wawrzeńczyce, Poborowice, Żębocin (Pleszów deanery) – Reg. C. 6, f. 42v, 46–49; Reg. C. 7, f. 39v–40, 44v–49; Reg. C. 8, f. 46, 50–54. Other parishes from Pleszów deanery (Kościelec, Brzesko Stare and Brzesko Nowe) were incorporated into Witów deanery. The origins of Proszowice deanery have not yet been described. The newest monograph on Proszowice devotes only one sentence to this matter, see F. Leśniak *W okresie Polski szlacheckiej. Parafia, kościół, duchowieństwo*, [in:] *Proszowice. Zarys dziejów do 1939 r.*, ed. F. Kiryk, Kraków, 2000, p. 231.

²¹ Kumor, *Dzieje*, vol. 4, p. 151.

²² AV Cap. 2, 5, 7, 10, 15, 17. This topic was prepared mostly on the basis of microfilms borrowed from the archive of ABMK in Lublin. However, in case there were pages missing, or unreadable, we resorted to the original Radziwiłł visitation (concerning the deaneries of Lipnica, Wieliczka, Wojnicz, Tarnów, Bobowa, Nowy Targ and Nowy Sącz). Also, the following published visitations were used: of Cracow deanery (Ins. 1599) and Akta wizytacji dekanatów bytomskiego i pszczyńskiego dokonanej w roku 1598 z polecenia Jerzego Kardynała Radziwiłła, biskupa krakowskiego, pub. M. Wojtas, Katowice 1938; see also the chapter on Written Sources.

²³ Długosz LB.

of Cracow diocese from: 1565–1570,²⁴ 1602,²⁵ 1607–1608,²⁶ 1610–1613,²⁷ 1609–1614,²⁸ 1617–1619,²⁹ 1629–1639,³⁰ 1644,³¹ 1655–1658,³² 1663–1665,³³ 1690,³⁴ 1708–1709 and 1711.³⁵ Information found in *Liber retaxationum* from 1529 was treated only as auxiliary, as this book fails to record parochial affiliation of individual villages, but only mentions that they paid tithe and for the mass.³⁶ Sometimes it was necessary to refer to later sources: the *Regestr Diecezjów* by rev. Franciszek Czaykowski³⁷ and *Spis ludności Diecezji Krakowskiej prymasa Michała Jerzego Poniatowskiego z 1787 roku*.³⁸ Also helpful was the publication *Materiały do słownika historyczno-geograficznego województwa krakowskiego w dobie Sejmu Czteroletniego*.³⁹ These three, however, do not cover the areas which were taken from the Commonwealth as a result of the First Partition (1772), and so – in our territory – the deaneries of Dobczyce, Lipnica, Oświęcim, part of Proszowice deanery, Skawina, Wieliczka, part of Witów, Wojnicz, Tarnów, Zator in Cracow archdeaconry, as well as the deaneries of Nowy Targ, Nowy Sącz, Bobowa, Biecz, Jasło, and Żmigród in the archdeaconry of Nowy Sącz. In the case of territories situated south of the Vistula the so-called Tables by Bishop A.S. Załuski from 1747–1749⁴⁰ were helpful, as well as the tabular description of parishes from territories lost in the First Partition from 1776.⁴¹ We also resorted to *Słownik geograficzny Królestwa Polskiego i innych krajów słowiańskich*, which lists parochial affiliation for the second half of the nineteenth century.⁴²

In some cases, the visitation of Cardinal Radziwiłł provides us with uncertain, or even incorrect affiliation of deaneries to parishes. *Reformationes generales ad clerum et populum Dioecesis Cracoviensis R.D. Martini Szyszkowski ep. Cracoviensi* from 1621 was useful in dubious cases, apart from the aforementioned visitations. It consists of a list of parochial and subsidiary churches in Cracow diocese, presented in the structure of higher-rank units.⁴³ We also resorted to books of benefices from

²⁴ AV Cap. 1. Concerning the visitation conducted during the reign of bishop Filip Padniewski, see: T. Glemma, *Wizytacje diecezji krakowskiej z lat 1510–1570*, „Nasza Przeszłość”, vol. 1, 1946, pp. 57–69, especially the list of inspected churches, with a date and page from the book, pp. 70–80.

²⁵ AV Cap. 20 (deaneries Nowa Góra, Wolbrom, Lelów, Zator); 21 (deaneries. Jasło, Żmigród, Biecz, Wojnicz).

²⁶ AV Cap. 24 (1607, Bobowa deanery); 25 (1607–1608, deaneries Nowy Sącz, Nowy Targ); 26 (1608, deaneries Pilzno, Jasło, Żmigród, Biecz).

²⁷ AV Cap. 28 (1610, deaneries Witów, Sokolina, Skawina, Zator, Oświęcim, Wolbrom, Skała); 30 (1610–1612, deanery Andrzejów); 31 (1611–1613, deanery Nowa Góra, Bytom, Nowy Targ).

²⁸ AV Cap. 32 (deanery Lelów, Cracow, Nowy Sącz, Proszowice, Wrocimowice).

²⁹ AV Cap. 33 (1617–1618, deanery Skawina, Nowa Góra, Oświęcim, Zator, Wieliczka); 37 (1618–1619, deanery Biecz, Jasło, Żmigród, Pilzno); 39 (1618, deanery Bobowa, Nowy Sącz, Nowy Targ, Biecz, Jasło, Żmigród); 40 (1618, deanery Dobczyce, Lipnica, Wojnicz, Skała); 41 (1618, deanery Sokolina, Andrzejów, Wrocimowice, Proszowice, Witów, Bytom).

³⁰ AV Cap. 42 (1629–1630, deanery Wieliczka, Proszowice, Lipnica; 1634, Witów; 1639, Wrocimowice); 43 (1637, deanery Tarnów; 1638, Cracow; 1639, deanery Nowy Targ, Nowy Sącz).

³¹ AV Cap. 45 (deaneries Nowa Góra, Skawina, Zator, Oświęcim).

³² AV Cap. 46 (deaneries Dobczyce, Bytom, Oświęcim).

³³ AV Cap. 47 (1664–1665, deaneries Proszowice, Lipnica, Dobczyce, Tarnów); AV 8 (1663–1665, deanery Skawina, Zator, Nowa Góra, Skała, Wrocimowice, Andrzejów, Oświęcim, Witów, Sokolina, Wieliczka).

³⁴ AV 13 (deaneries Wolbrom).

³⁵ AV 16 (1708–1709, deanery Zator, Oświęcim); 17 (1711, deanery Lelów).

³⁶ LR 1529. The church paid to a given church for the mass, and so most likely belonged to its parish.

³⁷ Czaykowski. On the basis and range of the list created by rev. Czaykowski see *ibidem*, Wstęp, pp. VII–XII and map p. XIII.

³⁸ Pub. and comp. B. Kumor, ABMK, vol. 35, 1977, pp. 255–283; vol. 36, 1978, pp. 349–369; vol. 37, 1978, pp. 361–400; vol. 38, 1979, pp. 151–188; vol. 39, 1979, pp. 237–277. The list of bishop Michał Jerzy Poniatowski does not cover the same areas, which were included in rev. Czaykowski's list. Also, the deaneries of Bytom was covered only partially, mentions only the those parishes of the newly-created Siewierz deanery, which lay in Poland, and two from Silesia: Kamień and Mysłowice; S. Litak *Struktura terytorialna kościoła łacińskiego w Polsce w 1772 r.*, Lublin 1980, pp. 42–43.

³⁹ MWK materials.

⁴⁰ AKM, *Tabella eorum super quibus in visitatione inquirendum est*, t. 3, 5, 6, 7, 8, 12.

⁴¹ AKM, *Descriptio ecclesiarum parochialium et beneficiorum in dioecesi Cracoviensi parte cisvistulana consistentium. Cum circumstantiis in tabella normali ab excelso gubernio sub die – 2da septembris anni elapse peracta specificatis facta AD 1776 (no sign.)*. This source is important only for diaconal affiliation of parishes, as the range of parishes was noted only in few instances. The description focuses on the parson and the benefices of a given parish.

⁴² SGKP, all volumes.

⁴³ At the synod in 1621 Bishop Marcin Szyszkowski accepted the division created by bishop Radziwiłł. However, he divided Cracow deanery into two smaller deaneries. The list was printed in chapter XI of the documents of the synod: *Ordo*

1529, 1561, 1577 and 1602.⁴⁴ However, the latter sometimes did not include the current division into deaneries, and copied – apparently – the structure from previous books. For instance, the parishes in Wieliczka deanery, following the books from 1561 and 1577, were listed in *Liber retaxationum* from 1602 in Lipnica deanery. Similarly, probably using the structure recorded earlier, this book mentions Pleszów deanery, and the parishes then situated already in the newly-created Proszowice deanery were recorded according to the old division: partly in Pleszów, Skała and Witów deaneries.⁴⁵ The same was done with parishes from Żmigród and Pilzno deanery. The 1602 book lists them, just like the former parishes, in Jasło deanery. In several cases, our final decision was based on Stanisław Litak's studies.⁴⁶

Cracow diocese was the largest of all dioceses in the Crown. It occupied the area of 54,000 km², which was divided between three Voivodeships: of Cracow, Sandomierz and Lublin. Additionally, the two western deaneries: Bytom (partly) and Pszczyna – covered a part of Silesia, which belonged to the Habsburg Empire. More than a half of the diocese's area lay in the Voivodeship of Cracow.⁴⁷

Several sections of diocese borders require some explanation.

According to sixteenth century sources, the village of Mikuszowice (Silesian district) was divided by the border River Biała. One part of the village was situated in Silesia, the other – in the Crown.⁴⁸ In our study, we assumed that the State border did not cut the village in two, but ran between two villages of the same name.⁴⁹ The Radziwiłł visitation informs us that the village chapel stood on the right bank of the river, in the Kingdom of Poland. The visitation also notes that this chapel belonged to the Lutherans at the time.⁵⁰ In the beginning of the seventeenth century, the chapel was seized by the Catholics, and became a subsidiary church. An visitation from 1617 mentions that the church in Mikuszowice remained desecrated for many years, and there was no priest there, but that service was offered by the parson from Lipnik parish.⁵¹ The *Reformationes* from 1621 lists the church in Mikuszowice under Oświęcim deanery.⁵² Bolesław Kumor believes the Mikuszowice parish was split between two dioceses: Cracow and Wrocław.⁵³ If we accept this assumption, we must specify: the administration of the bishop of Cracow spread over the right bank Mikuszowice, the Silesian village Mikuszowice was under jurisdiction of the bishop of Wrocław. In the case of a nearby parish Biertułtowice the situation was exactly the same.

The border of Jaśliśka parish overlapped with the border of the town (with suburbs), an enclave of Cracow Voivodeship in Sanok land. Jaśliśka were located by Casimir the Great on the left bank of the River Jasiołka, which defined the border between Cracow Voivodeship and Sanok land. That is why the town was included into the Voivodeship and bishopric of Cracow. In 1434 Ladislaus II Jagiellon endowed Jaśliśka to the bishopric in Przemyśl. Since then successive bishops of Przemyśl tried to take the parish from the bishops of Cracow. However, this happened only in 1763, by decree of the archbishop of Lwów Waclaw Sierakowski, and Jaśliśka were incorporated into Przemyśl diocese.⁵⁴

The parish in Klasztor Mstowski was divided between two dioceses: Gniezno and Cracow.⁵⁵

Olsztyn parish was created in 1552 by the Archbishop of Gniezno, Mikołaj Dzierzgowski, from Klasztor Mstowski parish. Olsztyn city and three villages were situated in this part of the parish, which

⁴⁹ See H. Rutkowski's chapter: *Borders of state territorial units*.

⁵⁰ AV Cap. 17, f. 13. Also see *Communes of other denominations*, pp. 242–247. We should mention here that the communes in Mikuszowice and the nearby Wilkowiece were built by the Protestants, not seized from the Catholics. For practical reasons, we treat them as parochial seats, because this was the way the tax collectors saw them.

⁵¹ AV Cap. 33, f. 72v. The location of the church, near the border of the Kingdom of Poland was, according to the inspector, one of the reasons for the church's profanation. Later Mikuszowice became a subsidiary church of the church in Łodwigowice; S. Litak, *Struktura*, p. 193.

⁵⁵ See footnote 10.

belonged to Cracow diocese. In the 1598 visitation, as well as in the next visitation in 1602, Olsztyn was included in Lelów deanery. However, in 1609 diocese affiliation of this parish became the subject of a dispute, because the archbishop tried to put it under his jurisdiction. The argument was settled during the synod of Cracow in 1621, in favour of the Cracow bishopric.⁵⁶

Cierno parish lay on the right bank of the Nida, which defined the border between Gniezno and Cracow dioceses. Still in 1470–1480 the entire right bank of the Nida was under the authority of the bishop of Cracow. However, Jan Długosz mentions that the provost from Cierno tried to move the parish from Cracow archdeaconry to Kurzelów deanery in Gniezno diocese *per fas et nefas*. Soon, he succeeded in his efforts.⁵⁷

Krzepice parish was organized from Kłobuck parish in Cracow diocese. Before 1357 King Casimir the Great, who endowed the new parish, asked Bodzanta, the bishop of Cracow, to grant the tithe to the parish, but the bishop declined. The parish in Krzepice was then bestowed by archbishop Jarosław Bogoria of Skotniki with tithe from Gniezno archbishopric, and he incorporated the parish into his diocese.⁵⁸

Stare Krzepice parish, situated in Wieluń land, was subordinate to the bishopric in Wrocław (Opole archdeaconry, archprovostry of Olesno).⁵⁹ In the previous volume of the *Atlas*, devoted to the Voivodeship of Sieradz, the parish stretches beyond the territory of the Voivodeship of Cracow, over the River Liswarta. The authors were unable to consult the Radziwiłł visitation, and therefore accepted the eighteenth century borders of Stare Krzepice parish, at the time encompassing the villages Podłęże and Kostrzyna, both in Cracow Voivodeship. According to the 1598 visitation Warchałowska ironworks belonged to Przestań (later Przystajń) parish.⁶⁰ Another, more popular name of the ironworks was Kostrzyn, later Kostrzyna.⁶¹ The village Podłęże (later Podłęże Królewskie) did not exist then, and its origins are dated to the first half of the seventeenth century.⁶² Following the information found in the visitation, it was assumed that the border of Przestań parish, and therefore of Cracow diocese, ran along the River Liswarta at the end of the sixteenth century, and the changes of parochial affiliation of nearby villages occurred later, probably as a result of proprietary affiliation of Kostrzyna and Podłęże to Stare Krzepice starosta's district.

The borders of higher-rank units (archdeaconries and deaneries) were based on parochial borders.

Our description of the course of deanery borders should begin with some explanation on the matter of deanery names. In the sixteenth century Church sources several deaneries were listed under double names. The records mention: Bytom deanery, or (*seu*) Siewierz, Lipnica or Chełm, Skąpa or Wysocice.⁶³ In all these cases, we assumed that the name of the first parish was that of deanery seat, because in all sources from the first half of the seventeenth century these names appear without variation, the other name was never used. According to B. Kumor, changes of deanery seat were not caused by any official decision, but were related to a parochial settlement, where the dean was also a parson. The deanery was named after this settlement.⁶⁴

⁶⁰ AV Cap. 15, f. 122.

⁶¹ The name provided by the visitation was created from the name of the previous owner of the ironworks, Jan Warchoń, who owned the ironworks from the beginning in 1560 to 1578. One year later it was bought from the heir by Andrzej Słupski. The name Kostrzyn, derived from the River Kostrzyna, where the ironworks was situated, appears in the tax records from 1577, 1581, 1589 and 1595, 1629 and 1680. See MRPS, vol. V, no. 2745; B. Zientara, *Dzieje małopolskiego hutnictwa żelaznego XIV–XVII*, Warszawa 1954, pp. 108–109, 249–251, 270; SHGK, part 3, no. 2, p. 381.

⁶² The 1636 visitation mentions three smallholders in the village Zakostrzynianie alias Podłężanie, who brought coal to the ironworks Kostrzyn; B. Zientara, *Dzieje małopolskiego hutnictwa*, p. 255.

Biezanów, a village in Szczyrzyc district, belonged to Cracow cathedral chapter. In 1422 on request of the chapter it was made a parish by the bishop.⁶⁵ The parish, under the patronage of the chapter, was not inspected in conventional manner, so it is not recorded in the Radziwiłł visitation.⁶⁶ All aforementioned sixteenth century evaluation books place Biezanów in Lipnica deanery.⁶⁷ However, it must be remembered that between 1577 and 1596 Wieliczka deanery was created again from the north-western part of Lipnica deanery, and later visitations, as well as *Reformationes* from 1621 assign Biezanów to this unit.⁶⁸ Also Miechów parish (Książ district), supervised by members of the Order of the Holy Sepulchre from the local monastery, was not inspected along with other parishes until the eighteenth century. First records concerning the villages in this parish, and its deanery affiliation come from the visitation of Bishop Poniatowski in 1783, and from the 1787 *Spis ludności*.⁶⁹ These sources place Miechów in Książ deanery. At the end of the sixteenth century, the seat of this deanery was situated in Wrocimowice, that is why it was assumed that in our period Miechów belonged to this deanery. The parishes in Dłużec (Lelów district) and Kidów (Książ district) were listed under Lelów deanery in the books and in *Reformationes* from 1621. However, all visitations place them in Wolbrom deanery.⁷⁰ The 1596 visitation puts Iwkowa parish (Nowy Sącz district) in Nowy Sącz deanery, and yet all later visitations and evaluation books, as well as *Reformationes 1621*, list Iwkowa in Lipnica deanery.⁷¹ The affiliation of Melsztyn parish (Nowy Sącz district) appears not to have been settled in our period. The Radziwiłł visitation describes Melsztyn parish under Wojnicz deanery. Still, an annotation on the margin says: *ad lipnicensem decanatum*.⁷² The affiliation of Melsztyn to the deanery of Lipnica was noted in evaluation books and visitations from 1618 and 1630, and the 1602 visitation, *Reformationes 1621*, the 1664 visitation, and later eighteenth century sources placed it in Wojnicz deanery.⁷³ In our study, we assumed that at the end of the sixteenth century Melsztyn parish belonged to Lipnica deanery, and that its affiliation was changed later. Concerning the affiliation of the parish in Jawornik, the sources suggest that in the period under discussion the matter was probably still not settled. The evaluation books put Jawornik in Skawina deanery, and the Radziwiłł visitation in the deanery of Dobczyce.⁷⁴ The visitation from 1618 provides us with more precise information, placing Jawornik in Dobczyce deanery, but with an annotation *abstracta ad Skawina*.⁷⁵ The lack of unambiguous information seems to be confirmed by the fact that *Reformationes 1621* assign this parish to two deaneries: Skawina and Dobczyce, and the subsequent visitations from 1644 and 1655 do not include it at all.⁷⁶ According to the 1663 visitation, Jawornik was situated in Skawina deanery, the affiliation had already settled by then, and this state was recorded in the eighteenth century sources.⁷⁷ Similar divergences can be found in the sources in the case of the parish in Maków Podhalański (Silesian district). Both: the Radziwiłł visitation, and later visitations list this parish in Zator deanery.⁷⁸ *Reformationes 1621* and *Libri retaxationum* from 1529, 1561, 1577, and 1602 put Maków Podhalański in Skawina deanery, but the last

one also lists this parish in Zator deanery.⁷⁹ In the case of Leńcze parish (Silesian district), the situation is exactly the opposite: the visitations place the parish in Skawina deanery, and *Reformationes 1621* and evaluation books in Zator deanery. Only the book from 1602 is an exception here, it lists Leńcze along with other parishes of Zator deanery, but with an annotation, that the parish belongs to Skawina deanery.⁸⁰ It was assumed that the parishes in Tropie and Siedlec belong to Bobowa deanery, as recorded by the Radziwiłł visitation, even though the evaluation books and the next visitation (1608) place is in Nowy Sącz deanery. The said parishes were included in Bobowa deanery by the 1621 list and the eighteenth century sources.⁸¹

The range of Proszowice deanery, created during the pontificate of Cardinal Jerzy Radziwiłł, was recorded in the Radziwiłł visitation, and confirmed by subsequent visitation of this territory from 1614, 1618, and 1629.⁸² It is worth adding that the divergences concerning the affiliation of a given parish to a deanery found in the visitations and evaluation books occur also in other places, especially in the deaneries of Biecz, Bobowa, and Jasło. In the cases of all these differences, we accepted the state provided by the Radziwiłł visitation, confirmed by the next visitation from 1608.⁸³

Parishes were the smallest units of the territorial organization of the Catholic Church. They also played an important role in State administration.⁸⁴ Sometimes, a parochial church had a subsidiary church. We decided to treat subsidiary churches that had their own, isolated district as parishes, because usually these were old parochial temples, incorporated into neighbouring units for various reasons. Otherwise, a subsidiary church was not treated as a parish centre. Visitations helped us establish, whether a subsidiary church had an isolated district, as subsidiary churches with no autonomy were generally placed among villages belonging to a parent parish. However, sometimes the sources are so unclear that the issue of whether a given settlement is (or is not) a parish centre, remains hypothetical. The situation of the deanery of Nowy Targ was especially problematic. Difficult natural conditions, followed by poor development of settlement in the area, and – as a consequence – small bestowals, resulted in the annexation of local parishes, which could not survive by themselves, to neighbouring centres.⁸⁵ In the cases of one-village subsidiary parishes in Nowy Targ deanery, we decided to treat as parochial seats these churches, which served as independent parishes earlier. That is why the church in Ochotnica Dolna, for instance, was omitted. It was established around 1566, and functioned as a subsidiary church of the one in Tylmanowa from the very beginning.⁸⁶

The sources are unequivocal about the situation of the churches in Żarnowiec and Łany Wielkie (Wolbrom deanery). The visitation conducted in 1598 states, that the church in Żarnowiec was built in Łany parish. The church in Łany Wielkie on the other hand was described as an old parochial church, parent church for Żarnowiec parish, at the time, however, connected with its subsidiary church.

⁷⁹ LR 1529, p. 212; AKap., Reg. C. 7, f. 36; Reg. C. 8, ff. 42v, 77v.

⁸⁰ AV Cap. 17, f. 205v; AV Cap. 28, ff. 107–109; AV Cap. 33, f. 14v; AV Cap. 45, ff. 106–107; LR 1529, p. 342; AKap., Reg. C. 7, f. 75; Reg. C. 8, ff. 44, 77v.

⁸¹ AV Cap. 5, f. 14; AV Cap. 25, ff. 471, 499; LR 1529, pp. 295, 312; AKap., Reg. C. 7, ff. 88, 90; Reg. C. 8, ff. 89, 91. Tropie does not appear in neither of those deaneries in the 1618 visitation. AKM, *Tabella*, vol. 12, no. 12 i 14; AKM, *Descriptio*, f. 25.

⁸² Kościelec parish (Witów deanery) can raise some doubts. In the 1618 it appears in two deaneries: Proszowice and Witów (AV Cap. 41, f. 106v–107). However, this was probably the result of a scribe's mistake. The differences in the course of the border of Proszowice deanery, especially compared to the retaxation books, particularly the one from 1602 were described above.

⁸³ Retaxation books place the following parishes from Biecz deanery in Bobowa deanery: Ciężkowice, Szymbark, Turza, Gromnik, Rzepiennik, Staszkówka, Łużna, and the following parishes from Jasło deanery in Biecz deanery: Bączal Dolny, Trzcenica, Czerwna, Sławęcina, Harkłowa, AKap. Reg. C. 7, f. 93–94v, 101–101v; Reg. C. 8, f. 94v–95, 99–100. These differences also concern three other parishes in Wojnicz deanery: Rzezawa, Biesiadki and Porąbka Uszewska, which were put in Lipnica deanery. See J. Szymański, *Dekanat wojnicki*, pp. 81–83.

⁸⁴ H. Rutkowski, *Church administration borders*, [in:] AHP Sieradz, in this edition III.2.2.5.

⁸⁵ See B. Kumor, *Afiliacja kościołów parafialnych na Podhalu (1350–1783)*, „Prawo Kanoniczne”, vol. 4, 1961, no. 1–4, pp. 276–293.

⁸⁶ The church in Ochotnica Dolna was built probably because of the distance from the parochial seat and frequent overflows of the rivulet Ochotniczka AV Cap. 5, f. 48–48v. For more information about Ochotnica see below: K. Chłapowski, *Cerkwie prawosławne i osadnictwo wołoskie*, pp. 247–252. We decided that the parish Sromowce Niżne was not a subsidiary church of Sromowce Wyżne, as the sources do not emphasize the superiority of any of the two parishes.

The visitation does not isolate the villages belonging to the church in Łany Wielkie as well.⁸⁷ The visitations from 1610 and 1690, however, isolate both churches, with their districts, but the latter calls the church in Żarnowiec subsidiary the parochial church in Łany.⁸⁸ This legal status was also attested to the sources from the eighteenth century.⁸⁹ This study assumes that the church in Żarnowiec was subsidiary to the one in Łany Wielkie, and treats the situation presented in the sources from the turn of the sixteenth and the seventeenth century as temporary.⁹⁰

The parochial church in Sidzina was built in 1582. However, this parish failed to keep its autonomy, because already in 1601 it was listed as a subsidiary church of the temple in Maków Podhalański.⁹¹

The one-village subsidiary parish in Ryczów was not treated as an independent parochial seat, as it did not have a parson back then 'tanquam ad aliam ecclesiam pertinens'.⁹² However, there was a disagreement between the parson of Woźniki parish and the one from Spytkowice parish, about which one had Ryczów as a subsidiary. According to subsequent visitations, the rights to Ryczów, supported by the documents, belonged to the parson of Spytkowice, but in fact the service was provided by the provost of Woźniki, by consent of the monastery in Mogiła, which owned both villages.⁹³ Therefore, the majority of the sources lists Ryczów either in Woźniki parish, or as its subsidiary.⁹⁴

According to the Radziwiłł visitation, supplemented by data from other available sources, there were 34 villages in our territory, which were divided between two parishes.⁹⁵

Some fragments of parochial borders presented on the main map require further explanation.

Cięcina parish (Silesian district), the origins of which date back to the middle of the fourteenth century, was the farthestmost parish in Silesian district. The southern borders of the parish were defined by the range of settlement in this area.⁹⁶ The parish disappeared several times, probably due to its localization in a mountainous region. In the second half of the fifteenth century, Cięcina belonged to the parish of the town Żywiec. Later the service was offered here by the parson from Radziechowy parish.⁹⁷ The Radziwiłł visitation mentions that the church in Cięcina was administered by the parson of Radziechowy, but it also lists villages (Cięcina, Milówka and Cisiec), which paid the local church for masses, which probably proves that it also provided independent service.⁹⁸ Soon, the situation

⁸⁷ AV Cap. 15, f. 81–85v. This was confirmed in the 1602 visitation. 'Łany, villa in suburbano civitatis Zarnowiensis situata, matrix ecclesiae eiusdem civitatis, per dominum plebanum Zarnowiensem ex antiquo regitur;' AV Cap. 20, ff. 66–69.

⁸⁸ AV Cap. 28, f. 175. The fragment of the 1610 visitation concerning the church in Łany did not survive, but the incomplete description of Żarnowiec parish lists only three village in that parish. AV 13, ff. 26v–27v.

⁸⁹ S. Litak, *Struktura*, pp. 203–204; Litak, *Atlas*, p. 261; Spis 1787, ABMK, vol. 37, p. 378.

⁹⁰ We should mention here that there were some doubts concerning the range of Łany Wielkie parish, because the Radziwiłł visitation does not list any village in this parish. We accepted the range confirmed by the Church sources from the seventeenth and eighteenth century. Only the affiliation of the village Wierzbica remains unclear. Długosz, the 1690 visitation and the list from 1787 placed in by Łany parish, the tax registers, on the other hand, in Żarnowiec parish: Długosz LB, II, p. 208–210; AV 13, f. 27v; Spis 1787, ABMK, loc.cit.; P. Małopolska, p. 91; Tax reg. 1595, f. 369. In case of the church in Stary Żywiec, which was a mother parish of the church in Żywiec town, the Radziwiłł visitation mentions that there had not been a parson there for many years, and the church was administered 'a plebano ecclesiae filialis Novae Żywiec' (AV Cap. 17, f. 15). However, the visitation treats both parishes separately, and in no other place calls the church in Żywiec subsidiary. Later visitations either do not isolate the parish in Stary Żywiec, treating it as one with the parish in Żywiec town (AV Cap. 28, f. 150; 1610), or list the villages from Żywiec town parish again under Stary Żywiec parish (AV Cap. 33, ff. 66, 67; 1617 r.). In the eighteenth century the parish in Stary Żywiec was a subsidiary church of the church in Żywiec town, Litak, *Atlas*, p. 254.

⁹¹ AV Cap. 17, f. 170v; AV Cap. 20, ff. 157–158; 33, ff. 96–96v; J. Chachaj, *Rozwój sieci parafialnej w dekanacie Zator do końca XVI w.*, ABMK, vol. 68, 1997, p. 275.

⁹² AV Cap. 17, ff. 193v–194; AV Cap. 20, f. 174v (Masses here were only said on some Sundays).

⁹³ AV Cap. 17, f. 193v; 33, f. 103; AV Cap. 45, f. 121.

⁹⁴ Długosz LB, vol. 2, p. 234; LR 1529, f. 81; AV Cap. 20, f. 194v; 28, f. 144; AV 8, f. 40; AKap., Reg. C. 8, f. 77v; S. Litak, *Struktura*, p. 192.

⁹⁵ These were the villages: Borowna, Bukowiec, Charsznica, Drzykowa, Giebułtów, Gołkowice, Jastrzębie, Jeżówka, Kawec, Krężoły, Lgota Wolbromska, Łany, Łyczanka, Łęg, Ostrężnica, Owczary, Pasierbiec, Pękowice, Pobrzeże, Przeginia, Rogów, Roztoka, Rudno Niższe, Rzeszotary, Słupów, Smroków, Spytkowice, Stanisław, Surówka, Szczereż, Węgrce Wielkie, Wola Więclawska, Żakowa, Żerosławice.

⁹⁶ Concerning the origins of Cięcina parish see SHGK, part I, no. 3, p. 405 and J. Kurzeja, *Rozwój średniowiecznej sieci parafialnej w dekanacie Oświęcim*, „Roczniki Humanistyczne”, vol. 27, 1979, no. 2, pp. 30, 32.

⁹⁷ Długosz LB, vol. 1, p. 87; vol. 2, p. 289; LR 1529, p. 340. Cięcina is absent from retaxation books from 1561, 1577 and 1602.

⁹⁸ AV Cap. 17, f. 19–19v, 'haec ecclesia caret rectore proprio, ex antiqua consuetudine administratur per plebanum Radziechoviensi'.

changed again, as the 1610 visitation included Cięcina in Radziechowy parish. Again, such a state of affairs did not last long: in 1617 it was recorded that Cięcina was a seat of a parish of 14 villages, including 11 newly located ones.⁹⁹ However, the revival of the parish was not permanent. According to later sources, there was a chapel in Cięcina, in Radziechowy parish.¹⁰⁰

It was assumed in this study that there was a parish in Wysoka (Silesian district) village at the end of the sixteenth century, although the 1598 visitation mentions that the local church did not offer any service then, and became a subsidiary church of the temple in Marcyporęba before 1602.¹⁰¹ However, it is a known fact that there was a parochial church in Wysoka in the second half of the sixteenth century, as proven by the Peter's pence paid by this church in 1551–1563.¹⁰² The situation of a one-village parish in Przybradz (Silesian district) was similar. It was isolated from Frydrychowice parish before 1551.¹⁰³ Several years later it was seized by the Protestants, and the members of the parish began to attend the church in Frydrychowice.¹⁰⁴ As a result, Przybradz was again incorporated into Frydrychowice.¹⁰⁵ The same was true of Ślęcin parish (Lelów district). The Radziwiłł visitation tells us that the local parochial church was abandoned, and that Mikołaj Rey, the owner of the village, deprived it of its benefits, and moved the temple to the town Oksa, where he built a Protestant church.¹⁰⁶

The church in Kromołów was turned into a Calvinist temple, so in 1566 a new parish was erected in Skarżyce, adding three villages to it: Żerkowice, Dupice, Morsko. In 1574 the church in Kromołów was consecrated again, and the parish was restored, but without villages from the parish in Skarżyce.¹⁰⁷ This unusual situation, when one parish existed within the borders of another, probably led to many problems with parochial affiliation in the beginning, such as the one recorded in the 1602 visitation, which lists Morsko in both parishes, and Dupice in Kromołów parish.¹⁰⁸

At the end of the sixteenth century the parish in Lubcza (Książ district) was in the hands of the Protestants, and therefore was not inspected in 1598, and the villages in this parish were not listed.¹⁰⁹ The visitation from 1618 repeats the information about the state of the church, adding that the sacraments for the worshippers of the parish, from Lubcza and Wola Lubecka villages, were administered in Nawarzyce.¹¹⁰ In 1690 the situation was legally confirmed, and the parish in Lubcza was incorporated, along with its district, to Nawarzyce parish.¹¹¹ At the end of the sixteenth century there probably was

⁹⁹ AV Cap. 28, f. 152; AV Cap. 33, f. 70v. The parish in Cięcina was also listed in Reformationes 1621, f. 31.

¹⁰⁰ AV Cap. 45, f. 178; 46, f. 251. In 1628 r. a church was built in Miłówka, which was made a parish of the Assumption of Mary in 1644 r 'quia remote existit a dicta parochiali nec parochianis longe lateque commorantibus sacramenta commode administrari possunt', *ibidem*, 46, f. 252. In the eighteenth century Cięcina was a subsidiary church of the church in Radziechowy, Litak, Atlas, p. 254.

¹⁰¹ The village was in the hands of Protestants then, AV Cap. 17, f. 184v; AV Cap. 20, f. 173. Because the church was desecrated, the worshippers from Wysoka obtained sacraments in Witanowice; later sources list Wysoka as a subsidiary church of Marcyporęba: AV Cap. 33, f. 104v; AV Cap. 45, f. 116; Litak, Atlas, p. 254. Concerning the rule assumed in this study in case of churches occupied by Protestants see below.

¹⁰² J. Chachaj, *Rozwój*, pp. 266, 301.

¹⁰³ *Ibidem*, p. 274, 293.

¹⁰⁴ AV Cap. 17, f. 150v (1598); AV Cap. 33, f. 87v (1617).

¹⁰⁵ AV Cap. 45, f. 152; AV 8, f. 31v. In the eighteenth century Przybradz was a subsidiary church of the church in Frydrychowice, Litak, Atlas, p. 254.

¹⁰⁶ AV Cap. 10, f. 98v. This event must have happened between 1562, when Mikołaj Rey proposed a candidate to the parish in Ślęcin, and 1566, when the minister of the church in Oksa was first recorded. Rey died in 1569. See PSB, vol. 31, p. 198. The retaxation book from 1577 does not mention any problems in the way the parish in Ślęcin functioned, AKap. Reg. C. 7, f. 68v. The book from 1602 mentions that the endowments of the church were annexed by Rey, AKap. Reg. C. 8, f. 71v. In 1618 there was a granary in the church in Ślęcin, AV Cap. 41, f. 60. The church was recaptured by the Catholics shortly before 1664, AV 8, f. 171v. Later it was united with the parish in Nagłowice, Spis 1787, ABMK, vol. 37, p. 372.

¹⁰⁷ AV Cap. 15, ff. 145–146, 148v; SHGK, part 3, no. 1, p. 149, footnote 5.

¹⁰⁸ AV Cap. 20, f. 132v, 135. Similarly in the visitation from 1598 r., the parochial district from before the parish in Skarżyce was created was listed with other village in Kromołów parish, AV Cap. 15, ff. 149v–150. The church in Skarżyce was not listed in retaxation books from 1577 and 1602.

¹⁰⁹ AV Cap. 10, f. 116: 'per hereticos diruta et omni decore, ornamentis [...] spoliata'. The church in Lubcza was seized by the Protestants already in the first half of the sixteenth century, it is already excluded from the retaxation book from 1561 r. See LR 1529, p. 191.

¹¹⁰ 'Ecclesia a multis annis diruta,' AV Cap. 41, f. 68v–69. This parish was mentioned in the retaxation book from 1602 (Arch. Kap. Kat., Reg. C. 8, f. 70) and Reformationes 1621 r., f. 30.

¹¹¹ Czaykowski, p. 229; Spis, ABMK, vol. 37, p. 375; Kumor, *Dzieje*, vol. 4, pp. 392–393.

another village in Lubcza parish: Stępcice.¹¹² Possibly, the same could be said about Węchadłów, yet in this case there were some major difficulties, and in the end we assumed that Węchadłów lay in Wola Knyszyńska or Lubcza parish.¹¹³ The church in Wola Knyszyńska was abandoned at the end of the sixteenth century, and fell into ruin, so there was practically no service offered there.¹¹⁴ That is why the parish was incorporated, with its benefices, into Sancygniów parish in 1606.¹¹⁵ The 1610 visitation tells us that Węchadłów became a part of this parish then.¹¹⁶ Church sources remain silent, and say nothing about an earlier affiliation of Węchadłów. Secular sources, however, place this village in Lubcza parish, or mark it as a parish seat.¹¹⁷ *Liber retaxationum* from 1529 records that tithe from Węchadłów was paid partly to Wola Knyszyńska, and partly to the church in Lubcza, and there is evidence of this in Bishop Padniewski's visitation.¹¹⁸ We know that in the second half of the seventeenth century and in the eighteenth century Węchadłów was divided between Sancygniów and Góry (Sandomierz Voivodeship) parishes.¹¹⁹ It is impossible to establish at this stage, how and when a part of Węchadłów became part of Góry parish, because the parish remained desecrated until the end of the sixteenth century, and subsequent visitations fail to record its parochial range. This could possibly be related to the ownership affiliation of Węchadłów, belonging to the owners of Góry.

The subsidiary parish in Czarny Dunajec was isolated from the parish in Ludzimierz before 1596. According to the Radziwiłł visitation, there were seven villages in the parish.¹²⁰ The new church was built in 1595 at the private expense of Tomasz Miętus, the vogt (*scultetus*, 'sołtys') of Dunajec, who also endowed the church with a garden. The official document of foundation of the Podhale mayors, requesting the creation of the parish, was issued in 1605. In 1606, after the foundation was granted by the king, Bishop Bernard Maciejowski established an independent parish in Czarny Dunajec.¹²¹ There are some doubts concerning the parochial affiliation of three villages, belonging either to Dunajec parish, or to Ludzimierz. It was assumed that the village Długopole belonged then to Ludzimierz parish, as stated in the 1596 visitation. Still, the possibility of its alternative affiliation to Czarny Dunajec was accepted.¹²² On the other hand, in the case of the villages Rogoźnik and Bystre, it was assumed that they were situated in Czarny Dunajec parish, pointing to their possible affiliation with the parish in Ludzimierz.¹²³

¹¹² Długosz LB, vol. 1, p. 426; P. Małopolska, vol. 3, p. 89; Tax reg. 1595, f. 359. Stępcice does not appear in the 1618 visitation, it was also not listed in Nawarzyce parish in the 1664 visitation. In the eighteenth century it belonged to Sancygniów parish; Czaykowski, p. 353; Spis 1787, ABMK, vol. 38, p. 158.

¹¹³ Like it was said in the introduction to the List of Settlements, in case we were not completely certain about the parochial affiliation of a given village, two seats were listed, separated by the word 'or'. The first name is the name of the parish shown on the map (the more likely one), the other – of another parochial seat, to which a given parish could have belonged. Such a situation occurred in two instances: when there was a conflict between two parsons, or when there was no clear source records, see below.

¹¹⁴ AV Cap. 10, f. 116: 'Ecclesia [...] antiquitate desolata corrui ita ut vix locus extet.' Bishop Padniewski's visitation does not find any inaccuracies in the work of this church, AV Cap. 1, f. 190. The parish was noted in retaxation books from 1561, 1577 and 1602.

¹¹⁵ Kumor, Dzieje, vol. 4, p. 392.

¹¹⁶ AV Cap. 28, f. 87 (visitation from 1610). This was confirmed by the next visitation conducted in 1618. AV Cap. 41, f. 43v.

¹¹⁷ The land tax register from 1490, P. Małopolska, vol. 4, p. 439; LK 1564, vol. 2, p. 80 (List of villages, which paid the land tax). Tax registers consider Węchadłów a separate parish, and call it: 'Misiowska Góra alias Węchadłów', Tax reg. 1595, f. 359, similarly: P. Małopolska, vol. 3, p. 89; Tax reg. 1629, p. 136. Church sources do not confirm that such a parish existed.

¹¹⁸ LR 1529, pp. 148, 191. In bishop Padniewski's visitation Wola Knyszyńska parish was inspected, AV Cap. 1, f. 190v.

¹¹⁹ AV 8, f. 302–302v (1664); AV 17, f. 90–91 (1711); Czaykowski, pp. 351, 353. See also: E. Wiśniowski, *Prepozytura wiślicka do schyłku XVII w. Materiały do struktury organizacyjnej*, Lublin 1976, pp. 143–144, 156.

¹²⁰ AV Cap. 5, f. 67–67v.

¹²¹ AV Cap. 25, f. 638–641. The visitation lists all inhabitants of each settlement in Dunajec parish, f. 642–643 (printed in: L. Wyrostek, *Dokument chłopów podhalańskich*, [in:] *Studia historyczne ku czci St. Kutrzeby*, vol. 1, Kraków 1938, p. 495). Concerning the origins of the parish in Dunajec see J. Rafacz, *Z dziejów kościoła na Podhalu*, „Przewodnik Naukowy i Literacki”, 1917, pp. 97–109 1917 and B. Kumor, *Archidiakoniat sądecki*, pp. 165–167.

¹²² AV Cap., 5, f. 66. Długopole appears in the document of the foundation of the parish in Dunajec from 1605 and among the village in the parish in 1608, AV Cap. 25, loc.cit. The visitation from 1639 r. mentions there was a conflict about Długopole between these parishes, settled in favour of Dunajec parish, B. Kumor, *Archidiakoniat sądecki*, p. 166.

¹²³ The visitation from 1596 places Rogoźnik in Dunajec parish, the village was also listed in the 1605 document, the visitation from 1608 puts the village in Ludzimierz parish, AV Cap. 25, f. 634. The village Bystre, founded in 1591, appears in Church sources only in the visitation from 1727 in Dunajec parish, Kumor 1964a, loc. cit. Tax registers from the seventeenth century list Bystre in Ludzimierz parish, Tax reg. 1629, p. 228.

The village of Sędowice was listed in the Radziwiłł visitation in two parishes: Wrocieryż and Grudzyny.¹²⁴ The visitation conducted in 1618 informs us about a disagreement between the parsons about this village, which was settled in favour of Wrocieryż parish in the middle of the seventeenth century.¹²⁵ This was the parochial affiliation accepted for Sędowice in our study. The claims of the parson of Grudzyny were most likely laid, because of the tithe paid by Sędowice to this church.¹²⁶

There was a dispute between the parsons of Rudawa and Paczółtowiec, concerning the village Pisary.¹²⁷ The conflict could have been caused by the tithe from the demesne fields in Pisary paid to the church in Paczółtowiec.¹²⁸ It seems that, for our period, it would be far more justified to include Pisary in Rudawa parish (as shown on our map), as this is the affiliation recorded by Jan Długosz.¹²⁹ The 1602 visitation does not list a Pisary under Rudawa parish, and in case of Paczółtowiec, it states that it was an one-village parish. Similar information concerning this parish could be obtained from the visitations conducted in 1611 and 1617. According to the latter source, the village Pisary belonged to the parish in Rudawa.¹³⁰ Finally, however, the dispute was settled in favour of the parson of Paczółtowiec: the sources from the second half of the seventeenth century and the eighteenth century place Pisary in this parish.¹³¹

There are no unequivocal records on the parochial church in Łęka village. In this study it was accepted that it belonged to Sławków parish, or to the parish in Chechło. The Radziwiłł visitation lists the village in both these parishes.¹³² Łęka does not appear in the 1602 visitation under Chechło parish, and in the description of Sławków parish, the visitation states the local parson collected tithe from five serf fields, in turns with the parson of Chechło.¹³³ Such a situation had lasted a long time, because it was recorded already in 1529, in *Liber retaxationum*.¹³⁴ This must have been the reason for the dispute about the parochial affiliation, and the inconsistent source records: Łęka appears in Sławków parish in the 1611 visitation, but in the next visitation, in 1617, it was again listed in both parishes.¹³⁵ Soon, the doubts were probably settled in favour of the parish in Sławków, because the 1644 visitation, as well as the eighteenth century sources, record the village Łęka only in this parish.¹³⁶

Similarly unclear was the case of parochial affiliation of the village Nieprzeźnia, the source of conflict between the parsons of Sobolów and Chełm.¹³⁷ The conflict probably arose around the tithe, again paid partly to the church in Sobolów, and partly to the parson of Chełm.¹³⁸ Perhaps because of these controversies the village was listed in neither of the villages in the next visitation.¹³⁹ In this study, we accepted the affiliation of Nieprzeźnia to the parish in Sobolów as the more probable one, because that was the way it was recorded by Długosz and later sources.¹⁴⁰

There were also some problems with the parochial affiliation of the village Bistuszowa (Biecz district). Both: Jan Długosz, and the Radziwiłł visitation record this village in the parishes of Ryglice and Tuchów. And yet, later sources do not confirm this division, and place Bistuszowa solely in Ryglice parish.¹⁴¹

¹²⁴ AV Cap. 10, f. 85v, 87. Bishop Padniewski's visitation offers no support here, as it noted the parochial range only by Wrocieryż, AV Cap. 1, f. 180v.

¹²⁵ AV Cap. 41, f. 52v; AV 8, f. 185v, 187 ('Sędowice per decretum accessit').

¹²⁶ LR 1529, p. 341.

¹²⁷ AV Cap. 17, f. 99, 109v. Pisary were listed under both these village, the conflict was mentioned under Paczółtowiec parish.

¹²⁸ LR 1529, p. 157.

¹²⁹ Długosz LB, vol. 1, p. 39. However, we assumed that Pisary could have belonged to Paczółtowiec at the time.

¹³⁸ LR 1529, p. 84, 194.

¹³⁹ AV Cap. 40, f. 48v–49.

¹⁴⁰ Długosz LB, vol. 2, p. 115; AV Cap. 47, f. 30 (1664); AKM, Tab., vol. 6, no. 17; AKM, Descriptio 1776, f. 19.

¹⁴¹ Długosz LB, vol. 3, p. 223; AV Cap. 2, f. 112; AV Cap. 7, f. 24; AV Cap. 47, f. 536; SHGK, part 1, no. 1, p. 126. About the range of these parishes see B. Kumor, *Prepozytura tarnawska*, pp. 243–244, 273–276.

The parochial affiliation of the village Mrukowa (Biecz district) is also uncertain. The visitation suggests that there was a dispute about this village between the parsons of Samokłęski and Skalnik, because Mrukowa had belonged to the latter in the past. This information is confirmed by recorded payments by Mrukowa to the church in Skalnik in 1529.¹⁴² Later, the situation still remained unclear, because the 1608 visitation places Mrukowa only in Skalnik parish, describing Samokłęski as a parish comprising one village.¹⁴³

We have some doubts concerning the parochial affiliation of Wierzbica in our period. We assumed that it already belonged to Niegardów parish then, and accepted a possible alternative localization in Prędocin parish. The Radziwiłł visitation does not list Wierzbica in any of the parishes, and the visitation of bishop Padniewski, conducted some 30 years earlier, includes the village in the parish of Prędocin.¹⁴⁴ The next record on this matter comes from the 1664 visitation, which places Wierzbica in Niegardów parish, and this is confirmed by the eighteenth century sources.¹⁴⁵

We know nothing about the parochial affiliation of the village Rząka at the end of the sixteenth century. In this study it was assumed that the village belonged either to Bieżeń parish, or to St. Jacob's parish in Kazimierz, as recorded by Jan Długosz. However, this fails to find any confirmation in the visitations from 1599 and 1609. There is no data from the sixteenth or seventeenth century about the range of Bieżeń parish. We know only that in 1573 the church was granted tithes from sheaves (*decima manipularis*, 'snopowa') from Rząka by the bishop of Cracow. In the eighteenth century, Rząka lay in Bieżeń parish.¹⁴⁶

Mszczęcin, a village situated on the right bank of the Vistula, probably changed its parochial affiliation at the turn of the sixteenth and seventeenth centuries. Originally, the village belonged to the church in Pobiednik Mały, located on the opposite bank of the river. Due to the difficult access to the service, the members of the parish started to have their sacraments administered to them in the nearby church in Niepołomice. This situation was probably formalized later.¹⁴⁷

Our affiliation of the village Podobin to Mszana Dolna parish was based on later sources, which offered indirect information. The Radziwiłł visitation does not list Podobin among the villages in this parish. The next visitation (1618), places Podobin in a newly-created parish in Niedźwiedź. According to the visitation, all villages belonging to this parish at that time were moved from the parish in Mszana Dolna.¹⁴⁸ The church in Niedźwiedź was finished in 1593, but the right to erect a new parish there, and the bestowals, were granted by king Sigismund III Vasa only in 1605. On his request, the parish was created that year by Bishop Bernard Maciejowski.¹⁴⁹

We do not know precisely when Ochojno changed its parochial affiliation. Due to the significant distance between the village and the seat of the parish of St. Jacob, in Kazimierz near Cracow, the worshippers attended the nearby church in Podstolice. This probably began long in the past, because Jan Długosz had already placed Ochojno in Podstolice parish.¹⁵⁰ It could be assumed that at the end of the sixteenth century the situation was still not formalized. The Radziwiłł visitation lists Ochojno in neither of the two parishes: Podstolice, or St. Jacob's.¹⁵¹ Only the 1618 records a *novissima* village

¹⁴² AV Cap. 2, f. 137; LR 1529, p. 69.

¹⁴³ AV Cap. 26, f. 376, 379. Tax registers place Mrukowa in Samokłęski parish, probably because the two villages belonged to one person, P. Małopolska, vol. 3, p. 123; Tax reg. 1595, f. 486. The parish in Skalnik was incorporated into Samokłęski parish sometime before 1748, AKM. Tab., vol. 5, no. 43. See also B. Kumor, *Powstanie i rozwój sieci parafialnej w Małopolsce południowej do końca XVI w.*, „Prawo Kanoniczne”, t. 6, 1963, p. 501.

¹⁴⁴ AV Cap. 1, f. 219v.

¹⁴⁵ AV Cap. 47, f. 118; Spis, ABMK, vol. 37, p. 364. Wierzbica does not appear in the 1614 and 1618 visitation, either in Prędocin, or in Niegardów parish.

¹⁴⁶ Długosz LB, vol. 3, p. 50; AV Cap. 42, f. 6; AKM. Tab., vol. 6, no. 63. On Bieżeń parish see above.

¹⁴⁷ *Liber beneficiorum* by Długosz and the Radziwiłł visitation probably record the 'temporary state', because Mszczęcin was listed in the two parishes mentioned there, Długosz LB, vol. 2, pp. 154, 164; AV Cap. 7, f. 236; 10, f. 183. In 1618, during the visitation of the village and the parish in Pobiednik, it was noted that the village Mszczęcin antiquitus belonged to the parish 'verum propter flumen quo ab ecclesia separantur parochiani in Niepołomice ecclesia sacramenta percipiunt,' AV Cap. 41, f. 102v. The 1665 visitation places Mszczęcin in Niepołomice parish, AV 8, f. 352.

¹⁴⁸ AV Cap. 40, f. 5–6v.

¹⁴⁹ AV Cap. 46, f. 43–46. Later sources place Podobin in Niedźwiedź parish, AV Cap. 47, c. 405; AKM, Tab., vol. 6, no. 45.

¹⁵⁰ Długosz LB, vol. 1, p. 106.

¹⁵¹ Ochojno was not listed in St. Jacob parish in Kazimierz aslo in the 1609 visitation, AV Cap. 32, f. 75.

Ochojno in Podstolice parish, mentioning that the village had belonged to the church of St. Jacob in Kazimierz, but was moved because of the long distance from the parish *uti parochus asserit a officiali adiuncta est*.¹⁵²

Tax registers treat Chroszcza as an independent parish.¹⁵³ However, this is not reflected in Church sources. Similarly, we have no proof for the division of the village between Brzezcie and Niepołomnice parishes, recorded in the Radziwiłł visitation.¹⁵⁴ Długosz and the seventeenth century sources place Chroszcza only in Brzezcie parish.¹⁵⁵

Churches seized by the Protestants, or abandoned for other reasons, were not inspected, and the books contain only a short notice concerning the appellation of the church, its patronage, legal status (parochial church, subsidiary church, chapel), and sometimes the endowment. The list of villages belonging to a given parish was usually omitted. At the end of the sixteenth century, the percentage of churches which did not offer service was quite significant in Cracow Voivodeship. The Radziwiłł visitation leaves 50 churches without any data about the range of the parish, this is more than 10% of all churches. In such cases, as already mentioned, we consulted later visitations, and compared the information with Jan Długosz's *Liber beneficiorum* and *Liber retaxationum* from 1529. Anything concerning parochial affiliation found in tax records, or other secular sources, was treated with a large degree of caution, only as a reference, as such sources frequently provided incorrect information.¹⁵⁶ Long-lasting occupation of a church (often for many decades) by other denominations caused us many difficulties. We were forced to resort to several consecutive visitations, often conducted a hundred years after our period. Just as in previous volumes of the *Atlas*, parish seats seized by the Protestants (even in the case of a prolonged occupation) were included on the map, when the Catholic authorities decided not to move the parish to another village. In the sixteenth century, this was the approach taken by the tax collectors in writing their registers.¹⁵⁷ The borders of an entire parochial district were defined not on the basis of the Radziwiłł visitation in the cases of the following parishes: Bruśnik, Głębowice, Iwanowice, Jastrzębia, Kobylany, Korzenna, Kościelec, Makowiska, Miechów, Mstyczów, Nienaszów, Poborowice, Podlesie, Poręba Dzierżna, Żłoty Potok, Przegonia, Sanka, Szczekociny, Tropie, Wilczyńska, Górka Kościelnicza, Wysocice.

Parochial affiliation of one or several villages was determined on the same basis in the parishes: Andrychów, Bestwina, Bobin, Brzesko Stare, Cerekiew, Czchów, Dobra, Gorlice, Gorzków, Jordanów, Kłobuck, Lipnik, Mszana Dolna, Olsztyn, Palczowice, Piotrkowice, Rachwałowice, Raciborowice, Nowy Żmigród.

In several instances, the parochial affiliation determined on the basis of other sources was different than the one provided by the Radziwiłł visitation: Dobranowice (Poborowice parish), Dalechowice (Bobin parish), Iwanowice Duże (Kłobuck parish), Czepurka (Żłoty Potok parish), Maszków (Iwanowice parish), Białowieża, Krężoły,¹⁵⁸ Pękosław i Wojciechów (Mstyczów parish).

The total number of parishes, the boundaries of which were in the region of Cracow and the Duchy of Siewierz, at the end of the sixteenth century was 483. It also included the parishes, whose territory extended beyond the border of this area (12) and parishes, the centers of which were located

¹⁵² AV Cap. 33, f. 119v.

¹⁵³ P. Małopolska, vol. 3, p. 67; Tax reg. 1595, f. 271.

¹⁵⁴ AV Cap. 7, f. 236, 238.

¹⁵⁵ Długosz LB, vol. 1, p. 127; AV 8, f. 354v.

¹⁵⁶ Tax registers did not always reflect the real state of the parochial network, because the parochial division fulfilled only an auxiliary role there, and were not essential for the registers. It happened quite often that the same village was placed in different parishes in subsequent years, or one village was placed in two parishes. Often the tax record from one year served as a basis for the next-year collection, so a village once affiliated incorrectly could have been placed not in its parish for a long time. Thus, only the Church sources offer us a complete certainty.

¹⁵⁷ See H. Rutkowski, *Church administration borders*, [in:] AHP Sieradz, in this edition III.2.2.5. That is why the parish in Makowiska (Biecz district), for instance, was included, even though the church was seized by the Protestants and later demolished, and the local parish was not re-established. In the eighteenth century it was incorporated into Kobylany parish, AV Cap. 2, f. 142v; 26, f. 88v; AKM, Tab., vol. 5, no. 40. On this subject see also: B. Kumor, *Zanik i afiliacja parafii w archidiecezji sąddeckim, wojnickim i prepozyturze tarnowskiej (1326–1787)*, „Roczniki Teologiczno-Kanoniczne”, vol. 11, 1964, no. 4, p. 127.

¹⁵⁸ The village Krężoły was listed in Mironice parish in the Radziwiłł visitation, AV Cap. 10, f. 112. We assumed, following the SHGK, that this village was divided between two parishes: Mironice and Mstyczów, SHG Kraków, part 3, no. 1, pp. 141–142. This is confirmed by later sources, Materials MWK, pp. 145–146.

in neighboring provinces, but their range is in the area in which we are interested in the area covered (11)¹⁵⁹. There were 16 subsidiary churches altogether. Apart from 11 centres situated outside our territory (including one town), 75 of 472 parochial and subsidiary churches, and their districts, were located in towns (including three towns in Siewierz Duchy, and three in Cracow agglomeration, where there were 11 parishes), 396 in villages, one at a castle (Melsztyn). One parish was situated in an ironworks (ironworks hamlet) called Poczesna.¹⁶⁰ One town did not have its own parish – Mstów, the seat of this parish was located in another diocese.

At the end of the sixteenth century there were ten collegiate churches in the part of Cracow diocese situated in Cracow Voivodeship and the Duchy of Siewierz: five in Cracow (church of St. Michael at Wawel, of St. George at Wawel, of St. Giles the Abbot,¹⁶¹ of All Saints, of St. Ann), and also in Kleparz (of St. Florian), in Skalbmierz, Nowy Sącz, Wojnicz, and Bobowa. There were also six collegiate churches with incomplete body of canons: in Biecz, Olkusz, Imielno, Książ Wielki, Moskorzew, and Ruszcza.¹⁶²

At the end of the sixteenth century there were six abbeys in our territory (Hebdów, Jędrzejów, Mogiła, Nowy Sącz, Szczyrzyc, Tyniec), their seats were marked on the main map. The provost of the Order of the Holy Sepulchre in Miechów was considered equal to abbots in the constitutions of the *Sejm* (Diet), so we decided to mark Miechów with the sign of an abbey.

Parochial churches: wooden and brick

Krzysztof Chłapowski

We supplement our description of Church administration in Cracow Voivodeship with the division of churches according to the building material used, i.e. with the number of brick and wooden temples. Almost the entire voivodeship belonged to the diocese of Cracow, so the subject was prepared on the basis of the Radziwiłł visitation from 1595–1599.

At the end of the sixteenth century, there were 458 parochial and subsidiary churches of equal rank in this part of Cracow diocese, concerning which necessary information could be found in the visitation. Two churches were completely demolished (Makowska in Żmigród deanery and Poborowice in Proszowice deanery),¹⁶³ and were therefore not included in the total number. Of 456 churches, 144 were made of brick (31.6%), 303 were wooden (66.4%), and nine were made of wood and brick (2.0%).¹⁶⁴ These percentages differ a little from the results obtained for the entire diocese in the fifteenth century (27.4% brick, 71.2% wooden, 1.4% mixed). For comparison's sake, it would be worth presenting data from Mazovia at the end of the sixteenth century: of 447 parochial churches, 24% were wholly, or partly brick, and 76% were wooden.¹⁶⁵

At the end of the sixteenth century, there were 73 towns in this part of Cracow Voivodeship, which belonged to the diocese of Cracow, and one of them (Mstów) was not a parish seat, which was

¹⁵⁹ In this overall number in the Duchy there were 14 parishes (among them 10 were within the boundaries of the Duchy, two were in neighbouring districts, and two were outside the Duchy state borders).

¹⁶⁰ This was an exceptional situation. The church in Poczesna was built around 1592. According to the 1598 visitation it was not consecrated yet, but masses were said and sacraments were given, by consent of Church authorities; AV Cap. 15, f. 131v–132v; AV Cap. 20, f. 123 (1602).

¹⁶¹ The collegiate church of St. Giles was liquidated in 1591, see K. Chłapowski, *Ownership affiliation of settlements*, [in:] AHP Cracow, in this edition III.3.3.1.

¹⁶² Kumor, *Dzieje*, vol. 2, pp. 361–485; vol. 3, p. 173–194, 267–352, 407–425.

¹⁶³ The church in Dalewice (Proszowice deanery) was also destroyed. Given these doubts, it was not treated as a parochial church.

¹⁶⁴ The following churches belonged to the latter category: in Bolechowice (Skala deanery), Dukla (Żmigród deanery), Dziekanowice (Dobczyce deanery), Nowy Targ (Nowy Targ deanery), Oświęcim (Oświęcim deanery), Podegrodzie (Nowy Sącz deanery), Sędziszów (Andrzejów deanery), Wadowice (Zator deanery), and Zalas (Nowa Góra deanery).

¹⁶⁵ S. Litak, *Parafie w Rzeczypospolitej w XVI–XVIII wieku*, Lublin 2004, p. 82; A. Dunin-Wąsowicz, K. Pacuski, W. Pałucki, H. Rutkowski, *L'Atlas historique de la Pologne. Problèmes de l'histoire de l'église. L'exemple de la Mazovie*, „Miscellanea Historiae Ecclesiasticae”, p. 5, 1974, p. 85.

situated in the monastery of Mstów, in Sieradz Voivodeship. Brick parochial churches could be found in 50 towns (69.4%), wooden in 18 (25%), and wooden/brick in four (5.5%). Of the 50 towns with brick churches, 25 were royal towns, eight belonged to members of the nobility, and two to the Church. Of the four towns with partly brick churches, three were royal towns, and one belonged to the nobility.

In 373 parochial villages in our area, there were 285 wooden churches (76.4%), 83 brick (22.3%), and five were made of brick and wood (1.3%).

ANNEX

List of units of church administration

The list presents the situation for the end of the sixteenth century. Only parishes situated wholly, or partially within the borders of Cracow Voivodeship, as well as the parishes with seats outside the voivodeship, but where the villages belonging to the parish lay in Cracow Voivodeship. Parochial seats situated in the Voivodeship of Cracow, whose borders reached beyond the territory, were marked with *, and the seats of parishes from outside the voivodeship with **. Sixteenth-century names of parishes were given in alphabetical order, and current names – if different – were provided in brackets. Towns were marked with the letter 't'. In case of subsidiary churches with their own districts, the name of the parent parish was given in brackets.

Cracow diocese

Cracow archdeaconry

Deaneries:

Andrzejów (Jędrzejów): Andrzejów (Jędrzejów) t., Brzegi**, Chlewice, Dzierzków* (Dzierzgów), Grudziń (Grudziń), Jemielno (Imielno), Kossów t., Krzęcice (Krzącice), Lubcza, Mironice (Mieronice), Mokrosko* (Mokrosko Dolne), Moskorzów (Moskorzew), Nagłowice, Nawarzyce, Piotrkowice, Rakoszyń, Sędziszów, Słupia, Ślęcin, Tarnowa (Tarnawa), Tczeniec (Trzcinec), Wodzisław t., Wola Knyszyńska, Wrocirysz (Wrocierz).

Bytom: Będzin t., Chroszczobród (Chruszczobród), Ciężkowice (Ciągowice), Czeladź* t., Grodziec (Będzin-Grodziec), Kamień** (Piekary Śląskie-Kamień), Kozięgłowy t., Kozięgłówki, Mysłowice** t., Sączów, Siemunia (Siemonia), Siewierz t., Targoszyce, Wojkowice Kościelne.

Dobczyce: Dobczyce t., Dobra, Droginia, Dziekanowice, Gruszów, Jaworznik (Jawornik), Jordanów t., Łapanów, Łętownia, Łososina (Łososina Górna), Mszana Niżna (Mszana Dolna), Myślimice (Myślenice) t., Nowa Rybie (Nowe Rybie), Pcim (Pcim), Raba (Raba Wyżna), Rabka (Rabka Zdrój), Raciechowice, Siepraw, Skrzydlina, Słopnica (Słopnice), Szczyrzycka Góra (Góra św. Jana), Szyk, Tarnawa, Trzemeszna (Trzemeśna), Tymbark t., Wilkowiska (Wilkowisko), Wiśniowa, Zakliczyn.

Cracow:

- Cracow t.: N. Marii Panny (of the Holy Virgin), Wszystkich Świętych (of All Saints), św. Krzyża (of the Holy Cross), św. Szczepana (of St. Stephen), św. Anny (of St. Ann), św. Mikołaja (of St. Nicholas);
- Kleparz t.: św. Floriana (of St. Florian);
- Kazimierz t.: św. św. Michała i Stanisława (of St. Michael and Stanislaus), św. Jakuba (of St. Jacob), Bożego Ciała (of the Corpus Christi);
- Zwierzyniec (św. Salvatora / of St. Salvador).

Lelów: Biała Więsza (Biała Górna), Częstochowa t., Drochlin, Goleniowy, Irzędze (Irządze), Klasztor Mstowski** (Mstów), Kłobucko (Kłobuck) t., Kroczyce, Kromołów (Zawiercie-Kromołów) t., Lelów t.,

Miedzwno (Miedźno), Mrzygłód (Myszków-Mrzygłód) t., Nakło, Niegowa, Obichów (Obiechów), Ogrodzieniec t., Olsztyn t., Poczesna, Podlesie, Potok (Złoty Potok), Przerów (Przyrów) t., Przystań (Przystajń), Przybynów, Przyłęk, Rokitno, Skarzyce (Zawiercie-Skarzyce), Stare Miasto (Staromieście), Szczekociny t., Wilkowiecko, Włodowice t., Zdrębnice (Zrębice II), Żarki t., Żórawie (Żuraw).

Lipnica: Bochnia t., Brzeźnica, Chełm, Chronów (subsidiary of Wiśnicz Wielki), Czchów t., Gnojnik, Godprzydowa (Gosprzydowa), Iwkowa, Królewna (Królówka), Krzyżanowice, Lipnica (Lipnica Murowana) t., Łapczyca, Melsztyn, Olchawa, Pogwizdów, Poręba (Poręba Spytkowska), Rabrot (Rajbrot), Sobolów, Trzciana, Tymowa, Uszew, Wiśnicz Wielki (Stary Wiśnicz), Wojakowa, Złota, Żegocina Wola (Żegocina).

Nowa Góra: Babica (Babice), Chechło, Chrzanów (Chrzanów-Kościelec) t., Czerniechów (Czernichów), Gorynice (Gorenice), Jaworzno, Kościelec, Krzeszowice, Liski (Liszki), Morawica, Nowa Góra t., Olkusz t., Paczółtowice, Płaza, Płoki, Poręba (Poręba Żegoty), Przegonia, Raclawice, Regulice, Rudawa, Rybna, Sławków t., Sosnka (Sanka), Tęczynek (Tenczynek), Trzebinia, Zalas.

Oświęcim: Bestwina, Bielany, Biertułtowice (Bielsko-Biała-Zabawa), Cięcina, Czaniec, Dankowice, Gilowice, Grodziec (Grojec), Jawiszowice, Jelesna (Jelesnia), Kęty t., Kozy, Lipnik (Bielsko-Biała-Lipnik), Łękawica, Łodwigowice (Łodygowice), Mikłuszowice (Bielsko-Biała-Mikuszowice Krakowskie), Nidek, Osiek, Oświęcim* (Oświęcim-Stare Miasto) t., Pisarzowice, Poręba Wielka, Radziechów (Radziechowy), Rychwałd I, Stara Wieś, Stary Żywiec, Ślemię (Ślemień), Wilamowice, Wilkowice, Witkowice, Żywiec t.

Proszowice: Bierków (Biórków Wielki), Czulice, Grabie, Igołomia, Koniusza, Luborzyca, Mogiła (Kraków-Mogiła), Niegardów, Pleszów (Kraków-Pleszów), Pobiednik Mały, Poborowice (Dobranowice – part), Proszowice t., Raciborowice, Rusiec (Kraków-Ruszcza), Wawrzyńczyce (Wawrzeńczyce), Więclawice (Więclawice Stare), Wrzodowa Góra (Górka Kościelnicza), Zębocin (Żębocin).

