LIST OF ELEMENTS OF NATURAL LANDSCAPE

Names of elements of natural landscape presented on the map (rivers, ponds, hills, mountain ranges, and forests) were given in the historical form of the way they sounded, in modern spelling. Mostly these are names confirmed for the sixteenth century, a small number of names is confirmed for the fifteenth and the seventeenth–eighteenth centuries, which was considered valid for the period presented on our map. In cases the earlier name could not be found, the nineteenth century name was given, and marked with a **symbol** ^. Other names of elements of the natural landscape are given **in parentheses** as variants of main entries. If a historical version of a given name differs from the modern one, the latter was written *in Italics*. Objects with unknown present names are described as: [no name] and objects not existing anymore are marked with a symbol +. **Geographical coordinates** indicate the location of an object on the map: latitude (N) first followed by longitude (E), both accurate to one decimal place.

ABBREVIATIONS ON THE LIST:

l.s. – lower stream
m.s. – middle stream

u.s. – upper stream
rv. – river

l.t. – left tributary
r.t. – right tributary
