³⁰ Münch.

³¹ W. Hensel, *Najdawniejsze stolice Polski*, Warsaw 1960.

(*Maidens' Hill*), which became a town in the 1330s,³² a settlement called Targowisko (*Marketplace*) at the foot of the hill and a production and trade settlement found on the other side of the lakes, known as Zajezerze (that can be understood as a place behind the lake) or – more commonly – Piotrowo (*St. John settlement*). This settlement complex was heavily damaged during an attack by the Teutonic Knights in 1331. The city, located on an important export route, quickly recuperated and developed. Fairs (initially two, on the day of the feast of St. Adalbertus (Pol. *Wojciech*) and of St. Bartholomew) played a significant role in the growth of the city, eventually becoming the main events of trade, particularly of cattle, which was reflected in the local toponymy.³³ The economic development of the city, especially in regard to the production of beer, brought certain dangers with it, such as fires that engulfed the city or parts of it in the years 1503, 1512, 1538, 1548, 1613. This last one became very important in the process of reconstructing the plan of the city, since it destroyed the entire city along with its suburbs, causing significant changes in its appearance, e.g., encouraging a preference of brick buildings. The last fire, which influenced the reconstruction of the map, was the one from 1819. In its wake, large-scale changes were implemented – the Wzgórze Panińskie within the square was levelled and this surplus was transferred in between Wzgórze Panińskie and Wzgórze Lecha, the course of certain streets (including Tumska Street) was altered, and the reach of the lots was changed. These changes are all the more significant for us, since we only have one plan (1787) and one copy (1797) from before they happened. The basic cartographic source for many of the areas – UMTB – is dated to 1830 for Gniezno. As a result, it represents the state of the city long after these alterations.

Hydrography

One of the factors influencing the shape of Gniezno was the multitude of lakes and waterways neighbouring the town. Including them in the map was difficult as some of them had already disappeared in Early Modern times. This is especially true of the Święte (*Saint*) Lake and the southern part of Jelonek (*Fawn*) Lake, which are even included in the oldest city maps. At the same time, they were so important to the development of the city in the studied period that an attempt to reconstruct their probable range in 1600 had to be undertaken. Observations by Ferdynand Woliński were particularly useful for this reconstruction.³⁴ In case of Jelonek Lake, Woliński's notes were corrected on the basis of the topography. In its eastern part, two elongated bays to the south of the town were forgone, and the western shore of the lake was demarked, which had not been included in Woliński's study. The contour line that marked its eastern range was adopted as the basis. To reconstruct the headland, where a stadium was built in the twentieth century, the image of the contour lines from the 1880 map (MTB) was also used. The scope of the northern part of the lake is additionally confirmed by the plan from 1687, which Woliński did not use. Additionally, in order to check the reconstruction LIDAR was used in consultation with cartographers. Święte Lake was also reconstructed with the help of Woliński's observations based on UMTB and corrected based on the LIDAR reading. The reach of Świętokrzyskie (*Holy Cross*) Lake, which was only marginally visible due to merging with Święte Lake, it is based on UMTB. The border between Jelonek and Święte lakes was delineated by a dyke through which the flow was marked in accordance with UMTB.

The course of the Srawa River is primarily based on UMTB, although several sources were utilized to help fill in the gaps. First of all, the western route between Wzgórze Lecha and the located town was drawn on the basis of archaeological findings.³⁵ The existence of the left tributary of the Srawa ahead of the town with a water reservoir near the Church of St. Michael, known

³² Unfortunately, neither the location privilege nor the exact date have survived, but it is assumed that the town was located by Władysław Odonic, who died in 1239. The existence of a municipal commune in Gniezno is confirmed by the Powidz location document from 1243.

³³ Names such as *Targowisko Końskie*, *Koński Targ*, *Viehmarkt* were especially frequent in the suburbs.

³⁴ F. Woliński, *Sieć hydrograficzna regionu gnieźnieńskiego w wiekach średnich*, SMDWP, vol. 14, 1980, no. 1, pp. 137–161; see also: ibidem, *Karty dziejopisarskie Gniezna i ziemi gnieźnieńskiej. Studium historyczno-geograficzne*, Szczecin 2003.

³⁵ F. Woliński, *Karty dziejopisarskie Gniezna*, pp. 78–79.

as Stawek,³⁶ from which this tributary started, has been established based on a map from 1787. Furthermore, to the south of the town two watercourses have been drawn, which are not included in UMTB. The first was a ditch, which was well-evidenced in sources and the toponymy; it functioned as an extension of the town moat to the south of the city, which, near the Farna (*Parish church*) Gate, expanded into a small pond, probably facilitating the maintenance of the right amount of water in the moat.³⁷ The second was a watercourse connecting a small water tank (possibly the source of the water) with the Jelonek Lake. Both watercourses can be found on the plan from 1787 and 1797.

Located town

Streets and market square

The topic of the urban layout of Gniezno has been quite well researched; the basic outline of the development of the road network was presented by Münch,³⁸ essential information was reconstructed by Topolski,³⁹ and some additional information resulted from the research carried out as part of the *Encyklopedia Gniezna i Ziemi Gnieźnieńskiej*⁴⁰ and a new study of the history of the city.⁴¹

Münch found that, similarly to the case of Dolsk⁴² discussed in this volume, Gniezno has a characteristic three-lane plan with a parish church set further away from the market square, which was typical of located towns. At the same time, the influence of the settlement prior to the location on the shape of the town is clearly visible, e.g., in the form of an elongated market, of which the entire southeastern side was devoid of branching streets.⁴³

As in many other towns, the main communication axes within the walls were the result of supra-regional communication routes. The road from Poznań ran from the west into the town, connecting right in front of the town walls with the road from Kcynia to the north and the road from Środa and Śrem to the south. It crossed the bridge over the Srawa River and passed the town gate called Tumska (*Cathedral Gate*). It entered the market square through the middle of the western frontage, a little further north than presently.⁴⁴ It is marked on the map as Tumska (*Cathedral*) Street. In the tax registers from the first quarter of the seventeenth century, however, it is not called Poznańska (*Poznań*) Street, but Kościelna (Lat. *Ecclesiastica*; *Church*) Street, due to the cathedral located next to it and much closer to the town. From the south, there was a road connecting the routes from Pyzdry, Września, Słupca and Konin to the south of the town. Within the town, its continuation was a street named after the parish church of Holy Trinity, therefore Św. Trójcy (Lat. *S. Trinitatis*; *Holy Trinity*) Street, in later reports also called Farska (*Parish Church*) or Pyzdrska (*Pyzdry*) Street. The road from Toruń, which ran through Trzemeszno, reached the town from the west; the importance of the former for Gniezno was highlighted by the regular use of the name Toruńska (*Toruń*) Street. So far Żydowska (*Jewish*) Street, connecting Tumska Street with the monastery of the Sisters of St. Clare, and Szewska (*Cobbler*) Street, parallel to Tumska Street, have also been located within the walls. Solny Targ (*Salt Market*) Street, which was hitherto believed to be within the town walls, was established to have run outside of them, in the vicinity of the church of St. Nicholas.⁴⁵ Along this church, there was Św. Mikołaja (*St. Nicholas*) Street, perpendicular to Św. Trójcy Street. Almost parallel to it was Nad Przekopem (*Over the ditch*) Street (currently Rzeźnicka (*Butcher*) Street), which – as the name suggests – led south of the

³⁶ AmGn, I 155, f. 10 v.

³⁷ F. Woliński believes that this ditch was reinforced with the water from the Srawa River through a channel running from a tank located north of the church of the Holy Spirit along the cemetery of said church; *ibidem*, *Karty dziejopisarskie Gniezna*, p. 80. The oldest available plans, despite clearly showing the ditch south of the town, do not include this channel.

⁴⁴ The current Tumska Street was moved after the fire of 1819, so that its axis became aligned with the axis of the cathedral, which allowed for a better display of the monument; AAG, C 131, *Retablissement Plan*.

⁴⁵ Wiz. Gnz. 1608–1609, f. 512 v.

town along the ditch of the moat. Słomianka Street was almost perpendicular to it, leading to the mill and the settlement of the same name. There are many theories regarding the location and the scope of the Targowisko; they are so diverse that they are even contradictory, sometimes even within the same publication. This is primarily due to the fact that this toponym was used in relation to both the square as well as the entire suburb. Targowisko in the latter context will be discussed further in the section on *jurydyki*. The scope of Targowisko as a square is not precisely delineated in the sources, which has contributed to this misunderstanding. It is certain that the name Targowisko (along with Targ Koński (*Horse Market*)) was used in relation to the square known presently as 21 Stycznia (*21 January*) Square. There are some doubts concerning the use of this name in regard to market square Zielony Targ (*Green Market*), however, it seems that the current clear toponomastic distinction between both squares is the result of the spatial division of part of the first square along with its gradual development. In as late as 1803, Zielony Targ still carried the same name as 21 Stycznia Square – *Viehmarkt* (*Cattle Market*) though accompanied by the predicate *klein* (*small*)), which demonstrates that the two separate squares were initially perceived as one.⁴⁶ The trajectory of the Holy Spirit Street was uncertain; therefore, it was not included in the map.

Some streets had no names – this group includes streets by the walls (e.g., the road parallel to Nad Przekopem Street, perfectly visible on the plan from 1787) or the street leading from the Toruńska Gate to the Franciscan monastery.⁴⁷

Walls

So far, the attempts to reconstruct the trajectory of the town walls have produced varied results. However, since they all include three town gates, although different names have been used to describe them, the gates and their approximate location will be presented first, and subsequently the trajectory of the walls will be discussed.

The names of the gates have been chosen based on the plan from 1512. They are Toruńska Gate, Tumska Gate and Farna Gate. Toruńska Gate faced eastwards and was located on the route from Toruń. Tumska Gate, situated from the west, was frequently referred to as Poznańska Gate, although in other source materials, it also functioned as Żydowska Gate. Finally, the southern gate was Farna Gate, also known as Pyzdrska, Wrześnieńska, Słupecka or Kaliska Gate.

The southeastern section of the walls along with Toruńska and Farna Gates survived until the nineteenth century and was taken apart only after the fire of 1819, which meant that it appeared on the plans from 1787 and 1797, allowing to securely establish its trajectory and the location of both gates. The plan repeats the information found in the cartographic material, not counting a break in the wall (a wicket?), which was found south of Toruńska Gate. It was a later addition, as evidenced by Storn's drawing from 1661 that does not include any sort of opening in the wall between the gates.⁴⁸

The trajectory of the northern section of the walls was not depicted on the maps from this time period; however, the layout of the terrain has made its reconstruction easier. The line of the wall is defined by the edge of the slope on one side, and the church and monastery buildings on the other. The space, limited in such a way, is so narrow that the differences between the individual reconstruction proposals of the trajectory of the wall in this section are minimal and correspond to the proposed plan with an accuracy of a few meters.

The reconstruction of the final, third section, surrounding the town on the west side has posed the greatest difficulty. There are several reasons for this: first of all, the wall on this side was the earliest to disappear and as a result, doubt about its existence has been expressed in some of the scholarship.⁴⁹ It is also missing iconographic material, because from this side the town was obscured by Wzgórze Lecha. An important factor was also the intensive leveling works undertaken in this part of the city after the fire of 1819, which significantly changed the topography. The reconstructions so far essentially presented two solutions. In the older ones, the wall departed in a significant arc from the present-day

⁴⁶ AP Poznań, Oddział w Gnieźnie, sign. 1187a.

⁴⁷ *Dzieje Gniezna*, ed. J. Topolski, p. 263.

⁴⁸ S. Pasiciel, *Widoki*, p. 18.

⁴⁹ J. Kohte, *Der mittelalterliche Stadtplan von Gnesen*, "Historische Monatsblätter für die Provinz Posen", 1903, issue 4, p. 56.

Św. Wawrzyńca (*St. Lawrence*) Street, forming an empty space of unspecified purpose and with an uncertain number of buildings between it and the wall. The intersection of Św. Wawrzyńca Street and Kaszarska Street was located within the walls. The newer reconstructions depict the wall as located much further to the east, closer to the market square, and leave Św. Wawrzyńca Street outside of the town; while Kaszarska Street becomes a dead end, which reaches the wall at an approximately 45-degree angle, so that the intersection of both streets no longer exists. The change in the trajectory of the wall influenced the location of Tumska Gate, which can be found at the intersection of Tumska Street and Podgórna Street in newer reconstructions, while in the older ones the Gate was situated west of this intersection.

The presented plan proposes yet a different trajectory based predominantly on archeological research. The western boundary of the possible trajectory of the wall was adopted based on the assumption that the mill on the Srawa River was located outside the town wall. The mill was situated on the terrain currently believed to have been the backyard of the lot by 3 Tumska Street, which was connected to Św. Wawrzyńca Street. While maintaining that Św. Wawrzyńca Street ran along the town walls, the existence of a second road by the walls, which would have led to the mill, was suggested.

An issue that has not been included in the publications on the reconstruction of the town walls so far is the problem of the wickets in the walls. On the eastern side, which is depicted in iconography, there was certainly no wicket due, in part, to the short distance between the gates. On the western side, which has been poorly examined, two wickets were most likely present – one from the south, connecting the town with Słomianka⁵⁰ – the second one from the north facilitating communication between the monastery of the Sisters of St. Clare and Grzybowo. Due to the lack of unambiguous confirmation of their existence in sources, however, they were not included in the presented plan.

Other buildings

In the northern part of Gniezno's market square stood the town hall; its location is approximate, as after the fires it most likely was not rebuilt in the exact same spot.⁵¹ The location of the weigh house and trading house is also approximate.⁵² We know about the location of some of the slaughterhouses from the privilege of the Sisters of St. Clare, according to which they were located in the north part of the square.

A house belonging to the settlement Wójtostwo, in which the land courts were held, was found beside Gniezno's market square, though its exact site is uncertain.⁵³

It was also not possible to establish where the public baths were situated, since the town sources do not offer consistent information about this.

The Jewish district

Until the seventeenth century, the Jewish district was located within the town walls. It was situated north of Tumska Street and west of the market square, neighbouring with the monastery of the Sisters of St. Clare, which caused numerous conflicts⁵⁴ and resulted in the district being moved beyond the Toruńska Gate, near the church of the Holy Spirit, in the eighteenth century. Due to this move, the eighteenth-century plans of the city do not offer any information about the topography of the district when it was located within the walls. As a result, the reconstruction is based on written sources and on the sketch from 1512. In its original location, the Jewish district occupied both sides of the street leading northwards from Tumska Street, in the direction of the monastery of the Sisters of St. Clare, though it must be noted that on its eastern side, the Jewish buildings did not cover the entire block, but rather were grouped in its western section, thus not reaching the market square. A synagogue and school occupied the western section. The site of the synagogue was tentatively marked on the plan; this building had previously been mistakenly located on the corner of Tumska Street and Żydowska

⁵⁰ H. Münch demonstrates, that the connection between the town and Słomianka is rather old; idem, *Historia i rozwój przestrzenny miasta*, [in:] *Gniezno, woj. Poznańskie, Studium historyczno-urbanistyczne*, p. 46.

Street.⁵⁵ The new location is not only derived from more recent studies on the traditions and customs of building synagogues in Polish territories, but, more importantly, is the result of a new interpretation of the building contract,⁵⁶ which clearly stated that the synagogue of Gniezno was to be modeled after the one in Poznań. The location of the latter was established within the block of buildings.⁵⁷ The theory about the synagogue in Gniezno being located within the block of buildings is also supported by the sketched plan of the town from the seventeenth century, which shows the characteristic synagogue building with a stepped hip roof, which stood among other buildings rather than on a street corner. The synagogue building on the plan has dimensions that correspond to those specified in the building contract; it is assumed it was an oriented building.

Churches and hospitals

The cathedral

The church of the Assumption of the Blessed Virgin Mary stands in the place of the chapel located in the settlement outside town walls and was rebuilt many times. In the sixteenth century, it had the form of a Gothic cathedral, the construction of which was initiated in 1342 by Jarosław Bogoria Skotnicki. Numerous extensions were added to the cathedral in the fifteenth century, including chapels by the southern aisle, the treasury and one of the towers, while the second was completed in 1602. The cathedral was damaged during fires in 1613 and 1760. Its first cartographic representation dates back only to 1797, because Wzgórze Lecha has not been included in the map from 1787. However, the cathedral is shown in many iconographic sources, the oldest of which it is dated to 1505,⁵⁸ it is also clearly visible in the veduta from 1661⁵⁹ and in the cityscape from the eighteenth century.⁶⁰ Due to the need for generalization, the plan presents only a general outline of the building, without the detailed image of the range of individual additions. A cathedral school was located by the cathedral.

Church of St. George

The church of St. George is very old and originated as the castle chapel.⁶¹ As the visitations confirm, in the sixteenth century it was a masonry building,⁶² which was restored in 1613 and 1782, but to this day its outline is based on its Romanesque foundations.⁶³ Therefore, the reconstruction on the plan is certain and is based on modern data.

Chapel of St. Stanislaus

The chapel of St. Stanislaus was erected and equipped by Jan Łaski. The masonry rotunda was built between the cathedral and the church of St. George. It was surrounded by a graveyard called Boża Rola (*God's Land*). After the fire of 1613, the chapter funded its reconstruction, and in 1680 it was completely restored at the expense of the Metropolitan Canon Stanisław Cieński; it was demolished in the second half of the eighteenth century.⁶⁴ Its location was not marked on plans from the end of the eighteenth century and was reconstructed on the basis of descriptions found in written sources.⁶⁵

⁶⁴ LBG I, p. 9 (footnote).

⁶⁵ *Wiz. Gn.* 1608–1609, f. 22v–24v.

Chapel of St. Anne

The chapel of St. Anne was canonically erected and endowed by Casimir IV Jagiellon at the request of the Canon of Gniezno, Władysław Glembocki, as a hospital church in 1497.⁶⁶ The building was rebuilt after a fire of 1613, but after another fire in 1760, it was demolished and, as a result, it was not included in Kirszenstein's plan.⁶⁷ Unfortunately, not only its location has not been marked on any of the maps available to modern researchers, but there are also no iconographic representations of its buildings. Information about its location is provided by the visitation from 1608, according to which the church lay between the cathedral cemetery and the town gate.⁶⁸ It also confirmed the description of the church as *ad pontem*, i.e., near the bridge on the way to Poznań.⁶⁹

Church of the Holy Trinity

The first sources about the church of the Holy Trinity, the parish church of the town, date back to the fifteenth century and concern the construction of a masonry church.⁷⁰ There is a dispute in the scholarship about the existence of an earlier church and parish. According to Topolski, until 1259, parish services were performed in the cathedral, and later this role was taken over by the Franciscans.⁷¹ Most scholars, however, are of the opinion that when taking into account the specifics of the foundation of parish churches on Polish lands, it can be assumed that since the discussed church was situated on a site typical of located settlements, i.e., on the edge of the town, near the town fortifications, the church must have been founded around the same time the town was.⁷² The church, built in the fifteenth century, was significantly damaged by a fire in 1613 and restored and consecrated for a second time in 1632. Thanks to the continuity of its existence, it was possible to securely establish its location. The cemetery around the church is mentioned in the visitations⁷³ and has been reconstructed on the basis of the plan from 1787. There was a school next to the church, but there was no provost's house.⁷⁴

Church of the Holy Spirit and the hospital

The date of the foundation and endowment of the church of the Holy Spirit along with the hospital is not certain. Its foundation and endowment are believed to have happened as early as the thirteenth century,⁷⁵ but this thesis was built on general arguments, as there is a lack of source information or archaeological sites confirming it.

The church was also damaged during the fire of 1613. It was later rebuilt only to be severely destroyed in the fire of 1760. The ruins were sold to a private owner during an auction in the 1820s. There are no iconographic representations of the church, but it was included in the maps from 1787, 1797 and UMTB.

Church of St. Nicholas

The church and hospital of St. Nicholas were founded in 1361.⁷⁶ In the year 1575 in place of the older wooden building a masonry building was erected by the burgher Feliks Papież.⁷⁷ It survived

⁷⁷ LBG I, p. 9.

the fire of 1613⁷⁸ and endured until the beginning of the nineteenth century.⁷⁹ The building was not depicted in any iconographic sources (due to the lack of a church tower), but the church was marked on the plans from 1787 and 1797, which became the basis for its location on our map. On the other hand, the hospital building was not included in cartographic sources or in the visitation in 1608,⁸⁰ thus it was not added to our map. According to the latter source, the church was surrounded by a cemetery, which was reconstructed on the basis of the plan from 1787. The aforementioned numerous foundations by Papież, described in the visitations, made it possible to locate Targ Solny Street next to the church.

Church of St. Lawrence

The church of St. Lawrence was already mentioned in 1255 as being of older genesis.⁸¹ It was damaged during an invasion by the Teutonic Knights in the fourteenth century and rebuilt as a wooden church, which was replaced by a masonry building.⁸² Its continued existence has allowed the establishment of a precise location of the building based on modern maps. The characteristic silhouette of the building, which towers over the suburbs, is very visible on the gouaches by Alberti⁸³ and in the background of the painting of St. Lawrence from the altar of the church.⁸⁴ Unfortunately, though, the immediate surroundings of the church are not visible on these depictions. Based on the visitation we can establish that the church was surrounded by a graveyard, the area of which was reconstructed based on the plan from 1787. According to this same source, the house of the parson was situated near the church; although its exact location remains uncertain, it most likely stood south of the church and on the same side of the road.

Church of St. Michael

The church of St. Michael was located outside the town walls on the road to Trzemeszno and Toruń. Directly in front of it, there was a square used as a market for the settlement Wójtostwo. The lack of sources makes it impossible to determine not only the founder, but even the approximate date of the church's construction.⁸⁵ Due to its nickname "zbarski", its location is attributed to the site of the fortified settlement Zbar.⁸⁶ However, this name was a later addition and originated from the association of this church with a part of the territory of the former Zbar deanery.⁸⁷ In the sixteenth century, the building had the form of a late Gothic masonry church that has survived to this day.⁸⁸ Its durability made it possible to locate it precisely on the plan based on contemporary maps. According to the visitation, there was a cemetery by the church (the scope of which was reconstructed on the basis of correlation with other objects, it is therefore hypothetical), a school and the house of the parish priest, the location of which could not be determined. This church not only served as a parish church for Wójtostwo but was also the seat of the Zbar deanery.

Church of St. Anthony of Padua along with the monasteries of the Sisters of St. Clare and the Franciscans

The church and the monasteries were founded by Bolesław the Pious in the northern part of the located town. In 1279, the church was newly endowed and expanded at the suggestion of Bolesław's widow, Jolanta, by his nephew, Przemysław II. The complex survived more or less untouched by the many fires in Gniezno and remains the best-preserved example of a medieval Franciscan church in

Poland.⁸⁹ In the extensive monographs about this complex, Pasiciel presented a reconstruction of the plan of the temple, the oratory of the Sisters of St. Clare and the monastic buildings of both orders in the second half of the fifteenth century,⁹⁰ which became the basis of our map. The surroundings of the church and monastery complex were recreated on the basis of the plan from 1512 (western side) and from 1787 (eastern side).

Church of St. John and the monastery of the Order of the Holy Sepulchre

The church of St. John was built and endowed by the Duke of Greater Poland Przemysł, his brother Bolesław and their mother Jadwiga in 1243 as a hospital with a house for the poor and a monastery.⁹¹ The hospital was run by the Order of the Holy Sepulchre, brought to Gniezno for this purpose.⁹²

The late Gothic church with a Gothic tower that was added later,⁹³ still stands. Thus, its location is known and has been established with the help of modern maps. The buildings from the monastic hill were burned in 1512, except for the church and part of the monastery, and underwent further changes in the sixteenth and seventeenth centuries. Their reconstruction on our plan is hypothetical, based on the gouache by Alberti⁹⁴ and the plan from 1797. The plan from 1787 only included the church building. The Hospital of St. John was probably not rebuilt in the sixteenth century,⁹⁵ which is also tied to Order moving away from these responsibilities at the end of the Middle Ages. Therefore, the hospital will not be found on our map. There may have also been a cemetery, but since its location is unknown, it was not included in the cartographic reconstruction.

Church of the Holy Cross

The church of the Holy Cross was erected before 1198 on an island in the Lake Świąte by the Canon of Gniezno and later bishop of Lebus, Przeclaw, who also endowed this church with two villages.⁹⁶ Primarily it was the main seat of the Order of the Holy Sepulchre, which arrived in Gniezno in the twelfth century. It was replaced in this function by the newly constructed Church of St. John probably already in the thirteenth century, becoming its chapel of ease. Until 1834, it was housed in a wooden building of unknown shape,⁹⁷ which, unfortunately, was not reflected in any iconographic sources. It was also deprived of a cemetery, which was founded only in 1804. On the plan the church is located in the site of the present-day brick church.

The village, mentioned in scholarship as the location of the church, has not been confirmed by cartographic evidence, thus it was not included in the plan.⁹⁸

Another unanswered question concerns the island where the church was located: when did it become a peninsula as a result of descending water levels of Lake Świąte and whether this process was accelerated by the creation of a dyke? The lake water level, adopted in accordance with Woliński's research, was high enough at the end of the sixteenth century that the area in question was marked as an island on the plan, but it is possible that a more detailed analysis of archival sources will allow the verification of this research.⁹⁹

⁹⁹ There is confirmation in source materials of the existence of an island in 1467: "super provisione domorum in insula ultra et post locum Swyanthe iacente, et ortorum in eadem insula"; J. Korytkowski, *Arcybiskupi*, vol. 2, p. 363.

Church of St. Peter

The date of the construction of the church is unknown. Its existence has only been confirmed by sources in 1357, but it certainly has much older origins, possibly dating to the twelfth century.¹⁰⁰ It was a wooden structure until 1780.¹⁰¹ After the fire in 1613, it was rebuilt, and its shape and surroundings are visible on the plan from 1687. It was a parish church and the seat of the deanery.¹⁰²

Churches of St. Agnes, All Saints and St. Lazarus with a hospital¹⁰³ as well as a hospital for priests¹⁰⁴ were not added to the plan due to the lack of sources allowing for the reconstruction of their location. The Hospital of St. Martha, sometimes erroneously dated to the sixteenth century, was established only in 1610 and therefore it was not marked on the map.¹⁰⁵

Jurydyki

Gniezno was surrounded by a number of *jurydyki* – the settlements owned by Church or private persons that were exclaves of town's jurisdiction.

Jędrzejewo

In scholarly works, the names Jędrzejewo, Jelenia Głowa and Cierpięgi, as well as Targowisko, are used almost as synonyms,¹⁰⁶ which makes differentiating the settlements from each other much more difficult. Since the year 1600, a spatial or legal separation between the three settlements can be established; they were included in the map as separate entities. Until 1579, only Jelenia Głowa, a village belonging to the Grodziecki and Żydowski families, appeared in the tax registers, where the hereditary windmill, a rental tavern and alcohol sales were taxed, along with a dozen or so farmers and a few (usually three) craftsmen. The name Jędrzejewo appears for the first time in 1580, marked as belonging to both families. In 1581, Jędrzejewo is limited to the Grodziecki family and referred to as *oppidum*, while the section that belongs to Żydowski family is called Jelenia Głowa. In 1582, both sections are listed together again under the name *Iendrzeiow sive Ielienia Głowa*, and in 1583 under the name “Jędrzejow”.¹⁰⁷ This term also appears in 1640 as a self-descriptive name in the council and vogt books of the commune.¹⁰⁸ It was only in 1672 that the name “miasteczko Jędrzejewo alias Cierpięgi” (town of Jędrzejewo or Cierpięgi) was used,¹⁰⁹ with a note that the town is under the jurisdiction of the chapter. These names appearing in the sources of the *jurydyka* are interchangeable, but while Jędrzejewo¹¹⁰ (also in the variety Andrzejowo¹¹¹) appears on its own, Cierpięgi is always combined with a second name.¹¹² It can be assumed that in the seventeenth century the town was bought by the chapter and thus connected with Cierpięgi over time, though the name Jędrzejewo remained dominant.

¹⁰⁰ A. Warschauer's assumptions are based on the structure of the document from 1357. H. Münch adds that “the church of St. Peter can at least be attributed to the twelfth century”; A. Warschauer, *Geschichte der Stadt Gnesen*, p. 20; Münch, pp. 62–63.

¹¹² A similar occurrence can be found in the sources reviewed by W. Dworzaczek. Although there the name Cierpięgi appears as an auxiliary name Jędrzejewo much sooner – in 1604 – but it is only one of two, almost simultaneous mentions

The exact reconstruction of the shape of the *jurydyka* in question is made difficult by the lack of any iconographic sources and the late visualization on plans. A precise image of Jędrzejewo is only offered by UMTB. The plan from 1787 covers the *jurydyka* only partially because this area is located on the edge of the plan and was not fully drawn. The plan from 1797 covers the entire area, but it only exists as a copy that is not very accurate in this area. So our proposed map is a compilation of three plans, taking into account the topography and source materials.

Cierpięgi

Cierpięgi was a village belonging to the chapter. Warschauer claimed that it extended eastward from the current Cierpięgi Street and to the west of the so-called Małe Cierpięgi (*Small Cierpięgi*, currently Łąkowa (*Meadow*) Street),¹¹³ though this should be excluded, after taking into account the reconstructed range of the Jelonek Lake. The analysis of cartographic sources unequivocally shows that Łąkowa Street was marked out in the area from which the lake retreated. Therefore, for the purposes of the map, it was assumed that it was a village that lay along the present-day Cierpięgi Street, and the reconstruction uses plans from 1797 and UMTB. Cierpięgi are unfortunately only partly visible on Alberti's gouache,¹¹⁴ so this iconographic source was not helpful in the reconstruction.

Targowisko

Targowisko,¹¹⁵ later called Przedmieście Pyzdrowskie (*Pyzdry suburb*), is counted among the oldest settlements in the area of present-day Gniezno, which has also been confirmed through archeological excavations. While, despite Münch's suggestion, the name Targowisko did not appear in 1136,¹¹⁶ both its spatial arrangement along main communication paths and the toponymy deriving from marketplace suggest an old origin. Targowisko was bought by the town in 1487.¹¹⁷ There are many sources about it from the sixteenth and the beginning of the seventeenth century, including town tax registers¹¹⁸ and descriptions of the salaries of city churches.¹¹⁹ Two churches were included in Targowisko: the parish of St. Lawrence and the chapel of ease of St. Nicholas. There is a lack of iconographic sources depicting this part of the city, but Targowisko is shown in great detail on the plans from 1787 and 1797 and UMTB. The town tax registers show an artisanal suburb with two windmills, numerous malt houses and breweries. It is in this part of the city, in the Grzymisławski brewery, that a fire started in 1613.

Wójtostwo

Along the road leading to Toruń lay Wójtostwo, known also as Przedmieście Toruńskie (Toruń Suburb). Contrary to its name that usually means the possessions of a vogt, it was not related to the town's foundation; it was created from two villages – Wągielnik and Łagiewnik – given to the vogt Piotr Winiarczyk in 1289.¹²⁰ From then onwards, the village remained in the hands of the nobility, many times divided and recombined. At the beginning of the sixteenth century, Jerzy Kotwicz owned one half of the settlement, while his heir Mikołaj Kotwicz also bought the second half in the 1520s.¹²¹ In some unexplained way, Wójtostwo passed into the hands of the Mieliński family, from whom it

(the second is from 1605). On the other hand, Jędrzejewo functions independently as a name 10 times, both earlier (in the years 1599 and 1600, along with Jelenia Głowa in 1595) and much later (in 1613).

¹¹³ A. Warschauer, *Geschichte der Stadt Gnesen*, p. 36.

¹¹⁴ S. Pasiciel, *Widoki*, fig. VIII.

¹¹⁵ There is no substantial evidence for the use of the name Końskie Targowisko during the time period that interests us. In Teki Dworzaczka, there was a mention from 1645 about the gifting of two houses in the suburb Końskie Targowisko. One of these houses was sold in 1663; the location of the house was the Gniezno suburb called "Targowisko"; TD 1864 (no. 337), 1895 (no. 337).

was bought in 1630 with the approval of Sigismund III Vasa by the starosta Krzysztof Gembicki.¹²² The settlement only obtained town rights in the second half of the eighteenth century.¹²³ It is not known whether the town hall, located by the market square across from the church¹²⁴ and mentioned as a characteristic feature of Wójtostwo, is dated to this period, therefore this building was not included in the plan. The parish church of St. Michael was marked on the map, along with the market square in front of it, adjacent to the road, the range of which has been established based on the plans from 1787 and 1797, as well as the church and Hospital of the Holy Spirit. The range of the buildings, gardens and agricultural land, as well as the trajectory of roads, were reconstructed on the basis of the plans from 1787, 1797 and 1830.