Skala: Biały Kościół, Bolechowice, Chodów, Czaple Wielkie, Giebułtów, Gołcza, Goszcza, Imbramowice, Irzmanowice (Jerzmanowice), Iwanowice (Iwanowice Dworskie), Jangrot, Korzkiew, Minoga, Modlnica Wielka (Modlnica), Niedźwiedź, Prędocin (Prandocin), Saspów, Sieciechowice, Skala t., Słomniki t., Smarzewice (Smarzowice), Sułoszowa, Śreniawa (Szreniawa), Tczyca, Ulina (Ulina Wielka), Uniejów (Uniejów-Parcela), Wysocice, Zadroże (subsidiary of Skala), Zielonki.

Skawina: Gaj, Głogoczków, Herbułtowice (Harbutowice), Izdebnik (subsidiary of Lanckorona), Krzęcin, Krzywaczka, Lanckorona t., Lińcze Górne (Leńcze), Mogilany, Pobodr (Paszkówka – part), Przymkowie (Przytkowice), Radziszowska Wola (Wola Radziszowska), Radziszów (Radziszów), Skawina t., Sulikowice (Sułkowice), Tyniec (Kraków-Tyniec), Zebrzydowice.

Sokolina: Działoszyce* t., Secygniów (Sancygniów), Skarbimierz* (Skalbmierz) t., Wolica Szyszczycka** (Wolica).

Tarnów: Plesna**, Ryglice Niższe (Ryglice), Tuchów** t.

Wieliczka: Bieżanów (Kraków-Bieżanów), Biskupice, Bodzanów, Brzezcie, Gdów, Kosocice (Kraków-Kosocice), Łęczany (Łazany), Niegowiec (Niegowić), Niepołomice, Podstolice, Wieliczka t.

Witów: Bobin, Brzesko Nowe t., Brzesko Stare (Hebdów – part), Cerkiew (Cerekiew), Cudzynowice, Gorzków, Kazimierza Wielka, Koszyczki (Koszyce) t. (subsidiary of Witów), Kościelec, Książnice Więtsze (Książnice Wielkie), Mikłuszowice, Przymków* (Przymków), Rachwałowice (subsidiary of Przymków), Uście (Uście Solne) t., Witów.

Wojnicz: Biesiadki (subsidiary of Porąbka), Brzeżek (Brzesko) t., Brzozowa, Dębno, Gwoździec, Jadowniki, Jasień, Olszyny, Porąbka (Porąbka Uszewska), Rzezawa, Siemichów (Siemiechów), Szczepanów*, Wojnicz* t., Zakliczyn t.

Wolbrom: Bydlin, Chlina, Dłużec, Gołaczów (Gołaczewy), Kidów, Kiełto (Giełto), Łany Wielkie, Pilcza (Pilica) t., Poręba Dzieżycza (Poręba Dzierżna), Poręba Górna, Strzegowa, Wolbram (Wolbrom) t., Żarnowiec t. (subsidiary of Łany).

Wrocimowice: Kalina (Kalina Wielka), Kozłów, Książ Mały, Książ Wielki t., Łętkowice, Małoszów, Miechów t., Mstyczów, Nasiechowice, Pełsnica (Pałecznicza), Raławice, Radzimice (Radziemice), Słaboszów, Sławice (Sławice Duchowne, Sławice Szlacheckie), Wrocimowice, Zielenice.

Zator: Andrzychów (Andrychów) (subsidiary of Wieprz), Barwałd Niższy (Barwałd Dolny), Choczni, Frydrychowice, Gierałtowice, Głabowice (Głębowice), Grabiszycze (Graboszyce), Inwałd, Kletcza (Klecza Dolna), Krzeszów, Maków (Maków Podhalański), Miłoszów (Sidzina), Mucharz, Palczowice, Piotrowice, Polanka (Polanka Wielka), Poręba Markowa (Marcyporęba), Przeciszów, Przybradz, Radocza, Spytkowice, Stryszów, Tłuczań, Wadowice t., Wieprz, Witanowice, Woźniki, Wysoka, Zator t., Zembrzyce.

Nowy Sącz archdeaconry

Deaneries:

Biecz: Biecz t., Bieniarowa (Binarowa), Cieszkowice (Ciężkowice) t., Gorlice t., Gromnik, Kobylanka Niższa (Kobylanka), Libusza, Lipinki, Łużna, Moszczenica Polska (Moszczenica), Ołpiny Wyższe (Ołpiny), Ropa, Rozembark (Rożnowice), Rzepiennik (Rzepiennik Biskupi), Sękowa, Staszkówka, Szerzyny, Szymbark, Świącany, Turza, Wójtowa, Zagórzany.

Bobowa: Bobowa t., Bruśnik, Grębów (Grybów) t., Jastrzębia, Korzenna, Krużłowa (Krużłowa Niżna, Krużłowa Wyżna), Lipnica Niemiecka (Lipnica Wielka), Mogilno, Pałecznicza (Pałecznicza), Podole (Podole-Górowa), Polna, Przedanica Niżna (Przydonica), Siedlec (Siedlce), Siedliska (subsidiary of Bobowa), Szalowa, Tropie, Wilczyńska, Zborowice.

Jasło: Bączal Niżny (Bączal Dolny), Cieklin, Czerwna, Dębowiec t., Hartłowa (Harkłowa), Jasło* t., Jedlicze**, Łężany (Łężyny), Łubienko, Ossownica (Osobnica), Sławęcın, Tarnowiec, Trzcienica (Trzcienica), Załęże, Zrzęcın* (Zręcın).

Nowy Sącz: Barcice (Barcice Dolne), Bieganice (Nowy Sącz-Biegonice), Chomranice Wyższe (Chomranice), Czarny Potok, Ilmanowa (Limanowa) t., Jakubkowice (Łososina Dolna-Jakubowice), Jazowsko, Kamienica, Kamionka (Kamionka Wielka), Kanina, Łącko, Łukowica, Męcina Wyżna (Męcina), Muszyna t., Mystków, Nawojowa, Pisarzowa, Piwniczna (Piwniczna Zdrój) t., Podegrodzie, Przyszowa, Ptaszkowa, Sądecz Nowy (Nowy Sącz) t., Sądecz Stary (Stary Sącz) t., Tęgoborza (Tęgoborze), Ujanowice, Wielogłowy, Zbyszyce, Żeleźnikowa Wielka.

Nowy Targ: Dębno Spiskie (Dębno), Dunajec (Czarny Dunajec) (subsidiary of Ludzimierz), Grywałd (subsidiary of Krościenko), Hartłowa (Harkłowa), Klukoszowa (Klikuszowa) (subsidiary of Nowy Targ), Kluczkowice (Kluskowce) (subsidiary of Maniowy), Krościenko (Krościenko nad Dunajcem) t., Ludzimierz (Ludźmierz), Łopuszna (subsidiary of Ostrowsko), Maniowy, Nowy Targ t., Ostrowsko, Sramowice Niżne (Sromowce Niżne), Sramowice Wyżne (Sromowce Wyżne), Szaflary, Szczawnica Wyżna (subsidiary of Krościenko), Tyłmanowa, Waksmand (Waksmund) (subsidiary of Nowy Targ).

Pilzno: Brzostek** t., Brzyska, Jodłowa Niemiecka (Jodłowa).

Żmigród: Bobrek (Bóbrka), Dukla t., Jaśliska t., Kobylany, Makowiska, Nienaszów, Osiek (Osiek Jasielski) t., Skalnik, Sowokłęski (Samokłęski), Wietrzno, Żmigród (Nowy Żmigród) t., Żmigród Stary (Stary Żmigród).

III.2.2a.1 COMMUNES OF OTHER DENOMINATIONS

Krzysztof Chłapowski

The map presents the location of the communes of other denominations (not buildings used for worship) in Cracow Voivodeship at the end of the sixteenth century. It was prepared on the basis of the sources created by members of other denominations (*Akta synodów różnowierczych*, ‘Documents of the synods of other denominations’),¹ as well as records of instances of church desecration found in *Libri retaxationum* from 1561 and 1577² (in almost every case the existence of Protestant communes is attested to in these settlements by other sources), and the visitations of Cracow diocese from 1595–1599).³ We also used studies by other authors, who resorted to a fragmentary visitation conducted in 1565–1570, and to visitations from the first half of the seventeenth century, or other detailed Church sources, relating to individual settlements.⁴ We consulted the literature on the history of the Reformation in the Commonwealth, beginning with the works of Julian Bukowski and Henryk Merczyng,⁵ through various dissertations and articles containing data about the historical geography of the Reformation in Lesser Poland, published in ‘Reformacja w Polsce’,⁶ ‘Odrodzenie i Reformacja w Polsce’,⁷ and other magazines,⁸ or collective studies,⁹ town monographs, and other works,¹⁰ as well as biographies included in *Polski słownik biograficzny*.

¹ ASR; Volume 3 was particularly important.

² AKM I, 26, 27.

³ See above footnotes 18–22 for more information about the documents of visitations.

⁴ For instance: T. Glemma, *Wizytacje diecezji krakowskiej z lat 1510–1570*, „Nasza Przeszłość”, vol. 1, 1946, pp. 43–96; S. Kot, *Szkolnictwo parafialne w Małopolsce XVI–XVIII w.*, Lwów 1912; B. Kumor, *Archidiakoniat sądecki*, ABMK, vol. 8, 1964, pp. 271–304, vol. 9, 1964, pp. 93–286; J. Wiśniewski, *Dekanat miechowski*, Radom 1917; idem, *Historyczny opis kościołów, miast, zabytków i pamiątek w Pińczowskim, Skalbmierskim i Wiślickim*, Mariówka 1927; idem, *Historyczny opis kościołów, miast, zabytków i pamiątek w Jędrzejowskim*, Mariówka 1930; idem, *Historyczny opis kościołów, miast, zabytków i pamiątek w powiecie włoszczowskim*, Mariówka 1932; idem, *Historyczny opis kościołów, miast, zabytków i pamiątek w Olkuskiem*, Mariówka 1935–1936; B. Kumor, *Reformacja w diecezji krakowskiej i jej wpływ na kasatę parafii katolickich*, [in:] Kumor, *Dzieje*, vol. 4, Kraków 2002, pp. 399–420 – this text contains mistaken identifications of villages and incorrect spelling of names (Studnicki instead of Stadnicki, Mysłowska instead of Myszowska, Michoszewiński instead of Moskorzewski, Szyłaciński instead of Silnicki, Bonarowicz (sic!), the castellan of Sandomierz, etc.).

Only these communes, about which we were certain (or it was highly probable) that they operated for at least 10 years, were included.¹¹ We omitted the communes, which appear only in sources created after 1600.¹² Similarly, we did not mark those Arian communes, which were considered uncertain by Waław Urban.¹³ The commune in Uście, Szczyrzyc district, was omitted, because the information about its existence, provided by H. Merczyng,¹⁴ was not confirmed by any other sources. The commune in Bóbrka, Biecz district, was not marked for the same reasons.¹⁵ We believe that in both cases Merczyng was wrong to link source records with settlements in the Voivodeship of Cracow.

Bolesław Kumor's lists of parishes in Cracow diocese seized by the Protestants, were treated with necessary criticism, because for the author any record mentioning an abandoned parochial church, or lack of parson, meant that the parish was seized by the Protestants for worship purposes.¹⁶ In our opinion, such conclusions were drawn too rashly.

In several places we refrained from marking anything on the map, as we could not be certain, whether the source information was true, and that there really was a Protestant commune in a given settlement. For instance, the parochial church in Wieprz, Silesian district, or the subsidiary church in Andrychów in the same district, were described as demolished in 1577,¹⁷ but the sources provided no information about any Protestant activity, so we assumed that the church was destroyed for some other reason. Sometimes it was the Catholic patron of a church, who destroyed it, e.g. Walenty Dembiński, the castellan of Cracow destroyed – according to the 1597 visitation – the parochial church in Poborowice in Proszowice district, and used the obtained materials for demesne buildings, and the parish endowments were given to the churches in Wawrzyńczyce and Zembocin. The visitation claimed that a *vir haereticus* from Bolestraszyce was the current heir of the village, but this does not mean there was a Protestant commune there.¹⁸ Similarly, the information recorded in 1577 that Piotr Krasowski, the heir of Ulina, a village in Książ district, demolished the parochial church, especially as the 1598 visitation mentions only that there was no rightful parson, and the parish was administered *per vagos praesbiteros*.¹⁹ Perhaps the situation resembled the case of the subsidiary church in Ślęcin, Lelów district, which was destroyed by Mikołaj Rey, a protestant, who nevertheless organized a commune in a nearby town Oksza, situated already in the Voivodeship of Sandomierz.²⁰ We cannot

¹¹ The following Protestant communes were omitted: Biezanów in Szczyrzyc district, mentioned only in 1566 (ASR, vol. 2, p. 201), Chełm in Proszowice district, mentioned only in 1552 and 1561 (ibidem, vol. 1, p. 193, vol. 2, p. 72), in Dzierzków in Lelów district, mentioned only in 1560 r. (ibidem, vol. 1, p. 32), in Grabowa Proszowice district – only in 1558 (ibidem, vol. 1, p. 228), in Korzkiew in Proszowice district – only in 1561 r. (AV Cap. I, 27, f. 53v, the visitation from 1598 tells us that: 'ecclesia ruinosa et desolata... a multis annis vacat' AV Cap. 15, f. 18), in Kuczków in Lelów district – only in 1561 and 1563 (ASR, vol. 2, p. 79, 121, 351), in Piekary in Proszowice district – only in 1595 and 1598 (ASR, vol. 3, p. 110, 193), in Pisarzowa in Nowy Sącz district – only in 1577 r. (AKM I, 26, f. 89v), in Pisarzowice in Silesian district – only in 1561 (AKM I, 27, f. 105), in Rożnów in Nowy Sącz district – only in 1563 (ASR, vol. 2, p. 351), in Radziechowy in Silesian district – only in 1561 (AKM I, f. 105) and in Stare Wilamowice – only in 1561 (AKM I, 27, f. 105v).

¹² In Błażkowa in Biecz district – first entry from 1603 (ASR, vol. 3, p. 244), in Marchocice in Proszowice district – from 1609 (ibidem, p. 298), in Wielkanoc in Książ district – from 1615 (ibidem, p. 365), in Skorczów in Proszowice district – from 1622 (ibidem, p. 438) and in Łuzna in Biecz district – from 1627 r. (ibidem, p. 499; according to W. Budka, *Zbór w Łuznej*, „Reformacja w Polsce”, 4, 1926, pp. 176–180 was created between 1602 and 1620 at the manor).

¹³ W. Urban, *Materiały*, pp. 136–137.

¹⁴ H. Merczyng, *Zbory*, p. 78.

¹⁵ Ibidem, p. 47. It supposedly existed between 1561 and 1639. The village belonged to Koprzywnica Abbey, which would rather exclude the possibility of a Protestant commune there, for so long. Borek castle in Silesian district is also not an option here, because the heirs, the Ligęza family, were Catholics.

¹⁶ Kumor, *Dzieje*, vol. 4, p. 403, table 54 – 'Kościoły parafialne przejęte przez protestantów w diecezji krakowskiej – 1571 r.', pp. 405–407, table 55 – 'Parafie przejęte przez protestantów do 1577 r.'; pp. 410–415, tabl. 56 – 'Parafie w rękach protestantów w 1608 r.'

¹⁷ AKM I, 26, f. 74v, 73v.

¹⁸ AKM 10, f. 191v. The visitation from 1618 informs us that a new church was built. (S. Kot, *Szkolnictwo parafialne*, p. 287); A. Tomczak, *Walenty Dembiński kanclerz egzekucji ok. 1504–1584*, Toruń 1963, does not mention the case of the devastation of the church in Poborowice. According to Kumor, *Dzieje*, vol. 4, p. 418, the new church in Poborowice became a parochial church in 1615.

¹⁹ AKM I, 26, f. 40; AV Cap. 15, f. 50v.

²⁰ AV Cap. 10, f. 98 v.

also be certain, whether there was a Protestant commune in Niegowa in the district of Lelów – in 1577 the local church was demolished, but in 1598 the inspector noted the parochial church ‘per haeresiam fuit violata tandem catholicis restituta’.²¹ We have similar doubts concerning Dalowice, a village in Proszowice district. The 1598 visitation tells us the church was destroyed by Stanisław Sobek, a Protestant and founder of the commune in the nearby Sobków.²²

Most communes in Cracow Voivodeship operated in parochial churches seized by the Protestants. Some houses of prayer were situated in manors of Protestant heirs, and in various buildings in royal towns (Ciężkowice, Grybów, Jasło, Cracow, Olkusz, Nowy Sącz, Wieliczka, Zator).²³ There were ten non-parochial settlements with a Protestant commune (Aleksandrowice in Proszowice district, Balice in Proszowice district, Hałcnów in Silesian district, Luślawice in Nowy Sącz district, Pawlikowice in Szczyrzyc district, Piotrkowice in Proszowice district, Raciborsko in Szczyrzyc district, Świdnik in Nowy Sącz district [Tęgoborze parish], Wojnarowa in Biecz district, and Wywła in Lelów district).

Ownership type played an important role in the location of communes. In Church estates there were only two Protestant communes, and temporary too: in Biezanów, a village in Szczyrzyc district belonging to Cracow chapter, and in Dierzków, a village in Lelów district, belonging to the provost of Cracow.²⁴ In royal estates there were communes in the following towns and villages: Dziekanowice (Szczyrzyc district), Łętkowice (Proszowice district), and – for a short time – in Pisarzowa, a village in the district of Nowy Sącz.²⁵

The majority of Protestant communes were Calvinist, i.e. Evangelical Reformed. This is documented by the surviving acts of the synods. We know three of them to be Lutheran, i.e. Evangelical Church of the Augsburg Confession: Biertułtowice vel Komorowice, Mikuszowice and Wilkowice (all in Silesian district). Thanks to Waclaw Urban’s work, we know the location of Arian communes.²⁶ Some of them were originally Calvinist, but later became Arian. Here is the list of Arian communes: Bobowa in Nowy Sącz district (Calvinist at first), Bruśnik in Biecz district, Chomranice in Nowy Sącz district (Calvinist at first), Gnojnik in Nowy Sącz district, Jakubkowice in Nowy Sącz district (Calvinist at first), Jasło in Biecz district, Jastrzębie in Nowy Sącz district, Luślawice in Nowy Sącz district, Męcina in Nowy Sącz district, Moskorzów in Lelów district (Calvinist at first), Nienaszów in Biecz district, Olkusz in Proszowice district,²⁷ Pawlikowice in Szczyrzyc district, Pełsnica in Proszowice district (Calvinist at first), Piotrkowice in Proszowice district, Przyszowa in Nowy Sącz district, Nowy Sącz in Nowy Sącz district, Sobolów in Szczyrzyc district (Calvinist at first), Świdnik in Nowy Sącz district, Tarnowa in Książ district (Calvinist at first), Wieliczka in Szczyrzyc district (Calvinist at first), Zakliczyn in Nowy Sącz district, Zbyszyce in Nowy Sącz district.

In total, 110 Protestant communes were shown on the map: 27 in Silesian district, 25 in Proszowice district, 15 in Nowy Sącz district, 13 in Biecz district, 13 in Lelów district, nine in Książ district, eight in Szczyrzyc district.

The list of Protestant communes shown on the map (present name, if different from the sixteenth century name, was given in brackets, t. = town):

Proszowice district

Aleksandrowice, Balice, Bobin, Gorzków, Iwanowice, Kazimierza Wielka, Kościelec, Cracow t., Łętkowice, Nasiechowice, Niedźwiedź, Olkusz t., Pełsnica (Pałecznicza), Piotrkowice, Poręba Górna,

III.2.2b.1 EASTERN ORTHODOX CHURCHES AND VLACH SETTLEMENT

Krzysztof Chłapowski

At the end of the fourteenth century, Vlach settlement began to spread from the east along the Carpathians. At the end of the fifteenth century it gradually moved forward into Cracow Voivodeship, namely the southern territories of the districts of Nowy Sącz and Biecz.¹ The Vlachs were Romanian people with some South-Slavonic blood, later called Lemkos (Łemkowie) in this part of Lesser Poland. They were Eastern Orthodox. The location of Eastern Orthodox churches in the Voivodeship of Cracow in the second half of the sixteenth century agreed with the range of Vlach settlement. Gradual slavification of the Vlach, as well as ethnic and religious blending of the population in the many villages in this part of Cracow Voivodeship occurred much later. On the other side of the Carpathians, Vlach settlement reached much farther west than in the Commonwealth, where it stopped upon reaching earlier inhabited areas of Czorsztyn and Nowy Targ starosta's districts.

Eastern Orthodox churches were marked on the map on the basis of tax registers (Eastern Orthodox districts were taxed). At the end of the sixteenth century, in Biecz and Nowy Sącz districts there were respectively 20 and eight Eastern Orthodox parishes (including four in the key of Muszyn). In the villages of the so-called Muszyn country, which were recorded together, there were four Eastern Orthodox churches (*popostwo*), according to the 1595 register.² We know that there could have been an Eastern Orthodox temple in Mochnaczka Niżna³ at the time, but we do not know the location of the three remaining temples.

All Eastern Orthodox churches in Biecz and Nowy Sącz district belonged to the Eastern Orthodox diocese in Przemyśl. Its bishop, Michał Kopystyński (Kopestyński), did not participate in the 1596 union with the Roman Catholic Church (it was done by the next bishop of the Eastern Church in Przemyśl, Aleksander Atanazy Krupecki, ordained in 1610, but the situation was not stabilized until 1681).⁴ In 1765 there were already 100 Eastern Orthodox parochial churches and eight subsidiary churches in this area.⁵

Parochial borders of the southern territories of Biecz and Nowy Sącz district were not marked on the main map, because there were no Catholic villages in the area of dense Vlach settlement. The parochial network of the Roman Catholic Church helped fiscal organizations collect taxes (and record them) Tax proclamations or other royal documents, were read from the pulpit. Tax registers of Biecz and Nowy Sącz district from the second half of the sixteenth century, and from 1629 and 1680, also list, apart from Catholic, Eastern Orthodox parishes, adding 'bożnica', 'fara bożnica', or even just

¹ K. Pieradzka, *Na szlakach Łemkowszczyzny*, Kraków 1939 (ibidem earlier literature); B. Kumor, *Osadnictwo lemkowski i sieć parafialna w kluczu muszyńskim biskupstwa krakowskiego (do 1780)*, „Rocznik Sądecki”, vol. 24, 1996, pp. 9–23. Despite the title, the author focused also on Vlach village and Eastern Orthodox parishes (since 1681 – Uniate), which – in the sixteenth century and later – lay outside the key of Muszyna (Bielczarowa, Boguszowa, Królowa Wołoska, Łabowa, Maciejowa, Szlachtowa and other) and did not belong to Cracow bishopric.

⁵ W. Kołbuk, *Kościół wschodnie w Rzeczypospolitej około 1772 roku. Struktury administracyjne*, Lublin 1998, pp. 241–242, 246, 254–255.

'fara' (except for the key of Muszyn, where the villages were recorded together).⁶ Perhaps then, in this territory, Eastern Orthodox churches fulfilled the same public role as Catholic churches.

As we established that some of the villages recorded in tax registers of Biecz district in Eastern Orthodox parishes, Bednarka, Miscowa, and Grabie certainly did not lay in these parishes (impossible given the location of these villages). Other villages were located much closer to other temples, and because the villages in the key of Muszyn were recorded together in tax registers, the map of Eastern Orthodox churches does not show the territorial range of Eastern Orthodox parishes.

A village was recognized as inhabited by Eastern Orthodox population on the basis of tax registers, informing (not always consistently) that the village comprised of Vlach lans (in Vlach villages this term was usually used alternatively with the term 'great lan', i.e. 32 rods).

It should be noted that villages inhabited by an Eastern Orthodox population belonged to different types of land ownership: royal (Biecz,⁷ Nowy Sącz, Grybów starosta's districts, and Osiek rent⁸) – 19 villages, Church, that is of the clergy (the key of Muszyn of Cracow bishopric) – 34 villages, and nobility – and 47 villages.

The complete list of Vlach villages inhabited by Eastern Orthodox populations in the sixteenth century, runs as follows:

Nowy Sącz district

Bielczarowa parish

Bielczarowa

Królowa Wołoska parish

Królowa Wołoska, Boguszowa

Łabowa parish

Hamrzyska, Łabowa, Maciejowa, Wola

Szlachtowa parish

Jaworki, Szlachtowa

The so-called Muszyn country ('Państwo Muszyńskie')

Banica, Berest, Bieliczna, Brunary Niżne, Brunary Wyżne, Czarna, Czertyżne, Czyrna, Florynka, Izby, Jastrzębnik, Jaskowa, Jędrzejówka, Kamianna, Krynica, Leluchowa, Miestko, Milik, Mochnaczka Nizna, Mochnaczka Wyżna, Muszynka, Piorunka, Polana, Powroźnikowa, Słotwiny, Stawisza, Szczawnik, Śnietnica, Wawrzki, Wierchomla, Wojkowa, Złocko, Zubrze, Żegiestów

Biecz district

Barwinek parish

Barwinek

Bednarka parish

Bednarka, Nowa Wola Cieklińska

Grabie parish

Dołche, Grabie, Nieznajowa, Ozinna, Radocina, Rostanie, Wysowatka

Hanczowa parish

Blechnarka, Hanczowa, Ropka, Wysowa

Krempna parish

Hałbów, Krempna

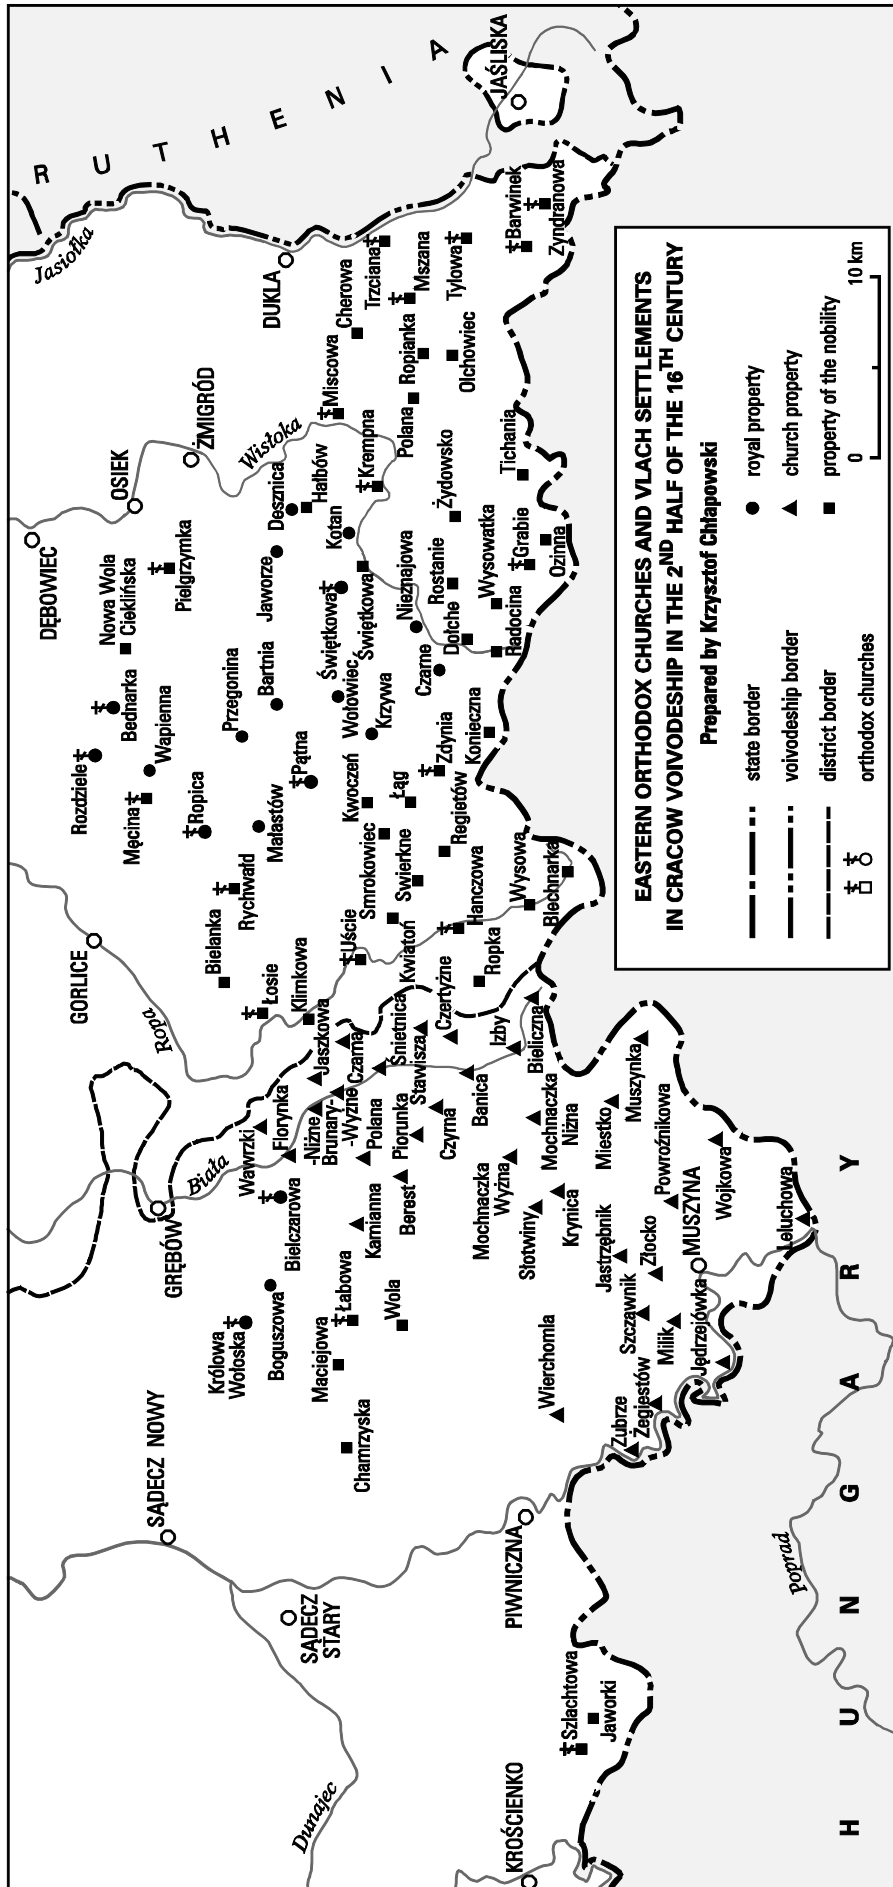

Łosie parish

Bielanka, Klimkowa, Łosie

⁶ On the second half of the sixteenth century they were listed by name only in the registers from 1577 – 12 villages, where there was 31½ Vlach half-demesnes (ASK I, 117, f. 223), in 1588 – also 12 villages, but already 63 Vlach half-demesnes (ASK I, 126, f. 255v), and in 1593 – 20 villages, with 115 Vlach half-demesnes (BJ, MS 5043, f. 254 v). In 1629 r. 28 villages were recorded, with 127 Vlach half-demesnes (Tax reg. 1629, p. 234), in 1680 also 28 villages, with 137½ Vlach half-demesnes (Tax reg. 1680, p. 249).

⁷ Eighteen 'Ruthenian villages' were noted down in Biecz starosta's district in the visitation of Cracow Voivodeship from 1765 (LK 1765, pp. 130–135).

⁸ Królowa Wołoska belonged to starosta's district of Nowy Sącz, Bielczarowa and Boguszowa to Grybów starosta's district, Desznica and Jaworze to Osiek lease, Rozdziele to a small Lipniki lease.

Zydranowa

Parochial affiliation of the following villages remains uncertain: Czarne, Desznica, Konieczna, Krzywa, Małastów, Olchowiec, Świątkowa, Tichania, Żydowsko.

Ochotnica, a village in Czorsztyn starosta's district, is an exceptional case of Vlach settlement, it was not marked on the map of Vlach settlement (it lay to the west from the territory shown on the map). In 1416 the king entrusted its location on Środa law to Dawid Wołoch, and in the case of any danger to the castle in Czorsztyn 'omnes Valachi et incolae villae praedictae' were to come. In *Liber retaxationum* from 1529 there is a phrase *in Ochotnicza a Valachis*, and Vlach lans are listed in tax registers, apart from *smallholders* and landless peasants.⁹ In the second half of the sixteenth century a subsidiary Catholic church was built in Ochotnica.¹⁰ So the village was inhabited both by Catholic and Eastern Orthodox population. The visitations from 1616–1620 and 1627–1629 (Czorsztyn starosta's district was not inspected earlier) the village was called Ochotnica Woło document was mentioned and summarized by the mayor's district; in the 1659–1664 visitation the adjective 'Wołoska' does not appear, neither does the summarized document from 1416.¹¹ It seems that the mayor's district fell into non-Vlach hands, and the subjects slavified with time.

III.2.2.2 SANDOMIERZ VOIVODESHIP

Anna Dunin-Wąsowiczowa

The detailed map of Sandomierz Voivodeship shows the borderlines of Church administration of the higher level (dioceses, archdeaconries) and parochial borders at the end of the sixteenth century; an additional map (no. 3) contains a scheme of the division, including the deanery division.¹ The commentary, in turn, describes the most important changes that occurred in the sixteenth century. They were related to both: the successes of the reformation, as well as the reorganizations conducted by the episcopate following the Council of Trent. Within the scope of our interest, this was visible in the increase in the number of deaneries, which were promoted to the role of the basic link between the diocese authorities and parishes. This was to improve Church administration and internal discipline of the clergy.² In the second half of the sixteenth century we observe the division of some archdeaconries or larger deaneries into smaller units (in archdeaconries of: Sącz, Lublin and Radom or in Kielce deanery).

Dioceses

The territory of Sandomierz Voivodeship in the period of our interest was cut by diocese borders. A major part of the voivodeship lay in Cracow diocese; districts of: Sandomierz, Wiślica, Pilzno, Stężyca land and a part of Radom and Chęciny districts belonged to this diocese. The north western part of the voivodeship (Opoczno district and the western area of Radom and Chęciny districts) belonged to Gniezno archdiocese. Moreover, Łaskarzew parish, situated in Stężyca land and subject to Poznań diocese, lay within the borders of our voivodeship.³ The map also shows a hypothetical affiliation to Przemyśl diocese⁴ of several settlements in Pilzno district, right on the border of the voivodeship.

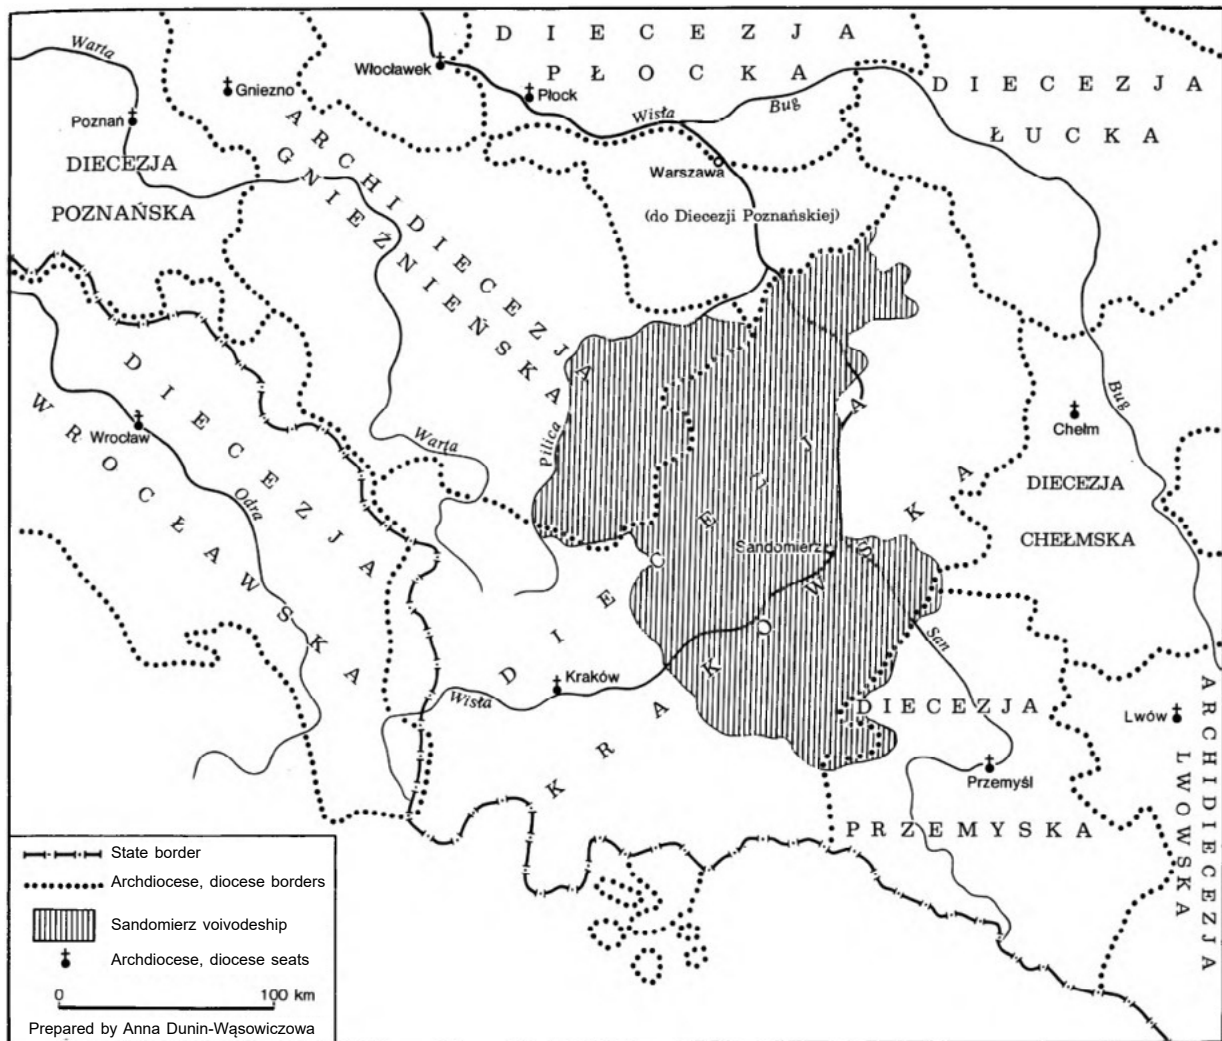

¹ Church visitations kept in Archiwum Kurii Metropolitalnej (Archive of the Metropolitan Curia) and Archiwum Kapituły Metropolitalnej (Archive of Metropolitan Chapter) in Cracow are quoted only with signatures, archive names are omitted.

² W. Müller, *Diecezje w okresie potrydenckim*, [in:] *Kościół w Polsce*, vol. 2, Kraków 1969, pp. 92 and 94.

³ A. Dunin-Wąsowicz, *Church administration units*, [in:] AHP Mazovia, in this edition III.2.2.7; see B. Kumor, *Granice metropolii i diecezji polskich (968–1939)*, ABMK, vol. 18–24, 1969–1971, here quoted vol. 18, 1969, p. 350.

⁴ Current literature on the subject assumes that this fragment of the diocese border overlaps with voivodeship border (Kumor, *Granice*, ABMK, t. 20, 1970, p. 255). The analysis of parochial affiliation of villages found two villages (Węglówka Ruska and Bratkówka) whose parochial affiliation in the sixteenth century was difficult to determine because the Cracow diocese visitations fail to mention these villages. It is difficult to tell, whether these villages remained outside the organization of the Roman Catholic Church (as suggested by the presence of several Orthodox churches in the borderlands between Cracow and Przemyśl, also in Węglówka Ruska, P. Małopolska, p. 256), or they were already subject to Przemyśl diocese, as noted in contemporary fiscal sources of much later Church sources.

In the description of Odrzykoń parish Węglówka appears no sooner than the nineteenth century; according to the pattern of Church administration in Łemkowszczyzna, Węglówka – called Waniwka in Russian – was to date back to the fifteenth or sixteenth century, what would suggest its contemporary parochial affiliation to Odrzykoń; however, the author of the pattern failed to provide the source basis for his information – 1975 letter from Rev. J. Ataman from Archiwum Diecezjalne w Przemyślu (Diocese Archive in Przemyśl); see: A. Fastnacht, *Osadnictwo ziemi sanockiej w latach 1340–1650*, Wrocław 1962, p. 17; Z. Perzanowski, *Przegląd najstarszych dziejów osad wiejskich regionu krośnieńskiego*, [in:] *Krosno, Studia z dziejów miasta*

Map 1. Sandomierz Voivodeship against the diocese borders

Archdeaconry and deanery divisions

In the sixteenth century, Cracow diocese had eight archdeaconries and corresponding jurisdiction-visitation units, or parts of them, in the territory of Sandomierz Voivodeship. The following units lay entirely within the borders of our voivodeship: Kielce provostry, Tarnów provostry, Sandomierz archdeaconry; Kielce deanery and the archdeaconries of Cracow, Sącz, Zawichost and Lublin covered the area of Sandomierz as well as the neighbouring voivodeship.

i regionu, vol. 2, Kraków 1973, p. 413. Bratkówka appears in the 1646 visitation in Odrzykoń parish, Archiwum Diecezjalne Przemyskie, MS 64, p. 229; according to the aforementioned information provided by Rev. Ataman, whom I thank for his explanation.

The thesis that these villages could have belonged to Cracow diocese, although they were subject to Przemyśl diocese, is supported by a record in a visitation of a parish in Ropeczyce deanery in 1608 (OABMK, microfilm 3242, v. 20v): 'Est ecclesia parochialis in Odrzykon in diocesi Praemisiensi, cuius medietas parochiae iacet in dioecesi Cracoviensi'. This actual division of a parochial district between two dioceses, the cause of obvious arguments, is not an isolated one. In the end of the sixteenth century there was a village Rogoźnica, subject to Głowów parish (Cracow diocese), separated from Przemyśl diocese (AV Cap, 4, f. 81). And we know a document from Mazovia, which divided the area of competences of the bishops of Poznań and Płock from 1547–1548. The analysis of the document leads us to the conclusion that arguments about tithes and Church benefices resulted in temporary submission of certain villages to parochial churches situated outside the villages' diocese (A. Dunin-Wąsowiczowa, *Church administration borders*, [in:] AHP Mazovia, w tej edycji III.2.2.7).

1. Kielce deanery, also called: Radom archdeaconry, since the end of the twelfth century was subject to the jurisdiction of the dean of Kielce collegiate.⁵ At the end of the sixteenth century it encompassed the bulk of the territory of Radom district and almost the entire Stężyca land, it also cut into a small part of Mazovian Zapilcze (Głowaczewo parish). At the beginning of the sixteenth century its eastern part, situated in Stężyca land, was isolated. It was described as ‘sub decanatu Radomiensi in Transilvania’ or ‘sub decanatu Radom in Podlasze’;⁶ in terms of territory, this area corresponded to later Stężyca deanery. In the second half of the century (probably after 1576)⁷ Kielce deanery divided into three deaneries: Radom, Zwoleń and Stężyca.⁸

The archdeaconry affiliation of several parishes situated in the borderland between Radom land and Lublin Voivodeship is unclear. Namely, the parishes: Gołąb, Oleksów, Regów and Jaroszyn (Gołąb parish was inspected in Stężyca deanery, and the other three in Zwoleń deanery) according to visitations of Kielce deanery from 1598 belonged to this deanery.⁹ Other records in fact list these parishes in Lublin archdeaconry, beginning with the fifteenth century, so with Długosz’s *Liber beneficiorum*,¹⁰ through *Liber retaxationum* from 1529,¹¹ until the visitation conducted in 1611 by the archdeacon of Zawichost Piotr Skidziński, in which these parishes were included in Parczew deanery of Lublin archdeaconry.¹² However, given S. Litak’s counterarguments,¹³ this could not be explained with the thesis of P. Szafran, who claimed that between 1447 and 1470 the lands of Stężyca and Łuków (and before 1565 the part of Radom archdeaconry situated on the right bank) belonged temporarily to Lublin archdeaconry.¹⁴ We should rather perceive this transient inclusion of four parishes to Radom archdeaconry a post-Trent attempt to reorganize Church administration in the area adjacent to regions of relatively late colonization – such as in the case of Stężyca land.

We must also note that Łysobyki (present-day Jeziorzany) parish situated in Stężyca land, later belonged to Łuków deanery and Lublin archdeaconry, but at the beginning of the sixteenth century it was still, along with neighbouring Kocko parish ‘ad Radom in Podlasze’, i.e. to Radom archdeaconry.¹⁵

2. Kielce provostry¹⁶ consisted of parts of four districts, namely: Radom, Sandomierz, Chęciny and Wiślica. There was a cluster of estates belonging to Cracow bishopric: these were the keys of Iłża and Kielce.¹⁷ There were no major difficulties in the reconstruction of outer borders of this provostry,

¹⁴ S. Litak, *Sieć parafialna archidjako­natu radomskiego*, p. 103.

¹⁵ LR 1529, pp. 419 and 429, states that the parishes Przetoczno and Kocko belonged ‘ad Radom in Podlasze’; however, they were not listed in the visitation of Kielce deanery in 1598. Łysobyki parish i.e. Przetoczno (how it was called in tax registers in the sixteenth century, e.g. in 1569, P. Małopolska, p. 332 n.) was also omitted by the visitation of Łuków deanery in 1595 (AV Cap. 65 pp. 496v–501v) and by the visitation of the neighbouring Parczew deanery in 1611 (*ibidem*, f. 539–548), because this parish was seized by Calvinists; in the eighteenth century it was included in Parczew deanery at first, in Cracow diocese (in 1739 visitation quoted by Ambroży Wadowski, Kościoły diecezji lubelskiej XIX/XX w., MS BN, microfilm 40753, f. 130, and according to Franciszek Czaykowski, *Regestr dyecezyów (1783–1784)*, *ibidem*, microfilm 7679); in 1790 its affiliation to Łuków deanery is attested in Chełm diocese (then Lublin); B. Kumor, *Granice*, ABMK, vol. 20, p. 324.

except for the territory of four parishes, situated along the border with Zawichost archdeaconry (parishes Manina, Szewna and Michów) and Sandomierz archdeaconry (Baczkowice parish), which were inspected at the turn of the sixteenth and seventeenth centuries within Kielce provostry,¹⁸ as well as neighbouring archdeaconries.¹⁹

3. Cracow archdeaconry reached the south western boundaries of Sandomierz Voivodeship. In our territory there was a small part of Jędrzejów deanery (parishes Brzegi and Sobków and a fragment of Mokrsko parish) that belonged to this archdeaconry,²⁰ the entire Opatowiec deanery,²¹ a part of Wojnicz deanery,²² and a small fragment of Tarnów deanery, namely this part which had not been incorporated into Tarnów provostry,²³ and finally: the former Wiślica provostry, submitted to the authority of Cracow archdeacon in the sixteenth century.

Wiślica provostry has not been marked on the map of Sandomierz Voivodeship in the sixteenth century, because the provostry does not appear in the sixteenth and seventeenth century sources. Of five deaneries, of which it originally consisted, namely: Bolesław (later: Opatowiec), Czarnocin (later: Sokolina), Dębica, Kije, Książnice (later: Pacanów), Dębica deanery was removed in favour of the newly-created in 1448 Sącz archdeaconry, and between the fifteenth and eighteenth centuries the deanery of Opatowiec was closely tied to Cracow archdeaconry.²⁴ This event could probably be dated to the end of the sixteenth century, because it was inspected in 1596 along with a different part of Cracow archdeaconry than deaneries of Kije, Sokolina and Pacanów, which were inspected two years later.²⁵

Somewhere between the end of the fifteenth century and 1604 there were some changes in the archdeaconry affiliation of four borderland parishes; Borowa and Czermin were separated from Cracow archdeaconry and included into Sącz archdeaconry, and Gawłuszowice and Połaniec into Sandomierz archdeaconry;²⁶ the latter change occurred probably between 1598 and 1604.²⁷

4. Tarnów provostry was created in 1400. In the sixteenth century its territory grew, which could be explained by the centralization of the estates of the family Tarnowski and their successors, who possessed the right of patronage over the collegiate of Tarnów. However, only in 1618 did the remnants of the deanery of Tarnów become fully subject to the power of the provost.²⁸ At the turn of the sixteenth and

¹⁸ The visitation of Kielce provostry conducted by Stanisław Sułowski, provost of Kielce, canon of Cracow in 1597, AV Cap. 65, f. 506–516; see AV Cap. 8, f. 507–516v; this visitation omits Bardo parish, which had been attested earlier, see e.g. Długosz LB, II, p. 465; LR 1529, p. 378; parish in Kielce was inspected in 1598, AV Cap. 9, f. 569.

¹⁹ Visitation of Zawichost archdeaconry ordered by Marcin Szyszkowski, the archdeacon of Zawichost, conducted by the vicar of Sandomierz collegiate Andrzej of Żarnów in 1592, compendium, AV Cap. 65, k, 450–494; visitation of Sandomierz archdeaconry (from the times of the bishop Bernard Maciejowski) from 1604 by Sandomierz archdeacon Marcin Wróblewski, ib., f. 518–531. Długosz LB, II, p. 468., mentions a church in Baczkowice (as subsidiary to Łągów parish) and Manina parish in Kielce provostry, and Szewna parish in Zawichost archdeaconry (ibidem, p. 508).

²⁰ Compendium of the visitation from 1596, AV Cap. 65, f. 223v–224 (decanatus Andreoviensis); see AV Cap. 10, f. 223–226 (protocol of this visitation).

²¹ Compendium of the visitation from 1596, AV Cap. 65, f. 110–124v; protocol of this visitation, AV Cap. 7, f. 110–124v (*decanatus Opatouiecensis*). Church of St. Lawrence in Gorzysławice (Wiślica suburbs) was inspected in 1598, AV Cap. 9, f. 412, similarly Wiślica collegiate, ibidem, f. 374.

²² Compendium of the visitation from 1596/1597, AV Cap. 65, f. 97–108v; according to the protocol of this visitation AV Cap. 10, f. 73–111, the parishes we are interested in were inspected in Dobczyce deanery, the visitation included churches of Wojnicz deanery in this visitation, what is difficult to explain without checking bishopric's files.

²³ Visitation from 1596, ib., f. 64–76v, divided Tarnów deanery into two parts; visitation of the second part was entitled (k. 72): 'sequitur parochiales ecclesiae in eodem decanatu, quae non subiacet iurisdictioni seu officio praepositi Tarnoviensis'. In the visitation protocol from 1596, AV Cap. 7, f. 1–23 Tarnów provostry was not listed.

²⁴ E. Wiśniowski, *Rozwój sieci parafialnej w prepozyturze wiślickiej w średniowieczu*, Warszawa 1965, pp. 26, 45; idem, *Prepozytura wiślicka do schyłku XVIII w.*, Lublin 1976 (Materiały do atlasu historycznego chrześcijaństwa w Polsce, vol. 2, part 3), p. 19.

²⁵ Opatowiec deanery was inspected in 1596, together with the deaneries of Tarnów, Dobczyce, Wojnicz, Lipnica, and Wieliczka (AV Cap. 65, f. 64–157); and the deaneries of Pacanów, Kije, Sokolina were inspected in 1598 with the deaneries of Jędrzejów, Wrocimowice, Pleszów and Witów (ib., f. 190–278); see AV Cap. 7, f. 110–124v, and AV Cap. 10, f. 192–220, (used according to excerpts for *Historical Atlas of Poland*).

²⁶ E. Wiśniowski, *Prepozytura wiślicka*, p. 80; these parishes were listed in 1529 'sub decanatu Kxyązyncze', LR 1529, p. 265, 268.

²⁷ Połaniec parish was inspected in 1598 in Pacanów deanery (former Książnice), AV Cap. 65, f. 195; and in 1604 – in Sandomierz archdeaconry, ibidem, f. 528.

²⁸ B. Kumor, *Prepozytura tarnowska. Opracowanie materiałów źródłowych do Atlasu Historii Kościoła w Polsce*, ABMK, vol. 12, 1966, p. 214–216.

seventeenth centuries this provosty consisted of 10 parishes: Łysagóra, Jastrząbka, Żdżarzec, Zassów, Skrzyszów, Szynwałd, Zalasowa, Łękawica, Poręba Radlna and Wierzchosławice; but only seven parishes belonged to Tarnów deanery, which was not under the authority of the provost of Tarnów: Jurków, Góra Zbylitowska, Jodłówka, Piotrkowice, towns Tuchów, Ryglice²⁹ and Pleśna.³⁰

5. Sącz archdeaconry lay mostly in Cracow Voivodeship, but it wedged from the south into Sandomierz Voivodeship, mainly into the district of Pilzno.³¹ This archdeaconry was separated in the fifteenth century from Cracow archdeaconry.³² Several sources provide us with information about the division of this archdeaconry into deaneries. There are significant discrepancies in the sources as to the number and range of individual units in the sixteenth century.

According to *Liber retaxationum* in 1529 a major part of the area described was occupied by Pilzno deanery,³³ and over a dozen parishes in the south east belonged to Jasło deanery (Przeczyca, Brzostek, Klecice, Gogołów, Frysztak, Kołaczyce, Sieklówka, Bieździedza, Lubla, Warzyce, Szebnie, Jedlicze).³⁴ On the basis of an visitation from the end of the sixteenth century we can assume that Pilzno deanery was divided. From its northern part Mielec deanery (that is Przeclaw deanery)³⁵ was created, from its eastern part – Ropczyce;³⁶ the range of this reduced Pilzno deanery was enlarged in the south by the addition of nine parishes separated from Jasło deanery.³⁷ This division is shown in one of the visitations from 1595 and the compendium based on it. However, another record of the protocol from this visitation offers a different version.³⁸ Yet it seems that either there were mistakes in the form, or it presented an attempt at a different division of this area into deaneries, which had not been conducted, as the visitation of the bishop of Cracow from 1608 shows the same division as the one recorded in the compendium of the visitation from 1595. Small differences observed result from the division of deaneries between 1595 and 1608 when a new deanery of Strzyżów was separated from Ropczyce deanery.³⁹

6. Sandomierz archdeaconry occupied the south eastern and eastern part of the district of Sandomierz and a small fragment of Pilzno district. The range of this archdeaconry was determined on the basis of the 1604 visitation, conducted in the times of Bishop Bernard Maciejowski.⁴⁰ In comparison with the state from the beginning of the sixteenth century, described in *Liber retaxationum*, the above-mentioned visitation clearly points to the affiliation to this archdeaconry of the areas of new colonization in Sandomierz Forest and in the fork of the Rivers Vistula and San, where new parishes were established in the sixteenth century.

The visitations from the turn of the sixteenth and seventeenth centuries do not describe the division of this archdeaconry into deaneries; as such, W. Müller's thesis concerning their organization in

²⁹ See footnote 23 in this chapter.

³⁵ Compendium of the visitation from 1595, AV Cap., 65, f. 13–21v; protocol of this visitation, AV Cap. 2 ('decanatus Mielcensis seu Przeczlauiensis').

³⁶ Compendium of the visitation from 1595, AV Cap. 65, f. 23–31v; protocol of this visitation, AV Cap. 2.

³⁷ Compendium of the visitation of Pilzno deanery from 1595, AV Cap. 65, f. 3–12v; protocol of this visitation, AV Cap. 2, f. 1–29; compendium of the visitation of Jasło deanery, AV Cap. 65, f. 49–56v.

³⁸ Two protocols of the visitation conducted at the same time (25 May – 19 December 1595) by the provost of Tarnów Krzysztof Kazimierski were made by the same notary Stanisław Zięba, a cleric in Cracow diocese. Text AV Cap. 2, on which the compendium was based, AV Cap. 65, was authenticated only by the scribe, with his seal and signature; it is entitled 'Acta visitationis exterioris decanatum Pilznensis, Mielcensis, Ropczicensis, Biecensis, Jaslensis et Żmigrodensis ad archidiaconatum Sandecensem pertinentium...' The second text, AV Cap. 4, written in a more elaborate and careful hand, entitled: 'A.D. 1595 die 25 Octobri... visitatio ecclesiarum parochialium decanatum Pilznensis, Ropczicensis et Biecensis...' was authenticated by both: the scribe and the provost of Tarnów, Kazimierz Kazimierski. In AV Cap. 4 the parishes, which according to AV Cap. 2 were inspected in Jasło deanery, were included in Biecz deanery; at the same time, the entire Mielec deanery and the southern part of Ropczyce deanery (according to AV Cap. 2) were inspected, according to AV Cap. 4, in Pilzno deanery, and in Ropczyce deanery AV Cap. 4 lists only nine parishes: Ropczyce, Witkowice, Sędziszów, Góra, Głowów, Mrowła, Trzciana, Nockowa, Zgłobień (so the northern part of this deanery, according to AV Cap. 2).

³⁹ Visitation from 1608, AV Cap. 26 and AV Cap. 27 (OABMK, microfilm 3242, f. 15–455).

⁴⁰ Compendium of the visitation in 1604, AV Cap. 65, f. 518–531; AV Cap. 18 and AV Cap. 23 (used according to the excerpts for Historical Atlas of Poland).

this area in the 1590s does not seem legitimate,⁴¹ it appears that the organization occurred only at the beginning of the seventeenth century.

7. Zawichost archdeaconry consisted of parishes from both banks of the Vistula, situated partly in Lublin Voivodeship and partly in Sandomierz Voivodeship. The reconstruction of the borders of this archdeaconry in our voivodeship was based on the 1592 visitation.⁴² In the description of the borders of Kielce provostry it was already mentioned that parishes laying in the borderland with Zawichost archdeaconry were inspected in both these jurisdiction districts.⁴³ Some changes in the course of the borderline of this archdeaconry occurred at the point of junction with Lublin archdeaconry: Piotrawin parish (seat in Lublin Voivodeship) along with its subsidiary church, which in fact fulfilled parochial functions, in Pawłowice (Sandomierz Voivodeship), inspected in 1592 in Zawichost archdeaconry, belonged in 1595 to Lublin archdeaconry;⁴⁴ a similar change of affiliation can be observed in Lublin Voivodeship for example in Boby and Zakrzówek parishes;⁴⁵ this correction of the course of the borderline was probably related to the division of the archdeaconry of Lublin into deaneries.

The course of the archdeaconry border along the River San near Wrzawy parish (Zawichost archdeaconry) and the parishes Zaleszany and Charzowice (Sandomierz archdeaconry) was reconstructed in a different manner than that presented in the map of Lublin Voivodeship by S. Wojciechowski. Żabno, a village of Sandomierz chapter, did not belong to Charzowice parish, as assumed by Wojciechowski, but to Wrzawy parish.⁴⁶ As such, we have led the borderline of this parish, and of Zawichost archdeaconry at the same time, south of Żabno, along the old channel of the San.

8. Lublin archdeaconry cut into Sandomierz Voivodeship between Zawichost archdeaconry and Kielce deanery (that is: Radom archdeaconry) and covered the north eastern borderlands of the voivodeship.⁴⁷ Probably, the introduction of the division into deaneries accompanied some changes in the affiliation of some of the borderland parishes. The entire Solec deanery was situated within the boundaries of the voivodeship. We reconstructed its range on the basis of the 1595 visitation.⁴⁸ Wojcieszków and Adamów parishes belonged to Łuków deanery in the same year, they lay in the eastern borderland of Stężyca land.⁴⁹ As already mentioned, four parishes inspected in 1598 in Kielce deanery, as well as Kocko⁵⁰ parish, were included into Parczew deanery in 1611. Piotrawin parish belonged to Chodel deanery. The parish was previously inspected in 1592 in Zawichost archdeaconry, and already in 1595 in Lublin archdeaconry.⁵¹

The parishes whose archdeaconry affiliation remained uncertain were listed in the Annex 7. On map 3 they were separated from their respective administrative units, but the more probable affiliation was marked with arrows. The main map shows only the more certain border.

Gniezno archdiocese in Sandomierz Voivodeship encompassed the territories belonging mainly to Kurzelów archdeaconry, and some settlements situated in Łowicz, Łęczyca and Uniejów archdeaconry.

1. Kurzelów archdeaconry covered the north western part of our voivodeship, but western border of this unit of Church administration lay in the neighbouring Sieradz Voivodeship, and northern border in Mazovia. As there are no surviving visitations of this archdeaconry, its range was reconstructed on the basis of Jan Łaski's *Liber beneficiorum*, dated back to the beginning of the sixteenth century. The same range appears in printed documents of the synod of Gniezno archdiocese from 1628. At that time, Kurzelów archdeaconry was divided into six deaneries (Kurzelów, Małogoszcz, Opoczno,

Przytyk, Skrzynno, Żarnów), and at in the beginning of the sixteenth century the division into deaneries did not exist, so it has not been presented on our map.⁵²

2. Łowicz archdeaconry in our area encompassed the parish of Łęgonice (city) and villages belonging to the parish, whose churches were situated in Rawa Voivodeship (Łęgonice village) and Łęczyca Voivodeship (Inowłódz).⁵³

3. Łęczyca archdeaconry encompassed villages belonging to the parishes: Maluszyn, Nagórzyce and Sulejów, situated in Tuszyn deanery in Sieradz Voivodeship.⁵⁴

4. The fragment of Uniejów archdeaconry that entered our territory was a small part of Brzeźnica deanery, to which Borzykowa parish belonged. Its seat lay in Sieradz Voivodeship.⁵⁵

Parochial network

The rules applied during the reconstruction of the parochial network in Sandomierz Voivodeship were similar to ones used for the map of Mazovia in the sixteenth century,⁵⁶ based mostly on Church sources from the second half of the sixteenth century and the turn of the sixteenth and seventeenth centuries. Earlier data, from the fifteenth century, or later – from the eighteenth–nineteenth centuries, as well as fiscal materials were used as an auxiliary source, especially for the areas for which no sixteenth century parochial visitations survived; these sources helped to supplement the information needed to determine the range of newly-established parishes. We have also tried to use the existing literature on this topic.⁵⁷

There were 380 parishes in Sandomierz Voivodeship in the sixteenth century,⁵⁸ of which 100 were city parishes; 11 towns did not have their own churches at that time, and were subject to neighbouring village parishes.⁵⁹ sixteenth century foundations of 40 parochial churches – or those fulfilling parochial functions – accompanied the development of the settlement network in newly-colonized areas (in Sandomierz Forest or in some parts of Stężyca land, then called Polesie); to some extent these churches were created near old parochial seats, seized by reformed denominations and remained in their possession over a lengthy period.

Subsidiary churches were marked as parishes on the main map only when they really had their own district, as in Pawłowice (subsidiary church of Piotrawin parish in Zawichost archdeaconry, and then Lublin archdeaconry),⁶⁰ whereas churches without parochial functions were omitted, such as the church built in Gródek village in Zwoleń deanery,⁶¹ because during the visitation it was described as: ‘nondum parochialis, recenter aedificata [ecclesia] inter fines parochiae Sieciechoviensis’.⁶² In

⁵² Łaski LB I, pp. 541–713; *Constitutiones synodi archidioecesis Gnesnensis presidente... dno Joanne Wężyk... AD 1628 die 10 mensis Mai*, Cracoviae 1630, p. ⁵⁷ About parochial network see E. Wiśniowski, *Rozwój organizacji parafialnej w Polsce do czasów reformacji*, [in:] *Kościół w Polsce*, ed. J. Kłoczowski, vol. 1, Kraków 1966, pp. 237–371; S. Litak, *Struktura i funkcja parafii w Polsce*, [in:] *ibidem*, vol. 2, Kraków 1969, pp. 261–479.

⁵⁸ Only parishes where parochial churches were situated in Sandomierz Voivodeship were counted, there whose seats lay outside our voivodeship, to which villages in the borderlands belonged, were disregarded. There were the parishes: Łęgonice in Rawa Voivodeship; in Mazovia: Jasiona, Wyszemierzyce (Wyśmierzyce); in Lublin Voivodeship: Kazimierz, Kock, Piotrawin, Radorzyż, Świeciechów; in Ruthenia: Odrzykoń; in Cracow Voivodeship: Działoszyce, Dzierzków, Cierno, Jasło, Mokrsko Dolne, Przemków, Sancygniów, Skarbmierz (Skalbmierz), Szczepanów, Wojnicz, Zrzęcin; in Sieradz Voivodeship: Borzykowa, Maluszyn, Nagórzyce, Nowopole (Konieczpol), Sulejów; in Łęczyca Voivodeship: Inowłódz.

⁵⁹ In Sandomierz district Lasocin town belonged to Dębno parish, Rudnik town – to Kopki parish, Gliniany town – Bidziny parish; in Wiślica district the towns Dębno and Raków – to Szumsko parish; in Pilzno district Niebylec town – Konieczkowska parish; in Chęciny district Oksza town – Konieczno parish, Włoszczowa town – Włoszczowa village parish; in Radom district Lipsko town – Krępa parish, Ciepiałów (Grzymałów) town – Ciepiałów parish; in Stężyca district Wyprzedów (Nowodwór) town – Żabia Wola parish.

⁶⁰ AV Cap. 65, f. 476.

⁶¹ *Ibidem*, f. 298.

⁶² Visitation of Zwoleń deanery from 1598, AV Cap. 14, f. 298 (according to excerpts for Historical Atlas Section).

Pawłowice near Stężycza on the other hand, the former Protestant church, built by Anzelm Gostomski (who died in 1588), was extended by his son Jakub as a Catholic church ‘ad instar parochialis’, but it was lawfully a chapel subject to Wargocin parish, where a new church was also built in the end of the century, because the old one was destroyed in an overflow of the Vistula.⁶³ Of other newly-created chapels those built in Jadamów (Adamów),⁶⁴ Radorzyż (subsidiary to Tuchowicz parish in Łuków deanery)⁶⁵ or in Rzecznów in Solec deanery in Siemno parish⁶⁶ could be mentioned.

Among the newly-created churches and chapels in Sandomierz Voivodeship there were also those that – even though their official foundation occurred in the seventeenth century – already fulfilled the role of parochial church, giving sacraments, mostly within the boundaries of the parish in which the former parochial church was seized by reformed denomination, such as the new church in Bierdzieża in Oleksów parish (Zwoleń deanery).⁶⁷ Exceptional was the case of the newly-located town of Sobków, where the church was built Protestant, then it was given to Catholics; according to the 1598 visitation it functioned as a parochial church, though not yet consecrated; the official foundation was to happen in the following year.⁶⁸

The average size of parishes in Sandomierz Voivodeship was around 68 km². The lowest average within district boundaries appears in Wiślica district (45.7 km²), and the highest – in Stężycza district (146.9 km²). Extreme values within the boundaries of the entire voivodeship were: the lowest in Książnica parish in Wiślica district (4.3 km²), the highest in Charzowice parish in Sandomierz district (378 km² altogether, with the area outside the voivodeship), and the biggest parish situated entirely in Sandomierz Voivodeship was Iłża parish in Radom district, with an area of 310.8 km². As S. Litak noted, the parishes much bigger than average could be found in forested areas of Sandomierz, Radom and Stężycza districts.⁶⁹

We had access to several lists of parochial churches for Cracow diocese, which made our research on the changes in parochial network much easier. These were *Liber beneficiorum* by Jan Długosz from the 1470s, *Liber retaxationum* from 1529, and finally – the visitations from the turn of the sixteenth and seventeenth centuries, which constituted the main source basis of our reconstructions. Some regions have been prepared from this perspective.⁷⁰

⁶³ AV Cap. 65, f. 303; AV Cap. 14, f. 88, 90v.

⁶⁴ AV Cap. 65, f. 501: ‘Jadamow oppidum [...] ecclesia seu capella [...] e lignis quondam recenter constructa, nullam habet dotem et fundationem, nempe pastorem legitimum habens, consecrata per sacerdotes [...] sacramenta in eadem administrantur’.

⁶⁵ Ibidem, f. 500v: ‘Radorzysz villa nobilium sub parochia Tuchoviensi. Ecclesia seu capella sub parochia ecclesiae de Tuchowicz [...] noviter et recenter ex lignis constructa [...] consecrata...’, however, because the collator did not present the documents, ‘ideo divina officia in ea silent’.

⁶⁶ Ibidem, f. 504v: ‘Capella [...] sub parochia oppidi Siemno’. The following chapels, which did not perform parochial functions, but were situated in village settlements in Sandomierz Voivodeship, are known from the visitation of Cracow diocese from 1595–1611: in Zawada, Lubzina parish, Pilzno deanery (AV Cap. 65, p. 17v), in Czarnków Mały i Wielki, Stary Korczyn parish, Opatowiec deanery (ibidem, f. 116), in Sieciechowice, Góra Zbylitowska parish, Tarnów deanery (AV Cap. 7, f. 19), in Szklanów, Stobnica parish, Pacanów deanery (AV Cap. 65, f. 200v), in Turbia, Charzowice parish, Sandomierz archdeaconry (ib., f. 520v), in Żyraków, Straszęcin parish, Mielec deanery (ibidem, f. 19), in Chotel Zielony, Busko parish, Kije deanery (ibidem, f. 204v).

⁶⁷ AV Cap. 65, f. 299: ‘villa Bierdziedza [...] ecclesia recenter ex muro extracta inter limites parochiae profanatae Olexów, nondum consecrata, ad instar tamen parochialis aedificata [...] administrat sacramenta parochianis parochiae Olexoviensis...’; like in AV Cap. 14, f. 73.

⁶⁸ The visitation of Jędrzejów deanery from 1598, AV Cap. 10, f. 92–92v: ‘Oppidum Sobkow nouum. Ecclesia noua inter limites parochiae Mokrzko pro haereticismo aedificata a Stanislae Sobek thesaurario Regni, castell[ano] sandomirien[si], ubi et corpus eius sepultum est, in catholicam usum ab aliquod annos per filios defuncti conversa, titulumque nominatum habet Assumptionis BMV, nondum consecrata, nec dotem inscriptum habet...’, and f. 93 lists the benefits, determined when the Protestant church was established. The death of the Treasurer Stanisław Sobek on 27 October 1569 sets the date post quem the church was to be handed to the Catholics. According to J. Wiśniewski, *Historyczny opis kościołów, miast, zabytków i pamiątek w Jędrzejowskiem, Mariówka 1930*, p. 357, the church was officially erected in 1599. About the location of Sobków town, see A. Dunin-Łasowiczowa, *Character and size of settlements*, [in:] AHP Sandomierz, in this edition III.3.2.2.

⁶⁹ S. Litak, *Struktura*, p. 284.

⁷⁰ About the parochial network of Cracow diocese: W. Müller, *Diecezja krakowska w relacjach biskupów z XVII–XVIII w.*, „Roczniki Humanistyczne”, vol. 13, 1965, no. 2, pp. 5–149; eastern frontiers of Stężycza districts are described by S. Litak, *Formowanie się sieci parafialnej w Łukowskiem do końca XVI w. Studium geograficzno-historyczne*, „Roczniki Humanistyczne”, vol. 12, 1964, no. 2, pp. 5–137; the study on Sandomierz archdeaconry was published only in summary: S. Jop, *Sieć parafialna archidiaconatu sandomierskiego do końca XVI w.*, „Sprawozdania Towarzystwa Naukowego KUL”, vol. 7, 1953–1956, pp. 154–158; and the parochial network of Zawichost archdeaconry was studied only in the earlier period, see footnote 42 in this chapter; the development of the parochial network in Kielce deanery was described by S. Litak, see footnote 7 in this chapter; in Wiślica provostry – E. Wiśniewski, see footnote 24 in this chapter, in Tarnów provostry –

In Wiślica district, both: within the territory of the former Wiślica provostry, and Opatowiec deanery or Kielce provostry, there were no changes in the number and localization of parochial centres in the sixteenth century, except for the disappearance of Strzelce parish (Pacanów deanery) in the second half of this century.⁷¹ It is worth mentioning, that the parish of St. Lawrence, mentioned by Długosz in the suburbs of Wiślica, was localized in Gorysławice.⁷²

The following parishes were erected in Pilzno district in the sixteenth century: in Tarnów provostry – in Jastrząbki,⁷³ and in Tarnów deanery – in Piotrkowice, where there had been a church subsidiary to Tuchów parish before,⁷⁴ in Mielec deanery – in Radomyśl,⁷⁵ in Ropczyce deanery – in Głowów⁷⁶ and Mała,⁷⁷ in Sandomierz archdeaconry – in Kolbuszowa.⁷⁸ Parochial functions were also fulfilled by other churches in this district at the end of the sixteenth century – in Przewrotna (Sandomierz archdeaconry)⁷⁹ and in Niwiska (Mielec deanery).⁸⁰

The borderline between Cracow diocese and Gniezno archdiocese ran through Radom district. Part of this district that belonged to Cracow diocese was divided between Kielce provostry, Kielce deanery i.e. Radom archdeaconry, Lublin archdeaconry and Zawichost archdeaconry in the second part of the sixteenth century. At the turn of the fifteenth and sixteenth centuries new parochial centres were created in Radom district: in Brzoza in Zwoleń deanery⁸¹ and in Wielgie in Solec deanery.⁸² The following parishes were created later, in the sixteenth century, in Zwoleń deanery: Policzna,⁸³ Kozienice⁸⁴ and Kazanów.⁸⁵ In Solec deanery the parochial functions were already fulfilled by the church in Lipsko,⁸⁶ and in Zawichost archdeaconry by the subsidiary church in Pawłowice.⁸⁷ We have not numbered the temples in Gródek in Zwoleń deanery,⁸⁸ Rzecznów⁸⁹ and the city of Ciepiałów in Solec deanery⁹⁰ among parochial churches.

B. Kumor, see footnote 28 in this chapter; in Sącz archdeaconry – B. Kumor, *Archidiakoniat sądecki*, ABMK, vol. 8, 1964, pp. 271–304, vol. 9, 1964, pp. 93–286.

⁷¹ E. Wiśniowski, *Prepozytura wiślicka*, p. 115.

⁷² Długosz LB, II, p. 370; LR 1529, p. 263; E. Wiśniowski, *Prepozytura wiślicka*, pp. 75–77; see footnote 21 in this chapter.

⁷³ B. Kumor, *Prepozytura tarnowska*, p. 228.

⁷⁴ *Ibidem*, p. 238; full parochial rights were granted to the church in 1513.

⁷⁵ The church was inspected as a parochial church already in 1595, AV Cap, 65, f. 19v; the official foundation of the parish took place in 1599 (B. Idzik, *Rys historyczny Radomyśla Wielkiego*, „Rocznik Ziemi Mieleckiej”, 1971, p. 106; about foundation of the town in 1581, the church was endowed in 1606).

⁷⁶ The parish existed in fact already in 1581, the church was endowed in 1606; B. Kumor, *Archidiakoniat sądecki*, ABMK, vol. 8, p. 229; about the location of the town see: A. Dunin-Wąsowiczowa, *Character and size of settlements*, [in:] AHP Sandomierz, in this edition III.3.2.2.

⁷⁷ The parish appears already in the visitation from 1595, AV Cap. 65, f. 31v; it was officially erected in the following year, B. Kumor, *Archidiakoniat sądecki*, ABMK, vol. 8, p. 233.

⁷⁸ Parish erected in 1523, „Rocznik Diecezji Tarnowskiej”, 1967, p. 194.

⁷⁹ In tax registers from 1581–1674 Przewrotna is listed in Kołaczyce parish. In 1569 the inspectors noted (AGAD, Dz. XVIII, 29, f. 266v): ‘the subjects built a church in this village [...] for this occasion they keep a priest and a master’. In the visitation of Sandomierz archdeaconry from 1604 (AV Cap. 23, f. 36) it was stated: ‘Przewrotne [...] ecclesia seu capella s. Magdalenae ab annis 30 constructa per nob. d. Konarzewski, villae istius locatorem, parochialis ipsa tantum Przewrotne’.

⁸⁰ According to the visitation from 1608, AV Cap. 65, f. 77: ‘Villa Niwiska intra limites ecclesiae parochiae Zochoviensis ab annis tredecem plus vel minus constructa, in qua quidem ecclesia administrantur sacramenta colonis villarum Niwiska et Trzesnia’. See B. Kumor, *Archidiakoniat sądecki*, ABMK, vol. 8, p. 153.

⁸¹ S. Litak, *Sieć parafialna archidiakonatu radomskiego*, p. 106. This parish does not appear in Długosz, although it is listed in LR 1529, p. 403.

⁸² In Długosz, Wielgie are not a parish, but they are listed in LR 1529, p. 434.

⁸³ Attested as a parish in 1531, J. Wiśniewski, *Dekanat kozienicki*, vol. 1, Radom 1913, p. 102.

⁸⁴ Parish created around 1577, S. Litak, *Sieć parafialna archidiakonatu radomskiego*, p. 106.

⁸⁵ According to the visitation of Zwoleń deanery from 1598 (AV Cap. 65, f. 291) in Kazanów there was ‘ecclesia nova, nondum per loci ordinarium approbata, ex licentia tamen in ea celebratur et sacramenta administrantur, nondum consecrata’. About the location of Kazanów town see A. Dunin-Wąsowiczowa, *Character and size of settlements*, [in:] AHP Sandomierz, in this edition III.3.2.2.

⁸⁶ Lipsko is mentioned in the visitation from 1595 (AV Cap. 65, f. 504) as ‘oppidum noviter locatum’ with a church, not yet finished.

⁸⁷ AV Cap. 65, f. 476.

⁸⁸ AV Cap. 65, f. 298 and Visitation of Zwoleń deanery from 1598, AV Cap. 14, f. 298.

⁸⁹ See footnote 66 in this chapter.

⁹⁰ In the 1595 visitation (AV Cap. 65, f. 503, AV Cap. 3, f. 503) it was stated that ‘ecclesia nondum perfecta, non consecrata’ was still subject to the parochial church in Ciepiałów village. About the location of the town see p. 402, footnote 122.

The parish in Jarosławice Nadolne was called 'deserta' in the 1595 visitation of Radom deanery;⁹¹ its range was reconstructed on the basis of the comparison of the state from the end of the fifteenth century according to Długosz,⁹² and from the end of the eighteenth century, registered by F. Czajkowski.⁹³ Some difficulties arose while marking the settlements belonging to the city parish in Radom and the parish in Stary Radom, because of the significant discrepancies observed in the records from different years. As such, the 1595 visitation was accepted as a basis of the distinction between those parishes. Because the visitation failed to list all villages included in earlier lists of villages subject to parochial rights of both these churches, it was necessary to supplement it with the data from fiscal registers.⁹⁴ Finally, the parish in Gąsawy has not been isolated. There was a parochial church there in the end of the fifteenth century, although the tax registers mention this village throughout the entire sixteenth century as a parochial seat, based on old forms. However, according to the visitation of Kielce provostry, Gąsawy belonged to Jastrząb parish, as it was described earlier in the register of income of Church benefices from 1529.⁹⁵

Almost the entire territory of Stężycza district belonged to Kielce deanery, only the borderlands lay in Lublin archdeaconry. In the sixteenth century the parochial network was much thinner here than on the left bank of the Vistula, in Radom district, which was related to the poor development of the settlement in the district of Stężycza. There were 24 parishes in the Radom part of Kielce deanery at the beginning of the sixteenth century, and in the Podlasie region of Stężycza there were only 12 parishes at the time.⁹⁶ New parishes were created in the sixteenth century in Żabianka and Kłoczów,⁹⁷ and the churches in Jadamów⁹⁸ and Radorzyż⁹⁹ also fulfilled parochial functions at the end of the sixteenth century. The range of Łysobyki parish (perhaps also Przetoczno parish in the sixteenth century) was reconstructed on the basis of fiscal registers, as the parish was not – as already mentioned in the description of Kielce deanery – inspected at the turn of the sixteenth and seventeenth centuries. In fact, according to the 1739 visitation quoted by Ambroży Wadowski, the parochial church was founded only by Jan Odrowąż Pieniążek, the voivode of Sieradz, so – at the turn of the seventeenth and eighteenth centuries, but it was probably the second foundation in the same place or a transfer of a church.¹⁰⁰

Significant changes in the parochial network can be observed in the sixteenth century in Sandomierz district. There were not so many new parishes created in the area of old colonization, mostly in the newly-located towns: Denków,¹⁰¹ Janików,¹⁰² Ożarów,¹⁰³ Tarłów¹⁰⁴ and

⁹¹ The visitation of Radom deanery from 1598, AV Cap. 14, f. 286.

⁹² Długosz LB, I, p. 514.

⁹³ Regestr Diecezyów (Radom deanery), microfilm BN no. 7679.

⁹⁴ Długosz LB, I, p. 514; LR 1529, pp. 404, 407, 453; the visitation of Radom deanery from 1598, AV Cap. 14, f. 289.

⁹⁵ Długosz LB, II, p. 487, Gąsawy parish highlighted in tax registers from 1526, 1576 and 1577; in Church sources from the sixteenth century Gąsawy appear in Jastrząb parish: LR 1529, p. 378; the visitation of Kielce provostry from 1597, AV Cap. 8, f. 512; similarly in Czajkowski in his Regestr Diecezyów (Kunów deanery).

⁹⁶ On the basis of S. Litak, *Sieć parafialna archidiakonatu radomskiego*, p. 105.

⁹⁷ *Ibidem*, p. 106; parish in Kłoczewo was created in 1559, and in Żabianka between 1570 and 1575.

⁹⁸ The parochial church built by Hieronim Rusiecki soon after the town was located existed since 1545, Litak 1969, p. 106; *Catalogus ecclesiarum et utriusque cleri tam saecularis quam regularis dioecesis Lublinensis pro AD 1902*, Lublin 1901, p. 86; see chapter *Character and size of settlements*, [in:] AHP Sandomierz, in this edition III.3.2.2. However, in the beginning of the second half of the sixteenth century, the church was turned into Protestant church, *Miasta polskie*, vol. 1, p. 696. According to the visitation of Łuków deanery from 1595, there was a 'ecclesia seu capella' in Jadamów, which performed parochial functions, see footnote 64 in this chapter.

⁹⁹ According to Litak, *Sieć parafialna archidiakonatu radomskiego*, p. 106, the parish in Radorzyż existed since 1580, but the 1595 visitation states that it was a closed subsidiary church of Tuchowicz parish, see footnote 65 in this chapter; Radorzyż itself lay outside the borders of Sandomierz Voivodeship, but villages from our voivodeship belonged to its parish.

¹⁰⁰ Fiscal registers of the sixteenth century: 'Przetoczno seu Lissobiki' parish, P. Małopolska, p. 332. Jan Odrowąż Pieniążek died around 1712, for his biography see K. Przyboś, *Pieniążek Jan Chryzostom z Iwanowic, h. Odrowąż*, PSB, vol. 26, pp. 93–97. *Catalogus ecclesiarum et utriusque cleri tam saecularis quam regularis pro AD 1902*, Lublin 1901, p. 88, dates the foundation of the parish in Łysobyki to the beginning of the seventeenth century. See also footnote 15 in this chapter.

¹⁰¹ The church in Denków was founded in 1591, according to SGKP, vol. 1, p. 957; it was inspected in 1592, AV Cap. 65, f. 478.

¹⁰² According to the visitation from 1592, AV Cap. 65, f. 490v: Janina oppidum noviter extractum [...] parochia [...] noviter extracta...'. During the visitation in 1598 (AV Cap. 12, f. 24) the temple was 'lignea, non consecrata et iam pene diruta, ad quam omnes apparatus ecclesiastica ex ecclesiae Czyzoviensis iam haeresi infectae translati'. Ritual functions were performed by Rev. Jan Konopacki from Lwów archdiocese, 'quem uti peregrinum oppidani in usum proprium detinuerunt...'.
¹⁰³ *Ibidem*, f. 490: 'Ecclesia lignea [...] noviter per oppidanos constructa [...] oppidum [...] in cruda radice noviter locatum'.
¹⁰⁴ *Ibidem*, f. 475, 477; town parish in Tarłów was separated from Pawłowice parish.

Lasocin,¹⁰⁵ situated in this part of Zawichost archdeaconry which was situated within the boundaries of Sandomierz district. It was not precisely determined, which parish was appointed to Gliniany; at the end of the sixteenth century they rather belonged still to Bidziny parish.¹⁰⁶ No parishes were created in the part of Kielce provostry situated in Sandomierz district, but Dąbrowa parish was joined with Bodzentyn parish.¹⁰⁷ More important changes of the parochial network occurred in Sandomierz Forest, where new settlements were being created. The parish in the village Kopki¹⁰⁸ was moved to the newly-located town of Rudnik, and new parishes of churches fulfilling parochial functions were created in Grębów,¹⁰⁹ Pysznica,¹¹⁰ Jeżowa Wola,¹¹¹ Górna,¹¹² Dzikowiec,¹¹³ Jaślany¹¹⁴ and Sławogóra (Ostrów)¹¹⁵ in Sandomierz archdeaconry, and in Zgórska¹¹⁶ in Mielec deanery of Sącz archdeaconry.

No visitations from the sixteenth or seventeenth centuries survived for Kurzelów archdeaconry in Gniezno archdiocese, so the parochial borders were reconstructed on the basis of Łaski's *Liber beneficiorum*. The part referring to our territory was created in 1511.¹¹⁷ We have also used data from fiscal sources from the sixteenth century, or later.

The bulk of Chęciny district belonged to Kurzelów archdeaconry; a minor part of the district lay in Cracow diocese, namely in Kielce provostry, and small fragments in Kije and Jędrzejów deaneries of Cracow archdeaconry. In the archdeaconry of Kurzelów the parish in Chrzastów lost its parochial rights in 1544 in favour of the church in Nowopole (present-day Koniecpol), situated outside our voivodeship.¹¹⁸ The parish in Stare Chęciny was incorporated into the town parish in Chęciny

¹⁰⁵ According to the visitation from 1598, quoted by J. Wiśniewski, *Dekanat Opatów*, Radom 1907, p. 252, after Lasocin was located in 1549, the owner – Andrzej Lassota ‘ecclesiam novam in eo aedificavit, eandem in Dembno dissolvit ac diruit, ex trabibus benedictis bovine construxit...’. Despite that, still ‘villae ad eandem ecclesiam [in Dębno] pertinebant: Dembno et Biedzychów’. The compendium of the 1592 visitation (AV Cap. 65, f. 491) lists both Lasocin and Dębno as parishes, Lasocin was supervised by a presbyter, Dębno – a parson. The visitation from 1598 (AV Cap. 12, f. 25), says that the church in Lasocin ‘non habet parochum, atque fortassis de consensu Illmi Cardinalis ad instantiam Dnae Ciołkowa ven. Franciscus canonicus Opatoviensis ibidem sacramenta administrat’; see J. Wiśniewski, *Dekanat sandomierski Radom 1915*, p. 101.

¹⁰⁶ Gliniany town, located in 1595, had a church of St. Adalbert, which – however – was used by Protestants at the turn of the sixteenth and seventeenth century. A date 1573 was cut on a joist in the presbytery; *Katalog zabytków sztuki w Polsce*, vol. 3, no. 7: Opatów district, Warszawa 1959, p. 19.

¹⁰⁷ J. Wiśniewski, *Dekanat Opatów*, p. 32.

¹⁰⁸ The town Rudnik was located in 1552; the parish from Kopki village was transferred to Rudnik in 1585; SGKP, vol. 9, p. 933; inspected in 1604, AV Cap. 18, f. 13; and on f. 17 it was said about Kopki that it is ‘villa nobilium, habens ecclesiam parochialem s. Martini dirutam’.

¹⁰⁹ The visitation of Sandomierz archdeaconry from 1604 (AV Cap. 18, AV Cap. 23, f. 23) lists Grębów among parochial centres with an adnotation: ‘oratorium coloni atque ruricolae [...] ab annis 80 construxerunt [...] qui olim titulum dederunt S. Adalberti’.

¹¹⁰ Royal consent for the foundation of the church of the Holy Cross in the royal village Pysznica, and the appointment of parson's bestowals come from 1569; MRPS, vol. V, no. 4067. The parish was inspected in 1604; AV Cap. 18, AV Cap. 23, f. 10. According to SGKP, vol. 9, p. 330, the parish was founded in 1605, which probably meant the appointment of the official parochial district.

¹¹¹ The parish in Jeżowa Wola was founded in 1603; *Schematismus universi ven. cleri saecularis et regularis diec. ritus latinensis Premislensis pro anno 1886*, Przemyśl 1885, p. 178; SGKP, vol. 3, p. 585. According to the inventory from 1590–1597 (AGAD Dz. XVIII, 69, f. 306 n.) the village Jeżowa, founded in a previously undeveloped place in 1554, had ‘a church, newly built by the assembly on vogt's grounds without permission, which can stan, because there is to be no taking of vogt's grounds for the residence of the priest and the gardens’. The parish was inspected in 1604, AV Cap. 65, f. 522v.

¹¹² The parish in Górna was created in 1599; *Schematismus*, p. 178; inspected in 1604, AV Cap. 65, f. 522v.

¹¹³ Parish endowed in 1576, B. Kumor, *Zanik i afiliacja parafii w archidiakonatach sandomierskim, wojnickim i prepozyturze tarnowskiej, 1326–1782*, „Roczniki Teologiczno-Kanoniczne”, 1964, p. 121.

¹¹⁴ Jaślany village was listed in fiscal registers in Chorzelów parish, probably because the chapel in the village was incorporated into Osiek parish in 1580, into Chorzelów parish in 1599; B. Kumor, *Archidiakoniat sądecki*, ABMK, vol. 9, 1964, p. 141. The visitation of Sandomierz archdeaconry from 1604 listed Jaślany among parochial centres; AV Cap. 65, f. 524v. An inventory from around 1590–1597 (AGAD, Dz. XVIII, 69, f. 455) states that Wola Grochowska requested a right to pay tithes to Jaślany, which their ‘sacramenta administrantur’.

¹¹⁵ The church in Sławogóra (Ostrów) attested in 1562; SGKP, vol. 7, p. 705; inspected in 1604, AV Cap. 65, f. 524v.

¹¹⁶ Parochial church in Zgórska, built around 1561, consecrated in 1595, parish founded in 1583; B. Kumor, *Archidiakoniat sądecki*, p. 163.

¹¹⁷ The datation of the description of church benefits in Kurzelów archdeaconry according to J. Łukowski [in:] Łaski LB, I, p. XV. Visitations of this archdeaconry from XVIII were used by S. Litak, *Struktura terytorialna Kościoła łacińskiego w Polsce w 1772 r.*, Lublin 1980, pp. 31–34, 149–154.

¹¹⁸ The surviving metrical registers of Nowopole parish begin at 1604, and Chrzastów is listed in this parish still in the eighteenth century.

already in 1500, but in tax registers the name of the old Stare Chęciny parish was still maintained in 1527–1530 and 1662.¹¹⁹ The centre of Włoszczowa parish was localized in the village, not in the town of the same name,¹²⁰ and Babelno parish in Babelno Mniejsze village, according to the information provided by Łaski.¹²¹ In the sixteenth century, new parishes were created in this part of Chęciny district, which belonged to Kurzelów archdeaconry: Bolmin¹²² and Mniów,¹²³ and in the part belonging to Cracow diocese – in Sobków (Jędrzejów deanery),¹²⁴ and in Tumlin (Kielce provostry).¹²⁵

Instances when one settlement belonged to two parishes were observed in this area; probably because of the tithe paid from one's own holding, according to the decision of the owner, the manor in Lasochów belonged to Małogoszcz parish, and the manor in Gruszczyn – to Krasocin parish, but the subjects in both villages belonged to Kozłów parish.¹²⁶

In Opoczno district Skotniki parish was established between 1528 and 1530 (previously this village belonged to Ręczno parish).¹²⁷ It should also be mentioned, that the village Damujowice, in which there was a parochial church, was called Sołek since the seventeenth century, and in 1674 the name: 'Zameczek alias Damuiowice Sołek' appears.

Some difficulties arose in the part of Radom district which belonged to Kurzelów archdeaconry. They were related to the borders of parishes, whose seats remained in the possession of Protestant denominations in the sixteenth century. The most vivid example of such complications was determining the course of the border of Jedlińsko parish and its neighbouring parishes: Goryń, Jankowice and Lisów-Komorniki. The parish in Jedlińsko was established in 1540 for the first time. Between 1560 and 1630 Jedlińsko belonged to the Polish Brethren and the church did not function. During the second foundation of the church in Jedlińsko, new boundaries of the parish were also set on request of the owner of the villages Zawady, Płasków, Jedlanka, Wola Gutowska, Nowa Wola and Lisów Wielki; they were included in the newly-established parish, because distance and other obstacles made reaching parochial churches in Goryń, Jankowice and Lisów difficult for the inhabitants;¹²⁸ it is therefore impossible to reconstruct sixteenth century borders of parochial district of Jedlińsko on this basis. The reconstruction of the boundaries of these parishes was based on fiscal sources from the sixteenth century and some later sources.

Churches seized by protestants

The Catholic Church is the only denomination whose territorial organization is presented on detailed maps of Poland in the sixteenth century.¹²⁹ Not only was it the ruling denomination, but also the parochial network fulfilled other important, non-religious functions, both: social and state, as there were no districts in the structure of Poland in the Modern Era smaller than large judicial districts. As

¹¹⁹ Łaski LB, I, p. 586, footnote 4.

¹²⁰ According to SGKP, vol. 13, p. 722, the parochial church was situated in Włoszczówka; J. Wiśniewski, *Historyczny opis kościołów, miast, zabytków i pamiątek w pow. włoszczowskim*, Mariówka 1932, p. 270, localized the first church between Włoszczowa and Podzamcze.

¹²¹ Łaski LB, I, pp. 551, 569, similarly the register from 1577 (ASK 0 I, 9, f. 345); but the register from 1564, for instance, mentions Babelno Maior as parish seat (ASK 0 I, 9, f. 763v).

¹²² Parish in Bolmin founded in 1574, see J. Wiśniewski, *Historyczny opis kościołów, miast, zabytków i pamiątek w Jędrzejowskim*, pp. 204, 216; H. Rybus, *Regesty*, p. 195.

¹²⁹ AHP Lublin in this edition III.2.2.3; AHP Mazovia in this edition III.2.2.7.

such, the parishes were the focus of social relations, going beyond individual villages. They also played an important role in announcing state regulations. Tax registers, the main source of our study, were formed on the basis of parochial division. For tax collectors and their assistants it was unimportant, whether parochial organization had been damaged by the Reformation. The same parishes appear in the registers from the second half of the sixteenth century, which in fact did not function, because they had been seized by reformed denominations. It is clear evidence of the importance of parishes to financial organization of the State. Indirectly, it shows the role of parishes in social life. On the other hand, the Church hierarchy still considered parishes, in which temples were used by members of reformed denomination, institutions of Catholic law. That is why all parishes have been presented alike in the basic map (1:250,000) and the map of Church territorial organization. The matter of their religious functions, i.e. the influence of the Reformation, was disregarded.

We have decided to draw the borders of the parishes that did not function at the turn of the sixteenth and seventeenth centuries in reality as elements of Church organization, and for this reason were either not inspected, or properly described, on the basis of tax registers. Earlier and later Church sources helped us to check the data. The visitations mentioned omitted the parishes in Malice and Niekraszów (Sandomierz district, Sandomierz archdeaconry) and in Łysobyki (Stężyca district, Kielce deanery in the first half of the sixteenth century; Lublin archdeaconry in the second half of the next century).¹³⁰ At times, as in Jarosławice (Radom district, Kielce deanery) or in Dymitrów (Sandomierz district, Sandomierz archdeaconry), the inspectors did not list the villages belonging to the parochial district, probably because the churches were destroyed.¹³¹ Sometimes a Protestant owner of parochial village did not allow the inspectors to enter. Such a situation was mentioned in 1598 in the inspectors' description of the church in Sienno (Radom district, Solec deanery).¹³²

Surviving visitations of the churches in Cracow diocese from the turn of the sixteenth and seventeenth centuries originate from the period of significant success of reformatory Catholic circles. Many churches returned to Catholicism. Sometimes even, newly-built Protestant churches were turned into Catholic temples, such as in Sobków,¹³³ although still towards the end of 1580s the nobles who supported reformed denominations occasionally seized parochial churches and used them for their own religious purposes, as in Oleksów (Radom district, Zwoleń deanery), where – according to 1598 visitation – the temple was desecrated nine years earlier.¹³⁴ Usually however, the inspectors informed, whether the inspected church was temporarily in the hands of the Protestants, and also marked, which churches had not yet been reconciled, even though they held Catholic masses by a special bishop's permission.¹³⁵ As such the data provided by the visitations allow us to establish, that in this part

¹³⁰ Visitations of Sandomierz archdeaconry were checked AV Cap. 18, AV Cap. 23, and the compendium AV Cap. 65, f. 518–531. About Łysobyki see footnotes 15 and 100 in this chapter.

¹³¹ About Jarosławice see the subchapter *Parochial network*. In a visitation from 1604 it was emphasized by Dymitrów, that the temple is 'penitus desolata' and there was no list of villages belonging to the parish; AV Cap. 18, AV Cap. 23, f. 31. This village belonged to the voivode of Brześć Kujawski Andrzej Leszczyński, who also owned Baranów and villages in Baranów parish (P. Małopolska, p. 200); in the description of Baranów church the inspectors noted that 'haereticus est ipse haeres' and did not list villages belonging to this parish (visitations quoted, f. 31).

¹³² AV Cap. 65, f. 504.

¹³³ S. Litak, *Struktura*, p. 284.

¹³⁴ AV Cap. 65, f. 292, at the same time noting that vicarium in Tszew, qui circa hanc ecclesiam manebat, et dum haeresiarcha induceratur, per eundem inde pulsus est'; see footnote 955. Apart from the aforementioned churches in Jarosławice Nadolne (footnote 67 in this chapter), Jedlińsk (footnote 128 in this chapter), Malice, Niekraszów, Łysobyki (footnote 15 in this chapter), Dymitrów, Baranów (footnote 131 in this chapter), Sienno (AV Cap. 65, f. 504), the Reformed denominations controlled in the end of the sixteenth century, according to Cracow visitations, the following parochial churches in Sandomierz Voivodeship: in Sącz archdeaconry (AV Cap. 2, AV Cap. 4) – in Czudec and Sieklówka, in Zawichost archdeaconry (AV Cap. 1) – in Czyżów and Ożarów, in Kielce deanery – in Drzążgów (AV Cap. 14, f. 120: 'ecclesia parochialis [prophanata per Nic. Kłoczowski [...] omnibus clenodii, argento, apparatibus omnique decore suo spoliata. Administratur per haeresiarcham Paulum et per eundem agri coluntur').

¹³⁵ For instance, AV Cap. 7, f. 111, parochial church in Żabno, Opatowiec district, 'per haeresim ante viginti annos et duos [so in 1574] prophanata per m. quondam Hier. Buziński tes. Regni, neque ad huc reconciliata, sed per licentiam in ea celebratur'. AV Cap. 2, f. 35, temple in Książnice, Mielce deanery, 'per haereticos prophanata nec reconciliata, licentiam tamen celebrantur ad nonam diem mensis Junii futuri anni duraturam'. AV Cap. 14, f. 106v, in Okrzeja, Stężyca deanery, 'ecclesia [...] prophanata et ab haereticis multis annis possessa, tandum per gen. ol. Paulum Samborzecki catholicis restituta; nescitur utrum reconciliata'. AV Cap. 65, f. 209v, in Korytnica, Kije deanery, the temple was – the inspectors found – 'per haereticos [...] prophanata [...] viginti annos a prophanatione catholicis restituta, nondum tamen reconciliata per licentiam in

of Cracow diocese, which at the turn of the sixteenth and seventeenth centuries lay in Sandomierz Voivodeship, 12% of parochial churches remained in Protestant hands for a longer, or shorter period. Much less complete data for Kurzelów archdeaconry of Gniezno diocese allow us to assume, that the situation in this area was similar. However, as it was impossible to present the location of ‘violated’ churches in a certain manner in this part of Sandomierz Voivodeship, we decided it would not be proper to prepare a map, which would show such churches in the entire voivodeship. The map of Protestant churches provides information about the range of the influence of the Reformation in the sixteenth century. The preparation of the map was described in chapter III.2.2a.2.

ANNEX

Church administration network in Sandomierz Voivodeship at the end of the sixteenth century

Cities were marked with the letter ‘c’. Alternative form of a given site name in the sixteenth century was put in brackets, the same was done with the present-day name, when changes would render identification impossible. The date of creation of parishes established in the sixteenth century, or the date of the first known record, as well as information about a liquidation of a former parish in the sixteenth century, when another church assumed parochial function, was also given in brackets. Churches and chapels in villages situated outside the parochial seat were also marked, if only the sources allowed us to assume that such churches and chapels possessed the right to give sacraments in the sixteenth century. Parishes situated in the archdeaconries of: Zawichost, Lublin, Sandomierz, Cracow and in Kielce deanery and Kielce provostry, where the affiliation of parishes to respective territorial units is uncertain, were marked with an asterisk. About differences in deanery divisions appearing in two visitation protocols from 1595 in Sącz archdeaconry see p. 54. The scheme uses the division according to AV Cap. 2 and compendium AV Cap. 65.

Cracow diocese

Zawichost archdeaconry

Bałutów, Bidziny, Czyżów, Denków t. (1591), Dębno (later Lasocin), Gierczyce, Góry Wysokie, Janików t. (Janina) (1592), Jankowice, Lasocin t. (second half of the sixteenth century), Łukawa, Manina*, Michów*, Opatów t., Ożarów t. (1592), Pawłowice* (subsidiary to Piotrawin), Pkanów, Przybysławice, Ruszków, Słup Nadbrzeżna, Sobótka, Szewna*, Ścimiłów t. (Ćmielów), Święta Trójca, Tarłów t. (second half of the sixteenth century), Wojciechowice, Wsześwięte, Zawichost t., Zemborzyn.

Lublin archdeaconry

Solec deanery

Chodcza, Ciepiałów village (with a church in Ciepiałów t., second half of the sixteenth century), Janowiec t. (Serokomla), Krępa, Lipsko t., (1595), Siemno t., (with a chapel in Rzecznów), Solec t., Wielgie (1529)

ea celebratur’; *ibidem*, f. 305, in Wilczyńska, Stężyca deanery, ‘ecclesia [...] per mag. d. Stanislaum Gostomski prophanata, per fratrem ipsius germanum ill. et mgf. dnum Hieronimum Gostomski palatinum Posnaniensem catholicis restituta, nondum reconciliata’; still in 1595 Stanisław Gostomski appears as a patron of the Protestant church in Wilczyńska, see his biography in PSB; soon after the visitation in 1598 the church in Wilczyńska was reconciliated by cardinal Radziwiłł, the bishop of Cracow, AV Cap. 9, f. 606v. In Jodłówka, on the other hand, Tarnów deanery, ‘ecclesia par. recenter extracta’ was during the visitation still ‘non consecrata’, and the old temple had been destroyed ‘cum fuisset ab haereticis prophanata et per viginti annos ab eisdem possessa’, AV Cap. 7, f. 20.

Chodel deanery

Pawłowice*

Łuków deanery

Jadamów t. (Adamów) (1545), Wojcieszków t., probably also Łysobyki t. (Nowe Przetoczno)

Parczew deanery

Gołąb*, Jaroszyn*, Oleksów*, Regów*

Sandomierz archdeaconry

Baczkowice*, Baranów, Bieliny, Charzowice, Chobrzany, Cmolasy, Dymitrów, Dzikowiec (1576), Gałuszowice, Gorzyce, Goźlice, Górna (1599), Grębów (first half of the sixteenth century), Gryzikamień, Iwaniska t., Jaślany (end of sixteenth century), Jeżowa Wola (1554), Kiełczyzna, Kliczanów, Kolbuszowa (1523), Kopki (until 1585, then Rudnik t.), Łuniów, Malice, Michocin, Modlibożyce, Mydlów, Niekraszów, Obrazów, Olbierzowice, Osiek t., Padew, Pokrzywnica t. (Koprzywnica), Połaniec t.*, Przewrotna (1569), Pysznicza (Pyszna Wola) (1569), Raclawice, Ramiżów, Rudnik t. (1585), Samborzec, Sandomierz t. (St. Peter parish and St. Paul parish), Skotniki, Sławogóra (Ostrów) (1562), Strzegom, Strzeżowice, Sulisławice, Szczeglice, Trzeźnia, Ujazd, Wiązownica, Wielawieś, Włostów, Zaleszany

Kielce deanery (so-called Radom archdeaconry)

Radom deanery

Borkowice, Chlewiska, Jarosławice, Nadolne, Kowala Stępcina, Mniszek, Nowa Cerkiew, Radom t., Stary Radom, Szydłowiec t., Wierzbica t., Wola Kowalska (Wola św. Doroty, today: Wolanów), Wsola, Wysoka, Zakrzów

Zwoleń deanery

Brzeźnica, Brzoza (before 1529), Jaroszyn*, Jedlna, Kazanów t., (1598), Kozienice t. (around 1537), Odachów, Oleksów* (with a church in Bierdzieża), Policzna (1531), Regów*, Ryczywół t., Sieciechów t. (with a church in Grodek), Skarżyszów t. (today: Skaryszew), Sucha, Świerże Wielkie, Tczów, Zwoleń t.

Stężyca deanery

Bobrowniki t., Drzążgów t., Gołąb*, Górzno Wyższe, Kłoczów (1559), Korytnica, Maciejowice t., Okrzeja t., Ryki, Samogoszcza, Stężyca t., Wargocin (with a chapel in Pawłowice), Wilczyska, Żabia Wola (today: Żabianka) (1570–1575), Żelechów t.

Kielce provostry

Baczkowice*, Bardo, Bodzęcin t. (today: Bodzentyn), Brzeziny, Chybice, Dąbrowa (later Bodzęcin parish), Dębno, Daleszyce t., Grzegorzowice, Iłża t., Jastrząb t., Kielce t., Krzynki (Skrzynki, today: Krynki), Krzyżanowice, Kunów t., Łągów t., Manina*, Michów*, Mierc (today: Mirzec), Pawłów, Potok, Słup Nowa t., Słup Stara, Szewna*, Szumsko, Świętomarza, Tarzek (today: Tarczek), Tumlin (1599), Waśniów t., Wąchocko t., Wzdół, Zbylutka.

Sącz archdeaconry

Pilzno deanery

Bieździedza, Brzeziny, Brzostek t., Dobrków, Frysztak t., Gogołów, Gumniska, Klecice (today: Klecie), Kołaczyce t., Lubcza Górna, Lubla, Łęki Górne, Pilzno t., Przeczycza, Siedliska, Siekluka (Sieklówka), Zwiernik

Mielec deanery (Przeclaw deanery)

Borowa, Brzeźnica, Chorzelów, Czermin, Dębica t., Książnice, Lubzina, Mielec t., Niwiska (around 1595), Przeclaw t., Radomyśl t. (1599), Straszecin, Wadowice, Zgórsko (1583–1595), Żochów t. (today: Rzochów)

Ropczyce deanery

Czudecz t., Dobrzechów, Głowów t. (1581), Góra, Konieczkowa, Kozłów, Ludcza, Łączki (near Niedźwiada), Łączki Małe, Łęki Wielkie, Mała (1595), Mrowla, Niewodna, Nockowa, Połomia, Pstrągowa

Niznia, Ropczyce t., Sędziszów t., Strzeżów t., Trzciana, Wielopole t., Witkowice, Zgłobien

Jasło deanery

Jedlicze, Szebnie, Warzyce

Cracow archdeaconry

Tarnów provostry

Jastrząbka (half of the sixteenth century), Łękawica, Łysagóra (today: Lisia Góra), Poręba (Poręba Radlna), Skrzyszów, Szywna, Tarnów t., Wierzchosławice, Zalasowa, Zassów, Zdzarzec

Tarnów deanery

Góra Zbylitowska, Jodłówka, Jurków, Piotrkowice (1513), Pleśna, Tuchów t.

Wojnice deanery

Bodzęcin (Borzęcin), Radłów, Szczurowa

Opatowiec deanery

Bejsce, Bolesław, Dąbrowa Wielka, Dobrowoda, Gorysławice, Gręboszów, Kocina, Korczyn Stary, Nowe Miasto Korczyn t., Olesno, Opatowiec t., Oporyszów, Ostrowce, Otwinów, Piasek Wielki, Rogów, Solec, Stróżyska, Szczucin, Świnary, Wietrzychowice, Wiślica t., Żabno t.

Pacanów deanery

Beszowa, Biechów, Kargów, Koniemłoty, Kotuszów, Książnice, Kurozwęki t., Oleśnica t. (with a church in Strzelce from the half of the sixteenth century?), Pacanów t., Połaniec t.*, Staszów t., Stobnica t., Strzelce (until the second half of the sixteenth century), Szydłów t., Tuczępy, Zborówek

Kije deanery

Bogucice, Busko t. (with a chapel in Chotel Zielony), Chmielnik t., Drugnia, Chomętów, Chotel Czerwony, Gnojno, Janina, Kije, Korytnica, Krzyżanowice, Lisów, Łukowa, Pierzchnica t., Pińczów t., Piotrkowice, Sędziejowice, Szaniec, Szczaworzysz, Zagość

Sokolina deanery

Chroberz, Czarnocin, Dzierżązna, Góry, Jurków, Kazimierza Mała, Michałów, Młodzawy Małe, Pełczyńska, Probołowice, Sokolina, Stradów (Zastępów), Wolica Szyszczycka

Jędrzejów deanery (Andrzejów deanery)

Brzegi, Sobków t. (1560–1570)

Gniezno archdiocese

Kurzelów archdeaconry

Bedlno, Bębello Mniejsze, Białaczów t., Białobrzegi, Bieliny, Błogie, Błotnica, Bolmin (1574), Brudzewice, Bukowno, Chełmce, Chęciny t., Chotów, Chrzastów (until 1544, Nowopole afterwards), Czarnca, Czermno, Damujowice (Sołek), Dąbrowa, Drzewica t., Fałków t., Gielniów t., Goryń, Goworców t., Jankowice, Januszowice, Jedlińsko t. (1540), Kaszów, Klwów, Konieczno, Końskie, Kozłów, Krasocin, Kraśnica, Kunice Wielkie, Kurzelów t., Libiszów, Lipa, Lisów-Komorniki, Łopuszno, Małogoszcz t., Mnin, Mniów (1596), Nieznamierowice t., Odrowąż Wielki, Odrzywół t., Opoczno t., Piękoszów, Pilczyca, Policzko, Potrykozy, Potworów, Przedbórz t., Przytyk t., Radoszyce t., Radzanów, Rembieszce, Secemin t., Skorkowice, Skotniki (1528–1530), Skrzyń t. III.2.2a.2 REFORMED DENOMINATIONS COMMUNES

Krzysztof Chłapowski

Map 4 shows the location of Protestant Churches – the communes of reformed denominations (not buildings used for religious purposes) in Sandomierz Voivodeship in the sixteenth century. The basis for the study consisted of two files kept in Oddział Starych Druków Biblioteki Uniwersyteckiej w Warszawie ('Old Prints Department of the Library of the University of Warsaw'). The first file, prepared under supervision of Dr. Maria Sipayło is an index to the publications of synods of reformed denominations. The second is a copy of the file prepared by Prof. Dr. Waław Urban, kept in Zakład Dokumentacji Instytutu Historii PAN in Cracow ('Documentation Department of the Institute of History of the Polish Academy of Sciences'); it consists of source information on Protestant churches and Protestant schools (Calvinist, Polish Brothers, Lutheran).¹ Both files cover the entire territory of the Republic of Poland in the sixteenth–seventeenth centuries. Source records describing instances of desecration of Catholic churches by Protestants, found in Church visitations of Cracow diocese,² as well as documents of Protestant synods published by M. Sipayło,³ were also, directly used. We have also used monographs,⁴ articles and studies by various authors from the journal 'Reformacja w Polsce' ('Reformation in Poland') and its continuation – 'Odrodzenie i Reformacja' ('Renaissance and Reformation').

Surviving documents from Calvinist synods allowed us to determine the number and location of all churches of this denomination, which functioned in Sandomierz Voivodeship in the sixteenth century. We are almost certain that we were able to find all communes of the Polish Brethren, because their churches were subject to fierce attacks of both: Polish Catholics and members of other reformed denominations, so the source basis here is quite extensive. On the other hand, Lutheran communes do not appear in the sources very often, and so in this respect our study cannot be complete. Some communes of the Polish Brothers became Calvinist. Occasionally we were unable to determine the denomination of Protestants who – according to an visitation – desecrated a Catholic church. As such, we treated all Protestant Churches alike, and did not mark their denomination. Protestant communes were created at different times, some of them quickly collapsed. So the communes distinguished are those, which were proven to survive over 10 years. Protestant churches attested to only after 1600, were not marked.⁵ However, we included Protestant communes, the existence of which in the sixteenth century was not completely certain, but about which there exists indirect information, making their functioning in the sixteenth century probable.⁶ Therefore, the published map should be treated as a cartographic

¹ We must thank dr. Maria Sipayło for the access to the files. They allowed us to broaden, and above all: verify, the data contained in the work: H. Merczyng, *Zbory i senatorowie protestanccy w dawnej Rzeczypospolitej*, Warszawa 1904.

² See above, A. Dunin-Wąsowiczowa's remarks on churches seized by the Protestants.

³ ASR, vol. 1–3.

Opracowanie materiałów źródłowych do atlasu historycznego Kościoła w Polsce*, ABMK, vol. 8, 1964, pp. 271–304; vol. 9, 1964, pp. 93–286; idem, *Prepozytura tarnowska. Opracowanie materiałów źródłowych do atlasu historycznego Kościoła w Polsce*, ABMK, vol. 12, 1966, pp. 205–288; vol. 4, 1967, pp. 249–256; E. Wiśniowski, *Prepozytura wiślicka do schyłku XVIII w. Materiały do struktury organizacyjnej*, Lublin 1976 (Materiały do Atlasu Historycznego Chrześcijaństwa w Polsce, vol. 2, part 2).

⁵ E.g. the church in Radzanów (Wiślica district), mentioned in 1602 (H. Merczyng, *Zbory*, p. 71; ASR, vol. 3, p. 242), was not marked, although it is possible that it existed earlier.

⁶ E.g. uncertain information about the church in Kolosy (Sokolina parish, Wiślica district) in to some extent confirmed by the visitation from 1618, which mentions an Aryan living in this village (E. Wiśniowski, *Prepozytura wiślicka*, p. 161); the

index of the information about Protestant churches existing in the sixteenth century prepared on the basis of the sources described above.

Protestant groups taken into consideration had various numbers of worshippers, and did not always have access to a building built specifically for cult purposes, or used a captured parochial church. Such communes without their own churches – temples were often situated in cities;⁷ we also encounter them, where the parochial church functioned as a Catholic temple (Ćmielów, Lutcza, Staszów), and partially where there was no parochial church before.⁸ It should be remembered that there was no Protestant commune in Sandomierz, although it was in this city, where the famous gathering of representatives of different reformed denominations in 1570 took place.⁹ Cities located in the sixteenth century by Protestants were distinguished. They were usually strong centres of Protestantism; of them Raków was the most famous.¹⁰ After the fall of the Reformation in Poland these cities became new parish centres.

Ownership relations influenced the placement of Protestant churches, as shown on map 4. There were no Protestant churches in royal estates, apart from centres of starosta's districts, when they were used by other denominations (Stobnica, Pilzno, Chęciny, Wiślica). In bishopric estates there was an exceptional case of a Protestant church in Kunów town. In any case, in 1570 the following Protestant churches were mentioned in the list of reformed temples in Szydłów district during the general synod in Sandomierz: Oleśnica, Solec, Iwaniska, Kunów.¹¹ However, a question arises, whether it was not a scribe's mistake, and was it not Łuniów, where there was in fact a Protestant church at the time,¹² especially that there does not exist any other mention of a Protestant temple in Kunów.¹³ Given this, the information about the church in Kunów was not marked on the map, because it seems that any Protestant church operating in a bishop's town would – as an exceptional case – appear in other sources, especially those of Church origin.

In general, 97 Protestant churches were marked on the map; 25 in Wiślica district, 18 in Sandomierz district (without Kunów), 14 in Chęciny district, 14 in Radom district, 12 in Pilzno district, eight in Opoczno district and six in Stężycza district.

(1993)

Translated by Agata Staszewska

tradition claiming that the building from around 1580 in Pęczelice (Szczaworzysz parish, Wiślica district) is a former Protestant church agrees with records from 1618 and 1635 visitations mentioning infidels in this parish (ibidem, p. 72).

⁷ E.g. in Stobnica the Protestant church was situated in a house in the market square. In Pilzno the masses were held in homes of citizens; similarly in Wiślica, see W. Urban, *Z dziejów reformacji w Wiślicy*, „Małopolskie Studia Historyczne”, vol. 2, 1959, no. 2/3, pp. 35–51.

⁸ E.g. in Ćmielów the Protestant church was situated in the castle chapel. In Lutcza Church sources mention several times (1565, 1577, 1596) that the church was not seized by Protestants, although the founders were Protestants; so the masses were probably held in the manor; B. Kumor, *Archidiaconat sądecki*, ABMK, vol. 9, p. 255.

II.2.2b.2 EASTERN ORTHODOX CHURCHES IN SANDOMIERZ VOIVODESHIP IN THE SECOND HALF OF THE SIXTEENTH CENTURY

Krzysztof Chłapowski

Four Orthodox churches were marked on the map (Bonarówka, Krosna, Oparówka, Węglówka) on the basis of the information from tax registers from the second half of the sixteenth century¹⁴ and registers from the seventeenth century. An Orthodox church in Oparówka village is attested to by the document of the bestowal of priesthood in this village issued by the owner, the Abbot of Tyniec in 1559.¹⁵ Additionally, we have used the information gathered by Rev. W. Sarna.¹⁶ The above-mentioned Orthodox churches belonged to the Orthodox diocese of Przemyśl, whose bishop, Michał Kopystyński, did not participate in the 1596 union with the Roman Catholic Church.¹⁷

III.2.2.3 LUBLIN VOIVODESHIP

Stefan Wojciechowski

We should now focus on Church divisions around 1564 and highlight the most important changes that occurred before the close of the sixteenth century.

Seats of parishes divided by voivodeship border lay either in our voivodeship, like Kock, or outside – like Zawichost. The parish in Kock is a peculiar example here, because it was divided between three administrative units: Łuków land, where the seat of the parish was situated, Lublin district, and the district of Stężycza in Sandomierz Voivodeship. As far as the villages in Lublin district are concerned, this old parish¹ encompassed settlements located north of a broad strip of the forest, stretching northwards from the edge of Lublin Upland. In the twelfth century, when the parish in Kock was established the River Wieprz probably did not flow the way it does now, nor the way it was presented on the maps from the eighteenth/nineteenth centuries, but almost straight westwards from Leszkowice, through a depression in which the lakes Firlejowskie and Kunowskie lay now, and then further on to the west, reaching its present channel between Giżyce and Krupy. Długosz does not mention the lakes Firlejowskie and Kunowskie in his *Chorografia*, still this does not mean they did not exist back then, but could have been omitted by the fifteenth century historian, as they were located deep inside the forest and far from any settlement, and as such were not utilized in any way.² So, at the time of the foundation of the parish in Kock, the River Wieprz probably did not isolate these settlements (or the area where they were to be located), which were later situated on its left bank, and were ascribed to Lublin district when the border between Łuków land and Lublin district was determined, but did not lose connection with their parochial church. In Łuków land 10 settlements belonged to Kock parish, and in the district of Lublin – 11.

Some of the parishes were small, encompassing only the parochial village (such as the already-mentioned village Białka), but there were also parishes with several dozen settlements. Still, the parishes which had four to 10 settlements were the most numerous. The table below shows the size of parishes in Lublin Voivodeship measured by the number of villages.

Apart from the 81 parishes situated in the Voivodeship of Lublin and compared in the table, there were 26 settlements in the voivodeship which belonged to six parishes whose seats were located outside the borders of our voivodeship (Wilczyska, Wojcieszków, Drażgów, Zawichost, Zaleszany and Charzowice).

Since around 1564 until the end of the sixteenth century three new parishes were formed in Łuków land: Radoryż in 1588, Domanice (subsidiary church in the parish of Łuków, but with a separate district) prior to 1595, and Stanin in 1599.³ In Urzędów district a parish was founded in the newly-located Radomyśl,⁴ and a church was built in Zakrzówek, which had a separate district in

¹ S. Litak, *Sieć parafialna archidiecezji radomskiej w okresie przedrozbiorowym*, „Sprawozdania Towarzystwa Naukowego KUL”, vol. 9, 1958, pp. 57–58. The parish was reduced in the beginning of the fifteenth century and its eastern part became Czemierniki parish (later it was a town). This process was described in the quoted study: Czemierniki Lubelskie.

1592, although formally it still was not a parochial church.⁵ In 1599 the seat of Nowogród parish located in Lublin district was moved to Kijany.⁶

The territory of Lublin Voivodeship belonged to Cracow diocese. The diocese border surrounded the voivodeship to the east, and partially also to the south and north. The parishes from Lublin district, together with a stretch of land belonging to Sandomierz Voivodeship (over a dozen parishes on the left bank of the Vistula) comprised the archdeaconry of Lublin,⁷ the southern part of our territory belonged to the archdeaconry of Zawichost, and a small part – to the archdeaconry of Sandomierz. The area of Łuków belonged to the archdeaconry of Radom, but between 1565 and 1595 the parishes from this land were annexed to the archdeaconry of Lublin.⁸

There were two land courts in the voivodeship – for two lands – in Lublin and in Łuków, but the land court in Lublin issued separate verdicts for the district of Lublin and for the district of Urzędów – the verdicts for the latter district were given in Urzędów. Town courts and offices functioned in Lublin and Łuków. Originally the voivodeship *sejmik* (dietine) gathered in Urzędów, since 1532 – in Lublin, the capital of the voivodeship. The only castellan of the voivodeship in the sixteenth century resided in Lublin, but there was an interval between 1474 (the year the voivodeship was created) and 1518 when the office of the castellan of Lublin was re-established.⁹ The other castellany of the voivodeship, the medieval castellany of Łuków, disappeared in the first half of the fifteenth century and was re-established only in 1775.¹⁰

of parishes from the end of the sixteenth century Radomyśl appears as a profaned parish (Diocese Archive in Kielce, Kopiaż wiślicki, f. 444v), in 1617 it appears as a parish (Archive of the Cracow Chapter, Wizytacje no. 34, f. 37v).

⁵ Archiwum Kurii w Krakowie, Wizytacje no. 1, f. 32–32v. The following villages were ascribed to this church: Zakrzówek and Suków from Kraśnik parish, and Bystrzyca and Rudniczek from Kielczewice parish (according to the tax register, all these parishes belonged to Kraśnik parish).

¹⁰ Ibidem, p. 48, footnote 16.

Apart from Cracow, the capital of the State, and Piotrków, situated centrally in the Crown, Lublin was the only place where the Seyms gathered before the Union of Lublin. It was situated favourably on the road from Cracow to Vilnius, relatively close to the border with Lithuania. Moreover, this was a large city where roads from many directions met, and there was a castle here, which could house the royal court. In the sixteenth century, four Seyms were held in Lublin (1506, 1554, 1566, and 1569), and one Seym gathered in Parczew (1564), located only 6 km from the Lithuanian border.¹¹ In 1578 Lublin was chosen as one of the two seats of the Crown Tribunal.

(1966)

III.2.2.4 GREATER POLAND

III.2.2a.4 DIOCESES OF GNIEZNO AND WŁOCŁAWEK

Arkadiusz Borek

As is customary with the AHP Series, the divisions and centres of Church administration are shown on two complementary maps. The main map has the seats of ecclesiastical administration units plotted, along with the borders of parishes, deaneries, archdeaconries, and dioceses. The thematic map entitled *Church divisions in Greater Poland in the late sixteenth century* presents the central towns of deaneries, archdeaconries, and dioceses, with the borders of deaneries and higher-tier units. In line with the Series' established assumptions, they render the state-of-affairs, in approximation, as at the late sixteenth century. This text is a commentary to the administrative divisions of the dioceses of Gniezno and Włocławek, as per the map. Since the latter diocese coincided with the territory of Greater Poland to a marginal extent, a definitely larger part of this text deals with Gniezno diocese.¹ Further on, discussed are the changes in the sixteenth-century Church administration structures, including the setting up of new archdeaconries and deaneries, the erection of parishes, and so on. Described are also the cases of doubt-rising or uncertain affiliation to ecclesiastical administration units, conflict situations, or localities with a shared parish affiliation. The below-described fragments of the two dioceses concerned were situated almost only in the Voivodeship of Kalisz.

The source material useful in the research into the structures of Gniezno diocese is rather unevenly distributed across the unit's sections. The best evidenced areas in this respect (in spite of the lack of detailed scientific studies²) are, apparently, the archdeaconries of Gniezno and Kalisz, both within the diocese of Gniezno. They are described in the *Liber beneficiorum*³ from the early sixteenth century (the descriptions of the Gniezno and Kalisz archdeaconries having been made in 1517 and 1521, respectively⁴), with canonical visitation records dating to the first decade of the subsequent century surviving for them.⁵ These records offer us an almost complete picture of the said archdeaconries, for both temporal scopes, any changes occurring in the course of the sixteenth century being easily graspable by comparing the two works. The historic records of use in a reconstruction of the structures of the sixteenth-century archdeaconry of Kamień, with the district of Nakło within it, is much poorer. The area

¹ For the reasons of why 'diocese' instead of 'archdiocese', see H. Rutkowski, *Church administration borders*, [in:] AHP Sieradz, in this edition III.2.2.5.

² For the present purpose, neglected are the studies on the history of individual localities and their respective parishes. A study has recently been produced discussing, *inter alia*, though in a not exhaustive manner, the parish divisions in district of Konin (J. Łojko and P. Wojtyński, *Powiat koniński od XVI do XVIII wieku*, "Rocznik Koniński", vol. 18, 2013, pp. 97–113). The descriptions of the border and structures of the entire Diocese of Gniezno in volume 1 of the catalogue of the archbishops of Gniezno penned by Jan Korytkowski (idem, *Arcybiskupi gnieźnieńscy: prymasowie i metropolici polscy od roku 1000 aż do roku 1821*, vol. 1, Poznań 1888, pp. 29–39) and the study by Bolesław Kumor (idem, *Granice metropolii i diecezji polskich 966–1939*, Lublin 1969). They have not proved useful in compiling this present study.

Kal. 1610–1611; Librowski, Repertorium 1, pp. 128–34; 'Wizytacja parafii archidiaconatu kaliskiego ok. 1602' (ADWł, Akta Archidiecezji Gnieźnieńskiej, Akta wizytacji archidiaconatu kaliskiego 1602, AAG, Wiz. 1 [Ośrodek Archiwów, Bibliotek i Muzeów Kościelnych, microfilm 3810]; Librowski, Repertorium 1, pp. 105–106) is actually a draft of the record of the visitations of 1603–1607; a check comparison of these historic records has showed no essential differences, hence the compilation of this commentary and the map has used the fair copy.

is not covered in the *Liber beneficiorum*; no visitation records from the early seventeenth century have survived. Parish districts are only referred to (though not exhaustively) in a 1653 visitation record; it came out together with the documents reorganising the archdeaconry's ecclesiastical structures, dated 1617, which documents enable us to get a picture of at least the parish centres within the district of Nakło.⁶ The situation at the beginning and the middle of the sixteenth century is moreover rendered in the lists of archiepiscopal tithes from the tithe district of Kamień, specified by parish, as for the years 1511⁷ and 1548.⁸ They cover about a half of the localities of Nakło district and the parish affiliations given by those records triggers doubt at times (the locality is situated far away from its attributed parish). For the archdeaconry of Kamień, greatly helpful has proved the study of its history by Andrzej Mietz.⁹ The difficulties in reconstructing the networks of parishes and parish districts are greatly due to the Reformation that proved to have been much stronger in Nakło district compared to the areas south of Noteć River.

In some isolated cases, later, seventeenth- and eighteenth-century, visitation records for Gniezno diocese have been used in respect of the entire territory concerned.¹⁰ Of use has also been the *Ordo ecclesiarum* contained in a 1628 synodal statutes volume.¹¹ The same is true for the *regests* (registers) from the dossiers of Gniezno Archbishops, edited by Henryk Rybus,¹² and the visitation repertories by Stanisław Librowski.¹³ The Gniezno diocese area is covered by descriptions of Greater Poland's churches in Jan Korytkowski's *Brevis descriptio*¹⁴ and Stanisław Kozierowski's *Schematyzm*.¹⁵ The quite detailed descriptions, with references to the records in the notes, authored by Korytkowski (in the LBG) need to be mentioned as well. Regrettably, all these studies are far from offering a comprehensive description of the historical relations, the pieces of information they give proving random. As an auxiliary material, *Regestr diecezjów* by Franciszek Czaykowski,¹⁶ documenting the diocese's state as at the end of the eighteenth century, has been used; it however does not deal with the territory seized by Prussia as part of the First Partition of Poland-Lithuania. Other data have come from tax registers, but let us remark that they were used rather carefully. The by-parish system used in these registers did not always reflect the actual state-of-affairs. The divisions of districts into parishes stemmed basically from the scribe's convenience in the compilation of the register and reflected the early parish divisions or blended them with the ownership structure; localities tended to be shifted among parishes; resulting from clerical errors, some inexistent parishes are specified.¹⁷ Hence, as an autonomous source, these

¹⁶ Czaykowski.

¹⁷ For instance, the parish of Gniezno – St. Adalbert [św. Wojciech], appearing in the registers as comprising the localities of Kawiary (Kawiorzy) i Rzegnowo (RPWK, gzn, 1564, no. 326; RPWK, gzn, 1565, no. 328; RPWK, gzn, 1576, nos. 306, 307; RPWK, gzn, 1577, nos. 297, 298; RPWK, gzn, 1579, nos. 102, 103; RPWK, gzn, 1580, nos. 405, 406; RPWK, gzn, 1581, nos. 345, 346, 347; RPWK, gzn, 1582, nos. 312, 313, 314; RPWK, gzn, 1583, nos. 322, 323; RPWK, gzn, 1588, nos. 336, 337). The Church records unambiguously indicate that Kawiary belonged to the Holy Trinity Parish and Rzegnowo, to the Parish of Dębica Mała. Gniezno's St. Adalbert parish appears to have been 'coined' by the authors.

records are only referred to when parochial affiliation could not be evidenced otherwise; in case of contradicting information, Church records prevail.

Based on the source material available, the Church structures of the archdeaconries of Kalisz and Gniezno, as plotted on the map, reflect the state recorded in the visitation records dating to the first decade of the seventeenth century, taking into account the modifications of up to the year 1600 (inclusive). It is worth noting that the fluctuations of parochial affiliations between the LBG and the first visitations are pretty marginal (usually, they were connected to the erections of new churches), all being described herein. The assumption of a concrete time range for the Nakło part of the archdeaconry of Kamień was a more difficult task, though. The decanal structures are shown from before 1617. The issue of parochial affiliation is even more complicated as we have at our disposal, on the one hand, not-quite-reliable sixteenth-century records (tax registers, lists of archiepiscopal tithes) and, on the other, visitation records dating to the middle of the seventeenth century and later. This being the case, the proposed reconstruction of the parish network and parish districts is partly hypothetical and retrogressive – mainly as regards the district's north-western part.

As for several parishes belonging to the diocese of Włocławek, whose territory partly coincided with that of Voivodeship of Kalisz, no serious interpretive problems were encountered. The reconstruction of their reach and territorial affiliation has been based on sixteenth-century records published in the *Monumenta historica dioeceseos Wladislaviensis*¹⁸ and the visitation records of Włocławek (not published in the series) kept at the Archdiocesan Archive in Gniezno.¹⁹ The situation shown in the map reflects the one as of the end of the sixteenth century.

Diocese of Gniezno

The borders

Analysis of the borders of the diocese of Gniezno covers its part situated in the area of Greater Poland (a third of the entire diocese), neglecting the northern part of the archdeaconry of Kamień situated in Pomeranian Voivodeship (Royal Prussia), and the south-eastern area, which are described in the two preceding volumes of the AHP. The part of Gniezno diocese discussed herein spread over a part of Voivodeship of Kalisz, marginally stretching beyond its limits. The village of Stęszewko (Stęszewo) of the Wronczyno parish, archdeaconry of Gniezno, was the only strip penetrating into Voivodeship of Poznań.

The eastern border of the diocese of Gniezno, beginning with the north-eastern edge of Nakło district, initially went southward mostly along the rivers and coincided with the voivodeship borderline. From the north downwards, the rivers included the Brda, Krówka (Plitwica), Noteć (Noteś), and Mała Noteć. At Gębice (Voivodeship of Brześć Kujawski), the voivodeship borderline (up to Brodowo) and the diocesan one departed from the natural borders, with some sections based on the rivers. The diocese's border crossed over the voivodeship borders at several points; such exceptions was the wedge-shaped area between the Krówka and the Noteć, covering the parishes of Nakło (Nakiel, in Nakło district), Samsieczno (Sąsieczno, Nakło district), Ślesin (Bydgoszcz district), and the Cuyavian part of the parish of Samokłęski (Kcynia district). The purpose behind the emergence of that 'wedge' can be explained in terms of the area's natural features. The muddy and boggy valley of the Noteć might have caused that originally, when the diocese's borders were formed, those areas had better communication with Gniezno area. The location of Ślesin and a part of Samokłęski parish in Voivodeship of Inowrocław probably stemmed, for a change, from ownership changes and from the emergence of district borders.²⁰

¹⁹ AAG, ACons. E 1 (Wizytacje diecezji włocławskiej z lat 1582, 1585, 1597 (visitation records, Diocese of Włocławek), hereinafter quoted by ref. no.); see W. Kujawski, *Repertorium ksiąg wizytacyjnych diecezji kujawsko-pomorskiej przechowywanych w Archiwum Diecezjalnym we Gnieźnie*, part 1, ABMK, vol. 77, 2002, pp. 151–90.

²⁰ A. Gąsiorowski, *Powiat w Wielkopolsce XIV-XVI wieku. Z zagadnień zarządu terytorialnego i podziałów Polski późnośredniowiecznej*, Poznań 1965, pp. 72–79.

The original cohesiveness of the area is attested by the fact that in as late as 1299, the locality of Rynarzewo was still located *in territorio de Nackle*.²¹

The subsequent shift of the diocese's borders from the voivodeship frontier and Noteć River was the case with Łabiszyn parish; this requires a discussion. The view is stated by some authors that the town whose centre was located in an isle within the Noteć was split between the dioceses of Gniezno and Włocławek, the Noteć forming their border. In the sixteenth century, the town proper belonged to the former and its right-bank suburb to the latter.²² This opinion should be rejected as it is based on a superficial analysis of sources. This division of the town is shown in the 1578 visitation record for Włocławek diocese,²³ which refers to two churches on the Gniezno side (St. Nicholas's parish church and the Holy Spirit hospital church) and three on the Włocławek side (St. Thomas's plus two unnamed – otherwise known as the Holy Cross and St. John the Baptist's²⁴). This information does not line up with the other records: beginning with the *liber retaxationum* of Włocławsek dating to 1527²⁵ through to eighteenth-century visitation records, the visitators focused on St. Nicholas's parish church, rather than St. Thomas's in the suburb. The same is true for the aforementioned 1578 record, which is the main reason behind the confusion: it describes a brick St. Nicholas's church located inside the town.²⁶ On the other hand, there is no visitation record for Gniezno that would extend to Łabiszyn, which is not mentioned in the LBG, either. The erroneous communication from the 1578 record is possibly explainable by the author's reference to the geographical context. The 1583 visitation record says, 'Praedicta ecclesia [i.e. St. Nicholas' – A.B.'s note] est ultra fluvium iam in Polonia Maior, qui fluvius limitat dioceses et districtus'.²⁷ So, the Noteć was basically treated as a diocesan border, and hence the 1578 visitation records informs on a division of the town. This is explained by the fact that by as late as the latter half of the fifteenth century, the parish church for Łabiszyn was St. Thomas's, situated on the 'Włocławek side' of the Noteć,²⁸ which might have affected the perception of the diocesan border.