The tax registers from 1577 mention four boiling pots and two hereditary taverns, the location of which could not be established. The tax register from 1579 lists 50 *hortulani* (smallholders without land).¹²⁵

Piotrowo

Piotrowo, the name of which is derived from the parish church,¹²⁶ also called Zajezerze due to its location, belonged to the Metropolitan chapter¹²⁷ and most likely began developing between the twelfth and the thirteenth centuries.¹²⁸ Its development was analyzed by Münch,¹²⁹ who established that the shape of the settlement was something between a circle and an oval. He pointed out the lack of a street-based part of the settlement, which developed entirely around the square by the crossroads. According to Münch, this square played also a role in the trade as a market square. The *Encyklopedia Gniezna i Ziemi Gnieźnieńskiej* draws attention to settlement's production function in the field of metalwork.¹³⁰ The reconstruction of this parts of the city is based on a panoramic plan from 1687, which shows both a church with a parish school and a cemetery¹³¹ and the parsonage buildings, as well as houses, fields and gardens of the presbyters and monastic houses and gardens¹³² along with the trajectory of roads within the settlement and the windmill on a nearby hill. A detailed description of the roads on the plan and the designation of some of them as *via regia* or *via antiqua et nunc [...] destructa* allowed for an exact reconstruction of their layout on the crossroads of the routes leading to Poznań, Kłecko and Środa, as well as the crossroads with a road leading towards Kiskowo. Additionally, the probable range of the lake waters was also included in the plan.

On the shores of Lake Jelonek, there was a masonry bathhouse in Piotrowo, which was used by the clergy and students at the cathedral school. While it is mentioned for the first time at the beginning fifteenth century,¹³³ it does not appear on the plan from 1687 and it did not leave any archaeological remains, so it was not possible to determine its location. A temporary pond, present on the plan from 1687, was also not included in the map. Two taverns located near the church¹³⁴ and mentioned in the tax registers from 1564 similarly do not appear on the map, as it was impossible to establish their certain location.

In 1620, a demesne called Kleryka was separated from the area of Piotrowo and assigned to the penitentiaries.¹³⁵ This part of Piotrowo is marked on the plan as rural buildings.

¹²² Idem, p. 321.

¹²⁶ “In written sources from 1399 we encounter the name Piotrowo, and seven years later with Zajezerze. [...] It must be assumed that the earlier name is Z[a]jezerze [...] In the Middle Ages, both names were most likely used simultaneously”; *Encyklopedia Gniezna*, p. 672.

¹²⁷ *Dzieje Gniezna*, ed. J. Topolski, p. 260.

¹²⁸ Idem, p. 91.

¹²⁹ Münch, pp. 141–142.

¹³⁰ *Encyklopedia Gniezna*, p. 672.

¹³¹ They are also described in the visitations of Wincenty de Seve; Wiz. Gnz. 1608–1609, f. 29r.

¹³² The plan does not specify which order is referred to, however, as the plan was commissioned by the Order of the sisters of St. Clare, it is believed that it depicted the sisters' property.

¹³³ *Dzieje Gniezna*, ed. J. Topolski, p. 158.

¹³⁴ “Duo diversoria sub eadem Ecclesia unus Michaelis Popek, et alius Mathias Rzeczyczk”. The surname of the owner must have passed on to the tavern and later to part of the settlement, thus acquiring a toponymic character, since the tax registers mention a place called Rzeczyczko, which later disappears.

¹³⁵ *Dzieje Gniezna*, ed. J. Topolski, p. 260.

Grzybowo

Grzybowo was clearly divided into two parts. The western one belonged to the monastery of the Order of the Holy Sepulchre. Due to the dedication of their church to St. John, the place was called Grzybowo Świętojańskie (*St. John Grzybowo*). The eastern part belonged to the monastery of the Sisters of St. Clare and was named Grzybowo Panieńskie (*Maiden Grzybowo*). Their development differed; Grzybowo Świętojańskie became urbanized earlier, while Grzybowo Panieńskie had a sparser layout until the nineteenth century. Iconographic and cartographic source materials depicting this area are very rare and date to a later period. The first iconographic sources are dated to the mid-nineteenth century. Grzybowo was not included in the plan from 1787, while on the plan from 1797, gardens and agrarian land were not depicted. The basis for the reconstruction was, therefore, UMTB, while taking into account certain aspects from the older plan and source materials. Grzybowo has a lot of written sources. While the surviving court books are dated to 1661 onwards for Grzybowo Panieńskie (vogt and jury books) and to 1752 for Grzybowo Świętojańskie (council books), but monastic documents were preserved in the cathedral archive, thus providing information about the settlement. Unfortunately, such studies would go far beyond the scope of research that could be carried out as part of this reconstruction of the Gniezno plan. We hope that this research gap will be filled in the future.

Among the terms found in sources in 1613, the term *Villa Grzybowo* appeared in reference to Grzybowo Świętojańskie.¹³⁶ Grzybowo was first described as a town in 1675, but the town hall of Grzybowo Świętojańskie was not erected until the eighteenth century.¹³⁷ In the inspections from 1576 and 1577, two taverns are described as situated in Grzybowo Świętojańskie, though their location was not established.

Słomianka

The name of Słomianka, which belonged to the archbishopric, was first mentioned in sources in 1492,¹³⁸ but a theory appeared in the scholarship, stating that it must have been the oldest ecclesiastic *jurydyka* in Gniezno, as it is on its terrain that many scholars situate *pomerium iuxta castrum*, which the chapter gave in 1235 to Władysław Odonic for the purpose of constructing a gord there.¹³⁹ However, Czesław Sikorski questioned this¹⁴⁰ along with the popular theory, that in the following century, this territory must have belonged to the chapter because a castle was built there already by Bogoria Skotnicki (i.e. in fourteenth century).¹⁴¹

However, it is certain that the construction of the castle was initiated by Jan Łaski in the sixteenth century. His successors completed the task.¹⁴² This area was included in the map from 1797, Alberti's gouache was also helpful as it depicted Gniezno from the western bank of Lake Jelonek,¹⁴³ as well as Storn's drawing from 1661¹⁴⁴ and UMTB.

Kustodia

Kustodia was a demesne belonging to the Metropolitan chapter, granted to the college of cathedral vicars in 1621.¹⁴⁵ Not much can be said about its buildings in the sixteenth century; in 1760, there is a note about the destruction of four straw-roof houses as a result of a fire.¹⁴⁶ It is also missing iconographic records (Alberti drew the view of the city from the northwest side from the hill of the Kustodia),

¹³⁶ AmGn I 155, p. 9.

¹⁴⁶ “The intensity of the fire [...] carried the fire behind the Lake ‘Święte’, where four houses covered in straw burned down”; J. Walkowski, *Wspomnienie o kościele metropolitalnym*, pp. 45–46.

so the basis for the reconstruction is UMTB. Due to Kustodia's lakeside location, the reconstruction of the range of the waters of Lake Święte was equally important in this process.

Kawiory

The suburb, called Kawiory or sometimes Kawiary, reached the southern part of Jędrzejewo and neighboured Wójtostwo from the northwest. They are the least studied *jurydyka* of Gniezno due to very few available sources. The lack of written sources from the time period that interests us has made it difficult to establish the spatial development of this settlement, which was located near the demesne. The issue of ownership is equally uncertain. Scholars, following Münch's research, seem to agree that the suburb most likely belonged to the priests from the college of penitentiaries.¹⁴⁷ The reconstruction is based on the plans from 1787, 1797 and 1830 (UMTB).

Translated by Karolina Frank

¹⁴⁷ *Dzieje Gniezna*, ed. J. Topolski, p. 160.

III.6.12.6 INOWROCLAW

Marcin Frąś

This plan depicts Inowrocław in the second half of the sixteenth century. It is a reconstruction plan recreating the layout of this Cuyavian royal town, which was important for voivodeship administration. The plan covers town area within town walls, together with its adjacent suburbs of Staromieście, Nowe Ogrody, Batkówek, Stodoły, and the area referred to as Zofiówka. We also outlined the roads leading from the town to the surrounding villages. Whenever possible, we also marked the elements known from preserved manuscripts on the plan, although their location is hypothetical. The elements not present on the plan include the town's bathhouse, windmills, and some of its cemeteries.

The reconstruction was created using the retrogression method and scaled at 1:10,000, in keeping with the standards applied throughout the AHP series. It is based on cartographic sources from the nineteenth and twentieth centuries, as well as mentions and references from written sources from the sixteenth century and the first half of the seventeenth century. Reports from archaeological works were also used as auxiliary materials. They proved that the spatial layout of the town had survived unchanged until the nineteenth century.

Written sources

The bulk of sources concerning Inowrocław's history has been lost in subsequent town fires, which are also to blame for the absence of town books. Consequently, the most significant source of information on the topography of the town and its surroundings are fiscal sources. The available archival documents of this type include tax registers from 1552,¹ 1553,² 1564,³ 1565,⁴ 1576,⁵ 1577,⁶ 1581,⁷ 1582,⁸ 1583,⁹ and 1589.¹⁰ The printed 1510/1511 inspections of Inowrocław Gord Starosty¹¹ are very useful for conducting research on the Early Modern period of the town's history. Other notable preserved documents of this type include inspections of royal estates from 1564–1565,¹² 1569,¹³ 1616–1620,¹⁴

¹⁴ LWWK 1616, part 1, pp. 273–277.

1628–1632,¹⁵ as well as later ones, from 1659–1665.¹⁶ Another document which is worth mentioning in this context is the 1552 description of town and village boundaries.¹⁷ All these sources are currently stored in the Central Archives of Historical Records (AGAD).

The records of canonical visitations of Kruszwica archdeaconry kept in the Archdiocese Archives of Gniezno are useful for the reconstruction of sacral spaces. The 1577 visitation was published as *Monumenta Historica Dioeceseos Wladislaviensis*.¹⁸ The repertories of the post-visitation protocols of 1585,¹⁹ 1596²⁰ and 1597²¹ were published in the journal titled *Archiwa, Biblioteki i Muzea Kościelne*. These documents offer mainly repetitive information on the patronages over Inowrocław churches, and the locations of those temples.

We used the 1450 privilege of Casimir IV Jagiellon, which had several source editions, as a supplementary source. It contains information about the area of the burghers' meadows and pastures. A lot of facts and data were confirmed through the analysis of the documentation of the Franciscan convent – e.g. information concerning the Jewish quarter and the road that led to it, the Old Town and the Church of the Blessed Virgin Mary and Nowe Ogrody Suburb, the suburb outside the castle, the gate and the road towards Toruń, as well as the villages of Jacewo, Wierzbie, Rąbin, Mikorzyn, Szymborz, Kurowo garden (at the eastern moat), and Kozłówka.²²

What proved invaluable for recognising the remains of structures which are typically located in a town (churches, cemeteries, moats) were reports, together with the plans created for the purposes of the said reports, based on latest archaeological research carried out as part of archaeological supervision over contemporary investments. They are kept in the Archive of the Jan Kasprowicz Museum in Inowrocław.²³

Cartographic sources

The 1:25,000 *Urmesstischblätter* (UMTB) of 1861 was used as the basis for reconstructing town topography. The map does not show the town's future expansion towards the north driven by the construction of the railway line, and or its growth towards the south-east, which took place after the opening of the salt mine. Adopting UMTB as a basis for further work turned out to be the right decision, because this map represents the Inowrocław area in the pre-industrial period.

The cadastral map of Inowrocław, which was created in 1908–1909 and had an unknown scale, was used as auxiliary reference material. It shows a fragment of the town, or, to be more precise, its central section, but does not cover the entire area within the town walls. The south-western part of the town was probably presented on a separate, currently unaccounted for sheet. The preserved plan depicts blocks of buildings, divided into land parcels, with each parcel bearing its own registration number. Some buildings, including the monastery's square, are also represented on the plan in a generalised way. The plan was originally drawn up in German, and when the town became part of the Polish State, the street names were overwritten with Polish versions. In fact, it is the oldest, and also the only, source of this type that has survived to this day. It is currently kept by the District Starosta's Office in Inowrocław.²⁴ Other auxiliary materials referenced for the purpose of reconstructing the town's topography also included the plans of the Inowrocław garrison from 1897²⁵ and 1910,²⁶ and the 1881 map which

is now kept at the Jan Kasprowicz Museum in Inowrocław.²⁷ The map was created in connection with the exploitation of salt deposits located outside of the town, and depicts various elements related to the extraction of this raw material. The 1820 enfranchisement and regulatory map of the Franciscan monastery in Inowrocław²⁸ was also used as an auxiliary material. It is assumed that the land that belonged to the Franciscans is marked on this map. A historically reconstructed map from 1912 was used to identify the names of the old suburbs.²⁹

Studies

The first general publications on Inowrocław – the works of Adolf Warschauer³⁰ and Heinrich Wuttke³¹ – were written in the nineteenth century. Other German-Prussian scholars were mainly interested in the period of Frederick the Great.³² Polish-language literature on Inowrocław is not extensive. The most notable are two works by Stanisław Waszak and Zygmunt Czapla,³³ as well as a monograph of the town published in 1978,³⁴ which constitutes the only broader overview of Inowrocław's history. There are also some minor works on the subject, most of them published in *Ziemia Kujawska*, an academic journal. In the context of town plan reconstruction, the most important are: *Inwentarz Starostwa Inowrocławskiego z 1510 Roku*³⁵ and *Rejestr Dochodów i Rozchodów Starostwa Inowrocławskiego z 1510/1511 r.*³⁶

History

Before Inowrocław was a royal town, it was a ducal town. Maria Bogucka and Henryk Samsonowicz classified it as a second category town,³⁷ which was related to, *inter alia*, the fact that Inowrocław sent 20 armed men to the Prussian War in 1458.³⁸ Throughout its entire existence, the town remained in the hands of the monarch, initially as a trading settlement, later as the seat of the castellan. The town served as the capital of a duchy during the feudal fragmentation period, and later, as the capital of Inowrocław Voivodeship, seat of the gord starosty, as well as gord and land offices.

Inowrocław was chartered under Magdeburg Law.³⁹ The exact date of the town's foundation is unknown. Presumably it took place between 1237 and 1238, although recently Adam Kosecki has indicated that the foundation document could have been issued a few months after the gathering in Danków (2 July 1238), between the autumn of 1238 and the wedding of Duke Casimir and Constance in 1239.⁴⁰ Historians attribute the founding of Inowrocław under Magdeburg Law to Casimir I, Duke

Karczewski, Cracow 2017, pp. 175–178 – this publication contains a thorough overview of this subject. In an intriguing manner, the foundation initiative is dated by M. Bogucka and H. Samsonowicz

of Cuyavia, whose frequent contacts with Henry the Bearded and Henry the Pious and visits to Wrocław shed some light on the Lower Silesian town's development. It is possible that he planned to introduce a similar initiative in Cuyavia. In turn, the law granted to Inowrocław served as a model for other Cuyavian towns.⁴¹ The foundation document was most likely lost in the town fire caused by the Teutonic Knights in 1431. In 1450, King Casimir IV Jagiellon issued another privilege for the town, in which he granted the inhabitants the right to a third of the land belonging to the vogt's office in Inowrocław, two lans of Mikorzyn land, income from bathhouses, meadows and pastures, together with half of Noteć River from Szarlej to Leszczyce, the land and demesnes that had long belonged to the town, and, in the case of Prussian town inhabitants, the right to attend the weekly markets. He allowed the burghers to sell wine, honey and beer, aside from Bydgoszcz beer or the beer imported from other parts of the country, in front of the town hall. This restriction applied to the area within a mile of the market square.⁴²

Inowrocław ceased to be a border town after the Second Peace of Toruń.⁴³ It went through a period of economic development between the Second Peace of Toruń and the Deluge. It was burnt down during the Deluge in 1656, and later, it was damaged in an even more significant way, during the Second Northern War.⁴⁴

Inowrocław was the seat of the castellan.⁴⁵ After the town was incorporated into the state of Ladislaus the Short, the actual power in the town was taken over by the starosta of Greater Poland, Wincenty of Szamotuły.⁴⁶ The importance of Inowrocław decreased after the Treaty of Kalisz in 1343 with the merger of the former district duchies of Inowrocław and Brześć into one voivodeship with the seat in Brześć Kujawski. The borders of a separate Inowrocław Voivodeship gained their final shape only at the turn of the fifteenth century.⁴⁷

The town was an important stop on the trade route connecting Gdańsk Pomerania with the central part of Polish lands. The development of Bydgoszcz and establishment of Nieszawa (until it was moved) meant that the days of Inowrocław's role as the most important town in the voivodeship, and in Cuyavia in general, were slowly ending.⁴⁸ However, this did not affect the market, which was maintained in order to continue bringing income to the Duke who collected the toll and market fee. The oldest mentions of the Inowrocław market come from the second half of the twelfth century, and it remained one of the most important markets of the region until the end of the eighteenth century.⁴⁹ The Duke's customs house was established early in Inowrocław, with its first mention dates to 1252.⁵⁰

From the moment of its foundation until the sixteenth century, the town must have had the right to organise two fairs, since the privilege of Sigismund the Old of 7 February 1546 increased their number to three. At that point, the subsequent fair was to take place ‘before the Judica Sunday’, meaning before the fifth Sunday of Lent. Later, in 1555, the privilege was extended to four fairs, which were to be held successively: ‘on the first Tuesday after the Judica Sunday’, in the octave of Corpus Christi, on 25 July (St. James) and 4 October (St. Francis).⁵¹ Merchants of Inowrocław maintained contacts with such large towns as Wrocław, Poznań, Kalisz, and Pyzdry, and most likely also with smaller nearby towns from Inowrocław Voivodeship, or the neighbouring Cuyavian or Greater Poland districts. However, the burghers of Inowrocław maintained the most intense contacts with Toruń, where they sold agricultural products, mainly grain, leather, and wool, and bought Flemish cloths, salt and fish such as herring and sturgeon.⁵² It follows that despite its location on a salt dome, salt was not mined in Inowrocław in the Early Modern period. The oldest medieval remnants of salt evaporation were discovered on the south-western slope of the hill near the Church of Blessed Virgin Mary.⁵³ The saltworks had to cease to exist or had to be moved when the church was constructed in the twelfth century.⁵⁴ These are the only known traces of salt evaporation in this place until the nineteenth century.

Location

Inowrocław is located at 52°40' N latitude and 18°40' E longitude.⁵⁵ The area of the chartered town is estimated to be situated between 100 and 109 m AMSL. On the other hand, the height of the areas outside the town ranges from 85 to 95 m AMSL.⁵⁶ Inowrocław is located in Greater Poland Lakeland, once known as Greater Poland-Cuyavia Lakeland.⁵⁷ More specifically, it is located on a moraine plateau, on the so-called Cuyavia Upland, within its flat lands. The area around Inowrocław is rich in fertile black earths, hence the Polish name ‘Kujawy Czarne’ (Black Cuyavia, with black referring to black earths, literally, ‘black soil’) used for this part of Cuyavia.⁵⁸ The fertility of the soils was noted in mid-eighteenth-century reports of Prussian officials.⁵⁹ The area of the moraine plateau is interspersed with ‘wide valleys and transformed channels with smooth bottoms and gently titled slopes’.⁶⁰

Inowrocław was located on a salt dome, which explains its German name – *Hohensalz* – which was used from 1904 to 1918⁶¹ and in the period of 1939–1945. The so-called salt ‘bump of Inowrocław’ has an elongated profile on the north-south axis. Its base is 5-kilometre-long and 2.5-kilometre-wide.

The southern and northern slopes are 1- to 2-kilometre-long, while the eastern and western slopes are between 100 and 200 m in length.⁶²

Hydrography

Inowrocław was a town located far away from water intakes. There was a considerable distance between the town and the Vistula as it was located between the basins of the Vistula and the Odra.⁶³ It was just a bit closer to the Noteć. Access to this river was determined by the 1450 privilege of Casimir IV Jagiellon, in which the burghers were granted the right to access meadows and pastures up to the half of the river's length, at the height of the borders of Szarlej – Mątwy, Mątwy – Krusza, Krusza – Piotrkowice, Piotrowice – Leszczyce.⁶⁴

Near the town, there were numerous wetlands whose presence was 'linked to the lowering of the ground moraine and impermeable silt-clay substrate'. These areas were artificially modified and used as agricultural plots of land. As a result, the groundwater level dropped.⁶⁵ There were also several ponds in the vicinity of the town that have survived to this day. The first pond was called Rybnik, which gave Rybnicka and Mała Rybnicka Streets their names, and was located about a kilometre away from the southern town walls, present-day Czarlińskiego Street.⁶⁶ The second pond lay in Szymborze (present-day Andrzeja Dybalskiego Street).⁶⁷ Travelling from Lithuania to Germany and Italy, Michał Butler wrote in his journal that there were streams (*ruczaj*) in the area, located 'two miles from the town'.⁶⁸

There must have been wells in the town as well. Data from archaeological excavations reveal that one of them, 1.5 m in diameter and 3.5 m in depth, was located on the monastery's grounds.⁶⁹ The register of Inowrocław Gord Starosty shows that the water source must also have been located on the premises of the castle demesne. This is also confirmed by the 1564–1565 inspection which noted that there was a well in the area behind the castle demesne.⁷⁰ It is probably a water intake discovered in Stodoły Suburb, thanks to archaeological excavations carried outside the no-longer-existing town walls. It is assumed that water was taken from this well in the fifteenth century, as it is reported to have stopped working at the turn of the seventeenth centuries.⁷¹ Another water intake was also discovered outside the western line of the town walls. It was the so-called Zbychor's well.⁷²

Topography

The town was located on the foundations of a previously existing settlement. The town's foundation area was located 'at the top of a waterless hill, 300 m from the castellan gord'.⁷³ Unfortunately, there is no evidence of its existence. According to Marian Biskup, the layout of the town was formed at the turn of the fourteenth century, and it has survived almost unchanged until the nineteenth century.

The town plan had the shape of an inverted trapezoid with the plan in the north-up orientation, the northern part of which was probably several dozen meters shorter (approx. 300 m) than the southern (approx. 375 m).⁷⁴ There were buildings with administrative functions (a ducal/royal castle in the north-west, a hypothetical castellany gord in the south-east⁷⁵) and church buildings (a Franciscan monastery in the north-east and the church of St. Nicholas with a square in the south-west) in all four corners of the newly founded town. In 1583, there were also two windmills which belonged to the town in the area.⁷⁶ Other worth-mentioning public buildings included the town's bathhouse, which existed before 1450.⁷⁷ The bathhouse's exact location is unknown.

The oldest mention suggesting that the town was fortified comes from 1258,⁷⁸ and the fortifications in question were probably made of wood and earth. Until the mid-fourteenth century, the town was surrounded by a 1.8-metre-thick wall which was 1,600 m long in circumference (irregular in the north-eastern part of the town) and had 16 rectangular towers and a castle (in the north-western corner of the above-mentioned walls).⁷⁹ A single moat surrounded the defensive walls from the outside. The town's defence line was probably modernised in the 1430s, when the second moat and earth embankments were added. Archaeological research conducted by Marcin Woźniak helped determine the dimensions of the second external moat. The first moat was 11 m wide and 3 m deep. A rampart of up to 8 m in width was built between the moats. The total width of Inowrocław's fortifications was approximately 30 m from the wall to the outer edge of the second moat.⁸⁰ There were three gates that led to the town: Żydowska, Bydgoska, and Mątewska.⁸¹ According to the source information from 1510, the condition of the walls left much to be desired.⁸² The town fortifications mostly disappeared from urban space in the eighteenth century and the first half of the nineteenth century, but their remains can still be seen near the town centre.

The castle of Inowrocław was for sure already visible above the walls of the town in 1305.⁸³ The 1564 inspection mentions that it was used as the seat of the starosta. It was rebuilt in the Renaissance style at nearly the same time.⁸⁴ It was still used as the starosta's seat in 1647 until the flood, after which it fell into ruin. It was demolished in the nineteenth century.⁸⁵ There was an outer bailey with a stable and a horse mill next to the castle.⁸⁶ There was also a demesne near the castle called Kawęczynski.⁸⁷ A detailed description of the castle can be found in the inspection from 1564.⁸⁸

Roads

In the pre-foundation period, there were about 40 settlements scattered within a radius of several kilometres around the future town.⁸⁹ The roads leading from Gdańsk Pomerania through Cuyavia to Greater Poland, which involved the crossing over the Vistula near Toruń, aggregated in the area around Inowrocław. They included a road leading in the south-west direction, *i.e.* the former road to Poznań, which led further to central Germany.⁹⁰ In the vicinity of Mątwy, there was once a natural passage through Noteć Valley, which required crossing first a ford, and then a bridge over Noteć River, on the transit road to Gdańsk Pomerania and Cuyavia. It was the most important crossing leading from Greater Poland to Cuyavia towards Bydgoszcz.⁹¹ One of the two roads from Kalisz to Royal Prussia also ran through Inowrocław.⁹²

Market square

The total area of the town within the walls was 16 ha.⁹³ There was a square market with an area of approximately 1.5 ha (estimated dimensions of approximately 115 x 130 m) in the town centre.⁹⁴ This area comprised nearly 310 building plots.⁹⁵ There was a municipal scale⁹⁶ in the eastern part of the market square. It is estimated that this part of the market was built at the turn of the seventeenth century, although there is no absolute certainty in this regard and the process could have started at the turn of the sixteenth century. The town hall was located in the north-west part of the market square,⁹⁷ although some researchers believe that it was located in the middle of the square.⁹⁸ The inspection performed after the Deluge noted that the town hall was wooden and included a brick Gothic tower, visible in the drawing from 1734.⁹⁹ The exact location of the town hall could be determined thanks to the results of research carried out in 2010 within the market square, Świętego Ducha and Królowej Jadwigi Streets, and Klasztorny Square. As a result, it was established that the town hall was located in the southern part of the north-west quarter of the market square.¹⁰⁰ The building burnt down in a fire in 1775 and had not yet been rebuilt.¹⁰¹ The inspection noted also that there were market stalls selling food, which were covered with shutters, on the market square.¹⁰² According to the 1564 inspection,

there were 14 of them.¹⁰³ On the other hand, later 1628–1632 records do not mention their exact number.¹⁰⁴

In 1510–1511, ‘there were 32 houses in the market square, seven of them at Franciszkanów Street, three at an unidentified *zakątki* (nooks) street, 14 at the street leading to Mątwy, another 14 at the street leading to Holy Spirit Hospital, and 13 at Tkaczy Street – with a total of 83 chimneys.¹⁰⁵ Moreover, between the buildings there were five breweries which belonged to five brewers. On top of that, the starosta also had a brewery of his own. According to the 1564–1565 inspection, the town had about 220 parcels with buildings occupied by burghers.¹⁰⁶ According to the data quoted by Maria Bogucka and Henryk Samsonowicz, in 1616, there were 310 burgher houses within the town walls.¹⁰⁷ Czesław Sikorski stated that residential buildings were mostly made of wood, with half-timbered construction with wattle-and-dab infill, although there were also some examples of log constructions. The height of the preserved structural beams was 1.5 m.¹⁰⁸ Most of these buildings burned down in the great town fire of 1775, and the new ones were built using brick.¹⁰⁹ Gardens and parcels scattered around the town belonged to burgher houses.

Streets

A total of eight streets led off the corners of the market square. Toruńska Street, also known as Świętego Ducha Street (called Szpitalna Street), crossed the eastern side of the market square and passed through a line of town walls that ended with Żydowska Gate, leading travellers towards Toruń. Another street crossing the town walls was Bydgoska Street (a name which probably replaced its former designation, Tkacka Street), which started within the north-south axis of the town, and then ran along the western frontage of the market square, leading towards Bydgoszcz. It is difficult to determine the location of the street leading from the market square to the south. It cannot be ruled out that this street, originally leading towards Poznań, at that time emerged from the middle of the southern frontage of the market square. The state of research allows us to conclude that Kasztelańska Street crossed the southern side of the walls, going outside the town walls through Mątewska (Strzeleńska) Gate. It was this road which led to the crossing on Noteć River and, further, to Poznań.¹¹⁰

Table 1. Sixteenth-century Inowrocław streets confirmed by sources

Old Polish street name	Contemporary street name
<i>Platea dicta fratrum</i> (Bracka or Franciszkańska)	Łączna or northern section of present-day Kościuszki Street
<i>Platea versus Manthwi</i> (to Mątwy)	Poznańska or I.J. Paderewskiego
Tkaczy	no information
<i>Platea versus hospitale</i> (Szpitalna)	Świętego Ducha
Zakanthki (Zakątki-Zakątek)	no information
Market Square (Rynek)	Market Square

Table 2. Sixteenth-century Inowrocław streets of uncertain location, but within town walls

Contemporary street name	Comments
Farna	led from the market square to Św. Mikołaja Street
Klasztorny Square	exists to date
Św. Mikołaja	no confirmation in the 16 th century
Kościelna	northern frontage of market square
Kościuszki	eastern frontage of market square
Szeroka	southern frontage of market square
Krótką	near the walls, on the eastern side
Przesmyk ('pass')	common name for a road connecting a castle with a town
Rybnicka	earlier Kramarska (no confirmation in the 16 th century)
Rzeźnicka	no confirmation in the 16 th century
Studienna	no confirmation in the 16 th century
Wałowa	renamed Żydowska only in the 17 th century
Wodna	former road connecting (to date) the Market Square with Św. Mikołaja Square
Bydgoska (no confirmation in the 16 th century)	Królowej Jadwigi
Kasztelańska (no confirmation in the 16 th century)	Kasztelańska

Jewish quarter

The Jewish quarter was established in the south-eastern part of the town in the fifteenth century.¹¹¹ According to Zenon Guldon, the oldest mention of Jewish settlers comes from 1453.¹¹² In 1564, there were 27 houses and four empty parcels in the quarter (which translates into 108–162 people).¹¹³ A year later, the number rose to 168, including 30 poor people and students. In the seventeenth century, the number of Jews declined to 30, according to the poll tax from 1674.¹¹⁴ It is connected with the repressions introduced after the Deluge, resulting in the expulsion of Jews from the town and probably also destruction of the synagogue. According to information from the end of the seventeenth century, there was already a synagogue in the town,¹¹⁵ built near (within) the town walls.¹¹⁶ Right next to it, there was a school financed by the qahal¹¹⁷ and a Jewish cemetery located outside the walls. Its existence probably dates back to the fourteenth century, and the oldest tombstone dates back to 1591.¹¹⁸

Suburbs

The suburbs were integral areas of the town. The first suburb, Staromieście, surrounded the church of Blessed Virgin Mary – the area of the first Inowrocław settlement. Twenty four people lived there

in 1510.¹¹⁹ Batkówko Suburb covered an area south of the walls, outside Poznańska Gate. The Holy Cross Church stood in the centre. In the sixteenth century, Sigismund the Old granted Batkówko the right to build a windmill in its territory. In the sixteenth century, this area was inhabited by 42 people.¹²⁰ Stodoły Suburb stretched to the north of the walls, outside Bydgoska Gate. In 1510, there were 37 farms here; in the sixteenth century, the suburb was granted the right to build a windmill by Sigismund Augustus.¹²¹ Another suburb was located around the Holy Spirit Hospital.¹²² Near Staromieście, there was a suburb called Nowe Ogrody, formerly known as Rogów, with the Corpus Christi Church founded in 1480.¹²³ The area between the moats and Batkowskie (Batkówko) Suburb was called Zofiówka. The name may be associated with Saint Sophia Chapel (Zofia is the Polish term for Sophia), which some assume could have existed there until the end of the seventeenth century.

There were also other suburbs adjacent to the town, the existence of which, however, cannot be confirmed in the sixteenth century. They include: Grodztwo – north-west of the walls (first mention from the period of 1722–1730),¹²⁴ Radziejów Suburb outside Toruń (Żydowska) Gate – east of the walls (mentioned in the second half of the eighteenth century),¹²⁵ and Kurów Suburb which appeared in sources in 1374 as a garden given to the Franciscans. This area stretched along the walls, from Żydowska Gate to Bydgoszcz road, up to the Church of Blessed Virgin Mary.¹²⁶ There was also Strzelno Suburb, marked on the 1772 town plan outside the south-west line of the town walls.¹²⁷

Villages

The starosta in charge of the town collected income from nine neighbouring villages belonging to the burghers.¹²⁸ They were Jacewo, Turzany, Szymborze, Batkowo, Rąbin, Wierzbie, Marulewy, Miko-rzyn,¹²⁹ and Kotwiniec.¹³⁰ The village of Michowiec (Miechowice) joined this group in 1540 by way of repurchase.¹³¹ According to Zenon Guldon's findings, in 1583 all these villages had 50 lans of land that lent themselves to cultivation.¹³² Citing Marian Biskup, Edmund Mikołajczak indicates that the earliest municipal properties included Jacewo, Wierzbie, Kotwiniec, Rąbin, and Szymborze. Both researchers associate the granting of these villages with the foundation privilege of the town.¹³³ In turn, Inowrocław Gord Startosty included the following villages: Orłowo (with a demesne), Broniewo, Mischewice (Niszczewice) (with a demesne), Jaksice (with a demesne), half of Mątwy Village, Sławęcinek (with a demesne), Murzynno, Dolsk (Dulsk), Wielowieś, Chrzastawa, Buczkowo, Sowikowa (Sójkowo), and Tuczo (with a demesne).¹³⁴ Orłowo, with a demesne, and Murzynno became part of the gord starosty in 1422. Before that, they belonged to the Teutonic Knights.¹³⁵

Churches

One of the oldest religious buildings in the town is the church, which is now a basilica known as the church of Blessed Virgin Mary, located in Staromieście (*extra muros*).¹³⁶ Dariusz Karczewski dates the construction of that church to the 1180s.¹³⁷ Most likely, its founder was the son of Bolesław IV the Curly, Leszek.¹³⁸ The parish included Staromieście, Rąbin, Batkowo, Popowice, Szymborze, Jacewo, Turzany, part of Słońsk Village, Strzemkowo, and Marcinkowo.¹³⁹ There were also altarage chapels of the Assumption of Blessed Virgin Mary and St. Anna in the church.¹⁴⁰

At the same time, the Franciscans were brought to the town at the time of its foundation. It was clearly modelled on the solutions used in Wrocław, to which the Order of Friars Minor were brought in 1236 by Henry the Pious. In the newly founded town, they found their place near the Duke's castle.¹⁴¹ According to Marian Biskup, work on the construction of the monastery must have been well underway already in 1238. On the basis of his archaeological research, Czesław Sikorski determined that the church was built first, and the buildings intended for religious houses followed.¹⁴² In 1402, the street next to this church was called *platea dicta fratrum* – Bracka or Franciszkańska.¹⁴³ According to Gotfried Dornstein, the church was located 120 feet from the then Bydgoska Street.¹⁴⁴ Stanisław Kozierowski reports that the church and monastery were situated *infra muros*.¹⁴⁵ Before the construction of the St. Nicholas church, the monastery church served as a place of official gatherings. It survived some dramatic moments of town history, *i.e.* the destruction caused by the invasion of Świętopełk, Duke of Pomerania (1239) and Bolesław the Pious, Duke of Greater Poland (1271).¹⁴⁶ Apart from the well, there were barns and two wooden cellars for storing food and cooling alcoholic beverages in Klasztorny Square.¹⁴⁷ In 1607, the Franciscans were the owners of six lans of land.¹⁴⁸ The monastery was demolished at the beginning of the nineteenth century, and the church in the 1870s, and, therefore, its location on the plan is hypothetical.