There is a similar story regarding the divergence of borders near Barcin, with the centre of the local parish also situated at the 'Gniezno side' of Noteć River; it may be presumed that the original settlement centre was located at the Cuyavian side, though. Also the earliest cartographic records indicate that access to the town area was more difficult from Greater Poland's side, owing to the swampy valley of the Noteć.²⁹ The other instances of difference between the voivodeship and diocesan frontiers are Pakość, Skulsk, Sompolno, and Brdów (Brdowo). The first three were situated in Cuyavia, whereas Brdów was part of the district of Konin. The diocesan affiliation of the Pakość parish to Gniezno diocese

²⁷ AAG, ACons. E 1, f. 18v.

²⁸ Ulan. Act. Cap., vol. 1, no. 1189. Also, as confirmed by visitation records of 1578 (MHDW 17, p. 21), 1582, and 1585 (AAG, ACons. E 1, ff. 17v–18v, 63r), albeit there are traces that suggest the presence of an older structure in lieu of St. Nicholas's church (J. Kohte, *Verzeichnis der Kunstdenkmäler der Provinz Posen*, vol. 4: *Die Kunstdenkmäler des Regierungsbezirks Bromberg*, Berlin 1897, p. 163; KZS, vol. 11, no. 14: *Szubin i okolice*, Warszawa 1977, p. 29). Attention should moreover be paid to the fact that today's St. Nicholas's replaces site-wise the former St. Thomas's. The historical St. Nicholas's church was consumed by fire in 1761, and is presently replaced by an Annunciation church. St. Thomas's. Was dismantled at the end of the sixteenth century; a Protestant church was at that place. Once decommissioned in 1627, the Franciscans of the Strict Observance were brought in and built a new St. Thomas's church-and-convent. After the convent's dissolution in w 1829, the former monastic church was consecrated in 1833 at St. Nicholas's; R. Nowicki, *Z przeszłości Łabiszyna*, pp. 16, 18, 21; A. Drozd-Lipińska, *Klasztor O.O. Reformatorów w Łabiszynie: historia i teraźniejszość*, "Materiały do Dziejów Kultury i Sztuki Bydgoszczy i Regionu", vol. 15, 2010, pp. 85–87. This troublesome situation easily brings about mistakes; see M. Wrzeszcz, *Łabiszyn*, [in:] *Encyklopedia katolicka*, vol. 11, Lublin 2006, col. 339.

²⁹ Gilly 1802; UMTB, sheet 1650 (1832).

was owed to its location on the left bank of the Noteć.³⁰ As for Skulsk, the local parish belonged to the diocese of Włocławek, its centre being located in Cuyavia, whereas most of its district's villages were situated in Gniezno district (the line formed by the nearby lakes might have been treated as a natural border between the dioceses). Albeit within Włocławek diocese, Brdów, in turn, was part of Konin district. Skulsk and Brdów were mentioned as part of Włocławek diocese already in 1325.³¹ Sompolno is an interesting case in that it was considered part of Cuyavia earlier on³² as well as in the sixteenth century. It was moreover situated at the edge of the deanery for which it was the centre, whilst also being the deanery's only parish located in Cuyavia. In this particular case, the divergence between the diocesan and the voivodeship border (as well as the status of Sompolno and the deanery's centre) was probably founded upon the ownership of Sompolno by the Archbishop of Gniezno.³³ A slight divergence of borders was the case with the village of Brzezie, Przedecz district, which belonged to the parish of Mąkolno (Mąkolino) in Gniezno diocese. Beyond Brodowo, the voivodeship border was set within Gniezno diocese (as discussed further on). A short fragment of the border between the dioceses of Wrocław and Gniezno coincided with the border between the districts of Kalisz and Ostrzeszów. The border between the diocese of Gniezno and the diocese of Poznań is discussed in the commentary on the latter (see B. Szady, *The Church administrative borders, B. Dioceses of Poznań and Wrocław* in this volume).

Archdeaconries

District archdeaconries were known in the diocese of Gniezno since the thirteenth century.³⁴ In the early sixteenth, there were two archdeaconries within Gniezno diocese in Kalisz Voivodeship territory – namely, the ones of Gniezno and Kalisz. The voivodeship's area almost insignificantly overlapped with the archdeaconry of Łęczyca, which encompassed two villages in Konin district – namely, Bylice and Byliczki, belonging to Borzysławice parish (Łęczyca district) in the deanery of Kłodawa,³⁵ and the archdeaconry of Uniejów (also in Konin district) that encompassed the village of Podłużyce belonging to the parish of Wilamów (Wielanów; Szadek district), deanery of Uniejów. The number of archdeaconries in the territory concerned increased in the beginning of the century's second decade when Archbishop Jan Łaski founded on 20 October 1512 the archdeaconry of Kamień. The unit was isolated from the northern deaneries of Gniezno archdeaconry (see below), and its establishment was related to problems with keeping the local clergy obedient.³⁶ The area of this newly-formed archdeaconry coincided with that of the earlier Officiality of Kamień.³⁷

The archdeaconries of Kalisz, Gniezno, and Kamień formed an area stretching from the south to the north, their western and northern borders (save for the southern section of Kalisz archdeaconry) coincided with the diocese's frontiers. The divisions between them were latitudinal and significantly coincided with the district borders. Kalisz archdeaconry encompassed most of Kalisz district and a part

³⁰ Between the mid-thirteenth and mid-fourteenth centuries, the Pakość church was under the archbishop's patronage; S. Kozierowski, *Szematyzm historyczny ustrojów parafjalnych dzisiejszej Archidiecezji Gnieźnieńskiej*, p. 151.

³² S. Arnold, *Terytorja plemienne*, 33.

³³ The situation where an estate of a Church institution was situated outside of the institution's diocese was regarded rather inconvenient. The Cracow Chapter's endeavours to have the Pabianice estate (in Gniezno Diocese) replaced with the Piórkowo set of properties within Cracow diocese, Lesser Poland (Małopolska), which was property of bishops of Cuyavia in the middle of the fifteenth century (M. Kowalski, *Uposażenie krakowskiej kapituły katedralnej w średniowieczu*, Kraków 2000, pp. 55–56), and the replacement of the Wolbórz estate owned by Cuyavian bishops, Gniezno Diocese, with Bydgoszcz deanery in the eighteenth century (B. Kumor, *Granice metropolii*, pp. 327–329), are evidenced by the records.

³⁷ A. Gąsiorowski and I. Skierska, *Początki oficjalatu kamińskiego archidiecezji gnieźnieńskiej (wieki XIV–XV)*, KH, vol. 103, 1996, no. 2, p. 17. Let us mention that before the early fourteenth century, Gniezno Diocese reached much further northwards, encompassing the Castellany of Słupsk. Those areas were detached from the diocese once their connection with Poland was broken (ibidem, pp. 4–8).

of Pyzdry district (deanery of Krotoszyn/Kobylin) and, in the east, the one of Sieradz, too. Gniezno archdeaconry covered the districts of Konin, Gniezno, and Kcynia, entering from the north-east the district of Pyzdry and, in fragments, the areas of Voivodeships of Łęczyca (parish of Grzegorzewo) and Sieradz (parish of Turek). The southern half of Kamień archdeaconry (up to the Rivers of Kamionka and Debrzynka in the north) coincided with Nakło district area. The parish of Ślesin in Voivodeship of Inowrocław was an exception. The said archdeaconry stretched beyond Kalisz Voivodeship and covered the districts of Człuchów and, partly, Tuchola. The coincidence of borders in question was mainly based on environmental factors than historical associations with secular and ecclesiastical divisions. The border separating the archdeaconries of Kamień and Gniezno was set along the Noteć River, and that between Gniezno and Kalisz archdeaconries, along the primeval forest on the borderline of the districts of Konin and Kalisz.

The eastern and western borders of Kalisz archdeaconry are interpreted as a trace of the former secular divisions. In this case, the eastward shift of the archdeaconry's core territory is distinct, relative to the Kalisz district area where on the Sieradz side a strip of the archdeaconry's parishes stretched. The historical association between the archdeaconry and the territory of Kalisz seems certain. Comparing the borders of the other archdeaconries against state administration units, it was the archdeaconry of Kalisz and the Territory of Wieluń that prove the closest to their secular counterparts. As far as Kalisz archdeaconry is concerned, considerable changes occurred in the course of formation of state administrative borders. The view is commonly accepted whereby the archdeaconry's eastern frontier was a remnant of the original border of the Land of Kalisz, which with time began to shift westwards.³⁸ The layout of the archdeaconry's borders in the west is also interpreted as earlier than the coinciding secular structures, including the separated exclave of Kobylin. The origins of the latter are unclear: the most plausible version seems to be the one linking it with the original dependence of those areas with the diocese of Gniezno as part of the territory of the former stronghold of Czestram. The settlement processes taking place in the later period in the afforested area north of Odolanów formed the borders that were known in the sixteenth century.³⁹

Deaneries

The functioning of deaneries in the diocese of Gniezno in the early sixteenth century is well evidenced; however, their network was subject to considerable changes during the century. The reorganisation resulted from the Polish Episcopate's strivings to withhold the progress of the Reformation. The bishops saw the office of rural deans an instrument with which to discipline and reform the clergy whose low moral and intellectual standards were perceived as feeding the popularity of Protestantism.⁴⁰ The exact dating of the changes in the archdeaconries of Gniezno and Kalisz is not known; for Kalisz archdeaconry, it is not even certain if such change actually took place. The literature places those events in the years 1583–9. Though no record has been found to confirm these statements, they seem fully probable.⁴¹ The earliest date would be the year in which the diocesan synod of Gniezno was held, at which the issue of renewing the deaneries was put on the table;⁴² the latest would be the date of the subsequent diocesan synod (no record of its decisions has survived).⁴³ The diocesan synod of 1593 took

a more detailed stance with respect to the renewal of deaneries.⁴⁴ As we can learn, the reorganisation of the existing and setting up of new deaneries was to be dealt with by the archdeacons during their coming visitation. None of the visitations of the first decade of the seventeenth century was carried out with such a purpose, since their records do not mention any such change whatsoever. Wincenty de Seve, who inspected the archdeaconry of Gniezno in 1608, reminisced that around 1603 he had done another visitation; however, again, there is no reason to refer it to the reform of the deanery structures in Gniezno archdeaconry.⁴⁵ Taking the account the role of Stanisław Karnkowski, who served as archbishop in 1581–1603 and was strongly involved in the remodelling of the Polish Church in the post-Trent spirit, and who personally inspected Gniezno diocese parishes or had his archdeacons do it,⁴⁶ it can be accepted that the deanery reform (for the archdeaconry of Gniezno) took place before the end of the sixteenth century, as possibly testified by the aforesaid synodal statutes. The last diocesan synod convened by Karnkowski in 1602 adopted no new resolutions regarding the deaneries; what it did is it repeated the relevant article from 1593,⁴⁷ which might suggest that not all the archdeacons met their obligations (which is certain for the archdeaconry of Kamień).

The results of the reform of the deaneries in the archdeaconry of Gniezno are fully graspable if one compares the LBG and the earliest visitations. The former enumerates six deaneries – namely, those of Gniezno,⁴⁸ Łekno, Żnin, Zbar, Konin, and Słupca; as per the 1608–9 visitation record, there were eight deaneries: Gniezno – St. Peter's,⁴⁹ Gniezno – Holy Trinity, Gniezno – St. Michael's, called 'of Zbar' (*zbarski*, after the names of the local churches⁵⁰), Łekno, Żnin, Konin, Sompolno, and Słupca. Only the deaneries of Łekno, Konin and Słupca remained intact as the change progressed. The reform mainly consisted in the establishment of three Gniezno deaneries and a deanery of Sompolno, based on the Gniezno and Zbar deaneries' territory. The deaneries of St. Peter's and Holy Trinity were formed of, respectively, the north-western and south-western part of Gniezno deanery. The deanery of St. Michael's ('of Zbar'; hereinafter, 'St. Michael's') was formed of the eastern part of Gniezno deanery and of the northern part of Zbar deanery. The 'Zbar' segment in its name was based on the latter, itself coming from the burg of Zbar. The date it perished remains unknown; in any case, Zbar has lent the name to the territory and the castellany which were mentioned in the records up to the fifteenth century. The convergence between the territory and the deanery of Zbar is pretty well confirmed; some of the localities appearing in mediaeval documents and localised in the land of Zbar were later mentioned in Zbar deanery in the LBG.⁵¹ This instance, and the evident divergence between the deanery borders

⁴⁴ *Synodus dioeciesana Gnesnensis celebrata Lovicii, Anno Christii M.D.XCIII Die XXIX mensis Martii*, Posnania 1593, p. 44.

⁴⁵ Wiz. Gn. 1608–1609, f. 3r. This earlier Gniezno visitation can be associated with the Kalisz visitation of 1603–7, as directly pointed to by the Kalisz archdeacon's reminiscence of Wincenty de Seve; Wiz. Kal. 1603–1607, pp.7–8; also, see Librowski, Repertorium, part 1, p. 107; Librowski, Repertorium, part 5, p. 24.

⁴⁶ A. Bruździński, *Działalność prymasa Stanisława Karnkowskiego w zakresie wprowadzania uchwał Soboru Trydenckiego w Polsce 1581–1603*, Kraków 1996, pp.168–71; idem, *Działalność duszpasterska prymasa Stanisława Karnkowskiego*, „Folia Historica Cracoviensia”, vol. 3, 1996, pp. 109–110; see also J. Gręźlikowski, *Wkład biskupa Stanisława Karnkowskiego w dzieło recepcji reformy trydenckiej w diecezji włocławskiej*, „Prawo Kanoniczne”, vol. 44, 2001, no. 1–2, pp. 161–84; A. Bruździński, *Wkład biskupa Stanisława Karnkowskiego w zastosowanie uchwał Soboru Trydenckiego w diecezji kujawsko-pomorskiej (1567–1581)*, „Studia Włocławskie”, vol. 6, 2003, pp. 439–451; J. Gręźlikowski, *Biskup Stanisław Karnkowski jako ustawodawca. Wkład w dzieło recepcji reformy trydenckiej w diecezji włocławskiej*, „Studia Włocławskie”, vol. 7, 2004, pp. 355–368.

⁴⁷ *Concilia Poloniae*, vol. 5, pp. 187–200.

⁴⁸ Not specified by name; see J. Łukowski, *Liber Beneficiorum Jana Arcybiskupa Łaskiego*, „Roczniki Towarzystwa Przyjaciół Nauk Poznańskiego”, vol. 10, 1878, p. 8.

⁴⁹ The present-day Sts. Peter and Paul's church was at the deanery's centre. The latter apostle appears in the visitation record as the church's name only as of 1697 – the year his name was added to the deanery's name; Librowski, Repertorium, part 5, pp. 77–79.

⁵⁰ In the map provided, the localities of Wójtostwo and Piotrowo are shown as the seats of the Deaneries of St. Peter's and St. Michael's, respectively. The material used herein (LBG, tax registers, visitation records; Librowski's, Repertorium, part 5) never identifies them as the source for the names of the parishes they were the centres of. The parishes were always termed by their dedications, possibly specifying them as 'of Gniezno' (suburban, external/'outside the city walls'). For this reason, the parishes' names differ from the names of localities as per the map. The same concerns the parish of St. Laurent [*św. Wawrzyńca*] in Jędrzejewo.

⁵¹ S. Kozierowski, *Szematyzm historyczny ustrojów parafialnych dzisiejszej Archidiecezji Gnieźnieńskiej*, p. 51; S. Arnold, *Terytorja plemienne*, pp. 23–24; J. Bieniak, *Wielkopolska, Kujawy, ziemia łączycka i sieradzka wobec problemu zjednoczenia państwowego w latach 1300–1306*, Poznań 1969, pp. 40–41, 153; UdR. Spisy I/1, p. 166; SGKP XIV, p. 509.

and the district ones, unambiguously indicate that the deanery divisions within the archdeaconry of Gniezno in the early years of the sixteenth century date back to quite a long time ago. The last of the century's newly-founded deaneries was the deanery of Sompolno, formed of the southern part of the former Zbar deanery. Resulting from the reforms, the deanery of Żnin incurred slight territorial losses, including the one-village parish of Skórki, lost to St. Peter's deanery,⁵² and the parish of Wielatowo, which was incorporated in St. Michael's deanery.⁵³ The deanery affiliation of the parish of Trzemeszno at the beginning of the sixteenth century is problematic: not specified in the LBG,⁵⁴ it was situated at the border of the border area of Gniezno, Zbar, and Żnin deaneries. After the deanery reform, it was part of St. Michael's deanery.⁵⁵ It is worth noting that as far as the reform is concerned, no apparent dependence upon the state administration divisions are identifiable.

Table 1. Gniezno archdeaconry's parishes that altered their deanery affiliation between the beginning and the end of the sixteenth century

Name in the sixteenth century	LBG	1608–9 visitation
Budzisław	[of] Zbar	St. Michael's
Czerniewo	[of] Gniezno	Holy Trinity
Dąbrowa	[of] Gniezno	Holy Trinity
Dębna	[of] Zbar	[of] Sompolno
Dębnica Mała	[of] Gniezno	St. Peter's
Dęby	[of] Zbar	[of] Sompolno
Duszno	[of] Gniezno	St. Michael's
Dziekanowice	[of] Gniezno	Holy Trinity
Gądecz	[of] Gniezno	St. Peter's
Jemielno	[of] Gniezno	Holy Trinity
Gniezno	[of] Gniezno	Holy Trinity
Gosławice	[of] Zbar	[of] Sompolno
Grzybowo	[of] Gniezno	Holy Trinity
Gurowo	[of] Gniezno	Holy Trinity
Jabłkowo	[of] Gniezno	St. Peter's
Jankowo	[of] Gniezno	St. Michael's
Janowiec	[of] Gniezno	St. Peter's
Jarząbkowo	[of] Gniezno	Holy Trinity
Jędrzejewo	[of] Gniezno	Holy Trinity
Kamieniec	[of] Zbar	St. Michael's
Kazimierz	[of] Zbar	[of] Sompolno
Kędzierzyno	[of] Gniezno	Holy Trinity
Kiskowo	[of] Gniezno	Holy Trinity

⁵² LBG I, p. 165; Wiz. Gn. 1608–1609, f. 56v–58r. Let us note that the mention of this parish's name in the LBG as part of Żnin Deanery may have to do with its subjection to the Rogowo parson's command. As of 1608, Skórki had an instituted, though non-residing, parson of its own.

⁵³ LBG I, pp. 187–188; Wiz. Gn. 1608–1609, f. 232v–234v.

⁵⁴ The reason might be that it was, in parallel, a conventual church, and thus is not mentioned in the list of benefices. Of Gniezno Archdeaconry, the parishes of Trangel and Strzelce are not mentioned, though their deanery affiliation is clear and did not alter between the beginning and the end of the sixteenth century.

⁵⁵ Wiz. Gn. 1608–1609, f. 230r.

After: LBG and Wiz. Gnz. 1608–1609 (Author's own compilation).

The least clear are the deanery divisions in the archdeaconry of Kalisz at the beginning of the sixteenth century. LBG gives no specification of deaneries in this area and thereby no changes can be ascertained compared with the later structure. The visitation records from the years 1603–7 and 1610–11 describe a total of five deaneries: Kalisz, Kobylin *sive* Krotoszyn, Pleszew, Staw, and Stawiszyn. There is evidence, however, that deaneries existed in the area already in the fifteenth century. The earliest found mention of the deanery of Pleszew dates to 1471/3:⁵⁶ the same record, a Kalisz consistory file, mentions the name of Piotr, the parson and rural dean in Pleszew;⁵⁷ as of 1539, a certain Łukasz is reported to have held the same functions.⁵⁸ That the office of Pleszew dean existed is confirmed by the town's sixteenth-century municipal registers, mentioning the deans named Grzegorz (as of 1512)⁵⁹ and Wojciech (in 1553 and 1563).⁶⁰ Moreover, references can be found in the Kalisz consistory file of the deanery of Stawiszyn.⁶¹ It may be supposed that a separate deanery was formed at a rather early date by the enclave around Krotoszyn. From the standpoint of the ecclesiastical administration, it would have been a natural move to establish a separate unit there, due to the distance from the rest of the archdeaconry. The early seventeenth century saw the renaming of the deaconry. As we are told by the visitation records, once the churches in Krotoszyn were regained by the Catholics in 1600,⁶² the deanery office was moved from Kobylin to Krotoszyn, and it is the latter town whose name was adopted by the deanery ('non Cobelinensis sed Crotosinensis decanatus amplius nominatur'). This alternation was reportedly consulted with Archbishop Karnkowski (Krotoszyn was inspected shortly after his death).⁶³ For this reason, the appropriate name for the deanery in the latter half of the sixteenth century is 'of Kobylin' (*kobyliński*), rather than 'of Krotoszyn' (*krotoszyński*). The changes in the names of deaneries, with the transfer of the office of dean (particularly in the early period of their functioning) is a known fact.⁶⁴ The afore-quoted information suggests that the deanery in the area of the exclave had a tradition dating back to at least the sixteenth century. As has been remarked, the LBG provides

no information on the deanery divisions (it does not even mention the deans!). A spatial analysis of the sequence of entries on the parishes has shown no considerable convergences with the deaconry layout at the beginning of the seventeenth century,⁶⁵ so there is no basis for attempting a hypothetical reconstruction. The parish layout as per the LBG is explainable in terms of the archdeacon's preferred travel itineraries⁶⁶ and the territory's compactness. The temptation to identify the deaneries' borders at the end of the sixteenth century with their earlier counterparts should primarily be prevented by the awareness of the tendency to carry out deanery reforms in the latter half of the sixteenth century. To sum up, there is no doubt that deaneries existed in the archdeaconry of Kalisz before the seventeenth century, though nothing can be said of their reach or number. The fact that the LBG passes over Kalisz archdeaconry's deaneries in silence could have been due to the actual decline in the importance of deaneries in late mediaeval Poland.⁶⁷

As opposed to the two earlier-described archdeaconries, the deanery reform in the archdeaconry of Kamień is very well documented in the records. It was carried in that area later on in 1617 (possibly due to the instability of Church structures in an area strongly impacted by the Reformation), whereas the reorganising document dated 1617 enables to recognise the borders of deaneries from before then.⁶⁸ The Nakło part of Kamień archdeaconry included in the sixteenth century two deaneries: the ones of Nakło (split in 1617 into the deaneries of Nakło and Łobżenica) and Sępólno (Krajeńskie, later, Więcbork). These deaneries, as well as those of Chojnice and Tuchola in Pomerania, are also known from the founding deed for the archdeaconry of Kamień of 1512.⁶⁹ In as early as the late sixteenth century, Sępólno deanery was managed by the parson of Więcbork, though the phrase *Decanatus ruralis Więdzborgensis* first appears in 1621.⁷⁰ Let us remark that albeit the central town an archdeaconry, Kamień Krajeński was not central for the deaconry. The border dividing the archdeaconry into a northern and a southern part, along the Rivers Kamionka and Debrzynka, until the 1617 reorganisation, which diverged from the voivodeship frontier at several points, calls for some explanation.⁷¹

The first and the most controversial point that calls for a detailed commentary is Downica (Lędyczek, called Lędyczek Szlachecki (the 'noble' Lędyczek) in the nineteenth century) – a settlement to be found in sources only in 1556,⁷² for which it is considerably difficult to determine the parish affiliation and, thereby, the deanery affiliation. The tax registers of Nakło describe the locality as a parochial one, inclusive of Debrzno-Wieś. In any case, it has to be rejected that such a parish functioned in Downica (apparently, it is merely a clerk's construction). We have no confirmation that a church existed in Downica in the sixteenth century, whilst Debrzno-Wieś belonged to a different parish (see below). There was a church located in the *starosta's* Lędyczek (*Lędyczek starościński*) directly on the other side of the Debrzynka, opposite Downica (i.e. Lędyczek Szlachecki). Marian Biskup and Andrzej Tomczak⁷³ mark the *starosta's* Lędyczek as the seat of a parish, referring to the tax-collection register for the Voivodeship of Pommerania of 1570: 'Landeck villa habet templum'.⁷⁴ It was however not a fully-fledged parish church; as a 1565 inspection (*lustracja*): 'There's no church but a small chapel whereto, so that the divine service be there, the settled gardeners are paying 19 to the parson per sol. 5. No

⁶⁵ From this perspective, the sequence of parishes as per the LBG is as follows: 1 parish in the later Deanery of Kalisz; 1 in the Deanery of Staw; 1 in the Deanery of Stawiszyn, 3 in Kalisz Deanery, 7 in the Deanery of Krotoszyn (entire area, except for Sulmierzyce parish); 10 in the Deanery of Pleszew, 1 in Stawiszyn Deanery (Chodecz, located at the border with Pleszew Deanery); 8 in Pleszew Deanery, 8 in Kalisz Deanery, 4 in Pleszew Deanery, 5 in Kalisz Deanery, 16 in Staw Deanery, 1 in Stawiszyn Deanery (Kamion [Kamień], at the border with Staw Deanery), 4 in Staw Deanery, 15 in Stawiszyn Deanery, and 1 in Staw Deanery.

tithe are they paying⁷⁵ (the parson is not specified). The presence of a church in the Pomeranian part of Lędyczek might have been the reason why the Nakło part was recorded as the parish's seat. The situation of Debrzno-Wieś within it stemmed probably from the fact that it belonged to a parish with its centre in Pomerania, analogously to the church in the *starosta's* Lędyczek. Andrzej Mietz provides no explanation at this point. In his study of Kamień archdeaconry, he initially suggests – partly resulting from an erroneous interpretation of the information contained in tax registers – that Downica was subordinated in the sixteenth century to the parish of Lędyczek *starościński* on the Pomeranian side of the Debrzynka and thereby was part of the deanery of Chojnice (which was split in 1617 into the deaneries of Człuchów and Czarne). Further on in his book, Mietz mentions the locality's affiliation to the parish of Zakrzewo, located in the deanery of Nakło.⁷⁶ The former option can be supported by tax registers (which are not fully reliable records, as demonstrated above) as well as by the visitation record of 1652–3, which describes both localities named Lędyczek, mentions a wooden church and remarks that the locals – though Protestants – pay the *meszne* tax (vested in the parish for celebration of masses at the church) to the parson at Uniechów (thus suggesting the affiliation with this parish). The latter option would appear correct because of an eighteenth-century attribution of Downica to the parish of Radawnica⁷⁷ (which was probably separated out of the parish of Zakrzewo in the early seventeenth century; see below) and of the sixteenth-century ownership structure that tied Downica/Lędyczek to the district of Nakło,⁷⁸ The list of churches in the diocese of Gniezno from 1628 refers to Lędyczek twice: once, as a branch (*filia*) of Uniechów (which corresponds with the later mention in the visitation record) and then again as a profaned church in the deanery of Łobżenica⁷⁹ (probably referring to the church built by the Protestants). As in the course of the 1617 reorganisation, Lędyczek in Pomerania joined the deanery of Człuchów, the second piece of information from the list of churches refers to the Lędyczek of Nakło. Since we have no reliable information as to the parochial affiliation of Downica in the sixteenth century (which is true also for other localities in the same part of Nakło district; see below), whereas the later sources are ambiguous, it was resolved in this particular case that Downica/Lędyczek belong to the parish of Zakrzewo. This conviction is additionally reinforced by the fact that the border along the Debrzynka was rather durable in that area with regards to administrative divisions. Before 1466, it was part of the state border; by as late as the end of the nineteenth century, the oppositely situated localities of Lędyczek and Lędyczek Szlachecki belonged to separate parishes as well as districts.⁸⁰ The two Lędyczeks were merged into one locality only after the Second World War 2. The strongest argument against the latter-mentioned option would seemingly be the distance between Lędyczek and Zakrzewo – that is, approximately 19 km; let us remark however that in this area (which is better documented source-wise) the distances between some localities and their respective parishes equalled 15 km or even more.⁸¹ Given all these circumstances, the distance for Lędyczek was the largest; this had probably been due to retardations in the development of the parochial network versus the settlement, with the Reformation also having an impact. An attempt to solve those problems was the setting up of the parish in Radawnica (see below).

The sixteenth-century deanery frontier diverged from the district and natural ones for the settlement of Debrzno-Wieś (Debrzno), belonging to the parish of Debrzno (Frydland), whose centre was in the deanery of Chojnice.⁸² The deanery of Tuchola, in turn, stretched into the Nakło side of the Kamionka near the village of Mała Cerkwica belonging to Duża Cerkwica parish in Pomeranian Voivodeship.⁸³ The crossing of the voivodeship border on the Kamionka was practiced in the opposite direction as well. The deanery of Sępólno covered the Pomeranian localities of Orzełek (parish of Kamień) and

Pamiętowo (parish of Zalesie).⁸⁴ There are certain doubts as to the parochial affiliation of the locality named Obkas, Tuchola district. In 1592, the local church was described as a *cappella*. The beneficials, properties and privileges, together with the *meszne* church tax, belonged to the benefice of the archdeacon of Kamień,⁸⁵ in which the parish church was incorporated as well, based on the founding deed.⁸⁶ It seems that by the end of the sixteenth century the church in Obkas might have been affiliated; with the lack of sufficient evidence, however, Obkas has eventually not been plotted within Kamień parish.⁸⁷

Parishes and parochial districts

The rules of plotting parochial centres in the main map and the reference map of the Church structures are identical to those followed in the preceding volumes of the AHP.⁸⁸ Parish centres and pastoral districts functioning at the end of the sixteenth century have been plotted. Filial churches with their own districts were treated on an equal footing;⁸⁹ they are marked in the same way (reference number, borders) as the parishes proper. The status of these churches is not always obvious. The records used often do not allow for an unambiguous resolution, and the later status of the most problematic cases resulted from a long-lasting process whose course was determined by legal, economic, or institutional factors, and it is not quite legitimate to directly project it onto the sixteenth century. The other assumption adopted for the series is that parish churches seized/occupied by Protestants, whose function and districts were not suppressed by the Catholic Church authorities,⁹⁰ are shown in the same way as the churches remaining in the Catholic hands.⁹¹ Details concerning Protestant churches form a separate chapter and are shown on a separate map. Hence, no 'pure' picture of the network of pastoral units has been produced, as a result. Given that the proposed map is meant to support further historical research, showing on it also those centres whose status diverts from the idea of a normally functioning parish,⁹² but which might be come across by historians in their own studies. The Church sources continuously took account of them as legal entities, at least in postulative terms, and there are no premises for their being arbitrarily included in other pastoral units.

The changes in the status of the churches and thereby in the network of pastoral districts in the diocese of Gniezno appeared, in legal terms, along either of the two lines – canonical erection of a new parish in a singled-out territory of the former parish or suppression of a parish and its inclusion in the territory of the adjacent one.

In the archdeaconry of Kalisz, three new parishes were founded by separation (singling-out) during the sixteenth century – namely, the ones of Zakrzyno (Zaksino, detached from Lisków in 1540),⁹³

⁸⁴ Mietz, p. 36.

⁸⁵ AAG, ACap. I 147, f. 301r.

⁸⁶ Mietz, p. 270.

⁸⁷ The churches in Obkaz, Cerkwica Wielka, and Dąbrówka were formally incorporated in 1615, as part of the reorganisation of the archiepiscopal demesne; hence, the later records situate them, alternately, in the Deanery of Tuchola or Więcbork (Kamień belonged to the latter); *ibidem*, pp. 132, 143–144.

⁸⁸ M. Piber-Zbieranowska, *Church administration borders*, [in:] AHP Cracow in this edition III.2.2.1.

⁸⁹ I use the term 'filial' with respect to churches, of diverse types, without full parochial rights. The records are quite ambiguous in this respect; this is especially true for the terms *ecclesia filialis* and *capella*. Unless based on detailed studies on the legal situation of the individual churches and their functioning, no arbitrary categories that would help to determine the status of other sacred buildings within the parish. One option would be to highlight the filial churches with their own districts (filial parishes), as was done at the outset of the AHP series. Their formal rights tended to vary to a considerable degree. See S. Litak, *Struktura terytorialna Kościoła łacińskiego w Polsce w 1772 roku*, Lublin 1980, pp. 20–22; *idem*, *Kościół łaciński w Rzeczypospolitej około 1772 roku. Struktury administracyjne*, Lublin 1996, pp. 56–59, 62; Mietz, pp. 44–45; E. Wiśniowski, *Parafie w średniowiecznej Polsce. Struktura i funkcje społeczne*, Lublin 2004, pp. 54–56; P. Jokes, *Kościół filialne i ich miejsce w organizacji parafialnej średniowiecznych Moraw*, „Prace Historyczne”, vol. 137, 2010, pp. 21–26.

⁹⁰ The procedure is justifiable in terms of the period's ecclesiastical legislation. In the latter half of the sixteenth century, the view was adopted at diocesan, and subsequently provincial, synods that the seized parishes ought not to be dissolved, the care over the parishioners (and the related income) to be taken over by the parsons of the adjacent units; see B. Kumor, *Dzieje ustroju kościelnego*, p. 106; I. Subera, *Synody prowincjonalne*, pp. 116, 256–257. That such a solution was applied in practice is indirectly confirmed by Gniezno visitation records from the early seventeenth century, describing (though usually less precisely) the seized parishes, remarking that the parishioners receive the sacraments in the neighbouring churches.

⁹¹ M. Piber-Zbieranowska, *Church administration borders*, [in:] AHP Cracow in this edition III.2.2.1.

Żerniki (detached from Blizanów in 1569),⁹⁴ and Dębe (detached from Kamień parish in 1600).⁹⁵ The status of Żerniki parish requires some explanation. Although a document survives that confirms the founding of the local parish church, the legal grounds of its functioning were challenged by the parsons from Blizanów and Rychnów, in connection with the situation surrounding the ‘erection’. Before 1568, the churches in Blizanów and Rychnów were taken over by Protestants. The situation was taken advantage of by Jan Ciświcki, the then-owner of Żerniki, who obtained consent for setting up a separate parish in Żerniki, which entailed territorial losses of the earlier parishes: Blizanów lost Żerniki, and Rychnów had Kurza and Wyganki detached. It was a logical move, given the practice of adjusting the parish area to the local ownership borders. Wyganki also belonged to Jan Ciświcki, who was a leaseholder (*tenutariusz*) with Kurza.⁹⁶ Thus, the parish of Żerniki emerged at the expense of two neighbouring ones, at the moment when they had no parsons in office, and their Protestant patrons did not deem this fact to be of importance or their protests were ignored for denominational reasons. The situation changed once the churches of Rychnów and Blizanów became Catholic again; their parsons endeavoured to have the state from before the Reformation reinstated.⁹⁷

An interesting case as far as vanishing of parishes is concerned is the locality of Chorzewo in the district of Kalisz. In 1518, the local parish was linked with Brzezie by a union, on initiative of the patrons of the Chorzewo church, who argued that their benefice suffered from poor income, apparently too low to support the local parson. The LBG confirms the church’s deplorable situation: of the four parish villages, Chorzewo alone was not described as *deserta*.⁹⁸ Such poor endowment and the related union of parsons’ benefices usually led to the decommissioning of the economically weaker parish, usually through affiliation with the stronger one.⁹⁹ The process was stopped by the seizure of the Brzezie church by the Protestants (they kept it until the early seventeenth century).¹⁰⁰ In this specific case, the Reformation, usually assessed as a factor destructive to the Church structures,¹⁰¹ helped preserve the initial state. The parish of Brzezie was institutionally and functionally unable to completely take over the church linked with it. As a result, on the visitation of both centres in the early years of the seventeenth century, Chorzewo was reported on as the centre of the parochial life, albeit the church was severely devastated and village largely depopulated.¹⁰² This is why the parish is plotted exactly in such a way.

In spite of adverse conditions, the parish of Ostrówce (as of the sixteenth century, Ostroszce, Kcynia district) formally survived. The case was peculiar since not only the church but the entire village declined with time. While in the early sixteenth century the parish still functioned, it had no considerable income at its disposal.¹⁰³ The village became deserted with time¹⁰⁴ and the church went to rack and ruin (‘*brevi nulla istius [ecclesiae] parochialis extabat vestigia*’) and then only formally existed in the district.¹⁰⁵ It seems that the parish was legally suppressed only in the latter half of the seventeenth century, whereas its district was taken over by the church in Wenecja.¹⁰⁶

A typical instance of a parish’s vanishing through union is the village of Kamienna Wieś (Kamiona) in Kalisz district. The local church was mentioned at the beginning of the sixteenth as united with the locality of Iwanowice.¹⁰⁷ Visitation records from the early seventeenth century report on the church’s

incorporation and affiliation to Iwanowice, carried out by Archbishop Jan Gruszczyński in the second half of the fifteenth century. During the subsequent century the church collapsed completely, and a chapel was built on its site.¹⁰⁸ The church in Russów lost its parochial rights during the same century; the LBG describes it as vacant.¹⁰⁹ Visitation records refer to this church as filial to Tykadłów within the same parish.¹¹⁰ The same pattern was the case with the church of Koczonowo (Kocanowo), archdeaconry of Gniezno. In 1500, it was united with the church in Pobiedziska (again, owing to poor beneficiaries). As of 1608, the visitor only found a non-consecrated chapel and attributed the village to the parish of Pobiedziska.¹¹¹ The church in Kozarzewek, Konin district, was in a bad shape at the beginning of the sixteenth century.¹¹² Its inclusion in the parish of Kazimierz must have taken place not long afterwards, as the 1608 visitor mentions it marginally.¹¹³ The sixteenth century saw moreover a collapse of the parish of Stępushowo (Stopachowo, Kcynia district). At the beginning of the following century only a small chapel existed there; the village was made part of the parish of Kozielsko.¹¹⁴

As far as filial churches with own pastoral districts are concerned, three such cases had been found for the archdeaconry of Kalisz – namely, Rypinek (filial to Dobrzec Wielki),¹¹⁵ Goliszewo (filial to Złotniki), and Ołobok (filial to Rososzycza, though the status of the local church was uncertain). In the archdeaconry of Gniezno, the churches included those of Chotunia (filial to Słupca),¹¹⁶ Nowa Wieś (filial to Dobrosolowo),¹¹⁷ Gączy (Gądecz, filial to Łopienna), Gurowo (filial to St. Laurent's church in Gniezno),¹¹⁸ Otoczna (filial to Szemborowo),¹¹⁹ St. Bartholomew's church in Konin (filial to Sts. Peter and Paul's in Stare Miasto), Grzybowo (filial to Gozdowo, Poznań diocese), Kramsk (Krapsko, filial Pyzdry, Poznań diocese), and Kościelec (filial to Koło).

The situation of some of them calls for a broader commentary. The Goliszewo parish (Kalisz district) was united prior to the compilation of the LBG with the church of Złotniki. It was treated as inferior to the Złotniki parish and was not described as a separate parochial district.¹²⁰ A separate parish in Goliszewo was reinstated in 1602 by Archbishop Karnkowski, who had a parson settled there and the locality of Jankowo incorporated in the parish.¹²¹ Given no confirmation of a separate pastoral district for Goliszewo, the testimony of tax registers, where Goliszewo and Jankowo are permanently mentioned as part of the parish of Goliszewo, indicate that its re-founding in 1602 was based on the earlier parochial divisions and perhaps the pastoral district of Goliszewo functioned in some form in the sixteenth century. Hence, Goliszewo is shown in the map as a filial church, together with its district.

The problem of the existence of a parish centre Ołobok, Kalisz district, where a Cistercian nuns' abbey was situated, is much more complicated. The LBG refers to a parish church in Ołobok (the parish extended to Wielowieś, both settlements having been the nuns' villages), with no dedication quoted. The

¹⁰⁹ LBG II, p. 80.

¹¹⁰ Wiz. Kal. 1603–1607, p. 435; Wiz. Kal. 1610–1611, pp. 454, 458–459.

¹¹¹ LBG I, p. 58; Wiz. Gn. 1608–1609, ff. 202v, 205v.

¹¹² The records do not specify precisely whether the church was located in Kozarzewo or Kozarzewko. Tax registers (RPWK, knn, 1564, no. 111–113; RPWK, knn, 1565, no. 124–126; RPWK, knn, 1576, no. 92, 93; RPWK, knn, 1577, no. 127–130; RPWK, knn, 1578, no. 114–116; RPWK, knn, 1579, no. 136–139; 181, no. 29–32; RPWK, knn, 1583, no. 141, 142) quote these two names alternately as the centre of the parish. The 1608–9 visitation record (k. 262v) has *Kozarzewo*. Teki Dworzaczka, Regesty includes the name 'Kozarzewo Kościelne', but it once appears along with 'Kozarzewo Małe' (8338, no. 10, gr. 1387, 1491) whilst elsewhere along with 'Kozarzewo Wielkie' (1891, no. 6, zs. I., and, Rel. Z. Kon. 6, 1542). Librowski (Librowski, Repertorium, part 6, p. 127, Wizytacja z 1790–1792 (visitation record) refers to a *Kozarzewko*, daw. (= formerly) *Kozarzewo*, but the church built in 1780 is meant there. The repertory index provides no resolution (Librowski, Repertorium, part 8, p. 110). As the parish's seat, Kozarzewek is adopted after LBG I (p. 235, footnote.) and SGKP (IV, p. 541), where it is mentioned that ruins of the church could still be seen in Kozarzewo, and based on the Teki Dworzaczka, Regesty entry (5482, no. 28 I. & Rel. Kon. 28, 1598), which identifies Kozarzewo Małe with Kozarzewo Kościelne.

author apparently did not mean a monastic church as he clearly refers to a parson's homestead.¹²² The later events do not enable us to uncritically accept that there existed a parish church. The chronologically subsequent piece of information to be found in the literature comes from Jan Korytkowski and refers to the affiliation of the Ołobok church to the Rososzyca church of 1532;¹²³ this information could not be verified against the sources. The Kalisz consistory file from the same year only contains a verdict passed in the case between Leonard, a monk in Ołobok, who was probably responsible for the handling of the liturgies at the nunnery, and Wawrzyniec, the parson at Rososzyca. The latter complained that the residents of Ołobok and Wielowieś go to Ołobok to have their children baptised instead of doing it at Rososzyca, as would have been customary and in line with the laws of his parish. The official deemed these complaints by all means legitimate and barred Leonard from dispensing the sacraments. The note contains nothing to suggest that any other church than the monastic church existed at the time in Ołobok whatsoever.¹²⁴ The further relations between Ołobok and Rososzyca indicate that the verdict was not respected. The first visitations inform again that sacraments are again administered in Ołobok to the dwellers of the two villages owned by the Cistercian sisters, which takes place at a church *extra villam* (presently, St. John the Baptist's church at the Ołobok cemetery).¹²⁵ The visitors were absolutely certain that it was not a parish church and described Ołobok and Wielowieś as villages within the parish of Rososzyca. The deanery statistics has it, in turn, that the Ołobok church was affiliated to Rososzyca, or was under command. The parson of Rososzyca presents in the visitation records a long list of arguments in favour of the statement that the Ołobok church usurps parochial rights, pointing that the *cura animarium* is celebrated there by permission of the *official* of Kalisz. The visitor also noted that the situated stemmed from a considerable distance from the nuns' village to Rososzyca, which was a gnawing nuisance when water levels increased in the rivers making the travel tough.¹²⁶ The mention of the permission from the *official* suggests that the activity of the Cistercian sisters' was not completely illegal. This situation seems to refer to the permit issued in 1161 by Pope Alexander III for dispensation of the sacraments at Cistercian monasteries upon the bishop's consent.¹²⁷ Parochial activities are confirmed for Ołobok as of 1628.¹²⁸ This did not prevent the Rososzyca parsons from suing their rights further on; the related verdict was produced, once again, in 1688. The Ołobok church was affiliated to Rososzyca in 1719,¹²⁹ probably in order to at least formally satisfy the parsons of Rososzyca. In 1744, an autonomous parish was set up in Ołobok.¹³⁰

Doubts are also triggered by the argument, proposed by a number of authors, that the origins of St. John the Baptist's church dated back to the thirteenth century.¹³¹ For the period of our interest, it is in fact impossible to unambiguously recognise the status of that church. There is, for one thing, a rather strong argument in the form of the LBG description, which incites one to regard the Ołobok

¹²² LBG II, p. 50.

Cystersek w Ołoboku*, „Roczniki Towarzystwa Przyjaciół Nauk Poznańskiego”, vol. 26, 1900, p. 110 (also pointing to the lack of source information in Korytkowski); *Inwentarz drewnianej architektury sakralnej w Polsce*, no. 4a: *Kościóły w Wielkopolsce XVI wieku*, comp. M. Pawlaczyk, Wrocław 1985, p. 77; Librowski, *Repertorium*, part 8, p. 129 (1540 given as the affiliation date).

¹²⁴ ADW1, Akta Archidiecezji Gnieźnieńskiej, Konsystorz Kaliski, 13, f. 101v.

¹²⁵ The date of its construction is not clear; architectural features suggest the first quarter of the sixteenth century (*Inwentarz drewnianej architektury sakralnej w Polsce*, no. 4a, pp. 77–79), which is not fully in concord with the visitor's remark that ksieni Teofilia Siemikowsk had it founded (she took the office in 1557 and held it until her death in 1601); S. Karwowski, *Klasztor PP. Cystersek*, p. 48). This would mean that the church was erected in the 2nd half of the sixteenth century, at the earliest, the most probable option being its end years, since the visitation record describes it as 'new'; *Wiz. Kal. 1603–1607*, p. 103.

¹²⁶ *Wiz. Kal. 1603–1607*, pp. 10, 101–103, 123; *Wiz. Kal. 1610–1611*, pp. 161, 175–178.

¹²⁷ S. Karwowski, *Klasztor PP. Cystersek w Ołoboku*, p. 110.

¹²⁸ *Ibidem*.

¹²⁹ Rybus, pp. 297, 325; Librowski, *Repertorium*, part 1, p. 166.

¹³⁰ Librowski, *Repertorium*, part 1, p. 213.

The chronology probably stems from an erroneous understanding of the monastery's foundation deed (KDW I, no. 81, which refers to a monastic church) and from the probable error in Jan Długosz; see G. Kucharski, *Początki klasztoru cystersek w Ołoboku*, [in:] *Cystersi w społeczeństwie Europy Środkowej*, eds. J. Dobosz and A. Wyrwa, Poznań 2000, pp. 322, 329–330; W. Baran-Kozłowski, *Wokół początków fundacji klasztoru cystersek w Ołoboku*, „*Nasza Przeszłość*”, vol. 102, 2004, p. 452.

church as a parish one; for another, the other sources and the later history of the church concerned make it plausible that the Ołobok church can only be regarded as the one that did perform the functions of a parish and had a quasi-formalised parochial district based on the Cistercian nuns' proprietorship and the distance to Rososzycza, though this state-of-affairs became fully legal at a later date. All the same, it is due to the actually existing parochial district that Ołobok is plotted as a parochial centre, whereas, owing to the Rososzycza parson's claims, the church might be described (for the sake of simplification) as a filial one.

An interesting case of alteration, with time, of the filial status as reflected in the LBG versus the visitation records appears with certain aspects of the relationship between the churches of Gącz and Łopienna¹³² (Gniezno district) and between those of Stare Miasto and Konin¹³³ (Konin district). In the early sixteenth century, Gącz (of the former mentioned pair) and Stare Miasto (of the latter) were both named the *ecclesia matrix*. However, due to a higher significance of the centres, the two respective parsons resided at the filial churches (in Łopienna and Konin).¹³⁴ Later on, the descriptions were reversed: as of 1608, Gącz is referred to as the former mother ('matrix') church and in 1632, as affiliated to Łopienna. The church of Stare Miasto is a similar case in point, which in the latter half of the seventeenth century began to be described as affiliated to Konin. It seems that in both cases the genetic criterion of filiality was ousted by the hierarchical criterion (see B. Szady, *The Church administrative borders, B. Dioceses of Poznań and Wrocław* in this volume). Following the description of the first visitations, it has been assumed that by the end of the sixteenth century Gącz (*matrix olim fuit*) was affiliated to Łopienna, Konin (*filia parochialis ecclesiae in Antiqua Konin quae est matrix*) having remained a *filia* of Stare Miasto (*mater ecclesiae parochialis Coninensis*). The case of the church of Grzybowo (Gniezno district), which was deemed filial to the parish of Gozdowo, Poznań diocese, is interesting.¹³⁵ The origins of this peculiar situation can be linked to the fact up to 1364, Gozdowo was part of the diocese of Gniezno and it was only the delimitation between the two dioceses that the locality was attached to Poznań diocese.¹³⁶ It is not, however, a complete explanation since the chapel in Grzybowo was probably erected not long before 1440,¹³⁷ that is, after the delimitation. The plotting of St. Gotthard's near Kalisz, affiliated to Dobrzec Wielki. The visitation records describe its location as *in villa Minori Dobrzec alias na (in) Rypinku*.¹³⁸ Since Dobrza Mała as well Rypinek are shown in the map as separate localities, the appropriate location for the church concerned is Rypinek.

The churches in Kościelec and Kramsko (Krapsko), both in Konin district, lost their full rights to the other parishes. The former was *incorporata et unita* in/with the parish of Koło, probably in 1552. The Kościelec parish did not vanish, though, and its church did not decay, whilst it was handled by a vicar.¹³⁹ The church in Kramsko was incorporated in 1518 in the Provostry of Pyzdry, the consent for which was given by the king (who exercised patronage of both benefices) and the archbishop. As a result, the parson's benefice of Kramsko was abolished; instead, Archbishop Łaski established a perpetual vicar, with the patronage of the provost of Pyzdry.¹⁴⁰

The church in Strzałków, parish of Lisków, Kalisz district, built in the late sixteenth/early seventeenth century, deserves a brief mention. The founder, Stanisław Zaręba, sought to elevate it to a parish church status; eventually, though, the church became a filial one.¹⁴¹

That a parish church existed in Chwaliszewo (Chwalczewo, Kalisz district) is a matter of doubt. The LBG situates the locality, probably erroneously, in the parish of Zduny.¹⁴² The visitation records

¹⁴¹ Wiz. Kal. 1603–1607, p. 211; Wiz. Kal. 1610–1611, p. 236.

¹⁴² LBG II, p. 19. LBG includes in the same parish the locality of Uciechów, which is also mentioned in the visitation record beside Sulmierzyce. Also the geographical location of Chwaliszewo and Uciechów unambiguously ties them to Sulmierzyce.

refer to it as belonging to the parish of Sulmierzyce (Sulimierzyce). The records moreover mention a parish church that was affiliated to Sulmierzyce; however, it was destroyed meanwhile. Jan Korytkowski gives 1540 as the affiliation date;¹⁴³ this information reappears in the subsequent visitation records.¹⁴⁴ Since no earlier trace of a parish church existing locally has been found, Chwaliszewo is not marked as the centre of a pastoral district.

As remarked earlier, two deaneries of the archdeaconry of Kamień required to be approached on a special basis, due to completely different underlying records. The main foothold is the findings of Andrzej Mietz in his research into ecclesiastical structures of Kamień archdeaconry. He takes note of several cases related to the change in the status of parish churches. One such the church in Miasteczko Krajeńskie, which still in 1511 was described as filial to the once in Brzostów.¹⁴⁵ Probably before 1529 the parish's centre was moved Miasteczko, due to the importance of the latter.¹⁴⁶ The Brzostów church fell into ruin.¹⁴⁷ Most of the other filial churches enumerated by Mietz are situated in suburbs, or had been affiliated in the fifteenth century, there being no evidence that they had pastoral districts.¹⁴⁸ Komierowo can probably be identified as a filial church with a parochial district. In the 1617 ordination reorganising the relations between parishes, it is mentioned as remaining under the care of the provost from Sępólno Krajeńskie (Sempelbork), *iuxta antiquum usum*. From 1628 onwards, it was consistently mentioned as subordinated to the church in Wałdowo;¹⁴⁹ yet, this cannot be stated for the sixteenth century. In the area under discussion, the parish of Głubczyn (Głupczyn) was found, as an area separated from that of Krajenka in 1588.¹⁵⁰ According to Mietz, the church in Buczek Wielki was built at the end of the sixteenth century; a filial church before 1617, it then became the centre of a parish singled out of the parish of Zakrzewo.¹⁵¹ Mietz proposes his opinion based on the *regests* the endowment of the church in Buczek based on the inventory of the church in Dźwierszno, the earliest of those registers dating to 1570 and 1600.¹⁵² The original entries in the *starosta*'s court books of Nakło¹⁵³ and the land books of Poznań¹⁵⁴ never mention a Buczek church; their presence in the said inventory is explainable by the fact that the estates to which the entries related became part of the Buczek's church endowment only at a later date. Hence, the foundation of the church needs to be shifted to the early seventeenth century.

Apart from these changes, a few other problems require to be clarified. First, the parish centres of Łobżenica and Luchowo. The Protestants took over the church in Łobżenica in as early as 1554; shortly afterwards, they took the filial church in the suburbs.¹⁵⁵ They were regained in 1622 and 1663, respectively,¹⁵⁶ which means that there was no active Catholic church in Łobżenica for almost

The Sulmierzyce parish is not described in LBG, though it is attested in the fifteenth century; S. Kozierowski, *Szematyzm ustrojów parafialnych dzisiejszej Archidiecezji Poznańskiej*, p. 392.

¹⁴³ LBG II, p. 19 (footnote); Wiz. Kal. 1603–1607, p. 205; Wiz. Kal. 1610–1611, p. 513–14; S. Kozierowski, *Szematyzm ustrojów parafialnych dzisiejszej Archidiecezji Poznańskiej*, pp. 59–60. Librowski, *Repertorium*, part 8, p. 84, informs that the parish of Chwaliszewo was formed in the fourteenth century of the parishes of Zduny and Sulmierzyce, without giving source-based evidence.

¹⁴⁴ Librowski, *Repertorium*, part 1, pp. 167, 187, 214.

¹⁴⁵ Ulan. Visit., p. 331.

¹⁴⁶ S. Kozierowski, *Szematyzm ustrojów parafialnych dzisiejszej Archidiecezji Gnieźnieńskiej*, p. 126. A 1548 tithe enumeration still has Brzostow as a parish, Miasteczko just being mentioned. This might have to do with the later actual affiliation of Miasteczko, or deemed to be a result of copying the structure of the list from the preceding register; see Ulan. Visit., p. 331; AAG, ACap. I, B. 143, f. 208.

¹⁴⁷ Mietz, p. 48.

seventy years. It is known that local Catholic believes used the church in Luchowo at the time. Once the Łobżenica parish was reinstated for Catholic pastoral purposes, the church of Luchowo was affiliated to it, before its final decay.¹⁵⁷ According to the earlier discussed methods of compiling maps for the AHP series, both centres are shown as parochial, for there is no information on a formal merger between the churches of Łobżenica and Luchowo in the second half of the sixteenth century. Our decision is supported by the fact that both parishes still existed before the Reformation, and the reach of the parishes is reconstructible.¹⁵⁸ Moreover, in 1617, when it came to the reorganisation of deaneries, Łobżenica – though a Protestant town – was formally given the status of capital of the deanery.¹⁵⁹ The situation of the one-village parish of Dębno at the end of the sixteenth century was also specific. In 1570, the village's owner Marcin Dembiński killed the local parson, and so an interdiction imposed on the church. Ever since, the faithful of Dębno frequented the church in Dźwierzno Wielkie. The formal status of the deserted church is unknown. As later mentions suggest, it was affiliated to Dźwierzno – certainly before 1617, the year as of which Dębno is mentioned as a village allocated to the Dźwierzno church.¹⁶⁰ Since the date of Dębno's the incorporation in the parish in Dźwierzno cannot be precisely stated, whereas Dębno did have a parish of its own for a major part of the sixteenth century, I have decided to plot it on the map.

Among the churches in the area of the archdiocese of Gniezno under discussion, the church of Trzemeszno, Gniezno district, is worth mentioning: described as a monastic-and-parochial church (*ecclesia conventualis parochialis*),¹⁶¹ it is the only such case we have identified.

The borders of parishes

The determination of parochial affiliation of individual localities within the archdeaconries of Kalisz and Gniezno has not been a difficult task, as the LBG and early-seventeenth-century visitation records could be juxtaposed and compared. For the archdeaconry of Kamień, with the poorer resource of ecclesiastical records available, the scale of the problems was considerably larger. For the entire diocese of Gniezno territory under analysis, the rule has been adopted that in case the information dating to the former half of the sixteenth century (LBG; episcopal tithe registers for the district of Nakło) was confirmed with the seventeenth- or eighteenth-century ecclesiastical records (visitation records; Czaykowski), it was decided that the identified situation corresponded with that of the sixteenth century's latter half. The corresponding conclusion was drawn in the event that the later Church sources confirmed the parochial affiliation based on the tax registers (which, as remarked, frequently recorded an earlier affiliation). Whenever, however, tax registers specified an affiliation other than the ecclesiastical sources, usually the latter have prevailed. Obviously, not all the localities mentioned in the registers were enumerated in the earliest visitation records or in the LBG; some were only mentioned in the later Church records. Visitation records dated later than the early seventeenth century, as well as Czaykowski's *Regestr Diecezjów*, were also used in case that a locality appeared neither in a tax register nor in (an) earlier Church record(s).

Furthermore, not all the cases were found to be clearly described in the ecclesiastical sources available. In some cases, the conclusion was drawn based on the parish's endowment. Of special importance were the mentions of the *meszne* tax.¹⁶² Let us remark that for a part of Nakło district, it was impossible to completely determine the parochial affiliation for the second part of the sixteenth century,

¹⁶¹ Wiz. Gn. 1608–1609, f. 230r.

¹⁶² Visitation records frequently gave the names of those villages which fed the local church with certain income, instead of specifying the parish's territory. The two areas prove not coincidental in some cases, since rents or tithes were often received from outside the parish district, but mentions of the *meszne* usually testifies to a settlement's belonging to the specified parish and its pastoral district. See K. Kaczmarczyk, *Ciężary ludności wiejskiej i miejskiej na prawie niemieckiem w Polsce XIII i XIV w.*, PH, vol. 11, 1910, p. 157; J. Matuszewski, 'Missalia – mensalia', [in:] *Cultus et cognitio. Studia z dziejów średniowiecznej kultury*, ed. S. Kulczyński, Warszawa 1976, pp. 375, 378–379.

particularly when it is obvious that it was the early seventeenth century that proved to be a period of intensive change in the local Church structures.¹⁶³ Hence, a number of cases were resolved on an individual basis, depending on the material available – considering sixteenth-century mentions more reliable, or affording primacy to the 1653 visitation. The parish affiliation of individual settlements was at times only mentioned in one Church record, if not just in a register; in such cases, such individual mentions were taken into account. In some cases, no source base has however been found that would have enabled to determine such affiliation. In most cases, though, settlements were concerned which were situated by the other localities (mills, suburban settlements) and the records probably saw them as a part of the given locality; in such cases, the parish affiliation was determined based on such association between localities. The instances where parish affiliation could be determined on a conjectural basis, given the locality's location or ownership relations. In four cases, determining the parochial affiliation has proved completely impossible.¹⁶⁴

In Greater Poland's part of the diocese of Gniezno, there were a number of localities with a split parochial affiliation (often along the lines of the manor/village division). In Kalisz district, the following settlements were thus divided: Borucin (the manor belonged to the parish of Kuczkowo, the village to the parish of Sobótka; consequently, the split between the deaneries of Kalisz and Pleszew followed);¹⁶⁵ Krzywosądów (split between the same parishes, the border was set along the river);¹⁶⁶ and, Cieszyków (split between the parishes of Staw and Rajsko).¹⁶⁷ In Gniezno district: Lednogóra (named Góra in the sixteenth century, the village was divided between the parishes of Dziekanowice and Węglewo);¹⁶⁸ Gorzuchowo (the manor belonged to the parish of Kłęcka, deanery of Gniezno–St. Peter's, and the village to the parish of Sławno, deanery of Gniezno–Holy Trinity);¹⁶⁹ Sarbia (Sarbką, split between the parishes of Popowo Kościelne and Podlesie Kościelne);¹⁷⁰ Szyszyn (split between the parishes of Ostrowąż, St. Michael's deanery, and Ślesin deanery, of Sompolno);¹⁷¹ and, Żydówko (the manor belonged to the parish of Łubowo, the village to the parish of Dziekanowice).¹⁷² In Kcynia district, the tendency for division into the manor and the village is particularly visible for the parish of Kozielsko (Łekno deanery), within which the manors of the settlements of Dąbrowa,¹⁷³ Niemczyn,¹⁷⁴ Starężyn, Starężynek,¹⁷⁵ and Zuzoły¹⁷⁶ were located, whereas the villages belonged to the adjacent parishes: Dąbrowa, Starężyn, and Starężynek was part of Janczewo parish (Żnin deanery), Niemczyn – of Łekno, and Zuzoły – of Żerniki. Apart from those enumerated, a split affiliation was the case with a few other settlements at the beginning of the sixteenth century as well, but the later visitations did not confirm this relation; whether the issue had meanwhile been settled or it is a matter of the visitators' inadvertency, is not to be determined. In Konin district, the manor of Koźmin (Kozimino) belonged in the first years of the sixteenth century to the parish of Janiszew and the namesake village was part of Dobrowo parish; as of 1608, the village is recorded under the former parish only.¹⁷⁷ The same district's village of Sulanki belonged to the parish of Gosławice parish, and the manor to Morzysław parish; the settlement was recorded in 1608 only along Morzysław, resulting from the depopulation of the village

¹⁶³ Mietz, *passim*.

¹⁶⁴ All these settlements whose location remains unidentified are poorly documented in terms of records; these include Gliszczyno (Nakło district), Łoscica (Kcynia district), Niedźwiady (Kalisz district), and Wiesiołowo (Kalisz district).

¹⁶⁵ Wiz. Kal. 1603–1607, pp. 147, 348; Wiz. Kal. 1610–1611, p. 120.

¹⁶⁶ Wiz. Kal. 1603–1607, pp. 147, 348; Wiz. Kal. 1610–1611, p. 120.

¹⁶⁷ The visitation records from the early seventeenth century only mention them for the parish of Staw; the parson in Rajsko only collected the title from the local empty soils. The visitation records of 1719 and 1761 inform again of a division, hence it has been decided to represent it; LBG II, p. 8, 65; Wiz. Kal. 1603–1607, pp. 216, 231; Wiz. Kal. 1610–1611, pp. 189, 203; AAG, ACons. E 52, f. 219r, 244v; AAG, ACons. E 22b, f. 710, 829.

¹⁶⁸ LBG I, pp. 44, 56; Wiz. Gn. 1608–1609, ff. 200v, 203r.

¹⁶⁹ LBG I, pp. 53–54, 90, 97; Wiz. Gn. 1608–1609, ff. 33r, 217v.

¹⁷⁶ LBG I, pp. 141, 162; Wiz. Gn. 1608–1609, ff. 102r, 318r.

¹⁷⁷ LBG I, pp. 252, 256; Wiz. Gn. 1608–1609, f. 157v.

belonging to Gosławice parish.¹⁷⁸ In Kcynia district, a similar situation concerned Międzylesie, with the manor belonging to the parish of Kozielsko and the village to the one of Janczewo, the latter being the only location marked in 1608.¹⁷⁹ A rather untypical split was the case with Mierucino, Gniezno district. As per both the LBG and the visitation record, while the village belonged to the parish of Parlin, two local peasants belonged to Słaboszewo parish.¹⁸⁰ Such a record, suggesting a non-standard, personal basis of parochial affiliation, refers probably to the territorial division (in serf *lan* terms). Accordingly, Mierucino effectively appears under the two parishes. A peculiar situation is the case with the village of Węgrzynów, Kalisz district, which was divided into the parishes of Lutynia and Magnuszewice, and thus belonged to two dioceses (see B. Szady, *The Church administrative borders, B. Dioceses of Poznań and Wrocław* in this volume).

Certain instances of parish affinity call for a comment. Albeit the village of Głogówiec¹⁸¹ (Gniezno district) was consistently mentioned in tax registers as part of the parish of Kwieciszewo;¹⁸² I have however decided to have it belonging to the parish of Strzelce. Głogówiec appears in Kwieciszewo parish neither in the LBG¹⁸³ nor in the 1608 visitation record.¹⁸⁴ As for Strzelce parish, it is not mentioned as belonging to it¹⁸⁵ but only as a tithe-payer.¹⁸⁶ The affiliation of Głogówiec to the parish of Strzelce is clearly confirmed only at the 1632 visitation.¹⁸⁷ The information of its affiliation to Kwieciszewo parish should be deemed dubious, and was probably based on the fact that Głogówiec and Czarnotul in Kwieciszewo parish shared the same owner.¹⁸⁸ The village of Iłowo (Jelowo; Nakło district), mentioned in tax registers of Sępólno Krajeńskie (Sempolbork) parish¹⁸⁹ but appearing as part of Sypniewo parish in 1653, is a similar example.¹⁹⁰ Again, I have resolved to accept the parish affiliation as later confirmed in Church records; the locality's placement was a prevalent factor, whereas the tax registers' testimony triggers doubts. Iłowo first appears in a 1576 register, as *Iłowa cum Zdziechowa*.¹⁹¹ Dziechowo (Zdziechowa) was namely a village of the Gniezno-based Knights of the Holy Sepulchre in the parish of Sępólno. It is not known why the chancellery linked the two localities, by adding (squeezing in) the name 'Iłowa' above that of 'Zdziechowa'. The subsequent registers merely copied this phrase and thus Iłowo always preceded Dziechowo in the parish of Sępólno. In line with the registers, the parochial affiliation of Jeziercze village (Gniezno district, see A. Borek, M. Słomski, *Location of the settlements* in this volume) was established – namely, as part of Pobiedziska parish. *Regestr diecezjów* and Korytkowski mention, in turn, that it could have belonged to the parish of Imielno (Jemielno).¹⁹² I did not deem these premises sufficient to reject the communication from the tax registers, for the records mentioning this affiliation were made dozens of years after the village finally vanished.

Church records apparently rather imprecisely define the parochial affiliation of Goczałkowo, Gniezno district, situating it in the parishes of Kędzierzyn and Niechanowo at the same time, the reason having been that tithe was paid from the village to both parishes. Other, more precise fragments regarding the endowment clearly indicate that Niechanowo was the proper parish for Goczałkowie.¹⁹³

Doubts arose around the parish affiliation of Nakwasin (Nakwasino; Kalisz district), which in 1521 belonged to Koźminek parish, and at the beginning of the subsequent century was recorded as part of the parish of Rajsko.¹⁹⁴ The later sources have this village positioned within Koźminek parish.¹⁹⁵ The communication of the 1607 and 1611 visitation records is probably based on the fact that Nakwasin paid to the church of Rajsko the tithe from all the fields, and since Koźminek was occupied by the Protestants at the time, its parish district is not described in the records. Still, the situation is not completely clear. The parish of Koźminek was not dissolved during the Reformation as there is no other case of a village from this parish to be met in any other parish, while such a solution would not have been in line with the general policy pursued by the Church authorities towards seized churches. Indeed, it was not impossible that a locality be temporarily moved to an adjacent parish (see B. Szady, *The Church administrative borders, B. Dioceses of Poznań and Wrocław* in this volume), but there is no clear confirmation that this might have been one such case. The situation of Wyszki (Wyszkowy, Kalisz district) is corresponding: mentioned in 1605 and 1611 for the parish of Twardowo,¹⁹⁶ they are located in earlier and later records in the parish of Magnuszewice.¹⁹⁷ Wyszki is missing in the 1611 description of Magnuszewice parish.¹⁹⁸ Again, there is a certain doubt. At the end of the sixteenth century, Magnuszewice was under the management of the parson of Twardowo, which might possibly have caused certain ‘mistakes’.¹⁹⁹ Taking into account, on the one hand, the resolute purport of the source and a small plausibility of a temporal change in the parochial affiliation for both Nakwasin and Wyszki, I have not resolved in either of the above cases as to unambiguous determination of the parochial affiliation, ascribing primacy to the church in Koźminek as the parish of Nakwasin and to the church in Magnuszewice for the village of Wyszki.