The church of St. Nicholas was erected some time later. It originally functioned as a filial church of the church of Blessed Virgin Mary, and starting from as early as the first half of the sixteenth century, as a parish church. It was first mentioned as such in sources on 21 December 1338.¹⁴⁹ The next mention comes from 1321 and is related to the judgement issued by the papal court.¹⁵⁰ A school employing a teacher was established by the church. The church also owned the Corpus Christi chapel, located outside the town walls on the road to Toruń.¹⁵¹ The church also included the altarge chapels dedicated to the Assumption of the Blessed Virgin Mary, the Beheading of Saint John the Baptist, the Holy Cross, St. Sophia, and the Holy Trinity.¹⁵² The importance of the church of St. Nicholas as a parish church grew in the sixteenth century, with the decline of the church of Blessed Virgin Mary.¹⁵³

Outside the town, and beyond the gate on the old road to Toruń, there was also the Holy Spirit Hospital, whilst the Corpus Christi chapel stood at the contemporary route to Toruń. Marian Biskup states that its foundation must have taken place before 1268. Its founder was most likely Casimir I of Cuyavia, whose son, Ziemomysł, in 1268 gifted Marulewy, Batkowo, and Śrubska, villages founded under German law, to this institution. At that point it was run by the Knights of the Cross with the Red Star of the rule of St. Augustine, invited to Inowrocław from Wrocław.¹⁵⁴ According to Stanisław Kozierowski, the church was burnt down by the Teutonic Knights in 1331, but, nevertheless, continued to perform its function.¹⁵⁵ The congregation managed these properties until 1592, *i.e.* until they were incorporated into the College of Vicars of Włocławek Cathedral.¹⁵⁶

The already mentioned Corpus Christi chapel was located outside the town walls, on the eastern side, on the road leading to Toruń. Funded by Jakub Borowicz, a chapel and a hospital dedicated to the Holy Cross¹⁵⁷ were also located outside the town walls. The church was consecrated in 1573 by Bishop Stanisław Karnkowski.¹⁵⁸ The church and the hospital were also depicted in a 1734 view painted by Frederick Bernard Werner.¹⁵⁹ Thanks to this painting, we know that they were located exactly opposite Poznańska Gate. The conducted archaeological research confirmed this, leading to excavation of several church graves and an ossuary.¹⁶⁰

The 1585 visitation carried out by Kacper Chronovius, Cantor of Kruszwica, on the order of Bishop Hieronim Rozdrażewski, provides information about six churches:

- 1) St. Nicholas church, inside town walls, with royal patronage;¹⁶¹
- 2) BVM church, located outside town walls, formerly serving as a parish church, and at the time of the visitation, as a subsidiary of St. Nicholas church, with the royal right of patronage;¹⁶²
- 3) monastic church of the Franciscans, not included in the visitation;
- 4) St. James church, serving as a provostry and church at the same time, located in the suburbs, outside the town walls,¹⁶³ with the royal patronage;

- 5) Corpus Christi church, also located in the suburbs, far outside the town,¹⁶⁴ with the burghers' patronage. It was funded by a burgher from Włocławek, Henryk Bug, on whose behalf the masses were to be held. There is no information about the church's consecration;¹⁶⁵
- 6) Holy Spirit church, with a hospital provostry, and the royal patronage.¹⁶⁶

The visitation carried out in July 1596 confirms the existence of two parishes: St. Nicholas parish in the town and BVM parish outside the town, and two chapels: the Corpus Christi chapel and the Holy Cross chapel. There were also two hospitals – Holy Spirit Hospital and Holy Cross Hospital, and one St. James Prebend.¹⁶⁷ There could be cemeteries located next to all the above-mentioned churches.

III.6.13.4 KALISZ IN THE MIDDLE OF THE SIXTEENTH CENTURY¹

Urszula Sowina, Tomasz Związek, Tomasz Panecki

The map of Kalisz at the middle of the sixteenth century has primarily been reconstructed based on the results of historical, archaeological, and cartographic research published to date, as coupled with the author's own research into written and cartographic records. The most important written sources are the relevant documents published, mainly, in *Kodeks dyplomatyczny Wielkopolski*, manuscript records in the *Metrica Regni Poloniae*, the registers of Kalisz land, castle, and municipal courts. Sixteenth-century canonical visitation records have also been used, along with data from tax registers or rolls. The adoption of the middle, rather than the end, of the sixteenth century as the chronological caesura basically stems from the fact that a fire consumed the city in the year 1537. The years following the conflagration saw Kalisz being intensely rebuilt and reconstructed – as minutely evidenced by the earliest preserved town court books, dated 1537–47. Detailed source-based analyses of the following decades in the city's history would have exceeded the scope of the present series. Let us add that the existing, highly unsatisfactory, research on the city has not made use of the municipal registers, the history of Kalisz in the latter half of the second century has been shown superfluously and, in many cases, with no reference to source material. Hence, this text seeks to deepen the present knowledge on Kalisz on the verge of the modern era. The present studies will be followed up to produce a history of Kalisz as part of the series entitled *Historical Atlas of Polish Towns* (the outcome of detailed research will be published in the years to come).

Kalisz is situated on the Kalisz Upland, in the southern part of the area of sixteenth-century Voivodeship of Kalisz. The city is located on the floodplain of the meandering Proсна (Przosna) River, which is fed at the Old Town section by the Swędnia (Swędra).² The hydrographic and other topographic elements have been reconstructed using the retrogressive method, making use of the plans from the first half of the nineteenth century. Those maps render the status of the hydrography before the regulation of the rivers (after 1842), a project that was devised to ensure the city's flood protection. It can be assumed that the course of the rivers in the earliest cartographic representations ought to correspond with that in the preceding centuries; it is otherwise known that the changing riverbed of the Proсна caused the transferral of the town, in the thirteenth century, to its present place. Floods related to the city's location on a floodplain area used to be characteristic of Kalisz. The first such flood is recorded in 1698,³ though it was not the first-ever one.

Three plans have been used in our cartographic reconstruction of Kalisz and its closest vicinity – namely, (i) the one by Politalski-Wolle (a redraw from the 1785 map);⁴ (ii) the plan

¹ A vast portion of this text is written by Urszula Sowina. The passages on the Jewish population, city-owned villages, and road network are by Tomasz Związek, the commentary's editor; Tomasz Panecki has authored the environmental and cartographic introduction. In compiling this section, the authors reciprocally exchanged the records they had found, studies, and observations regarding the history of Kalisz.

of Kalisz and its surroundings from around 1820;⁵ and, (iii) the *Plan des Environs de Kalisz* from c. 1835.⁶

The first was redrawn in 1878 by Ottomar Wolle, from a circa-1800 redraw of the plan by Andrzej Politalski, drawn up in 1785 on commission of the Kalisz Commission of Good Order. The scale, as noted on the map, is approximately 1:3,000 (200 cubits equalling 3.9 cm). The map encompasses a rather small area, of approximately 2.1 km², including Kalisz surrounded by the Prosna; the suburbs: Wrocławskie (Wrocław/*Breslau*), Toruńskie (Toruń/*Thorn*), and Piskorzewskie (Piskorzewo), plus the village of Czaszki. The content primarily consists of the network of roads (with no clear categories specified) and streets (with their names), as well as buildings, structures, and housing developments, classed into wooden and brick, defensive walls, towers/bastilles, and gates. Land plots within the city's area are marked as well. The picture is complemented by the land cover and descriptions of individual (sub)divisions, some having the type of ownership specified. Apart from hills and elevations, quite schematically represented in the neighbourhood of Tyniec and Majków, the plan does not reflect the landforms, and so the Prosna valley is not marked. The content is complemented by forty-one explanatory notes referring to the town's important sites and structures, including churches, monasteries, public buildings, or infrastructure, as of 1785.

The plan in question was used for the drawing of the city of Kalisz inside the walls, owing to its focus on details and enabling analysis of not only the built-up areas and developments but also the deployment of parcels across the town. Its small spatial scope is a disadvantage, though; hence, in our reconstruction of the areas adjacent to the city, we have made use of two maps of Kalisz and its surrounding area, dated around 1820 and 1835.

The first is a black-and-white photographic reconstruction retrieved from Henryk Münch's study on the layouts of Greater Polish towns.⁷ It is dated circa 1820, the reproduction scale being approximately 1:16,700, calculated based on the linear scale. The plan, compiled in French (with Polish names of the nearby localities), shows probably but a segment of a larger whole (probably, the south-eastern part between Kościelna Wieś and Rajsków). It spans over a 17 km² area encompassing: the city of Kalisz, with no singled-out (described) suburbs; the villages of Majków (description only, no development area featured), Tyniec, Stare Miasto (Old Town), Raysków (Rajsków), Zawodzie, Zagórzyniek, Rypinek, Czaszki, and Ogrody, plus three (unnamed) brickyards and a mill named Korszak (Korczak). The content consists of topographic elements such as road network (two categories, corresponding the road's importance), land cover and use (urban development, peasant homesteads/farmhouses, gardens, woodlots, cemeteries), and topographic features (windmills, mills). The topographical relief, marked with hatchings (probably, using the Lehmann method⁸), vividly shows the terrace and excellently harmonises with the hydrography of the Prosna and its branches. In spite of a smaller amount of detail, compared to the Politalski-Wolle plan, the major city's features are identifiable, including market-square area developments, the churches of St. Nicholas, Our Lady, church-and-convent complexes – Franciscan, Bernardine, Reformati Friars', and former Jesuit; also, the Voivodeship School, and an evangelical cemetery. It is the earliest, and basically the most accurate cartographic image of Kalisz and its surrounding area of such range.⁹ It has been used to draw the topographic features – roads and ground cover, and to localise objects or features, pre-eminently outside the city's limits.

Partly useful, particularly for localisation of features outside Kalisz, was another map of the town's neighbourhood, compiled in the scale 1:21,000 and published in 1835 as a manually coloured lithograph.¹⁰ The inscriptions are in two languages, French and Russian, which in some cases leads

⁵ Münch, Tab. XVIII. In the interwar period of 1918–39, the plan was kept at the Central Archives of Historical Records [AGAD].

Trzebiński, *Wieloarkuszowe mapy topograficzne ziem polskich 1576–1870*, Wrocław–Warsaw–Cracow 1983 (Centralny Katalog Zbiorów Kartograficznych w Polsce, vol. 5), p. 50 (item 94).

to distorted toponyms. The map encompasses over 200 km² of the vicinity of Kalisz – the city itself, due to the scale, being represented in a much generalised fashion. It only shows a schematic network of streets and simplified development; there are no descriptions of the suburbs. Apart from Kalisz, all the localities, surrounding settlements, sites and structures (such as churches, mills, cemeteries) are specified.¹¹ The content of this particular cartographic record corresponds with that of large-scale topographic maps.

The chartered town of Kalisz was founded in the place situated higher than the earlier settlement segments within the urban area.¹² Kalisz was not unique in this respect; due to the floods intensifying since the thirteenth century, many towns would be situated on elevated sites, yet close to the river. Kalisz was founded at the narrowest section of the Prosna Valley,¹³ which facilitated the crossing. The passage probably functioned as an indispensable element of the so-called new Toruń road¹⁴ linking Silesia, Greater Poland, and the Teutonic Order State. The Silesian-Teutonic route became the axis of the new locality.

As is known, Kalisz was founded under the Środa Law by Duke Boleslaus the Pious (Bolesław Pobożny). The establishment of Kalisz under the German Law took place after 1253, the date the duke took power over the town, and before 1268, being the date of issuance by Boleslaus of a document ‘ad communem civitatis nostre Kalis civiumque omnium ibidem utilitatem’¹⁵ – a formula that indisputably testifies that a reshaped urban commune existed there at the time. Marta Młynarska, who is the first scholar to have presented, in a systematised and well-grounded manner, based upon written and archaeological sources, the evolution of Kalisz toward foundation, believes that this quite long-lasting process was not completed before 1303, with the city’s division into two parishes.¹⁶

Revising the document issued by Duke Przemysł II in 1282,¹⁷ renewing and confirming the legal foundation of the city, we cannot preclude that the spatial layout of the city had been established before that event. Based on the document, it is clear that Kalisz had a strictly determined inner urban space, close to which a mill had already been functioning. In his analysis of plans of towns, Henryk Münch has noticed that Kalisz underwent a ‘process of formation of an oval shape of the market-place, which proved conclusive for urban settlements’.¹⁸ Should we accept this view, then – still based on the *intra muros* plan of Kalisz – we would find that in the course of the spatial rearrangement the market was marked out at the centre of the square and the oval-shaped space between the market square and each of the later-erected gates were occupied by development blocks. Tadeusz Lalik, opposing Münch’s view on the oval-shaped layout of the town and its pre-foundation origin, gives the urban layout of Kalisz as an example of what he describes as ‘the most frequent type of layout ... in small and medium-sized towns with walls or retrenchments’. According to this scholar, whose view we accept as definitely prevailing over Münch’s concepts (which has been rejected also by other mediaevalists), ‘the transport and traffic was subordinated to the two opposite gates: the streets going out of the market’s corners

¹¹ This map has enabled to localise Dobrcza Mała and the Jewish cemetery in Czaszki.

¹⁵ Based on the edition in KDW I, no. 389, dated therein at 1260 (as noted in vol. 1’s index, this dating is erroneous; the correct date, as noted in the index, is 1268). M. Młynarska believes that the incorporation was completed before that date (eadem, *Proces lokacji Kalisza*, [in:] *Osiemnaście wieków Kalisza*, vol. 1, ed. A. Gąsiorowski, Kalisz 1960, p. 115; eadem, *W sprawie kościoła Panny Marii w Kaliszu i podziału miasta na dwie parafie w 1303 roku*, [in:] *Kalisz na przestrzeni wieków*, p. 203). The document’s original copy, kept at the AGAD (dok. perg. no. 3371), is dated 1268 – as in J. Senkowski, I. Sułkowska, *Archiwum dokumentowe miasta Kalisza*, [in:] *Osiemnaście wieków Kalisza*, vol. 1, p. 300. Ibidem, on p. 295, the author’s refer to the 1869 edition of the document, published in *Kališkija Gubernskija Vedomosti*, vol. 30, 1869, 494–5, no. 1 [*non vidi*], also dated 1268. A. Wędzki, *Lokacja Kalisza*, [in:] *Dzieje Kalisza*, p. 70 and, recently, U. Sowina, *Ze studiów nad zaopatrzeniem w wodę późnośredniowiecznego i wczesnonowożytnego Kalisza*, [in:] *Kalisz na przestrzeni wieków*, p. 214, among other authors, have accepted this very date.

¹⁶ M. Młynarska, *Proces lokacji*, pp. 109 and 112, with reference to the 1303 document, in KDW II, no. 876.

¹⁷ KDW I, no. 511.

¹⁸ Münch, p. 187.

toward the gates converged into curves not far away from them ... and therefore the market and the main traffic route, marked by the two opposite pairs of streets, became oval-shaped.¹⁹

The regularity of the layout of the chartered town, though enclosed within the oval line of the *intra muros* urban area and additionally limited by the arms of the Prosna, is indicative of a systematic (though not necessarily one-time) measurement of the locality. This is attested, at least, by the shape of all the three market-square blocks: two of them (north-western and south-eastern) echoing the market's rectangle and two (south-western and north-eastern) being almost square-shaped, as well as that of at least three corner land plots with identical width module – i.e. fifty thirteenth-century feet, 1 foot = 0.313 m. Yet, this latter data is preliminary and calls for deeper investigation, including measurement, in feet and ells, of the market square and the market blocks (possibly, using land-survey grids, scale 1:1,000). The existing studies specify the present-day size, in metres: namely, 91 x 113 m for the market, 74 x 74 m – the shorter market sides, 48–50 x 70–75 m – the longer market sides.²⁰ As noted by M. Młynarska, two ducal documents, dated 1289 and 1291, refer to the development of the market square itself (*circulum fori*) at that time.²¹ The 1289 deed by Przemysław II put all the stalls (*omnes apothecas institorias*) inside the market space, which could be built there within (save for the sixth one, to be owned by the vogt), into use by the town.²² By means of the 1291 deed, the duke granted to the town the already functioning cloth-hall or cloth stalls (the document uses the phrase *venditorii, ubi panni venduntur* alternately with *camerae*) he had hitherto owned, together with all the related income.²³ It was most probably at that time that a drainage channel was dug through the market, referred to in a 1303 document as ‘*fluvium qui currit per medium forum*’.²⁴ Not only did this facility improve the commercial and stall-related activities in the Kalisz market but also became – along its length, from the market into outside the city – an important section of the border between the two parishes, as drawn in that particular deed. The channel drained off excessive water from the market, starting, in all probability, at the outlet (adjacent to the market) of Toruńska Street, as the parish's border entered the city area with this street. Then, the canal might have been set diagonally across the market, and then went along the street identified herein as the *platea pecorum* (see below), up to the Nad Kanałem (Above the Channel) Gate.²⁵ No record has been found so far that would confirm that the channel still functioned in the sixteenth century; therefore, it is not plotted on our plan, though the modern-time name of the gate²⁶ has at least preserved the memory of that watercourse.

In reconstructing the map of Kalisz for the middle of the sixteenth century, it has to be borne in mind that the time was one of a great reconstruction after the entire city area *intra muros* was consumed by fire that broke out on 20 July 1537. The occurrence was described by the councillors in the opening page of the surviving town court book of Kalisz: ‘*civitas ipsa tota, templa omnia, arx, pretorium, torres et domus omnes ad fundum cremate sunt*’.²⁷

Before the conflagration, Kalisz was a major urban centre in Greater Poland, second only to Poznań. A 1520 capitation register mentions Kalisz as the major *secundi ordinis* centre, ranked higher than Kościan and Wschowa.²⁸ The Kalisz town court books from the late 1530s/early 1540s abound

²⁴ *Ibidem*, no. 876. That is was an artificial canal, rather than an arm of the Prosna, as it had hitherto been believed, see in U. Sowina, *Ze studiów nad zaopatrzeniem w wodę*, p. 218.

²⁵ Widawski, *Mury*, p. 163.

²⁶ *Ibidem*.

²⁷ AmK, I/6, 1 (1537). Leaving the Kalisz fires for a separate discussion, it is worth noting that Kalisz was on fire also in 1458; see T. Jurek, *Żydzi w późnośredniowiecznym Kaliszu*, “Rocznik Kaliski”, vol. 24, 1992/1993, p. 44 and footnote 141 on p. 53 (letters burnt in that fire), and a reference source to Kalisz Gr. 26, f. 39v. As we can read in that book: “f. 5 ante f. Penthecosten 1461 (21.05.1461) veniens Slawa Cawyanowa Judea cum Jacobo filio suo legitimo indiviso in Calisch literas et Jura que habuerunt super villam Chelstowo que debuerunt restituere nobili Stachna de ibidem recognoverunt quia eadem iura et munimenta tempore quo civitas Calisch per ignem fuit consumpta. Ideo omnes literas et munimenta seu Jura si que habuerunt illa mortifica(n)t et in nichilum redigus super quo ipsa Stachna adiudicatum solvit”.

²⁸ VC, vol. 1, part 1, 361.

with mentions of a *aree* – – *pro domo edificanda*, testifying to an animated construction activity that followed the fire. As we can learn from the period's notes, the movement was initiated by the town council of Kalisz, which assigned land allotments owned by it (*aree civiles*) to the burghers, temporarily exempting them from the rent, with the obligation to have them developed within one to three years.²⁹ In case of failure to meet the deadline, the council would take the plot away and transfer it to someone else. This procedure enforced fast rebuilding of the town. Apart from founding a new house on their burnt parcels, the burghers were obligated to build underground rainwater canals. The almost unanimous warrants of the municipal authorities, those canals were used to provide water for fire-protection purposes.³⁰

As determined by Stanisław Herbst, Kalisz was reconstructed after the fire still in a Gothic style; Renaissance-oriented alterations in its architecture were only made by the Italian builders who arrived in Kalisz together with the Jesuits.³¹ Although the year 1537 saw the burning down of the city's buildings and houses, arguably the efficient organisation of destruction removal has preserved the mediaeval form of the chartered *intra muros* town, with its limits, road network, and development blocks, as identifiable in the much later maps, beginning with that by Politalski-Wolle. In the opinion of Teresa Zarębska, 'laid out on an isle area, this high mediaeval town [i.e. Kalisz] ranks among the most excellent specimens of Polis town-planning of that era'.³²

It is the considerably intensified development of empty parcels after the 1537 fire that caused the amassment of data on *intra muros*-Kalisz's streets, specified in the city's register of 1537–47.

There is the market with the town hall and stalls, in the first place. Attested since 1372, the town hall of Kalisz³³ very soon recovered after the fire of 20 July 1537. The earliest surviving town court book covering the first transaction, dated 31 August, the town hall is referred to as the site of such transactions (*actum in pretorio Calisiensi*). This may attest to its expeditious restoration, at least to the condition enabling it to host sessions of the town council at full strength, in presence of the starost.³⁴ Andrzej Nowak and Władysław Rusiński,³⁵ drawing on the findings of Kazimierz Stefański,³⁶ also state that the town hall was rebuilt very quickly, giving as a proof merely the fixing in 1542 of a new clock on the town-hall tower; yet, this fact might have only attested to the completion of the tower itself before the clock was fixed. The town hall building was in fact restored a few weeks after the fire and functioned, probably, until redeveloped in the early seventeenth century when a Renaissance attic was added and the tower crowned with a cupola.³⁷

The reconstruction and (re)arrangement of the market area, which holds true as well for the city's other parts, continued for two years after the fire, as is described (for example) in the 1539 town court book, which tells us that brick houses and brick stalls were rebuilt at that time.³⁸ Kazimierz Stefański notes that it was not before 1549 that the municipality concluded its final (re)construction contract with a certain Jan, a mason from Poznań, who had been hired by the city authorities as a reconstruction worker right after the fire.³⁹

³⁷ S. Herbst, *Kalisz renesansowy*, p. 100.

³⁸ AmK, I/6, 65 (1539): permit for the burgomaster to have his parcel (owned by him before the fire as well) developed. Given the lack of written or archaeological sources, we cannot tell the extent to which the fifteenth-century Kalisz market was surrounded with brick houses forming the frontages. To date, a mention on one of them – possessed by Mikołaj, and Old-Town miller – dated 3 February 1463, has been found in a town court book.

³⁹ K. Stefański, *Mieszczanstwo kaliskie*, p. 40.

Shortly after the fire, the city's two main streets connecting the market with the two main gates, were mentioned in a town court book. The names of these arteries, identical with those of the city's two main gates, suggest that these very two streets formed the intra-town section of the Wrocław–Toruń transport and commercial route. The street Toruńska (*platea Thorunensis*), linking the market with the Toruńska Gate, was mentioned as of 5 September 1537;⁴⁰ it was also named 'Długa (Long) or Toruńska' (*platea Longa seu Thorunensis*).⁴¹ The street named Wrocławska (*platea Wratislaviensis*) was mentioned on 28 September 1537⁴² and, subsequently, in 1538⁴³ and 1545, as reaching the city wall and a street by that wall.⁴⁴ The first of those references informs on a land plot by the street, adjacent to the rear area of another plot whose front faced the street Mnichów (*platea Monachorum*). This piece of information has enabled us to localise this latter street as forming a curve from the market to the Wrocławska Gate (in the Politalski-Wolle plan, the street is named św. Stanisława (St. Stanislaus)), thus acting as an alternative artery for Wrocławska St., and being part of the city's axial layout.⁴⁵ The traffic line further extended toward the Toruńska Gate along Najświętszej Marii Panny (Blessed Virgin Mary) Street (attested, *inter alia*, as of 1440⁴⁶), by which the Blessed Virgin Mary church stood since the end of the thirteenth century,⁴⁷ which in light of the aforementioned document from 1303 was the major temple in the chartered town of Kalisz.⁴⁸ Ever since, it moreover became the parish church for the north-eastern part of the town and its adjacent areas.⁴⁹ Around the middle of the fourteenth century, Archbishop Jarosław Bogoria Skotnicki ordered that an archiepiscopal palace be built near the Collegiate church of Blessed Virgin Mary. Tadeusz Poklewski-Kozieł and Maria Żemigala quote a 1583 description of the palace: this two-storey edifice had, in its 'east-facing gable', a passageway 'to the Collegiate-Church's loft' (i.e., from the upper storey). 'All ramshackle' at that time, it was given to the Jesuits who had arrived in the city as their 'abode'.⁵⁰

The other streets leading out of the market were six routes perpendicular to the city's main axis and to the four arteries described above. In the time concerned, all the six streets reached the city walls line. Sixteenth-century names have been attached to some of those six streets based on the literature and our own archive search.

⁴⁰ AmK, I/6, 3; also, see T. Jurek, *Żydzi*, p. 30 and footnote 16, 49, with a reference to AmK, I/53, 108; also, see AmK, I/6, 20.

⁴¹ AmK, I/6, 4–5, 21. The two simultaneously appearing names have enabled to identify Długa St. (*platea Longa*), mentioned as of 1423 and 1443; cf. AGAD, dok. perg. nos. 3449 & 6636 [*non vidi*]; cf. J. Senkowski, I. Sułkowska, *Archiwum dokumentowe miasta Kalisza*, no. 55, p. 317.

⁴² AmK, I/6, 5.

⁴³ *Ibidem*, 44.

⁴⁴ AmK, I/54, 367: "domum suam sittam in platea Vratislaviensi penes murum civilem ex una et plateam ex altera".

⁴⁵ It can be added that the three streets in question (apart from the market and the other four streets – cf. below) are noted in the document issued by Wojciech, Archbishop of Gniezno, dated 1429: KDW V, no. 497. The name '*platea Monachorum*' also appears in a 1470 municipal register – as two houses in that street were owned by the Castellan of Wieluń; see Kalisz Gr. 27, f. 112. The street is mentioned in the city's book since 1538; AmK, I/6, 13.

⁴⁶ AGAD, dok. perg. no. 3493.

⁴⁷ M. Młynarska, *Proces lokacji*, p. 119.

⁴⁸ This is how the church is described, based on a minute primary-source analysis, by I. Skierska, *Konflikty międzyparafialne w późnośredniowiecznym Kaliszu*, RH, vol. 70, 2004, p. 145–166. The annex contains a printed copy of the 1303 document.

⁴⁹ The date the church was set up and had the functions of its namesake Old-Town temple transferred thereto is subject to a noteworthy debate initiated by M. Żemigala (earlier supported by T. Poklewski-Kozieł). Based on a penetrating analysis of the archaeological material and of the 1303 document, she believes that the latter refers to the Blessed Virgin Mary church in the Old Town and that the transferral took place "after 1342, rather than before 1303", given the *terminus post quem* for the construction of the brick church of the Blessed Virgin Mary in the chartered town, on initiative of Archbishop Jarosław Bogoria Skotnicki; cf. M. Żemigala, *Cegła w budownictwie wielkopolskim w średniowieczu*, Łódź 2008, pp. 63–65, and (recently, as a follow-up) M. Młynarska, *W sprawie kościoła Panny Marii w Kaliszu*, pp. 208–209 (changing her previous view). I personally [U.Sowina] opt here for the late thirteenth/early fourteenth century, i.e. just before or in 1303 – this being based on analysis of the 1303 document, particularly its two fragments: on the transferral of the temple, following the believers, from the Old Town area to the chartered town (I. Skierska, *Konflikty międzyparafialne*, p. 153, shares this view), and on the processions to go from St. Nicholas's church to the Blessed Virgin Mary's, as mandated by the archbishop, 'at the Great Litany' (25 April) and on the Cross-Days, i.e. Monday, Tuesday, and Wednesday before the moveable feast of the Ascension, forty days after the Easter (cf. *ibidem*, 146). A short procession distance within the chartered town seems easier to cover in springtime than the one of over 1 kilometre, from St. Nicholas's to the Old-Town Blessed Virgin Mary's church, though the wetland by the Proсна.

⁵⁰ T. Poklewski-Kozieł, M. Żemigala, *Przestrzeń "niemiejska" w czternastowiecznym Kaliszu w oczach archeologa*, [in:] *Civitas et villa. Miasto i wieś średniowiecznej Europy Środkowej*, ed. C. Buško i in., Wrocław–Prahá 2002, p. 162.

Out of the market's south-western corner, Żydowska (Jewish) Street stretched, of which the earliest mention, dated 1542, has been found by Tomasz Jurek in the earliest preserved town court book.⁵¹ Another mention comes from 1543, part of a description of the terms of extension of a water-supply canal from the public water-supply cistern at the market into the Jewish district.⁵² According to Jurek, Kalisz might have been home to the earliest attested group of Jews within Poland.⁵³

The actual number of Jews residing in Kalisz in the mid-sixteenth century is unknown. An extant breakdown of the amounts due yet unpaid (so-called *retentas*) in the 1552 extraordinary collection from Kalisz district names nineteen persons who have paid the overdue tax.⁵⁴ It is not certain, though, whether the names were those of Jews dwelling in Kalisz itself, as some of them might have been from other urban centres in the county.⁵⁵ Twelve men (less the 'old' and widows) multiplied by nine or ten residents (the predictor adopted in the studies on Warsaw, for instance) per Jewish household would make 108–120 persons; using the predictor proposed by Zenon Guldon (twenty persons per house) makes 240. None of these figures contains the indigent (*pauperes*), as such individuals were customarily exempted from paying and therefore now elude historical statistics.⁵⁶ Consequently, the list from 1552 could not serve as the basis for calculating the indicative population of Jews dwelling in Kalisz in the period concerned.⁵⁷ The demographic estimates have been based on a 1579 tax register which recorded the payment of head tax (*pogłównie*) at 130 florins (3,300 *grosz*) from a total of 170 persons of the 'Mosaic faith', of which forty were described as *pauperes*.⁵⁸ As per the tax registers from 1563, the Jewish community paid 3,000 *grosz* and a year later, 3,300 *grosz*, which perhaps attests to an increased Jewish population of Kalisz.⁵⁹ Based on the data on the Jewish people and the amount paid by them in 1579, we can estimate, by analogy, in the mid-sixteenth century Kalisz might have been populated by a hundred residents of the Jewish religion, including the poor, who amounted to approximately 25% of the community. It is worthy of noting that according to the visitation record dated 1564, there were eighteen Jewish houses at that time in Kalisz and a synagogue (school);⁶⁰ this would mean that the Jewish community in question was one of the smallest average-sized Jewish colonies in the Crown (Kingdom of Poland) at that time.⁶¹ To compare, a definitely larger community within the Voivodeship of Kalisz was the community of Gniezno, with its twenty-two houses occupied by Jews only, plus five other 'hired at Christians'.⁶² The communities comparable as to size were, arguably, those of Międzyrzecz, Skwierzyna, and Śrem (eighteen, seventeen, and eighteen houses, respectively).⁶³

⁵¹ T. Jurek, *Żydzi*, footnote 11, p. 49, with a reference source to AmK, I/6, 137 (f. 69 in the old pagination).

⁵² AmK, I/6, 173. For more on this topic, see U. Sowina, *Woda i ludzie w mieście późnośredniowiecznym i wczesnonożytynym. Ziemia polskie z Europą w tle*, Warsaw 2009, p. 332.

⁵³ T. Jurek, *Żydzi*, p. 29; cf. H. Zaremska, *Żydzi w średniowiecznej Polsce. Gmina krakowska*, Warsaw 2011, pp. 116–142.

⁵⁴ Those enumerated included: Haskiel, Salomon, Józef Koźmin (Kozmyn), Jachny, Michał, Lewek (Lyewek), Izaak the elder, Daniel Sieradzki (Sziraczky), Abraham the elder, Izaak Talha, Józef the rope-maker, Izaak, son-in-law of Michał, Bieniasz, son-in-law of Bieniasz, Izaak, brother of the elder Izaak, and Mojżesz the old, of Nakło. Two widows, Aaron's and Szmaj's, complemented the list; ASK I 12, f. 512v.

⁵⁵ Iwanowice was the only locality in Kalisz County which before the mid-sixteenth century might have been home to Jews; see J. Suproniuk, 'Jews in Greater Poland's towns', [in:] AHP Greater Poland, pp. 155, 165, in this edition III.2.2d.4. The fact that Daniel Sieradzki is also known from the records in the earliest municipal register, might suggest that those Jews actually came from Kalisz; U. Sowina, *Woda i ludzie*, p. 332.

⁵⁶ H. Zaremska, *Żydzi w średniowiecznej Polsce*, pp. 254 and 263.

⁵⁷ The idea to adopt purely theoretical figures for the predictor 'number of residents per house(hold)' has been quit, since – as demonstrated by M. Wieczerski's (unpublished) studies, in the literature covering the fifteenth to sixteenth centuries' period, the said predictor oscillated between eleven up to one-hundred individuals per house. For more on the relevant predictors, see M. Wieczerski (Poznań), *Demograficzne aspekty osadnictwa żydowskiego w Polsce w XVI i połowie XVII w.*, an unpublished master thesis, kept at Warsaw's Jewish Historical Institute [ŻIH], 24–36, esp. Tab. 6 ('Population density per Jewish house, in historians' opinion') and Tab. 9 ('The residential relations in the Jewish district of Poznań, 1619'). We owe the information on this dissertation to Jarosław Suproniuk, MA.

⁶³ Ibidem, 271–2.

Due to scarcity of precise sociotopographic studies of Kalisz, it is not known what real space in the town's area, within the individual parcels, was occupied by Jews. This is precisely why we have resolved not to mark on our map, by means of singling out, the Jewish district and school. The localisation of the synagogue (as plotted) is based, in turn, on the Politalski-Wolle plan.

The extension of Żydowska St. from the market's south-eastern corner to the city walls was a street identified during our research as *platea pec(c)orum*, that is, Bydlęca (Bovine) St., mentioned a century earlier, in 1442, in one of the castle court books.⁶⁴ In the oldest town court book, it is noted, e.g., as of 1539 and then 1540 – the date a water-supply facility was extended to it, and, 1543 – more burghers gradually getting connected to the water-supply system.⁶⁵ As it went out of the market, it was one of Kalisz's main streets, at times mistakenly named Szkocka (Scottish) (before the Scots arrived), instead of Skotska.⁶⁶ It was this route that the canal draining water from the market went through, up to the Nad Kanałem Gate, in the late thirteenth/early fourteenth century. Hence, in 1303, the street functioned as the border between the two parishes of Kalisz. As it seems, the entire development block between this street and the above-identified Mníchów St. was occupied by the monastery of (with St. Stanislaus's church) the Franciscan friars who had arrived in Kalisz at the time of its foundation under the German/Środa Law.⁶⁷

Each of the two subsequent parallel streets crossed halfway through the north-western and south-eastern development block adjacent to the market, respectively. The former was Piskorzewska St., leading to the namesake gate, beyond which the area of Piskorzewie stretched.⁶⁸ The street is mentioned in the aforementioned Gniezno Archbishop's document dated 1429,⁶⁹ and in the files of the Lands Tribunal of Kalisz – in 1462, when Iwan and Maciej of Czerminek (*de Czermyno*) are reported to have yielded to Iwan of Golina, for 30 marks, a plot of land behind the malt-house of Jan Borkowski and Tomasz Nadolny in *platea Pyskorzeviensi*.⁷⁰ The street was mentioned in the city's register since 1538.⁷¹ A house (unlocalised) in this street was bought in 1595 by Jews.⁷² The south-eastern block of the Kalisz market was cut across by Piekarska (Bakers') Street (*platea pistorum*), a development plot which was provided by the councillors in 1538.⁷³ Among the most interesting mentions of this street detected in Kalisz town court books is the one dated 1541, stating that one of Kalisz maltsters yielded a half of his malt land-plot to another maltster. The plot, measured out long before, was located in Piekarska St., between the 'public road' (*via publica*) and a malt-house (*mielcuch*) owned by a certain Trzęsigłówa.⁷⁴ Apparently, there was a public road going along the south-eastern frontage of the market, being a section (distinct by its name) of one of the main arteries in Kalisz, connecting the streets Mníchów and Najświętszej Marii Panny, and thus forming part of the Wrocław–Toruń route which cut through the city. It is worth reminding that an analogous situation was found in Sieradz for the 1530s' decade which has allowed for a more precise measurement of the local market.⁷⁵ As for Piekarska St., along its section adjacent to the wall another malt plot has been detected, this time belonging to a cloth-cutter who happened to

⁶⁴ Kalisz Gr 20, f. 85: the *honorabilis Martinus Swemicz de Rosozicza*, Notary to the King, had his house there (note found by Tomasz Jurek and shared with U. Sowina, who hereby acknowledges this).

⁷⁵ U. Sowina, *Sieradz. Układ przestrzenny i społeczeństwo miasta w XV–XVI w.*, Warszawa–Sieradz 1991, p. 26 – the *via publica* along one of the market's frontages formed a section of the Poznań–Cracow (Great Poland–Lesser Poland) route.

be the Vogt of Kalisz; the plot was located close to the city stable and the city wall.⁷⁶ From the north-western corner of the market, toward the parish church of St. Nicholas's,⁷⁷ a so-named street went, attested (*inter alia*) in 1545.⁷⁸ As per the Politalski-Wolle plan, a street called Łaziebna led out of the north-eastern corner of the market. The tradition of this name dates back to at least 1598, the year in which a document by King Sigismund III Vasa (Zygmunt III Waza) mentions a street 'commonly named Łaziebna', ending with a city gate⁷⁹ (more to be said below). The name suggests that baths functioned nearby, most probably by the river, within the *extra muros* space.⁸⁰

Among the identified side streets, let us point to Grodzka,⁸¹ a street that starts at the foot of the castle and runs along one of its sides and then by St. Nicholas's church, most probably up to Piskorzewska St. In the aforementioned town court book, Grodzka (Castle) St. is mentioned in 1537⁸² and two years later as *platea Castrensis*.⁸³ The latter mention refers to a burgher's house: 'in platea Castrensi penes plateam transversalem Latere ad domum Joannis Kupiecz ['merchant'], civis Calisiensis'. This persuades us to identify the place with the crossing of Grodzka St. and its perpendicular street, called Przekczna,⁸⁴ reaching Toruńska St. The name *platea Castri* had appeared in the *Metrica Regni Poloniae* as a house located on this street was sold in 1472, for 40 marks, to the Castellan of Kalisz.⁸⁵ The details about Grodzka St. gathered so far show the area's dual sociotopographic character. Closer to the castle, the local nobility associated with the castle owned their houses, the more remote houses being owned by burghers.⁸⁶ Around the castle, its appurtenant area stretched, whose size has not been determined yet. As of 1503, this area remained at least partly undeveloped, and could still be split into plots (*aree*). One testifying example is the king's lifetime donation of one such plot 'in civitate Calisiensi, in spatio castrensi immediate sub castro iacentem' for a Gniezno canon.⁸⁷ Another side street, being a gate street, most probably diverging from Most Blessed Virgin Mary St. and reaching the eastern gate (unnamed⁸⁸), was Furteczna⁸⁹/Forteczna⁹⁰ (Wicket-Gate) St. (*platea fortens(s) [sic]*), which after the 1537 fire was another area busy with construction.⁹¹ Earlier on, in 1519, the street was mentioned in the records of the Kalisz consistory as *platea ffurthska/fforthska (furtska/fortska)*.⁹² The street disappeared in the late sixteenth century as the Jesuit convent buildings were

⁷⁶ AmK, I/54, 3 (1541).

⁷⁷ As per the 1303 document, St. Nicholas's church – one of the two parish churches of Kalisz ever since – was earlier a filial church to the Blessed Virgin Mary's church in (still then) the Old Town. According to the aforementioned analysis by I. Skierska (*Konflikty międzyparafialne*, 147 f.) after 1303 it became inferior in importance and competencies to the parish church of the Blessed Virgin Mary. As to the date of its construction, it might have been older than the latter the in-city Blessed Virgin Mary's church; cf., *inter alia*, M. Żemigąła, *Cegła w budownictwie*, pp. 40–8.

⁷⁸ AmK, I/54, 369; earlier on, e.g. in 1429; KDW V, no. 497.

⁷⁹ T. Poklewski-Kozieł and M. Żemigąła, *Przestrzeń "niemiejska"*, p. 162.

⁸⁰ The city baths is attested as of 1526, the date the city councillors sold the facility to Stanisław, a bath attendant; AGAD, dok. perg. no. 3737.

⁸¹ Named 'Przygrodzka' in Politalski-Wolle's plan.

⁸² AmK, I/6, 12 (1537): "Nos consules Civitatis Calisiensis -- dedimus et concessimus aream Civilem ab antique desolatam in platea castrensi sitam penes aream Marcinowa Crawczowa ex una et aream Gregory fabri parte ex altera -- honesto Laurencio sutori civi Calisiensi et suis legitimis successoribus".

⁸³ AmK, I/6, 63.

⁸⁴ Old Polish for 'transversal'; *Słownik polszczyzny XVI wieku* [a dictionary of sixteenth-century Polish], vol. 31, ed. by M.R. Mayenowa, Warsaw 2003, p. 156.

⁸⁵ MRPS I, no. 904 (MK 12, f. 105): "Rex Philippum Suchorzewsky Bartholomaeo de Iwanowicze, castellano Calisiensi, domum in Calis, in platea Castri sitam, pro 40 marcis vendidisse testificatur".

⁸⁶ Let us add at this point that in the city itself there was a considerable proportion of houses belonging to noblemen. Due to scarcity of municipal registers for the mediaeval period, a number of transactions in the city's real properties were entered in the so-called *starosta's* resignation registers. A seventeenth-century list of noble-owned houses in Kalisz has moreover been found in AP Poznań; see AP Poznań, Tabele Kalisz 12, f. 244–246 ("Sors a domibus nobilium in Kalisz existentibus").

⁸⁷ MRPS III, no. 782, 50; MK 20, f. 63.

⁸⁸ Widawski, *Mury*, p. 163.

⁸⁹ As in, for instance, A. Wędzki, *Kalisz gotycki*, [in:] *Dzieje Kalisza*, p. 100.

⁹⁰ The name herein proposed is close to 'Fórtczana' St., used for the same street by J. Widawski, *Miejskie mury obronne*, p. 163.

⁹¹ AmK, I/6, 6, 8, 15, 18.

⁹² ADWł, Akta Archidiecezji Gnieźnieńskiej, Konsystorz Kaliski 11, f. 24r–24v. (The mention has been detected and shared with us by A. Borek, MA, for which we owe him gratitude.)

erected.⁹³ Its disappearance, and the topographic changes in this part of the city related to the settlement of the Jesuits), are referred to in a passage of King Sigismund III Vasa's document from 1598, kept at a Jesuit archive, as published (in the Latin original and a Polish translation) by T. Poklewski-Kozieliński and M. Żemigala: 'so that, in lieu of this street, an alleyway be retained between the church and the brick-house of Mrs. Zaremba, sixty ells wide, with no need for the gate to which such a street is to be conducted, whereas the other city gate, facing the south, at the closest distance to the college from the street commonly called Łaziebna, stands open'.⁹⁴

Not much is known, for the time being, about the topography of the area adjacent of the sixteenth-century city's walls. The town court books and the *Metrica Regni Poloniae* comprise surviving valuable mentions of long-established malt plots related to beer production, in at least some parts of that area. The malt-house (*mielcuch*), at which the first stage of the production was performed – the malt grain, the basic ingredient in the process, was prepared there⁹⁵ – was the most important device on each such plot. Another mention, dating to 1539, has enabled us to situate at least three malt-houses (including one belonging to the burgomaster) opposite the entrance to the parish church of St. Nicholas,⁹⁶ that is, at the end of the street that linked the market to St. Nicholas's church. Let us point out that the rear sides of the plots neighboured along that street with the rear areas of the plots along Piskorzewska St., at which a malt-house operated in 1462 (as aforementioned). Malt-houses – or, in a broader take, 'malt allotments', were assembled not only in that area adjacent to the wall. The year 1539 saw the sale, for 5 marks of such a plot, whose rear side faced the Gniezno archbishop's palace, beside the road going to the city wall, in the neighbourhood of city allotments; the purchaser was Archbishop Jan.⁹⁷ Somewhat further on, near the city stable, between the outlets, adjacent to the wall, of the streets Furteczna/Forteczna (Fortska/Furtska)⁹⁸ and Piekarska,⁹⁹ two other malt plots were situated, referred to in 1538 as the neighbourhood area of the city stable.¹⁰⁰ In 1550, another malt allotment – located at the wall's foot, close to the baths – was collected due to fire peril, and transferred for use of the municipality.¹⁰¹ Finally, at least two mutually adjacent malt-houses were located by the city wall, toward the Franciscan monastery (*versus Monachos Santi Stanislai*). So, malt-houses stretched along the city walls, starting at the rear area of the archbishop's palace and ending at the buildings owned by the Franciscans; some of those along Piekarska St. would reach the market.

The location of Kołodziejska Street¹⁰² has not been determined; it is known that in the sixteenth century Jews purchased houses situated on that street.¹⁰³ The same is true for the streets Szczudłowska¹⁰⁴ or Rybacka, the latter mentioned in 1479,¹⁰⁵ and for a 'toward the shepherd' street.¹⁰⁶ One of the Kalisz castle registers names twice in 1499 the house called Rycerzewski (Riczerzewski), with the plot in Kalisz,

⁹³ A. Wędzki, *Kalisz gotycki*, p. 100. The area occupied in the later period by the Jesuit church and convent is marked on the reconstruction map as no. 9 and ringed black.

⁹⁴ T. Poklewski-Kozieliński and M. Żemigala, *Przestrzeń "niemiejska"*, p. 162.

⁹⁹ AmK, I/54, 3.

¹⁰⁰ AmK, I/6, 29.

¹⁰¹ MRPS V, no. 5067 (MK 79, f. 293–293v): "Donatio areae brasealis sub moenis civitatis Calissiensis in regione balnei sitae Joannis Malgowsky civis Calissiensis propter periculum ignis ex aedificiis eius universae civitati irrogatum et illatum ad dispositionem regiam devolutae civibus Calissiensibus pro usu civitatis".

¹⁰² AmK, I/6, 16, 17, 19 (1538).

¹⁰³ T. Jurek, *Żydzi*, p. 31 and footnote 16, quoting 1579 after: AmK, I/80 (no page number). The author presumes that the street was adjacent to the Jewish district. Let us add that a Jew (*perfidus Judeus*; unnamed) has already appeared in AmK, I/6, 19, as of 1538, as a proprietor of one of the houses in that street.

¹⁰⁴ Both streets are mentioned in the 1429 entry (KDW V, no. 497): the former as the *platea currificum*, i.e. Stelmachów [Cartmakers'] St., cartmakers sometimes identified with wheelwrights (*rotifici*); the latter, as the *platea Szczudłowska*.

¹⁰⁵ The *generosus* Dersław Kwiatkowski, Cup-bearer of Kalisz, sells the ground by the Kalisz wall near Rybacka St. for 100 *grzywns* the nob.[leman] Stanisław Sobotski; TD, 8721 (no. 9, gr. 1386), year 1479.

¹⁰⁶ Kalisz Gr. 30, f. 58 (1499).

at the street going ‘toward the shepherd’, situated between the houses of the cloth-maker Nyezdrowko and the city shepherd. The house, once belonging, ‘by the Polish Law’, to the *generosus* Jan Rycerz, Castellan of Wieluń, was pawned for 10 Hungarian golden florins by Piotr Jarapka, a nobleman, to the *generosus* Szymon Złotkowski, Sword-bearer and Burgrave of Kalisz, for full use by Szymon until the borrowed capital of the said 10 florins be paid off.¹⁰⁷

The defensive fortifications, including the Kalisz castle, are exhaustively described in the literature – most minutely by Jarosław Widawski¹⁰⁸ and then Andrzej Wędzki.¹⁰⁹ Reliable findings regarding the castle in the Middle Ages are described by Tadeusz Poklewski-Koziół.¹¹⁰ The castle’s history and the structure has moreover been covered, *inter alia*, by Marta Młynarska¹¹¹ and Janusz Tomala.¹¹² For our present purpose, it has to be reminded that the fourteenth-century brick structure of the castle probably replaced the burg of Duke Henry the Bearded (Henryk Brodaty) from the preceding century.¹¹³ The castle in its fourteenth-century form became an element of the defensive system of the chartered town of Kalisz, together with the city ramparts built in the same century, albeit Poklewski-Koziół pointed to the overly residence-oriented, rather than defensive function of the castle.¹¹⁴ Although destroyed by the 1537 fire, the castle’s defensive location was still emphasised in the visitation record of 1564–5: ‘This castle stands at the corner of the town, by the Toruńska Gate, together with the city in a good and defensive place, by the River Przosna, which on both sides of the town and the castle pours [out] broadly’.¹¹⁵ In fact, only a small part of the castle was raised from ruins at that time, most of it remaining a site of conflagration.¹¹⁶

The authors concordantly admit that the ramparts of Kalisz¹¹⁷ were erected in the fourteenth century, under King Casimir III the Great (Kazimierz III Wielki), and then extended and redeveloped in the time of Władysław II Jagiełło, Casimir IV Jagiellon (Kazimierz IV Jagiellończyk), and Sigismund I the Old (Zygmunt I Stary). For the purpose of this study, the ramparts/city walls of Kalisz have been drawn based on the Politalski-Wolle plan.

With regards to the city’s gates, the main two are best perceptible in the records. The northern gate is referred to in the literature as Toruńska, as the far-reaching route toward Toruń went through it from the town. First mentioned in a written record in 1283,¹¹⁸ and then, for example, in 1471, the Toruńska Gate is each time regarded as a cardinal point for the location of the land belonging to the Holy Spirit hospital and one of the city’s royal mills, but in neither of the two cases is its name mentioned. In 1471, it was merely remarked that the structure was situated ‘sub castro Calisiensi ante walwam eundo in Thynyec’.¹¹⁹ True, it was called ‘Tyniecka’ earlier on as well, e.g. in 1444.¹²⁰ On Friday, 29 March 1538, the fact that the city’s authorities provided the key to the gate, described as located near the mill, in front of the Holy Spirit hospital, to Stanisław Kokoszka (Cocozsca), the hereditary miller of Kalisz, until the arrival of the Castellan of Poznań, was recorded in the town court book as a particularly important event.¹²¹ The city’s southern gate is attested, as Brama Wrocławska,

as of 1361.¹²² Widawski and, following him, Wędzki specify other gates that apparently existed in fourteenth/fifteenth-century Kalisz. Apart from the aforementioned eastern one (probably, an unnamed gate-wicket; see above) and the Piskorzewska Gate, they refer to the (abovementioned) ‘Nad Kanałem’ Gate, in the south-eastern part of the town,¹²³ through which a watercourse – drainage channel, to be more specific – most probably flowed out into behind the walls, as of 1303 (as discussed above). As an element of the city walls, this particular gate survived at least until 1715 – the date it was immortalised on a painting by Bonifacy Jatkowski, a friar of the local Reformati order, portraying Saint Paschalis adoring Our Lady as well as the painter’s contemporary panorama of Kalisz.¹²⁴ In spite of a ‘condensed’ picture of the buildings, which, in Teresa Ruszczyńska’s opinion, resulted from his willingness to present all the major intramural buildings within the walls, it can be clearly seen that the gate was situated not far from a street that, for the sixteenth century, has been identified above as Bydlęca St. The scarcity of records prevents one from finding whether the street and the gate were united in the sixteenth century the presumed function reflected in the street’s name – namely, the passageway for the cattle to the commons. The above-quoted 1598 document of Sigismund III Vasa¹²⁵ notes one more (the sixth) gate at the outlet of Łaziebna St., as mentioned in the above description of the fading of Furteczna/Forteczna St.

The topographically closest area to the *intra muros* city was Przedmieście Toruńskie (Toruń Suburb), stretching behind the northern gate along the road to Toruń. The *Via Thorunensis* was first named in the already-quoted Boleslaus the Pious’s document of 1268 (once misdated at 1260)¹²⁶ as the direct vicinity of the ten *lans* (*decem mansos*) sold by the duke to the town of Kalisz, for use as pastures, for twelve marks in silver. The area sold to the town was situated between the Toruń road and the one heading for Kokanin, reaching the limits of this village and the one of Borków Stary (Borkowo). This example clearly illustrates that together with the founding of Kalisz under the German Law, the duke did not bestow to the town, as a patrimony, the entire area that had thitherto belonged to it, delineated by the villages neighbouring on the area.

A mill described in the records as situated *sub castro Calisiensi*, as it was indeed situated near the castle, was located in close proximity to the Toruń Gate, in the *extra muros* area. It was, therefore, one of the two mills on the Prosna, the construction of which was given by the king to Maciej the miller, a burgher of Kalisz, in 1361.¹²⁷ These facilities might have been equipped with altogether six, eight, or more wheels. One of those mills would have been erected by the castle, the other one on the other side of the city by the Wrocławska Gate. Their task was to grind grains and kibble malt. This is suggested by the said document as it informs that the maltsters (*mieleczarzs*) and bakers, plus all those who baked or sold breads based in the city, had been imposed the grinding coercion for those mills, the miller Maciej having been exempted from fees for his measure of malt that he could unrestrainedly sell or exchange. The costs of the buildings millstones, and hydraulic installations, such as water dam-up devices (*obstacula*), dykes (*aggeres*), and other – unspecified, were to be distributed between the king (two-thirds) and the miller (one-third). The construction of those royal mills, on both sides of the city, and their strict association with, particularly, the maltsters working thereat possibly testify to a development, in the time concerned, of the malting industry in Kalisz-*intra-muros*, and to the fact that the number of mills at that time must have been unsatisfactory.

The source descriptions of the mill tells us that it functioned between the walls by the castle and the branch of the Prosna right near the Toruńska (Tyniecka) Gate,¹²⁸ which leads us to localising the

facility by the Prosna, on the river's left side. Rather than to the city, it belonged to the king, being part of the *starosta's* district's endowment.¹²⁹ As customary in such cases, it was leased out to hereditary millers who were members of the nobility or of Kalisz's burgher elite, according to the records. Who of them, and to what degree, directly took charge of the mill, is hard to establish; most probably, professional millers did, as those who had adequate expert knowledge that was indispensable for handling the technical apparatus. One 1437 castle-register note refers to a 'laboriosus Johannes molendinator castri Kalisiensi',¹³⁰ evidently a professional miller of rural background. Among fifteenth-century hereditary millers was one *providus* Mikołaj, 'molendinator molendini sub castro Calisiensi ante walwam eundo in Thyniecz', who in 1471, together with his wife Katarzyna, borrowed ten marks less one *ferto* (one-quarter) from the nobleman Andrzej of Brzezie, on pledge of holding the income from a third of the mill – more specifically, from the *folusz* (fulling mill) wheel used for processing the cloth ('molendini seu rote prefatis textorium dictae folusz').¹³¹ In 1564–9, the mill at the Toruńska Gate was equipped with four undershot wheels grinding the grains and kibbling the malt.¹³² In the closest vicinity of the mill and the gate, a bridge linking the two banks of the Prosna must have been in place, as an indispensable element of the northward route.

Behind the bridge, to the left, the Holy Spirit Hospital was situated – also by the Toruń route, alternatively described (at the hospital section) as the road leading to/from Tyniec, which attested to its importance also as a local road.¹³³ The hospital was, let us remind, generously endowed in 1282, receiving from Przemysław II as many as seven completely free *mansi* (*lans*), adjacent to the hospital complex, so that it might enjoy them for time eternal. The hospital as well as the city of Kalisz and the village of Tyniec were jointly granted the right to use the lumber and pastures. Under the same privilege, the hospital was granted one fisherman to pay service to it.¹³⁴ A year later, the duke granted to the Canons Regular of the Holy Spirit (colloquially known as the *duchaks*), possibly on a formal basis, the place, land, and allotment at the entrance to the city, below the gate, to the right, in the part reached by the road from Tyniec, where the poor and the sick would be received.¹³⁵ The fifteenth- and sixteenth-century castle and court registers contain mentions of the hospital and the *duchak* provosts representing it.¹³⁶

In the mid-sixteenth century, Bernardine buildings stood along Przedmieście Toruńskie, which included a wooden church of the Visitation and timber-frame construction monastic buildings (so says the literature).¹³⁷ It only in 1594–1607 that the church and the monastery were rebuilt in brick. A reference dating to 1544 survives in the town court book stating that a garden was situated 'inter fossata Sancti Spiritus ex una et monasterium Bernardinorum parte ex altera eundo ad civitatem Calisiensem de Thyniecz in manu dextra'.¹³⁸ Another note, four years earlier, pointed to a brisk river flowing toward the Bernardines.¹³⁹ These two mentions suffice to figure out the river-area space in which the two monastic communities happened to dwell and pursue their activities in the northern suburb of Kalisz.

Apart from the above-described structures and facilities situated in Przedmieście Toruńskie, the city gallows can be localised in the area. Eighteenth-century records say that the north leading northeast behind the Bernardine church was called Ku Szubienicom (Toward the Gallows).¹⁴⁰ The map of Kalisz

¹⁴⁰ Taryfy 1767, p. 261: "and before this bridge, along Ku Szubienicom Street, beginning at the Toruń highroad, a clayey road [goes] downwards toward the city, all in dreadful bumps and holes".

from around 1820 has the gallows marked near the outlet road from the city toward Warsaw, on the elevation behind the Bernardine cloister. It was the area of Chmielnik where, according to a monographer of Kalisz, the brick gallows was dismantled in 1821.¹⁴¹ It cannot be told whether the gallows stood there earlier on, including the mid-sixteenth century, and whether it was the site of execution at all.

Behind the Wrocław Gate, the Wrocław Suburb (*Przedmieście Wrocławskie*) stretched along the continuation of the Toruń-Wrocław route cutting through the town. Like *Przedmieście Toruńskie*, in terms of area development, it was a linear (street) village with the suburban dwellers' homesteads. The major structure and industrial mechanism in this area was a watermill¹⁴² erected following the privilege granted by King Casimir III the Great in 1361 for construction of two mills, each at one of the two main city gates (as aforementioned); the mill is attested in fifteenth-century records.¹⁴³ The search done for the present purpose has shown that at least since the beginning of the sixteenth century it had more functions compared to the peer facility in *Przedmieście Toruńskie*. The visitation record from 1564–5 states that the mill 'by the Wrocław Gate, which has four undershot wheels for flour [grinding] and the fifth one for the fulling, and for this purpose, a sixth wheel for the two groats-mortars: in one do they shatter the oak, in the second, millets and flax-seeds. Of both of which mills, the miller is Stanisław Kokoszcicz Pawłowski and he takes the third measure, for which he hath produced the right.'¹⁴⁴ Two entries, dated 1534, in *Metrica Regni Poloniae*¹⁴⁵ let us know that it was beside this particular mill that the king permitted Stanisław Kokosicz, the hereditary miller for both Kalisz mills (advised to this end by Łukasz of Górka, Castellan of Poznań and Starosta-General of Greater Poland and Kalisz), to have a grindery erected – between the waulk mill and the city wall, as well as groats mortars for oak bark grinding¹⁴⁶ – between the mill and the turret on the bridge, which was the daytime guardians' watchtower. As is thus apparent, the entire milling enterprise, with its wheels, mortars and pestals, was situated on the right side of the Proсна, which flew behind the Wrocław Gate, and by the bridge, beginning with the city walls and ending with the river. As of 1534, the situation of the mill under discussion was dynamic anyway; the grindery was to replace the worn-and-torn sawmill ('saw'), as another *Metrica Regni Poloniae* entry from the same year tells us, now without specifying which of the mills was concerned.¹⁴⁷ The operation of the sawmill beside that mill might have been

Also, cf. MRPS IV/3, no. 17464: "Wilna, 26 februarii 1534, De consilio Lucae de Gorka, castellani Posnaniensis, Stanislao Kokoszcicz, molendinatori Calisiensi, in loco, ubi officina sarre vetustate collapsa est aliam officinam pro acuendis et expoliendis ferramentis et instrumentis artificum alias schloffarnia et torquatiles rotas aut arietes ad demoliendos et in pulverem concutiendos cortices quercinos in usum coriariorum alias stampy aedificare consensus datur,

initiated by a privilege granted by King Władysław Jagiełło in 1402.¹⁴⁸ The distribution of profit from the facility according to the said privilege is worthy of note: retaining two-thirds for himself, the king granted the rest to Kalisz burghers; the sawmill maintenance obligations were assigned according to the same pattern. The operation of a sawmill right outside the city possibly testifies to a considerable demand for construction timber in late mediaeval Kalisz.¹⁴⁹

Of the industrial facilities and apparatuses functioning in the space of sixteenth-century Kalisz, let us add that among Stanisław Kokosicz's undertakings was the construction of an *officina hamer* ('incus alias nakowadlnia,¹⁵⁰ hamer, folles'), which he leased out late in November 1537 to two Kalisz coppersmiths, for four marks per annum.¹⁵¹ The facility was, no doubt, a metal processing workshop equipped with an anvil, a mechanical hammer and bellows, using the force of water as the source of power (it was besides equipped with its own wheels and wooden (water-supply and drainage) gutters. The question remains open whether it was part of any of the two milling undertakings run at that time in Kalisz by Stanisław Kokosicz, or was a separate device taking advantage of the Proсна's current. As far as the grindery is concerned, it is hard to state whether it still functioned beside the Wrocławskie Przedmieście mill after 1534; in any case, it is absent in the 1564–5 visitation record.

Kalisz housed also another hospital, dedicated to the Holy Trinity, located in Wrocławskie Przedmieście area. Nowak and Rusiński write of it (referring to no relevant source) that it was founded by Kalisz burghers in 1560, whereas a small wooden church was erected next to it in 1590.¹⁵² The town court book of Kalisz notes for the year 1539 that Maciej, a preacher at Kalisz's Blessed Virgin Mary's, assigned ten marks "ad hospitem sancte Trinitatis extra muros Calisienses" by means of his last will.¹⁵³ Hence, the Trinity hospital must have been erected more than twenty years before then.¹⁵⁴ It was eventually dismantled in 1821.¹⁵⁵

Among the areas adjacent to Przedmieście Wrocławskie, the one named Czaszki (lit., Skulls) should be mentioned, due to its important role for the Kalisz agglomeration not only in the period concerned but at least since the late thirteenth century, up to the Second World War.¹⁵⁶ In 1287, Duke Przemysław II approved the perpetual lease of a mount (elevation) by a knight named Rypin (Rufin), situated on the edge of his demesne farm Podgórze, neighbouring on the ducal fields of Dobrcza Mała.¹⁵⁷ The elders of the Kalisz Jewish community took the mount over in order to set up a cemetery there.¹⁵⁸ In the late

cum obligatione 3 fl. census annui ad officium capitaneale Calissiense solvendi (deletum)". See, moreover, MK 49, f. 129; also (after LWWK 1564, vol. 2, 285, no. 107): MRPS IV, no. 17617: "Posnania, f. 2 Bartholomei (24 Aug.) Lucas de Gorcka -- nob. Stanislao Cocoscicz, molendinatori Calissiensi, incudem penes officinam, in qua demoliuntur cortices quercinae, in eadem rota, construere admittit pro eodem unico censu, qui in litteris regis super officinam demoliendi quercus expressus est" (MK 49, f. 203, not specifying the mill concerned).

¹⁴⁸ KDW VII, no. 432: "molendinum cum serra seu pila, cum qua asseres scinduntur, decrevimus in flumine Przosna erigendum et locandum, cuius molendini, ut eo melius posset reformari, civibus Kalisiensibus terciam partem damus: et adiungimus perpetuis temporibus duraturis, ita videlicet, quod de eodem molendino terciam partem ipsi cives capient et nobis duas partes assignabunt, pro eius reformacione nos duas partes dare debemus et ipsi terciam partem assignare tenebunt".

¹⁵⁷ Since Dobrcza Mała is not an autonomous settlement unit today, the sixteenth-century form is used throughout this commentary, rather than the official modern name of Dobrzec, so that it should not be mistaken for Dobrzec Wielki (in the sixteenth century, Dobrzec). For more on sixteenth-century forms, their declensions, and present-day forms, see List attached to this volume.