The parish affiliation of Laskownica Wielka and Laskownica Mała in Kcynia district needs to be more precisely defined. Without differing between these two names, the LBG makes one of them part of the parish of Łekno and the other, of Grylewo.²⁰⁰ The 1608–9 visitation record ascribes Laskownica Wielka to the parish of Grylewo, making *Luchownice* (i.e. Laskownica; scribe’s error) part of Łekno parish.²⁰¹ Taking into account the location of both Laskownice localities, such affiliation seems erroneous. The subsequent visitation records only differ between a *Laskownica* (Łekno parish) and a *Laskownica* (Grylewo parish).²⁰² Laskownica Mała was finally attached to Grylewo in 1712,²⁰³ and this particular record has been accepted as decisive, taking into account the location of the two villages.²⁰⁴

A complication is involved in the identification of the parochial affiliation of the villages of Paruska and Sokolna, Nakło district. Neither of the two villages appears in tax registers; the former was chartered probably at the end of the sixteenth century (first attested 1598²⁰⁵), the latter probably has an older record but was deserted for a part of the century.²⁰⁶ The visitation record of 1653 mentions them as part of the parish of Głubczyń,²⁰⁷ the parish’s founding charter dating to 1588 only mentioning Głubczyń and Stare as localities being part of the parish.²⁰⁸ The aforesaid record remarks, describing the parish of Krajenka mentions that the local parson was in conflict with his peer in Głubczyń over,

¹⁹⁵ Czaykowski, p. 168; AAG, ACons. E 52, f. 248v; AAG, ACons. E 22b, p. 724.

¹⁹⁶ Wiz. Kal. 1603–1607, p. 358; Wiz. Kal. 1610–1611, p. 571.

¹⁹⁷ LBG II, p. 38; Czaykowski, p. 116. The visitation records of 1719 (AAG, ACons. E 52, f. 117r) and 1753 (AAG, ACons. E 22b, p. 430) have only Twardowo and Wola included in the parish of Twardowo.

¹⁹⁸ Wiz. Kal. 1610–1611, p. 572.

¹⁹⁹ The fact that the visitor drew information on Magnuszewo parish from the parson of Twardowo seems to have influenced the language of description of the parish. The record confirms the parish’s former (Magnuszewice had been separated out of Twardowo) and present dependence on Twardowo.

²⁰⁸ Ibidem, pp. 331, 338.

inter alia, the *meszne* from Paruszka and Sokolna, since both villages had been ‘in territorio parochiae Krainensis aedificatis’.²⁰⁹ Therefore, it has been decided that Krajenka be the proper parochial affiliation for both villages as at the end of the sixteenth century. They became part of Głubczyno parish probably when the Catholics took over the local former Protestant churches, which were affiliated to Głubczyno,²¹⁰ whereas the church in Krajenka was managed by Głubczyno parsons.²¹¹

A challenging area in terms of identification of parochial borders for the second half of the sixteenth century is the north-western part of Nakło district (delimited, roughly, by the rivers of Łobżanka in the east and Kanał Śmiardowski in the south). The major reason was the chartering of new localities, a process that lasted during the sixteenth century (see A. Borek, M. Słomski, *Location of the settlements* in this volume), with the extension of the parish network failing to catch up with it, along with a rather deeply penetrating Reformation.²¹² These issues also refer to the aforementioned locality of Downica (Lędyczka; see in this chapter). For this reason, for a number of localities it is only the middle of the seventeenth century, the moment by which the local Church structure had already been considerably reorganised, that we have the earliest specification of their parish affiliations.²¹³ Putting a few auxiliary churches aside, this was true for two parishes emerging in the early years of the seventeenth century – namely, those of Buczek Wielki (Buczek Wielki, Batorowo, Buczek Mały, Buka, Czyżkowo, Trudna²¹⁴) and Radawnica (Radownica, Górzna, Grudna, Kamień, Krzywa Wieś, Nowy Dwór²¹⁵).²¹⁶ The tax registers consistently mention them for the parish of Zakrzewo,²¹⁷ and it is this parish that settlements named with those later parishes have been included in.

In the case of Gniezno and Kalisz, the parish divisions were set outside the towns or in the suburbs. Gniezno had four parishes: Holy Trinity – encompassing the main municipality; St. Laurent – in the small town of Jędrzejewo; St. Peter’s – in the suburb of Piotrowo; and, St. Michael’s – in Wójtostwo. In Kalisz, the town and its closest surroundings were split, since 1303, between the collegiate parish of St. Mary’s (the town’s north-eastern part) and the municipal parish of St. Nicholas’s (southern and western part)²¹⁸ (see below; U. Sowina, T. Związek, and T. Panecki, *Kalisz in the middle of the sixteenth century*). The 1603–7 visitation record specifies that a third of the town’s area inside the ramparts belonged to St. Mary’s parish, St. Michael’s covering the remainder of the town and the suburbs.²¹⁹

Four parochial exclaves are plotted on the map, including Kiełpin and Drążno (Drążn) in Nakło district, Komorowo in Kcynia district, and Nosków (Noskowo) in Kalisz district. Their singling-out in the map is partly due to the need to cartographically visualise the parochial borders. For Kiełpin, distant from Złotowo by more than 15 km, with the area of Zakrzewo parish between the two, the situation followed from a specific development of the parish network in that area. It has however to be stressed that Kiełpin is mentioned as part of the parish of Złotowo both in tax registers from the latter half of the sixteenth century²²⁰ as well as in the visitation record from mid-seventeenth century,²²¹

Key: (+) – founding of new parish; (-) – dissolution of parish (affiliation to another church); * – relocation of parish's centre; ** – change occurring between 1570 and 1617, not reflected in AHP map; *** – parish incorporated in the adjacent one in the beginning of the sixteenth century (surviving parish district is attested), reactivated 1602; **** – possibly, error in visitation records.

After: LBG and Wiz. Gnz. 1608–1609 (Author's own compilation).

Officialities

The AHP programme has never taken into consideration the judicial units of ecclesiastical division, called officialities (*oficjalats*). Hence, the very brief description herein. The diocese of Gniezno area was situated within the limits of district officialities of Kamień, Gniezno, and Kalisz, all reporting to the General Officiality of Gniezno. It is commonly accepted that their territories coincided with the borders of the archdeaconries with which they shared their central towns. The officiality of Kamień existed earlier than the archdeaconry of Kamień, and the borders of the officiality had set those of the archdeaconry.²²³

²²³ W. Patykiewicz, *Późniejsze oficjalaty gnieźnieńskie*, „Roczniki Teologiczno-Kanoniczne”, vol. 5, 1958, no. 4, p. 117; I. Skierska, *Oficjalat kaliski w XV wieku*, „Rocznik Kaliski”, vol. 25, 1994/1995, pp. 97–98; A. Gąsiorowski and I. Skierska,

Diocese of Gniezno at the end of the sixteenth century

The Greater Polish part of diocese of Gniezno included a total of 310 parishes, of which 306 had their centres in Voivodeship of Kalisz, twelve were filial parishes, sixty-seven were municipal and 239 were rural parishes.

The Greater Poland volume of the AHP is the final one that encompasses a larger part of the diocese of Gniezno, which almost exhausts the study on its territory published in this series. Only the parishes of Ślesin and Sompolno, in their entirety, and the centre of the parish of Pakość were situated in Cuyavia.²²⁴ For this reason, it has been decided that the findings made so far are worth summarising at this point, and statistics presented to draw a picture of the diocese at the end of the sixteenth century. This need is further justified by the lack of a comprehensive monograph of the diocese. The statistics shown below summarises the information from the previously published APH volume series²²⁵ and from the atlas of Pomeranian Voivodeship,²²⁶ including the aforementioned Cuyavian parts. The statistics below does not specify the filial churches.

In the end of the sixteenth century, the Gniezno diocese area stretched over a vast territory of less than 41,000 km² – from the south-western part of Pomeranian Voivodeship to the northwestern part of Voivodeship of Sandomierz, overlapping, to a larger or smaller degree, with the territories of ten Old Polish voivodeships. An uneven spatial distribution of the diocese's territory is worthy of attention. The northern part of the diocese (up to the deanery of Konin in the south) never exceeds 70 km in its east to west width, whilst longitudinally stretches along the length of more than 200 km. The southern part forms a more compact area, whose broadest east-west line is above 200 km, its north-east line exceeding 170 km. The diocese was divided into eight archdeaconries (including the so-called territory of Wieluń²²⁷), which in turn were split into thirty deaneries (archdeaconry of Kurzelów²²⁸ and Wieluń territory²²⁹ were not divided). The Wieluń territory was the smallest archdeaconry unit (over 1,700 km²), the largest archdeaconry having been that of Gniezno (above 7,500 km²). The average area of a deanery exceeded 1,100 km²; the largest one was deanery of Chojnice (more than 2,500 km²), the one of Kobylin having been the smallest (300 km²); the area of most deaneries was between 700 and 1,400 km². There were a total of 757 parish centres across the area (including full-fledged and affiliated parishes), of which 162 (21.7%) were located in towns. On average, there was 1.9 parish church per 100 km² in Gniezno diocese; in other words, one church per 54 km². Archdeaconry of Gniezno had the largest number of parish churches (183), Łowicz archdeaconry having been the opposite (45). As far as the density of distribution of churches is concerned, archdeaconry of Kalisz came first (1 church per 37 km²); the Wieluń Territory (1 per 39 km²) and archdeaconry of Gniezno (1 per 42 km²) were quite similar in this respect. The least dense parish network appeared archdeaconry of Kurzelów (1 per 75 km²). On the deanery level, the similar statistics was as follows: deanery of Chojnice had the biggest number of churches (51), the difference between this and the deaneries Żnin and Konin (29 each), both with the second largest number, was rather considerable. The smallest number of parishes (7) were deanery of Kobylin; twenty-one parishes per deanery within Gniezno diocese was the average figure. The densest network could be encountered in the deaneries of Pleszew (1 church per 27 km²) and Słupca (1 per 28 km²), followed by other deaneries of the archdeaconries of Kalisz and Gniezno. The biggest distances, in statistical terms, appeared between the churches in deaneries of Radomsko (1 per 90 km²) and those of Szadek and Nakło (1 per 87 km² in both).

Diocese of Włocławek

The Church structures of diocese of Włocławek pose no considerable interpretive problems. The diocese's area being part of Voivodeship of Kalisz was pretty marginal, covering but a dozen localities and no full parish. Let us mention Barcin at this point, which was at times mentioned as part of deanery of Raciąż;²³⁰ however, taking into account the distance between Barcin and the deanery, this option has to be excluded, and Barcin has to be assigned to deanery of Inowrocław.²³¹ For Włocławek diocese localities situated in Kalisz Voivodeship, we come across parish centres whose districts were mostly situated in Cuyavia (Barcin, Brdów, Łabiszyn), or villages with parish centres situated outside the voivodeship (the villages of Buszkowo, Czartowo, Kobylanki, Paniewo, Popielewo – parish of Skulsk; village of Mirosławice – parish of Kościeszki). Apart from Brodowo, which belonged to deanery of Radziejów in archdeaconry of Włocławek, the other localities belonged to Archdeaconry of Kruszwica – of which Łabiszyn and Barcin were part of deanery of Inowrocław, the rest belonging to that of Kruszwica. In the latter half of the sixteenth century, no change in the Church organisation was seen in Włocławek diocese area.²³² With regards to officialities, the entire area was subordinated to the District and General Officiality in Włocławek.²³³

III.2.2b.4 B. DIOCESES OF POZNAŃ AND WROCLAW

Bogumił Szady

Diocese of Poznań

External borders and reach of the diocese of Poznań

The original territory of diocese of Poznań (before 1000 AD) was delineated by the borders of Duke Mieszko I's country.¹ Following the destruction suffered in the 1030s, the territorial organisation of Poland's Church was rearranged and reshaped resulting from the actions of Duke Boleslaus II the Generous (1075) and, subsequently, papal legate Giles of Tusculum (1123/4). At that same time, around the year 1124, the territory of Poznań diocese was fundamentally shaped, with its division into the Greater Polish and Mazovian part.² Due to the diocese's frontier location, its territorial shape was conditioned both by changing political borders and by the emergence of new dioceses, particularly those of Gniezno, Lubusz, Kamień, and Wrocław. For the description of the external borders of sixteenth-century diocese of Poznań, which in its northern, western, and southern part mostly coincided with the borders of the Kingdom of Poland, valuable findings are contained in the entry 'Wielkopolska' compiled as part of the SHGPoz project.³ It has to be borne in mind that we owe an extensive discussion of the diocese's external borders (plus the maps) to Józef Nowacki.⁴ Fairly detailed borders of the diocese are moreover shown in the map entitled *Wielkopolska epoki piastowskiej*, prepared by Tadeusz Szulc and attached to volume 4 of the KDW.⁵ Analysis of the diocese's boundary line and its changes is, furthermore, facilitated by the monographic studies for the adjacent dioceses of Kamień,⁶ Lubusz,⁷ and Wrocław.⁸

The external borders of Poznań diocese are discussed herein below according to the division into the northern, eastern, and south-western part. The reach of the respective sections is as follows:

north-western and northern border (from the Silesian-Brandenburgian border, in the vicinity of Boryszyn, parish of Żarzyn, to the parish of Piła);

eastern border (from Piła parish to the parish of Wysocko Wielkie); and

southern and south-eastern border (from Wysocko Wielkie parish to the Silesian-Brandenburgian border – i.e. the vicinity of Boryszyn, parish of Żarzyn).

Before the external borders are presented, the issue of territorial jurisdiction of the bishops in the area under Reformation needs to be addressed. The territory of the diocese was set according to the

reach of the jurisdiction and the authority of the local bishop ordinary (*ordinarius loci*) was compact, which was determined by the stable functioning of the basic territorial units – that is, parishes. In Greater Poland, apart from border areas, the Reformation basically did not lead to a durable collapse of Catholic parochial structures. After the period of seizure and occupation of some of the churches and benefice emoluments, they basically resumed their form from the former half of the sixteenth century. Albeit at the beginning of the seventeenth century the deanery structure was reorganised, a vast majority of the parish churches were regained.⁹ The southernmost, westernmost, and northernmost areas neighbouring on Pomerania, Brandenburg, and Silesia are exceptions in this contest. Accordingly, the main criterion behind the affiliation of a given area to diocese of Poznań is a permanent administration and control of the parishes by Poznań bishops. Areas (parishes) in respect of which Poznań bishops occasionally undertook individual legal actions – based, at times, on claims filed and in disputable situations – will be omitted. In the event that during the Reformation period, the competencies of the Poznań bishop were temporarily restricted and, sometime afterwards (in the seventeenth or eighteenth century) the bishop's jurisdiction over the church and its endowment was resumed, such a centre and its subordinate area will be regarded as part of Poznań diocese. Neglected will be, in turn, the areas where Catholic parochial structures vanished for good and the Poznań bishop ordinary's sovereignty was abolished. In the simplest terms, what it means is that the borders of the diocese in the west, south, and north ought to be set along the state borders.

Józef Nowacki as well as Marek Okoń shifted the diocese's north-western border resolutely beyond the Kingdom of Poland's border with Brandenburg. Both authors argued that the borderline between the dioceses of Poznań and Kamień was set in the first half of the sixteenth century along the Warta River. While Nowacki believed that it reached up to Oksza and Głuchowo,¹⁰ Okoń would push it eastwards (to the vicinity of Kołczyn and Włostów), where it would reach the diocese of Lubusz.¹¹ The course of the border in that region as proposed by Okoń is convergent with the earlier findings of Fr. Anzelm Weiss and Fr. Bolesław Kumor.¹² The question arises whether the sixteenth-century borders of Poznań diocese coincided with the state frontier or perhaps reached beyond it, up to the Warta, and thus encompassing Drezdenko, Santok, Karnin, Gorzów Wielkopolski, Lubniewice, Glisno, Kołczyn, Krzeszyce, Oksza, Głuchowo, as well as Jemiołów, Sieniawa, and Staropole.¹³ The records that might confirm the functioning of a parish for some of the aforementioned localities (e.g., Głuchowo, Oksza, Karnin, Kołczyn), even for the pre-Reformation period, offer a rather flimsy basis, whereas the diocesan affiliation arouses doubts (Jemiołów, Krzeszyce).¹⁴ Plotting them by Nowacki on the map of Poznań diocese in 1602 should be deemed quite dubious. All the enumerated ecclesiastical centres situated in the latter half of the sixteenth century outside the limits of the Crown collapsed during the Reformation and thus cannot be treated as part of Poznań diocese. The interim and occasional care extended between the sixteenth and the eighteenth centuries over the scarce clusters of Catholics dwelling in the border areas of the Protestant Brandenburg. The reach of Poznań diocese in this region was thus delineated by the frontier of the voivodeship and the Crown; the furthestmost parishes included Trzemeszno Lubuskie (Czarmyśl), Wielowieś (Langfuld), Bledzew, and Sokola Dąbrowa (Falkwald), belonging to deanery of Międzyrzecz.

A similar problem is the case with the reach of Poznań diocese in the western part of the land of Wałcz, including the locality of Kalisz Pomorski (Nowy Kalisz). The neighbourhood of this urban centre had since the thirteenth century been a scene of political and ecclesiastical rivalry between Bran-

⁹ J. Dworzaczkowa, *Reformacja w Wielkopolsce*, [in:] *Dzieje Wielkopolski*, vol. 1: *Do roku 1793*, ed. J. Topolski, Poznań 1969, pp. 562–567.

¹⁰ Now2, p. 17.

¹¹ M. Okoń, *Granice średniowiecznej diecezji kamińskiej*, p. 54.

¹² B. Kumor included the parish of Oksza in Poznań diocese. Although A. Weiss saw Krzeszyce parish as part of Lubusz diocese, he omitted Oksza and Głuchowo, the more westward ones. His historico-geographical dictionary of the Bishopric of Lubusz mentions Pyrzany but ignores Świerkocin; A. Weiss, *Organizacja diecezji lubuskiej*, p. 144; B. Kumor, *Granice metropolii i diecezji polskich*, p. 82.

¹³ The affiliation of the localities of Templewo, Wielowieś (Langfuld), Żarzyn, and Boryszyn (Borszyn) calls for a more precise explanation. The map attached to the 'Wielkopolska' entry in SHGPOz has them included in Brandenburg, whereas they were detached from Poland only in 1629; see M. Gochna, *Borders of state territorial units*, [in:] in this edition III.2.1.4.

¹⁴ See historico-geographical dictionary of the Bishopric of Lubusz in A. Weiss's study; Now2, pp. 481, 558; A. Weiss, *Organizacja diecezji lubuskiej*, pp. 231–285.

denburg (Bishopric of Kamień) and Poland (Bishopric of Poznań). Nowacki's conclusion with respect to the ecclesiastical affiliation of that area is rather questionable: 'Politically, a considerable portion of this zone – from Złocieniec, through Kalisz Pomorski, up to Barnimie and Niemcz – continued to belong, also after 1368, to the New March of Brandenburgian margraves. Protestantised in the middle of the sixteenth century, it was completely lost for the diocese of Poznań and for the Catholic Church. This did not alter the diocese's legal border, though.'¹⁵ As was the case with the Noteć area zone, the area's location beyond the frontier of the Crown, coincidental with a lasting fall of the Catholic structures in the age of Reformation, caused that the diocese's reach in the region was set by the state border.¹⁶ In its new shape, Poznań diocese was surrounded from the west and north by the Northern Mission, the historical unit of the Catholic Church administration, embracing, *inter alia*, the areas of the dioceses of Kamień and Lubusz, which were liquidated in mid-sixteenth century – in 1545 and 1566, respectively.¹⁷ Let us moreover emphasise that in some westernmost patches of Wałcz land, the jurisdiction of the Poznań bishop could only be titular, due to the lack of Catholic parishes locally, as was the case with the area of Mirosławiec (Frydland), for instance.

In the northern part, the border of Poznań diocese coincided with the one of Poznań Voivodeship. Jastrowie was the diocese's and voivodeship's north-easternmost locality (in Wałcz district); it was there that the borders converged of the dioceses of Poznań, Gniezno, and (formerly) Kamień. In his maps showing the 1510 and 1602 situation, Nowacki shifts the Poznań borderline too far north-eastwards, including into the diocese the parishes of Drawień, Lotyń (Łotyń), Węgorzewo, Łomczewo (Łowczew), Brokęcino, Okonek, Chwalimie (Walny), Borucino, Podgaje, Pniewo, Ciosaniec, and the filial church in Glinki Mokre (possibly, the cemetery chapel featured on Prussian maps from the first half of the nineteenth-century).¹⁸ He mentions no record based on which he has included in the sixteenth-century Poznań diocese the localities north of Jastrowie, up to the mouth of Osoka flowing into the Gwda (in the area of Drawień locality).¹⁹ The border of Wałcz district as well as of Poznań diocese in that region was set right north of Jastrowie, along the River Młynówka, crossing the Osoka. On the Duchy of Pomerania side, the villages of Samborsko, Pniewo, and Podgaje were situated.²⁰ Okoń likewise presents the Kamień diocese borderline in this particular area.²¹

In the east, Greater Polish's part of Poznań diocese bordered on the diocese of Gniezno. The extensive parish of Piła was limited in the east by the River Gwda. At the Gwda's estuary into the Noteć, the border bent eastwards, entering the Voivodeship of Kalisz area (Pałuki). The parish of Chodzież was split between Voivodeships of Poznań and Kalisz,²² whilst Margonin parish was entirely located in district of Kcynia, Kalisz Voivodeship. The diocese's borderline in the area concerned was shaped

¹⁵ Now2, p. 14.

¹⁶ The following parishes: Niemieńsko (Niemcz), Barnimie, Biały Zdrój, Dębsko, Kalisz Pomorski, Cybowo, Suchowo, Płociczno, Stara Korytnica, Pożrzadło Wielkie, Pomierzyn, Stara Studnica, Sienica, Żeńsko (Borujsko), Żabin, Żabinek, Wierchow, Lubieszewo, Osiek Drawski, Linowno, Stawno, Gudowo, Suliszewo, Drawsko Pomorskie, Kosobudy, Złocieniec, Bobrowo, Cieszyno (Czechy), Chlebowo, as well as the Brandenburg enclave around Próchnowo and Piecnik cannot be seen as part of Poznań diocese. The map attached to SHGPoz's entry 'Wielkopolska' contains a tiny error as the locality of Sadowo is shown as located in Brandenburg; Now2, pp. 391, 553–4; T. Jurek, *Wielkopolska*, p. 591.

¹⁷ B. Kumor, *Granice metropolii i diecezji polskich*, p. 82; G. Wejman, *Kościół katolicki na ziemi lubuskiej 1124–2010. Zarys problemu*, [in:] G. Chojnacki, *Kościół na Środkowym Nadodrzu. Historia i postacie praca zbiorowa*, Zielona Góra 2011, pp. 23–24.

¹⁸ The localities of Łomczewo, Pniewo, Ciosaniec, and Glinki Mokre (Glinka) only appear on the maps attached to the J. Nowacki monograph, without being mentioned in the index breakdown.

¹⁹ Now2, pp. 13, 389.

²⁰ According to SHGPoz, the northern border of Poznań Voivodeship in that region was disputable in the sixteenth century, and so it is shown in the map attached to the entry 'Wielkopolska'. However, the authors shifted the temporary settled (in 1588) border section between Poland and Duchy of Pomerania in the vicinity of Jastrowie. The border on the Młynówka River, in the area of Jastrowie, is reported to have been established at the beginning of the sixteenth century. K. Górka-Gołaska, *Jastrowie*, [in:] SHGPoz, part 2, pp. 56–57; T. Jurek, *Wielkopolska*, pp. 584–588.

²¹ M. Okoń, *Granice średniowiecznej diecezji kamińskiej*, p. 54.

²² The division of the parish of Chodzież between Voivodeships of Kalisz and Poznań coincided with the ownership distribution. All the localities within Chodzież parish being part of Poznań Voivodeship were royals demesnes, whereas in the Kalisz contained nobility's properties only. This correlation could be explained by the early foundation of the parish of Chodzież, which took place prior to the formation of state administration divisions. L. Kurpisz, *Kronika kościołów chodziejskich*, Chodzież 1933, pp. 7–11.

in the fourteenth century, resulting from a dispute between the bishop of Poznań and the archbishop of Gniezno. Pursuant to the composition concluded in 1364, the villages within Pałuki were classed into three groups: (i) Żoń (Żuń), Grylewo, Gołańcz, Chojna, and Jaktorowo were kept by the archbishopric of Gniezno; (ii) Margonin, Próchnowo, and Sułaszewo (Sułaszewo) were granted to the bishop of Poznań; (iii) the third group, consisting of the *villae intermedie* of Kowalewo, Lipiny i Szamocin (Szamocino), was to belong to Poznań diocese, the tithe being paid to Gniezno.²³ The village of Próchnowo was subdued again, under unknown circumstances, to the control of the Gniezno archbishop.²⁴

In its eastern part, Poznań diocese clearly ‘encroached’ the area of Kalisz Voivodeship. In Nowacki’s words, ‘the entire eastern border ... was set freely, as it seems, basing on the castellanies’, rather than the districts’ borders’.²⁵ Władysław Abraham pointed earlier on to how the diocesan division related to the political one, stating that the original border between the dioceses of Poznań and Gniezno was subject to no considerable shifts in the Middle Ages.²⁶ The relations between state borders and Church borders in the mediaeval period is still fairly unexplored. Since the existence of linear borders between castellanies is dubious, zones of influence being a more accurate concept.²⁷ Also the borders of dioceses in the period concerned can only be determined in an approximation. The literature offers a number of hypotheses. The most interesting one is also in the context of the emergence of the Czersk enclave of the diocese of Poznań. It states that the land of Kalisz belonged to this diocese (Tomasz Jurek). Quite dubious, for a change, is the view whereby a separate diocese had been established in Kalisz as early as the eleventh century.²⁸ A much more plausible version seems to be a gradual process, over an extended period of time, of formation of the borders between the dioceses of Poznań and Gniezno in that region. It was probably a process that occurred prior to the solidification of the voivodeship and district splits, which is dated for Greater Poland at the fourteenth century.²⁹ This is possibly confirmed by the parish districts as divided into the Voivodeships of Poznań (Poznań district) and Kalisz (Gniezno and Pyzdry districts), i.e.: Rogoźno, Lechlin (Lechnino), Skoki, Wronczyn (Wronczyno; village of Stęszewko³⁰), Iwno (Rujśca (Ruszcza) village³¹), Kostrzyn, and Pierzchno. The jurisdiction of Poznań bishops reaching east of Rogoźno (parishes of Potulice, Pruśce (Pruśca), Łęgowo) might possibly indicate the original range of the Castellany of Rogoźno (Sienno village).³² The diocesan affiliation of the Ostrowo-Młyn (Ostrowski) settlement, mentioned on a regular basis in tax registers for the district of Kcynia, remains problematic. The documentation for the parish of Łęgowo, to which Stanisław Kozierowski assigned the settlement, is rather scarce:³³ only the presence of the field called Ostrówki, in Łęgowo parish, has been attested (for the year 1778).³⁴ The mill, situated directly by the Wełna River, was probably a narrow link between Łęgowo, the parish’s central locality, and the village Bobrowniki on the river’s other side.³⁵

²⁴ It might have been determined resulting from the border dispute that continued in 1367–1371 between the bishop of Poznań and the bishop of Gniezno. As per the Gniezno (Archbishop Łaski’s) book of benefice, Próchnowo was part of Żoń parish. LBG I, p. 116; B. Kumor, *Granice metropolii i diecezji polskich*, pp. 36–37.

³¹ The affiliation of Rujśca to Iwno parish and to Poznań diocese may have stemmed from the village’s earlier associations with ‘the province of Kostrzyn (*opole kostrzyńskie*)’; S. Arnold, *Terytorja plemienne*, p. 42.

³² *Ibidem*, p. 21.

³³ S. Kozierowski, *Badania nazw topograficznych na obszarze dawnej zachodniej i środkowej Wielkopolski*, vol. 2: M-Z, Poznań 1922, p. 122.

³⁴ Wiz. Poz. 1777–1784, f. 362v.

³⁵ Bobrowniki’s affiliation to Łęgowo parish has been determined based on the 1778 visitation record; the earlier visitations of Rogoźno and Potulice parishes ignored the village. Tax registers specify it, in most cases, without parochial affiliation, among the other estates related to the monastery of Wągrowiec; *ibidem*, f. 362.

The abovementioned dispute between the bishop of Poznań and the archbishop of Gniezno was also about the diocese's borders in the area of Pyzdry district, Kalisz Voivodeship, which almost entirely belonged to Poznań diocese.³⁶ Analysis of Stanisław Arnold's map of 'tribal territories' points to some far-reaching analogies between the range of Castellannies of Giecz and Biechowo and the eastern border of diocese of Poznań in that area. The diocesan division known already in 1136 included Giecz in Poznań diocese, whereas 'in terms of [Poland's] fragmentation into provinces, the Castellany of Giecz was associated with the Duchy of Gniezno (the 1249 division) or that of Gniezno-and-Kalisz (the 1253 division).'³⁷ In the fourteenth century, Giecz began to lose in importance to Biechowo; Pyzdry became the district's and the deanery's administrative capital. The borderline between the dioceses of Poznań and Gniezno in that area, along the River Wrześnica, was described by Jan Długosz in his *Chorographia Regni Poloniae*.³⁸ Opatówko is a parish that was split by district borders (districts of Pyzdry and Gniezno), which probably resulted from the court's decision and the 1364 composition.³⁹

South of the Warta, the diocese's border partly wedged into Kalisz district. The parishes of Żerków and Wilkowyja were divided between the districts of Pyzdry and Kalisz. A unique situation was the case with the village of Węgrzynowo (today, part of Wilcza), which was split between the parishes of Lutynia (Poznań diocese) and Magnuszewice (Gniezno diocese).⁴⁰ The affiliation of the village of Orpizewek (Orpizewko) is disputable; neglected by books of benefice of the dioceses of Poznań and Gniezno, it was included by sixteenth-century tax registers in the parish of Lutynia (Poznań diocese), while in the later Church records it is mentioned as part of Sośnica parish, diocese of Gniezno.⁴¹ The village's situation within the diocese of Poznań is supported by a 1543 agreement between the landlord of Orpizewko, Stanisław Suchorzewski, and Marcin, the parish priest at Lutynia, regarding the replacement of tithe-in-kind by pecuniary tithe.⁴² The borderlines of Poznań and Gniezno dioceses in that area changed during the Middle Ages: the Czestram Territory (Castellany of Starogród) originally belonged to Gniezno diocese and was taken over by the diocese of Poznań. The so-called Krotoszyn enclave was a remnant of the area's former affiliation to the diocese of Gniezno.⁴³

The southern and south-western border of Poznań diocese was based on the borders of Greater Poland and Silesia (Wrocław diocese). Along the short section in the eastern part, the reach of Poznań diocese was set by the borderline between Voivodeships of Kalisz and Sieradz (parishes of Wysocko Wielkie and Odolanów (Odalanów)). Disputable in this area is the ecclesiastical affiliation of Uciechów village. Tax registers from the latter half of the sixteenth century included it in the parish of Odolanów, but Gniezno diocese's book of benefice (*liber beneficiorum*) mentions the village in its description of the parish of Zduny; the later Church records have it as belonging to Sulmierzyce parish.⁴⁴ The latter affiliation seems the most probable. Apart from the aforementioned Krotoszyn enclave, the situation of a few parishes in the land of Wschowa, the neighbourhood of Sława, and the vicinity of Świebodzin can be described as specific. The need for more detailed research into border parishes has been pointed to by Jurek.⁴⁵ The influence of the Reformation has to be taken into account, along with the so-called reduction of Protestant parishes that followed in 1653–1654, and how these developments impacted the diocesan border between Poznań and Wrocław.⁴⁶ It is difficult to precisely identify the diocesan

affiliation of the parishes that did not function in the second half of the sixteenth century, whilst parish churches functioned as Protestant community churches. In addition, some of the churches identified with Poznań diocese prior to the outbreak of the Reformation, situated in the border areas in Greater Poland or in Silesia, were contained in the seventeenth century within the limits of Wrocław diocese.

A problematic proposition is Nowacki's inclusion in the diocese of Poznań of the parishes of Trzebosz, Jabłonna, and Kaczkowo, situated in Silesia. This author accepted that the mentions regarding a given parish in the Poznań consistory file unambiguously attest to its diocesan affiliation. Bernhard Panzram's study on the parochial structure of Wrocław diocese in the Middle Ages has the parishes of Trzebosz and Jabłonna included in the diocese. Kaczkowo, which the northernmost point, is neglected in this study, as it was probably regarded as part of Poznań diocese.⁴⁷ In turn, contribution lists from 1540 and 1561 mention Trzebosz within the deanery of Śrem, Poznań diocese; as of 1561, Trzebosz was one of the centres seized by the Protestants.⁴⁸ Jabłonna and Kaczkowo are missing in the said registers. In Kumor's opinion, Wrocław diocese obtained these parishes in the fifteenth and sixteenth centuries.⁴⁹ All these parishes fell during the Reformation; Trzebosz never resumed functioning as a Catholic parish, whereas Jabłonna and Kaczkowo once regained by the Catholics were degraded to filial churches in the parish of Czernina, part of Wrocław diocese.⁵⁰ Therefore, they cannot be included in the Poznań diocese borders of the late sixteenth/early seventeenth century.

Within Voivodeship of Poznań, in the land of Wschowa, a few Wrocław diocese parishes functioned in the latter half of the sixteenth century. The voivodeship's border in the south crossed the parish of Wyszaków, whose centre was situated in Silesia; the localities of Górczyna and Dryżyna (Dreżyna) were in the land of Wschowa. The border of the dioceses of Poznań and Wrocław in the vicinity of Wschowa between the fifteenth and the seventeenth century was described by Nowacki as 'unstable', which he related to the disputable political affinity of the area of Wschowa in the late thirteenth and early fourteenth century.⁵¹ The Poznań bishopric territory coincided in that region with the mediaeval range of the Castellany of Przemęt⁵² and was demarcated by the original border between Greater Poland and Silesia.⁵³ Important information on the range of the Poznań diocese in that area in the latter half of the sixteenth century is provided by the visitation record of the diocese of Wrocław from 1580.⁵⁴ It includes in the deanery of Góra, Wrocław diocese, the following parishes: Konradowo (Kunersdorf/Kursdorf, in whose parochial district the village of Kandlewo (Kandel) was mentioned), Stare Drzewce (Drzewce, Drewitz), Zamysłów (Szymolewo, Himsdorff, Hinzendorf), Kowalewo (Kavel, Kabel), Jędrzychowice (Heyersdorf, Heindersdorf), Wyszaków (Schwusen), and Siedlnica (Sidnica, Zedlitz, Cziedlitz). Only two of them – namely, Konradowo and Zamysłów – were described as belonging to the Roman Catholic Church.⁵⁵ These parishes had been included in Wrocław diocese in the Middle Ages as well.⁵⁶ The situation of the churches in Kowalewo, Siedlnica, and Jędrzychowice was rather complex. After the seizure by the Protestants, the bishop of Poznań tried to obtain jurisdiction over the centre in Siedlnica. The attempt made by the bishop in 1606 to restore the parish by establishing the institution of Catholic parish priest ended up in a failure. In the 1619 Poznań diocese visitation record, the church still ranks among those occupied by 'heretics' ('Swidnica'). In the visitation records for Wrocław diocese from the second half of the seventeenth century, it functioned as a Catholic church, described as filial to Kowalewo ('filia est ecclesiae haereticae in Kavel'), which was still kept by the dissenters, as was the other of its subordinate *filias* – the one in Jędrzychowice.⁵⁷

⁴⁷ Jabłonna is mentioned as part of the Archpresbyterate of Góra, Wrocław diocese, in as early as 1376; J. Jungnitz, *Visitationsberichte der Diözese Breslau*, vol. 1: *Archidiakoniat Glogau*, Breslau 1907, pp. 19–23; B. Panzram, *Geschichtliche Grundlagen*, pp. 120–121; Now2, p. 423.

Featured in the Poznań diocese maps compiled by Nowacki, the diocese's frontier in the western part considerably exceeded the state's border with Silesia and Brandenburg. This is true with the area of Sława and Kolsko. Both centres are specified in the contribution lists for the diocese of Poznań for the second half of the sixteenth century, though they appear among the churches occupied by the Protestants. Poznań diocese visitation record of 1619 mentions Sława among churches seized by the Protestants, though the way the locality's name is written down might suggest that it was added as a supplement.⁵⁸ Since in the second half of the sixteenth century and in the first half of the seventeenth, both parishes were run by the Bohemian Brethren – Kolsko in 1582–1654, Sława from 1570 to 1654.⁵⁹ Once returned to the Catholic community, they were made part of Wrocław diocese – the border of the diocese of Poznań was set in that section along the state border. A situation similar to that of Sława and Kolsko was the case with the entire Świebodzin district, which belonged to Silesia but was separated from it by the territory of Brandenburg. The complete collapse of the Catholic structures and of the deanery of Świebodzin in the middle of the sixteenth century, and the failed attempts at regaining the influence in that territory, made by Poznań bishops in 1592,⁶⁰ prevents one from recognising the district as subordinate of Poznań diocese. After the re-Catholicisation in the seventeenth century, the area of Świebodzin was incorporated in Wrocław diocese.

Finally, the diocese's border in the south of deanery of Międzyrzecz needs to be discussed, in the context of the relations between Paradyż (Gościkowo) and Jordanowo (Jordan). The Paradyż parish is mentioned in regular tax registers in the latter half of the sixteenth century (from 1553 on). The village of Jordanowo (Jordan) appears in the 1580–3 registers within the parish of Iwno, and so SHGPoz specifies it as a deserted settlement near Iwno. However, the 1583 register mentions Jordanowo (Jordan) village owned by the Paradyż monastery; the two local mills, named 'Hamerski' and 'Nowy', can be localised – on the Paklica River.⁶¹ The 1603 visitation record indicates that central to Paradyż parish was the church situated in Jordanowo village.⁶² Nowacki states that the parish emerged in the sixteenth century, since it is neglected in the book of benefice dated 1510 as well as in the other registers. This argument seems not well grounded as it cannot be precluded that tax registers mentioning the parish of Paradyż actually referred to the name of the cloister rather than parish. It is also plausible that the parish had been incorporated in the cloister, which would explain its absence in the contribution lists of 1540 and 1561.⁶³

Archdeaconries and deaneries

The division of Great Polish part of the diocese of Poznań into territorial archdeaconries, established by Bishop Andrzej Zaremba's decision of 21 January 1298, survived with no significant modifications until the end of the Old Polish period. It was based on the split of the then-only archdeaconry of Poznań into three parts. The names of the thus formed archdeaconries – a larger, medium-sized, and small one – came later on. The small unit became called in mid-fourteenth century the archdeaconry of Pszczew, the medium one – the archdeaconry of Śrem, and the large one, the archdeaconry of Poznań: a hierarchy that rendered the rank of these archdeacons, expressed in terms of the position in the Cathedral Chapter rather than the territorial size of the units they were in charge of. The arrangement at the end of the thirteenth century did not extend to the entire Poznań diocese, as apart from the archdeaconry structure there was the part situated behind the River Noteć, which was reserved for the fourth archdeacon.

The description of the limits of the archdeaconries in Bishop Andrzej Zaremba's document was rather general. Nowacki saw no analogy between the areas of state administration (castellanies, *vicinia* settlements) and the archdeaconry layout.⁶⁴ The latter was based on natural borders (Warta River) and existing parishes. The document enumerated – south to east, beginning and ending with the Warta – the westernmost parishes of the large (i.e. Poznań) archdeaconry, namely: Mosina, Łódź (Łodzia), Modrze, Granowo, Drużyn (Drożyn), Słupia, Niepruszewo (Nieproszewo), Kaźmierz (Kazimierz), Szamotuły, and Obrzycko. East of the Warta, where the archdeaconry's border was in parallel the frontier of the diocese, only two extreme parishes are mentioned limiting the territory from the south (Ciężyń (Ciężym)) and from the north (Drezdenko (Drdzeń)). The River Noteć was to mark its northern border. The medium (Śrem) archdeaconry covered the southern part of the diocese and was meant to be separated from Poznań and Pszczew by the Rivers Warta and Obra. The small (Pszczew) archdeaconry (Pszczewski) was situated between the Warta and the Obra, whereas the record lists the eastern parishes separating from the archdeaconry of Poznań, north to south: Wronki, Otorowo, Wilczyzna, Ceradz Kościelny (Ceradz Stary), Buk, Ptaszkowo (Ptaszkowo Wielkie), and Łęki Wielkie.⁶⁵

Within the above-outlined limits, the archdeaconries specified above basically retained their structures till the end of the sixteenth century. The Poznań diocese's book of benefice from 1510 specifies no division into archdeaconries, but it is identifiable based on the sequence of deaneries (decanates) described. The part of the diocese behind the Noteć and the deanery of Świebodzin located outside the country's borders were omitted. An essential difficulty to the reconstruction of the limits of the archdeaconries around 1600 lies in the status of the areas located north of the Noteć. Both Nowacki and SHGPoz refer to the 1349 document as the basic premise apparently testifying to the functioning and reach of the fourth archdeaconry. The premise is rather weak as it is based on a single mention of Henryk, the archdeacon 'inter Notesz et Drawam'.⁶⁶ The lack of other testimonies – given the importance of the office and the accuracy of Nowacki's queries – might testify to the apparent fact that the project to establish a fourth archdeaconry for the part behind the Noteć, as expressed in the 1298 document, was never put into practice. Nowacki apparently comes to the same (implied) conclusion, though not directly expressed, since he includes the area north of the Noteć in the archdeaconry of Poznań.⁶⁷

The diocese was divided into deaneries in the fourteenth century; the deaneries are mentioned in the consistory files since 1403. It is rather difficult to reconstruct the division at the end of the sixteenth century. In the late sixteenth/early seventeenth century, the deanery network was reorganised, whereas, in Nowacki's opinion, it is impossible to give a precise date of emergence of the new deaneries. The span is 1590 to 1602, the diocese's reform carried out by Wawrzyniec Goślicki after he assumed power in the diocese in 1601 being considered to be the most plausible interpretation.⁶⁸ Hence, the map of Church structures reflects the status and borders of the deaneries before the 1602 synod. The reorganisation carried out at that time produced a total of nineteen deaneries (the area beyond the Noteć being included, whilst excluding the Świebodzin deanery, lost in the sixteen century), out of twelve. The most considerable change was seen in the archdeaconries of Poznań and Śrem. The number of deaneries in Pszczew archdeaconry remained the same. The general scope of the change is shown in the table above, whereas it has to be remarked that certain shifts took place in the affiliations of individual parishes as well. This means that not all the parishes belonging to the deanery specified in the central column (before 1601) were transferred to one of the deaneries described in the right column (after 1602). The most considerable change occurred in the diocese's northern part with the deanery of Oborniki being considerably shrunk; its northern segment, including a fragment of the diocese situated north of the Noteć, were merged into the new deanery of Czarnków. The range of the following deaneries altered considerably as well: Wschowa, Grodzisk Wielkopolski (Grodzisko), Międzyrzecz (deanery of Zbąszyń since 1640), Sęszew (deanery of Buk, since the eighteenth century) and Wronki (from 1640 on, deanery of Lwówek).

Rogoźno		
(area behind the Noteć River)	Czarnków	

The basic sources with which to reconstruct the sixteenth-century arrangement of deaneries are the book of benefice of the diocese of Poznań, dating to 1510, and the contribution lists from 1540 and 1561⁶⁹ (the latter not having been known to Nowacki). Comparison of these lists with the 1471 breakdown of deaneries attests to a fairly durable deanery network in Poznań diocese until the middle of the sixteenth century.

As illustrated by the table above, the diocese's three archdeaconries housed altogether eleven deaneries functioning in the latter half of the sixteenth century – four in Poznań archdeaconry (Poznań, Pyzdry, Oborniki, Stęszew) as well as in Śrem archdeaconry (Śrem, Wschowa, Kościan, Nowe Miasto nad Wartą), and three in Pszczew archdeaconry (Grodzisk Wielkopolski, Wronki, Międzyrzecz). The nature of the Świebodziń district and of the diocese's part behind the Noteć in that period is problematic. In both cases, the basic factors were how the state border influenced the organisational shape of the Poznań Church, and the effects of the Reformation on the diocese's northernmost and westernmost areas. The issue of Świebodziń deanery has already been explained. More complex is the case of deanery of Wałcz, otherwise termed deanery of Kalisz, *Zanotecki* ('of the area behind the Noteć') and, after 1602, with the remarkably changed borders, deanery of Czarnków. The area was neglected in the 1510 book of benefice and in the contribution lists of 1540 and 1561. The opinion that a deanery existed in the pre-Reformation period in Kalisz Pomorski, a town within Brandenburg, is based on weak premises (mentions dated 1509–11). Fr. Lech Bończa-Bystrzycki dates its emergence at the second half of the fourteenth century, without however giving the underlying source.⁷⁰ During the Reformation, 'the deanery in fact ceased to exist, as the churches were passed by their patrons to the

⁶⁹ LBP; AAP, CP 404; ASK I 3, ff. 326–348.

⁷⁰ L. Bończa-Bystrzycki, *Dekanat walecki w XVI-XVIII wieku*, „Koszalińsko-Kołoobrzeskie Wiadomości Diecezjalne”, vol. 13, 1985, no. 1–2, p. 37.

dissenters',⁷¹ hence no mention of this unit in the map showing the Latin Church structures at the end of the sixteenth century.

The parishes' affiliations to deaneries as specified by the contribution lists of 1540 and 1561 trigger no major doubts. The borderland between the deaneries of Grodzisk Wielkopolski and Międzyrzecz (the parishes of Brójce, Rogoziniec, and Koźminek) triggers some doubt, but it seems that Nowacki's resolutions should be followed. The affiliation of these parishes to Grodzisk Wielkopolski deanery is potentially suggested by their affiliation to the district of Kościan, based on the coincidence of state and ecclesiastical borders. This, however, is too weak a premise to undermine Nowacki's opinion, especially that district affiliations of localities in that region are not fully certain. Doubts arise as to the parish mentioned in the 1561 contribution list as 'Brodze', deanery of Grodzisk Wielkopolski. The similarity of name forms suggests that the parish of Brójce might have actually been meant. However, the nearby Brudzewo cannot be excluded; if this is the right option, it would provide a strong premise to state that the parish was separate from Kręcko (Kręsko) in the second half of the sixteenth century.⁷²

Poznań diocese deaneries were mostly compact and had regular formations. Source information regarding the location of Wysocko Wielkie and Sławoszew (Słaboszewo) parishes in the deanery of Śrem, mentioned in the 1540 and 1561 contribution lists, require a comment.⁷³ In his introduction to the edition of the 1510 book of benefice, Nowacki remarks that the parishes in question were mentioned as part of Śrem deanery, but he considers it an error and so has them included in Nowe Miasto nad Wartą deanery.⁷⁴ The main premise, though not directly expressed, was the parishes' location far from Śrem deanery, right near the border with the diocese of Gniezno. The geographical situation of those parishes indicates their affiliation with Nowe Miasto deanery. However, the existence of two extraterritorial enclaves of the deanery of Śrem, composed of the parishes of Wysocko Wielkie and Sławoszew, cannot be precluded. Though very rare, such situations were recorded for some other dioceses. For instance, in the latter half of the eighteenth century: the parish of Mnich (deanery of Gostynin, diocese of Płock); the deanery of Bobrowniki (diocese of Włocławek), divided into two parts by the parish of Czernikowo (deanery of Lipno, Płock diocese); or, the deanery of Wolbórz (Włocławek diocese), with two enclaves situated in the deanery of Zgierz (diocese of Gniezno).⁷⁵

Parishes and parochial districts⁷⁶

The presentation of the parochial structure of Poznań diocese in the second half of the sixteenth century ought to be preceded by introductory and methodological remarks and comments. The information basis regarding individual parishes is fairly extensive, mainly thanks to the basic findings by Nowacki and the efforts of the Sections of the Department of the Historical-Geographical Dictionary of the Polish Lands in the Middle Ages and the Department of the Historical Atlas at the Institute of History, Polish Academy of Sciences (IH PAN). In a number of situations, it regrettably does not enable to establish unambiguous conclusions concerning the functioning and status of Church administration units in the late sixteenth century. It has to be stressed that the Reformation caused significant changes in Greater Poland's parochial structure. With the lack of canonical visitations in Poznań diocese in the latter half of the sixteenth century, it is sometimes difficult to precisely find the moment of regaining the church from the Protestants and reinstatement of the parish for the Catholic pastoral service. A number of Catholic churches lost their original parochial character and, after retrieved from the Protestants, became filial churches. In addition, some filial churches had their pastoral districts – described as 'filial parishes' hereinafter. In line with the principle adopted for the AHP series, filial churches having their

⁷⁶ For a discussion of the disputable issues related to parishes of Poznań, such as e.g. the affiliation of Ostrów and Piotrowo (today, parts of Poznań) to St. Margaret's parish (in Śródka), see the notes to the map of Poznań, penned by P. Dembiński.

parochial districts have been treated as parishes and marked both in the main map and in the map of the Church territorial structures.⁷⁷

The essential factors taken into account when choosing to include or omit a parish were the durability/stability of the structures and territorial autonomy of the parish. A precise reconstruction of the process of regaining numerous parishes from the Protestants and reconstruction of their parish districts for the second half of the sixteenth century, based on Church records, has often proved impossible. A high dynamism of changes, against a poor source base of ecclesiastical provenance makes one resort to tax registers as an essential indicator of the parish's territorial autonomy. They certainly record the situation closer to the sixteenth-century social realities, compared to the descriptions of parochial structures from the latter half of the seventeenth or from the eighteenth century, quite distant in time. Hence, the map reflects those parish centres which are mentioned in Church contribution lists dated 1540 and 1561, and subsequently were systematically referred to as parish centres in tax registers from the second half of the sixteenth century – even if they turned into filial centres or were entirely absorbed by other parishes resulting from post-Reformation changes in the seventeenth or eighteenth century. The Poznań diocese's book of benefice from 1510 and the tax registers from the latter half of the sixteenth century are thus a decisive source in the reconstruction of parochial districts. The Church sources from the seventeenth and eighteenth centuries, including the ecclesiastical visitations and the register of dioceses by Franciszek Czaykowski, serve as auxiliary and complementary material to verify the information.

The discussion of the parochial structure in the diocese of Poznań is arranged into three subchapters. The first ('Wałcz, Wschowa, Międzyrzecz') presents the situation in the three areas where reconstruction of the parish network at the end of the sixteenth century is a particularly difficult task – namely, the northern part of the diocese (behind the Noteć), deanery of Wschowa, and deanery of Międzyrzecz. The separate treatment of these areas is also due to the fact that dynamic changes in the parish network implied no less frequent changes in the ranges of the parishes and their districts. The commentary on the major part of the diocese which was definitely more stable in regard of Church administration, is divided into two parts: 'Parishes and affiliated parishes' and 'Parochial districts'. The first describes the problems related to the reconstruction of the parish network, focusing in particular on incorporated and filial parishes that lost or retained their territorial autonomies. These processes were every so often connected with a collapse of some of the parishes during the Reformation. The second attempts to explain the doubts related to parochial affiliation of individual settlements. Special attention is paid to the influence of decisions made by Church authorities and secular patrons, incomplete recording in the sources of less important settlements (mill- or forge-based), and the impact of ownership relations on the recording of parochial affinity.

(a) Wałcz, Wschowa, Międzyrzecz

A definite majority of the parishes as well as parochial districts of the diocese of Poznań were stable in their character and territorial reach. Doubts mostly refer to the situation of parishes located in the northern part of the diocese located behind the River Noteć in deaneries of Wschowa and Międzyrzecz

For the area behind the Noteć (so-called deanery of Wałcz/Zanotecki), the lack of source base that would enable to determine the parochial or filial character of the churches functioning before the Reformation, let alone reconstruct the parish districts, poses a serious problem. This is particularly true for the areas where the Catholic Church structure completely decayed in the sixteenth century.⁷⁸ Individual mentions from the earlier period (fourteenth to the first half of sixteenth centuries) appear at times that attest to the parochial status of churches; most of them concern the parish priests in office in the first decades of the sixteenth century.⁷⁹ Wałcz was the first parish to have been reinstated

⁷⁷ H. Rutkowski, *Church administration borders*, [in:] AHP Sieradz in this edition III.2.2.5.

⁷⁸ On the Reformation and Counter-reformation in Wałcz land, see Bąk, *Wałcz*; also M. Kuc-Czerep, *Dissenter communities and churches in Greater Poland in the second half of the sixteenth century*, [in:] AHP Greater Poland, in this edition III.2.2c.4.

⁷⁹ The first fairly complete list of parishes for this particular area, as is accepted in the literature, is found in the 1349 document (KDW II, no. 1284; www.wbc.poznan.pl/dlibra/docmetadata?id=20067; access 3.11.2016). To be more precise, though, it was essentially a register, provided by Henryk, the archdeacon for the northern part of Poznań diocese ("terram inter Noteć et Drawam"), of those localities that had to pay the tithe to the bishop of Poznań. The parochial status of a number of them

in its Catholic function, which took place in 1595–1602.⁸⁰ The Reformation in this area meant not only the takeover of Catholic churches but also the building of Evangelical structures *in cruda radice* in the areas where new settlement action unfolded. What it means is that a number of localities were not covered by Catholic pastoral care in the sixteenth century at all. Due to gaps in the records, the main map does not show a full reconstruction of the parochial districts, with the central localities of the parishes of Wałcz, Tuczno, and Czaplinek being plotted. In the opinion of the SHGPoz authors, Nowacki's hypotheses regarding the functioning in the latter half of the sixteenth century of a number of parishes are to be challenged; for the area of Człopa, such parishes include Dzwonowo (Szonowo), Szczuczczarz (Czuczczarz), Przelewice (Pieczyska), Jaglice (Gogolce), Wołowe Lasy, Niekursko, Golin (Gołacza), and Brzeźniak (Barchold); in the area of Wałcz: Różewo (Rozwałd), Prusinowo Wałeckie (Prusendorf), Kłębowiec (Klausdorf); and, in the area of Tuczno: Strzalin (Stralemburg), Zdbowo (Stibowo), Jeziorki (Schulzendor), and Rzeczyca (Knakendorf).⁸¹ Nowacki himself had strong doubts in this matter: 'So, the above churches existed before 1550, while the establishment of all of them before 1510 and their character as parochial or merely succursal cannot be definitely established'.⁸²

Important premises testifying to the loss of parochial rights by a number of churches in the former half of the sixteenth century are comprised in the witness statements made in the 1607 litigation for retrieval of the *beneficia* (i.e. beneficiais, benefactors, properties, and privileges) of the parish in Tuczno. All the local churches were *filiis* already before the Reformation, and were handled by the parish priest of Tuczno.⁸³ The loss of parochial rights by a number of churches is attested also by the tax registers for Poznań district from 1580 and 1583, which recorded the parish of Człopa and the localities of Dzwonowo, Szczuczczarz, Trzebin (Trzebinia), Wołowe Lasy, Załom (Załomia), or Brzeźniak within its limits, all regarded by Nowacki as centres of separate parishes prior to the Reformation.⁸⁴ The renewal of Catholic Church structures in Wałcz district was accompanied by the development of settlement, with new settlements emerging whose parochial affiliation was not readily defined, particularly in the Catholic-Lutheran borderland. This dynamic picture is recorded in the area's visitation records from 1628–9 and 1640–1, which moreover show the rather chaotic and multi-tier dependencies of churches on the other churches. One example is the relations between Człopa, Dzwonowo, Trzebin, and Przelewice, as described in 1641. Przelewice and Trzebin were first included in the parish of Człopa, and then disclosed as chapels of the church in Dzwonowo, which 'fuit olim seorsiva, et pro parochiali habebatur, modo ab aliquot annis parochus Człopensis per commendam illam administrat'. Moreover, the description of the chapel and the filial church in Trzebin includes the statement reading: 'Ad eandem parochiam pertinet filialiter villa Czuchar seu Cicer [Szczuczczarz, Czuczczarz – B.S.'s note] dicta'.⁸⁵ The reconstruction of Catholic structures consisted in regaining former Catholic parishes and their *beneficia*, as well as in attempts to build new pastoral-care centres founded upon the Protestant churches that came into existence in the sixteenth century.⁸⁶ This is probably true with a series of localities at the Ujście (Piła)-Wałcz borderland, including Nadarzyce (Nadorycz), Brzeźnica, Budy (Buda), Głowaczewo (Klawiter), Szwecja, Zdbice (Zbytno), Sypniewo (Sypnow), and Dudylany (Duderlak). Most of them appear in the records only in the latter half of the sixteenth century; the Catholic parish of Nadarzyce emerged only in the early years of the seventeenth century.⁸⁷

Czaplinek was another centre customarily mentioned as parochial in the sixteenth century. Apart from the aforementioned Nadarzyce, Czaplinek was the northernmost Poznań diocese parish functioning

arouses doubt, given that no confirmation can be found in any other record. As remarked earlier, the area is mentioned neither by Poznań diocese's book of benefice, 1510, nor by the lists of the clergy's contributions from 1540 and 1561.

⁸⁵ Wiz. Czir. 1640–1641, ff. 323–324.

⁸⁶ From the visitation record for the parish of Czaplinek, 1641: "Istae omnes ecclesiae sumptibus haereticorum extractae. Anno vero 1625 (it fama est) recuperatae, gremioque Sanctae Romanae Ecclesiae adscriptae sunt"; ibidem, f. 336v.

⁸⁷ The relation between the churches of Nadarzyce and Brzeźnica is unclear. "Ecclesia parochialis cuiusquam sancti nomine non intitulata, ab haereticis olim extracta et ante annos duodecem catholicis restituta non consecrata. Filialis matricis ecclesiae in Brzeznica ad quam et aliae in Buda, Klawiter, Suecia, Zbytno, Sypniow et Duderlak villis filiales ab haereticis itidem extractae et non consecratae spectant"; Wiz. Poz. 1628–1629, f. 8.

in the modern period. According to the 1628 visitation record, the territorial jurisdiction of the local parish priest was titular, since the neighbourhood was only inhabited by Evangelicals.⁸⁸ The record does not mention the villages of Kluczewo (Klausewo), Rakowo, and Nobliny (Nabliny) within the parish's district,⁸⁹ according to Friedrich Wilhelm Ferdinand Schmitt and Fritz Bahr, the moment the Reformation broke out, the Czaplinek church was filial, belonging to Wałcz parish.⁹⁰ For the victory of Catholicism in Czaplinek and renewal of the local Catholic parish in 1624–5, crucial was the attitude of Jan Czarnkowski, *starosta* of Drahim.⁹¹ Not all the attempts at (re)constructing Catholic parishes after the Reformation were immediately successful. For the parish of Dzwonowo, to which three filial churches – Szczuczarz, Przelevice, and Trzebin – were allocated at the beginning of the seventeenth century, the parish priest of Tuczno was initially appointed (in 1616) and then the one of Człopa (1637). In the second half of the seventeenth and in the eighteenth centuries, all these churches are mentioned as filial ones within Człopa parish.⁹² The year 1602 saw Fr. Krzysztof Zadow, parish priest of Tuczno, take the parishes of Strzalin, Mielęcín, and Marcinkowice (Marcinkowo). As per SHGPoz, this act concerned the villages which in the early sixteenth century had no filial churches dependent on the parish of Tuczno and where chapels had been built by dissenters.⁹³ After the visitation of 1628, all these localities (probably, pursuant to the 1607 verdict) were disclosed as parochial villages of Tuczno.⁹⁴ The same visitation record mentions the parish of Róża with its two filial churches, those in Gostomia and Leżenica.⁹⁵ The attempt to establish this particular parish probably failed as well, for in the subsequent years all the three churches are seen included in Wałcz parish.⁹⁶ A failure was the case also with the attempt to set up, in the seventeenth century, of an autonomous pastoral-care centre in Nakielno. The visitation record from 1628–9 informs of a parish in this locality and the villages owned by it: Strączno (Stręcno), Dzikowo (Dykowo), Rutwica (Hermansdorf), Prusinowo Wałeckie (Prusendorf), but in the subsequent years Nakielno is recorded as filial to Tuczno.⁹⁷ Also, there is no strong attestation of the parochial character of the churches in the villages of Dobino (Braksztyn) and Skrzatusz; the latter became an autonomous pastoral centre only in the year 1660.⁹⁸

A somewhat better source base, mainly due to the tax registers that recorded parochial affiliations, is available for the parishes of the deanery of Oborniki (i.e. Wieleń, Czarnków, Biała, Piła) situated behind the Noteć. Apart from the bigger number of records of *lan* tribute collection and visitations, there is a register of the hearth tax (*podymne*) for Poznań Voivodeship, dated 1631 and specifying the parish affiliation.⁹⁹ However, the latter source often specifies the parochial affiliation of localities other than as per the visitation records, and thus has to be treated with considerable criticism. The existing source base does not allow for confirming the suppositions put forward by Nowacki as regards the functioning of a parish in Jastrowie before 1619. The local church, turned into a Catholic one in the seventeenth century, was originally built by the Protestants.¹⁰⁰ As indicated by tax registers from 1580,

⁸⁸ "Habet haec ecclesia octo filiales in villis Lubal, Szwarcenze, Pelen, Wurowa, Szarfenor, Flakenze, Groszwarzenze et Cykier, quas memoratus plebanus non solet adire neque ulla ecclesiastica administrare sacramenta, cum omnes in iis sint parochiani haeretici"; *ibidem*, f. 8v.

1581, and 1583, the locality belonged to the parish of Piła.¹⁰¹ In this parish, incorporated were also the region's localities appearing in the records only in the latter half of the sixteenth century: Czechyń (Czechy), Zabrodzie (Garbaty Most, Garbacz), Czaplino (Głochotka, Borowy, Matter), Dobrzyca, Zawada, Kuźnica Pilska (Hamer Pilski), Dolaszewo, Szydłowo (Biała Góra),¹⁰² as well as Płytnica and Krępsko (Krępa).¹⁰³ Some doubt may be cast on the functioning of a one-village parish in Biała, Oborniki deanery: mentioned in the LBP (with no description)¹⁰⁴ and in the 1540 contribution list¹⁰⁵ (no description), it appears in the parish of Człopa in the 1583 tax register and in the hearth tax register from 1631.¹⁰⁶ The new church was set up right before the parish was inspected in 1628.¹⁰⁷ In Ludwik Bąk's opinion (no record being referred to), 'the All Saints' church [in Biała – B.S.'s note] remained Catholic during the Reformation'.¹⁰⁸ Given the sources available, it is not easy to determine the parish(es) out of which Trzcianka (Trzciana Łąka) parish was singled out in the seventeenth century. The church itself probably emerged along with the chartering of Trzcianka in 1586.¹⁰⁹ As per the visitation record dated 1628, the villages of Łomnica and Nowa Wieś belonged to it.¹¹⁰ An earlier parochial affinity of Trzcianka and its parochial villages is possibly testified by its inclusion in the parish of Człopa by the 1583 tax register and the hearth tax register from 1631.¹¹¹

Reconstruction of the parish network for the land of Wschowa in the second half of the sixteenth century is an almost equally difficult task. The tax registers specify no parish affiliations. More information can be gathered for the southern part of the land, which belonged to diocese of Wrocław (see in this chapter). As regards the part belonging to Poznań diocese, one has by necessity to use later sources, mainly visitation records, juxtaposing them with the earlier fragmentary pieces of information. Ambiguous details relate to the parishes of Świąciechowa (Świąciechów) and Ogrody, neighbouring on each other and confirmed by contribution lists from 1540 and 1561.¹¹² According to Nowacki, Ogrody parish collapsed in the sixteenth century; its area was merged in 1675 with the parish of Świąciechowa (apparently based on the 1675 document). This finding has been undermined by Jurek in his description of Przybyszewo locality; in his opinion, the inclusion of the villages of Przybyszewo, Ogrody, and Trzebiny (Trzebinia) in Świąciechowa parish took place at an earlier date (the quoted erection deed was undated). The parish of Ogrody included Strzyżewice (Strzeżewice) village in 1510. A fragment of the Poznań diocese's book of benefice added with another hand (in mid-sixteenth century, according to Nowacki) is on the affiliation of Przybyszewo and at least one more village (whose name is not quoted) to Świąciechowa parish.¹¹³ In Jurek's view, the locality's situation indi-

¹⁰¹ RPWP, pzn, 1580, no. 475; RPWP, pzn, 1581, no. 473; RPWP, pzn, 1583, no. 477; Now2, p. 388.

¹⁰² The villages of Zawada (chartered 1598), Dolaszewo (1586), Szydłowo (as 'Biała Góra'; 1586), Pokrzywnica (1567), Ługi Ujskie (Olędrowo; 1597), Dobrzyca (also called Borka; set up before 1590), forge settlement Kuźnica Pilska (as 'Hamer'; set up shortly before 1564), and the mill settlements of Czaplino (sometimes as the Matter mill; set up before 1569), and Cyk (also as the Kłapsztyn mill; set up 1586) are specified in seventeenth and eighteenth-century visitation records. In Czechyń, together with the village's chartering in 1597, a Protestant church probably emerged. The date it was retrieved from the Evangelicals is unknown; a Lutheran preacher resided there still in 1612. The 1641 visitation record includes the filial church in Czechyń and the village of Zabrodzie (Garbacz) in the parish of Piła. The glassworks of Pokrzywno (Huta Pokrzywnicka), the mill settlements of Kępa (Kłoda, Gędek) and Ptusza, the forge settlement of Smolary (Smolany), and the inn settlement of Piaskinia (Bełzant) are mentioned as part of Piła parish, with no clear source-based attestation; the premise was their location in Poznań district, close to Piła, and not far from the other localities belonging to the parish; Wiz. Poz. 1628–1629, f. 6; Podymne 1631, f. 6v; Wiz. Czur. 1640–1641, f. 356v–362; Wiz. Poz. 1695–1696, ff. 555v, 572v–573v; Wiz. Poz. 1726–1728, ff. 329v–333; Bąk, Wałcz, pp. 395–396; Żmidziński, pp. 57–60.

¹⁰³ The villages of Płytnica (chartered 1594) and Krępsko (set up c. 1584), having Evangelical chapel built probably together with the chartering, were incorporated before 1628 in the new parish of Jastrowie; Wiz. Poz. 1628–1629, f. 7; Żmidziński, pp. 58–60; Bąk, Wałcz, p. 393.

¹⁰⁴ LBP, p. 82.