¹⁵⁸ KDW I, no. 574: "Nos Premisl secundus, Dei gratia dux Polonie, notum esse volumus universis ad quos presentes pervenerint, quod Rupinius filius Iaschkonis nec non Iudei Calissienses satisfecerunt concordie et in nostra presenciam constituti libera et spontanea voluntate recognoverunt, quia Ripinius montem suum hereditarium in fine predii sui hereditatis sue Podgorze, penes agros hereditatum nostrarum minoris Dobrzecze iacentem, Iudeis senioribus Kalissiensibus et toti eorum universitati, pro sepultura ipsorum in vim perpetui census sex talentorum piperis et croci duobus inscripsit. Prefati vero Iudei et alii pro

Middle Ages and early modern period, the mount, called Góra Żydowska (Jewish Mount), was still surrounded by fields, cultivated in the mid-sixteenth century (and before then too) by triple sequential cropping and owned by noblemen and burghers.¹⁵⁹ In 1495, there was a demesne farmstead near the mount, and thus near the Jewish cemetery, belonging to a member of the Calisian elite, and then to an eminent nobleman,¹⁶⁰ who two years later purchased a half of another such farmstead with a manor and seven *hortulaniae* (combined agricultural, horticultural, and animal-breeding farms) within the Podgórze area – adjacently, near the Old-Town mill.¹⁶¹ The documents settling a shared, triple cultivation of fields in that area include the remark that a part of the field, together with the farm buildings and the garden, was situated by the road that goes from the Old-Town mill and passes the Jewish cemetery.¹⁶² Earlier than the abovementioned notes, in 1422 and 1425, a mill was mentioned as property of the Kalisz burgomaster.¹⁶³ Then, it was mentioned 1443 as adjacent to a real estate situated ‘inter Castrum antique civitatis alias grodzyskem et inter molendinum Długosy’.¹⁶⁴ Hence, the mill was at a close distance to Zawodzie. When appearing as the municipality’s property in the sixteenth century, one mention in the municipal register described its location as *circa Antiquam Civitatem*; indicated was also the course of the River Prosna or a river/rivulet being a branch of it, which propelled its main wheel: ‘ac cum fluvio decurrenti a principali rota penes sepes eiusdem molendini usque ad montem’.¹⁶⁵ Again, Podgórze is probably meant in this statement. The present analysis enables us to determine, be it roughly, the location of the hitherto-unlocalised mill in the Old Town area at the latter’s border with Podgórze, not far from Zawodzie. Let us evoke at this point a passage from Przemysław II’s 1285 privilege for a knight named Jaśko, high steward to the duchess, whereby the duke transferred to Jaśko his mill ‘quod fuit antiqua civitatis in flumine Przosna, cum piscina in qua molendinum est constructum’. This meant that the mill was situated in the Old Town, with undershot wheel; rather than on the Prosna, it was built on a fished millrace that was extended from the river precisely for the construction of the mill.¹⁶⁶ As per the tax registers of 1565, the Old-Town mill had two undershot wheels.¹⁶⁷

In the period under analysis, the Old Town was also referred to as a suburb. The area deserves special attention as a pre-incorporation crafts-and-fair settlement, which together with the adjacent burg in Zawodzie was the centre of Kalisz’s settlement prior to the town’s foundation under the German Law. In the middle of the sixteenth century, the Old Town was a rural settlement with a linear layout, stretching along the road toward the passage through the Prosna, with a fairground in its western part.¹⁶⁸ It was mostly composed of *hortulaniae*-type farms. This settlement structure took place before 1294, the year Duke Przemysław II chartered the Old Town under the German Law. He released the smallholders living there from the encumbrances of the Polish Law, established his vogt, and ordered that he, the duke, be paid four scots (*skojecs*) [1 scot = 1/24 mark] per year per farmstead (size: six rods [i.e. 15 ft.] wide and thirty rods long each, as standardised according to the ‘German custom’).¹⁶⁹ As of 1497, the presence in the Old Town of a private demesne farm with a manor and at least seven *hortulaniae* is attested.¹⁷⁰

tempore existentes, prefato Ripinio et eiusdem hereditatis possessoribus quolibet festo sancti Martini censum prefatum solvere, sub pignore et pena domini palatini inscripserunt”.

¹⁶⁹ KDW I, no. 723.

¹⁷⁰ MRPS II, no. 827; MK 16, f. 88.

The Old Town is absent from the tax registers of 1507–10.¹⁷¹ The 1564–5 visitation record remarked that the village Stare Miasto had fifteen *hortulani* paying dues to the castle, three belonging to the Canon of Kalisz, three others to the Kalisz vicars, and one to the municipality.¹⁷² Apart from the latter, Kalisz only had in its Old Town area, in the period under discussion, the above-described mill – not noted in the 1564 tax register but specified in the following year.¹⁷³ It reappeared in the subsequent registers under its own name (*Molendinum Staromieyski*). As regards the municipality-owned facilities/structures, a detailed inventory of pieces of estate belonging to Regina, the miller's wife, widow of Błażej, the Old-Town miller, dated 1586 (Inventarium et concordia Bazdo cum Foliuss), has been found. It brings some information on the belongings of the miller's family and, partly, on the equipment and furnishings of the mill.¹⁷⁴

It can be added, moreover, that the area of Zawodzie was also incorporated under the Środa Law, in 1299, in order to improve the condition of St. Adalbert's church at the old burg; the garden farmsteads marked out locally on this occasion were five rods wide and thirty rods long.¹⁷⁵ It is worth reminding that there is no trace left whatsoever after the Old-Town Blessed Virgin Mary's church, whether in written or archaeological sources; the church probably fell into destruction after its functions were transferred to the namesake church inside the city.

Apart from the two main suburbs situated in the *extra muros* area closest to the chartered town of Kalisz (i.e. in the Toruńskie and Wrocławskie Suburbs), by the mid-sixteenth century did Kalisz possess some of the nearby villages, with which it was strongly associated. Nowak and Rusiński have noticed it, interpreting this fact as 'the emergence in the fifteenth and sixteenth centuries of a countryside zone subordinated to the city'.¹⁷⁶ As of 1434, a Kalisz land register mentioned that the husbandry and management in the hereditary estates of the town of Kalisz, as enumerated ('hereditates civitatis Kalisiensis Dobrzicza, Tynecz, Ostrow, Saczino'), with respect to forests, tree cutting, hunting, and fishing, was to be practiced according to the 'landed custom'.¹⁷⁷ Let us remind that two of these villages, Dobrzec Wielki and Tynec, are specified Przemysł II's privilege of 1282, among the other nearby villages where the landed law was in force.¹⁷⁸ Nowak and Rusiński noticed that the city's strong economic and social relations with its topographically closest urban zone manifested themselves in 'inclusion in the records of the dwellers of some of the villages (for example, Dobrza Mała) in the suburban residents'.¹⁷⁹ Some records refer to Tynec¹⁸⁰ and, at least partly, Dobrza Mała,¹⁸¹ as suburbs of Kalisz.

All the villages composing the urban *dominium* are known, *inter alia*, from a list of cultivated and void *lans* and the total amount of rents paid to Kalisz as of the year 1499.¹⁸² Among the villages fully owned by the city council were definitely Chełmcza,¹⁸³ Ostrów Kaliski (Ostrów),¹⁸⁴ Saczyno,¹⁸⁵

¹⁷¹ All the tax registers for Voivodeship of Kalisz from the first half of the sixteenth century are kept in ASK I 12.

¹⁷⁷ Kalisz Ziem. 6, f. 208v.

¹⁷⁸ KDW I, no. 511: "Ville vero que in districtu predictae civitatis sunt sitte, videlicet Tlokina, Tynec, Borkowo, Russowo, Kokanino, Maykowo, Piwonice, Dobrzec, et adhuc omnes situande, intererunt provinciali iudicio ter in anno".

¹⁷⁹ A. Nowak, W. Rusiński, *Rozwój przestrzenny i zabudowa miasta*, p. 140.

¹⁸⁰ For example, Kalisz Gr. 19, f. 178v: "nobilis Andreas de Thinyecz in suburbio civitatis Kalisiensis Thinyecz suburbium civitatis Kalis". (The note has been suggested to U. Sowina by Tomasz Jurek, which the author hereby acknowledges.)

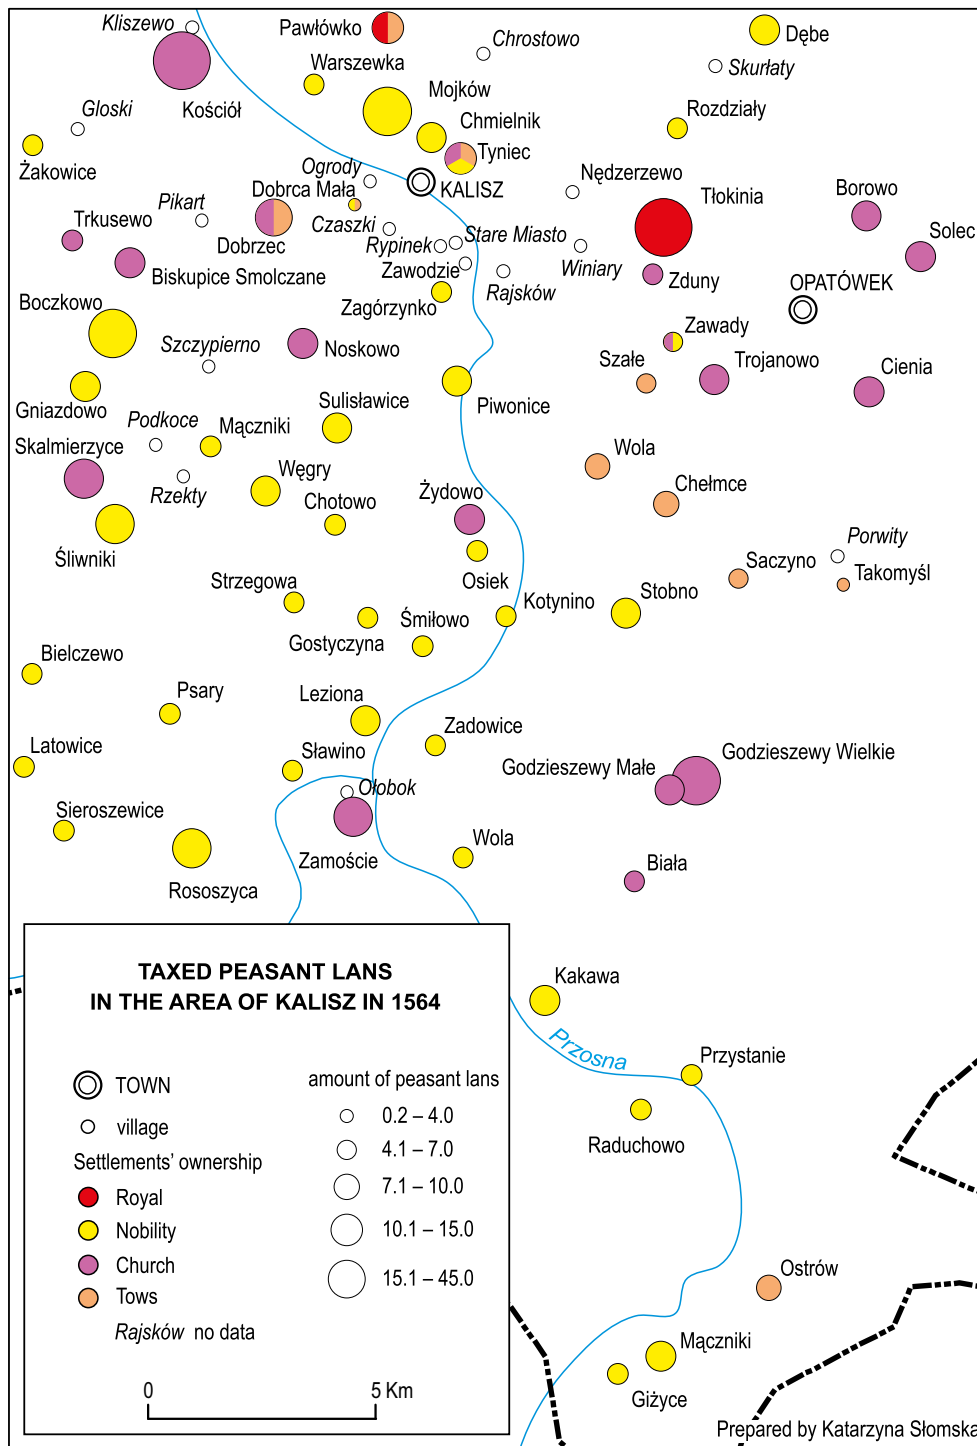

¹⁸¹ Kalisz Gr. 30, f. 62r: "in Minori Dobrza in suburbio".

¹⁸² *Ibidem*, f. 61v–62r.

¹⁸³ *Ibidem*, f. 62r: "in Chelmca sunt 11 mansi possessionati, de quibus solvuntur census per mediam marcam. *Ibidem* sunt 5 mansi deserti". The 1507 tax register specified 5.5 serf *lans*, and 0.5 void *lans* (ASK I 12, f. 8); as of 1508 (*ibidem*, f. 68) – 5; the collection of the fourth grosz (also in 1508) is accompanied by the note reading, "Iste ville sunt civitate Calisch de quibus census precipitur et spiritualibus pro eorum beneficiis erogatur in toto" (*ibidem*, f. 38). The list dated 1564 has an annual inn, 8.5 serf *lans*, and 3 smallholders (ASK I 13, f. 179v).

¹⁸⁴ Kalisz Gr. 30, f. 62r: "in Ostrow sunt 9 mansi possessionati, de quibus solventur census annus per unam marcam. *Ibidem* nullus mansus est desertus". The 1564 tax register reports the collection of a tax from four 'hereditary wheels' and two 'annual wheels', plus 7.5 serf *lans* (*ibidem*, f. 180v). A year earlier, the collection from an inn was recorded (ASK I 11, f. 763) – a facility that does not appear in any of the subsequent tax rolls.

¹⁸⁵ Kalisz Gr. 30, f. 62r: "Item in Sarczino duo mansi sunt possessionati qui solverunt per mediam marcam tres, vero habent libertatem cremati deserti mansi sunt XVI". The 1507 tax register enumerates three serf *lans* and 2 *soltys* (village-ad-

Map 1. Taxed peasant lans in the area of Kalisz in 1564

Source: RPWK, kls, 1564, *passim*.

ministrator) *lans* (ASK I 12, f. 8), the registers from the sixties recording six to seven *lans* and a watermill (ASK I 13, f. 89v, 179v). There was a watermill in the village, which in 1542 was sold by the municipal councillors to Michał, nicknamed Chodyła, a miller, with the right for him to buy it out (AGAD, dok. perg. no. 3785; quoted after SHGKart). The miller was obligated to pay to the city an annual rent of 1 mark and 27 grosz and to provide one hog per annum. The one-wheeled mill is mentioned in the 1508 tax register (ASK I 12, f. 68); it appeared also in sixteenth-century tax rolls (ASK I 6, f. 600 – 1552, as a hereditary mill, and then up to 1591, as an hereditary undershot-wheel mill; e.g., ASK I 13, f. 89v – 1565).

Szale (Szale),¹⁸⁶ Takomyśl,¹⁸⁷ and Wolica (Wola).¹⁸⁸ The city moreover held certain partitions in Dobrzec Wielki,¹⁸⁹ Dobrza Mała,¹⁹⁰ and Tyniec.¹⁹¹ The exact history of the suburban area of Czaszki has not been determined in more detail as yet.¹⁹² In Rajsaków rents from smallholders and fishermen were collected.¹⁹³ The question of the watermill in the Old Town (Stare Miasto) is discussed above.¹⁹⁴

Inhabitants of municipal villages had a number of obligations toward the municipality and thus had to observe certain established rules.¹⁹⁵ For instance, since there was a bridge in the area of Szale¹⁹⁶ that connected the two banks of the Cienia River, all the municipal villages situated in the parish of Chełmce¹⁹⁷ were obligated to mend the bridge under the penalty of ten marks.¹⁹⁸ Each of those settlements was moreover obliged, in line with the ‘old customs’, to provide the city with two barrels of tar per year.¹⁹⁹ Due to the painful fire-related experiences in the city’s history, the dwellers of the nearby Dobrzec Wielki had, under pain of financial penalties, to plant willows near their houses.²⁰⁰

¹⁸⁶ Kalisz Gr. 30, f. 62r: “in Szale sunt 8 mansi possessionati, de quibus solwunt per mediam marcam. Nullus mansus quia desertus [est]”. The 1507 and 1508 tax registers specify three serf *lans* (ASK I 12, f. 8, 68), 4.5 *lans* being mentioned as of 1565 (ASK I 13, f. 179v).

¹⁸⁷ Kalisz Gr. 30, f. 62r: “Thakomisl tres possessionati solwunt per mediam marcam deserti sunt quinque”. As per 1507 and 1508 tax register, tax was collected from two serf *lans* (ASK I 12, f. 8, 68); the 1564 roll mentions one ‘hereditary wheel’ and 3.75 serf *lans* (ASK I 13, f. 179v).

¹⁸⁸ Kalisz Gr. 30, f. 62r: “in Volicza 10 mansi possessionati, de quibus solwunt per mediam marcam. Tres mansi sunt deserti”.

¹⁸⁹ Kalisz Gr. 30, f. 62v: “in villa Dobrzeza Maior sunt 36 mansi possessionati de quibus solwunt kmethones per 3 fertones census anno et 6 mansi eciam possessionati, qui habent libertatem, deserti vero ibidem sunt 20 et 1 mansus”. The second half of the sixteenth century saw 41.25–45.25 arable *lans* recorded for the village (see, *inter alia*, ASK I 6, f. 638; ASK I 12, f. 595) and a two-*lan* partition (*sors*) being property of Kalisz Canons, which at the century’s end became part of the Kalisz Jesuits’s endowment (ASK I 11, 1508). The ‘Korczak’ mill operated in the village (ASK I 11, 1508: “de una rota korzczakna molendini Korczak dicti”), which in the mid-sixteenth century was equipped with two annual wheels (ASK I 13, f. 179v), and then with only one (ASK I 12, f. 595).

¹⁹⁰ Kalisz Gr. 30, f. 62r: “in Minori Dobrzeza in suburbio recognovit, quia sunt 15 mansi possessionati, de quibus solwunt census per 14 scotos annus”. The 1564 tax register mentions 3.5 *lans* (ASK I 13, f. 179v).

¹⁹¹ Kalisz Gr. 30, f. 62r: “Item in Tiniecz XI mansi possessionati solwunt per mediam marcam”. It is known that the village was bestowed to the city by King Casimir III the Great in the fourteenth century (KDW III, no. 1463), in order to contribute to its economic potential (U. Sowina, ‘Ze studiów nad zaopatrzeniem w wodę’, 216–17). In the 1560s, the village was divided into three owners, incl. the provostry of the Holy Spirit (7 serf *lans*), the municipality (5.5 serf *lans* and 6 vogt *lans*), and the noble family Skarszewski (2 serf *lans*); cf. ASK I 13, f. 98v. Also, see AmK, I/6, 310: “proconsuli et consulibus civitatis Calissie laboriosi Nicolaus Jaroszek in uno manso integro, Lazarus Shapyol in medio manso, Valentinus Sczygala in medio manso in villa civili Thinyecz redidentes ex vi concordie occasione census annui ad hospitale Sancti Spiritus facte obligaverunt” (1547 r.).

¹⁹² Until the 1590s, the village was probably noble-owned only; see ASK I 12, f. 698; ASK I 13, f. 390. Czaszki is mentioned as a municipal village in the 1591 tax register, with “famati proconsul cum consulibus civitatis Calissiensis” as the owners; ASK I 11, 1539. Little is known on the settlement’s earliest history; even SHGKart; cf. footnote 119 provides no relevant data.

¹⁹³ Kalisz Gr. 30, f. 62: “in Raysko sunt ortulani, piscatores, qui solwunt 8 marcas et 17 grossos cencus anni [annuali?]”. In the late Middle Ages and the modern era, the village included at least three ‘sorts’ (partitions; *sortes*) – one belonging to the city, the other one to a noblewoman ‘Filipowa’ [apparently, wife of a certain Filip], and the third to ‘the noble Rafał’; ASK I 12, f. 15, 48, 75. As of 1509, the village is referred to as royal (“villam Rayskow regalem nostram pertinentem ad opidum Calisch”); MK 24, f. 300v; MRPS IV, no. 9264. In the century’s second half, the village was taken over, in its entirety, by the municipality; the precise date of this transferral is unknown, given the present-day state of research.

¹⁹⁴ See pp. 314, 324–28.

¹⁹⁵ Based on the breakdown found in the vogtship court book for the years 1581–1695 (AmK, I/232, Acta advocatialis Calissiensis annorum 1581 incipiendo ad alios annos continendo villanorum ad civitatem Callisiensem spectantium).

¹⁹⁶ Where exactly the bridge was situated, is not known. Neither the Perthées map nor the printed version of the Gilly’s map directly mark any passage through the Cienia toward Szale. Perthées marks an inn (?Tumiday) parallel to Zawady village, on the road toward Trojanów and the Trojanów Mill (Młyn Trojanowski). As per eighteenth-century cartographic records, passages through the Cienia were located in Trojanów. Only the WIG map reflects a mill built on Trojanów village’s land, parallel to Zawady; by this mill, probably through a weir, one could get to the river’s other side. The bridge named in the sixteenth-century book should perhaps be localised basing on the 20th-c. WIG map.

¹⁹⁷ These villages were referred to as ‘zaleskie’ (=‘located behind the forest’; *wsy zaleskie*), which possibly suggests that the area between Wola and Szale villages, toward Kalisz, up to the Cienia estuary – or, perhaps, as far as Rajsaków – was in the sixteenth century covered by a forest.

¹⁹⁸ AmK, I/232, p. 41.

¹⁹⁹ Ibidem, p. 42.

²⁰⁰ Ibidem, p. 41: “In the moone of Marche, the Dobrzeze-dwellers are to plante willo[w]es each in fronte of theyre house as manie as he canne due to adventurre of fyre and due to other benefittes of theyres under three-scores [*resp.* dozens] of penaltie.”

Such impositions were meant to ensure protection of the countryside buildings and facilities against destructive winds and, in a broader perspective, to prevent potential fire from spreading.²⁰¹

Along with Gniezno and Poznań, Kalisz ranked in the sixteenth century among the major transport centres of Greater Poland at the time, as demonstrated by the studies of Teresa Dunin-Wąsowicz and Stefan Weymann.²⁰² The most important determinant was the fact that Kalisz was the essential place of passage the River Prosna.²⁰³

The layout of the roadways leading out of Kalisz stemmed from the town-planning layout of the chartered city. It could be reached from the south through the Wrocław Gate, and from the north through the Toruń Gate – and it was along this axis that the city's most important trade and transport traffic occurred. Public roads went out of Kalisz toward Konin²⁰⁴ and Pzdzry.²⁰⁵ Certainly, a roadway of high importance went through Tyniec toward Winiary and then toward Koźminek, Dobra, Zamysłów, and Uniejów in Voivodeship of Sieradz. Also the road going through Ołobok in the direction of Silesia must have been of essential importance, including because of collection of customs duty at that place.²⁰⁶ A road from Kalisz to Pleszew is attested as of 1440, based on historical sources,²⁰⁷ and it was perhaps this particular road that at the beginning of the sixteenth century was known as the 'Kalisz Road'.²⁰⁸ Another essential transport and trade centre in the region was Poznań. This city could be reached by travelling, among other places, through Pleszew (Pleszów) and using the network of roads leading towards Wrocław and Głogów, via Sulmierzyce, Jutrosin, and Poniec.²⁰⁹

Yet, the most important element that shaped the actual road network around the city was the Prosna; unregulated until the middle of the nineteenth century, the river posed a real threat to the inhabitants of Kalisz since the very beginning of colonisation and settlement in that area.²¹⁰ Some of the local rough roads around the city were periodically flooded by the river in the autumn/winter

²⁰¹ Cf. ibidem, pp. 41–2: "... everie husband man [in] the summere and in the automne oughte to banne hys childrene and servantes that nonne goe with fyre to the shrubberie and to the forreste, upon whome this become knowne, he shall bee punyshed with three-scores [resp. dozens] of penaltie."

²⁰² CMP, no. 136; Weymann, Drogi, p. 241; T. Dunin-Wąsowicz, *Kalisz na tle wczesnośredniowiecznej sieci drogowej*, [in:] eadem, *Drogami średniowiecznej Polski. Studia z dziejów osadnictwa i kultury*, ed. A. Janeczek, with an afterword by M. Młynarska-Kaletynowa, Warsaw 2011 (Collectio Archaeologica, Historica et Ethnologica, vol. 4), pp. 77–104; contains a map of the roads (scale 1:500,000).

²⁰³ T. Baranowski, *Komunikacyjna rola Prosny we wczesnym średniowieczu*, [in:] *O rzece i wodzie w życiu codziennym człowieka średniowiecza*, ed. S. Możdziej, K. Chrzan, Wrocław 2015 (Spotkania Bytomskie, vol. 8), pp. 83–87. As noticed by T. Dunin-Wąsowicz, in Piwonice, 5 km south of Kalisz, and in Kościelna Wieś, 7 km north of Kalisz, two other crossings through the Prosna must have functioned (eadem, *Kalisz na tle wczesnośredniowiecznej sieci drogowej*, p. 100). They were mainly of local importance and were not used by merchants who in the following centuries would have been obligated to become liable to the staple right and the law of *Straßenzwang* ('road coercion'). Cf. Taryfy 1767, 264, informing that the passage at Ołobok "is not sufficient ... for whenever the stream flows out, it renders the crossing much unlike a bridge, wherefrom several incidents have been memorised by the people".

²⁰⁴ Akt rew., 140. The Toruń road is known since the early Middle Ages. Its functioning is indirectly confirmed by the road-sign pole erected 1151 in Konin; T. Dunin-Wąsowicz, *Insrypcja konińska z 1151 roku*, [in:] eadem, *Drogami średniowiecznej Polski*, pp. 170–3; cf. KDW I, no. 389; KDW II, nos. 686, 1001, 1289. Casimir III the Great's 1349 document establishing commercial routes for Toruń merchants within the Kingdom of Poland clearly indicated that one of the roads toward Silesia ought to be the one going "per Raczeviam (Radziejów), per Conin, per Kalis et per Schilburg (Ostrzeszów)"; cf. Weymann, Drogi, pp. 242–4.

²⁰⁵ Akt rew., 142; cf. M. Brzostowicz, *Ląd i ziemia nad Wartą*, [in:] *O rzece i wodzie w życiu codziennym*, ryc. 4 (*Przebieg szlaków lądowych w kontekście lokalizacji późnośredniowiecznych stanowisk archeologicznych na terenie obecnego powiatu wrzesińskiego*), p. 102; also, see AGAD, dok. perg. no. 3529: a parchment document from 1450, mentioning the roads to Kokanin and to the Pawłówko (Pawłówek) village.

²⁰⁶ Akt rew., 144–5; Taryfy 1767, 264. The Ołobok customs duty was mentioned in as early as 1292; KDW II, no. 686.

²⁰⁷ KDW V, no. 666.

²⁰⁸ After SHGKart (BRacz, MS 523, vol. 1, f. 4): "tertiam sortem suam minore borrae in eadem Minori Tursko incipiendo a via, quae se protendit de Biskupice ad Tursko ad sinistram partem, usque ad viam, quae vadit de Minori Tursko a taberna Szopa per eandem borram usque ad viam Kaliska et a via Kaliska usque iuxta viam, quae ducit ad paludem Bucheno".

²⁰⁹ The intensity of trade between the southern part of Kalisz Voivodeship and Silesia is attested by, *inter alia*, a document describing the recommendations regarding the observance of the trading in oxen in that area, dated at the mid-sixteenth century; Spisanie jarmarków, pp. 158–9. Also, cf. the relevant passages in Weymann, *Drogi*, pp. 245–8, the deployment of customs-houses and toll collection points in the map of the roads.

²¹⁰ T. Kałuża, *Analiza zmian układu*, pp. 138–52; E. Stupnicka, *Grodzisko na Zawodziu na tle rozwoju koryta Prosny*, [in:] *Kalisz wczesnośredniowieczny*, ed. T. Baranowski, Kalisz 1998, pp. 29–37; cf. T. Dunin-Wąsowicz, *Kalisz na tle wczesnośredniowiecznej sieci drogowej*, pp. 90–97.

seasons.²¹¹ The quality of the roads was moreover influenced by the local soils. The central part of the chartered town was situated on alluvial soil, its northern suburbs on argillaceous soils.²¹² As we can see in an eighteenth-century illustration commissioned for use of the local *Boni Ordinis* Commission, the passage into the city along the routes heading for Kalisz from the north was considerably hindered precisely because of the water lingering on their surfaces.²¹³

(2017)

Translated by Tristan Korecki

²¹¹ Taryfy 1767, 261: Also, the third bridge on the stream off that same river of Prosna, flowing close to the Reformanti [*sic*] Friars, flooding only in the winter and in the autumn, whilst dry in the summer”.

²¹² See the 1:300,000 map of soils published by the Institute of Soil Science and Plant Cultivation [IUNG], Warsaw, 1961.

²¹³ Taryfy 1767, 261: “and before this bridge, along Ku Szubienicom Street, beginning at the Toruń highroad, a clayey road [goes] downwards toward the city, all in dreadful bumps and holes”.

III.6.14.4 KOŚCIAN

Dariusz Kram

A significant research obstacle in the analysis of the spatial arrangement and appearance of Kościan in the past is the extremely small amount of cartographic or iconographic material. The fact is that no credible image of the city has survived to the present day. The only known depiction of Kościan, dated to 1700, is a painting *The Vision of St. Augustine*, once located in the monastery of the Dominicans in Kościan. Currently, it can be viewed in the parish church dated to the early days of the city, where it hangs over one of the side entrances. Historians studying the city argue to this day whether the painting actually depicts Kościan or not. Furthermore, when it comes to the cartographic material, no plan or map with a medieval or early modern depiction of the city is known until the end of the eighteenth century.

The plan of the royal Kościan presented in this atlas was prepared on the basis of available cartographic records, the oldest of which date back to the end of the eighteenth century. The drawings made by Henryk Münch in the 1930s are most essential to the analysis of the spatial layout of the city in the second half of the sixteenth century. These are Kościan's plans from 1791,¹ 1794² and 1803.³ Later ones, from 1798⁴ and 1802–1803,⁵ although depicting the city with the surrounding villages, did not present any details of the spatial layout of Kościan itself. Additionally, the Kościan cadaster map from 1863⁶ and the plan of the city centre from 1900⁷ were consulted. Another particularly valuable source was the print from a glass plate negative found in the collection of the Department of the Historical Atlas of the Institute of History of the Polish Academy of Sciences, which represents Kościan's plan from 1794, on the basis of which Münch made his drawing. The originals of this and the other two monuments were destroyed during the fire of the State Archives in Poznań in 1945.

The research on old Kościan began in the mid-nineteenth century and has lasted until the present day. It has been undertaken by academics as well as researchers studying the region, who have inquired into the city's past. Some of the first to broach this subject have been Józef Łukaszewicz and Klemens Koehler. During the Second Polish Republic and in first years after the Second World war, this topic was further explored by, among others, Father Zygmunt Cieplucha, Władysław Szodrski, Henryk Münch or Antoni Mączak. Following this, the history of Kościan was studied by Henryk Florkowski, Zbigniew Wielgosz, Andrzej Wędzki. The work of these historians concerns only the history of the city, including guilds, monasteries, culture and science, Church, hospitals and other issues related to the old Kościan. A particularly important contribution to the study of the sources concerning the history of the town was offered by the authors of the *Słownik historyczno-geograficzny województwa poznańskiego w średniowieczu*, including Krystyna Górską-Gołaską, whose works – devoted to the topography of

the late medieval Kościan – constitute a sort of foundation for research on spatial layout of the city in the sixteenth century. The inspections of the voivodeships of Greater Poland and Cuyavia from the years 1564–1565 and 1628–1632 were utilized to describe the starosta’s buildings.

The map in the scale 1:10,000, found in this volume, shows the main urban layout of the city and its adjacent suburbs. The plan does not include the villages Naclaw, Czarkowo (Czarnków on the map) and Sierakowo, the bishop’s village Kielczewo, the vogt’s village Kurza Gora with the demesne and the buildings belonging to burghers, including mills, called Nowa Wieś (discussed further in this commentary), however the roads leading to them have been marked on the map. Furthermore, the plan does not encompass the starosta’s demesne of Grodztwo, the burgher demesne Wymykowo, as well as breweries, malt houses and granaries found near the Głogowska Gate. There was not enough information to securely identify their location. Sixteenth-century Kościan included the town surrounded by city walls, located at the fork of the Obra river, as well as unfortified suburbs: Poznańskie Przedmieście (*Poznań suburb*), Głogowskie Przedmieście (*Głogów suburb*) and Stare Miasto (*Old Town*).⁸

Kościan was most likely awarded town privileges at the end of the thirteenth century, under the rule of Przemysł II. The exact date of the location under German town law is unknown.⁹ Only documents confirming the restoration of Kościan’s town rights by king Władysław Jagiełło in 1400 have survived until the present day. It was done under the Magdeburg Law and was to be modelled on the law, which was used in Poznań. The villages belonging to Kościan were also to be included under this law.¹⁰

The city was founded in the narrowing of the Obra Valley, in a place through which, on one side, ran a trade route connecting left-bank Poznań with Silesia, while the other side was inaccessible enough to allow an effective defence against a possible attack if necessary. According to Krystyna Górską-Gołaska, the natural flood areas of the Obra were used for defensive purposes of the future town, which from the east and the northeast was protected by the main riverbed, while from the west and north – by a man-made arm of the river, called *fossatum* in 1544 and *fossata civilis*, *fossa civilis* (ditch) in 1547 and 1549.¹¹ The earlier market settlement, mentioned in sources, was not located in the vicinity of the water and the marshes, but on a slight elevation north-west of the future town. The crossing of the Obra River, through which a travel and trade route ran, was most likely guarded by a fortified gord, which, in time, was probably transformed into a starosta’s castle made of brick.¹²

According to scholars studying the spatial layout of Kościan, at the time of its location, the town had an oval layout,¹³ along which ran the aforementioned travel route. It developed primarily to the sides of the main axis – to the southeast and to the northwest. As a result, the town took on the shape

⁸ A. Wędzki, *Początki Kościana. Powstanie grodu i osady targowej na tle podziałów dzielnicowych południowo-zachodniej Wielkopolski*, [in:] *Dzieje Kościana*, vol. 1, ed. K. Zimmiewicz, Kościan 2000, p. 49.

⁹ A. Wędzki (ibidem, *Kościan w czasach piastowskich*, “Rocznik Leszczyński”, vol. 8, 1987, p. 18) believed the original location of Kościan happened between 1253 and 1289. The first date is based on the location of the left bank of Poznań and the development of the trade route leading to Silesia, the second is based on a document issued by Przemysł II, in which a witness was a person from Kościan named Jakób. Ks. Z. Cieplucha lists him in his register of parish priests, *Z przeszłości ziemi kościańskiej*, Kościan 1929, p. 195. According to A. Wędzki, the mention of the parish priest cannot be the decisive factor about the nature of the settlement, since at that time there was already a relatively dense network of village parishes. However, given the fact that after 1289, there is an increase of the number of direct and indirect mentions of Kościan as a located town, it can be assumed that this mention already referred to a parish priest of a located town; see ibidem *Kościan w czasach piastowskich*, pp. 18–19.

¹⁰ The original of the document issued by king Władysław Jagiełło for Kościan did not survive. We only know it from two copies dated to 1510 and 1548; the two versions differ from each other, see SHGPoz, part II, issue 3, p. 369; K. Górską-Gołaska, *Ustrój miasta i jego administracja*, [in:] *Dzieje Kościana*, vol. 1, p. 118.

¹¹ See K. Górską-Gołaska, *Topografia późnośredniowiecznego Kościana*, [in:] *Spoleczeństwo Polski średniowiecznej. Zbiór studiów*, vol. 6, ed. S.K. Kuczyński, Warsaw 1994, p. 228; SHGPoz, part II, p. 344.

¹² The existence of the fortified gord in Kościan is mentioned in Yearbook of Traska (Rocznik Traski) from the fourteenth century.

¹³ According to A. Wędzki, the irregular oval shape of Kościan was, on the one hand, was tied to the terrain, since the founded town was limited by the arms of the river, and on the other hand, was the result of the route that split into two streets within the city, which later reconnected by the town’s gates, see idem, *Lokalizacja i powstanie średniowiecznego miasta*, [in:] *Dzieje Kościana*, vol. 1, p. 59; idem, *Kościan w czasach piastowskich*, p. 21. This hypothesis was similarly supported by K. Górską-Gołaska, *Topografia późnośredniowiecznego Kościana*, p. 226. These authors also point out that an earlier theory, according to which the oval shape of the town was based on the market square of the settlement predating the formal founding of Kościan, can no longer be considered viable.

of a pear, cut across by the travel route running around the oval village.¹⁴ The city with an area of about 10 hectares was surrounded by defensive walls erected at the turn of the fourteenth and fifteenth centuries, the length of which reached 1,150 m. The diameter of the city's southeast axis was 300 m, while the northwest one, including the castle, was 450 m.¹⁵ The city walls stood 6–7 m tall.¹⁶ Initially, the town had two gates linked by the road running through it. These were the Poznańska (*Poznań*) and Głogowska (*Głogów*) Gates. The earliest mentions of the Głogowska Gate – *Porta Glogoviensis* are dated to 1396. The sources mention that in the sixteenth century, the gate was also called: *Glogische Thor* (1544), *Valva Glogoviensis* (1545), *Głogowska Brama* (1565), *Porta Glogoviensis* (1594).¹⁷ The Poznańska Gate, on the other hand, was first referenced in 1493 under the name *Pozinsche Thor*. It was later known as: *Valva Poznaniensis* (1510), *Posnische Thor* (1542), *Valva Poznaniensis* (1546, 1550).¹⁸

It has been hypothesized that this period also saw the emergence of Kościan's coat of arms, as illustrated in the town seals. Historical sources do not reveal who originally designed it. It was probably decided on by the town counsellors and later approved by the royal chancellor. It consisted of a defensive tower, which meant that it belonged to the group of coats of arms with architectural designs.¹⁹ One of the oldest known seals is known from the wax imprints on town documents from 1396, 1397, 1401, 1408. The relatively primitive execution suggests it was made in an earlier period. Other known town seals are dated to 1591, 1622, 1699 and represent the fortress tower with an open gate, often widening to the bottom, over which can be found two open windows. An embrasure supported or unsupported (as exemplified by the seal from 1622), on two abutments and battlements with four or – more often – five merlons has been placed over the windows. The tower is crowned with a triangular roof with a knob or cross.²⁰ Depending on the seal, the roof is supported on two or three merlons of the battlements.²¹ The tower gate from the town's coat of arms was most likely used in the protective sign of the guild of clothiers in Kościan given to them by Casimir IV Jagiellon in 1472 (reconfirmed in 1475, as well as in 1509 by Sigismund I the Old). The lead sign, which was attached to logs of cloth (measurement of fabric), included a tower gate, which widened at the bottom and on which an eagle spreading its wings, with a C or S on its breast, was placed.²²

In the mid-fifteenth century, another gate called the New Gate in 1510 came into use.²³ This likely happened as a result of the purchase of the village of Sierakowo in 1410 by the town,²⁴ as well as the founding of the Bernardine Friars' monastery in 1456.²⁵ No route ran through this gate, which in 1597 became known as the *Porta Antiquae Civitatis* and in 1599 – *Valva Antiquae Civitatis*. Nevertheless, it did shorten the path connecting Kościan with the suburb Old Town. At the turn of the sixteenth and seventeenth centuries, the gate became known as *Staromiejska (of the Old Town)*.²⁶

The final gate, which makes an appearance in the source material, is the Wodna (*Water*) Gate, known also as the *Valva Aquatica* (1549), *Wasser Thor* (1553), *Porta Aquatica* (1597–1598).²⁷ It was located approximately halfway between Poznańska Gate and the castle and it was not an exit from the town, but rather an entry point in the town walls for the pipes with potable water, which was gathered in the fields of Kiełczewo. The first waterworks in Kościan were made operational in the middle of

the sixteenth century. In 1534, Jan Latałski, the bishop of Poznań, allowed the town to buy land in the meadows from the peasants from Kielczewo in order to dig the ditches through which water was to be supplied to Kościan. For the right to use the land and to renew the ditches, the city was obliged to pay 6 grosze to the peasants of Kielczewo. Less than 10 years later in 1542, the city made an agreement with master Jan (*cannalium magister*) to build the devices delivering water to Kościan. Master Jan was to be paid 20 grosze per week and to receive workers, wood and other necessary materials needed to complete this undertaking. He was succeeded by Marcin Mielczarek, *aqueductor*, who adopted town law in 1548 and Wojciech Schlosser, *Rormeister*, who had a home on Poznańska Street until 1560.²⁸ The waterworks functioned all throughout the sixteenth, seventeenth and for (at least) the first half of the eighteenth century.²⁹ The maintenance of the waterworks ensured that the inhabitants had clean water, as the water from the marshy Obra was unfit for consumption. Access to water was important when choosing a place for the construction of the so-called malt houses, i.e. malt houses and breweries. Clusters of these buildings were located in the vicinity of the Wodna Gate and Kacza (*Duck*) Street, and also behind the Głogowska Gate by the moat and on Kamienna (*Stone*) Street (*Litostratos*).³⁰ It is not certain whether the waterworks system was directly connected with the city well, located in the market, and the town bath, which in the sixteenth century could be found on a lot at the crossroad of Sukiennicza (*Cloth*) and Kozia (*Goat*) Streets.³¹ The bathhouse was located there at least in the years 1562–1565. Before that, it was situated by a square near Głogowska Gate.³²

The system of city fortifications, in addition to the abovementioned walls and city gates, also included towers, sometimes called bastions. Sources mention at least two towers; the first, called Strzelnica,³³ could be found near the Głogowska Gate and the second one, called Kabat, to which led the path from Sukiennicza Street. It is mentioned in 1593 in a reference to a burgher who was held in a public prison commonly known as Kabat.³⁴ Further mentions of towers come from the beginning of the seventeenth century, i.e. from 1604 and 1614.³⁵

The starosta's castle located in the southeastern part of the city was an element of the Kościan's defensive system with its own walls, independent of the city's walls.³⁶ It had a square shape,³⁷ and the walls protecting it may have been up to 60 m long.³⁸ Their height may have reached 6–7 m, like the city walls.³⁹ According to the inspection of the castle from 1565, there were three unfinished buildings with a total length of 87 ells and a stable for 30 horses in the eastern section of the castle courtyard.⁴⁰ The entrance to the castle was guarded by a gate. The main castle was located in the southern section

²⁸ SHGPoz, part II, p. 375; K. Górską-Gołąska, *Ustrój miasta*, p. 131.

²⁹ In 1624, in the will of one of Kościan's merchants, 500 guldens were donated to the renewal and laying of pine pipes from the Przysiecki spring to the town; compare with R. Marciniak, *Gospodarka komunalna i wymiar sprawiedliwości*, [in:] *Dzieje Kościana*, vol. 1, p. 243; K. Górską-Gołąska, *Topografia późnośredniowiecznego Kościana*, p. 228.

³⁰ K. Górską-Gołąska, *Topografia miasta, układ sieci drożnej, zabudowa*, [in:] *Dzieje Kościana*, vol. 1, p. 78.

³¹ From the accounts of employees of municipal waterworks and companies dealing with municipal roads since the 1960s, it seems that during the works conducted in the 1980s and 1990s, wooden pipes and metal clamps most likely belonging to the old waterworks system of Kościan were uncovered from time to time. The pipes were found on Wrocławska Street (1960s), Piłsudski Street and Plac Niezlomnych (1980s) or Wodna Street and Szczepanowski Street (the 1990s). From this last street and Plac Niezlomnych come metal clamps (MRK, reference number 26A) and an approx. 50 cm long fragment of a wooden pipe (MRK, sign. 968 H), currently found in the collection of Kościan Museum.

³² SHGPoz, part II, p. 375.

³³ This was the name of the building near the Głogowska Gate, marked on the map of meadows and marshlands near Kościan in 1791; AP Poznań, Sketches and copies of the plans of Greater Polish cities by H. Münch, sign. O.pl.m. 41.

³⁴ K. Górską-Gołąska, *Ustrój miasta*, p. 124.

³⁵ See ibidem, *Topografia późnośredniowiecznego Kościana*, p. 227.

³⁶ The castle, or rather the fortified gord, existed already during the conquest of Kościan by Władysław I Łokietek in 1332. This was noted in the Yearbook of Traska in the fourteenth and in Jan Długosz's ninth book of *Roczniki, czyli kroniki sławnego Królestwa Polskiego*; see also *Kościan: zarys dziejów*, ed. Z. Wielgosz, K. Zimniewicz, Warsaw–Poznań 1985, pp. 7–9.

³⁷ The rectangular shape of what once was the starosta's castle was clearly marked and described at the end of the eighteenth century on the maps, known from the sketches by H. Münch.

³⁸ See: LWWK 1564, part 1, p. 10; *Rewizja zamku w Kościanie z dnia 24 stycznia 1565*, [in:] K. Koehler, *Dawne cechy i bractwa strzeleckie. Rzecz osnuta na danych o cechach i o bractwie strzeleckim w Kościanie*, Poznań 1899, pp. 445–449.

³⁹ See Widawski, *Mury*, p. 190.

⁴⁰ If we assume the length of the ell at the time was 57.6–58.6 cm, the total length of the three buildings could be no more than 51 m. If we include the stable for 30 horses, mentioned in the inspection, which may have had a width of at least 5–6 m, it appears that the wall surrounding the starosta's castle could have had up to 60 m.

of the complex. It was most probably one-story building with a basement. It would have had two rooms on the ground floor and on the first floor. In one of the rooms upstairs, the gord court sessions could be held.⁴¹ The castle also contained residential buildings for the servants, as well as the chamber of the deputy starosta, who acted here on behalf of the starostas. Additionally, the complex included a kitchen, a pantry and other utility rooms.⁴² The aforementioned inspection also references the fallen castle wall, over 30 m long, found on the northern side of the complex.⁴³ The state of neglect of Kościan Castle, as described in the inspection, may have been evidence of the fact that the starostas managing the royal property did not pay much attention to the maintenance or repair of the buildings, including the castle walls. Such a state of affair most likely resulted from the nature of the starosta's district as a non-gord centre.⁴⁴

A malt horse mill belonging to the castle, rebuilt by starosta Czarnkowski, was found on the side of the town and a brewery located behind the castle by the pond.⁴⁵ Near the brewery, behind the castle buildings by the river, there was a water mill with three general flour wheels and a fulling wheel.⁴⁶ The second water mill was located north of the town. Jagielna Street led to it.⁴⁷ The estates of the Kościan starosta's district included the village of Bonikowo and a part of the village of Kurza Góra with the vogt and peasants, and the vogt's demesne in the village bought in 1586 by the scribe Gębicki.⁴⁸ The buildings of the Kurza Góra demesne consisted of a white chamber with a hall, fenced off barnyard with two barns, a cowshed and a sheepfold.⁴⁹ The second demesne, Grodztwo, was located to the south of the town, to the left of the so-called Great Road leading to Wschowa. The property included a white chamber with a hall, a fenced barnyard with two barns and a garner, a shed, a sheepfold and a pigsty.⁵⁰ The starosta's estate also included the town's villages of Naclaw, Czarkowo and Sierakowo, which, however, were managed directly by Kościan's authorities.⁵¹

The centre of the sixteenth-century Kościan was the market square, called *circulus* in 1510 and 1548.⁵² It resembled a square in shape, with dimensions of 75 x 80 m. Individual frontages by the market square were divided into nine plots,⁵³ with a single plot width of up to 6.9 m and length up to 50 m. Plots of land measured in this way favoured the construction of three-bay houses, most likely with arcades, up to 16 m in length.⁵⁴ In the middle of the market, which was the heart of the town's economic activity, there were – in addition to the previously mentioned well – butcher shops and city stalls, belonging to various guilds in Kościan.⁵⁵ Following the great fire of Kościan, which occurred on 24 July 1503, and destroyed most of the town, King Alexander Jagiellon allowed for the butcher

⁵¹ The starosta, who was a representative of the king, was the lord and chief of the village Naclaw and Czarkowo, received only 53 fl. and 22 gr of rent annually; see LWWK 1564, p. 160.

⁵² SHGPoz, part II, p. 342.

⁵³ K. Górską-Gołaską assumes that there were 9 lots in each frontage of the market square at least from the founding of the town to the sixteenth century. This number was most likely reduced in the seventeenth and eighteenth centuries, which is evidenced by the number of lots on the town's plan from 1794. In *Historia Kościana*, a schematic plan of the square created by K. Górską-Gołaską was included. It contained a division of the frontages and lots, as well as their owners from the mid-sixteenth century until the seventeenth century; see *Historia Kościana*, vol. 1: *Okres staropolski*, ed. K. Zimmiewicz, Kościan 2005, pp. 76–80.

⁵⁴ J. Strumiński, *Próba limitacji mierniczej układu przestrzennego średniowiecznego Kościana*, [in:] *Pamiętnik Towarzystwa Miłośników Ziemi Kościańskiej 1979–1980*, ed. H. Florowski, Kościan 1985, pp. 21–22.

⁵⁵ The guilds of Kościan in the sixteenth century included: cap makers, potters, wheelmakers, blacksmiths, stallholders, tailors, furriers, bakers, brewers, linen makers, butchers, clothiers, shoemakers. See K. Górską-Gołaską, *Ludność*, pp. 89–114.

shops to be moved in 1504 from the market to the street, which was located behind the market's south-eastern frontage and connected the parochial church with Głogowska Street.⁵⁶ For several years after this fire, the townspeople of Kościan strove to reduce taxes and limit church rents.⁵⁷ Construction works were carried out as evidenced by, for example, the purchase of the wood for the reconstruction of the Kościan parish church.

Historians do not agree on the location of the late medieval town hall. However, it can be assumed that in the sixteenth century, it was not centrally located in the middle of Kościan's market square. Instead, it would have been situated in a half-timbered burgher house, part of a frontage by the market, near the northern corner of the square. Sixteenth-century sources mention houses located "at" or "behind" the town hall. There are records from the years 1548 and 1593 of a house in the market square near the town hall. In 1561, a house behind the town hall was described; in 1562, the house by the market square, on the way to the bathhouse, behind the town hall was replaced. An entry from 1748 notes that a house on Mnisza (*Monk*) Street, on the corner of the market most likely had a damaged wall, which was facing the town hall ("bad wall").⁵⁸

There was also a weigh house in the market, along with a cloth cropping facility, the management of which was given by royal privilege in 1553 to Mikołaj Broda, also known as Anebus, a cloth shearer. The same privilege allowed him to brew and serve beer. The king awarded Broda all the proceeds from these facilities, while exempting him from paying taxes to the starosta and the town. After his death, Tomasz Wierusz took over, although he did cede the weigh house to the town as collateral for his unpaid debt of 40 florins. Once he passed away, the city took over the house in return for unpaid debts. Moreover, by selling the house in 1598 to Grzegorz Lizewicz, the town council ordered him to keep an inn there, while the weigh house and the shearing room were to be moved elsewhere within six years.⁵⁹

There were eight streets connected to the market square, two per corner. Four of them formed the oval, through which ran the trade route from Poznań to Silesia. These were Głogowska and Kościelna (*Church*) Streets, which connected the market with Głogowska Gate, and Poznańska and Mnisza Streets, which connected the market with Poznańska Gate. Głogowska Street, in 1510 known as *platea Glogoviensis*, and in 1542 and 1544 called *Glogaschegasse* and *Glogischegasse*, led to the western corner of the market square and was part of the so-called Great Road. In 1595, one of the records noted that Głogowska Street is connected to the market.⁶⁰ Kościelna Street, called *platea Ecclesie* in 1510 and 1589, *Kirchgasse*, *Kirchengasse* in 1543, 1551 and 1557, and "Kosczyelna" in 1565, was the second street connecting the market with Głogowska Gate.⁶¹ It started in the southern corner of the market and it led to the parish church. These two streets were connected through a passage or a square, to which the butcher shops were brought in 1504 from the market. Poznańska Street was connected to the western corner of the market and led to Poznańska Gate. This street, in 1510 and 1588 called the *platea Posnaniensis* and in 1559 *Posnische Gasse*, was part of the trade route going through Kościan. Another street connecting the market with Poznańska Gate was Mnisza Street, which ran from the northern corner of the market and was called *Münchegasse* in 1543 and "Mnysza ulica" in 1566.⁶² What differentiated it was its slightly different shape. Starting in the northern corner of the market, it headed towards the city gate, only to split after several dozen meters into two sections, one of which turned left towards the Dominican monastery, and the other turned right, reaching Poznańska Gate and connecting the town with the Przedmieście Poznańskie. The street's curious shape is attested in the records about the Dominican monastery and houses in its vicinity: in 1605, a house on Mnisza Street beside the monastery, in 1599, the monastery church of St. Nicholas on the same street, in 1601, a house also on this street, adjacent to the city wall near the Poznańska Gate, and in 1560 and 1594 houses on the corner of the market square and Mnisza Street.⁶³ Among the remaining streets that connected to the

⁶² *Ibidem*.

⁶³ *Ibidem*.

market, which handled local traffic, perpendicular to the route that ran around the oval rundling, only one street had a name.⁶⁴ It was Kozia Street, which connected to the northern corner of the market in the direction of Sukiennicza Street, near the church of the Dominicans. Sources from the sixteenth century reveal that it had several names: *platea Caprorum* (1511), *Tzigengasse* (1542), *Czigengasse* (1543), *Czegengasse*, which ran from the market (1553), *Czigengasse*, which ran from the market to the bathhouse (1554), *platea Caprina* (1562), *platea Caprarum*, leading from the market to the bathhouse (1564), the house “w Kozy uliczy” (1565).⁶⁵ The remaining three roads running from the market connected to the starosta’s castle and Nowa (New) Gate. They did not have names; in sources, they are presented in a descriptive manner. The streets connecting the castle with the New Gate ran along the south-western frontage of the market. They were described as follows: the street in front of the castle, on the way from the parochial church to castle (1551), the corner of Kościelna Street and the street leading to the castle (1610), the little street (*Gasse*) running from the market to the New Gate (1552), the street leading from the market to the Old Town (1561, 1564), the corner of the Sukiennicza Street and running to Old Town (1565).⁶⁶ The lack of names could suggest that they were located along lots with buildings facing the market and Sukiennicza, Głogowska and Kościelna streets. This stretch was probably created later than the other streets near the market square and it may have been the result of the clearing of certain plots located by the market square and the aforementioned streets. The southeastern part of the route could have been built in connection with the construction of the castle in the fourteenth century, and the northwestern section as a result of the creation of the New Gate in the fifteenth century.⁶⁷ The final street running from the eastern corner the market square led to the castle and merged with Kacza Street behind the plots located by Poznańska Street.

Kacza Street, called *platea Kacza* in 1510, *Eyntenagasse* in 1537, *platea Anetarum* in 1548,⁶⁸ connected the shortest road to the Poznańska Gate with the starosta’s castle. This road could not only be used to reach the malt houses or the horse mill, located near the castle, but also the parochial church or the buildings near it. According to Górska-Gołaska, Kacza (*Duck*) Street was still directly connected to Poznańska Gate in the sixteenth century. For those arriving from Poznań, it would have been the fastest route to the castle. After the Swedes destroyed the castle in 1655–1656, the road became useless, which would explain why by 1794, the extension of the street towards Poznańska Gate no longer existed.⁶⁹ A similar function to Kacza Street, which connected the castle with Poznańska Gate, was fulfilled by Kapłańska (*Priest*) Street; it connected the castle to Głogowska Gate. This street ran along lots located by the city walls. In source material, it is called: *Prystergasse* (1542), *Pristergasse* (1543), *platea Sacerdotum* (1562, 1563, 1598), “ulica Kapłańska” (1565).⁷⁰ The parish school was located there.⁷¹ The school could be accessed from the parochial church through the cemetery found between Kapłańska and Kościelna Streets. In 1558, a wicket gate (*portula*) led from the cemetery in the direction of Kapłańska Street and the parish school.⁷² The cemetery, just as the school, was located there from the fourteenth to the nineteenth century. The space between these streets was occupied by a complex of buildings belonging to the parish and the church of the Assumption of the Blessed Virgin Mary.

The origins of this sixteenth-century church towering over the town probably date back to the town’s location in the second half of the thirteenth century.⁷³ The construction was conducted in the fourteenth and fifteenth centuries.⁷⁴ The previously mentioned fire, which ravaged the town in 1503, contributed to

⁶⁴ See K. Górska-Gołaska, *Topografia późnośredniowiecznego Kościana*, p. 231.

⁶⁹ K. Górska-Gołaska, *Topografia późnośredniowiecznego Kościana*, p. 233.

⁷⁰ SHGPoz, part II, p. 343.

⁷¹ The foundations of the parish school were discovered during archaeological excavations conducted by the Regional Museum of Kościan in 2004.

⁷² SHGPoz, part II, issue 3, p. 343.

⁷³ According to Z. Cieplucha, the oldest mentions of the parochial church are dated to 1333. A large church seal from 1356 confirms that the church was always dedicated to the Assumption of the Blessed Virgin Mary; see *idem*, *Z przeszłości ziemi kościańskiej*, p. 194.

⁷⁴ The three-nave structure was probably erected until the mid-fourteenth century. In the fifteenth and early sixteenth centuries, chapels funded by brotherhoods and town’s guilds were added to the body of the church. After the fire, the church

the reconstruction of the church lasting until 1510.⁷⁵ In order to rebuild the parochial church, the city authorities and the townspeople of Kościan donated money, evidenced by, among others, testamentary records. Another form of support for the reconstruction were the efforts of the authorities to obtain an exemption from paying taxes and – as was the case in 1505 – the donation of 60 oak trunks to the reconstruction of the church.⁷⁶ In 1549, a fire broke out, causing the collapse of the church tower, which was rebuilt before 1594.⁷⁷ The tower finally collapsed in 1711. In the fifteenth and sixteenth centuries, the church included more than 20 altarge-funded chapels. The church was managed by the Knights Hospitaller, whose commanders performed the function of parish priests of Kościan.⁷⁸ According to Zbigniew Wielgosz, the Kościan parish included the town of Kościan and several local villages. The basis of the parochial church's endowment was the beneficial village of Widziszewo, the demesne Pianowo in Kurza Góra and the "rola Szyba", the location of which is uncertain. The documentation of the visitation in 1610 mention that the endowment of the church parson, besides the land fundum, included payments for mass from Kościan villages: Naclaw, Czarków, Ponin, Sieraków, Kokorzyn, Godziszew, Szczodrów, Kurza Góra and Kielczew, and from the demesnes in Ponin, Kokorzyn and Szczodrów. The parish therefore included Kościan and 12 villages.⁷⁹

In the northern part of the town, Sukiennicza Street played a similar role to Kapłańska Street in the southern part. The longest street in town began at Głogowska Gate and ran along the city walls, cutting through the street connecting the market with New Gate, reaching the square, by which the Dominican monastery was located in 1410.⁸⁰ Houses on this street, called in 1510 *platea Textorum, platea Pannificium*,⁸¹ stood only on one side. Just as in the case of Kapłańska Street, some lots reached the city walls. At the same time, Sukiennicza Street, which was called "Sukyennicza ulicza" from the mid-sixteenth century onwards, in 1565 formed the back section of the lots by the market and Głogowska Street. In the sixteenth century, the bathhouse was located on this street, which also led to Kabat tower. The name of the street was derived from one of the oldest and largest Kościan guilds, the clothiers, whose houses, workshops, and the first and only known headquarters of the elders of the guild (the so-called *Dom Knapski*) in Kościan – mentioned in the years 1562–1612 – were all located there.⁸² As Antoni Mączak established, there were around 27 cloth workshops in Kościan in 1580.⁸³

The monastery of the Dominican order could be found at the end of Sukiennicza Street.⁸⁴ Having obtained the approval of Władysław Jagiełło, the burghers dedicated parts of the northeast section of the town to the monastery. The lot, which housed the monastery buildings and the church of St. Mary Magdalene, St. Nicholas and St. Valentine, bordered the city wall.⁸⁵ This was some of the cheapest land in the town and among the last to be built on; such a location was typical for mendicant convents.⁸⁶

was rebuilt and the presbytery was expanded to three-naves, a new vault was constructed, at the same time covering the naves and chapels with one roof; see KZS, vol. 5: *Województwo poznańskie*, issue 10: *Powiat kościański*, ed. T. Ruszczyńska, A. Sławska, Warsaw 1980, p. 45.

⁷⁵ The responsibility for starting the fire on 24 July 1503, was assigned to Hospitaller Tomasz, a former preacher in Kościan. Due to the anger of Kościan's inhabitants and the desire to retaliate against Tomasz, on 28 July a town councilor named Urban with a writer Stanisław took Tomasz to Poznań and presented the case to the bishop of Poznań, Jan Lubrański, who arrested Thomas and opened an investigation to find the cause of the fire and the guilty parties. On 18 August he ruled the behavior of the Hospitaller to be unfitting of his status, praised the attitude of the townspeople and sentenced Tomasz to be thrown out of the diocese and to undergo canonical purification; see SHGPoz, part II, p. 377.

⁷⁶ Ibidem, p. 376.

⁷⁷ See Z. Cieplucha, *Z przeszłości ziemi kościańskiej*, p. 194.

⁷⁸ The functioning of the Knights Hospitaller in Kościan and the parochial church from the fifteenth century was discussed by Z. Wielgosz, *Kościół w dziejach miasta*, [in:] *Historia Kościana*, vol. 1, pp. 176–211.

⁷⁹ Idem, p. 180; SHGPoz, part II, p. 376; J. Nowacki, *Archidiecezja Poznańska w granicach historycznych i jej ustrój*, Poznań 1963, p. 427.

⁸² K. Górską-Gołąska, *Ludność*, pp. 108–109.

⁸³ See A. Mączak, *Sukiennictwo wielkopolskie: XIV–XVII wiek*, Warsaw 1955, p. 263.

⁸⁴ The history of the Dominicans' church in Kościan was discussed by Father W. Szoldrski, *Kościół Dominikanów I kaplica P. Jezusa w Kościanie*, Włocławek 1927; see also SHGPoz, part II, pp. 395–399.

⁸⁵ A fragment of the fourteenth-century wall appears to currently be located on the estate of the parish of Our Lord Jesus and of the court of Kościan, which previously belonged to the monastery of the Dominican Order.

⁸⁶ Z. Wielgosz, *Kościół w dziejach miasta*, p. 199.

Mnisza Street led from Poznańska Gate to the monastery. The construction of the monastery was led by the first prior of the facility, Jan Prutheni. It lasted most likely until 1426.⁸⁷ The monastery remained unchanged until the beginning of the sixteenth century, when it was rebuilt after the fire of 1503, in part thanks to the numerous bequests made to the Dominican monks by the inhabitants of Kościan, especially those who lived near the monastery, such as the cobblers, the clothiers, weavers, bathhouse attendants, bakers, furriers and saddlers.⁸⁸ One of the most famous foundations for the Dominican monastery came from a native of Kościan, Maciej Kleiber. His donations between 1578–1589 exceeded many times those of the burghers' bequests. Kleiber was a vicar in perpetuity, deputy custodian of the Cracow Cathedral, who donated to the monastery, among others, the rents from the villages of Naclaw, Sieraków and Czarków, rents purchased from the town council and a sum of 500 grzywny, thanks to which gardens and a windmill were bought in the Przedmieście Poznańskie.⁸⁹

In the sixteenth century, the town behind city walls, surrounded by the river and partially by the man-made mote, also included suburbs, the origins of which can be dated to the fourteenth century.⁹⁰ The Przedmieście Poznańskie was the oldest. It lay to the east of the city and was called Smoleńsko (Schmolensko) in 1543.⁹¹ This name was most likely tied to the production of tar, which was needed by the shoemakers' guild. Many representatives of this guild inhabited this area. A paved street leading towards Poznań ran along the partially urbanized suburbs.⁹² It had several names: *Peitsch* (1465), *Steinweg* (1493), *Picza ante Costan* (1510), *Paytzen* (1542), *Litostratos*, *Pycza* (1546), *Picza sutorum* (1558, 1562), "Smolinsko" (1588), *Platea Sutorum* (1592), *platea Sutorum Pycza dicta* (1594, 1599).⁹³ This area was separated from the town by the main riverbed of the Obra and its two branches.⁹⁴ In order to reach the city from Poznań, three bridges had to be crossed; information about them comes from sources dated to the years 1550, 1560 and 1563.⁹⁵ Behind the third bridge, approximately 250 m from the city gates, the townspeople founded and endowed the church and hospital of the Holy Spirit in 1385.⁹⁶ The city provided the church and hospital with an annual rent of 28 grzywny, and the townsman Henklin Goelczel granted them 1½ lans of land on Kurza Góra. Queen Hedwig confirmed this donation and freed the hospital grounds from all financial burdens. The sources note that during the fifteenth and sixteenth centuries, there were many records of rents, as well as larger and smaller sums

⁸⁷ SHGPoz, part II, p. 395.

⁸⁸ According to Z. Wielgosz, the location of the Dominicans in the north-east of the town, within the area of the so-called *platea monachorum* and the road leading to the Przedmieście Poznańskie through Poznańska Gate, which was inhabited by shoemakers, and near Sukiennicza Street (which connected Głogowska Gate and the monastery), where craftsmen and poorer inhabitants from the Przedmieście Poznańskie lived, influenced the reach and the socio-religious influence of the monastery. It is believed that the monks were particularly influential amongst this urban population, see idem, *Kościół w dziejach miasta*, p. 204.

⁸⁹ Ibidem, p. 205.

⁹⁰ The exact date of the founding of the suburbs is unknown. It is, however, believed that the hospital church of the Holy Spirit from the Przedmieście Poznańskie and the one of the Holy Cross from the Przedmieście Głogowskie, which appeared at the end of the fourteenth century and at the beginning of the fifteenth century, were constructed in an already urbanized space.

⁹¹ See K. Górską-Gołaską, *Topografia późnośredniowiecznego Kościana*, p. 235.

⁹² According to K. Górską-Gołaską, the exact shape of this suburb in the fifteenth and sixteenth centuries is unknown. In the eighteenth century, it was partially located on an island (the scholar believes that they were probably two small islets), surrounded by the flood waters of the Obra River; the part closest to the Poznańska Gate was built up on both sides of the road. Across the second bridge, the land on the left side of the street belonged to the village of Kielczewo, and the buildings were located on the right side. The buildings of the church and hospital of the Holy Spirit were situated in close proximity to the third bridge; see ibidem, *Topografia późnośredniowiecznego Kościana*, pp. 236–237.

⁹³ SHGPoz, part II, p. 344; K. Górską-Gołaską, *Topografia późnośredniowiecznego Kościana*, p. 235.

⁹⁴ There is evidence of a third channel of the Obra River, visible on the copy of the plan of Kościan from 1791 made by H. Münch. Initially, it may have run by the church of the Holy Spirit, but it appears that the flooding it caused on the church's estate led to burying part of the channel and to the creation of a dyke. The channel itself was redirected north towards the lower terrain, creating a pond known as the *Zły dół* (*Bad Pit*). From there, the channel ran along the street towards the church of the Holy Spirit, crossing the street and flowing into the old prong of the river, only to merge with the main channel of the Obra, north of the city. It is believed that the section from the road to the riverbed dried up or was covered up in the nineteenth century, since the maps from that time period do not show this fragment of the channel. However, a small ditch used to drain these areas, which still existed in the first half of the twentieth century, could have been a remainder of the original channel, which diverged from the river Obra behind the castle and ran northwards to the dyke and the pond.