¹⁰⁵ AAP, CP 404, f. 16v (recorded next to Czarnków; the sequence of parishes in the contribution list is compliant with the 1510 book of benefice).

cates that before the Reformation, Przybyszewo was part of Ogrody parish, similarly as Trzebiny and Strzyżewice. It can be presumed that the annexation of Ogrody parish and its territory to the parish of Święciechowa was completed before 1639, when it had turned out that reconstruction of a Catholic parish in Ogrody was impossible.¹¹⁴ Possibly in that same period the village of Strzyżewice was moved from Ogrody parish to the parish of Leszno.¹¹⁵ The parishes of Święciechowa and Ogrody are plotted separately in the main map; the villages of Przybyszewo, Trzebinia, and Strzyżewice were made part of Ogrody parish. Niechłód and Jezierzycze Kościelne (Jezierzycze) parishes, which lost their parochial rights probably resulting from the changes implied by the Reformation, are marked as separate units, whereas the autonomy of Jezierzycze Kościelne parish is more doubtful.¹¹⁶ As established by SHGPoz, which undermines Nowacki's argument, the parishes of Łysiny (Łysina) and Tylewice are also treated as separate units.¹¹⁷ Based on the visitation record from 1619, Łysiny parish included Wygnańczyce, a locality with a Protestant church.¹¹⁸ Different circumstances were the case between the parishes of Lasocice and Leszno. Mentioned in contribution lists of 1540 and 1561, both parishes were merged before the Reformation, in 1514.¹¹⁹ Earlier still, at the beginning of the fifteenth century, the parishes of Długie Nowe and Długie Stare were joined together, the seat of the parish in the following years was the church in Długie Stare.¹²⁰

There is no certain information on the parochial affiliation of Przychyna Dolna in the sixteenth century. The village has been disclosed as part of Wschowa parish based on an eighteenth-century visitation record.¹²¹ Later records have been used to confirm the parochial affiliations of the villages of Długie Nowe – to Długie Stare,¹²² Buczyna (Buchwald) – to Osowa Sień,¹²³ and Dominice – to Włoszakowice.¹²⁴ The 1619 visitation record has enabled to include the villages of Hetmanice and Nowa Wieś in the parish of Lgiń; the record neglects Zaborówiec (Zaborowo), a demesne farmstead that, according to Stanisław Malepszak, was founded in 1583–90 and appears in Lgiń parish in the later sources.¹²⁵ The said parish included Śmieszkowo and Potrzebowo villages as well, the former having probably been separated from the parish (as of 1619, the local church was managed by the parish priest of Lgiń). Nowacki's hypothesis that a parish church had existed in Śmieszkowo prior to the Reformation should be rejected, following Jurek's observation that the locality is first attested at the end of the sixteenth century, as is Potrzebowo.¹²⁶ The records-based diversity regarding the affiliation

¹¹⁴ The *terminus ante quem* based on a fragment of the addendum re. Święciechowa parish in the Poznań book of benefice; *ibidem*, *ibidem*, pp. 136, 153; Wiz. Śrm. 1672–1685, f. 636v; Now2, pp. 437–438; T. Jurek, *Ogrody*, [in:] SHGPoz, part 3, p. 417; *idem*, *Przybyszewo*, [in:] SHGPoz, part 3, pp. 886–887; *idem*, *Strzeżewice*, [in:] SHGPoz, part 4, pp. 714–715; *idem*, *Święciechowo*, [in:] SHGPoz, part 5, pp. 126–130; SHGPoz, part 5, no. 2, p. 355.

¹¹⁵ Wiz. Śrm. 1672–1685, f. 646v.

¹¹⁶ The 1510 book of benefice has Jezierzycze Kościelne appear twice, as part of Gołanice parish and as a separate parish. Jezierzycze Kościelne as a parish is mentioned in the 1540 contribution list, where it is braced with Gołanice. The following contribution list, of 1561, has the phrase "Gołancza Jezierzycze annexa eidem". Niechłód and Jezierzycze Kościelne, being affiliated to Gołanice still in 1673, had separate benefices, the villages themselves being described as parochial; AAP, CP 404, f. 41v; ASK I 3, f. 341v; Wiz. Śrm. 1672–1685, ff. 643–643v; Now2, p. 439; S. Chmielewski, *Jezierzycze*, [in:] SHGPoz, part 2, pp. 72–73; T. Jurek, *Niechłód*, [in:] SHGPoz, part 3, pp. 250–251; K. Górńska-Gołaska, *Piotrowice*, [in:] SHGPoz, part 3, pp. 677–679.

¹¹⁷ J. Nowacki believed that the incorporation of Tylewice parish in the Łysiny parish took place in as early as 1444; SHGPoz has this fact dated at the beginning of the seventeenth century, after the retrieval from the Protestants; T. Jurek, *Łysiny*, [in:] SHGPoz, part 3, pp. 69–70.

¹¹⁸ Wiz. Poz. 1610–1619, f. 165.

¹¹⁹ In J. Nowacki's opinion, Lasocice never had a parish church but only a filial chapel. T. Jurek, for a change, remarks that a parish existed there in the fourteenth century and subsequently lost its parochial rights to the church of Ogrody; AAP, CP 404, f. 42–42v; ASK I 3, f. 342; Wiz. Śrm. 1672–1685, f. 645v; Now2, ff. 437–438; T. Jurek, *Lasocice*, [in:] SHGPoz, part 2, pp. 575–577.

of Miastko village has been resolved to the benefit of Brenno;¹²⁷ why tax registers had this village recorded as part of Włoszakowice parish is hard to explain. Tax registers point to the association of Trzebidza village with the parish at Grobia (1563–80) as well as with that of Charbielin (1581); its assignment to the latter has been based on the seventeenth- and eighteenth-century Church records.¹²⁸

The considerations on Wschowa deanery ought to be concluded with the problem of the parish of Kaszczor (Stary Klasztor). Tax registers have Kaszczor (Stary Klasztor) consistently placed in the parish of Przemęt, which is mentioned (without a description) in the 1510 book of benefice contribution lists of 1540 and 1561.¹²⁹ The founding document for the parish in Kaszczor (Stary Klasztor) from 1603 thus marked a renewal and re-erection, as Nowacki observes, after a long period of negligence by Cistercian abbots who were the patrons and owners of the locality. The patrons' negligence might have been the reason why tax registers included Kaszczor (Stary Klasztor) and the parish's localities in St. Peter's parish in Przemęt (Świętopietrze). The parochial district of Kaszczor (Stary Klasztor) parish may only be reconstructed based on the 1603 document; in its description of Przemęt (St. Peter's) parish, the book of benefice compiled in 1510 only names Radomierz and Starkowo. To conclude, it has to be assumed that at the end of the sixteenth century Stary Klasztor parish (and, thereby, Wschowa deanery) reached in the north up to the deanery of Grodzisk, thus encompassing the localities of Ciosaniec, Szreniawa, Łupice (Łupica), Mochy, Wielen, Wijewo, and Osłonin (Osłonino).¹³⁰ The natural border at the side of Przemęt (St. Peter's) parish was probably formed by the complex of the Lakes Górskie, Olejnickie, Radomierskie, and Przemęckie, with their surrounding forests.

The third area that requires a detailed discussion is the area of Międzyrzecz, the westernmost part of the diocese of Poznań. As with the vicinity of Wschowa, the Reformation movements had left a strong impression on the local parish structure. Determination of the status of a number of Catholic churches in the latter half of the sixteenth century is fairly difficult. Considering the fact that sixteenth- and eighteenth-century records reflect the changed, post-Reformation parochial divisions, tax registers have to be given an important role in determining the distinctiveness of individual parishes. The main centre that influenced the entire western and southern part of the deanery was the parish in Międzyrzecz. In the south, the Cistercian monastery in Paradyż (Gościkowo) had an important role. In the deanery's eastern and northern part, the extensive parishes of Trzciel, Pszczew (Pzew), Rokitno, Skwierzyna, and Przytoczna (Przetoczno) stretched. Taking into account the contribution registers of 1540 and 1561 and the parish affiliation data from tax registers, the separateness of a number of one-village parishes that in the sixteenth and seventeenth centuries were incorporated in Międzyrzecz or Chociszewo parishes, been retained. One among them is Rogoziniec parish, recorded in the registers of Poznań and Kościan, being a separate parish according to most of them. Only two Kościan registers, 1563 and 1565, have the village allocated to Chociszewo parish, with the remark that payments were made in Poznań district.¹³¹ As per the 1603 visitation record, the church was permanently occupied by the Protestants. It was returned for the purposes of Catholic pastoral activity in 1604 by Bishop Wawrzyniec Goślicki and attached, as filial, to Międzyrzecz.¹³² The incorporated parishes, preserving their territorial autonomy in the light of tax registers, included moreover Goruńsko, Chycina, Kursko, Pieski, Grochowo, Nietoperek, and Kęszyca (Kęsica).¹³³ Despite serious doubts, a separate parish in Lutol Suchy, Międzyrzecz deanery has been plotted on the main map. The parish was annexed in 1551 to Chociszewo, but was still treated separately in tax registers.¹³⁴ After the retrieval from the Protestants in the early seventeenth century, it was handled – similarly to Rogoziniec – parish priests of Międzyrzecz, and subsequently attached to Międzyrzecz parish in 1645.¹³⁵ The map moreover observes the

¹²⁷ LBP, p. 155; Wiz. Poz. 1610–1619, f. 154; Wiz. Śrm. 1672–1685, f. 599; Czaykowski, p. 828.

¹²⁸ Wiz. Śrm. 1672–1685, f. 611; Czaykowski, p. 829.

¹²⁹ LBP, p. 154; AAP, CP 404, f. 41v; ASK I 3, f. 341v.

¹³⁰ This parish district is attested also by the 1673 visitation record, which remarks that Wijewo already belongs to the parish of Brenno; Wiz. Śrm. 1672–1685, ff. 590–591; Czaykowski, p. 829.

¹³¹ RPWP, ksc, 1563, no. 155; RPWP, ksc, 1565, no. 157.

¹³² Wiz. Psz. 1603–1607, f. 32v, 140v; Now2, f. 474.

¹³³ The omission of Nietoperek parish in the contribution lists from 1540 and 1561 is hard to explain; AAP, CP 404, ff. 50v–53; ASK I 3, f. 345–345v; Wiz. Czur. 1640–1641, ff. 70–73, 90–90v; Now2, pp. 471–472.

¹³⁴ Now2, p. 473; T. Jurek, *Lutol Suchy*, [in:] SHGPoz, part 2, pp. 688–689.

¹³⁵ Wiz. Czur. 1640–1641, ff. 31–33.

distinctiveness of the one-village parish of Chełmsko, which was dependent on the church in Bledzew and then, in the seventeenth century, affiliated to Rokitno,¹³⁶ and of Policko and Gorzycko. These parishes finally collapsed in the beginning of the seventeenth century.¹³⁷

The case of the village and a potential parish in Lutol Mokry (Lutol Wodny), which is mentioned by Nowacki, is rather complex. Let us add that it is mentioned on a regular basis by tax registers for Poznań district in the latter half of the sixteenth century.¹³⁸ Kościan registers assign Lutol Mokry to Zbąszyń parish. The existence of a church in this locality has been challenged by Jurek, who found that the 1645 document produced by Nowacki pertained to Lutol Suchy.¹³⁹ This conclusion is by all means justifiable, taking moreover into account the fact that at the beginning of the seventeenth century, the *meszne* tax (vested in the parish for celebration of masses at its churches) from Lutol Mokry (Lutolek) was paid to Zbąszyń.¹⁴⁰ The mention in Poznań district of the parish of Lutol Mokry ensued from the frontier character of the locality, since Zbąszyń parish was part of Kościan district territory. And, there is no premise that would testify to a separateness of the parishes of St. Adalbert's (św. Wojciecha) and Bobowicko from Międzyrzecz parish.¹⁴¹

Given the records available, the parochial affiliation of the village of Trzebieszewo near Skwierzyna, being part of the episcopal demesne of Pszczew, is unclear. This might have been the reason why certain tax registers include it in Skwierzyna parish, while other ones see it as part of Pszczew. The most interesting, given the context, is the 1576 registry. It mentions Trzebieszewo twice – in Skwierzyna parish, and in the parish of Pszczew, clearly remarking that ‘Trzebyszewo episcopatus Posnaniensis clavis Pczewensis pertinet ad parochiam Sqwyerzyna’, though.¹⁴² As per the 1607 visitation record, Trzebieszewo housed a wooden Nativity of Our Lady church (without a parish priest in office or a parish district). By analogy with the church in Murzynowo, its incorporation in Skwierzyna parish may be assumed.¹⁴³

(b) Parishes, filial parishes, filial/incorporated churches

Following the assumption adopted in the introduction to this section, the main map and the reference map illustrating the Church structures include, apart from the normally functioning parishes, those centres which, in spite of the atrophy of Catholic pastoral service caused by the Reformation, mainly owing to shortages in parish priest manning, were approached in the second half of the sixteenth century as administrative units (filial parishes). Included in this category are also filial and incorporated churches that preserved their territorial autonomy from their mother parishes and are treated as separate parishes. One such is the parish of Gać, which in spite of its seizure by the Protestants in the mid-sixteenth century was regularly recorded by tax (collection/‘chimney’-tax registers) and contribution registers. Only in the register from 1580 is Gać, together with its parochial localities of Brzeźno and Łopuchowo, mentioned as part of Długa Goślina (Goślina Długa) parish. Similar circumstances were the case with one-village parishes in Ocieszyn¹⁴⁴ and Lewice.¹⁴⁵ Another incorporated parish featuring a well-attested permanent district was also Mutowo (Szamotoły Stare). Clearly, the formal deed of the merger of

¹³⁶ Ibidem, f. 98; Now2, p. 480.

¹³⁷ Now2, pp. 471–472.

¹³⁸ RPWP, pzn, 1576, no. 315; RPWP, pzn, 1580, no. 349; RPWP, pzn, 1583, no. 354.

¹³⁹ The basis of T. Jurek's opinion whereby the 1645 document actually mentions Lutol Suchy, rather than Lutol Mokry, is unknown; Now2, p. 473; T. Jurek, *Lutol Mokry*, [in:] SHGPoz, part 2, pp. 687–688.

¹⁴⁰ The 1607 visitation record for Zbąszyń parish refers to a *meszne* paid based on half-*lan* [*póllanek*] in Lutolek locality; Wiz. Psz. 1603–1607, f. 132.

¹⁴¹ The 1640 visitation record refers to a St. Adalbert's oratory. Its description differs (in the lack of parish priest's benefice, *inter alia*) from that of the other churches (*ecclesiae*) – those of Rogoziniec, Lutol Suchy, Kęszyca, and Nietoperek – which, though filial, were autonomous as regards property. The 1603 visitation record mentions a church in Bobowicko, whereto the one of Policko (both occupied by the Protestants) was affiliated; however, other records, esp. tax registers, point to Bobowicko belonging to Międzyrzecz parish. Wiz. Psz. 1603–1607, ff. 32v, 140v; Wiz. Czur. 1640–1641, ff. 70–76v; Now2, pp. 469–471.

¹⁴² RPWP, pzn, 1576, no. 434, 572.

¹⁴³ Fifteenth- and sixteenth-century files offer no information on this temple. Nowacki presupposes that it might have functioned as a parish in the fifteenth century based on the equipment and the indulgence privilege dated 1454. Wiz. Psz. 1603–1607, f. 145v; Wiz. Psz. 1724–1725, f. 203v; Now2, p. 480.

¹⁴⁵ RPWP, pzn, 1553, no. 228; RPWP, pzn, 1583, no. 313–314; Now2, pp. 461–462; J. Luciński, *Lewice*, [in:] SHGPoz, part 2, pp. 592–594.

St. Stanislaus's parish in Szamotuły and St. Martin's parish of Mutowo, Szamotuły Stare, dated 11 June 1478, had not been put into daily practice, since the two parishes are treated separately well into the sixteenth century.¹⁴⁶ In spite of some doubts, the main map shows Boguszyn (Boguszyno) as a separate parish. It is mentioned by the contribution lists from 1540 and 1561,¹⁴⁷ whereas at the time of the 1619 visitation its parochial character was not certain. In Nowacki's opinion, Boguszyn, the church and the parish, was annexed to Radomicko only in 1694–7.¹⁴⁸ Also for the parishes of Lipno, Witosław, Drużyn (Drożyn), Trzebaw, Brójce, Mieczewo, Radzewo, Słupia, Kępa Mała, and Ziemin it was assumed that they eventually faded in the seventeenth century. Lipno, a parish mentioned on regular basis in the records in the latter half of the sixteenth century, was left in the seventeenth under the control of the parish priest of the adjacent parish of Mórkowo; the church was subsequently dismantled.¹⁴⁹ A similar situation was with Witosław parish, which after its collapse in the seventeenth century was made part of Drzeczkowo parish.¹⁵⁰ The parish of Drużyn was annexed to the one of Granowo in 1632.¹⁵¹ The parish in the village of Trzebaw had apparently collapsed at an earlier date, for the record of the visitation of the parish of Łódź (Łodzia) in 1628 has this locality situated within its own parish district, just mentioning the once-existing, and by then completely destroyed, church.¹⁵² The parish of Brójce (hidden, perhaps, under the name of 'Brodze' in the 1561 list), regularly mentioned by sixteenth-century tax registers, after its retrieval from the dissenters was affiliated in 1614, based on its patron's decision (caused by an insignificant benefice), with Babimost.¹⁵³ The parishes in Mieczewo and Radzewo were incorporated into Bnin parish, after 1614 and after 1616, respectively. The date of the fall of Słupia's one-village parish is unknown. According to Nowacki, it was incorporated before 1537 in Witaszyce parish. Systematically mentioned in sixteenth-century records, it appears in the benefice district of Witaszyce parish as of 1610.¹⁵⁴ The parish in Ziemin functioned with interruptions and in an irregular fashion, in the late sixteenth and early seventeenth centuries.¹⁵⁵ At the beginning of the latter century, resulting from an inundation of the Warta, the church in Kępa Mała village was destroyed; never rebuilt afterwards, it had its benefice joined with that of the parish of Zaniemyśl (Niezamyśl).¹⁵⁶

The main map shows the parish of Krzan (Krzon) as an autonomous one, despite its incorporation, prior to the Reformation (in 1508), in the parish in Stary Białcz (Białcz, Białejezioro).¹⁵⁷ This is how the village is recorded in the tax register in 1563, namely, within Stary Białcz parish.¹⁵⁸ However, the contribution lists (1540, 1561) and other tax registers never cease to mention the parish of Krzan.¹⁵⁹ An important premise in favour of the parish's autonomy was the character of its incorporation, which was meant to preserve the parochial rights of the two joint churches and a separate benefice for the chapel in Krzan, as quoted in the 1610 visitation record.¹⁶⁰ The autonomous status of the parish in Rostarzewo (Rzestarzewo), is problematic, as all the tax registers place this village within the parish of Wolsztyn, which was disclosed in the contribution list of 1540 but neglected in the corresponding register dated 1561.¹⁶¹ The trial in 1513 between the lord of Rostarzewo manor and the parish priest of Wolsztyn was held as the latter had undermined the parochial character of the church and

¹⁴⁶ LBP, pp. 78–79; AAP, CP 404, f. 15v; ASK I 3, f. 330v; Wiz. Czur. 1640–1641, f. 205v; Now2, p. 372.

¹⁴⁷ AAP, CP 404, f. 32; ASK I 3, f. 338.

¹⁴⁸ As regards the church in Boguszyn, the visitation record from 1619 has: "Est controversia an pertineat ad parochialem ecclesiam in Radomiczko ut nonnulli asserunt, nec non". The affiliation of Boguszyn and Bronikowo villages, where once had been separate parishes, and of Radomicko parish church was a matter of dispute in the second half of the seventeenth century. Wiz. Poz. 1610–1619, f. 141v; Wiz. Śrm. 1672–1685, f. 465; Now2, p. 432.

¹⁶¹ AAP, CP 404, f. 44.

demanded that its benefice be taken over by Wolsztyn parish. The picture is even more complicated as the church was taken over by the dissenters in the second half of the sixteenth century. The main premise in favour of having this one-village parish plotted is the mentions confirming its functioning in the latter half of the sixteenth century (e.g., the presentation for the parish priest in 1543, erection deed confirmed as of 1551, commendary in office from 1595 to 1603) and the following mention in the 1603 visitation record: ‘Nullas habet villas parochiales, sed ipsamet villa est per se, ubi dicta ecclesia est aedificata’.¹⁶² The parish in Pierzchno is seen as separate, in spite of its incorporation in the provostry (praepositura) of Kórnik. Though the 1540 list mentions the Pierzchno parish under one item with Kórnik, all the tax registers name it as belonging to the said parish. At the beginning of the seventeenth century, the parish was neglected, with no sacraments dispensed (or, at best, given twice in a year); it was run by the parish priest from Kórnik.¹⁶³ Albeit the incorporation into Kórnik provostry took place in 1431, still at the beginning of the eighteenth century did Pierzchno parish preserve traces of territorial autonomy (a parochial district).¹⁶⁴ In 1548, the parish of Bojanice, due to poor benefice emoluments, was incorporated, upon consent of the patrons, in the parish of Świerczyna, and yet it is seen by tax registers as a separate unit.¹⁶⁵ The case of Gałęzewo parish was similar. 1446 saw the Chapter of Poznań grant its consent for annexing the parish church in Gałęzewo, as filial, to the parish in Szamarzewo; in 1510 the parish priest of Szamarzewo managed the church in Gałęzewo. In 1540, the bishop recognised the independence of the Gałęzewo church as a parish church.¹⁶⁶ No sixteenth-century record provides a clear and lasting effect of a temporary merger between Łaszczyn (Łaszczyno) and Sarnowa (Sarnowo) parishes.¹⁶⁷ In terms of administrative affiliation, interesting is the relation between the parishes in Noskowo and Potarzyca. The 1510 book of benefice has Nostków (Noskowo), deanery of Nowe Miasto, mentioned as village with a chapel and a prebend with the parish of Potarzyca.¹⁶⁸ The Noskowo parish was founded in 1434. Nowacki supposes that when it came to implementing the founding deed, the parish priest at Potarzyca created some difficulties. This might have led to the diverse terms used in relation to this particular benefice (*oraculum, altare, ecclesia parochialis, beneficium perpetuum*). In his opinion, Noskowo parish became fully autonomous only in the latter half of the sixteenth century.¹⁶⁹

The omission of certain parishes in the contribution lists from 1540 and 1561 was mostly caused by their legal/formal situation or by the dynamism of Reformation phenomena. One such parish is Budzyń, which was mentioned on a regular basis by tax registers from the second half of sixteenth century and the later visitation records.¹⁷⁰ Its absence in these lists or registers might have been based on a dependence that at times caused conflicts with the adjacent parish of Chodzież, which according to Nowacki was Budzyń’s mother parish.¹⁷¹ The situation is similar with one-village parish of Wyszczanowo, interrelated with the parish in Stary Dwór and systematically appearing in the tax registers.¹⁷² The main map features, though not without a doubt, the one-village parish of Brudzewo, whose autonomy is attested by tax, including hearth tax, registers from 1631, in spite of its integration in 1563 into Kręcisko (Kręcisko) parish.¹⁷³ Another argument is its absence in Kręcisko’s parish district, as per the 1603 visitation record: ‘Villae parochiales sunt 2 Nova et Vetus Kromsko, utraque villae reverendi domini

abbatis'.¹⁷⁴ Similar circumstances have caused that a separate parish in Koźmiek be plotted. It is disclosed in the tax registers for the district of Kościan (due to the geography) as well as for that of Poznań (owing to ownership relations with the Cistercians of Paradyż). As far as Kościan registers are concerned, the location was included, as a rule, in the parish of Kręcko, sometimes without quoting the amount or base of the tax concerned, with reference to Poznań district.¹⁷⁵ The tax amount and base is regularly specified whenever Koźminek is disclosed as a separate parish in the tax registers for Poznań district.¹⁷⁶ The church was not covered by the 1603 visitation, for it had no priest in office yet, freshly retrieved from the Protestants.¹⁷⁷ The omission in the contribution lists of Łagowiec parish, otherwise noted down in the tax registers, might have been due to its dependence, though not documentarily attested, on Bukowiec Międzyrzecki (Bukowiec).¹⁷⁸ The lack in the 1561 register of the Holy Spirit parish in Oborniki might have been due to its special character (a hospital church, second parish in Oborniki, in the suburban area). As a provostry parish church, it is still mentioned in an visitation record from the early eighteenth century.¹⁷⁹

Some of the parishes have lost their territorial autonomy resulting from the incorporation, the latter being in some cases related to the parish's collapse in the course of the Reformation. Morasko (Morawsko) is only mentioned as a parish's seat in the 1553 tax register.¹⁸⁰ After the incorporation in the parish of Chojnica in 1507, and the seizure of the benefice in the mid-sixteenth century, the parish eventually collapsed. The 1540 and 1561 contribution lists describe it as joined with Chojnica, the tax registers from the latter half of the sixteenth century and thereafter include the village in the parish of Chojnica.¹⁸¹ The situation was similar with Stare Borówko (Borówko) parish, which was merged with Czempin parish in 1470 (after parish priest Michał's death). The related decree was issued by the bishop of Poznań in 1460.¹⁸² Although the parish is mentioned also by the contribution lists from 1540 and 1561 (specifying no tax amount), it is absent in the tax registers from the second half of the sixteenth century and in the 1510 book of benefice. Borówko basically belongs to the parish of Czempin.¹⁸³ The parish of Przyprostynia (Przeprostynia), existing at the beginning of the sixteenth century, was incorporated in 1515 in Zbąszyń parish. The 1540 and 1561 contribution lists indicate its association with Zbąszyń, whilst the tax registers consistently mention the village within the parish of Zbąszyń.¹⁸⁴ The parish in Błażejewo (Błożejewo) was mentioned by the 1540 contribution list alongside the provostry in Bnin, in which it had been incorporated in 1513; the subsequent list, dated 1561, does not name it.¹⁸⁵ This lot was shared by the parishes of Osiecko and Nowa Wieś, whose churches were merged into the parish of Sokola Dąbrowa (Falkwald) and re-ranked as affiliated ones.¹⁸⁶ As a separate parish, Boryszyn is only mentioned in the register from 1553.¹⁸⁷ By 1540, it had probably become a *filia* of Żarzyn; it is the latter that the other tax register allocated the village to.¹⁸⁸ The parish in Głuchów lost its territorial autonomy probably in the fifteenth century or in the first decades of the sixteenth; it is mentioned (no description) in the book of benefice, 1510, but not in the 1540 or 1561 contribution lists. Nowacki takes note that there are no mentions of parish priests in Głuchów after

¹⁸⁶ Enumerated in the contribution lists of 1540 and 1561. As of 1561, both parishes were occupied by the Protestants. All the tax registers have them as part of Sokola Dąbrowa parish; AAP, CP 404, ff. 51v, 52v; ASK I 3, ff. 345v–346; Now2, pp. 477–478.

¹⁸⁷ RPWP, pzn, 1553, no. 11.

¹⁸⁸ As of 1540, Żarzyn and Boryszyn were handled by the same parish priest. Boryszyn does not appear in the 1561 contribution list; AAP, CP 404, f. 51v; Now2, p. 476; K. Górską-Gołaska, *Boryszyn*, [in:] SHGPoz, part 1, p. 98.

1427. Tax registers from the second half of the sixteenth century include the village in Pogorzela parish.¹⁸⁹ Rybojady parish was annexed to the parish of Trzciel in the fourteenth century, according to Nowacki; the memory of that incorporation reappears in the institutive document for both presbyteries (parsonages) concerned, dated 1583.¹⁹⁰ The incorporation of Dąbcze (Dąbiec) parish into the one of Rydzyna took place in the early fifteenth century, whereas Słupia Kapitulna (Słupia) parish was made part of the parish of Czesram before 1510. Słupia Kapitulna became an autonomous pastoral centre again only in the middle of the seventeenth century.¹⁹¹ According to Nowacki, Sobiałkovo parish was incorporated in Miejska Górka (Górka) in the late fourteenth/early fifteenth century. The contribution lists from 1540 and 1561 treat both centres as merged, while tax registers consistently have Sobiałkovo within Miejska Górka parish.¹⁹² The exact date of annexation of the parish in Dłoń (Dłonia) village to Kołaczkowice parish is unknown. Mentioned in the 1540 contribution list, it is not specified in the corresponding 1561 record, whereas all the tax registers from the second half of the sixteenth century include it in the parish of Kołaczkowice.¹⁹³

Tax registers refer to the village of Wysoka in different ways. Some see it as a separate parish whilst others include it into the parish of Kaława;¹⁹⁴ the contribution lists of 1540 and 1561 ignore the name. In the main map, it is included in the parochial district of Kaława, where it belonged together with its filial church in 1603.¹⁹⁵ Among the parishes that lost their parochial rights during the Reformation and are not mentioned – or, if so, only fragmentarily – in the list records of the latter half of the sixteenth century, are also Mieściska (Mieścisko, Ceradz Stary parish),¹⁹⁶ Górka (village deserted in the sixteenth century, Trzebaw parish),¹⁹⁷ and Dąbrowa (deserted village, Dębno parish).¹⁹⁸ Erected in the latter half of the sixteenth century, the church in Radlin, mentioned in the 1610 visitation record, cannot be regarded as a parish church for there was no pastoral benefice related to it, and the church was managed by the parish priest of Wilkowyja. The locality was not mentioned in the parochial district of Wilkowyja; for the Mieszków parish, an annotation reads, ‘olim pertinebat etiam Radlinum, sed postea per compositionem separatum’. Apparently, at the beginning of the seventeenth century the parish of Radlin was getting organised.¹⁹⁹

In the main map, the symbol of parish marks the parish’s central seat – also if occupied by the Protestants. This refers, for instance, to the parish of Skoki, where, resulting from the seizure of the church by the Protestants, the seat of the Catholic parish was temporarily moved to Potrzeznowo.²⁰⁰ It was similar with the parish of Gnin (Gnino), where the functions of parish church were taken over by the filial church in Jabłonna (Jabłona Stara).²⁰¹ In some cases, a difference might have occurred between the parish’s name and its seat, or, such names could have appeared alternately (as with Paradyż – Jordanowo; Oborniki: Holy Spirit – Stara Wieś). Two parishes appeared for Żerków: the urban one – St. Nicholas’s, and the suburban one – St. Stanislaus’s.²⁰² A particularly interesting case is the relations between the churches in the parish of Grobia-Bucz (Bocz). The situation was made even more complex owing to the Reformation; at the beginning of the seventeenth century, the churches

in Bucz and Grobia are referred to as deserted.²⁰³ The parish of Grobia was restored in 1641, with its new seat of Bucz (Grobia locality vanished).²⁰⁴ The parish of Charbielin was moved after 1650 to St. James's (św. Jakuba) church in Dłużyna.²⁰⁵ It has been problematic to determine the central seat of Komorowo as a parish of Wolsztyn. Controversy was once triggered by the establishment of a church in the town of Wolsztyn within Komorowo parish. Based on the bishop's decision from 1461, the Holy Masses on Sundays were to be celebrated at both churches: the morning mass in the mother church of Komorowo and the High Mass at the filial church of Wolsztyn.²⁰⁶ It has to be made clear that the notions of 'mother' (*matrix*) and 'filial' (*filialis*) status ought to be referred to parochial rights with considerable carefulness, for the mother church (*matrix*) cannot be directly identified with a parochial one (*parochialis*), whereas the filial (*filialis*) church is not identical with a non-parochial one (*non parochialis, filialis*). A church's filial status might have:

- 1) been caused by its later date of emergence, as compared with the mother church ('filial' is a younger church than the mother one) – this being a genetic criterion;
- 2) ensued from the pastoral subordination and dependence – a hierarchical criterion.

The temple in Wolsztyn is a perfect example of filial church (under the former criterion) which gradually received its parochial rights, causing in parallel the transition of the mother church in Komorowo into a filial one (under the latter criterion). The moment of transferring the parochial rights to the Wolsztyn church is difficult to grasp, as it was a process. The bigger significance of the church in Wolsztyn already in 1540 is seemingly attested by the verdict in the trial of Błażej, parish priest at Wolsztyn and Komorowo, stating that on each feast day, save for Sundays, it was in Wolsztyn, the place with a larger congregation of the faithful, that solemn sung masses were to be held. The exception was the patronal feast, on which the Holy Mass was to be celebrated in Komorowo.²⁰⁷

Table 2. Areas of deaneries and number of Latin parishes in Greater Poland part of diocese of Poznań (end of sixteenth century)

(c) Parochial districts

There are many doubtful cases regarding the parochial affiliation of individual villages or smaller settlements (demesne farms, mill settlements, etc.). When resolving such doubts, the relevant decisions of ecclesiastical authorities or patrons ought to be taken into consideration.

The affiliation of Buszewo is a problematic issue, given the records. The locality was moved in 1411 by the bishop of Poznań from the parish of Otorowo to the parish of Psarskie.²⁰⁸ Some tax registers and the hearth tax register from 1631 continuously attribute Buszewo to Otorowo parish, though.²⁰⁹ The other registers from the second half of the sixteenth century and the visitation record from 1603 refer to Buszewo as part of Psarskie parish.²¹⁰ Tax records from the latter half of the sixteenth century, save for the earliest tax register, dated 1553, place the village of Konin (Konino) in the parish of Lwówek. In 1557, Poznań Bishop had the locality temporarily moved to Lwówek parish, as the one of Pniewy was seized by the Protestants. Konin became part of Pniewy parish again probably at the century's end, with its resumption of the Catholic practice. The years 1585 and 1590 saw the institution of two parish priests at Pniewy; the parish's visitation record of 1603 mentions Konin within the parish's district, with the remark 'Konin sub Lwowko'.²¹¹ A similar situation was the case with Kawczyn (Kawczyno) village. After the seizure of Oborzyska parish by the Protestants in 1562, the bishop of Poznań annexed the village, on request of Łukasz Rydzyński, the landlord of Kawczyn, to the parish of Bonikowo.²¹² The main map shows Kawczyn within Oborzyska parish as it is hard to decide whether the 1562 decision had actually been delivered, since all the tax registers still specify the village as belonging to Oborzyska parish, similarly as the seventeenth- and eighteenth-century ecclesiastical records.²¹³ And, there is no known confirmation of the Poznań bishop's decision to temporarily move, in 1560 the village from Niałek Wielki parish to Siedlec parish, on request of the owners of Powodowo. The tax registers from the second half of the sixteenth century and the earliest preserved visitation record, dated 1603, describe the locality as situated in Niałek Wielki.²¹⁴ The placement of Strychy (Strych) village in Międzychód parish is based on the new ordination for that particular church: dated 1591, it resolved that Strychy village be moved from the parish of Przytoczna (Przetoczno).²¹⁵

Decisions of Church authorities have been taken into account also when it came to analysing the parochial affiliation of the villages of Wyszynki (Wyszyny) and Prosna, on the border area of Ryczywół and Chodzież parishes (deanery of Oborniki). As of 1510, both villages were part of Chodzież parish; Wyszynki paid one-half of its tithe to Ryczywół.²¹⁶ In 1559–61, Bishop Andrzej Czarnkowski moved the two localities from the parish of Chodzież, occupied by the dissenters, to Ryczywół, until Chodzież parish was returned to the Catholic community.²¹⁷ This fact is not reflected in the tax registers, as Prosna appears in them as belonging to Chodzież parish,²¹⁸ whereas Wyszynki is mentioned alternately for the parishes of Chodzież and Ryczywół. The important thing is that Wyszynki appear in the tax registers as part of Ryczywół parish also prior to the Poznań bishop's decision; in two cases, the tax collector, recording Wyszynki among Ryczywół parish's localities, clearly remarked that the village belonged to Chodzież parish.²¹⁹ The Poznań bishop's decree was probably never delivered; the year 1586 saw

²¹⁰ Buszewo is mentioned as part of Psarskie parish by the visitation record for 1641, which remarks that the tithe is paid to Otorowo. It was possibly for this reason that *Regestr diecezjów* included Buszewo in Otorowo parish; RPWP, pzn, 1553, no. 340; RPWP, pzn, 1576, no. 409; RPWP, pzn, 1577, no. 443; Wiz. a Catholic priest (commendary) join the parish of Chodzież. The seventeenth- and eighteenth-century visitation records confirm Proсна's belonging to Chodzież parish and Wyszynki village's division between the parishes of Chodzież and Ryczywół (the *meszne* tax was paid as of 1641 alternately to both parishes).²²⁰ The division of benefice from one locality into two parishes was a rather frequent situation, but not always implying the locality's administrative split into two parish districts. A settlement split between two parishes was Małachowo (Malechowo). Mentioned for the parish of Kunowo as well as for that of Dolsk, it appears in tax registers only with the latter one. The 1610 visitation record remarks for Dolsk parish that tithes from the demesne farmstead were paid to Kunowo while the *meszne* from the serf *lans*, to the parish of Dolsk.²²¹ A similar picture can be found in the visitation records for Kunowo and Dolsk parishes, 1672–85: 'Małachowo. Habetur praedium curiae et spectat ad ecclesiam parochialem in Kunowo. Post agros vero cmetonales solvuntur missalia venerabili parochio in Dolsko'.²²² The dispute over the benefice from Małachowo involved the parish priests of Dolsk and Kunowo already in the fifteenth century.²²³ Also, the division of Grąbkowo between the parishes of Jutrosin the demesne farm and Golejewko (Czesram) the village, with the tax registers consistently allocating the locality to the parish of Golejewko (Czesram), was permanent.²²⁴ The village of Strzyżew (Strzeżewo) was located on the border area of the parish of Lutynia the manor and *hortulani* (smallholders) and Dobrzyca – *ipsa villa*.²²⁵ The division into two parishes of the localities of Boszkowo and Węgrzynowo – and, potentially, Raszkowo – is mentioned elsewhere.²²⁶

Rather convoluted were the relations between the parishes of Przemęt – St. Peter's (Świętopietrze) and St. Andrew's in the later sixteenth/early seventeenth century, both being mentioned by the Poznań diocese's book of benefice (1510) and the contribution registers of 1540 and 1561.²²⁷ The visitation record of 1619 is crucial as it specifies that a St. Peter's church had once existed outside the town; destroyed due to its age, it was abolished a few years until the visitation, and the site profanated. The benefice and obligations were taken over, on consent of Przemęt abbots, by St. Andrew's parish. Among the localities once providing benefits to the St. Peter's church, Błotnica, Górsko, Radomierz, Starkowo, and Boszkowo are mentioned. Save for Górsko, these localities are enumerated for Przemęt (Świętopietrze) parish in tax register for 1563 and 1565.²²⁸ The geographical location of Górsko urges one to include it in Przemęt (Świętopietrze) parish as well, in line with the visitation record rather than tax registers. It is harder to reconstruct the parochial districts of the mutually adjacent parishes of Wysocko Wielkie and Ostrów Wielkopolski (Ostrów). The origins of the parish in Wysocko Wielkie, handled by two parish priests for some time, dated back probably to as early as the twelfth century. The parish of Ostrów Wielkopolski (Ostrów), separated from it, functioned at times under the name of Ostrów Krępe. Basing mainly on the 1510 book of benefice and tax registers, Nowacki refers to an extensive district of Wysocko Wielkie parish, consisting of nineteen localities. He only includes the parochial city of Ostrów Wielkopolski to its namesake parish.²²⁹ However, the Church records offer a different picture. The records of the visitations of Ostrów Wielkopolski parish carried out in 1672 and 1683 found that, based on the erection deed, the villages of Zacharzew (Zacharzewo), Krępa (Krępe), Zębców (Ząbczewo), and Stare Kamienice (Kamienice) belonged to it from the very beginning.²³⁰ Why

two of them, namely Zacharzew and Zębców, were mentioned in the 1510 book of benefice's description of Wysocko Wielkie parish, is difficult to explain.²³¹

The problems causing interpretive difficulties in the determination of a locality's parochial affiliation is often a lack or inaccuracy of basic source information. This has at times to do with the way in which small mill or forge settlements were recorded – that is, as commercial facilities together with the larger centres. The considerable confusion is also caused by recording of localities in tax registers according to ownership, rather than by parish, the latter being the basic registration order. In the light of tax registers from the latter half of the sixteenth century, the range of the parishes of Rożnowo and Rogoźno is unclear: they were always noted down next to each other, while the 1553 register has a one-village parish of Rożnowo, and then the one Rogoźno with a number of member localities.²³² This sequence is reverted in the later register, with a one-village parish of Rogoźno followed by Rożnowo parish with those same localities as enumerated for Rogoźno parish in 1553.²³³ The way the records are made in the 1563–83 registers does not entail that the said localities had altered their parochial affiliation, as is indicated by seventeenth-century visitation records as well as the tax registers for Gniezno district, to which the villages of Marlewo and Żerniki belonged.²³⁴ Somewhat problematic is the belonging to Rogoźno of the localities of Rudnice and Runowo (Rumnowo), both recorded by tax registers for the districts of Poznań (Rogoźno parish) and Kcynia (Potulice parish).²³⁵ The allocation of these border localities to the parish of Potulice in Kcynia district's tax registers followed from the fact that those registers did not disclose Rogoźno parish as it was part of Poznań district, including these localities instead in the closest adjacent and westernmost parish of the respective district. The resolving record has therefore been that for the parish of Potulice dated 1628, which found that, apart from the parochial locality, only two villages – Nowe Brzeźno (Brzeźna) and Żelice – belonged to it,²³⁶ as is confirmed by the later visitation records for the parishes of Potulice and Rogoźno.²³⁷ Probably a similar circumstance underlay the inclusion in the Poznań district's tax registers of Brzekiniec locality in the parish of Rogoźno. Moreover, the village was part of the *starostwo* (starost's district) of Rogoźno. Yet, it belonged to the adjacent parish in Potulice, situated in Kcynia district and neglected by the Poznań registers.²³⁸

The district of the parish of Łęgowo, incorporated in 1596 in the convent of Wągrowiec, is poorly attested for the second half of the sixteenth century.²³⁹ The parish's benefice received by the convent, as specified in the 1628 visitation record, came from Łęgowo itself and from Sienno and Czekanowo villages (the affiliation of Bobrowniki is covered above).²⁴⁰ Czekanowo should be regarded as part of the parish of Lechlin (Lechnin), for it was there that 50% of the *meszne* tax was paid.²⁴¹ The locality is allocated in the same way in the 1510 book of benefice and in all the tax registers from the latter half of the sixteenth century and the later visitations.²⁴² In the main map, the village of Roszkowo (Raszkowo) appears as part of Lechlin parish. In the former half of the eighteenth century, it was part of Skoki parish, whereas its earlier split into Lechlin i Skoki parishes cannot be preclude.²⁴³ Somewhat

²⁴² LBP, p. 37; Wiz. Poz. 1726–1728, f. 395v; Wiz. Poz. 1737–1738, f. 272.

²⁴³ The village of Roszkowo paid its *meszne* to Lechlin parish, as of 1628; the 1727 visitation record mentions a distribution of the benefice from that locality among the parishes of Skoki and Lechlin, whilst the *meszne* tax, and the locality itself, belonged to Skoki parish. The latter fact is confirmed by the visitation record of Lechlin parish in 1778, where it is remarked that “Villam Roszkowo anteriores visitationes inter villas parochiales ecclesiae Lechlinensis significavit, ultima vero

problematic, owing the discrepant source information, is the scope of Grobia parish, at the border with the parishes of Wilkowo Polskie and Przemęt (Świętopietrze). The related information from the book of benefice, 1510, appears incomplete.²⁴⁴ The tax registers point to the affiliation of Boszkowo village to Przemęt (Świętopietrze) parish, and Barchlin (Barklin) – to Wilkowo Wielkie parish. This is somewhat opposed by the information, quoted by Nowacki, whereby, in line with the Andrzej Bniński document from 1440, Boszkowo and Barchlin were part of Grobia parish (Bucz, in seventeenth-century terms).²⁴⁵ The 1619 visitation record for the parish of Przemęt mentions Boszkowo among the localities which once had paid the *meszne* tax to St. Peter's church in Przemęt.²⁴⁶ An explanation is provided by the following excerpt from the Przemęt parish visitation record from 1672–1684: 'Boszkowo. Habetur praedium et pertinet ad sanctam Barbaram in Grobia, villa pertinet ad parochiam Premetensem'.²⁴⁷ On this basis, the affiliation of the settlement to the parishes of Przemęt (Świętopietrze) and Grobia can be determined. Harder to explain is why the tax registers allocated Barchlin to Wilkowo Wielkie parish; the aforesaid document, and the later ecclesiastical sources suggest that the affiliation with the parish of Grobia is pretty probable.²⁴⁸

The parochial affiliation of Sworzyce had triggered doubts since the mid-fifteenth century. Claims to the village were laid by the parish priests of Bukowiec (Bukowiec Małego) as well as those of Grodzisk Wielkopolski (Grodzisk). The tax registers consistently have Sworzyce situated in Grodzisk Wielkopolski parish, but the visitation record from 1603 and the later Church sources include it in the parish of Bukowiec.²⁴⁹ This very affiliation, in spite of the doubts related to Sworzyce having been moved under the jurisdiction of Bukowiec, is shown in the main map. This version is potentially supported by the geographical location of Sworzyce, close to Kąkolewo (the other parochial locality of Bukowiec) and considerably far from the localities of Grodzisk Wielkopolski parish. The parochial affiliation of Szczepowice parish is also problematic. In the fifteenth century, it clearly shows a relationship with Konojad, whilst the tax registers include it in Modrze parish. An important premise behind the inclusion of this locality in the parish of Konojad is provided by the document renewing the erection of the church in Konojad, dated 1601, which mentions Szczepowice within the said parish.²⁵⁰ Given the available information, the altered parochial affiliation of Wróżewy village as per the tax registers is difficult to explain: the lists of 1576 and 1577 mention the locality in the parish of Lutogniew. The subsequent ones, in Benice parish. The seventeenth- and eighteenth-century Church records and the locality's geographical situation, between Bożacin and Lutogniew, in the latter's direct vicinity and on the same side of the river, suggest the affiliation to Lutogniew parish.²⁵¹

Rogoźno parish oftentimes appears in the latter half of the sixteenth century as related to Jaracz, a mill settlement. However, its affiliation to the parish of Parkowo, as attested by the 1510 book of benefice, tax registers from 1508 and 1553, and the later visitation records, ought to be taken into account.²⁵² The picture is further complicated by the character of the settlement, which was recorded in the registers as a mill outside the village of Parkowo or the village of Wełna (the latter's belonging to Rogoźno is not unambiguous, either).²⁵³ It was perhaps for this reason that it was not mentioned

Kaczkoviana eam in controverso cum parochia Skocense extitisse asserit, ad praesens est sub regimine parochi Skocensis, quo titulo et a quo tempore ex documentis ecclesiae Lechlinensis non constat." The description of Skoki parish district is annotated: "Villa Raszkowo ad vigore erectionis ad hanc ecclesiam iure parochiali spectans"; Wiz. Poz. 1628–1629, f. 39v; Wiz. Poz. 1726–1728, ff. 395v, 401; Wiz. Poz. 1777–1784, ff. 367v, 372v.

²⁴⁴ LBP, pp. 127–128.

²⁴⁵ Cf. critical remarks re. the mention in the visitation records in J. Nowacki and K. Górską-Gołąska: Now2, p. 435; K. Górską-Gołąska, *Grobia*, [in:] SHGPoz, part 1, pp. 673–674.

²⁴⁶ Wiz. Poz. 1610–1619, f. 147.

²⁵³ Difficulties arise when it comes to determining the parish affiliation of Wełna village. In 1510, it belonged to Rogoźno parish, but tithe from the two demesne farmsteads were paid to Parkowo. As of 1628, the patronage of Parkowo parish was

in the visitation record for the parish of Parkowo dated 1628, which stated that the parochial village was the only one there.²⁵⁴ It was probably the locality's character that caused the difference in the recording of the mill settlements of Sapolny Młyn and Bobrówka. The sixteenth-century tax registers have it located in as many as three parishes – namely, Trzciel,²⁵⁵ Wytomyśl,²⁵⁶ and Lwówek.²⁵⁷ The visitation record of Pszczew deanery, 1603–7, mentions none of these localities within the respective districts of the said parishes, save for the fact of Sapolno millers' providing the Lwówek parish priest with one 'measure' (*ćwiertnia (miara, met(h)reta)*) of flour.²⁵⁸ Early seventeenth-century ecclesiastical sources completely ignore the mill settlement of Bobrówka. The tax registers from the latter half of the sixteenth century mention it also in Trzciel,²⁵⁹ Wytomyśl,²⁶⁰ and Lwówek²⁶¹ parishes, Wytomyśl being the most frequently mentioned identification. The mill is named in the benefice district of Wytomyśl parish in the visitation record dated 1725²⁶² – most probably because of the fact that the estates of Marcin Lwowski, the owner of Bobrówka, spread across all those parishes. Wytomyśl the parish possessed moreover the mill settlement of Mniszek, which is absent in the tax registers; its parochial affiliation is indirectly suggested by the association with the estates of Trzciel and Lwówek.²⁶³

The tax registers ignore the demesne farmstead named Krowi Lasek, whose exact location has not been determined. It is mentioned in the 1510 book of benefice as related to the parish of Goniębice (Goniębice), to which tithes from its land belonged. It was however clearly remarked that 'Praedium dictum Crowylassek decimat plebano suo':²⁶⁴ probably the parish priest of Osieczna is meant, who collected the tithe from this demesne farm also in the seventeenth century.²⁶⁵ The demesne farmstead of Maliny (Malinie), belonging to Wieszczyczyn (Wieszczyczyno) parish, appears in the tax records for the parish of Dolsk (Dolsko). This problematic affiliation has probably to do with the dispute over the locality that occurred in the middle of the fifteenth century between the parish priests of Wieszczyczyn and Dolsk; the arrangement concluded in 1449 allocated the village to Wieszczyczyn parish.²⁶⁶ Less is known of the affiliation of the demesne farmstead named Gaj, located between the parishes of Dolsk and Kunowo. First attested in 1471, it rarely appears in the records. Following Jan Korytkowski, SHGPoz allocates the demesne farm to the parish of Kunowo.²⁶⁷ The parochial affiliation of Ciężyń (Ciężym) village, chartered in the second half of the sixteenth century, is uncertain. Owing to the lack of comparative information from the visitations in the first half of the seventeenth century, its affiliation with the Boruszyn parish, as per the tax registers, has been maintained. In the eighteenth century, the village was included in Połajewo parish.²⁶⁸ As similar difficulty is the case with the village of Szczepankowo,

held by the landlords of Welna. The tithe from Welna demesne farm is attested in 1727 as received by Rogoźno, whereas the *ćwiertnia/metreta* of flour from the mill near Welna village – by the parish priest of Parkowo. The 1778 visitation record for Rogoźno parish specifies: "Villa autem Welna qualiter ad parochiam Parkoviensem applicata", its affiliation having been not *ex iure* but *ex usu*; ASK I 6, f. 135v; LBP, p. 89; Wiz. Poz. 1628–1629, f. 42v; Wiz. Poz. 1726–1728, ff. 388v, 413v; Wiz. Poz. 1777–1784, ff. 337, 419; K. Górka-Gońska, *Jaracz*, [in:] SHGPoz, part 2, pp. 26–27.

²⁶⁷ Gaj demesne farmstead is mentioned as part of Dolsk parish in the 1631 hearth tax (*podymne*) record. The affiliation to Kunowo is confirmed by the visitation record from 1672–85 and F. Czaykowski's list (second half of the eighteenth century); *Podymne* 1631, f. 37v; Wiz. Śrm. 1672–1685, f. 97v; Czaykowski, p. 820; K. Górka-Gońska, *Gaj*, [in:] SHGPoz, part 1, p. 450.

²⁶⁸ Wiz. Poz. 1737–1738, f. 96; Czaykowski, p. 793.

between the parishes of Ostroróg and Szamotuły. The tax registers include the village in the latter,²⁶⁹ as is confirmed by the parish's earliest preserved baptismal register.²⁷⁰ From the mid-seventeenth century onwards, the visitation records place the village in the parish of Ostroróg.²⁷¹ The exact date of the moving of Karna village from the parish of Zbąszyń to the one of Siedlec²⁷² is unknown. Similarly for Krasne Dłusko (Dłusko) village – from Skwierzyna to Przytoczna parish;²⁷³ Lubikowo – Rokitno into Przytoczna;²⁷⁴ Grzybno – Brodnica into Iłowiec (Iłowiec Mały);²⁷⁵ Młodzikowo – Solec into Gogolewo;²⁷⁶ Gronowo (Grunowo) – Goniembice into Leszno.²⁷⁷ With the sources under analysis, the date of the split of Śląskowo village between the parishes of Dubin (Dupino) and Jutrosin,²⁷⁸ and of Sulęcín (Sulęcino) village between those of Solec and Gogolewo,²⁷⁹ is undeterminable. The 1510 book of benefice was the basis for assignment of the void areas of Melpin (Małpino) and Mączlino in the parish of Mórka (Morka);²⁸⁰ Konotopia void area – in Długa Goślina (Goślina Długa) parish;²⁸¹ Biedrusko (Cietrzewka) mill settlement – to the parish in Chojnica;²⁸² and, the village of Sienno – to Goniembice parish.²⁸³ Given the affiliation of its surrounding localities, the void settlement of Sokolniki has been assigned to Głuszyna parish.²⁸⁴ Based on the 1631 'chimney' tax record and the later ecclesiastical sources, the following mill settlements were assigned to the respective parishes of: Chachle – to Kąkolewo,²⁸⁵ Kuźnica Zbąska-Borujka – to Siedlec,²⁸⁶ Bugaj (Nadolnik) – to Margonin;²⁸⁷ the void settlements or areas: Uście – to the parish of Kopanica,²⁸⁸ Kokoszki – to Nekla;²⁸⁹ Kobylarnia demesne farmstead – to Sieraków;²⁹⁰ and, the villages: Zaorle – to Dubin,²⁹¹ Dębiec – to Bnin,²⁹² Zdziechowo (Zdziech) – to Zieleniec,²⁹³

²⁶⁹ SHGPoz includes the village in Szamotuły Stare parish; P. Dembiński, *Szczepankowo*, [in:] SHGPoz, part 4, pp. 814–815.

²⁷⁰ AAP, PM 292/01, Księga metrykalna parafii Szamotuły, 1602–1636 (I owe this piece of information to Ms. Joanna Napierała).

²⁷¹ Wiz. Czr. 1640–1641, f. 296; Wiz. Psz. 1724–1725, f. 270; Czaykowski, p. 773.

²⁷² The book of benefice, tax registers, and an visitation record from the early seventeenth century mention it as part of Zbąszyń parish; in the eighteenth century, Karna was included in Siedlec parish. LBP, p. 162; Podymne 1631, f. 59; Wiz. Psz. 1603–1607, f. 132; Wiz. Psz. 1724–1725, f. 115v; Czaykowski, p. 727.

²⁷³ As of 1725, Dłusko village still belonged to Skwierzyna parish. *Regestr diecezjów* refers to a namesake demesne farmstead in the parish of Przetoczno; Wiz. Psz. 1724–1725, f. 208; Czaykowski, p. 833.

²⁷⁴ LBP, p. 336; Czaykowski, p. 833; G. Rutkowska, *Lubikowo*, [in:] SHGPoz, part 2, pp. 627–630.

²⁷⁵ Wiz. Poz. 1610–1619, f. 40v; Wiz. Śrm. 1672–1685, f. 24; Czaykowski, p. 739.

²⁷⁶ LBP, p. 66; Wiz. Poz. 1726–1728, f. 486; Czaykowski, p. 784.

²⁷⁷ Traces of Gronowo's affiliation to the parish of Leszno date back to the early years of the sixteenth century: the Poznań book of benefice (1510) states that tithes from one of the demesne farmsteads were paid to Leszno. The parochial rights to two demesne farms in Gronowo are mentioned also in the 1672 Leszno parish's visitation record. LBP, p. 132; Wiz. Poz. 1610–1619, f. 136v; Wiz. Śrm. 1672–1685, ff. 442, 646; Czaykowski, p. 829.

²⁷⁸ The 1672–1684 visitation records informs that the demesne farmstead was subordinated to Jutrosin parish, the village itself to Dubin parish. The question of benefice from Śląskowo village's demesne farm for the parish in Jutrosin is present also in the visitation record of 1667; Wiz. Śrm. 1672–1685, ff. 217, 251; Czaykowski, p. 752.

²⁷⁹ LBP, p. 66; Wiz. Poz. 1726–1728, f. 486; Czaykowski, pp. 784, 817.

²⁸⁰ This affiliation is confirmed by the 1672–1685 visitation record; LBP, pp. 121, 132; Wiz. Śrm. 1672–1685, f. 35.

²⁸¹ LBP, p. 87.

²⁸² Ibidem, p. 177; S. Chmielewski, *Cietrzewka*, [in:] SHGPoz, part 1, pp. 261–262.

²⁸³ G. Rutkowska supposes that the locality of Sienno (with its approximate location) might have been incorporated in Gronowo; LBP, p. 133; G. Rutkowska, *Sienno*, [in:] SHGPoz, part 4, pp. 400–404.

²⁸⁴ T. Jurek, *Sokolniki*, [in:] SHGPoz, part 4, pp. 589–590.

²⁸⁶ Ibidem, f. 56a.

²⁸⁷ AAP, AV26, Akta wizytacji dekanatu czarnkowskiego, 1738, f. 79.

²⁸⁸ Podymne 1631, f. 45av; Czaykowski, p. 725.

²⁸⁹ The parochial affiliation of the void settlement named Kokoszki is hard to definitely establish. The available sixteenth-century mentions point to its association with the parish in Giecz. According to S. Mazurkiewicz, in the early seventeenth century. Kokoszki belonged to another parish, Nekla. Although this author specifies no basis for his statement, it seems quite plausible, given the locality's geographical location. RPWK, pzd. 1552, no. 101; ASK I 11, f. 59; S. Mazurkiewicz, *Nekla. Historia miasta monografia na jubileusz 600-lecia*, Września and Neklą 2007, p. 31.

²⁹¹ Wiz. Śrm. 1672–1685, f. 251; Czaykowski, p. 750 (as 'Poluszyny—the new settlement').

²⁹² Wiz. Poz. 1695–1696, f. 349v; Czaykowski, p. 814.

²⁹³ Czaykowski, p. 805 (as 'Zdychowice – the inn').

Wojnow – to Nowe Kramsko (Krapsko Wielkie),²⁹⁴ Pawłowo – to Jutrosin,²⁹⁵ Wyki (Wykowy) – to Koźmin,²⁹⁶ Nowa Wieś and Maciejew – to Rozdrażew (Rozdrażewo),²⁹⁷ and Pławno – to Murowana Goślina (Goślina Kościelna).²⁹⁸ The village of Wierzbno, whose location has not been determined, has been allocated to Kosieczyn (Kosiczyn) parish based on a single mention in the 1583 tax register.²⁹⁹ Other premises lacking, the parochial affiliation of the forge settlement called Kozarzyn (Hamer Szamociński) has been defined based on its location near Szamocin within Margonin parish. The parochial affiliation of the not-very-familiar village of Robienko Małe, Kościan district, mentioned in the tax register from 1567, has not been established.³⁰⁰

The way in which the tax registers inform on the parochial affiliation of Witobel (Witowle Małe) mill settlement is ambiguous: the locality appears with the parishes of Trzebaw and Stęszew.³⁰¹ This duality may be clarified by the 1583 record where Witobel is included in Stęszew parish, with the remark reading ‘Molendinum circa Witowlie sub parochia Trzebaw solvit’ – probably resulting from payment of the tax together with the estate of the Dębowski, rather Gułtowski, family.³⁰² The hearth tax register from 1631 as well as the later Church records include Witobel in the parish of Stęszew – and such is its position in the main map.³⁰³ Sixteenth-century sources specify diverse parochial affiliations also of the village of Ogieniewo (Iłowiec Wielki); the doubts in this respect appear also in relation to the tax register from 1565, where Ogieniewo (Iłowiec Wielki) is mentioned as part of Czempiń parish and then crossed out. The total amount collected and its base are quoted, for a change, for the parish of Iłowiec Mały, along with the Iłowiecki family estate.³⁰⁴ The 1510 book of benefice and most of the tax registers included Ogieniewo (Iłowiec Wielki) in the parish of Czempiń.³⁰⁵ The available records ambiguously point to the affiliation of Szymanowo (Szymunowo); the tax registers indicate its belonging to Łaszczyn parish, while the 1619 visitation record has it included in Sarnowa (Sarnowo) parish. The attribution of Szymanowo by the tax registers to the parish of Łaszczyn might have been based on the ownership relations between Szymanowo and Sieraków. As of 1582–3, Andrzej Górka, Castellan of Międzyrzecz, owned both localities, with Sieraków belonging to Łaszczyn parish.³⁰⁶ More than fifty years of a merger between the parishes of Sarnowa and Łaszczyn,³⁰⁷ and the dispute between the parish priests over the benefice from that village,³⁰⁸ must have had an influence on the situation. The explanation of why Bonice (before the Second World War, Bojnice) village is recorded in the tax registers as located within Środa Wielkopolska (Środa) parish should be sought in the ownership relations with the nearby Babin: the owners of both villages were, in succession, members of the Pierzchleński family: Wojciech, Sebastian, and Agnieszka. The Poznań diocese book of benefice and the seventeenth- and eighteenth-century ecclesiastical sources unambiguously point to the village’s affiliation to Grodzisko (Grodziszczko) parish.³⁰⁹ Similarly for Gąsiorów, which belonged to the parish of Pogorzelica, whereas the tax records associated this village with another parish, Czeszewo.³¹⁰ Gąsiorów

²⁹⁷ Wiz. Śrm. 1672–1685, f. 682; Czaykowski, p. 749.

²⁹⁸ SHGPoz authors point to the locality’s affiliation to Głęboćzek parish in the fifteenth century. From the sixteenth to the eighteenth centuries, the village was part of the Murowana Goślina estate, which makes its belonging to Murowana Goślina (Goślina Kościelna) parish more probable for that period; it is attested by the *podymne* tax record from 1631 and the 1727 visitation record. The village of Worowo has been assigned to the parish of Głęboćzek, mainly based on the tax registers and the 1631 *podymne* list *Podymne* 1631, f. 7v; Wiz. Poz. 1726–1728, f. 425v.

(Gąsiorowo) and its neighbouring Szczodrzejewo, belonging to Czeszewo parish, were part of the estate complex owned by Jan Pępowski and, subsequently, Jan Roszkowski. The village of Sowiniec is named in the tax registers of Kościan district (Mosina parish) as well as Poznań district (Trzebaw parish). There is no doubt that it actually belonged to Mosina, its appearance with Trzebaw, in the Poznań records, had to do with shared property-related associations between the families Białośliwski, Marszewski, and Ciświcki.³¹¹ It has to be added that the parish of Mosina, at the border of the districts of Poznań and Kościan, does not appear in the tax records for Poznań district from the second half of the sixteenth century, whereas the city itself was recorded for the collection of the *szos* municipal tax. This is probably the reason why the tax registers from the latter half of the sixteenth century assign the village of Pożegowo to the parish of Wiry (Wiry Wielkie). The tax record of 1508, the Poznań diocese book of benefice (1510) and eighteenth-century Church records have it belong to the parish of Mosina.³¹² The latter probably extended also to the mill settlement of Niwka: though it was disclosed in the tax registers from the latter half of the sixteenth century with the parish of Trzebaw, the 1508 registers and the later Church sources point to the locality's linkage with Mosina.³¹³ The collection from Brzóstownia (Brzostownia) village was at times recorded according to the proprietorship criterion (Włościejewki parish),³¹⁴ rather than on a Church administration-related basis (Książ parish). The same criterion probably resulted in the assignment in the tax registers to the parish of Odolanów of the villages belonging to the *starosta*'s district of Odolanów. Ecclesiastical sources from the seventeenth and eighteenth centuries tell us, however, to include Łąkociny (Łąkocin) and Daniszyn (Daniszyno) in the parish of Janków Zalesny (Jankowo),³¹⁵ and Uciechów in Sulmierzyce parish (Gniezno diocese).³¹⁶ An analogous situation concerns the villages of Tłukawy and Zawady (Zawada), which were recorded together with other localities of Rogoźno *starosta*'s district as part of Rogoźno parish. As per the 1510 book of benefice and the later canonical visitations, they belonged to the parish of Ryczywół.³¹⁷ Ownership-related and administrative factors rendered the affiliation of Szymankowo village complicated. The tax registers consistently recorded the village as related to Uchorowo parish; the owner of both localities was initially Piotr Potulicki and subsequently Melchior Raczkowski.³¹⁸ The visitation record from 1695 formally includes it in the adjacent parish of Radzim, based upon the founding deed and a court verdict dated 31 January 1397 – and remarks that the priestly service is actually exercised by the parish priest of Białężyn.³¹⁹ The main map shows the actual affiliation of Szymankowo, which was probably conditioned in the sixteenth century by the ownership situation: this namely means the parish of Uchorowo, later on incorporated into Białężyn.³²⁰ Of importance was Szymankowo's location on the other side of the Warta River, with respect to Radzim parish, which certainly hindered the enforcement of claims. The parish priest in Radzim laid claims also to Starczanowo, situated on the other side of the Warta (in Białężyn parish), referring to the not-quite-familiar verdict passed by Jakub, archdeacon and judicial vicar (*officialis*) of Poznań.³²¹

In some situations, like in the case of Łęczeczki (Łęczce Małe) and Łęczce (Łęczce Wielkie) localities, the mistakes regarding parochial affiliation identifiable in the tax registers are pretty apparent.³²²

³¹⁷ LBP, p. 92; Wiz. Czur. 1640–1641, f. 247v; Wiz. Poz. 1726–1728, f. 161; Czaykowski, p. 794.

³¹⁸ RPWP, pzn, 1576, no. 641, 642; RPWP, pzn, 1577, nos. 683, 684; RPWP, pzn, 1580, nos. 721, 722.

³¹⁹ Wiz. Poz. 1695–1696, f. 179.

³²⁰ In the 2nd half of the eighteenth century, Szymankowo was recorded as part of Radzim parish. J. Nowacki informs that the 1727 visitation record mentions Szymankowo's affiliation to Uchorowo parish, but there is apparently no such information on the page being referred to. Wiz. Poz. 1726–1728, f. 418v; Czaykowski, p. 793; Now2, p. 378.

³²¹ “Starczynowo villa iure parochiali mere ad Radzyn huc spectans, in visitatione ecclesiae Białężynensis superius descripta”; Wiz. Poz. 1628–1629, ff. 37, 45.

³²² The registers of 1580, 1581, and 1583 have the locality of Łęszcze Minus recorded doubly – once as belonging to Chrzypsko Wielkie parish, and elsewhere as an autonomous parish. As regards the parish, Łęczce Wielkie is meant, clearly enough: suffice it to compare the nature of the ownership; RPWP, pzn, 1580, no. 91, 343; RPWP, pzn, 1581, no. 92, 341; RPWP, pzn, 1583, no. 86, 348.

No less erroneous was the inclusion of Mościejewo in the parish of Łężce, as of 1577.³²³ The blending in three tax registers of localities belonging to the parishes of Mieczewo and Mądre, distant from each other, is another clear case of chancellery error.³²⁴ Also the repeated mention, in 1576 and 1577, of the Nowa Wieś village, within Wronki parish, among the localities of the adjacent parish of Biezdrowo is difficult to explain.³²⁵

Finally, parish enclaves distant from the main seat of the parish need to be briefly covered. Among them is the locality of Stary Dworek near Bledzew, consistently assigned by all the tax registers to the parish of Żarzyn, situated in the south of deanery of Międzyrzecz. The SHGPoz authors assigned to it the reference in the 1540 contribution list, apparently testifying to the functioning of a parish there. This interpretation seems dubious since a similar layout of localities appears in the 1510 book of benefice, in which not Stary Dworek near Bledzew but the parish of Stary Dwór near Paradyż is meant. Nowacki's information that the 1580 tax register refers to the parish in Stary Dworek near Bledzew is not to be confirmed based on the records. The local church, which in the later years becomes a *filia* of Bledzew parish, is first mentioned in the 1603 visitation record.³²⁶ In the shaping of the parochial system of the diocese of Poznań, some localities lost their territorial connection to the main segment of their respective parishes – namely, Orliczko (Orle Małe, Psarbie parish), Tuchorza³²⁷ and Kuźnica Zbąska-Borujka (Siedlec parish).

Diocese of Wrocław

In the south of Poznań Voivodeship, the diocese of Wrocław overlapped with the territory of Wschowa district with its several parishes, belonging to the Archdeaconry of Głogów and Archprebyterate (equivalent to deanery) of Góra.³²⁸ Since those were border parishes, most of the pertinent issues were addressed hereinabove, as part of the discussion of Poznań diocese's frontier. Here, the doubts related to the reach of parish districts need to be touched upon. In the borderland of Silesia and Greater Poland – as well as in other areas where Catholic and Evangelical churches functioned beside one another – the filial Catholic churches were at times seen by the Catholic communities as part of their former parishes, which were taken over by the Protestants at the time. It has to be borne in mind that the Reformation and the seizure of churches by the Protestants were utterly illegal from the standpoint of Catholic ecclesiastical authorities and treated as a temporary situation. Hence, for instance, the Catholic visitation records in the Silesian village of Goła (Guhlau) from 1670 and 1679 refer to its subordination to the parish of Stare Drzewce (Drzewce), which was still kept by the local Protestants (the endeavours to return it to the Catholic community through the action of the imperial reduction committee in 1653–4 ended up in failure). A similar situation was with the parish of Siedlnica (Sidnica) and Jędrzychowice. Resulting from the visitation in 1670, both churches were treated as filial to the parish at Kowalewo, whereas Siedlnica was already in the Catholic hands whereas the churches in Kowalewo and Jędrzychowice were still occupied by the Protestants. In spite of its filial status, the church in Siedlnica had its territorial district (filial parish), to which Olbrachice belonged. Given such organisational durability kept in the ecclesiastical records, it has been resolved that the parishes enumerated by the 1580 inspection record be plotted on the map, albeit only two of them (Konradowo and Zamysłów) were in the Catholic hands at that time. The allocation of the villages of

³²³ RPWP, pzn, 1577, no. 339.