⁹⁵ SHGPoz, part II, p. 344.

⁹⁶ The church and the hospital were also dedicated to the glory of Mary, Mother of God, and to the saints: Catherine, Margaret, Dorothea, Barbara, 11,000 Virgins, Nicholas, Stanislaus, Adalbert, George.

in coin donated to the church and hospital by the inhabitants of the town.⁹⁷ The visitation of Kasper Hap, the archdeacon of Śrem, in 1610 contained a description of the hospital, which stood by the road to Poznań. It was a single house, containing a large, heated room and several smaller chambers. The hospital buildings also included cowsheds, stables and barns. Ten poor individuals were residing at the hospital.⁹⁸ The church, which originally had been made of wood, was rebuilt in the gothic style before 1620 by Bartłomiej Grzech, who was the church's provost at the time.⁹⁹ The demesne Wymkowo, which belonged to the townspeople from Kościan, could be found near the church in 1555. Similarly located was a mill, which stood near the road to Poznań and was mentioned in 1559 and 1560.¹⁰⁰

From the southwest lay the Przedmieście Głogowskie suburb, located right behind Głogowska Gate. It was most likely founded in the second half of the fourteenth century, about 250 m from the city gates. In 1396,¹⁰¹ the burghers founded a second hospital church – consecrated to the Holy Cross – in the town. The buildings in the suburb were situated on both sides of the street running through this area. This road, which ran from the town's gates in the direction of the town's villages Naclaw and Czarkowo, was called "stone" (*kamienna*), most likely due to its cobblestone finish. In the sources, the names *platea lapidea*, *platea litostratos*, *Steinweg*, *Steyenwege*, *Lytostratos*, "na Kamienny drodze" are found in the years 1510, 1542, 1547, 1544, 1562 and 1565.¹⁰² The aforementioned church was endowed by the town's authorities with rent in the amount of 7 grzywny, and in 1425, King Władysław Jagiełło gave the hospital the right to collect the tithe from the royal demesne Grodztwo.¹⁰³ According to the bishop's decrees from 1565 and 1610, the provost of the church had to be the permanent Polish preacher at the parochial church.¹⁰⁴ From the beginning, it played the role of a hospital-asylum for the mentally ill and leprosarium for the lepers.¹⁰⁵ In this suburb, not far away from Głogowska Gate, on the left side of Kamienna Street the Corpus Christi church was built in the mid-fifteenth century. It was first referenced in 1451.¹⁰⁶ This church was completely destroyed during the Swedish Deluge in 1655.¹⁰⁷ Breweries and most likely the townspeople's granaries, including the one belonging to the town and mentioned in 1561 and 1575, were located by the moat near Głogowska Gate.¹⁰⁸ Behind the buildings of this suburb, following the road towards the town's villages of Naclaw and Czarkowo, a small concentration of buildings and gardens belonging to the townspeople of Kościan, called Nowa Wieś, was formed in the sixteenth century. This suburb, called *Neudorff* (1543), *Nova Villa* (1545), *Newen Dorf* (1550), "na Nowy Wssy" (1565), housed the largest cluster of Kościan's windmills. The tax register from 1530 mentioned that there were as many as 10 of them.¹⁰⁹

⁹⁷ Comparte with SHGPoz, part II, p. 392; Z. Wielgosz, *Kościół w dziejach miasta*, pp. 196–197.

⁹⁸ See ŁOp., vol. 2, p. 174.

⁹⁹ According to the visitation of the bishop of Poznań, Maciej Łubieński: "The hospital church of the Holy Spirit, located in the suburbs of Kościan, which was rebuilt in burnt brick from the foundations up through the efforts of the revered Bartłomiej Grzech, the current parson, presents itself quite splendidly and has been already completed"; see *ibidem*, pp. 170–171.

¹⁰⁰ SHGPoz, part II, p. 344.

¹⁰¹ In 1396, the townspeople of Kościan received pope Boniface IX's permission to found the Chapel of the Holy Cross and the saints Fabian, Sebastian, Eustace, Erasmus, Alexius behind Głogowska Gate. Simultaneously, the pope awarded the patronage over the chapel to the authorities of the town, see SHGPoz, part II, p. 393. According to Z. Wielgosz, the exact date of the foundation of the church and hospital remains unknown. Scholars believe that it already functioned around 1420. The year 1412, which J. Łukaszewicz (*idem*, *Krótki opis*, vol. 2, p. 171) suggests as the date of the founding of the church, has not been confirmed; compare with: Z. Wielgosz, *Kościół w dziejach miasta*, p. 198; SHGPoz, part II, p. 393.

¹⁰² SHGPoz, part II, p. 344.

¹⁰³ *Ibidem*, p. 393.

¹⁰⁴ Z. Cieplucha, *Z przeszłości ziemi kościańskiej*, pp. 198–199.

¹⁰⁵ The leprosarium in Kościan was the second such hospital in Greater Poland (along with the one in Poznań). There are many testamentary bequests of rents and sums of money that Kościan burghers made to this hospital, see *Kościan: zarys dziejów*, p. 41.

¹⁰⁶ In this year, there is a mention of municipal office as having patronage over the All Saints altar; see SHGPoz, part II, p. 393. According to Z. Wielgosz, the chronology of the foundation of this church is difficult to establish. All the information, provided by the available sources, allows for the questioning of earlier assumptions that it also performed the function of a hospital church, and next to it there was a hospice – a shelter for the sick; compare *idem*, *Kościół w dziejach miasta*, p. 195.

¹⁰⁷ The visitation of the bishop Gniński from the years 1672–1683 informs us that the church and the hospital were so badly damaged that the inspector was only showed the place where the church once stood.

¹⁰⁸ K. Górka-Gołaska, *Topografia miasta, układ sieci drożnej, zabudowa*, p. 80.

¹⁰⁹ SHGPoz, part II, p. 408; K. Górka-Gołaska, *Topografia późnośredniowiecznego Kościana*, p. 240.

The Przedmieście Głogowskie and Stare Miasto, located to the west and southwest, were connected by a street named Kiernozia. It stretched along the city walls and connected Głogowska Gate and New Gate. In source materials, it figures as: *platea dicta Pewsgasse* (1547, 1549), *Pewsgasse* (1556), *platea Kiernozia* (1552, 1593), *platea Verina* (1558).¹¹⁰ The suburb Old Town is referred to in scholarship as the site of Kościan in the thirteenth century, before the foundation of the town.¹¹¹ In the mid-sixteenth century, it was densely covered with the burgher's gardens, residential buildings and malt houses. In the years 1542, 1546–1547, 1552 and 1565, the suburb was called: *Oldensadt*, *Alte Stadt*, *Antuiqua Civitas*, *Aldte Stadt*, “Sthare Myastho”.¹¹² It stretched along Sierakowska Street, also called the road to the Bernardine Friars, Discalced Carmelites or Friars Minor. In 1542, the street was called *Schirker Gasse*, in 1544 – *platea Sirakoviensis*, in 1545 – “...Syrałow” and in 1547 – “ulica Sierakowska za Nową Bramą”.¹¹³ Two roads departed from it near the Bernardine Friars' monastery, of which the first ran towards Sierakowo, while the other led to the nearby brickyard, which in 1546 was called *lateraria*, in 1547 – *lateraria alias czegelnicza* or in 1588 – *laterificia*. The beginnings of the brickyard probably date back to the second half of the fourteenth century.¹¹⁴ Behind the Nowa Gate, a road departed right from Sierakowska Street leading to the castle mill, situated by the dike to the north of the town. This street was called Jagielna. In the fourteenth century, it was referred to as: *Hirsze Winkel* (1542), *Hyrze Winkel* (1543) *Hirszen Winckell*, *platea Hirszenwinkel* (1548), *platea Milii alias Yagielna* (1545), *plate Jagielna* (1550).¹¹⁵

The Bernardine Friars' monastery was founded by the town's authorities on 3 November 1456. That was when the square behind the city walls was passed on to the monks. Previously, a fortified shooting range used by the local archery brotherhood was located there. The monastery was situated on the road leading to Głogów. The donation to the Friars Minor included two gardens with two houses, which stood opposite to the current shooting range from the eastern side.¹¹⁶ Originally a monastery and the church of Our Lady of the Angels were built with wood and half-timbered walls; however, according to sources from the beginning of the seventeenth century, due to the risk of collapse, a decision was made to rebuild the church and monastery complex.¹¹⁷ With the permission of king Sigismund III Vasa's and through the dedications of the townspeople and neighbouring gentry, new brick monastery buildings were constructed in the years 1603–1611. The construction works were carried out by the guardian Leonard Łapczyński and the new church was consecrated on 16 April 1611 by the suffragan bishop of Poznań, Andrzej Rychlicki.¹¹⁸

Psia Street, called *Hundesgasse*, *Hundsgasse* in 1542 and *platea Canum* in 1545, 1549, 1553 and 1557, could be found behind the Bernardine Friars' monastery.¹¹⁹ The monastery of the Bernardine Sisters was located there. The home of the Sisters of the Third Order of Saint Francis (*sorores tertiariae*) by Psia (*Dog*) Street was mentioned in sources dated to, among others, 1557 and 1565.¹²⁰ The Sisters of Saint Francis appeared in Kościan soon after the Bernardine Friars in 1472.¹²¹ They did not have their own church in Kościan, instead attending mass in the monastery church of the Friars Minor.

¹¹⁰ SHGPoz, part II, p. 345.

¹¹¹ The subject of the trade settlement before the foundation of the town was discussed by A. Wędzki, *Początki Kościana. Powstanie grodu i osady targowej*, pp. 46–53.

¹¹² SHGPoz, part II, p. 344.

¹¹³ SHGPoz, part II, p. 344.

¹¹⁴ The privilege issued by king Władysław Jagiełło in 1409, testifying to the advanced stage of the construction of the city walls, may indirectly indicate a working brickyard, the location of which was confirmed when it was handed over by the townspeople of Kościan the square for the construction of the Bernardine monastery in 1456.

¹¹⁵ SHGPoz, part II, p. 345.

¹¹⁸ See *idem*; Z. Wielgosz, *Kościół w dziejach miasta*, pp. 207–208.

¹¹⁹ SHGPoz, part II, p. 345.

¹²⁰ *Idem*.

¹²¹ Referring to Z. Wielgosz, the formation of the female Bernardine sisters' community can be read as a result of pastoral influences of the Bernardines and the influence of Franciscan spirituality on the religious mentality of the inhabitants Kościan and the surrounding area. The Bernardine Sisters were a non-cloistered community and therefore the nuns were in constant contact with their families. The monastery was closed after opposition to the imposition of an enclosure on nuns at the Council of Trent; see *idem*, *Kościół w dziejach miasta*, pp. 210–211.

Near the Bernardine Friars' monastery, the town lazaretto was built by Piotr Opaliński, the starosta of Kościan. Sigismund I the Old gave permission for the construction of the hospital in 1546. In 1596, the hospital was situated on Sierakowska (*Sierakowo*) Street, in close proximity to the shooting range of Kościan's archers' brotherhood, which had been moved here half a century earlier.¹²² According to the sources, the hospital and the range were across from the location, where the two paths diverged from Sierakowska Street, leading to the village of Sierakowo and to the town's brickyard. There was a dispute between the town's authorities and the monks over the relocation of the hospital along with its patients. The final decision in this matter was made in 1605 by king Sigismund III Vasa, who sided with the Bernardine Friars, ordering the lazaretto to be moved within 12 weeks, so that the neighbouring monks would not be putting their health at risk.¹²³

The aforementioned travel path connecting Poznań with Głogów and Wrocław ran through Kościan in the sixteenth century. According to Krystyna Górską-Gołaska, this path (from the side of Poznań) ran through the Przedmieście Poznańskie, then it turned left beyond Poznańska Gate and, via Poznańska Street, reached the market square, which it crossed and continued to run through Głogowska Street, all the way to Głogowska Gate. Behind the gate in the Przedmieście Głogowskie, the road in the sixteenth century ran along Kamienna Street, turning right behind the church buildings and the Hospital of the Holy Cross, with a path leading left to the villages Naclaw and Czarkowo, as well as the buildings in Nowa Wieś. After making an arc, this road led to the Bernardine Friars' monastery, with the town's gardens, the burghers' buildings, the Bernardine Sister's monastery and Psia Street (which most likely ran behind this monastery) on its right. By the monastery the road turned left and ran along the Głogów route, attested already in the thirteenth and fourteenth centuries.¹²⁴ Sources from the sixteenth century name this route "the great road" – *via magna*.¹²⁵

This commentary to the map of Kościan from the second half of the sixteenth century certainly does not exhaust the subject of the spatial arrangement of the town and its suburbs. Instead, it should be seen as an approximation and a possible summary of the current state of knowledge on and scholarship about the royal city Kościan in its time of greatest splendour. Professional archaeological excavations would be needed in order to delve deeper into the town's spatial arrangement. They would help answer many pressing historical questions and confirm or deny the proposed theories, which have been based solely on the currently accessible source material. An example of such theories are the ones concerning the parish school or the castle in Kościan. Archaeological research carried out in 2004 and 2006 confirmed the location of the school in the presumed place, however, they failed to produce the remains of the starosta's castle. A second analysis of the available results of the field studies as well as written and cartographic sources showed the need to search for the remains of the castle in an area located several meters away from the examined site. Hopefully, an explanation for this and many other issues related to the spatial arrangement of Kościan across the centuries will be discovered in the future.

(2017)

Translated by Karolina Frank

¹²² After the site where the shooting range was located was handed over to the Bernardine monastery in 1456, it was probably moved closer to the city and it was still in operation there in the mid-sixteenth century. This is evidenced by the records from 1549 about the house near the shooting range and from 1550 about the garden belonging to the new hospital, located near the shooting range; see SHGPoz, part II, p. 345.

¹²³ Idem, pp. 374–375.

¹²⁴ The oldest fourteenth-century version of this route, called the *Via lata* behind the Głogów Gate, turned right and the road along the moat and city walls ran to Sierakowska Street, then turn left and head west, having on the left side there is a fortified shooting range for a shooting brotherhood. According to K. Górską-Gołaska, the townspeople, building the Przedmieście Głogowskie and the cobbled street called Kamienna in the fourteenth century, made efforts to mark out a new route.

¹²⁵ See K. Górską-Gołaska, *Topografia późnośredniowiecznego Kościana*, pp. 239–240.

III.6.15a.1 CRACOW AND ITS SURROUNDINGS IN THE SECOND HALF OF THE SIXTEENTH CENTURY

Jacek Laberschek

The plan of Cracow and its surroundings was based on cartographic sources, images of the city, and written sources. The sixteenth century Cracow, the place of coronation of the kings of Poland and the main centre of the Polish-Lithuanian Commonwealth, was described by contemporary writers as ‘the capital of the Sarmatian kings’, ‘the seat of kings’, ‘the home of the kings’, ‘the capital of the Kingdom’, ‘the capital of the Polish Crown’, ‘the metropolis of the entire Kingdom’.¹ Therefore it could easily have had a drawn, detailed plan of the entire city, together with neighbouring towns and suburbs. We cannot reject the possibility that such plans were created in the end of the sixteenth century, if we possess a plan of Cracow from 1594. The so-called ‘Jesuit plan’, shows the city alone, within city walls, and is a proof that cartographic documents were created to specific order.² Unfortunately, apart from this one plan, quite schematic in fact and presenting a distorted image of the buildings, we do not possess any other cartographic source from that period. As a result, researchers have to resort to plans created mostly in the seventeenth and eighteenth centuries, which in the first place show towns adjacent to Cracow, suburbs, and suburban villages.

This work uses mainly the so-called Swedish plan from 1702, drawn during the occupation of Cracow by the army of Charles XII, the king of Sweden. The plan was created before the location of the town Podgórze, and shows Cracow and its nearest surroundings, i.e. the towns of Kazimierz and Kleparz, the suburbs Garbary and Stradom, and the villages Grzegórzki and Zabłocie.³ Józef Kromer’s plan, from 1783, in the copy by Józef Czech from 1792, was equally useful, it covered the territory stretching west from Przegorzały to Dąbie in the east, and from Krzemionki in the south to Prądnik Biały and Prądnik Czerwony in the north.⁴ However, the so-called kołłątajowski plan from 1785 proved the most useful. It showed Cracow and its surroundings after the First Partition, that is without territories south of the Vistula, namely: Cracow, Kazimierz, Kleparz, Stradomia (today Stradom), the villages Grzegórzki, Dąbie – partly, Krowodrza, Łobzów, Nowa Wieś, Czarna Wieś, Półwsie Zwierzynieckie and Zwierzyniec.⁵ Dominik Puck’s plan from 1744, known from copies, was also valuable.⁶ The reconstruction of Cracow’s water network in the sixteenth century was based on the plan of the siege of the city by the Swedish army from 1655 by Eryk Jonson Dahlberg, which shows the arms of the Vistula, numerous arms of the Rudawa, and the old channel of the Prądnik, flowing into Stara Wisła (‘the Old

Vistula') near the city's bleachery.⁷ The siege plan of Cracow, occupied by the Swedes and the Transylvanians and besieged by the allied Austrian armies in 1657, was also important.⁸ The topography of the area south of the Vistula could be reconstructed thanks to, among other things, the map of Galicia, created under the supervision of Friedrich von Mieg in 1779–1783 at a scale of 1:28,800.⁹ The plan created by Tadeusz Czort in 1929 also turned out very useful, it shows Cracow during the Great Seym, and is an appendix to *Mapa województwa krakowskiego w dobie Sejmu Czteroletniego 1788–1792*.

These and other plans, usually imperfect in terms of geodesy, do not offer a faithful image of earlier settlement structures, especially of the spatial layout and buildings of the sixteenth century Kazimierz and Kleparz, or contemporary suburbs and jurydyki. The eighteenth and nineteenth century plans register outcomes of catastrophic events in the city itself, and in its vicinity: the Black Death in 1651–1652, which depopulated the city and suburbs to a large degree; the flood from 1652, which affected Płaszów and Zablocie, as well as the grounds between Cracow and Krzemionki; two sieges of Cracow and the Swedish occupation from 1655–1658, which led to the almost complete destruction of suburban buildings and Kleparz and Kazimierz, the complete destruction of utility structures and the city's water supply cistern, and influenced the River Prądnik to change its channel. The water from the river drove the mills Rakowski in Rakowice, Piaseczny in Piaski, the one behind the church of St. Nicholas, and supplied the city's bleachery, situated below the church. The Swedish occupation during the Great Northern War in 1702, 1705 and the epidemic from 1705, when the city and the suburbs were depopulated to such a degree that the ruined and abandoned houses had to be demolished, and the city, according to historians, hit its nadir. Numerous settlement campaigns conducted after the 'flood' and 'the northern war' by the burghers and the owners of jurydyki resulted in the formation of new suburban hamlets and jurydyki, which did not always resemble old settlement structures.¹⁰ Therefore, the plans used were analysed retrospectively.

Iconographic sources, namely the surviving images of the city from the sixteenth and the beginning of the seventeenth centuries, played an important role, particularly in the localization of distinctive objects in the field.¹¹ The collection of images used begins with the panorama of Cracow seen from the south, made from Krakus Mound by order of Pfalzgraf Ottheinrich during his journey to Poland in 1536–1537, kept in the collection of images of towns in the University Library in Würzburg, reproduced and analysed by Elżbieta Maria Firlet.¹² The value of the panorama lies in the fact that it depicts certain objects in the town and in the suburbs, which do not always appear in written sources, such as Bochnia gate, or Wieliczka gate in the fortifications of Kazimierz, or the bridges in the arm of Vistula called Zakazimierka, situated exactly in front of the gates. Another sixteenth century panorama of Cracow, made from Krakus Mound by Giles van der Rye, is a testimony of the changes which occurred around Cracow during the following decades. This panorama was included in the 4th volume of a monumental work by Jerzy Braun and Franciszek Hogenberg *Civitates orbis terrarum*, published in Cologne in 1617, and does not show the bridge over the Vistula situated in front of Bochnia gate.¹³ The same work contains a breath-taking, beautiful and detailed panorama by an unknown author, created in 1603–1605.

¹¹ The oldest, beautiful image of Cracow, created in 1493 and included in Schedl 1493 was excluded as too schematic. It does, in truth, show the most important and dominant features of the landscape of Cracow in this period, i.e. the castle and the towns of the Cracow agglomeration, their shape and location, but fails to maintain full faithfulness to the details, that is, it does not depict individual details (J. Banach, *Dawne widoki Krakowa*, pub. 2, Cracow 1983, pp. 15–27, 177).

¹² E.M. Firlet, *Najstarsza panorama Krakowa*, Cracow 1998; AHMP Kraków, no. 2.2.

¹³ Reproduced and described in J. Banach, *Dawne widoki Krakowa*, pp. 50–58, 178–179; E.M. Firlet, *Najstarsza panorama Krakowa*, pp. 36–37; K. Dąbrowska-Budzińo, *Wśród panoram Krakowa*, Cracow 1990; AHMP Kraków, no. 2.4.

It shows Cracow from the northwest, and provides us with much useful information concerning the location and layout of suburbs, suburban villages, rivers, as well as palace, sacral and utility buildings, and gardens. The panorama became a model for subsequent seventeenth century images, particularly for the engraved panorama by Mateusz Merian from 1619.¹⁴

Written sources played an important role in the reconstruction of the sixteenth century settlement structures. Inventories and descriptions consisted especially valuable information, they include: *Liber beneficiorum dioecesis Cracoviensis* by Jan Długosz from 1470–1480, which describes some of the suburbs and suburban villages of Cracow, *Księga dochodów beneficjów diecezji krakowskiej* from 1529, which records churches in Cracow, Kazimierz, and Kleparz, as well as the streets in the cities, the suburbs of Cracow, and burghers' demesnes situated on the fringes of the cities, *Akta wizytacji dekanatu krakowskiego 1599 r. przeprowadzonej z polecenia kardynała Jerzego Radziwiłła*,¹⁵ providing us with a plethora of details about city buildings, the street network, squares, rivers, ponds, suburb register, jurydyki, suburban villages, fortifications, as well as sacral, utilitarian, community, public use and physiographic objects, gardens, and cemeteries. This group of sources also contains inspections, such as: *Lustracja województwa krakowskiego z 1564 r.* or *Lustracja województwa krakowskiego z lat 1659–1664*¹⁶, which record utility objects in Cracow, adjacent cities, suburbs, suburban villages, as well as objects bringing income to royal estates, namely: burghers' demesnes, gardens, meadows, city meadows, brickyards, mills, malt mills, lumber mills, looms, grinders, bleacheries, taverns, waterworks, i.e. cisterns, fish levy, baths, lakes, ponds, and some topographic objects. The settlement network of Cracow agglomeration from the end of the sixteenth century and the beginning of the seventeenth century is best documented in *Rejestry poborowe województwa krakowskiego* from 1581, 1593, 1595 and *Rejestry gospód w Krakowie z lat 1632–1649*.¹⁷

In our presentation of the sources for the sixteenth century Cracow, we cannot forget the diplomatic codes, and the collections of documents of the city of Cracow,¹⁸ the Cracow Cathedral, Lesser Poland, monasteries near Cracow (Mogiła and Tynec), and also register books of the Crown Metrica published in *Matricularum Regni Poloniae summaria*, which contain material documenting the formation and functioning of towns, suburbs, suburban villages, utilitarian objects, as well as information concerning all changes of ownership.

A plethora of information of every kind of object depicted on our plan of the sixteenth century Cracow could be found in the court books (almost complete) of Cracow, Kazimierz, Kleparz¹⁹ and Garbary, as well as in the documents of Cracow jurydyki,²⁰ books of the High Court of Magdeburg Law, Cracow gord court books, church books, and land court books of Cracow – these were less useful. Unfortunately, few of these sources were published in print, whole or in fragments.²¹ As such, our work on the plan required further query in the manuscripts, although selective to a large degree.

The source material gathered in the form of extracts and registers in the published volumes of *Słownik historyczno-geograficzny województwa krakowskiego w średniowieczu*²² and in the files of this *Słownik* kept in the Institute of History PAN in Cracow, proved extremely useful in our work on the plan of Cracow agglomeration. The material, ordered chronologically and thematically, was indexed both under settlement names, that is villages, demesnes, mills, taverns, customs houses, bridges, and physiographic names, that is rivers, ponds, hills, forests, groves, and meadows, which had their own name.

The climate of Medieval and Renaissance Cracow was quite specific, resulting from, among other things, a characteristic localization in the marsh valley of the Vistula and its tributaries. They were reconstructed by Danuta Limanówka, who, apart from other sources, used daily notes on the weather from 1502–1540, recorded by Marcin Biem of Olkusz, a professor of Cracow University.²³

Before we begin our presentation of the studies on spatial development of Cracow we used our commentary on the works devoted to buildings in towns and suburbs of Cracow agglomeration, as well as nearby villages around 1600. Moreover, before we mention studies on utility and green areas, which functioned at the time, we must note that so far there has not been a modern and complete study on the subject. A collection of studies on the development of the town from the very beginning to modern towns, published in 2007,²⁴ does indeed fill in the gaps in this field, replaces the existing brief encyclopaedic and atlas syntheses²⁵ and short analyses included in the published monographs of the city (by Jerzy Wyrozumski, Janina Bieniarzówna, and Jan Małecki), as well as a comparison of Cracow and Prague around 1600, written by Leszek Belzyt,²⁶ and summarises current knowledge found in earlier works²⁷ (often broadening and enriching it), it still does not exhaust the entire topic. Of particular towns comprising the agglomeration of Cracow, the spatial structure and the buildings were reconstructed for the city of Cracow within city walls,²⁸ and for Kazimierz,²⁹ and Kleparz.³⁰ The researchers reconstructed

individual blocks of buildings in towns, the plots and parcels, determined and described ownership, names of the streets, sacral and defensive objects, and in the case of Kazimierz also the borders of the Jewish town. Analyses on the suburbs Garbary, Stradom (the latter was administratively connected with Kazimierz), and other suburbs and jurydyki, are not, unfortunately, so advanced. The study on Garbary – although rich in source data – provides us only with a general description of buildings, and more than once it does not solve many unclear topographic issues.³¹ The works on Kazimierz, Stradom, suburbs Wesoła and jurydyki Smoleńsk were created in the Interwar period, and are no longer up to date.³² Newer publications on the surroundings of the Wawel Hills, Cracow jurydyki, and the entire settlement of Cracow introduce some improvements.³³ Rich literature exists for the Wawel Hill with the Royal Castle, and the sacral and secular buildings.³⁴ It should be noted that a complete register of all settlements in the agglomeration of Cracow until 1530 is being currently created by the authors of the aforementioned *Słownik historyczno-geograficzny województwa krakowskiego w średniowieczu*.³⁵ Several authors took an interest to medieval and later suburban settlement of Cracow.³⁶ Of suburban settlements shown whole or in part on the plan, detailed studies exist only for Krowodrza

From this list I exclude the villages near Cracow, which were not shown on the plan due to the distance between them and the city, e.g: Bibice, Bronowice, Grębałów, Piaski, Prokocim.

and Prądnik.³⁷ Dictionary entries from many villages around Cracow, written by Stanisław Tomkowicz and included in 'Teki Grona Konserwatorów Galicji Zachodniej' are still valuable.³⁸

On the other hand, research on architecture is much more advanced. In our work on the plan we used, among other things, studies on defensive architecture,³⁹ the network of Cracow churches and monasteries in the late Middle Ages and at the turn of the sixteenth and seventeenth centuries,⁴⁰ numerous works on individual churches and monasteries,⁴¹ and published volumes of *Katalog Zabytków Sztuki w Polsce*, concerning Cracow, Kazimierz, Stradom, Kleparz, Zwierzyniec, Nowy Świat and Półwieś Zwierzyniecki, and the Wawel Hill,⁴² as well as a book on Cracow hospitals.⁴³ The state of the research on utilitarian objects in the agglomeration of Cracow in the fifteenth–sixteenth centuries is less satisfactory. Notable are the works on royal mills in the landscape of Cracow, on the waterways of the old Cracow, and on Cracow baths.⁴⁴

The reconstruction of main communication routes running through the agglomeration of Cracow, as well as other roads in this area included on our plan, was done by Bożena Wyrozumska and presented in a separate book; the author used *Lustracja dróg województwa krakowskiego z roku 1570* and other sources.⁴⁵ The reconstruction of the sophisticated water network of Cracow and its surroundings was based on the old works of Klemens Bąkowski, and the newer studies by Mieczysław Tobiasz, Kazimierz Trafas, Jerzy Wyrozumski, and Wojciech Przegon.⁴⁶

All objects presented on our plan, that is: cities and towns, suburbs, jurydyki, villages, utilitarian and green areas, rivers, flumes, ponds, as well as important city and suburban buildings, were given their sixteenth century names, which frequently appear in the sources listed above, both printed and manuscripts, which were subject to query. Works by Stanisław Tomkowicz and Elżbieta Supranowicz⁴⁷ allowed us to determine the names of the majority of streets and squares in towns and suburbs in the agglomeration of Cracow. Some names, e.g. in Kazimierz, Kleparz, and in Stradom suburbs, were

difficult to establish, given the diversified and unstable nomenclature of some streets in the fifteenth and sixteenth centuries, as well as the existence of unnamed streets, particularly those of less importance. The names of streets in Cracow shown on our plan, and on the more detailed plan of the city in 1598 (by Kamila Follprecht and Zdzisław Noga) were uniformed.

The plan of Cracow and its surroundings was prepared at a scale of 1:10,000, according to the rule of this series of the AHP. Because of this scale, and the size of the agglomeration, the plan we created had to be very big. Despite its large format, we were unable to show Cracow in its full sixteenth century borders. However, the gaps are not significant, as they concern mostly green areas, north and northeast of Kleparz and Cracow, fragments of burghers demesnes: Psarski that is Montelupiewski, Langstanowy that is Celarowski, Zeifrytowski that is Fryzerowski, and Turzonowski that is Olsza. The plan shows the entire hydrographical network, with elements such as: rivers, flumes, and larger village ponds, and the entire settlement network of Cracow and its nearest surroundings in the sixteenth century, including: towns, suburbs, villages, burghers' and church demesnes, connected by streets and roads. The plan differentiates: a) developed areas, different colours for: towns, suburbs, and villages; b) green areas: gardens, meadows, fields; c) town borders and borders of individual villages and demesnes. The following objects were also shown on the plan: castles, city defensive walls, gates, town halls, churches, monasteries, hospitals that is asylums, bridges, moats, scarps, cemeteries, and swamps.

The following settlement units were shown on the plan:

1. Towns: Cracow, Kazimierz, and Kleparz.
2. Castles and royal watchtowers: a) Wawel with hamlets Podzamcze and Rybaki; b) Łobzów; c) watchtower north of Kleparz.
3. Suburbs of Cracow: a) Garbary with hamlets Piasek, Krupniki, Rybitwy [Pobrzeże]; b) Wał Krakowski (Cracow Embankment); c) Przedmieście św. Mikołaja (St. Nicolas Suburbs); d) Brzeg; e) Górka.
4. Suburbs of Kazimierz: Stradomia (today Stradom), Podbrzeże, Przedmieście Szewskie, Przedmieście przy św. Leonardzie (Suburbs by St. Leonard).
5. Jurydyki: Pędzichów, Błonie, and Biskupie.
6. Demesnes situated within city borders: Fryszbark, Psarski, Langstanowy, Zeifrytowski, Turzonowski, Morszytnowski (Piaski), and Langpetrowski.
7. Suburban demesnes: Królowa Wola (Gramatyka), and Błonie.
8. Other utilitarian objects: city bleachery, brickyard, and a harbour on the Vistula.
9. Villages: Krowodrza, Łobzów, Nowa Wieś, Czarna Wieś, Kawiory, Zwierzyniec, Półwsie, Grzegórzki, Rakowice (only green areas), Dąbie, Dębniki, Zakrzów, Zabłocie, Płaszów.
10. Hamlets: Rybaki across from Zwierzyniec, Smoleńsk.
11. Meadows: in Cracow, in Kazimierz, and in Kleparz.
12. Other green areas, which had their own name: Uroczysko Krzemionki, Góra Lasoty, Las Bystrzec.

Naturally, the plan is focused on Cracow, within borders delimited already by the Duke of Cracow and Sandomierz, Bolesław Wstydlivy, in the foundation document from 1257.⁴⁸ These borders, with some modifications, survived until the eighteenth century. By order of the duke, Cracow gained then the areas surrounding the town itself, to the River Prądnik, together with the village Rybitwy situated by the Vistula, and its adjoining grounds, as well as the village Krowodrza, but without the estates of the Bishop of Cracow located in the village, and without bishop's mills on the River Prądnik. The city also got the forest called Farcimiech, situated far from Cracow, by the upstream Vistula, and therefore not included in our plan.⁴⁹ Perhaps the area by the Rudawa, called in the fourteenth century 'przed Bramą Szewską' ('before Szewska gate'), since 1311 attested as property of the burghers of Cracow, was already counted as part of the city's estates. In the fifteenth and sixteenth centuries, these areas,

⁴⁸ KDMK, vol. 1, no. 1.