³²⁴ The village of Czołowo, parish of Mądre (RPWK, pzd, 1565, no. 191; RPWK, pzd, 1576, no. 153; RPWK, pzd, 1577, no. 176); Mieczewo village, Mądre parish (RPWK, pzd, 1565, no. 193; RPWK, pzd, 1576, no. 156); Nadziejewo and Pigłowice villages, parish of Mieczewo (RPWK, pzd, 1577, no. 180, 181).

³²⁷ An attempt at setting up a parish in Tuchorza was made at the beginning of the seventeenth century. However, the church was probably not founded until 1641 and was under the management of a commendary, the parish priest of Wolsztyn, and eventually affiliated to Siedlec in 1663. Wiz. Psz. 1603–1607, f. 18v; Wiz. Czir. 1640–1641, f. 196–196v; Now2, p. 579.

³²⁸ J. Jungnitz, *Visitationsberichte der Diözese Breslau*, vol. 1, pp. 21, 102–19.

Dryżyna (Dreżyna) and Górczyna to the parish Wyszyń, having its seat in Silesia, has been based on the 1670 visitation record.³²⁹

ANNEX

Church administration units in Greater Poland (a breakdown)

The parishes within the area of Voivodships of Poznań and Kalisz at the end of the sixteenth century totalled 698 (thereof, 315 in Gniezno diocese, 371 in Poznań diocese, seven in Wrocław diocese, and five in Włocławek diocese), including the (twelve) parishes whose territories extended beyond this area and those (thirteen) whose centres were located outside the limits of the Voivodships concerned herein. The number of filial churches with districts was twenty. Except for (thirteen) external centres (including five towns), among the total of 685 churches, 154 were situated in towns or cities, five in suburban areas, and 525 in rural areas. One parochial settlement was described as a 'void' one (Ostrowce). Eight towns were not central to a parish – namely, Chwaliszewo, Stanisławowo, and Ostrów (part of Poznań agglomeration), Kwiatów (Ocięż parish), Krystianowo (Kazimierz Biskupi parish), Korab (Brudzewo Wielkie parish), Koźmin Nowy (Koźmin parish), and Mirosławiec (Frydland; the parish faded under pressure of the Reformation).

Poznań Voivodship was home to a total of 282 parish churches, the average area of complete parishes (not traversed by the voivodship's frontier) equalled 52 km². Kalisz Voivodship numbered 403 churches, each parish encompassing the area of 41 km², on average. The mean area of complete parish in the territory of both voivodships was 46 km².

* * *

The list below reflects the situation as at the end of the sixteenth century. Included are the parishes situated, in whole or in part, within the limits of Kalisz and Poznań Voivodships – among them the parishes whose churches were outside the voivodships' borders, whilst the villages belonging to them were located within the two said voivodships. The centres of the parishes whose centres exceeded the limits of either of the two voivodships are marked [*]; the centres of parishes outside these voivodships are marked [**]. The breakdown specifies the period's names of the seats of parishes, in alphabetical order; the present-day name, if different from the historic one, is given in parentheses. Towns/cities are marked with '(t)'. For each filial church with its own district, the mother parish's name is given in brackets.

Diocese of Gniezno

Archdeaconry of Gniezno

Deanery of Gniezno – St. Michael's

Budzisław (Budzisław Kościelny), Duszno, Gniezno – St. Michael's (Wójtostwo (t.), Gniezno (part of today's town), Jankowo (Jankowo Dolne), Kamieniec, Kleczew (t.), Kruchowo, Linowiec, Lisowo (Lisewo Parcele), Orchowo (t.), Ostrowąż, Ostrowite Arcybiskupie (Ostrowite Prymasowskie), Rękawczyno (Rękawczyn), Siedlimowo, Strzyżewo (Strzeżewo Kościelne), Trzemeszno (t.), Wielatowo (Wylatowo) (t.), Wilczyno (Wilczyn) (t.), Wójcino (Wójcin), Złotkowo (Złotków)

³²⁹ SHGPoz erroneously makes Siedlnica part of Kandlewo (Kędlewo) parish as of 1670: in fact, Kowalewo (Kabel), rather than Kandlewo (Kandlau), is meant. As per the same visitation record, Kandlewo belonged to Konradowo parish; J. Jungnitz, *Visitationsberichte der Diözese Breslau*, vol. 1, 21, pp. 117–18, 190, 192; Now2, pp. 29–30, 440–1; T. Jurek, *Olbrachcice*, [in:] SHGPoz, part 3, pp. 420–421; S. Chmielewski, *Dryżyna*, [in:] SHGPoz, part 1, pp. 410–411; idem, *Górczyna*, [in:] ibidem, p. 618.

Deanery of Gniezno – St. Peter’s

Dębica Mała (Dębica – partly), Gądecz (Gącz, *filia* of Łopienno), Gniezno – St. Peter’s (Piotrowo, Gniezno (part of today’s town)), Jabłkowo, Janowiec (t.), Kłecko (t.), Kołdrąb, Łagiewniki (Łagiewniki Kościelne), Łopienno (t.), Mieścisko (t.), Modliszewo Małe (Modliszewko), Podlesie (Podlesie Kościelne), Pomorzany (Pomarzany), Popowo (Popowo Kościelne), Raczkowo, Skórki, Sokolniki

Deanery of Gniezno – Holy Trinity

Czerniewo (Czerniejewo) (t.), Dąbrowa (Dąbrówka Kościelna), Dziekanowice, Gniezno – St. Laurence’s (Jędrzejewo, Gniezno (part of today’s town)) (t.), Gniezno – Świętej Trójcy (t.), Grzybowo (*filia* of Gozdowo, Poznań diocese), Gurowo (*filia* of St. Laurence’s church in Gniezno), Jarząbkowo, Jemielno (Imielno), Kędzierzyna (Kędzierzyn), Kiszkowo (t.), Łubowo, Marzenino (Marzenin), Niechanowo, Pawłowo, Pobiedziska (t.), Sławno, Waliszewo, Węglewo, Witkowo, Wronczyno (Wronczyn), Września (t.), Zwanowo (Dzwonowo), Żydowo

Deanery of Konin

Białkowo (Białków Kościelny), Brudzew (t.), Dąbroszyno (Dąbroszyn), Dobrowo (Doborów), Grabienice, Grochowy, Grodziec, Grzymiszew (t.), Janiszewo (Janiszew), Koło (t.), Konin (t.) (*filia* of Sts. Peter and Paul church in Stare Miasto), Kościelec (*filia* of Koło), Królikowo (Królików), Krzymowo (Krzymów), Kuchary (Kuchary Kościelne), Lisiec Wielki, Rusocice, Rychwał (t.), Rzgowo (Rzgów Pierwszy), Sławsko Wielkie (Sławsk), Stare Miasto, Trąbczyno (Trąbczyn), Tuliszków (t.), Turek** (t.), Wyszyno (Wyszyna), Zagórów (t.)

Deanery of Łekno

Chojna, Czeszewo, Dziewierzewo, Gołańcza (Gołańcz) (t.), Grylewo, Jaktorowo, Kcynia (t.), Kozielsko, Łekno (t.), Panigródz, Rynarzewo (t.), Samokłęski* (Samokłęski Duże), Słupy, Smogulec (t.), Srebrna Górka (Srebrna Góra), Szaradowo, Szubin (t.), Tarnowo (Tarnowo Pałuckie), Wągrowiec (t.), Żuń (Żoń)

Deanery of Słupca

Brudzewo, Chotunia (Kotunia, *filia* of Słupca), Cienino Wielkie (Cienin Kościelny), Dobrosołowo, Giewartowo (Giewartów), Golina (t.), Graboszewo, Jaroszyn, Kawnica (Kawnice), Koszuty, Kowalewo, Łądek (t.), Mielżyn (t.), Młodujewo (Młodojewo), Myślubórz, Nowa Wieś (*filia* of Dobrosołowo), Odrowąż, Ostrowite Kapitulne (Ostrowite), Ostrów (Ostrowo Kościelne), Otoczna (*filia* of Szamborowo), Powidz (t.), Skarboszewo, Słupca (t.), Staw, Strzałkowo, Szamborowo, Wola (Wola Koszucka)

Deanery of Sompolno

Dębna (Dębno Królewskie), Dęby (Dęby Szlacheckie), Gosławice (Konin – partly), Grzegorzewo** (t.), Kazimierz (Kazimierz Biskupi) (t.), Krąpsko (Kramsk, *filia* of the church in Pyzdry, Poznań diocese), Lichyń (Licheń Stary) (t.), Lubstowo Małe (Lubstówek), Lubstowo Wielkie (Lubstów), Mąkolino* (Mąkolno), Morzysław (Konin – partly), Osiek Wielki, Racięcice, Ślesin (t.), Wąsosze, Wrząca Wielka

Deanery of Żnin

Brzeskorzystew (Brzyskorzystew), Cerekwica, Chomętowo, Chomiąza (Chomiąza Szlachecka), Gąsawa (t.), Gorzyce, Gościszyno (Gościeszyn), Góra (Żnin–Góra), Izdebnno, Janczewo (Juncewo), Kierzkowo, Kwieciszewo (t.), Lubecz (Lubcz), Mogilno (t.), Niestronno, Ostroszce (Ostrowce), Pakość** (t.), Pałędzie Wielkie (Pałędzie Kościelne), Parlino (Parlin), Rogowo (t.), Ryszewko, Słaboszewo, Strzelce, Szczepanowo, Świętkowo (Świątkowo), Trląg, Wenecja, Żerniki (t.), Żnin (t.)

Archdeaconry of Kalisz

Deanery of Kalisz

Biskupice Szalone (Biskupice Ołoboczne), Dobrzec (Dobrzec Wielki), Droszewo (Droszew), Giżyce*, Gostyczyna, Górzno, Kalisz – Saint Mary’s, Kalisz – St. Nicholas’s (t.), Kościół (Kościelna Wieś),

Kucharki Rycerskie (Kucharki), Kuchary Połączone (Kuchary), Lewkowo (Lewków), Ociąż, Ołobok ('*filia*' of Rososzyca), Rososzyca, Rypinek (Kalisz – partly; *filia* of Dobrzec Wielki), Skalmierzyce, Skrzebowa, Sobótka Wielka (Sobótka) (t.), Szczury

Deanery of Kobylin

Baszkowo, Kobelin (Kobylin) (t.), Kobierno, Krotoszyn (t.), Sulmierzyce (Sulmierzyce) (t.), Wyganowo (Wyganów), Zduny (t.)

Deanery of Pleszew

Broniszewice, Brzezie, Chorzewo (Chorzew), Czermino (Czermin), Gołuchowo (Gołuchów), Grodzisko, Jedlec, Kajewo (Kajew), Karmino Wielkie (Karmin), Koryta, Kotlino (Kotlin), Kowalewo (Kowalew), Kretkowo (Kretków), Kuczkowo (Kuczków), Lenartowice, Magnuszewice, Pleszów (Pleszew) (t.), Sońnica, Sowina Kościelna (Sowina), Szymanowice, Tursko Małe (Tursko), Twardowo (Twardów), Żegocino (Żegocin)

Deanery of Stawiszyn

Blizanowo (Blizanów), Borkowo (Borków Stary), Brudzewo Wielkie (Brudzew), Chodecz (Chocz) (t.), Dębe, Dzierzbino (Dzierbin), Goliszewo (Goliszew, *filia* of Złotniki), Jastrzębniki, Kamion (Kamień), Kokanin, Kosmowo (Kosmów), Kościelec, Lipe, Pamięcino (Pamięcin), Piątek Wielki, Rychnowo (Rychnów), Stawiszyn (t.), Tykadłowo (Tykadłów), Zbiersko (Zbiersk), Zborowo (Zborów), Złotniki Wielkie, Żerniki

Deanery of Staw

Błaszki**, Chełmce, Chlewo*, Gać Powężowa, Godzieszewy Wielkie (Godziesze Wielkie), Góra*, Iwanowice (t.), Koźminek (t.), Liskowo* (Lisków), Malanów**, Opatówek (t.), Przespolewo* (Przespolew Kościelny), Rajsko, Staw** (t.), Tłokinia (Tłokinia Kościelna), Zaksino (Zakrzyn)

Archdeaconry of Kamień

Deanery of Chojnice

Debrzno** (t.)

Deanery of Nakło

Bługowo, Dębno, Dębowo, Dźwierzno (Dźwierzno Wielkie), Glisno (Glesno), Głupczyno (Głubczyn), Gromadno, Grunowo (Stare Grunowo), Koszutowo (Kosztowo), Krajenka (t.), Krostkowo, Luchowo, Łobżenica (t.), Miasteczko (Miasteczko Krajeńskie) (t.), Mościska, Nakiel (Nakło nad Notecią) (t.), Satki (Sadki), Skicz (Skic), Sławianowo, Sypniewo, Śmiełowo (Śmiłowo), Wyrzysko (Wyrzysk), Wysoka (t.), Zakrzewo, Złotowo (Złotów) (t.).

Deanery of Sępólno

Drzewianowo, Kamień* (Kamień Krajeński) (t.), Klunia Wielka (Wielka Klonia), Komorowo (Komierowo), Lutowo, Łąck Wielki (Łąsko Wielkie), Mąkowsk (Mąkowsko), Mrocza (t.), Pruszcz, Sącieszno (Samsieczno), Sempolbork (Sępólno Krajeńskie) (t.), Wałdowo, Wąwelno, Wielewicz (Wielowicz), Wierzchucino (Wierzchucin Królewski), Więcbork (t.), Wyrza, Zabartowo, Zalesie*

Deanery of Tuchola

Cerkwica Wielka**

Archdeaconry of Łęczyca

Deanery of Kłodawa

Borzysławice**

Archdeaconry of Uniejów

Deanery of Uniejów

Wielanów**

Diocese of Poznań

Archdeaconry of Poznań

Deanery of Oborniki

Biała, Białężyno (Białężyn), Boruszyno (Boruszyn), Budziszewo (Budziszewko), Budzyń (t.), Cerkwica (Cerekwica), Chludowo, Chodzież (t.), Chojnica, Czarnków (t.), Gać, Głębozec, Goślina Długa (Długa Goślina), Goślina Kościelna (Murowana Goślina) (t.), Kazimierz (Kaźmierz) (t.), Kicina (Kicin), Kiekrz, Kiszewo, Lechnino (Lechlin), Łęgowo, Lubasz, Ludomie (Ludomy), Łukowo, Lusowo, Margonin (t.), Objezierze, Oborniki (t.), Obrzycko, Ocieszyno (Ocieszyn), Owieńska (Owińska), Parkowo, Piła (t.), Połajewo, Potulice, Pruśca (Pruście), Radzim, Rogoźno (t.), Roźnowo, Ryczywół (t.), Skoki (t.), Słomowo, Słoplanowo, Sobota, Stara Wieś (Oborniki – partly), Stobnica (t.), Szamotuły (t.), Szamotuły Stare (Mutowo), Tarnowo (Tarnowo Podgórne), Uchorowo, Ujście (t.), Wieleń (t.), Żydowo

Deanery of Poznań

Bagrowo, Bnin (t.), Czerlenino (Czerlejno), Giecz, Głuszyna (Poznań – partly), Grodziszczko (Grodzisko), Gułtowo (Gułtowy), Iwno, Kępa Mała, Kleszczewo, Kostrzyn (t.), Koszuty, Kryrowo (Krerowo), Kurnik (Kórnik) (t.), Mączniki, Mądre, Mieczewo, Nekla, Niezamyśl (Zaniemyśl), Poznań (t.) – St. Nicholas's (Ostrów Tumski, Zagórze, Poznań – partly), Pierzchno (*filia* of Kurnik), Poznań (t.) – St. Mary Magdalene's, Radzewo, Rogalinko (Rogalinek), Siedlec, Siekierki Wielkie, Śmieciska (Śnieciska), Solec, Splawie (Poznań – partly), Środa (Środa Wielkopolska) (t.), Śródka (Poznań – partly) (t.), Swarzędz (Swarzędz), Święty Jan (Poznań – partly), Święty Marcin (Poznań – partly), Święty Wojciech (Poznań – partly), Tulce, Urzazowo (Uzazewo), Wierzenica

Deanery of Pyzdry

Bardo, Biechowo, Bieganowo, Ciężym (Ciężen), Czeszewo, Gałęzewo, Gorazdowo, Gozdowo, Grabowo (Grabowo Królewskie), Kaczanowo, Kołaczkowo, Mikuszewo, Milesna Górka (Targowa Górka – partly) (t.), Miłosław (t.), Murzynowo Kościelne, Nietrzanowo, Nowa Wieś (Nowa Wieś Królewska), Opatówko, Pyzdry (t.), Romiejewice (Rumiejki – partly), Sokolniki, Szamarzewo, Winna Góra, Wszeliborz (Wszembórz), Zieleniec (Zieliniec)

Deanery of Stęszew

Drożyn (Drużyn), Dupiewo (Dopiewo), Granowo, Komorniki, Konarzewo, Łódzia (Łódź), Modrze, Mosina (t.), Nieproszewo (Niepruszewo), Skórzewo, Słupia, Stęszew (t.), Tomice, Trzebaw, Wiry Wielkie (Wiry)

Deanery of Wałcz (*Zanotecki* [= behind the Noteć])

Czaplinek (t.), Człopa (t.), Tuczno (t.), Wałcz (t.)

Archdeaconry of Pszczew

Deanery of Grodzisko

Babimost (t.), Brudzewo (*filia* of Kręsko), Bukowiec Mały (Bukowiec), Dąbrówka (Dąbrówka Wielkopolska), Dokowo Mokre (Dakowy Mokre), Gnino (Gnin), Gościeszyno (Gościeszyn), Grodzisko (Grodzisk Wielkopolski) (t.), Kamieniec, Kieblów (Kęblowo) (t.), Konojad, Kopanica (t.), Kosiczyno (Kosieczyn), Koźminek, Krapsko Wielkie (Nowe Kramsko), Kręsko (Kręcko), Łęki Wielkie, Michorzewo Mokre (Michorzewo), Niałek Wielki, Obra, Opalenica (t.), Parzęczewo, Prochy, Ptaszkowo Wielkie (Ptaszkowo – partly), Rakoniewice (Rakoniewice – partly), Ruchoćce, Rzestaszewo (Rostaszewo), Siedlec, Wielichowo (t.), Wolsztyn (t.), Zbąszyń (t.), Zielęcino (Zielęcín), Ziemin

Deanery of Międzyrzecz

Bledzew (t.), Brójce (t.), Bukowiec (Bukowiec Międzyrzecki), Chełmsko, Chociszewo, Chycina, Czar-myśl (Trzemeszno Lubuskie), Falkwald (Sokola Dąbrowa), Goruńsko, Gorzyca, Grochowo, Jordan (Jordanowo), Kaława, Kęsica (Kęszyca), Kursko (Stare Kursko, *filia* of Chycina), Łagowiec, Langfuld (Wielowieś), Lutol Suchy (*filia* of Chociszewo), Międzyrzecz (t.), Nietoperek, Pczew (Pszczew) (t.), Pieski, Policko, Przetoczno (Przytoczna), Rogoziniec, Rokitno, Skwierzyna (t.), Stary Dwór, Templewo, Trzciel (t.), Wyszanowo, Żarzyn, Zębsko (Zemsko)

Deanery of Wronki

Biezdrowo, Brody, Buk (t.), Bytyń, Ceradz Stary (Ceradz Kościelny), Chrzypsko Wielkie, Duszniki, Kamiona (Kamionna) (t.), Kwilcz, Lewice (t.), Łężce Wielkie (Łężce), Lubosz, Lutomie (Lutom), Lwówek (t.), Międzychód (t.), Ostroróg (t.), Otorowo, Pniewy (t.), Psarskie, Sieraków (t.), Wierzbno, Wilczyna, Wronki (t.), Wytomyśl, Zajączkowo

Archdeaconry of Śrem

Deanery of Kościan

III.2.2c.4 DISSENER COMMUNITIES AND CHURCHES IN GREATER POLAND IN THE SECOND HALF OF THE SIXTEENTH CENTURY

Marta Kuc-Czerep

The map shows the distribution of dissenter communities and their churches or meeting-houses in the area of Greater Poland, in the second half of the sixteenth century. The applicable Polish term *zbór* basically covers these elements as it refers to a community (*gmina*) of the faithful in a given locality, functioning under the pastoral care of the Evangelical minister and having their operational church or prayer house; this reflects the term's administrative meaning, equal to 'parish'. There were four constitutive elements of every such parish; apart from the church, there was a school, a hospital, and a cemetery.¹ Two types of the thus conceived parish have been plotted: first, those whose existence in the period concerned is confirmable based on the historical evidence from the latter half of the sixteenth century; second, those whose existence can be deemed probable. What it means is that the data regarding their functioning are based on early seventeenth-century sources.

The map has been compiled based on the methodological assumptions elaborated for the previous volumes in the AHP series.² The underlying source material can be categorised into two groups. The first includes records produced the dissenters themselves. Let us stress, though, that such documents are not to be approached as a collective archive; for a definite majority of the *zbores*, no material documenting their activities in the period under study has survived whatsoever. Hence, it was necessary to resort to the other surviving types of records, primarily those related to the provincial and general synods. For the Bohemian Brethren communities, the source edition of *Akta synodów różnowierczych w Polsce*, whose volume 4 covers Greater Poland, has proved crucial.³ Moreover, the State Archives in Poznań preserve the collection of documents called 'Files of the Bohemian Brethren' (*Akta Braci Czeskich*).⁴ Much information on the functioning of the Lutheran (Evangelical-Augsburg) communities, their parishes and churches is contained in the files of Lutheran synods (issued in print).⁵ Also the documentation concerning synods held by the Polish Brethren (Arians) is available.⁶ An important complementation of this evidence is the file prepared by Maria Sipayło, presently at the Warsaw University Library,⁷ which served as a basis for the publication of several ASR volumes. Waław Urban's file mainly comprises data on the dissenter communities in the territory of Lesser Poland.⁸ The other group includes records generated by Roman Catholic Church institutions – primarily, the episcopal visitations of the Dioceses of Poznań and Gniezno.⁹ The basic disadvantage of this archive footage is that they mostly reflect the

¹ *Zbór* is also defined as a community of believers, though it would not have met the requirements otherwise posed on the parish as an administrative unit – which, in practice, boiled down to the lack of permanent presence of the minister, who would have instead arrived from another *zbór* from time to time. For a broader discussion, see W. Kriegseisen, *Ewangelicy polscy i litewscy w epoce saskiej (1696-1763). Sytuacja prawna, organizacja i stosunki międzywyznaniowe*, Warszawa 1996, p. 75.

denominational situation in Greater Poland in the former half of the seventeenth century, the period by which a considerable proportion of dissident communities and parishes had ceased to operate.

Studies dealing with the development of the Reformation in the Polish-Lithuanian Commonwealth in the second half of the sixteenth century have also been used,¹⁰ in particular those concerning the chronology of the Reformation, the legal situation of the Protestants, and mutual relationships between the confessions.¹¹ The outcome of the research on the Reformation in Greater Poland has been crucial.¹² Vast amounts of relevant detail has come from publications discussing the situation in specific districts, e.g. Konin,¹³ Kalisz,¹⁴ Wałcz,¹⁵ and in Wschowa land.¹⁶ Historians have taken interest in individual communities, such as those of Karmin (Kalisz district),¹⁷ Ostroróg (Poznań district),¹⁸ or Poznań.¹⁹ In terms of scholarly recognition, the history of the *Jednota* (Unity; *Unitas Fratrum*) of the Bohemian Brethren has certainly been the most complete so far, mainly thanks to the research of Jolanta Dworzaczkowa.²⁰ Studies on Reformed Evangelicals,²¹ Lutherans,²² and Polish Brethren²³ have moreover been published. The map and commentary has taken into account also the publications on the history of the dioceses of Poznań and Gniezno – mainly, the findings of Józef Nowacki, who in his book on Poznań diocese made use of episcopal and consistory files.²⁴

Apart from the issues raised by Reformation historians with regards to the doctrine and liturgy, the geography of the Reformation should be highlighted.²⁵ The outlining, based on the available

sources, of the spatial structure of communities offers the possibility to indicate the real position of the Protestants in the Commonwealth of the Two Nations in the latter half of the sixteenth century. From this standpoint, of essential importance are the studies of those historians who have compiled the breakdowns of the *zbórs* active in Greater Poland at that very time. The names of Józef Łukaszewicz,²⁶ Albert Werner,²⁷ and Henryk Merczyng²⁸ deserve special mention here; these scholars gathered the basic data on the *zbórs*, their denominational identification, patrons, and period of functioning. They have identified place names in a vast majority of cases. Based on their findings, follow-up research was done on reconstruction of the network of dissenter communities and their churches. Volume 1 of *Dzieje Wielkopolski* includes a map showing the *zbórs* of Greater Poland in the latter half of the sixteenth century, drawn by E. Jarnuszkiewicz (Poznań Voivodeship) and T. Kowalski (Kalisz Voivodeship).²⁹ In the following years, the initiative to prepare a map of the *zbórs* was taken up by the Early Polish Culture Research Team at the Institute of History, University of Warsaw, led in 2002–6 by Urszula Augustyniak. A breakdown of Protestant churches active in Poland-Lithuania in the sixteenth to eighteenth centuries (*Zestawienie zborów protestanckich w Rzeczypospolitej czynnych w XVI-XVIII w.*) has been drawn up as part of the project.³⁰

The history of the development of Protestant Churches in Greater Poland in the modern period can be seen in terms of three periods. The sixteenth century was a time of theological disputes and formation of organisational and territorial structures for the Protestant confessions present in the region. Initiatives of collaboration between the fractions of Polish Protestants were taken at that time. The year 1555 saw the conclusion of a union in Koźminek;³¹ the year 1570 was marked by the Concord of Sandomierz;³² in the year 1595, the synod in Toruń took place.³³ In the seventeenth century, after the years of debilitation and decay of a number of Protestant centres (late sixteenth/early seventeenth century), a network of communities and their churches took shape anew, resulting from the migrations of Lutheran people from Bohemia and Silesia during the Thirty Years' War.³⁴ The subsequent migration wave of German-speaking people was seen in the former half of the eighteenth century.³⁵ A decisive role for the shaping of religious relations in that century was the reinstatement of religious freedom for the dissenters in 1768. The years 1775–80 saw the emergence in Greater Poland of thirty new Lutheran *zbórs*; between 1775 and 1793, thirty-two new Reformed Evangelical churches came into existence.³⁶

In line with the AHP series' assumptions, the map ought to reflect the network of heterodox communities (parishes, churches) in the latter half of the sixteenth century. This entails a strict records-based recognition of which of the *zbórs* was set up and functioned in that very period, and which of them was only founded in the first half of the seventeenth century or later. For example, the

²⁸ H. Merczyng, *Zbory i senatorowie protestancy w dawnej Rzeczypospolitej. Z mapą Dawnej Polski pod względem kościelnym ewangelickim*, Warszawa 1905. As the author remarks in the introduction, his objective has been to examine "the territorial development of the Polish Reformation". For the *zbórs* within Greater Poland, the German communities/parishes are referred to in the text but not plotted on the map.

Reformed Evangelical community in Żychlin, Konin district, formally started its activities in 1610.³⁷ In contrast to the earlier findings, the community in Borzęciczki, Pyzdry district, was probably erected in the early seventeenth century. The 1604 visitation record for a Bohemian Brethren parish remarks: ‘In Borzęciczki, a petition for a minister for the newly-established church’.³⁸ In the same year, Krzysztof Mycielski issued a document describing the emolument of the minister at the newly-established *zbór*;³⁹ a new church was erected at that time. In 1607–8, Maciej Węgierski served as the minister.⁴⁰

Adherents of the ideas proclaimed by Martin Luther appeared in the territory of Poland-Lithuania during the reign of Sigismund I the Old (Zygmunt I Stary; 1506–48). The Royal Prussian cities of Danzig/Gdansk, Elbing/Elbląg, and Thorn/Toruń, as well as Warsaw saw in the 1520s violent social riots which were ideologically motivated by Reformation slogans.⁴¹ Popular confession-related demonstrations were also seen in Greater Polish towns.⁴² In Poznań, the new ideas were spread by printed publications and by sermons delivered by preachers. In 1525, Johann of Bamberg, a German-speaking preacher and advocate of Lutheranism, was active in that city. In 1541, Polish-speaking preacher Stanisław of Przybysławek and German-speaking predicant Albert von Wollstein joined the Reformation trend.⁴³ In 1535, in Wałcz, bourgeois followers of Lutheranism destroyed the altar in the chapel of the local Corpus Christi parish church.⁴⁴ In Wschowa, the altarist Jan Clocz was accused of ‘Lutheran errors’, whilst altarist Paweł Rebyger was deprived of his prebend for this reason.⁴⁵ In view of some scholars, one of the earliest Lutheran communities was formed in Łobżenica in as early as 1537, a certain Martin (surname unknown) serving then as the minister.⁴⁶

However, it was only with Sigismund II Augustus’s (Zygmunt II August) coming to the throne of Poland-Lithuania that the core phase of Polish Reformation followed, manifesting itself in the turning by noble patrons of Catholic churches into Protestant ones (*zbórs*). Based on the current state of research, most of Evangelical parishes appeared within Greater Poland between 1555 and 1572.⁴⁷ A considerable number of them ceased to operate by the late sixteenth/early seventeenth century. This was due to the policy pursued by Sigismund III Vasa (Zygmunt III Waza) and the strengthened Counter-Reformation actions taken by the Catholic Church. As regards the churches belonging to the Bohemian Brethren, Dworzaczkowa pointed to 1608–9 as the cut-off date.⁴⁸ The situation of Lutheran *zbórs* in Poznań district changed in that period as well. In 1594, on the grounds of a king’s mandate, the church in Wałcz was taken over from the Lutherans, and a Catholic parson installed there:⁴⁹ a certain Joachim Librarius thus took the office in 1598 and took efficient action to restore the dominance of Catholic Church in Wałcz district.⁵⁰ Counter-Reformation implied also that the position of the Protestant community Wschowa land was considerably weakened.⁵¹

³⁷ The bishop’s visitation in 1608 confirmed that Protestants were present in the village; Wiz. Gnz. 1608–1609, f. 108v; cf. W. Kriegseisen, *Zbór ewangelicko-reformowany (kalwiński) w Żychlinie koło Konina*, „Odrodzenie i Reformacja w Polsce”, vol. 37, 1993, pp. 104–114; J. In the second half of the sixteenth century, churches of four Protestant denominations existed in Greater Poland represented four Protestant denominations: Evangelical-Augsburg (Lutheran), Bohemian Brethren, Reformed Evangelical (Calvinist), and Polish Brethren (Arian).

The founding of the Bohemian Brethren's *Jednota* was strictly associated with the arrival in 1548 of a group of confessors expelled from Bohemia by Ferdinand I. They brought along their elaborate doctrinal and liturgical standards and organisational rules of ecclesiastical structures. The Brethren's teachings were worded in their books of confession (*Konfesja*) and apology (*Apologia*) published in 1538.⁵² From 1557 onwards, their *Jednota* formed in Greater Poland the third Church province, apart from the Bohemian and Moravian ones; its organisation was based on the Bohemian model. The top-tier authority in this Church was the so-called 'Strict Council' (*Uzka Rada*), composed of clergymen elected for life as the synod, out of a group of elder brethren – the 'clerical seniors'.⁵³ The synod was an important institution, being the forum for the elder brethren called seniors and conseniors; the ministers would gather separately and then submit their propositions to the elders.⁵⁴ In 1573, six secular seniors were appointed for the districts; they took no active part in administering the Church, though.⁵⁵ For this reason, the system of the Bohemian Brethren's Church is describable as episcopal, with the crucial decisions taken by the clerical senior, aided by two or three conseniors.⁵⁶ In the latter half of the sixteenth century, a vast majority of Bohemian Brethren's Churches were Polish-speaking. A few German-speaking communities emerged in the area of Wschowa, including in Leszno, Lasocice, and Gołanice.⁵⁷ A German-speaking *zbor* functioned since 1557 in Poznań.⁵⁸ The headquarter in the Commonwealth was the town of Ostroróg, which housed a school, seminary, archive, and library. The *Jednota*'s seniors also resided in Ostroróg.⁵⁹ The Bohemian Brethren's *Jednota* remained a local Church within Poland-Lithuania, with its structures only Greater Poland and, partly, in Cuyavia.⁶⁰ This fact incited J. Dworzaczkowa to consider the case of the Bohemian Brethren's *Jednota* as a manifestation of the specificity and singularity of Greater Poland.⁶¹ According to her findings, there were some forty *zbórs* active in Greater Poland between 1551 and 1608.⁶²

The followers of the Evangelical and Reformed denomination appeared at a fairly early date in Cuyavia, for a change. Their patron was Rafał Leszczyński, *Starosta* of Radziejów, this royal town being their important centre. Reformed community churches emerged in Voivodeship of Sieradz and in the region of Wieluń, all strictly associated throughout with the Lesser Polish province.⁶³ There are divergent opinions among scholars with regard to the functioning in Greater Poland in the latter half of the sixteenth century of a separate Evangelical and Reformed *Jednota*, apart from the Lesser Polish and the Lithuanian ones. Some scholars have accepted that the *zbórs* functioning in Cuyavia and Greater Poland formed a separate province,⁶⁴ whilst others say that those communities never formed an individual territorial structure of their own.⁶⁵ The first half of the seventeenth century marked a rapprochement between Reformed Evangelicals and the Bohemian Brethren. The year 1627 saw the

Calvinist ministers join the *Jednota*; a union of the Bohemian Brethren's Church with the Evangelical and Reformed Church was concluded in 1633 in Orla.⁶⁶ In contrast to Lesser Poland the Polish Brethren movement was poorly represented in Poznań and Kalisz Voivodeships.⁶⁷

In the latter half of the sixteenth century, the largest Protestant community in Greater Poland was that of the Evangelical-Augsburg Church believers.⁶⁸ The Greater Polish Church was presided by the senior (superintendent); the one in office since 1566 was Erazm Gliczner.⁶⁹ Ministers, aided by deacons and teachers, were in charge of *zbórs*.⁷⁰ The religious community was tasked with supporting the minister and the teacher, hence its members were bound to pay their contributions on a regular basis. The community's funds were managed by the provisors (*vitrici*).⁷¹ The 1565 synod in Gostyń resolved the Church's territorial structures be organised; three ecclesiastical districts were formed, headed by district seniors.⁷² In 1607, the synod in Miłosław established six districts – the ones of Poznań, Pызdry, Kobylin, Wschowa, Kościan, and Międzyrzecz.⁷³ The estimates of the number of Lutheran churches in Greater Poland in the second half of the sixteenth century vary by author.⁷⁴

King Sigismund I the Old tried to hinder the spread of the Reformation in Greater Poland by means of edicts. The edicts issued as of 3 May and 24 July 1520 barred the import into Poland-Lithuania and sale therein of Lutheran books under the pain of confiscation of estate and expulsion. The writ was repeated by the edict of 15 February 1522, targeted at *starostas* and municipal councils. Based on the edict of 7 March 1523, adherents of Lutheranism were exposed to the capital punishment and loss of property. Finally, the edict dated 5 September 1523 admitted to conduct search at bourgeois houses for Reformation-related printed matter and imposed preventive censorship on rector of the Cracow University. The other relevant ordinances of the king were issued in the 1540s. In 1544, Sigismund I issued a decision banning the proclamation of 'religious novelties' within the royal estates, the making of trips to Protestant centres and importing into Poland-Lithuania of any texts propagating Reformation ideas.⁷⁵ The subsequent royal mandates against the Protestants in Poznań and Konin were issued by Sigismund II Augustus in 1555. In 1556, the king decreed three anti-Reformation edicts, two of which relating to Greater Poland: one of them bound the *starostas* to counteract the spread of religious novelties across royal towns and villages, the other imposed the same instruction upon the *Starosta General*.⁷⁶

The implementation of the edicts was in practice dependent on the will of *starostas*, many of whom favoured the Reformation. As a result, in the Crown's estates of Międzyrzecz *starosta*'s district, many a parish yielded to the Protestant control.⁷⁷ The Evangelical-Augsburg confession was officially adopted in the royal towns of Wschowa, Międzyrzecz, Skwierzyna, and Wałcz.⁷⁸ In spite of the municipal authorities of Poznań expressly supporting the Reformation, its official adoption in the city

proved impossible,⁷⁹ owing to the king's clear stance to the contrary, shared by the *Starosta* General of Greater Poland.⁸⁰

The development of the Reformation in sixteenth-century Greater Poland was enabled by the support from the powerful noble families. Greater Poland's *Starosta* General Jakub Ostroróg, owner of Ostroróg, Koźminek, and Chodecz, was in fact the founder of the Polish *Jednota* of the Bohemian Brethren.⁸¹ Another important protector of the Church was Rafał Leszczyński, Castellan of Śrem.⁸² From the standpoint of the Evangelical-Augsburg Church, decisive was the support lent by Andrzej Górka, Greater Poland's *Starosta* General and Castellan of Poznań, his sons Łukasz and Stanisław, the consecutive voivodes of Poznań, and Andrzej, Castellan of Międzyrzecz.⁸³ Stanisław Ostroróg, the Międzyrzecz Castellan, one of those who initiated the convening of the first Lutheran synod in 1555 Poznań, also played an essential role. He was regarded as the main patron of Greater Poland's Lutherans.⁸⁴ The patrons of the Evangelical and Reformed communities and their churches were members of the family Latałski as well as Jan Tomicki, Castellan of Gniezno.⁸⁵ The Polish Brethren could count on the patronage of Stanisław Cikowski, Eliaż Arciszewski, and Kasper Brzeźnicki.⁸⁶

Of importance for the propagation of the Reformation ideas was the support from the local noblemen, albeit it is difficult to state the exact number of those noble families who joined the new faith.⁸⁷ At least the names of those noble families who joined the communities of the Protestant denominations. Among the Bohemian Brethren were the families of Broniewski, Bronikowski, Bukowiecki, Gajewski, Grodzicki, Grudziński, Kurnatowski, Marszewski, Mielęcki, Suchorzewski, Twardowski, and Żychliński,⁸⁸ whereas Potulicki, Orzelski, Ossowski, Ujski, Gniński, Goltz, and Unrug became members of Lutheran *zbórs*.⁸⁹ The names of noble adherents of the Reformation were written down in the files of Lutheran and Bohemian Brethren synods held in the second half of the sixteenth century.

The setting up of a Protestant *zbor* in Greater Poland was thus conditional upon the will of the noble proprietor of the town or village concerned. The patron's task was to provide the minister with appropriate emolument. In some cases, the minister would maintain his previous income and the presbytery endowment, his subjects to pay him the tithe. The minister would sometimes be paid by the patron in money and in kind. In the Bohemian Brethren's *Jednota*, the patron issued the so-called provision. Dworzaczkowa's research has shown that provisions have survived for a total of twenty-two communities/churches with incomplete data identifiable for another six.⁹⁰ These documents enable one to determine the material standing of the ministers. The problem of insufficient endowment or salary was repeatedly debated at the synods of Bohemian Brethren's *Jednota*, as e.g. with the *zbórs* in Trląg and Szamotuły.⁹¹ Due to low emolument, the office of minister at Bojanów remained vacant for some time.⁹²

The related issue is the secular patron's influence on the filling of the post of minister in the Protestant community. In his analysis of this practice, as compared to that pursued in the Catholic

⁷⁹ Poznań's Lutheran and Bohemian Brethren's *zbórs* functioned under the care of the magnate families of Górka, Ostroróg, and Tomicki. In 1564, Ostroróg town had his houses in St. Adalbert Suburb excluded from the municipal and ecclesiastical jurisdiction. Both churches are plotted on the map of Poznań in AHP Greater Poland; cf. I. Błaszczuk, *Dawny zbor Świętego Krzyża na Grobli: obecny kościół parafialny Wszystkich Świętych*, Poznań 2001.

⁹¹ ASR IV, pp. 104, 134.

⁹² The Bolesław synod (3 to 12 April 1598) file stated that: “Bojanów may presently be provided with a Minister not; interim, may Messrs. the Patrons conceive a better provision”; *ibidem*, p. 150.

Church, Bogumił Szady argues that with regards to Greater Polish Protestant Churches, the position and role of secular patrons in the functioning of *zbórs* ought not to be exaggerated.⁹³ In the *Jednota* of Bohemian Brethren, secular fellow believers had a little say when it came to electing the ministers, as the decision was that of the clerical seniors and conseniors. In Dworzaczkowa's view, the secular patron of a *zbor* could request the clerical senior for appointing a minister; for instance, the synod in session in 1589 in Poznań received a request from the Protestant community of Poniec to assign to them a preacher with a command of German.⁹⁴ Introduction of a concrete minister was however dependent on the clerical senior who could resolve to have him dismissed and moved to another *zbor*. The filling of the office of minister was repeatedly decided by the synods held in the latter half of the sixteenth century. The like solutions, with the decisive say on the part of clerical seniors as to the election of ministers, were obligatory in the legislation of the Reformed Evangelicals and Lutherans.⁹⁵

As regards the *Jednota* of the Bohemian Brethren, a definite majority of Protestant communities were active at the seized parish churches. Some patrons had a new church building constructed for the needs of the religious community, but it was a rare practice. The church in Poznań was situated beyond the city walls, in St. Adalbert Suburb, at a building owned by Jakub Ostroróg. By means of a royal privilege, it was excluded from the municipal jurisdiction. For the purpose of the local community, Jan Krotoski provided in 1575 an adjacent house; another real property was donated by judge Jan Gajewski. A complex of buildings owned by the community thus emerged, encompassing two church buildings, a school, a hospital, five residential buildings with a garden, and a cemetery.⁹⁶ A new, wooden church building, designed for the Bohemian Brethren community, was erected in Marszewo by its patron Wojciech Marszewski.⁹⁷ In Gołuchów, Rafał Leszczyński took away the entire benefice from the local Catholic church, and had a new wooden church erected for the Bohemian Brethren.⁹⁸ The Brethren's church in Krotoszyn is another example. Jan Rozdrażewski provided the Protestant community with the local parish church and subsequently, in 1592–7, funded the construction of a brick church for the purposes of the community; the buildings and facilities for the minister and ecclesial servants as well as building to be used as a school were also erected.⁹⁹ Another example is the village of Dąbrowa in Keynia district, whose owner Mikołaj Orzelski had a chapel built for the needs of his fellow believers, Bohemian Brethren. He resumed Catholicism before his death and bestowed the chapel to the Catholic Church.¹⁰⁰ The situation in this respect was different with the Lutheran churches founded in Poznań Voivodeship. The second half of the sixteenth century saw the development of new settlement in that region, and to satisfy the needs of the new settlers, prevalently of the Evangelical-Augsburg denomination, new church buildings were erected – as in the areas of Międzyrzecz, Wschowa, and Czaplinek-Wałcz.¹⁰¹

The dissenter communities' being materially and financially dependent on the secular patron, given no legal personality granted to *zbórs* in the Kingdom of Poland, led to their collapse or decay in case the patron or his successors converted to another confession.¹⁰² The largest wave of conversions to Catholicism was seen in the 1590s¹⁰³ – one example being Grodzisk Wielkopolski (Grodzisk), where Międzyrzecz *Starosta* Stanisław Ostroróg gave the parish church away to Lutherans, in 1553 (or 1563);

⁹³ For a broader account, cf. B. Szady, *Między panem i plebanem – mechanizmy obsady funkcji duchownych w Rzeczypospolitej wielu wyznań w XVI-XVIII wieku*, [in:] *Między Rzymem i Nowosybirskiem. ¹⁰³ Cf. J. Wijaczka, *Luteranie w Koronie*, p. 6; A.K. Banach, *Konwersje protestantów na katolicyzm w Koronie w latach 1560–1600*, „Zeszyty Naukowe Uniwersytetu Jagiellońskiego. Prace Historyczne”, 1985, no. 77, pp. 21–35.

after the conversion of his son Andrzej, the church and its entire endowment was transferred in 1593 to the new Catholic parson.¹⁰⁴ A number of *zbórs* fell after their home villages were sold to a Catholic owner. Another reason would have been the discontinuation of funding by the secular patron, as was the case with the communities in Gromadno (Nakło district) and Niemczyn (Kcynia district).¹⁰⁵

The largest clusters of Bohemian Brethren communities-and-churches appeared in Kalisz Voivodeship. In the latter half of the sixteenth century, *zbórs* functioned in Kalisz district – in Gołuchów (Gołuchowo)¹⁰⁶ and Blizanów (Blizanowo), both being property of the Leszczyński family.¹⁰⁷ The patron of the *zbórs* in Jastrzębniki¹⁰⁸ and Lipa¹⁰⁹ was Jan Lipski. One of the most important Protestant community churches was that in Koźminek, owned by the Ostrogski family.¹¹⁰ The patron for Marszewo (Marszewo)¹¹¹ and Chodecz (Chocz)¹¹² was Wojciech Marszewski. Communities and their churches were active also in Broniszewice Suchorzewskie,¹¹³ Karmin (Karmino Wielkie), owned by the Marszewski and Sośnicki families,¹¹⁴ and in Kamień (Kamion), owned by Zaremba.¹¹⁵ The patron for Stawiszyn was probably Jan Zaremba of Kalinowa.¹¹⁶ Visitation records from the early seventeenth century tell us of two localities whose parish churches were occupied by the Protestants for a long time; this probably referred to Bohemian Brethren communities in the villages of Zakrzyn (Zaksino)¹¹⁷ and Kretków

¹⁰⁴ Czwojdrak and Kopaczyński, p. 44.

¹⁰⁵ Cf. J. Dworzaczkowa, *Sytuacja materialna duchowieństwa braci czeskich*, p. 135.

¹⁰⁶ The patron was Rafał Leszczyński. In 1581, the so-called provision was issued. Jan Rokita (1578) and Andrzej of Kołp (1597–1601) served as ministers. The church was returned to the Catholic community in 1601 by Waclaw Leszczyński, after his conversion to Catholicism. ASR I, p. 225; ASR IV, pp. 117, 121–2, 129, 132–4, 140, 150–1, 153–4, 159–61, 164, 361, 364; ASR III, p. 28; ABCz, no. 1435, 1436, 1438, 1442; ASL, p. 113; Wiz. Kal. 1603–1607, f. 372.

¹⁰⁷ The 1606 visitation record refers to the founding of a parish church in Żerniki. The locality had been singled out of its previous parish of Blizanów, which was taken over by Bohemian Brethren. The ministers: Błażej Adamiejusz, Jakub Tychicki. The church was regained by the Catholics ca. 1605. Wiz. Kal. 1603–1607, f. 440, 458; Wiz. Kal. 1610–1611, f. 469.

¹⁰⁸ The available records confirm that the *zbór* functioned in the second half of the sixteenth century. As per the 1606 visitation record, a ‘Calvinist’ minister stayed in the locality. ASR IV, pp. 105, 121, 178, 194; Wiz. Kal. 1603–1607, f. 461–462; *Repertorium akt wizytacji kanonicznych dawnej archidiecezji gnieźnieńskiej*, ed. S. Librowski, ABMK, vol. 28, 1974, p. 133; ASR IV, p. 178.

¹⁰⁹ The *zbór*’s owners and patrons were Jan and Maciej Lipski. According to the 1606 visitation record, the church’s collator Jan Lipski gave it away to Bohemian Brethren in 1570. Stanisław Hiperyk was the minister as of 1589. The visitation confirmed that the patron’s son, a Catholic himself, returned the church to the Catholic community; Wiz. Kal. 1603–1607, f. 462; ASR IV, p. 105.

¹¹⁰ ASR IV, pp. 9, 57, 61, 77, 104, 107, 119; ASL, p. 113; BRacz, rkps 50, ff. 176, 184, 196; ABCz, no. 892; Wiz. Kal. 1603–1607, f. 323.

¹¹¹ A provision for this particular community was issued in 1588. The ministers in office included Łukasz Andronicus (1564; 1587–95), Stefan Felix (1573–87), Samuel Aorg (1587), Wojciech Pietraszek (1597), Andrzej of Koło, and Deacon Adam Hilarius (1598). Problems appeared around 1600 with the filling of the post of minister owing to poor emolument. As per the visitation record dated 1605, the Marszewo *zbór* was still active, with a minister in office. ASR I, p. 83; ASR IV, pp. 99, 104, 107, 123, 151, 156–157, 159, 163–164, 166; ABCz, no. 892; Wiz. Kal. 1603–1607, ff. 372, 386.

¹¹² The so-called provision determining the church’s endowment was issued in 1575. The ministers: Piotr Abdeel, Jakub Trofim, Jan Memoratus, Jakub Widlak, Jan Lucjusz Turnowski, Adam Moller, Mateusz Serenius Chodowiecki; ASR I, pp. 221, 225, 258–61; BRacz, rkps 50, ff. 128–130; ASR IV, pp. 219, 250, 298, 385–386; Wiz. Kal. 1603–1607, f. 451.

¹¹³ The ministers: Adam Moller (until 1591), Jan Wiglef (until 1606); the latter was assisted, since 1601, by his son-in-law Maciej Cyrinus. A school was affiliated to the community. In 1606, the minister was dismissed by the (female) owner. Stanisław Suchorzewski converted to Catholicism; he died in 1615. Wiz. Kal. 1603–1607, f. 381; ASR IV, pp. 150, 166, 177–178; BRacz, rkps 62, f. 33.

¹¹⁴ The visitation record from 1605 confirms that the owners were Evangelicals and the church had been occupied for a number of years. The minister present at the time is first attested in 1601. The first dated mention of the *zbór* is in the file of the 1608 synod of Lipnik. The ministers were Jan Turnowski (?1595) and Andrzej of Koło (1601); ASR IV, pp. 164, 166, 170, 178, 193, 206, 228, 319–20, 322, 401; BRacz, rkps 46, f. 105v; Wiz. Kal. 1603–1607, f. 386.

¹¹⁵ A ‘provision’ was issued in 1587, then another one in 1590. The ministers were Andrzej Vitalis (1587–89), Stanisław Hypericus (1589–1609[?]), Szymon Leopolda (1608–9[?]). The synod files and the 1605 visitation record point to the efforts and activities of Andrzej Zaremba, patron of the *zbór*, and the church’s seizure by the Protestants. ASR IV, pp. 105–106, 164, 178–179, 185, 190, 194, 201, 321; Wiz. Kal. 1603–1607, f. 459.

¹¹⁶ The ministers were: Mateusz Gacki (1575–97), Piotr Studensky (1577), Stanisław Hypericus (until 1579), Samuel Aorg (1590), Maciej Dukat (1597–1607), Sebastian of Turek (1607–10); ASR IV, pp. 90, 129, 131, 154; Wiz. Kal. 1603–1607, f. 394.

¹¹⁷ As of 1579, the village was owned by Mikołaj Siedlecki; Wiz. Kal. 1603–1607, f. 244; Wiz. Kal. 1610–1611, f. 339; ASK 1579, f. 700.

(Kretkowo).¹¹⁸ The same records inform on a *zbór* in Rychnów (Rychnowo) village.¹¹⁹ There is no record-based evidence, in turn, of a Bohemian Brethren community in Kalisz.¹²⁰

In Konin district, attempts to introduce the Reformation failed for the town of Konin itself.¹²¹ Protestant communities-and-churches functioned in Grodziec,¹²² Wyszyna (Wyszyno),¹²³ Krzymów (Krzymowo),¹²⁴ and Drażno-Holendry (Drażno),¹²⁵ all belonging to the Grodziecki family. Further on, dissenter churches were funded in the Gorzewski-owned Kawnice (Kawnica)¹²⁶ and in Cienin Kościelny (Cienino Wielkie), property of the Przyjemski family.¹²⁷ The ecclesiastical visitation of 1608 confirmed that a *zbór* was active in Roch Żychliński's Myślibórz.¹²⁸ Another one probably functioned in Rychwał, owned by the Złotkowski family.¹²⁹

A community of Bohemian Brethren within Pызdry district certainly functioned in Krotoszyn.¹³⁰ In Kcynia district, a *zbór* operated in Barcin, Jan Krotoski being the patron,¹³¹ and in the Grudziński-

¹¹⁸ As of 1581, the village belonged to Jakub Włostowski and the Giżycki family. The 1608 visitation record has it that an Evangelical church operated there, with a minister present. The Catholics had the church back around 1590, with graves of Protestants inside it. *Wiz. Kal. 1603–1607*, f. 342; *ASK 1581*, f. 197.

¹¹⁹ The community and church are attested for this locality by the 1606 visitation record; the church was probably erected before 1568 – the year the parish church in Żerniki was founded and the locality detached from the parish in Blizanów as it was seized by Bohemian Brethren. The record specifies that also the church in Rychnów was taken over by the dissenters, probably Bohemian Brethren. The presence of a preaching minister was confirmed. The *zbór* collapsed around 1605; the village's owner Jan Kobierzycki provided the church to the Catholics. *Wiz. Kal. 1603–1607*, f. 457–458.

¹²⁰ J. Dworzaczkowa evokes the information from the town's Jesuit chronicle regarding conversions of Protestants that took place in 1586–98; cf. H. Merczyng, *Zbory i senatorowie protestancy*, p. 28; J. Dworzaczkowa, *Wprowadzenie reformacji do miast*, p. 78; W. Urban, *Z dziejów reformacji*, pp. 230–231.

¹²¹ In 1546, Fr. Stanisław Lutomirski, a Reformation adherent, was made the local provost. He gained support from Konin *Starosta* Stanisław Dziaduski. The year 1555 saw Lutomirski partake in the Gołuchów convention and the synod in Koźminek. He was excommunicated in the same year; in 1556, an anti-Reformation mandate was issued by the king, and delivered by Greater Poland's *Starosta* General Janusz Kościelecki. A new Catholic provost, Fr. Mikołaj Grochowski, was installed in Konin in 1556. As per the episcopal visitation record of 1608, no Protestants dwelled in the town. *ASR IV*, p. 903; *Wiz. Gnz. 1608–1609*, f. 105; cf. J. Dworzaczkowa, *Wprowadzenie reformacji do miast*, p. 76.

¹²² The ministers were Jakub Troffin (until 1581) and Jakub Widłak (until 1586). The community and church vanished, probably, after the patron's death in 1587. According to the 1608 episcopal visitation record, there were no Protestants in the locality. *Wiz. Gnz. 1608–1609*, f. 125.

¹²³ The patron was Andrzej Grodziecki, later succeeded by his son Adam. The ministers: Tomasz Wrzesita (from 1573), Błazek (1587), Samuel Orlik (1595), Andrzej Witalis (1608–10), Sebastian Campensis (Turcensis). *ASR IV*, pp. 99, 178; *ASL*, p. 114; *Wiz. Gnz. 1608–1609*, f. 142v.

¹²⁴ As per the 1608 visitation record, the *zbór*'s patron was Władysław Grodziecki, the village's owner since 1580; he transferred the church to Bohemian Brethren. A minister resided at the church – namely, Szymon Leopolda (as of 1597). From 1607 on, the village was owned by Rafał Jarochoowski, a Catholic, who reinstated the status quo ante. *ASR IV*, pp. 117, 122, 129; *Wiz. Gnz. 1608–1609*, f. 143.

¹²⁵ As of 1595, a certain Piotrw was the minister; *Wiz. Gnz. 1608–1609*, f. 143; *ASR III*, p. 128.

¹²⁶ The 1608 visitation record confirms that the church was seized years ago, and that a minister resides there. The ministers: Maciej Dukat and Maciej Teodor Włostowski (1596–1597), Szymon Leopolda (before 1608). *ASR IV*, pp. 117, 131, 178, 190, 192, 219, 380; *Wiz. Gnz. 1608–1609*, f. 375v.

¹²⁷ A 'provision' was issued for the *zbór* in 1568, then again in 1572. The ministers were Bartłomiej Organista (1568), Jan Lucjusz Turnowski (until 1572), Mikołaj Hermes (until 1598), Daniel Mikołajewski (1598), and Jan Pietraszek (from 1598). *ASR IV*, pp. 151, 159, 178, 192–193, 206, 240, 323, 380, 402; *Wiz. Gnz. 1608–1609*, f. 373v; *BRacz*, rkps 48, f. 33v, 36v, 48v; *BRacz*, rkps 62, f. 93.

¹²⁸ Paweł Patiens served as a minister (as of 1597). A school functioned in the village; Jerzy Clemens was a deacon in 1598. *ASR IV*, pp. 117, 122, 124, 131, 133, 175, 178, 192–193, 206, 380; *Wiz. Gnz. 1608–1609*, f. 376.

¹²⁹ A single mention survives of minister Stanisław Hypericus from Poznań, who stayed at the *zbór* in 1573. The community vanished, probably, with Złotkowski's death in 1574; his son Stanisław was most probably a Catholic. The 1608 visitation record says nothing of local Protestants. *Wiz. Gnz. 1608–1609*, f. 128v.

¹³⁰ The community's patron Jan Rozdrażewski provided the parish church to Bohemian Brethren, and then had a new brick church built for the Evangelicals. In 1600, after the patron's death, on consent of his widow Katarzyna, née Potulicka, the church was given back to the Catholics and turned into the Catholic parish church dedicated to St. John the Baptist. The visitation record from 1612 remarks, however, that Bohemian Brethren still stayed in the town. The ministers and preachers included Kasper of Krotoszyn, Paweł Orlik (1573–95), and Jan Turnowski (1597–1600). There was a school which Jan Rozdrażewski had agreed to support with 20 fl. per annum allocated for the purpose. In 1599, the community's members requested their patron to help them find a German-speaking preacher and a bachelor (teacher); *ASR IV*, pp. 122, 129, 131, 134, 151, 153–4, 156, 187, 252, 383; *ASL*, p. 113; *ABCz*, no. 1704, f. 6; *Wiz. Kal. 1603–1607*, ff. 166, 175.

¹³¹ That the *zbór* existed is confirmed by dissenter and Catholic records. In 1570–8, the minister was Jan Lucjusz Turnowski; Andreas Sylvianus succeeded him in 1595. After a period of vacancy, Wojciech of Marszewo was sent as minister

owned locality of Niemczyno (Miemczyno).¹³² The church in Jaktorowo, mentioned in an visitation record, was probably used by Bohemian Brethren.¹³³ As for Gniezno district, there was a church in Łagiewniki Kościelne (Łagiewniki)¹³⁴ and Skoki,¹³⁵ owned by the Latałski family, and in Trląg, whose patron was Jan Modlibóg.¹³⁶ Two *zbórs* are attested for Nakło district: one in Łobżenica, funded by Jan Erazm Krotoski,¹³⁷ and the other one in Sypniewo.¹³⁸ Scarcity of source information renders it difficult to attest the church in Gromadno with certainty.¹³⁹ Based on early seventeenth-century episcopal visitations, followers of the Reformation dwelled also in royal towns, such as Gniezno,¹⁴⁰ Kłecko,¹⁴¹ or Pobiedziska.¹⁴²

For two localities, there is no source basis to confirm that dissenter communities and their churches were active in the second half of the sixteenth century. According to the 1608 episcopal visitation record, the locality of Golina (mentioned by Dworzaczkowa¹⁴³) had its church desecrated as a Protestant was interred there. There were no dissenters in Golina as at the visitation date.¹⁴⁴ The *zbór* in Bardo, Pызdry district, is mentioned by Andrzej Węgierski and Józef Łukaszewicz, who point to the Bardzki family as the patrons. Around 1570, they offered the local parish church for the needs of their fellow believers. Krzysztof Bardzki was registered for the Toruń Synod in 1595. The community perished before 1608; no details of its Evangelical ministers have survived, and there is no source evidence for this locality whether in synod files or in Church visitation records.¹⁴⁵

Based on the episcopal visitations, it appears that there were some Protestant centres that attracted noble adherents of the Reformation from nearby villages. Barcin in Kcynia district saw Jan Dąbrowski arriving with his family from Dąbrówka village.¹⁴⁶ In Konin district, the *zbór* handled by a minister

to Barcin in 1598. In 1600, Georgius Clemens served as the minister. There was a school in Barcin as well. ASR IV, p. 164; ASR III, p. 28; ASR II, p. 311; ASL, pp. 72, 114; MHDW 17, p. 123; MHDW 19, p. 65; BRacz, rkps 48, f. 50v.

¹³² The ministers: Jan Campensis (1579–99), Maciej Cyrin (1598), Paweł Orlik (1600). As per the 1608 visitation record, Jan Grudziński continued to be an Evangelical, but there was no minister in place anymore. An Evangelical's tomb was found inside the church. ASR IV, pp. 131, 153, 158, 163; ASL, p. 114; Wiz. Gnz. 1608–1609, f. 103v.

¹³³ Jan Jaktorowski was the *zbór*'s patron; in 1588, he gave the local St. Anne's parish church to Protestants. According to the 1608 visitation record, there was no minister in the village; Wiz. Gnz. 1608–1609, f. 72.

¹³⁴ According to the visitation record, there was a "minister Bohemus secta calviniana" at the church for several years. The ministers were Jan Enoch (1596) and Maciej Nachor Paszkowski (1600–11); ASR IV, pp. 117, 126, 153; BRacz, rkps 46, f. 22–22v; Wiz. Gnz. 1608–1609, f. 37.

¹³⁵ Jerzy Latałski, the owner, was the patron; the minister was Jan Fortunat od 1596 r.; ASR IV, pp. 178, 193, 206, 234, 243.

¹³⁶ The *zbór*'s patron was Jan Modlibóg, whose patronage extended to the parish church. The ministers were Krzysztof Musonius (1589) and Paweł Patiens (1590–1597). An visitation in the early seventeenth century confirmed that a local *zbór* was active; it was eventually dissolved ca. 1600. ASR IV, pp. 104, 122, 361, 464; BRacz, rkps 46, f. 16–16v; Wiz. Gnz. 1608–1609, f. 342.

¹³⁷ The ministers: Wojciech Serpentinus (1573), Jan Ryba (1573), Szymon Musonius (until 1592), Andrzej Sylwan (1592), Jan Memoratus (1598), Andrzej of Koło (1602), Jan Turnowski (1604–9), Mikołaj Rausmann (1609–12), and Mikołaj Laureus. There was a school functioning in the town, the bachelors (teachers) being Krzysztof Musonius (1568) and Jan Textor (1597); ASR IV, pp. 112, 121, 124, 130, 135; BRacz, rkps 48, f. 50v; cf. Mietz, p. 108.

¹³⁸ The *zbór*'s patron was Jan Białośliwski. In 1580, the so-called provision determined the community's and church's endowment. The ministers were Szymon Musonius (1580–8) and Jan Ryba (1588–92); the latter died, an "emeritus miles Christi", in 1596 in Sypniewo. ASR IV, pp. 155, 362; BRacz, rkps 46, f. 22.

¹³⁹ Initially, it was a Lutheran *zbór*, which was later turned into one of Bohemian Brethren. A 'provision' was issued in 1593 to determine its endowment. J. Dworzaczkowa, *Sytuacja materialna duchowieństwa braci czeskich*, p. 141.

¹⁴⁰ The influence of the Reformation proved to be very weak in the second half of the sixteenth century. According to the 1608 visitation record, there were two Protestants among the local 'citizens' – Jerzy Pudłozek and Jan Majewski, both tailors by profession; their wives and other family members were Catholic. Wiz. Gnz. 1608–1609, f. 170v.

¹⁴¹ As per the 1608 visitation record, among the town's dwellers, Laurentius ('pistor germanus') and Daniel Szotus, as well as their wives and children, were of the Protestant faith. A certain Dawid was the pastor. Moreover, among the town's residents were many Scots who attended Dawid's sermons; *ibidem*, f. 33.

¹⁴² The 1608 visitation record says that there were two Protestants in the town – Joannes Thesarz, a 'germanus', and Joachimus Płociennik, also a 'germanus'; *ibidem*, f. 207v.

¹⁴³ J. Dworzaczkowa, *Bracia czescy w Wielkopolsce*, p. 196.

¹⁴⁴ Wiz. Gnz. 1608–1609, f. 375v; cf. J. Łukaszewicz, *O Kościołach Braci Czeskich*, p. 284; J. Dworzaczkowa, *Zbory braci czeskich*, p. 46.

¹⁴⁵ ASL, 115; cf. J. Łukaszewicz, *O Kościołach Braci Czeskich*, p. 269; J. Dworzaczkowa, *Sytuacja materialna duchowieństwa duchowieństwa braci czeskich*, p. 141.

¹⁴⁶ Wiz. Gnz. 1608–1609, f. 349v.

was frequented by Maciej Pniewski from Nowa Wieś.¹⁴⁷ The church in Dębica, a village in Gniezno district owned by Jerzy Latałski, was visited for sermons by Protestants from the nearby villages of Łubowo,¹⁴⁸ Latalice (Gwiazdowo),¹⁴⁹ Dziećmiarek,¹⁵⁰ and Imiołki (Jemiołowice).¹⁵¹ The church in Wyszyno, a village in Konin district, owned by Andrzej Grodziecki, attracted the neighbourhood's Protestants; the sermons delivered by the local minister were attended by Anna Lisiecka and her three sons from Lisiec Mały village,¹⁵² or by Mrs. Biskupska, a widow from another village, Biskupice.¹⁵³

The aforementioned visitation records tell us more also about the noble families that opted for the Reformation. Their residence is however not identical, as a rule, with the location of a Protestant church. In the light of these data, Mikołaj Słupski and his wife Zofia Głębocka in the village of Iwno,¹⁵⁴ and Zofia Grocholska in Grocholino village, Kcynia district,¹⁵⁵ were Protestant. In Konin district, of Evangelical confession were Jakub Nieradzki and his son, in Kragola village;¹⁵⁶ Dorota and Stanisław Czyżewski, in Kuchary;¹⁵⁷ Andrzej Kucharski, his wife and sister, in Kuchary Borowe;¹⁵⁸ Piotr Biskupski, in Łagiewniki,¹⁵⁹ Mikołaj Piruski and his wife, in the village of Grochowo;¹⁶⁰ and, Andrzej Wolski in Wola village.¹⁶¹ In Gniezno district, Andrzej Bronikowski's wife in Turostowa village,¹⁶² Mr. Chrzastowski in Stawiany,¹⁶³ Jan Płocki in Popkowice,¹⁶⁴ and Adam Napruszewski in Napruszewo¹⁶⁵ were of Protestant denomination.

Episcopal visitation records tell us at times that a parish church has been profaned as a Protestant had been interred on the premises; again, this does not mean that a Protestant church actually functioned there. Such is the case with several villages, including Podlesie Kościelne (Podlesie)¹⁶⁶ and Rękawczyn (Rękawczyno)¹⁶⁷ in Gniezno district, as well as Chojna,¹⁶⁸ Dziewierzewo,¹⁶⁹ and Srebrna Góra (Srebrna Górka)¹⁷⁰ in Kcynia district. The records mention no takeovers of the churches by the Protestants, nor do they refer to clerical ministers present in the respective circles of noble village owners.

Bohemian Brethren's churches functioned also within the limits of Voivodeship of Poznań. Within Poznań district, in the city of Poznań itself, one of the earliest established and most important *zbórs* was active. A school and a hospital functioned in the city as well.¹⁷¹ The other community church was that in Ostroróg;¹⁷² both were under the patronage of the Ostroróg family. The other such churches

¹⁴⁷ Ibidem, f. 373.

¹⁴⁸ Jan, Stanisław, and Mikołaj, owners a parts of the village, were Protestant; ibidem, f. 200.

¹⁷¹ The ministers were: Jerzy Izrael (1580), Szczepan Bydżowski (1582), Jerzy Erastus (1573–5), Łukasz Andronik (1572–3), Szczepan Felix, Jakub Tichy, Baltazar Eichner, Jan Enoch, Jan Siffert, Grzegorz Moller (until 1581), Jan Girk (until 1592[?]), Jan Girk Jr., Maciej Rybiński (1592–6), Samuel Aorg (until 1595 r.), Jan Turnowski Jr. (1596), Paweł Orlik Sr. (1597–8). Walenty Cornelius (1570) and Marcin Gracjan Gertych were employed at the school. ASR IV, 98, 107–8, 126, 131, 133–4, 152, 158, 166–7, 171; ASL, 113; BRacz, rkps 48, f. 59.

¹⁷² The ministers were: Jerzy Izrael (1560), Jan Lorenc (1578, 1587), Symeon Bogumił Turnowski (1587–1608). A school functioned in the Town, with Stanisław Scribonius as the 'bachelor'; BRacz, rkps 50, f. 176; AGAD, Depozyt Wileński 38

operated in Szamotuły,¹⁷³ Kwilcz,¹⁷⁴ and Policko.¹⁷⁵ In the second half of the sixteenth century, a *zbór* of Poznań district's Tomice was active, with the patronage exercised by Jan Tomicki. In 1557, a colloquium between Bohemian Brethren and Franciszek Lismanin took place there; Lismanin advised that the Brethren's *Konfesja* and *Apologia* be sent to Geneva, with a request for opinion. Services were held at the time, according to the Bohemian Brethren's rite.¹⁷⁶ A *zbór* in Cerekwica is reliably attested.¹⁷⁷

Another Bohemian Brethren's church operated in Parkowo village. The information that the parish church was seized by the dissenters is dated 1561; however, the presence of a minister is not to be confirmed based on the records. The visitation record of 1628 says that the church was in ruins.¹⁷⁸

Kościan district had three Bohemian Brethren's churches – namely, in Chobienice, owned by the Miękickis,¹⁷⁹ in Poniec.¹⁸⁰ and Godziszewo.¹⁸¹ In Wschowa Land, Leszno, property of the Leszczyńskis,¹⁸² was an important centre of the Bohemian Brethren's movement. A 'provision' was issued in 1580 to determine the *zbór's* endowment¹⁸³. There was a school in the town as well. In 1573, Radziejów *Starosta* Jan Leszczyński committed to fund the school with 200 *fl. per annum*. Its functioning was addressed by Leszczyński at the 1578 synod in Piotrków. He bestowed the school with '9 rods of soil' in Leszno, by means of a document issued in 1579; a conflict related to the funding of the school occurred in 1580. The 1586 file of the synod at Stawiszyn mentions that the school was sponsored by Rafał Leszczyński.¹⁸⁴ Within the same district, Protestant community churches operated also in Lasocice,¹⁸⁵ Gołanice,¹⁸⁶ and Wilkowice (Wilkowo).¹⁸⁷

Three Evangelical and Reformed community churches emerged in Grater Poland, as attested for the second half of the sixteenth century – all three within Voivodeship of Kalisz. Two were in Kcynia

(Acta et conclusiones orthodoxarum synodarum provincialium in minore Polonia 1547–1650), f. 34; ASR II, pp. 311–312; ASR IV, pp. 83, 94, 97, 99, 103–104, 106–107, 112, 119, 121, 125, 127, 131–132, 134–135, 140–141, 148, 151, 153, 156, 158, 160, 164, 167, 169, 170–171; ASR III, p. 28; ASL, p. 73.

¹⁷³ The *zbór's* patrons were Łukasz Górka and Jan Świdwa Szamotulski. The ministers: Błażej Adamatius (1570, 1573, 1578, 1589), Maciej Maj (1589), Paweł Orlik Sr., Waclaw Epenet (1597), Mateusz Kralicki (1608), and Maciej Dukat (1611). In 1555, after a fire in Ostrorów, Jan Lorenc and Piotr Skalnik collected donations for the poor in Szamotuły; the locals lined up against the Bohemian Brethren. In 1594, the latter lost the parish church and moved to a small hospital church of Holy Spirit.

¹⁷⁴ The first mention of the church's takeover by Protestants is from 1561. The *zbór's* patron was Jan Kwilecki. A 'provision' for it, issued by eleven persons, is dated 1577. The minister was Jan Bełdowski (until 1601). A school was affiliated to the church. ASR IV, pp. 160, 166, 170, 172, 175, 177, 193, 201, 206, 319–321, 327, 331, 384, 401; BRacz, rkps 48, f. 28v; ASK I 3, f. 345.

¹⁷⁵ The locality was owned by the Policki family. According to the surviving records, the church was seized by Protestants in mid-sixteenth century. The minister in office was Paweł Patiens (1587–90). The presence of Protestants is confirmed by visitation records from the early seventeenth century. ASR IV, p. 99; ASK I 3, f. 346; BRacz, rkps 46, f. 14; Wiz. Psz. 1603–1607, f. 59.

¹⁷⁶ As attested by the available sources, the local parish church was possessed as of 1561 by Protestants. An early-seventeenth-century visitation record says nothing of Evangelicals residing in the village. ASR I, p. 240; BRacz, rkps 50, ff. 133v–141v; ASK I 3, f. 332v; Wiz. Kal. 1603–1607, f. 339.

¹⁷⁷ Wiz. Poz. 1628–1629, f. 53v; Wiz. Czur. 1640–1641, f. 255.

¹⁷⁸ ASK I 3, f. 331v; Wiz. Poz. 1628–1629, f. 42v.

¹⁷⁹ The ministers were: Adam of Żarnowiec (until 1587), Wojciech Maximus (1589), and then, Sebastian Melissius; ASR IV, pp. 99, 104, 127, 170; BRacz, rkps 48, f. 38v; Wiz. Czur. 1640–1641, f. 12v.

¹⁸⁰ Walenty Cornelius (1587–98) served as the minister, aided by Jan Pietrasz. The community submitted their request for hiring a German-speaking preacher. A school was affiliated to the church. ASR IV, pp. 97, 104, 135.

¹⁸¹ Based on synod files, Jacobus Tichinus was a deacon with the local community; he participated in the Poznań convention in 1570. ASR II, p. 312.

¹⁸² For the records related to the community/church in Leszno, incl. entries in the chronicle of the town of Leszno for the years 1500 to 1637, lists of pastors, rectors and teachers of the grammar school (*gimnazjum*), see ABCz, no. 2528.

¹⁸³ Cf. J. Dworzaczkowa, *Sytuacja materialna duchowieństwa braci czeskich*, p. 143.

¹⁸⁴ ASR IV, pp. 28, 68, 91, 98–99, 107, 113, 122, 129; ASL, 113; AGAD, Depozyt Wileński 38, f. 37v; ABCz, no. 892.

¹⁸⁵ In 1575, Radziejów *Starosta* Rafał Leszczyński issued in Leszno a document confirming that the local church was transferred to Bohemian Brethren. The ministers were: Georg Erastus Sr. (1560–77), Baltazar Eichner (1573–5), Georg Mollerus (1587–1604), the latter assisted by Łukasz Helicz (c. 1597), and finally, Paweł Fabricius (Schmidt). As per the visitation record, the church was still in the Protestant hands as of 1610. ASR IV, pp. 107, 122, 129, 193, 214, 388; BRacz, rkps 48, f. 59; ABCz, no. 2530, ff. 14–15; Wiz. Poz. 1610–1619, f. 180.

¹⁸⁶ Waclaw Epenet served as the minister in 1587; ASR IV, p. 99.

¹⁸⁷ Fabrycyjus was the minister (c. 1597–1602); *ibidem*, pp. 129, 151.

district, in the localities of Brzyskorzystew (Brzeskorzystew)¹⁸⁸ and Chomętowo,¹⁸⁹ and one in Gniezno district – in the Latałski-owned Dębica.¹⁹⁰

The Polish Brethren embarked on confessional activities in Greater Poland as well. The year 1566 marks the appearance in Poznań of Marcin Czechowic, with a group of his coreligionists, who intended to incite a dispute with the local Lutheran minister. However, Marcin was expelled from the city by the *Starosta* General's decision. The attempt to set up an 'Arian' *zbór* in Kościan also failed¹⁹¹ – yet, the opposite was the case in Śmigiel, Kościan district.¹⁹² The year 1594 saw a nationwide Polish Brethren's synod convened in that town.¹⁹³ That an Arian community church ever functioned in Międzyrzecz cannot be attested based on the sources; its existence at the time is basically hypothetical.¹⁹⁴

Evangelical-Augsburg community churches emerged preponderantly in Voivodeship of Poznań. It was in this territory particularly in the area of Międzyrzecz, in Wałcz district, and in Wschowa land the proportion of German-speaking population was considerable; based on the present research, the Evangelical-Augsburg denomination was predominant among them.¹⁹⁵

Within the Poznań district, a Lutheran community functioned in Poznań itself.¹⁹⁶ Not far from the city, *zbores* were funded in the estates owned by Piotr Potulicki, Voivode of Płock – in Murowana Goślina (Goślina Kościelna)¹⁹⁷ and in the village of Ceradz Kościelny (Ceradz Stary).¹⁹⁸ A Lutheran church functioned in Szamotuły, the town co-owned by Stanisław Górka, who was a Lutheran himself. In 1573, he offered to Jan Świdwa Szamotulski, the other co-owner and confessor with the Bohemian Brethren's *Jednota*, that the two *zbores* be merged into one.¹⁹⁹

A number of Protestant centres were set up in the western part of Poznań district. In deanery of Wronki, a Lutheran community operated in the town of Międzychód, owned by the Ostrogski family.²⁰⁰ Not far from it, peer churches were funded in the villages of Wierzbno²⁰¹ and Murzynowo, the latter partly owned by the *starosta's* district of Międzyrzecz.²⁰² Attestable are also certain churches in nobility-

¹⁸⁸ As per an early-seventeenth-century visitation record, the *zbór's* patron was Zygmunt Smogulecki; the record points to a long-term vacancy, the rectory was deserted. The presence of a Reformed minister has been confirmed (he was no more there at the moment of visitation). ASL, p. 114; Wiz. Gnz. 1608–1609, f. 312v.

¹⁸⁹ As per an early-seventeenth-century visitation record, Jan Pałędzki was the patron. The church was passed over to the Evangelicals; there was a long-term vacancy at the rectory. The visitation confirmed that ministers were committed in their actions; their names were Stanisław of Górzyno (1576–95) and Marcin Orminius, a Bohemian Brother (until 1612). ASR IV, p. 248; ASL, p. 113; Wiz. Gnz. 1608–1609, f. 315v.

¹⁹⁰ At the end of the sixteenth century, the patron was Jerzy Latałski, and at the beginning of the following century, Mikołaj Latałski. Piotr Tarnowski served as the minister (1570–95). ASR IV, pp. 126, 156; ASL, pp. 64, 112; Wiz. Gnz. 1608–1609, f. 37.

¹⁹¹ Cf. J. Dworzaczkowa, *Wprowadzenie reformacji do miast*, p. 77.

¹⁹² The *zbór's* patrons were Stanisław Cikowski, Andrzej Dudycz, Elias Arciszewski. Its ministers were Andrzej and Krzysztof Lubieniecki, Walenty Schmalc, and Krzysztof Ostorodt (Osterode). There was a school in the town. ASR IV, pp. 360, 378; cf. *Dzieje Wielkopolski*, vol. 1, p. 555; *Eliasz Arciszewski*, [in:] *Wielkopolski słownik biograficzny*, p. 27; K. Drzymała, *Bracia polscy zwani arianami*, „*Studia Theologica Varsaviensia*”, vol. 1, 1963, p. 266; J. Tazbir, *Antytrynitaryzm*, p. 63; M. Pawelec, *Bracia polscy w Śmiglu*, <http://reformacja.muzeumleszno.pl/?p=1310> [access: 9.04.2018].

¹⁹³ Cf. S. Szczotka, *Synody arian polskich*, pp. 47, 48.

¹⁹⁴ The timeframe in which the community church functioned cannot be established with certainty. Jan Caper, who since 1560 was the Lutheran minister in the town, probably served as the church's minister. He subsequently was in office as the superintendent for Greater Poland but was dismissed in 1566 due to his professed crypto-Calvinism. In 1588, he converted once again. Cf. T. Wotschke, *Die unitarische Gemeinde in Meseritz-Bobolewitz*, „*Zeitschrift der historischen Gesellschaft für die Provinz Posen*”, 1911, p. 167; *Dzieje Wielkopolski*, vol. 1, p. 556; J. Tazbir, *Walka z braćmi polskimi w dobie kontrreformacji*, „*Odrodzenie i Reformacja w Polsce*”, vol. 1, 1956, p. 189.

¹⁹⁵ Cf. J. Dworzaczkowa, *Reformacja a problemy narodowościowe*, pp. 79–101; Czwojdrak and Kopaczyński, p. 40.

¹⁹⁶ The ministers included: (i) Polish-speaking: Bartosz Piscator, Mikołaj Gliczner, Andrzej Luperian; (ii) German-speaking: Abraham Abdeel, Georgius Enoch, Paweł Gericius. A school associated with the church was set up, with Jacobus Schwenck serving as the teacher. ASL, pp. 73, 128; ASR IV, p. 108.

¹⁹⁷ Wiz. Poz. 1628–1629, f. 36v; ASK I 3, f. 331v.

¹⁹⁸ The surviving records from 1561 confirm that the local parish church was taken over by Protestants. One of the ministers was Erazm Gliczner (1562–1566). The 1603 visitation record does specify the presence of Protestants in the locality, as opposed to the peer record from 1610; ASK I 3, f. 344v; Wiz. Psz. 1603–1607, f. 49; Wiz. Poz. 1628–1629, f. 55.

¹⁹⁹ ASR II, p. 311–312; ASR IV, p. 26.

²⁰⁰ As of 1561, the parish church was in Protestant hands; ASR IV, pp. 172, 175, 320; ASK I 3, f. 345.

²⁰¹ The church's takeover by the Protestants is attested by the 1640 visitation record. As of 1597, Wawrzyniec Krasznicki served as the minister; ASR IV, p. 126; Wiz. Czur. 1640–1641, f. 105.

²⁰² As per the 1603 visitation record, the church (chapel) was possessed by the Protestant community, with a Lutheran minister continuously visiting it; Wiz. Psz. 1603–1607, ff. 32v, 59, 145.

-owned estates, such as the one in the town of Lewice.²⁰³ In the latter half of the sixteenth century, the Protestants took over the parish church in Sieraków, a town owned by Łukasz Górka; whether a *zbór* was actually funded there, cannot be stated based on the records.²⁰⁴

Within the deanery of Międzyrzecz, Evangelical-Augsburg churches were established in the estates belonging to the *starosta's* district of Międzyrzecz. In the royal towns of Międzyrzecz²⁰⁵ and Skwierzyna,²⁰⁶ Lutheran community churches emerged in the middle of the sixteenth century. The churches in the villages of Kęszyca (Kęsica),²⁰⁷ Lutol Suchy,²⁰⁸ and Nietoperek²⁰⁹ are also reliably attested. The historical records confirm such churches functioning in nobility-owned estates, in the following villages: Bukowiec Międzyrzecki (Bukowiec),²¹⁰ Stare Kursko (Kursko),²¹¹ Chycina,²¹² Gorzyca,²¹³ Grochowo,²¹⁴ Trzemeszno Lubuskie (Czarmyśl),²¹⁵ Pieski,²¹⁶ and Goruńsko.²¹⁷ For Przytoczna village,²¹⁸ the information survives on the takeover of its parish church in the mid-sixteenth century; there is no source-based confirmation that a Protestant *zbór* was ever set up there, though.

In Poznań district, Reformation centres emerged in the estate owned by the Cistercian Abbey in Paradyż. Confirmed based on the sources are the Lutheran community churches in the localities of Kaława,²¹⁹ Chociszewo,²²⁰ and Stary Dwór.²²¹ A strong influence is observable for the localities that belonged to the Knights of St. John of Jerusalem. A church in Łagowiec village operated quite

²⁰³ The parish church was seized by Protestants 1561; attested as of 1561, this fact is later confirmed at the episcopal visitation of 1603. ASK I 3, f. 344v; Wiz. Psz. 1603–1607, f. 80.

²⁰⁴ The town's owner (in 1558–71) was Łukasz of Górka, succeeded by Jakub Rokossowski. From 1591 on, Sieraków was owned by Jan Opaliński; ASK I 3, f. 344v; cf. SHGPoz, part 4, pp. 410–422.

²⁰⁵ As of 1561, the parish church was in Protestant hands. The town's Protestant character is stressed by the visitation records from the beginning of the seventeenth century. ASK I 3, f. 345v; Wiz. Psz. 1603–1607, f. 58; Wiz. Czur. 1640–1641, f. 40.

²⁰⁶ The church functioned in the second half of the sixteenth century. As of 1561, the parish church was in Protestant hands, as confirmed by the episcopal visitation of 1604. No information on the ministers. In 1604, the Catholic community took over the local parish church. ASK I 3, f. 345v; Wiz. Czur. 1640–1641, f. 96.

²⁰⁷ As of 1561, the parish church was in Protestant hands; that the *zbór* functioned is confirmed by the 1640 visitation record; ASK I 3, f. 346; Wiz. Czur. 1640–1641, AMBK, 370, ff. 70–72.

²⁰⁸ The main source is the episcopal visitations of 1603–1607 and 1640; Wiz. Czur. 1640–1641, f. 73; Wiz. Psz. 1603–1607, f. 32v.

²⁰⁹ As per the 1603 visitation record, the church was still kept by the Protestants; this was confirmed by the peer record dated 1640. Wiz. Psz. 1603–1607, f. 59; Wiz. Czur. 1640–1641, ff. 39v, 67, 72.

²¹⁰ The surviving sources confirm that the parish church was seized by Protestants in mid-sixteenth century. David Saur served as the minister; the presence of an Evangelical minister was recorded in the 1603 visitation file. The church was not inspected in 1640 as it was held by the Protestants then. ASK I 3, f. 346; Wiz. Psz. 1603–1607, f. 43; Wiz. Czur. 1640–1641, f. 33v.

²¹¹ The available records confirm that the church was taken over by the Lutherans in mid-sixteenth century. As per the 1640 visitation record, the church was in the Lutheran hands. ASK I 3, f. 345v; Wiz. Czur. 1640–1641, f. 90v.

²¹² The parish church was taken over by Lutherans in mid-sixteenth century. As per the 1640 visitation record, the church was still in the Protestant hands. The patron was Jan Bukowiecki, who brought a Lutheran minister with him. ASK I 3, f. 345v; BRacz, rkps 48, ff. 28–38v; Wiz. Czur. 1640–1641, f. 90.

²¹³ The records attest to a *zbór* existing in the second half of the sixteenth century. The 1640 visitation records says that it was used by Protestants. ASK I 3, f. 346; Wiz. Czur. 1640–1641, f. 90v.

²¹⁴ The records attest the church's takeover by Protestants in mid-sixteenth century. As per the 1640 episcopal visitation, the church was occupied by Protestants. ASK I 3, f. 346; Wiz. Czur. 1640–1641, f. 90v.

²¹⁵ The records attest the church's takeover by Protestants in mid-sixteenth century. As per the 1640 episcopal visitation, the church still remained in Protestant hands. A Lutheran minister was present. ASK I 3, f. 345; Wiz. Czur. 1640–1641, ff. 34–35.

²¹⁶ As of 1561, the parish church was in Protestant hands. Its minister was removed before 1603, but the church remained closed, as it was hard to hire a German-speaking preacher. The 1640 visitation confirmed that the church was kept by the Lutherans community. ASK I 3, f. 345v; Wiz. Czur. 1640–1641, f. 90v.

²¹⁷ The functioning of a Lutheran church there in the second half of the sixteenth century is confirmed in the surviving records. As per the 1640 visitation record, the church was occupied by Protestants, with a Lutheran minister present. The community was dissolved c. 1640, as Stanisław Bukowiecki, a Catholic, returned the parish church to the Catholic community. ASK I 3, f. 345v; Wiz. Czur. 1640–1641, f. 90.

²¹⁸ The parish church was taken over by dissenters in 1561; ASK I 3, f. 345v.

²¹⁹ The Lutherans took over the parish church in mid-sixteenth century. Based on the 1603 visitation record, the situation lasted for years. ASK I 3, f. 346; Wiz. Psz. 1603–1607, f. 45; Wiz. Czur. 1640–1641, f. 36.

²²⁰ The parish church was taken over by Lutherans in mid-sixteenth century. As per the 1640 visitation, the Catholic community regained the church c. 1605, and 1613 Paweł of Lwówek, a Cistercian monk, was made the new parson. ASK I 3, f. 345; Wiz. Czur. 1640–1641, AMBK, 370, f. 31; cf. SHGPoz, part 1, pp. 201–202.

²²¹ The Lutherans took over the parish church in mid-sixteenth century and kept it until the early years of the seventeenth century, when the Catholics got it back. ASK I 3, f. 345; Wiz. Czur. 1640–1641, f. 34.

early, probably in the sixteenth century.²²² For the villages of Żarzyn,²²³ Templewo,²²⁴ and Wielowieś (Langfuld),²²⁵ the information that their respective churches were taken over date to the middle of the sixteenth century, and there are no other sources available that would confirm the establishment and functioning of Lutheran *zbórs*. The Reformation appeared moreover in the Cistercian estate of Bledzew. The information that the Protestants took over the churches in the following localities: Bledzew,²²⁶ Chełmsko,²²⁷ Sokola Dąbrowa (Falkwald),²²⁸ Osiecko,²²⁹ Zemsko (Zębsko),²³⁰ Rokitno,²³¹ Nowa Wieś,²³² and Stary Dworek²³³ dates to the mid-sixteenth century. The local parish churches remained unfilled by parsons for several years. Based on the episcopal visitation records alone, it is hard to establish whether Protestant churches were ever set up in those locations. A similar situation is the case with the episcopal estate near Międzyrzecz, in the village of Wojciechowo.²³⁴

The existing dissenter and Catholic records would not confirm that a *zbor* functioned in the latter half of the sixteenth century in the royal town of Piła.²³⁵ The same is true for the nobility-owned towns of Człopa,²³⁶ and Wieleń.²³⁷ In the northern part of Poznań district, a Lutheran church was probably active in the royal villages of Pokrzywnica²³⁸ and Jastrowie.²³⁹

A few Evangelical-Augsburg churches operated in Kościan district, the namesake town being its main urban centre. No Reformation centre emerged in the town in the latter half of the sixteenth century.²⁴⁰ Instead, the *zbórs* in noble estates of Gnin (Gnino),²⁴¹ Granowo,²⁴² Rostarzew (Rzestarze-

²²² Wiz. Czur. 1640–1641, f. 33v. The visitation in 1641 confirmed that the church had been taken over by Protestants, with a minister present; hence, the church was not inspected.

²²³ As of mid-sixteenth century, the church was held by Lutherans; ASK I 3, f. 345v.

²²⁴ The records say that the church was taken over by dissenters in mid-sixteenth century; *ibidem*.

²²⁵ *Ibidem*; cf. SHGPoz, Part 2, pp. 572–573.

²²⁶ ASK I 3, f. 345v; Wiz. Czur. 1640–1641, f. 88, 131; cf. SHGPoz, part 1, pp. 57–58.

²²⁷ According to the 1640 visitation record, almost all the village's dwellers were Catholic; ASK I 3, f. 345v; Wiz. Czur. 1640–1641, f. 98; cf. SHGPoz, part 1, pp. 188–189.

²²⁸ ASK I 3, f. 345v; Wiz. Czur. 1640–1641, f. 91; cf. SHGPoz, part 4, p. 589.

²²⁹ ASK I 3, f. 345v; Wiz. Czur. 1640–1641, f. 92; cf. SHGPoz, part 3, p. 456.

²³⁰ ASK I 3, f. 345v. The 1640 visitation record does not mention this locality.

²³¹ *Ibidem*, f. 346; Wiz. Czur. 1640–1641, f. 99; cf. SHGPoz, part 4, p. 131.

²³² ASK I 3, f. 346; Wiz. Czur. 1640–1641, f. 91.

²³³ The 1641 visitation record mentions the presence of Protestants in the village; Wiz. Czur. 1640–1641, f. 90.

²³⁴ A seventeenth-century visitation record mentions the church's takeover by Protestants – this being an insufficient premise for confirming the existence of a Protestant *zbor* in the village. Wiz. Psz. 1603–1607, f. 59.

²³⁵ The visitation record from 1628 mentions an expulsion of the Protestants from the town; Wiz. Poz. 1628–1629, f. 5.

²³⁶ The 1628 visitation record does not clearly state that a Protestant church functioned in the town. The charter granted to the town, as quoted by L. Bąk, allowed the Protestant residents to perform public cult and have their dead buried at the Evangelical cemetery. Wiz. Poz. 1628–1629, f. 14v; Wiz. Czur. 1640–1641, f. 320; Bąk, Wałcz, p. 138.

²³⁷ The 1628 visitation record mentions a long-standing vacancy of the presbytery, which is not tantamount to the functioning of a *zbor*; Wiz. Poz. 1628–1629, f. 15; Wiz. Czur. 1640–1641, f. 314.

²³⁸ The information on the *zbor* is based on the 1641 visitation record, which describes the village's dwellers as Protestants, with a Lutheran minister present; Wiz. Poz. 1628–1629, f. 6; Wiz. Czur. 1640–1641, f. 356v.

²³⁹ The functioning of a local *zbor* is reflected in early-seventeenth-century visitation records. The first church building was constructed for the village's Lutheran community. As per the episcopal visitation record dated 1628, the church was finally taken over by the Catholics in 1619. The information on the church built by the Lutherans and the presence of a minister is provided by the 1641 visitation record. Wiz. Poz. 1628–1629, f. 7; cf. Wiz. Czur. 1640–1641, f. 340.

²⁴⁰ The municipal authorities had the right to appoint the preachers, a Polish- and German-speaking one, for the parish church. In 1542, a certain Marcin 'Luckaw', adherent of Lutheranism, became the German-speaking preacher; in 1543, his Polish-speaking colleague Wawrzyniec Discordia was employed. Szymon of Grodzisk was unrestrainedly active in the town; after moving to Rydzyna, he was replaced by Stanisław of Bolekowo, a married priest. In 1561, the king issued a mandate banning the propagation of Reformation ideas in the town; the same year saw Jan Powodowski appointed the parson, who counteracted the spread of Lutheranism in Kościan. For more, see T. Wotschke, *Die Reformation in Kosten*, "Correspondenzblatt des Vereins f. Geschichte d. evang. Kirche Schlesiens", vol. 9/2, 1905, pp. 165, 166; J. Dworzaczkowa, *Reformacja w miastach*, pp. 65, 74–75; *Dzieje Kościana*, vol. 1, ed. K. Zimmiewicz, Kościan 2000, pp. 157, 178.

²⁴¹ The 1603 visitation record states that the church was in the dissenters' hands, with a Lutheran minister present thereat. In 1595–7, Wawrzyniec Krasznicki, senior of Poznań district, served as the minister. ASL, p. 113; ASR IV, p. 126; ASR III, p. 135; Wiz. Psz. 1603–1607, f. 20; Wiz. Czur. 1640–1641, f. 167.

²⁴² The preserved sources confirm that the parish church was taken over by Lutherans in mid-sixteenth century. The 1641 visitation record makes it apparent that a Protestant's grave was situated in the church. ASK I 3, f. 332v; Wiz. Czur. 1640–1641, f. 145.

wo),²⁴³ Gołaszyn (Gołaszyno),²⁴⁴ Stary Bojanów (Bojanowo),²⁴⁵ and Wilkowo Polskie are well attested.²⁴⁶ Churches operated in private towns as well – to name Gostyń,²⁴⁷ Grodzisk Wielkopolski (Grodzisko),²⁴⁸ and Rydzyna.²⁴⁹ A Lutheran church existed most probably also in the village of Kręcisko (Kręcisko), but the relevant information only comes from the 1640 visitation record; the *zbór*'s patron at the time was the Dziembowski family.²⁵⁰ A similar situation is the case with the churches of Śmigiel²⁵¹ and Miejska Górka (Górka),²⁵² the latter belonging to Stanisław Górka. Churches probably existed in the latter half of the sixteenth century in Brójce,²⁵³ Zielęcín (Zielęcino),²⁵⁴ and Kargowa.²⁵⁵

In Wschowa land, a Lutheran church functioned in the main urban centre – the royal town of Wschowa.²⁵⁶ In the second half of the sixteenth century, such churches probably existed in the localities of Przyczyna Górna,²⁵⁷ Siedlnica (Sidnica),²⁵⁸ Osowa Sień,²⁵⁹ Długie Stare,²⁶⁰ Jędrzychowice,²⁶¹ and Dębowa Łęka.²⁶²

Reconstruction of the spatial layout of Protestant churches in the Wałcz district area poses considerable problem due to the condition of the surviving sources. Documents that would relate to the functioning of individual churches have not survived. The Reformation processes are not reflected in the Wałcz municipality files. All the relevant data come from later sources, particularly the episcopal

²⁴³ The 1641 visitation record confirms that a *zbór* existed there in the sixteenth century; Wiz. Czur. 1640–1641, f. 179.

²⁴⁴ The local court's registers state that in 1526, the Catholic parson named Benedykt was removed by Lutherans – probably upon consent from Andrzej Bojanowski, the village's owner and collator of the church. The available records confirm that the Protestants seized the church in mid- sixteenth century. ASK I 3, f. 335v; SHGPoz, part 1, p. 533; P. Klint, *Szlachta różnowiercza w południowo-zachodniej Wielkopolsce (okolice Leszna i Śmigla) w XVI-XVIII wieku*, <http://reformacja.muzeum-leszno.pl/?p=1285> [access: 9.04.2018].

²⁴⁵ The church was probably founded by Jan Bojanowski in 1575. Since 1584, the owner was Mikołaj Bojanowski, a Lutheran. In 1589, he was in search of a minister with a command of Polish and German, which was difficult – as we learn from a mention dated 1598 – due to the *zbór*'s poor endowment. The ministers were: Deacon Wit Baśat (1573), Andrzej Królik (1587), Jan Nigran, Marcin Serafin (1598). ASR IV, ff. 104, 135, 150–1, 170, 175, 177.

²⁴⁶ As of 1570, Szymon, senior of Kościan district, served as the minister. As per the 1610 visitation record, the church was occupied by Lutherans, and a minister was present; ASR II, p. 311; ASL, p. 72; Wiz. Poz. 1610–1619, ff. 78, 180.

²⁴⁷ As of 1561, the parish church was taken over by Protestants; its patron was Mikołaj Gostyński. ASK I 3, f. 335v; ASL, p. 49.

²⁴⁸ As of 1561, the parish church was in Protestant hands. The ministers: Wawrzyniec (1560), Jakub of Łobżenica (1567), Erazm Glicznar (1578, 1569–1589). A school and a printing house were affiliated to the church; the decision to establish the former was made at the 1582 synod in Poznań; ASR II, p. 38; ASR III, p. 28; BRacz, rkps 50, f. 4v; ASL, p. 94; ASK I 3, f. 343.

²⁴⁹ Piotr of Kościan, pastor at Miłosław and archpresbiter (archpriest) at Rydzyna, attended the convention in Poznań in 1570. The 1610 visitation record confirmed that the town's *zbór* had ceased to function at the time of its compilation; its patron's name was Jan Mycielski. ASR II, p. 311; Wiz. Poz. 1610–1619, f. 201v.

²⁵⁰ The ministers' names were (after A. Werner): Jakob Zammendorf (1553), Matthias Dietrich, and Andreas Jechner; Wiz. Czur. 1640–1641, f. 24v; cf. A. Werner, *Geschichte der evangelischen Parochien*, p. 161.

²⁵¹ As per the 1619 visitation record, a church for the dissenters, funded by Waclaw Rozdrazewski and built around 1600, was active in the town. Wiz. Poz. 1610–1619, f. 120.

²⁵² The files of the synod held in 1573 mention the church's patron, Stanisław Górka. The available information on the ministers active there is unclear; Daniel Cervinus or Rehart was in office as of 1570. BRacz, rkps 48, f. 42; Wiz. Poz. 1610–1619, f. 121.

²⁵³ The visitation record from as late as 1640 confirms the presence of a local Lutheran community; Wiz. Czur. 1640–1641, f. 33v.

²⁵⁴ Information on the Protestant church comes from the 1641 visitation record; *ibidem*, f. 170.

²⁵⁵ The church was probably funded by the Żychliński family. In 1582–1610, Sigismund Bär served as the minister. A. Werner, *Geschichte der evangelischen Parochien*, p. 134.

²⁵⁶ The presence of a Lutheran church and its minister is confirmed by the 1610 visitation record; Wiz. Poz. 1610–1619, f. 167; J. Dworzaczekowa, *Wprowadzenie reformacji do miast*, p. 71; Czwojdrak and Kopaczyński, pp. 42–43.

²⁵⁷ The functioning of a local *zbór* is confirmed by the visitation record from 1610; the church was occupied by Protestants. Wiz. Poz. 1610–1619, f. 180.

²⁵⁸ As per the 1610 visitation record, the church was occupied by Protestants; *ibidem*, f. 180; Czwojdrak and Kopaczyński, 51.

²⁵⁹ As per the 1610 visitation record, the church was in Protestants' hands; Wiz. Poz. 1610–1619, f. 180.

²⁶⁰ The 1610 visitation record informs that the Catholic community regained the church from Protestants a few years before then; *ibidem*, f. 173.

²⁶¹ Cf. D. Czwojdrak, *Ewangelicy w Jędrzychowicach*, 'Kalendarz Ewangelicko-Reformowany', 2009, pp. 71–72.

²⁶² As per the 1610 visitation record, the church was occupied by Protestants for a number of years; Wiz. Poz. 1610–1619, f. 166v.

visitations of 1628 and 1641.²⁶³ The fact that a majority of villages in that area were chartered and populated only in the latter half of the sixteenth century, mainly with participation of German-speaking people, also informed the development of the Reformation.

Given the available records, the functioning of the Evangelical-Augsburg church in the royal town of Wałcz ought to be considered probable.²⁶⁴ Among the other localities within the *Starosta's* district of Wałcz, the villages of Róża is the only one for which a *zbór* is definitely attested.²⁶⁵ For the other villages, information on Lutheran churches is based on early seventeenth-century visitations, and hence may only be deemed plausible. The said villages include Brzeźnica,²⁶⁶ Budy,²⁶⁷ Chwiram,²⁶⁸ Dudylany (Duderlak),²⁶⁹ Głowaczewo (Klawiter),²⁷⁰ Nadarzyce (Nadorycz),²⁷¹ Szwecja,²⁷² and Zdbice (Zbystno).²⁷³

In light of the existing records, the functioning of a Lutheran church in Czaplinek should be regarded as plausible. According to the 1628 and 1641 episcopal visitations, the local parish church was possessed by Protestants. There are however no sixteenth-century sources available to give us the ministers' names. The church was regained in 1624–5, with Jakub Hildebrand appointed provost.²⁷⁴ In the area of *Starosta's* district of Drahim, a strong confirmation of an active Lutheran church is known for Nowe Worowo (Worowo) village.²⁷⁵ For the other villages, we are told of their *zbores* by seventeenth-century visitation records, with no exact funding dates. This is true for the villages of Sikory (Cykier),²⁷⁶ Jeziorna (Flokesia),²⁷⁷ Siemczyno (Heinrichsdorf),²⁷⁸ Kluczewo (Klausewo),²⁷⁹ Lubowo,²⁸⁰

²⁶³ For a broader account, see Bąk, 'Wałcz', pp. 29–50.

²⁶⁴ The visitation records from the early seventeenth century provide no specific information. L. Bąk has analysed the preserved extracts from the municipal register of Wałcz for the years 1558–1604, finding that it is difficult to unambiguously identify on this basis the name of the Evangelical pastor who was active in the town. *Wiz. Poz.* 1628–1629, f. 9v; *Wiz. Czr.* 1640–1641, f. 342v; Bąk, 'Wałcz', pp. 144–146.

²⁶⁵ The 1641 visitation record informs on a renovation of the church in Róża in 1623 – and, that a Protestant chapel has been there for less than seventy years. *Wiz. Poz.* 1628–1629, f. 12v; *Wiz. Czr.* 1640–1641, f. 347.

²⁶⁶ The 1628 visitation record says that the local church, probably built for the needs of the Lutheran community, was possessed by Protestants. In 1616, taken over by Catholics, it became a filial church to the parish of Nadarzyce. *Wiz. Poz.* 1628–1629, f. 8; *Wiz. Czr.* 1640–1641, f. 338v; SHGPoz, Part I, p. 127.

²⁶⁷ The visitation record from 1628 points to a local church, arguably built by Lutherans. It was taken over by Catholics in 1616 and became Nadarzyce parish's filial church. *Wiz. Poz.* 1628–1629, f. 8; *Wiz. Czr.* 1640–1641, f. 339.

²⁶⁸ Chwiram was incorporated in 1608 in the parish of Wałcz. As per the 1641 visitation record, the locality housed a chapel (oratory). The Lutheran community visited by a minister was quite large. *Wiz. Poz.* 1628–1629, f. 9v; *Wiz. Czr.* 1640–1641, f. 346v.

²⁶⁹ The 1628 visitation record tells us that the locality housed a church held by Protestants. It was taken over by Catholics in 1616 and became Nadarzyce parish's filial church. *Wiz. Poz.* 1628–1629, f. 8; *Wiz. Czr.* 1640–1641, f. 338.

²⁷⁰ As per the 1628 visitation record, the church was held by Protestants. After 1616, it functioned as Nadarzyce parish's filial church. *Wiz. Poz.* 1628–1629, f. 8; *Wiz. Czr.* 1640–1641, f. 339v.

²⁷¹ As per the 1628 visitation record, the church, probably constructed by Lutherans, was taken over by Catholics in 1616. *Wiz. Poz.* 1628–1629, f. 8; *Wiz. Czr.* 1640–1641, f. 337v.

²⁷² There was a church in the village that was probably built for use of the local Lutherans. It was taken over by Catholics in 1616 and became the filial church of Nadarzyce. As per the 1641 visitation record, the minister stayed at the parson's house by the church. *Wiz. Poz.* 1628–1629, f. 8; *Wiz. Czr.* 1640–1641, f. 339v; cf. SHGPoz, Part IV, p. 859.

²⁷³ As per the 1628 visitation record, there was a church possessed by Protestants. It was taken over by Catholics in 1616 and became Nadarzyce parish's filial church. *Wiz. Poz.* 1628–1629, f. 8.

²⁷⁴ *Ibidem*, f. 8v; *Wiz. Czr.* 1640–1641, f. 334; Bąk, 'Wałcz', pp. 421–422.

²⁷⁵ The Pogorzelski family were the patrons. As of 1595 and 1599, Piotr Dresnensis and Stanisław Scribonius were the respective ministers. As per the 1628 visitation record, all the village's residents were Protestant; *ASR IV*, p. 156; *Wiz. Poz.* 1628–1629, f. 8.

²⁷⁶ The chapel mentioned in the visitation record was probably built by Protestants. As of 1628, the village's dwellers were of Protestant confession. *Wiz. Poz.* 1628–1629, f. 8v; *Wiz. Czr.* 1640–1641, f. 334; cf. SHGPoz, Part I, pp. 278–279.

²⁷⁷ A chapel, probably built by Lutherans, existed in the village. After 1624, it was turned into a church filial to the parish of Czaplinek. As per the 1628 visitation record, all the village's residents were Protestant. *Wiz. Poz.* 1628–1629, f. 8v; *Wiz. Czr.* 1640–1641, f. 336.

²⁷⁸ At the beginning of the seventeenth century, Siemczyno was formally included in the parochial district of the Czaplinek church, whereas the church itself remained in Protestant hands, as confirmed by the 1641 visitation record. *Wiz. Czr.* 1640–1641, f. 336v.

²⁷⁹ As of 1641, the locality was under the jurisdiction of the Czaplinek provost, but an Evangelical minister was still present there; *ibidem*, f. 334v; Bąk, 'Wałcz', p. 421.

²⁸⁰ A chapel, probably built by Lutherans, existed in the village. After 1624, it was turned into a filial church to the parish of Czaplinek. As per the 1628 visitation record, all the village's residents were Protestant; *Wiz. Poz.* 1628–1629, f. 8v; *Wiz. Czr.* 1640–1641, f. 335v.

Nobliny (Nabliny),²⁸¹ Polne (Polempol),²⁸² Rakowo,²⁸³ Ostroróg (Szarpenort),²⁸⁴ Czarne Wielkie (Swarzędzel Wielki),²⁸⁵ and Czarne Małe (Swarzędzel Mały).²⁸⁶

In the Wałcz district, Protestant churches were active in the localities owned by the families Tuczyński and Wedelski – namely, the town of Tuczno²⁸⁷ and the villages Marcinkowice (Marcinkowo),²⁸⁸ Rzeczyca (Knakendorf),²⁸⁹ Bronikowo (Brunkowo),²⁹⁰ and Lubiesz (Lubsdorf).²⁹¹ It is probable that Mielęcín²⁹² and Rusinowo (Ruschendorf)²⁹³ had their *zbórs* in the latter half of the sixteenth century. Dissenter centres emerged also in the estates of the Protestant family Wedel Frydlandzki, the owners of Mirosławiec (Frydland) town. A Lutheran church was erected there probably already in the second half of the sixteenth century, but there are no sources preserved that would confirm this, save for the early seventeenth-century visitations.²⁹⁴ Lutheran churches were probably present in the villages of Hanki (Henkendorf)²⁹⁵ and Laski Wałeckie (Laczk)²⁹⁶ owned by the said family.

Referring to the account of Henryk Garbrecht, pastor at Laski, from the late seventeenth century, Ludwik Bąk enumerates the Protestant churches, together with their funding dates, which in the second

²⁸¹ From 1624 on, the former Lutheran church was subordinate to the provost in Czaplínek; yet, the Evangelical minister still stayed in the village. *Wiz. Czur.* 1640–1641, f. 335v; cf. SHGPoz, Part III, p. 293; Bąk, Wałcz, 421.

²⁸² There was a chapel in the village, built most probably by the Lutherans; after 1624, it became a filial church to Czaplínek parish. As per the 1628 visitation record, all the village's residents were Protestant. *Wiz. Poz.* 1628–1629, f. 8v; *Wiz. Czur.* 1640–1641, f. 335.

²⁸³ The chapel existing there was most probably constructed to be used by the Lutheran community. According to the episcopal visitation record from 1641, the church was subordinated to the provost of Czaplínek, but an Evangelical minister was still present there. *Wiz. Czur.* 1640–1641, f. 335v; cf. SHGPoz, Part I, pp. 278–279; SHGPoz, Part IV, p. 39; Bąk, Wałcz, p. 421.

²⁸⁴ As per the 1628 episcopal visitation record, all the village's residents were Protestant. A chapel existed in the village, built most probably by the Lutherans; after 1624, it became a filial church to Czaplínek. *Wiz. Poz.* 1628–1629, f. 8v; *Wiz. Czur.* 1640–1641, f. 336.

²⁸⁵ No relevant records available render it difficult to confirm that a *zbor* existed there in the second half of the sixteenth century. There was a chapel in the village, arguably built for the needs of the local Lutherans. After 1624, it turned into a filial church to the parish of Czaplínek. As per the 1628 visitation record, all the village's residents were Protestant. *Wiz. Poz.* 1628–1629, f. 8v; *Wiz. Czur.* 1640–1641, f. 335.

²⁸⁶ There was a chapel in the village, built most probably for the needs of the Lutherans residing there. After 1624, it was turned into a filial church to the parish of Czaplínek. As per the 1628 visitation record, all the village's residents were Protestant. *Wiz. Poz.* 1628–1629, f. 8v; *Wiz. Czur.* 1640–1641, f. 334; cf. SHGPoz, Part I, p. 279.

²⁸⁷ The parish church was handed over to the Lutherans in 1544. In 1593, Krzysztof Tuczyński had the 'Lutherian ministers' expelled from the town. Jesuit monks were brought into the town in 1602. *Wiz. Poz.* 1628–1629, f. 11; *Księgi grodzkie wałeckie*, gr. 19, p. 34v; Bąk, Wałcz, p. 229; T. Wujewski, *Ołtarze w Tucznie i w Marcinkowicach a sprawa autorstwa Hermana Hana*, 'Artium Quaestiones', vol. 18, 2007, pp. 117–149.

²⁸⁸ The chapel and the presbytery were arguably built for the Lutheran minister. The episcopal visitation record informs on the takeover by the Catholics of the Protestant-owned church. The Lutheran pastor named Jung was expelled in 1599. *Wiz. Poz.* 1628–1629, f. 11; *Wiz. Czur.* 1640–1641, f. 327; cf. SHGPoz, Part III, p. 87; Bąk, Wałcz, p. 230.

²⁸⁹ The ministers: Jan Cluentius (1595), Stanisław Discordia (1599), Grzegorz Milicz (1601), Stanisław Orłowski (1603), Stumer (1607). After 1607, the Rzeczyca church became filial to Tuczno parish. Apart from confirming this fact, the 1628 and 1641 visitation records also attested to the fact of the church being earlier on occupied by Protestants. Biblioteka Narodowa w Warszawie, Biblioteka Ordynacji Zamojskiej, ref. no. 1182, ff. 44–61; *Wiz. Poz.* 1628–1629, f. 11; *Wiz. Czur.* 1640–1641, f. 327v; cf. Bąk, Wałcz, p. 230.

²⁹⁰ The 1619 visitation record preserves a mention of the church having been renovated twenty years earlier and 'brought back into the Catholic religion', which occurred around 1605; *Wiz. Poz.* 1610–1619, f. 143; Bąk, Wałcz, p. 229.

²⁹¹ The information on the *zbor*'s comes from the 1628 visitation record. Prior to the Reformation period, there was no presbytery in the village, it was built only for use of the Lutheran minister. The episcopal visitation record from 1628 informs on the church having been taken away by the Catholics from the Protestants; this took place in 1599. In 1607 marks the turning of Lubiesz church into filial to the parish of Tuczno. *Wiz. Poz.* 1628–1629, f. 11; *Wiz. Czur.* 1640–1641, f. 328; cf. SHGPoz, Part II, p. 674; Bąk, Wałcz, p. 229.

²⁹² The presence of a *zbor* is confirmed by the 1628 and 1641 visitation records; *Wiz. Poz.* 1628–1629, f. 11; cf. SHGPoz, Part III, pp. 114–115.

²⁹³ As confirmed by the 1628 visitation record, the parish church was seized by Lutherans. The first minister in office there was Joachim Recz. The church was retrieved by Catholics in 1616. *Wiz. Poz.* 1628–1629, f. 11; *Wiz. Czur.* 1640–1641, f. 328; cf. SHGPoz, Part IV, pp. 220–221; Bąk, Wałcz, p. 230.

²⁹⁴ As per the 1641 visitation record, the church was still kept by Protestants; *Wiz. Czur.* 1640–1641, f. 333v; cf. SHGPoz, Part I, pp. 442–445; Bąk, Wałcz, pp. 133–134.

²⁹⁵ A parish church was located in this locality prior to the Reformation. There is no historical evidence to confirm that a *zbor* functioned there in the second half of the sixteenth century. As of 1641, the parish church was in the hands of dissenters. *Wiz. Czur.* 1640–1641, f. 333v.

²⁹⁶ As per the 1641 visitation record, a minister was present at the church; *ibidem*; cf. Bąk, Wałcz, p. 134.

half of the sixteenth century emerged in the estates held by the Golec family. Those were the villages of Kłosowo (Hansfeld) (1540), Golce (Nowy Golcz) (1540), Rzepowo (1546), Lubno (1548), Giżyno (1550), Piaseczno (Plumward) (1555), Siemczyno (Heinrichsdorf) (1560), Jabłonowo (Apelweth) (1562), Machliny (1567), Górnica (Hohenstein) (1568), Broczyno (Brocz) (1572), Dębołęka (Damlank) (1579), Karsibór (Kiesembork) (1579), Rudki (1580), and Popielewo (1581). As the author remarks, the dates tend to be called into question by scholars, who put forth their own proposals in this respect.²⁹⁷ Only for Kłosowo (Hansfeld)²⁹⁸ and Siemczyno (Heinrichsdorf),²⁹⁹ both mentioned in a seventeenth-century visitation record, it can be accepted that the church existed already in the sixteenth century. In most of the cases, confirming that a Lutheran church functioned in any of these localities in the period concerned is not possible based on the sources; hence, none of them have been plotted in the map. A Lutheran *zbór* probably functioned in the village of Kłębowiec (Klausdorf).³⁰⁰

A few Evangelical-Augsburg churches functioned in Voivodehsip of Kalisz. The town of Miłosław in Pызdry district, owned by Maciej Górski, *Starosta* of Wschowa, was an important Lutheran centre.³⁰¹ A Protestant church is also active in Pogorzela (Pogorzel), a private town belonging to the Pogorzelski family.³⁰² A Lutheran *zbór* operated also in Stanisław Górka-owned Kórnik (Kurnik)³⁰³ and in Bnin, whose owners were the Bniński family,³⁰⁴ and in Żerków.³⁰⁵ In Kcynia district, a Lutheran church functioned in the town of Chodzież, property of Piotr Potulicki, Voivode of Płock,³⁰⁶ and, probably, in Szaradowo.³⁰⁷ In Kalisz district, the Lutheran church was funded in a private urban centre, the one of Pleszew (Pleszów),³⁰⁸ and in a village, Brzezcie, owned by the Chwalibowski family.³⁰⁹ Łobżenica was an important Protestant centre in Nakło district. Historiographers offer the established view whereby one of the first Lutheran *zbórs* in Greater Poland emerged right there.³¹⁰ Since its activity is not reflected in the records of Catholic visitations or synodal files, this particular church (and community)

²⁹⁷ Cf. Bąk, *Walcz*, p. 154.

²⁹⁸ That a church held by Protestants existed there is only attested by the 1641 visitation record. The presence of a Lutheran minister was confirmed. *Wiz. Czur.* 1640–1641, f. 333v.

²⁹⁹ The locality was a combined royal-and-noble property; *Wiz. Czur.* 1640–1641, ff. 336v–337v.

³⁰⁰ Referring to the entries in the *Walcz* parish register dated 1695, L. Bąk finds that the origins of the local *zbór* can be dated at 1535. The church stood empty at the beginning of the seventeenth century. The visitation records from 1628 and 1641 do not mention it. Bąk, *Walcz*, pp. 153, 256.

³⁰¹ In 1561, the local parish church went into the hands of Protestants. The 1570 Poznań convention files specify that Piotr of Kościan, succeeded by Adrian and, from 1597 on, Stanisław Scribonius served as minister at the *zbór*. ASR II, p. 311; ASR IV, pp. 127, 158; ASL, p. 72; ASK I 3, f. 328v; *Wiz. Poz.* 1628–1629, f. 72v.

³⁰² At the 1607 synod in Miłosław, Jan Pogorzelski was elected secular senior. The church's minister was Piotr Dresdensis, who was a signatory of the 1595 synod of Thorn (Toruń) and a delegate at the synod held in Miłosław in 1607. ASR IV, p. 156; ASL, p. 113; *Wiz. Poz.* 1610–1619, f. 96v.

³⁰³ The patron was Stanisław Górka, the town's owner. As of 1555, Marcin, participant of the ministers' convention in Gołuchów, served as the minister. The community collapsed in 1592, with the town's takeover by Jan Czarnkowski, a Catholic. BRacz, MS 50, p. 4v.

³⁰⁴ The church's patron might have been Stanisław Bniński, the owner. He was involved in the activities of the Evangelical-Augsburg Church, partaking in the synods of Poznań and Sandomierz, in 1566 and 1570, respectively. A minister named Laurentius was present at the 'zbór'. The latter was dissolved in 1592 as the town was taken over by Jan Czarnkowski, a Catholic. ASL, pp. 54, 63; Teki Dworzaczka 12445 (no. 1399); cf. A. Werner, *Geschichte der evangelischen Parochien*, p. 19.

³⁰⁵ Information on this locality comes from the seventeenth century. Visitation record, which informs that the Catholics regained the parish church around 1610, taken over earlier on by Protestants; the Evangelical minister was still present, though. *Wiz. Poz.* 1610–1619, f. 100v.

³⁰⁶ As of 1561, the parish church was in the Protestants' hands, as confirmed in the 1628 visitation record; ASK I 3, f. 331v; *Wiz. Poz.* 1628–1629, f. 3; *Wiz. Czur.* 1640–1641, f. 374v.

³⁰⁷ Minister Daniel Kitzling took part in the 1607 synod in Miłosław 1607. The episcopal visitation record from 1608 informs of a profanation of the parish church by the internment of a Protestant, and states that there were no Protestants in the village. ASL, p. 128; *Wiz. Gnz.* 1608–1609, f. 79v.

³⁰⁸ The patron was the Kościelecki family. The church appeared around 1560, as the Protestants took over the parish church of St. John the Baptist. This is confirmed by the 1605 visitation record, which also mentions the church's takeover forty years earlier. A minister and a scholar were present on the church premises. *Wiz. Kal.* 1603–1607, f. 327.

³⁰⁹ The family owned the village since mid-sixteenth century, the time it was purchased by Bartłomiej Chwalibowski. As of 1579, Bartłomiej and Mikołaj Chwalibowski were the village's owners. With no relevant sources available, it is difficult to identify the date of the church's emergence. The general synod held in Cracow was attended by 'Valentinus a Brzezcie'. As at the 1605 visitation date, the church was kept by Protestants, with the presence of a minister attested. ASL, p. 82; 1579 tax register, f. 676v; *Wiz. Kal.* 1603–1607, f. 362; Teki Dworzaczka 5861 (no. 888).

³¹⁰ Cf. A. Mietz, *Archidiakoniat kamieński*, p. 99.

has been deemed probable.³¹¹ Given the available records, the ones in Krajenka, Gromadno, Kaczory, and Tarnówka³¹² certainly existed.

A total of 149 Protestant community churches (*zbórs*) are plotted in the map, including ninety-eight Evangelical-Augsburg, forty-seven owned by Bohemian Brethren, three Reformed Evangelical (Evangelical and Reformed), and one of the Polish Brethren. Their locations are as follows: (i) Kalisz Voivodeship: Kalisz district – sixteen *zbórs*; Gniezno district – four; Konin district – eight; Kcynia district – seven; Pyzdry district – six; Nakło district – seven; (ii) Poznań Voivodeship: Poznań district – thirty-four; Kościan district – twenty; Wałcz district – thirty-five; Wschowa land – eleven.

ANNEX

Protestant evangelical churches in Greater Poland (a breakdown)

The breakdown below shows the stage of development of Protestant communities-and-churches (*zbórs*) in Greater Poland in the second half of the sixteenth century; specified are the *zbórs* deemed certain and probable. The names of localities are given in alphabetical order; the present-day name, if different from the historic one, is given in parentheses. Towns/cities are marked with '(t)'.

Kalisz Voivodeship

Gniezno district

Dębница, Łagiewniki (Łagiewniki Kościelne), Skoki (t), Trląg

Kalisz district

Blizanowo (Blizanów), Broniszewice, Brzezie, Chodecz (Chocz) (t), Gołuchowo (Gołuchów), Jastrzębniki, Kamion (Kamień), Karmino Wielkie (Karmin), Koźminek (t), Kretkowo (Kretków), Lipe, Marszewo (Marszew) (t), Pleszów (Pleszew) (t), Rychnowo (Rychnów), Stawiszyn (t), Zaksino (Zakrzyn)

Kcynia district

Barcin (t), Brzeskorzystew (Brzyskorzystew), Chodzież (t), Chomętowo, Jaktorowo, Miemczyno (Niemczyn), Szaradowo

Konin district

Cienino Wielkie (Cienin Kościelny), Drżazno (Drążno-Holendry), Grodziec, Kawnica (Kawnice), Krzymowo (Krzymów), Myślubórz, Rychwał (t), Wyszyno (Wyszyna)

Nakło district

Gromadno, Łobżenica (t), Sypniewo

Pyzdry district

Bnin, Kurnik (Kórnik) (t), Krotoszyn (t), Miłosław (t), Pogorzel (Pogorzela) (t), Żerków (t)

³¹¹ The 1640 visitation confirmed the rather large Protestant community present in the town; Wiz. Czur. 1640–1641, f. 349.

³¹² Cf. A. Mietz's findings based on seventeenth- and eighteenth-century visitations of the archdeaconry of Kamień; idem, *Archidiakoniat kamieński*, pp. 96–97, 106.

Poznań Voivodeship

Kościan district

Bojanowo (Stare Bojanowo), Brójce (t), Chobienice, Gnino (Gnin), Godziszewo, Gołaszyno (Gołaszyn), Gostyń, Górka (Miejska Górka), Granowo, Grodzisko (Grodzisk Wielkopolski), Kargowa, Kręsko (Kręcko), Poniec (t), Rydzyna (t), Rzestaszewo (Rostaszewo), Stary Dwór, Śmigiel (t), Wilkowo Polskie, Zielęcino (Zielęcín)

Poznań district

Bukowiec (Bukowiec Międzyrzecki), Czarnyśl (Trzemeszno Lubuskie), Ceradz Stary (Ceradz Kościelny), Cerekwica, Chociszewo, Chycina, Goruńsko, Gorzyca, Grochowo, Goślina Kościelna (Murowana Goślina), Jastrawie, Kaława, Kęsica (Kęszyca), Kursko (Stare Kursko), Kwilcz, Lewice, Lutol Suchy, Łagowiec, Międzychód (t), Międzyrzecz (t), Murzynowo, Nietoperek, Ostroróg (t), Parkowo, Pieski, Pokrzywnica, Policko, Poznań (t), Skwierzyna (t), Stary Dwór, Szamotuły (t), Tomice, Wierzbno

Walcz district

Buda (Budy), Brunkowo (Bronikowo), Brzeźnica, Chwiram, Cykier (Sikory), Czaplinek (t), Duderlak (Dudyłany), Flokesia (Jeziorna), Frydland (Mirosławiec), Henkendorf (Hanki), Hansfeld (Kłosowo), Heinrichsdorf (Siemczyno), Klausdorf (Kłębowiec), Klawiter (Głowaczewo), Kluczewo (Klausewo), Knakendof (Rzeczyca), Lacz (Łaski Wałeckie), Lubowo, Lubsdorf (Lubiesz), Marcinkowo (Marcinkowice), Mielęcín, Nadorycz (Nadarzyce), Nabliny (Noblíny), Polempol (Polne), Rakowo, Róża, Ruschendorf (Rusinowo), Swartężel Wielki (Czarne Wielkie), Swartężel Mały (CzarneMałe), Szarpenort (Ostroróg), Szwecja, Tuczno (t), Walcz (t), Worowo (NoweWorowo), Zbytno (Zdbice)

Wschowa land

Dębowa Łęka, Gołanice, Jędrzychowice, Leszno (t), Lasocice, Osowa Sień, Przyczyna Górna, Sidnica (Siedlnica), Wilkowo (Wilkowice), Wschowa (t)

(2017)

Translated by Tristan Korecki

III.2.2d.4 JEWS IN THE TOWNS OF GREATER POLAND

Jarosław Suproniuk

None of the previous volumes in this series contained any chapters or maps concerning the Jewish population, who stood out due to its ethnic origin linked to the Mosaic faith (Judaism). The history of Jews in Polish lands is rich with literature.¹ The volume on the Cracow Voivodeship contained one brief paragraph that listed cities inhabited by Israelites in the second half of the sixteenth century.² In this volume of AHP, we would like to present the distribution of the Jewish population in the cities of Greater Poland. Despite recent publications centered on the history of Jews in Greater Poland, there is still a lack of texts focused specifically on the sixteenth century. Most available works often concentrate on the earliest sources mentioning the presence of a Jewish population in select urban centers or focus on specific topics in the history of the Jews in Greater Poland.³

The term “Greater Poland” proper refers to the territory comprised of the then Kalisz Voivodeship (districts: Gniezno, Kalisz, Kcynia, Konin, Nakło and Pyzdry) and Poznań Voivodeship (districts: Kościan, Poznań and Wałcz) as well as Wschowa land. The chronological scope of the discussed subject requires a few words of explanation.

¹ The state of Jewish studies in medieval Poland was most recently presented by H. Zaremska in: eadem, *Żydzi w średniowiecznej Polsce. Gmina krakowska*, Warsaw 2011 (and its extensive bibliography: pp. 505–538); I would like to thank prof. Hanna Zaremska for all of her comments and suggestions that helped with the writing of this text. The basic literature on Jewish history and culture can be found in: *Vademecum historia mediewisty*, ed. J. Nikodem, D.A. Sikorski, Warsaw 2012, pp. 452–457; *Encyclopaedia Judaica*, 2nd ed., vol. 16, ed. F. Skolnik, Detroit 2007, pp. 325–326; G.D. Hundert, *Polish Jewish History*, „Modern Judaism”, vol. 10, 1990, no. 3, part 1, pp. 259–270 (esp. pp. 262–263: *Jews in Poland before 1648*); B. Geremek, *Żydzi w społeczeństwie chrześcijańskim – od segregacji do ekskluzji*, [in:] idem, *O średniowieczu*, Warsaw 2012, pp. 238–287; see also: H. Samsonowicz, *Grupy etniczne w Polsce XV wieku*, [in:] *Ojczyzna bliższa i dalsza. Studia historyczne ofiarowane Feliksowi Kirykowi w sześćdziesiątą rocznicę urodzin*, ed. J. Chrobaczyński, A. Jureczko, M. Śliwa, Cracow 1993, pp. 461–469; A. Wyrobisz, *Mniejszości etniczne i wyznaniowe w miastach Europy wczesnonowożytnej (XVI–XVIII w.)*, [in:] ibidem, pp. 471–484.

² J. Suproniuk, *Character and size of settlements*, [in:] AHP Cracow, names 14 cities in the Cracow Voivodeship that had Jewish populations: Będzin, Bobowa, Bochnia, Dobczyce, Jasło, Kazimierz, Lanckorona, Lelów, Nowy Sącz, Olkusz, Oświęcim, Pilica, Sławków and Uście Solne.

The primary – albeit not only – sources of date are the tax registers, i.e., the records of payments of the extraordinary land tax decreed by the Sejm of the Commonwealth in the second half of the sixteenth century for military purposes.⁴ The tax registers – depending on the district – of the Kalisz Voivodeship are from 1552–1591, while the ones from the Poznań Voivodeship are from 1553–1583.⁵ A strict adherence to this time frame could lead us to overlook the Jewish populations confirmed to be in Greater Poland before 1552–1553 and after 1583–1591. It must also be stated that for several reasons not all registers contain the payments imposed on Jews. In order to ensure that the state of Jewish settlements in Greater Poland in the second half of the sixteenth century is presented most accurately and thoroughly, we reached for sources from the 1530s and 1540s,⁶ as well as some from the beginning of the following century,⁷ along with a comparison to data from the 1630s.⁸ As a result, the reader is presented with a description of the presence of Jews in Greater Poland that spans almost 80 years: from the beginning of the 1530s to 1600. Within this time frame, we take into account settlements with a confirmed Jewish presence in the 1530s and 1540s, as well as in 1552–1592, along with their transient presence in certain settlements in the 1590s.

We would like to note that the map does not denote Jewish communes, synagogues (temples, prayer houses)⁹ or Jewish cemeteries as their locations along with the locations of some Jewish quarters,¹⁰ cannot be found in source materials. In this volume, only on the reconstructed maps of Gniezno,¹¹ Kalisz and Poznań¹² from the second half of the sixteenth century have we marked down synagogues (Gniezno, Kalisz, Poznań), along with one Jewish cemetery (Kalisz).

The annexes at the end of the commentary contain a list of cities and towns in Greater Poland that had a Jewish population noted in the sources, along with excerpts about the Jewish population (primarily tax registers from the second half of the sixteenth century).

The Jewish settlement of Greater Poland can be traced to the early Middle Ages. The Jewish quarter in Kalisz was one of the oldest in Poland, dating back to at least the mid-twelfth century.¹³ Near the end of the 1180s a mint was established there, which issued bracteates (coins stamped only on one side) with Hebrew inscriptions. At the turn of the thirteenth century, a group of Jews also operated at the mint of Gniezno and at the neighbouring Kruszwica in Cuyavia.¹⁴ It is also very possible that Poznań had a Jewish settlement in the mid-thirteenth century.¹⁵

On the 16 August 1264, in Kalisz, Bolesław the Pious, the duke of Greater Poland, issued a statute for the Jews living in his district.¹⁶ Later reaffirmed by Casimir the Great (and subsequent rulers) and extended to the entirety of the Jewish population of Poland, the statute discussed and described the issue of the judiciary over the Jewish peoples, the rules and regulations under which they could conduct loans and trade and regulated the relations between the Jews and the Christian population.¹⁷

Schiper, *Dzieje handlu żydowskiego na ziemiach polskich*, Warsaw 1937, p. 9; Z. Zakrzewski, *Gniezno i Kalisz. Dwie mennice wielkopolskie za czasów Mieszka III*, Cracow 1927 (both from: „*Wiadomości Numizmatyczno-Archeologiczne*”), pp. 32–39.

¹⁵ H. Zaremska, *Żydzi w średniowiecznej Polsce*, pp. 114, 242. R. Witkowski assumes that: „The beginnings of the Jewish settlement in Poznań date back to the second half of the thirteenth century. Most likely during the town’s establishment in 1254, as its original layout was drafted, a zone for Jews was designated”, quot. from: idem, *Zarys dziejów osadnictwa żydowskiego w Poznaniu XIII–XVII w.* (poznan.jewish.org.pl/index.php/Zydzi-w-Poznaniu/XIII-XVII-w.html, accessed: 9.06.2017); L. Muszyński, *Poznańscy rabini*, [in:] *Żydowskie gminy wyznaniowe. Studia z dziejów kultury żydowskiej w Polsce*, vol. 1, ed. J. Woronczak, Wrocław 1995, p. 47; comp. to: J. Wyrozumski, *Żydzi w Polsce średniowiecznej*, [in:] *Żydzi w dawnej Rzeczypospolitej. Materiały z konferencji Autonomia Żydów w Rzeczypospolitej szlacheckiej. Międzywydziałowy Zakład Historii i Kultury Żydów w Polsce, Jagiellonian University 22–26 IX 1986*, [ed. A. Link-Lenczowski, T. Polański], Wrocław 1991, p. 130; *Dzieje Gniezna*, ed. J. Topolski, Warsaw 1965, p. 127: „a foreign element of the town were the Jews, who appeared during the rule of Mieszko the Old or even earlier and created a separate community”. See also: S. Smolka, *Mieszko Stary i jego wiek*, Warsaw 1959, pp. 96–97; A. Heppner, I. Herzberg, *Aus Vergangenheit und Gegenwart der Juden in Posen, nach gedruckten und ungedruckten Quellen*, Koschmin–Bromberg 1914, p. 1. T. Nożyński thought that: “Only in the second half of the fourteenth century does Poznań emerge as the center for Jews in Greater Poland. Earlier sources make no mention of it.”, quot. from: idem, *Żydzi poznańscy w XV w. (1379–1502)*, KMP, vol. 10, 1932, no. 1, p. 90. W. Tyloch assumed that the Jewish communes in Poznań and Kalisz existed already in the twelfth century.; see idem, *Przywileje dla Żydów Bolesława Pobożnego i Kazimierza Wielkiego*, [in:] *Z dziejów Żydów w Polsce*, ed. W. Tyloch, Warsaw 1983, p. 13. I. Schiper thought that „The Jewish community in Poznań is as old, if not older than the one in Kalisz.”, quote from: idem, *Studia nad stosunkami gospodarczymi Żydów w Polsce podczas średniowiecza*, Lviv 1911, p. 63. E. Leszczyńska assumes that: „Due to a lack of sources, we must assume that the second half of the fourteenth century as the time of founding of an organised Jewish community”, quot. from: eadem, *Przyczynek do dziejów*, p. 138.