⁴⁹ Z. Leszczyńska-Skrętowa, *Boturzyn, Facimiech*, [in:] SHGK, part 1, pp. 202–204, 671. The town was endowed with vast territories to the north, until the River Prądnik. As a result, duke Bolesław was forced to make a separate arrangement with the monastery in Tyniec, which was the owner of the grounds near the church of St. Florian. In the end the church renounced the ownership of this area in exchange for the village Brzostek in Wojnicz castellany and a dam on the Vistula, behind the village Boturzyn (Gosturin); *Kodeks dyplomatyczny klasztoru tynieckiego*, no. 21; J. Rajman, *Kraków – zespol osadniczy*, pp. 225–226.

called Piasek at the time, belonged to the suburbs Garbary.⁵⁰ A document issued by Casimir the Great in 1358 tell us which suburban areas were under the city's authority, and which belonged to the king. The document decrees all inhabitants of the suburbs under the town law, except for the hamlets: przy św. Florianie (by St. Florian), Czarna Wieś, Czarna Ulica, and along the Vistula towards Zwierzyniec (that is the hamlet Pobrżeże).⁵¹ Cracow decided to gain these attractive – in terms of settlement – areas. In 1363, admittedly, the town successfully bought the jurisdiction over Czarna Wieś, Czarna Ulica, and Pobrżeże for 100 grzywnas from Casimir the Great, but without the ownership rights. Three years later, the city exchanged the house in Floriańska Street with the Norbertine Sisters monastery in Zwierzyniec for the pasturelands between the monastery, the town, and Kawiory, later called Błonie. Constant legal arguments about these pasturelands forced the town authorities to try to obtain new green areas on the eastern side of the town. In 1401, they succeeded thanks to the endowment of king Ladislaus Jagiello, and gained the pasturelands stretching from the new moat running from St. Nicolas gate to Grodzka gate, and to the Vistula. In 1422, the city's estates encircled the city itself, when the same king endowed Cracow with the place called Żabokruk (Żabikruk), situated between the River Rudawa (Niecieczka), the city walls, the royal garden Zwierzyniec, and the new royal pond.⁵²

Okoł, a small hamlet, lay between Cracow's location in 1257, and the Wawel Hill. In 1304, the hamlet was called a suburb between the church of St. Andrew and the church of St. Martin, in 1321–1334 it was called Nowe Miasto, in 1336–1346 Okoł, and in 1338 Nowe Miasto na Okole (Nova Civitas in Okol). This proves that this area underwent the process of location under on Magdeburg law, and was granted town rights probably in 1335, by virtue of the privilege granted by Casimir the Great. After 1338, when Okoł was administratively incorporated into Cracow, and into the city walls, this medieval town obtained its distinctive feature, the irregularity of the city plan.⁵³

In the fourteenth–sixteenth centuries, intense colonization was conducted in the areas belonging to the town, sometimes in a planned and organized way, and sometimes spontaneously. As a result of Casimir the Great's planned action, legalized by the location document from 1366, the town of Kleparz formed on the site of former hamlet by the church of St. Florian.⁵⁴ Traces of the activity of this monarch and his successors can be found in various institutions of the suburb Garbary. The suburb did in fact depend on the town council of Cracow, but before 1412 it was granted the right to have its own court of assessors, and the hereditary and judicial office of a vogt, as well as the possibility of having its own court and vogt books. Another feature distinguishing Garbary from other suburbs was the fact that it had its own craftsmen guild, independent from Cracow, namely potters since 1504, and tanners already before 1532.⁵⁵ To the west, Garbary neighboured Pobrżeże, a hamlet recorded in the sources in 1315, 1316 and 1358 as Brzeg Wisły, and in 1363 as Pobrżeże, when it was incorporated into the city's jurisdiction. The name confirms that originally the hamlet lay by one of the arms of the Vistula, which existed in the first half of the sixteenth century, or by a temporarily dug channel of this river, running northeast from Zwierzyniec, through Błonia, then turning southwest before Wiślna gate, and thus

⁵⁰ J. Wiśniewski, *Garbary*, [in:] SHGK, part 1, pp. 693–706.. According to J. Rajman, *Kraków – zespół osadniczy*, pp. 236–237, this land constituted hereditary estates of the vogt, covering 30 lans, bestowed on the vogts of Cracow by Bolesław the Shy in 1257, which were confiscated by Ladislaus the Elbow-high after the rebellion of the vogt Albert in 1311.

⁵³ KDMłp., vol. 1, no. 134; KRK, 623, 1162, 1200, 1264, 1568; KDMK, vol. 1, no. 20; J. Wyrozumski, *Kraków do schyłku*, pp. 259–260; B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 1, pp. 120–122; J. Rajman, *Kraków – zespół osadniczy* pp. 207–211; *Encyklopedia Krakowa*, pp. 692–693.

⁵⁴ KDMK, vol. 1, no. 37. Some scholars believe that the Kazimierz foundation of Kleparz, that is Florencja, was preceded by a foundation of a town on the same location, conducted by Ladislaus the Elbow-high, which would be proved by entries from Cracow town books about 'alta civitas' from 1321, and about a vogt of 'de alta civitate' from 1343, as well as the fact that a burgher Petzold owned two lans, five gardens and a manor in the High City, which was probably a benefice of the locator ('zasadźca') of this town, B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 1, pp. 116, 124; J. Rajman, *Kraków – zespół osadniczy*, pp. 228–229. It is difficult to say, whether this really was the origin of Kleparz. The aforementioned entries could refer not to the supposed location, but to the artisan nature of the hamlet called the High City ('Wysokie Miasto') J. Wyrozumski, *Kraków do schyłku*, pp. 259–269), the fact that it had a vogt, or to the existence of many large burgher demesnes around the city of Cracow, probably like Petzold's demesne, incorrectly identified with the hereditary estates of the vogt.

⁵⁵ J. Wiśniewski, *Garbary*, [in:] SHGK, part 1, pp. 701–702, 704; W. Kolak, *Jurydyki krakowskie*, pp. 233–235; K. Pieradzka, *Garbary*, pp. 32, 65, 78–96, 137–140.

separating Cracow from Zwierzyniec. Two hamlets formed on the territory of Pobrzeże in the fourteenth and fifteenth centuries; Rybitwy and Krupniki, which were recorded e.g. in *Liber beneficiorum* by Jan Długosz as ‘Piscatores cum pultificibus’. The main occupation of the inhabitants of Rybitwy was breeding and storing fish for the market in the place called Stróża Rybna, i.e. in the royal fish farmstead, leased to the burghers of Cracow, which encompassed numerous nearby ponds, supplied with water from the Nieciecza and the flume Rudawa.⁵⁶ Of other smaller hamlets dependent on Cracow, we should mention Brzeg przed Nową Bramą, recorded already from the thirteenth century, but settled only in the fifteenth century,⁵⁷ Przedmieście św. Mikołaja, recorded already in 1318 as ‘molendinum et allodium prope Sanctum Nycolaum’, in 1366 as ‘area ante Portam sancti Nicolai’, that is an abode before Mikołajska gate, in 1551 as ‘suburbium retro s. Nicolaum ultra fluvium Prathnik’, and in 1599 as ‘suburbium s. Nicolai’,⁵⁸ and the so-called Wał Krakowski (Cracow Embankment), stretching along one of the arms of the River Rudawa, from Grodzka Gate to Kleparz, which was created as a hamlet by virtue of the privilege of king Sigismund I the Old in 1533, and was listed frequently in the sixteenth century sources.⁵⁹ The Radziwiłł visitation from 1599 listed also one hamlet called Górka, with buildings, before Nowa Gate.⁶⁰

At the end of the sixteenth century, three jurydyki existed in grounds belonging to the city: Pędzichów, Błonie, Biskupie, and the estate Smoleńsk. The first, situated north of Kleparz, was originally a property of Świętosław Popek, a burgher of Kleparz, and then fell into the hands of the vicars of Cracow cathedral. In 1434, the starosta of Cracow, Mikołaj of Michałów did in fact confirm that this estate belonged to the vicars, but at the same time he acknowledged administrative and judicial authority of the town council of Cracow in this area, which therefore at that time did not have the status of a jurydyka. Only in 1464, after the location of Pędzichów village by Casimir Jagiellon under Magdeburg law, was it possible to change the legal status.

The document does not mention any form of legal dependency of Prądnik in relation to Cracow. In the sixteenth century this hamlet was called ‘horti Prędzichow’, or ‘horti dicti Popek’.⁶¹ The history of pasturelands and gardens near Kleparz, called Błonie, was similar. They belonged to the monastery of the Holy Spirit in Cracow, and were recorded in 1496, and then in 1528 as a plain, on which the gallows stood. In 1551, the monastery of the Canons Regular of the Holy Spirit located here a hamlet with a status of a jurydyki.⁶² The largest amount of source data survived for the hamlet Biskupie, which belonged to Cracow bishopric, and neighboured the town of Kleparz from the west. Originally, only the gardens near Sławkowska Gate, called Biała Wieża (‘the White Tower’) in 1352, belonged to the bishop. Later they appear as Stare Biskupie, but already in 1306 the fields ‘in Dubis Querceti’ were added to the property of the bishopric, they were bought by Jan Muskata from Miroslaw Rożen, and adjoined Biała Wieża from the north. In the course of the fourteenth century, these grounds turned into a hamlet named Biskupie, and were described as a suburb of Cracow, or ‘villagium’, or ‘vicus’, and finally in the sixteenth century they became a jurydyka.⁶³ In 1533–1538, on the western side of the

Sebastiani’ (Ins. 1599, p. 124); Tomkowicz 1926, pp. 63–64; A surviving entry from 1531 mentions a bricklayer Anna ‘de vallo ante portam Wislna’ (*Wypisy źródłowe... 1530–1533*, no. 660), this proves that some fragments of the embankment on the western part of the city had already been developed before 1533. The street Podwale is a remnant of this embankment, it runs along the Planty in Cracow.

city, some distance from the city walls and Wiślna Gate, Marcin Myszkowski of Mirów built a manor with an unusual name Smoleńsk. In 1543, it became a property of Jan Żukowski of Bystrzyca, who with time assigned it for the construction of a hospital and Church of God's Mercy. At the turn of the sixteenth and the seventeenth centuries, this estate earned the status of a jurydyka.⁶⁴

There was a demesne Piaski, with Piaseczny Mill, situated on the fringes of Cracow. It bordered on Rakowice, Czyżyny, and Dąbie, and was recorded already in 1355. In the fifteenth and sixteenth centuries it was called Morsztynowski, from the name of the owners. In the sixteenth century, the following demesnes operated in the territories, which originally belonged to Prądnik Wielki, and later were incorporated into Cracow: 1) Turzonowski (Olsza), recorded for the first time in 1392 with a name 'Alkirhuse'; 2) Zeifrytowski that is Fryzerowski; 3) Langstanowy that is Celarowski, their recorded origin reaching back to 1367, when they belonged to Mikołaj Wierzynek, and 4) Psarski that is Montelupowski, also documented from 1367. Fryszbark, a demesne belonging to the nobility, operated in the sixteenth century in Garbary suburb. It was excluded from the city's jurisdiction, and recorded in land court books. The first entry comes from 1394.⁶⁵

In 1363, Cracow obtained jurisdiction over Czarna Wieś. This did not mean, however, that the town council had any ownership rights to this hamlet, as the rent still belonged to the monarch. This rather unclear legal situation was the source of conflicts between the burghers of Cracow, who bought land there, and the administrators of the royal estates in Cracow. For instance, around 1366 administrator Bodzęta of Kosowice began to restore the lands in this village to the king, seizing pasturelands and establishing royal gardens there, to the detriment of the city. In later sources, Czarna Wieś is still described as royal property, even though its inhabitants were under the jurisdiction of town courts in Cracow.⁶⁶

The legal status of the villages Grzegórzka and Dąbie also requires some explanation. Although the former was bought by the town council of Cracow in 1388 from Piotr and Jan Borek, and the latter in 1389 from the Cistercian monastery in Mogiła, and since then both villages formally belonged to the council and were put under the jurisdiction of town courts, they still kept some autonomy, and were not fully incorporated into the urban complex, often being the subject of purchase and sale transactions, and leases, between the town council of Cracow and individual burghers.⁶⁷

In 1335, Casimir the Great located a town named after himself (Kazimierz)⁶⁸ under Magdeburg law. It was situated on the lands belonging to the king, between the hamlet by the church of St. Nicholas in Skalka, the knights hamlet by the church of St. Jacob, and a village of Cracow chapter called Bawół. The location document mentions the Rivers Vistula and Wilga, but in the first case it means the channel of the Old Vistula ('Stara Wisła'). Additionally, the monarch agreed the area between the royal castle, Wawel, and the River Rudawa and its mouth flowing into the Vistula, later called Stradomia (since 1375), or 'Pons Regalis' (since 1419), to be settled, and legally incorporated into the town of Kazimierz, which indeed happened in 1419 by virtue of Ladislaus Jagiello's decision.⁶⁹ The newly located town did not have agricultural, or forest, background. The process of seizing new utilitarian areas by this body occurred in stages. In 1340, Casimir the Great incorporated the aforementioned village Bawół to the town of Kazimierz.⁷⁰ In 1357, the town council of Kazimierz bought for 120 grzywnas Zabłocie village from king Casimir the Great. It lay on the right bank of the Vistula and had forests. In 1370, the king endowed a half of this village to the town. Moreover, in the same year the king allowed the village Janowa Wola to be located by the stream Czyżowa, near Lasota hill. The village was put under the jurisdiction of Kazimierz. The location was, however, unsuccessful, and what

remained were the arable lans and thickets later called Czyżowa, or Czyżowa Wola, the property of the burghers of Kazimierz. Our plan does not show this area, because of its location to the southwest of Lasota hill. In current literature on the subject, this area was localized near the Vistula, across from Kazimierz suburbs by St. Leonard, where today the district Podgórze stands. This was an obvious mistake. The subsequent medieval purchases of Kazimierz, and specifically of the Augustan monastery by the church of St. Catherine, include: a garden in Błonie on the opposite bank of the Vistula, obtained in 1387 thanks to the endowment of Ladislaus Jagiello, and a farmhouse with two lans of field in the same place, obtained from the same monarch in 1394. Current cartography unreasonably calls the pasturelands and Kazimierz demesne on the right bank of the Vistula ‘Ludwinów’ instead of Błonie. The name was first used only in 1726.⁷¹

Still in the fourteenth century, suburban hamlets began to form on the fringes of Kazimierz. They were economically and administratively related to Kazimierz. Since 1385, the sources frequently mention Kazimierz bleachery, situated by the Vistula, east of Gliniana Gate. Local fishermen (other than the people doing the bleaching) gave rise to the suburb of Kazimierz called Podbrzeże, attested to in 1408, 1470–1480, and later.⁷² Just behind the defensive walls of Kazimierz, by Gliniana Gate, Przedmieście Szewskie formed, recorded in the sources already in 1378.⁷³ On the other side of the town, by the hospital church of St. Leonard, built after 1439 outside the city walls, another suburb formed, called ‘suburbium ad. S. Leonardum’ in 1599.⁷⁴ A demesne called Langpetrowski was built probably after 1469, on the eastern side of Kazimierz, on the initiative of Piotr Lang, a burger of Cracow. In 1522 the demesne belonged to another Cracow burgher, Jerzy Brandler, and next to the town council of Kazimierz. In the seventeenth century it became the property of burgher Dajwor. Some researchers believe this demesne was originally called Okop.⁷⁵

The north-eastern part of Kazimierz was occupied by the Jewish city, which existed since 1495, i.e. since John Albert moved some of the Jews from Cracow here, and grouped them with the Jews inhabiting this area since the end of the fourteenth century. In the beginning, the area was limited to the entire Szeroka Street, but in 1533–1608 it was systematically broadened, and in the beginning of the seventeenth century the borders of the Jewish town almost reached the church of St. Laurence in the south, and the present day Plac Nowy in the west.⁷⁶

The royal castle occupies the central point of our plan. It is situated on Wawel Hill, and Podzamcze and Rybaki lie at the bottom of the hill. They were a part of the royal estates in Cracow. The former hamlet appears also as ‘Subcastrum’, and is recorded already from 1345, as well as Podgrodzie, attested to in 1531. Often, its inhabitants worked in the castle.⁷⁷ Information about Rybaki, still called Rybitwy then, comes from Rejestr gospód w Krakowie from 1632.⁷⁸

⁷⁷ A mill ‘ultra castrum’ was attested in 1345, as well as a mill ‘sub nostro castro Cracoviensi’ (ZDM 1, 46; 4, 933). Mikołaj, a scribe ‘de subcastro’ appears in 1439 who sued Mikołaj, the altarist of Cracow cathedra and Clemens the keeper and the gatekeeper of the Cracow castle ‘de subcastro’ (Gr.Kr., 6, pp. 102–103, 115, 143, 145, 152, 211, 233). In 1472 bakers’ stalls were mentioned sub Castro Cracoviensi (*Codex diplomaticus Universitatis [...] Cracoviensis*, vol. 3, Cracow 1880, no. 3, 234). Podgrodzie is attested in 1531, and Podzamcze e.g. in 1553 and 1664 (LK 1564, part 1, pp. 24–25, 29; part 2, p. 157; J. Dobrzycki, *Zarys dziejów*, p. 22).

Apart from the above-mentioned castle hamlets, the royal estates comprised numerous royal villages, and parts of villages, situated closer or farther away. Our plan shows: Czarna Wieś, located on the site of Łobzów before 1358; Nowa Wieś – also located under Magdeburg law in 1367 on the site of Łobzów, near the royal demesne – the demesne in Łobzów by the royal castle, under construction since 1357; the castle itself with a garden, depicted on panoramas of Cracow from the beginning of the seventeenth century; Dębniki, attested to already in 1254, comprising a royal part, and a part belonging to the Pauline monastery by the church of St. Nicolas in Skalka, later called Rybaki; and a part of Półwie Zwierzynieckie.⁷⁹ A royal village Rakowice bordered city demesnes from the east, its fields are shown on the plan. The first record of this village comes already from 1244.⁸⁰ The village Płaszów experienced some ups and downs: between 1254 and 1287 it belonged to the monastery of the Norbertine Sisters in Zwierzyniec, between 1324 and 1428 to the knights, and finally, in 1428 it was bought by the king and incorporated into royal estates in Cracow.⁸¹

The plan of Cracow shows Church property, which consists of the aforementioned jurydyki: Biskupie, Błonie in Kleparz, and Pędzichów, suburban villages: Kawiory, Krowodrza, Półwie (Zwierzynieckie), Zakrzówek, Zwierzyniec, Królowa Wola demesne (today Gramatyka), and parts in Błonie in Kazimierz, and Dębniki (Rybaki). The earliest record, from 1220, mentions Krowodrza, and describes it as a property of the monastery of Holy Spirit by endowment of bishop of Cracow Iwo Odrowąż. Zwierzyniec is next, recorded in 1224 as a property of the local monastery of the Norbertine Sisters. The hamlet Kawiory appears in the sources since 1318, sometimes called ‘villagium’, i.e. a demesne in the suburbs of Cracow (1470–1480), and sometimes ‘villa’ (1599), parts of which belonged to various Church institutions: the church of St. Ann in Cracow, the monastery of the Sisters of St. Clare by the church of St. Andrew (later University of Cracow), Cracow bishopric, and Cracow chapter. In 1368, smallholders were settled on monastery grounds, under Magdeburg law, by the monastery in Zwierzyniec. This gave rise to the village called Półwie, attested to under this name in 1431, 1449–1450. The first record of the village Zakrzów can be found only in 1464. The village belonged to Cracow chapter and was put under Magdeburg law in that year by king Casimir Jagiellon. Królowa Wola was a demesne situated near the castle at Łobzów. In 1420–1517 the demesne belonged to the burghers of Cracow, and then to the University of Cracow. From the second half of the sixteenth century, this demesne appears under the name Gramatyka, a borrowing from the Grammar (‘Gramatyka’) faculty of the University of Cracow, to which it belonged, and from the inn Gramatyka, attested to in 1553. There were two demesnes in Cracow Błonie, one belonged to the monastery of St. Catherine in Kazimierz, and is recorded since 1387, the other belonged to the bishop of Cracow, and was listed already in 1399; in the seventeenth century it was called Ludwinów.⁸²

North of jurydyka Błonie in Kleparz, where the roads to Olkusz and Biały Prądnik met, and where now Nowy Kleparz lies, there was a guard structure of unknown origin and functions, recorded as

'custodia' in 1470, 'custodia civitatis' in 1540, 'strzelnica' ('shooting-range') in 1564, and 'saggitaria' in 1594. In 1587, during the preparations to repel the attack of the Archduke Maximilian Habsburg on Cracow, this structure was surrounded by walls and strengthened with earth bastiles by Jan Zamoyski. Perhaps Janina Dzikówna is right in her claims that the burghers of Kleparz guarded over their town from this place, and regularly practiced shooting, just like members of shooting fraternity of Cracow in their shooting-range.⁸³

Cracow bleachery was situated by the confluence of the Prądnik and the Vistula, probably on the site of the old Rybitwy, recorded in the location document of Cracow from 1257. The origins of this structure are related to the buyout of Jan Noldenfasser's garden by the town council of Cracow in 1452, and to Casimir Jagiellon's consent from 1458 to direct the water from the Rudawa to open this bleachery.⁸⁴ There were many brickyards in suburban areas of Cracow and Kazimierz, the biggest and the most important of which were located in Dębniki, Dąbie, outside the walls of Kazimierz across from Wielicka Gate, in the Błonie of Kazimierz, and across from Zwierzyniec monastery.⁸⁵ An image of Cracow from 1603–1605 tells us about the city haven, situated in a bend of the Vistula, between the mouth of the Nieciecza and Stradom. According to Mieczysław Tobiasz, the river port in this place (today it is Plac na Groblach) was built only in the sixteenth century, when the dyke separating royal ponds from the Vistula was built.⁸⁶ This place was inhabited by Cracow lightermen, the so-called 'włóczkowie', who floated timber down the Vistula and caught fish.

Recently, an attempt has been made to calculate the entire area of the medieval and sixteenth century agglomeration of Cracow. In 1999, Leszek Belzyt managed to establish the exact area of Cracow within city walls, Kazimierz within its walls, Wawel and the Jewish town in Kazimierz, but his estimated calculations of the entire area of the urban complex, together with suburbs and other objects – between 250 and 300 ha for the second half of the fourteenth century, and 500 ha for the end of the sixteenth – are far from reality, much lowered and misleading.⁸⁷ My thorough research conducted in 2005 and 2007 reveals that the general area of the entire Cracow agglomeration, i.e. the three cities with adjoining grounds, equalled 1,760 ha at the end of the sixteenth century, and 1,770 ha with the castle on Wawel, that is over 17 km².⁸⁸

Water networks underwent major changes in the period from the end of the sixteenth century and modern times. All rivers were shown on the plan, with their arms and flumes, as well as the more important ponds. The main water channel was the Vistula, which – according to Klemens Bąkowski – flowed in the same channel as today to the Wawel Hill, but after the castle hill it split into two arms, the main one surrounding Kazimierz from the north and northeast, and the other, called Zakazimierka or Nieciecza, surrounded this town from the south and southeast, and then joined the main channel at the exit of the current Ignacy Daszyński Street. The channel of the Zakazimierka was filled with water flowing from the dam on the Vistula, between Skałka and Dębniki, and the water from the Wilga, flowing into the channel above the modern mouth. The plan does not show the old channel of the Vistula, running through Dębniki. From time to time, during the enormous outflows, the waters of the Vistula tried to break through this channel, as in 1570. Another old channel of the Vistula, through Cracow Błonie near Wiślna Gate, was also not marked. The channel of the Zakazimierka was narrower than the main channel of the Vistula, however, in some years, such as 1593 or 1598, it broadened greatly

because of the floods.⁸⁹ Because of the two arms of the Vistula flowing through the city, an island was formed, near the place where the river split, between Wawel and Skalka. It was called Ostrów, and endowed by Casimir Jagiellon to Mikołaj of Brzezie in 1450. The latter, on the other hand, gave the island to the Augustan monastery by the church of St. Catherine in Kazimierz in 1458. Afterwards the island was used – according to the 1564 inspection – as a burial ground for Tatar prisoners.⁹⁰

In our area, the Vistula had several left tributaries: Rudawa, Prądnik, and Dłubnia, and one right tributary – Drwinia. The right-bank Wilga, on the other hand, flowed into the arm of the Vistula running by the Wawel and Skalka (Zakazimierka). The Rudawa had the highest number of arms, used for many utilitarian and military purposes. The definite majority of utilitarian structures in Cracow suburbs was driven by the energy from the waters of the Rudawa. All arms of the river were shown on the map. These were: a) the main channel, called Nieciecza in its downstream, it flowed from Mydlniki, along Błonie on the northern side, surrounded Półwie Zwierzynieckie, and flowed into the Vistula near the modern Dębnicki bridge;⁹¹ b) a side channel, which separated from the main one before Błonie and ran like the present-day Rudawa, then flowed into the Vistula near the monastery of the Norbertine Sisters in Zwierzyniec, and drove the monastery's mill; c) the artificial channel, separating from the Rudawa in Mydlniki as the so-called 'Młynówka', which surrounded the gardens of the castle at Łobzów from the south and east, and separated Nowa Wieś from Krowodrza, then flowed between Piasek suburbs and jurydyka Biskupie near Cracow city walls, further towards the southwest, through Garbary, surrounding Krupniki from the west, and finally joining the main channel near Rybitwy; d) another artificial channel beginning at Chełm, flowing near Kawior and through the meadows of Czarna Wieś, flowing into Nieciecza near Rybitwy; e) the fifth, also an artificial arm, which separated from the Młynówka by the town tower Ceklarcz (now this is the area of the monastery of the Franciscans), and then flowed in two arms along the city walls, thus encircling the city, the arms joined in Stradom and flowed into the main channel of the Vistula, near the now non-existent church of St. Sebastian. The majority of these arms of the Rudawa disappeared with time. Only one remained, which once performed auxiliary functions, behind the confluence with the Vistula, near the monastery of the Norbertine Sisters in Zwierzyniec. The few traces of the main channel can still be found, behind the so-called Cichy Kącik, as well as traces of Młynówka in the name of the Street called Dolnych Młynów.⁹²

The River Prądnik, now called Białucha at its downstream, was broadly used as a source of energy to drive mills in Zielonki, Biały and Czerwony Prądnik, Rakowice, Piaski demesne, Przedmieście Św. Mikołaja, and the city's bleachery. Its course changed much from the sixteenth century. In the village Prądnik Biskupi, which is Prądnik Biały district today, the river split into two arms:

⁸⁹ K. Bąkowski, *Dawne kierunki rzek pod Krakowem*, pp. 138–157; M. Tobiasz, *Dziejowe przemiany sieci wodnej*, pp. 22–30. The southern channel appears under the name of Nieciecza in 1430 (KDMK, vol. 1, no. 127), Zakazimierka, Kazimierka in 1533 and 1564 (*Prawa, przywileje i statuta*, vol. 1, no. 74; LK 1564, part 1, p. 31); *Hydronymia Europaea*, hrsg. von W.P. Schmid, Lfg. 12, *Rechte Zuflüsse zur Weichsel zwischen Sola und Dunajec (Nazwy wodne prawobrzeżnych dopływów Wisły między Solą a Dunajcem)*, bearb. von K. Rymut, Stuttgart 1996; tamże, Lfg. 16, *Gewässernamen im linken Zufluß der Weichsel zwischen Przemsza und Pilica (Nazwy lewobrzeżnych dopływów Wisły od Przemszy do Pilicy)*, bearb. von K. Rymut, Stuttgart 2001.

⁹⁰ LK 1564, part 1, p. 27; Bibl. Jag., MS 8059 IV, f. 95; K. Bąkowski, *Dawne kierunki rzek pod Krakowem*, p. 166.

⁹¹ The exact course of Nieciecza on its junction with Młynówka Rudawy, near Rybitwy and Krupniki, is hard to reconstruct. Two seventeenth century plans, created during the Deluge, are exceptionally imprecise and almost fantastical in their presentation of the river, whereas the eighteenth and nineteenth century plans, i.e. the Swedish plan from 1702 reproduced in vol. 5 of 'Roczniki Krakowskie' and the Kołłątajowski plan from 1785 reproduced in vol. 48 of these 'Roczniki', or Teofil Żebrawski's plan from 1836 differ in details. It is interesting that the surviving panoramas of Cracow from the first half of the seventeenth century do not include meanders and broads of this arm by its junction with Młynówka. The River Nieciecza has a rich sixteenth century documentation (e.g. MRPS, vol. IV, no. 9025, 9073, 15049, 23183; *Prawa, przywileje i statuta*, vol. 1, no. 749; Wiz. Krk. 1599, p. 39; LK 1564, part 1, p. 7; LK 1659–1664, pp. 320, 337).

⁹² K. Bąkowski, *Dawne kierunki rzek pod Krakowem*, pp. 157–165; M. Tobiasz, *Dziejowe przemiany sieci wodnej*, pp. 32–33. Recently K. Krasnowolski took interest in reconstructing particular arms of the River Rudawa and the mill network on this river, B. Krasnowolski, *Lokacyjne układy urbanistyczne*, pp. 130–136. The Zwierzyniec arm of the Rudawa is attested in, e.g. 1533 (*Prawa, przywileje i statuta*, no. 754), the Kawior arm in 1375, 1438, 1442, 1446, 1512 (KDMK, vol. 1, no. 49; *Dokumenty sądu ziemskiego krakowskiego 1302–1453*, pub. Z. Perzanowski, Wrocław 1971, pp. 187, 192; Gr.Kr., 9, p. 557; *Prawa, przywileje i statuta*, vol. 1, no. 749), The Garbary flumen of the Rudawa appears in 1564 (LK 1564, part 1, pp. 8, 10, 13–14; LK 1659–1664, f. 353, 406v), the arm, which surrounded the city, called Rudawka, is noted in 1533, 1564 (*Prawa, przywileje i statuta*, vol. 1, no. 751–752; LK 1564, part 1, p. 9; LK 1659–1664, f. 337, 351v–352v, 427).

a) the right one meandered southeast through burgher's demesnes: Psarski called Montelupiewski, and then Szlak, Langstanowy later called Celarowski, Zeifrytowski later called Bosacki or Pryzerowski, and Turzonowski, which was later called Olsza; b) the left arm, surrounding those demesnes from the north, changed its direction afterwards and turned southwest before Rakowice, and flowed into the main channel in Olsza. Next, the Prądnik flowed through Morsztynowski demesne in Piaski, where it drove the mill called Piaseczny (now the area southeast of Mogilskie roundabout), and then along the northern border of Grzegórzki, to the city's Bleachery, where it flowed into the main channel of the Vistula, that is the Old Vistula. The topography of this part of the town, from the present-day Mogilskie roundabout to the crossroads of Św. Łazarza Street and Grzegórzecka Street, characterized by the abrupt depression of the ground, and the distinctive meanders of the roads depicted in the Modern Age maps of the vicinity of Cracow, seem to legitimize the drawing of yet another, alternative channel of the Prądnik, running a bit more to the north from the border of Grzegórzki, almost parallel to the present-day Kopernika Street. The channel of Prądnik by the church of St. Nicolas survived until the Deluge, when the Swedish army besieging Cracow changed the course of the downstream Prądnik and dug its mouth into the Vistula in the village Dąbie. It is worth noting that the River Prądnik had a right tributary Suchydół, later called Sudoł, in Biały Prądnik village, and in Prądnik Tyniecki, that is Czerwony, the river had a left tributary – Suchydół Dominikański.⁹³

The River Wilga flowed into the Zakazimierka below Skalka. The contemporary confluence of the river with the Vistula is situated 300 m farther to the east from the original one. Our plan does not show two right tributaries of the Wilga: rivulets Głęboka Debrz (flowing from Piaski Wielkie) and Budnarka. We do not know, how the River Czyżowa flowed, whether it was a tributary of the Wilga, or its flume led under Lasota Mountain and drove a mill there. Friedrich von Mieg's map from 1779–1783 provides no answer on this matter.⁹⁴

Bridges were built over all rivers, at junction points with the more important roads and streets. The largest and the most important bridge over the Vistula, called Wielki ('Great') or Królewski ('Royal'), connected Cracow with Kazimierz, and is attested to already in 1363, and later in 1570, and 1599. Apart from that one, in the fifteenth and sixteenth centuries, there were three bridges over the Zakazimierka, one called the Bridge of St. Stanislaus, was situated across from Skawińska Gate and is recorded in 1385, the other stood by Wielicka Gate, and the third in front of Bocheńska Gate, as confirmed by an entry from 1475, as well as surviving images of Cracow: from 1537, and from the turn of the sixteenth and seventeenth centuries.⁹⁵ The bridges were often destroyed in the floods. Not all were rebuilt, like Bocheński bridge after 1537. The sources also mention bridges over various tributaries of the Vistula, namely: a) Sławkowski bridge over the Rudawka, mentioned in 1390; b) a bridge in front of St. Nicolas Gate, over the Rudawka, listed already from 1393; c) a bridge in front of Nowa Gate, over the same river, recorded from 1390 and 1395; d) a bridge in front of Grodzka Gate, over the same river, recorded e.g. in 1564, or e) a bridge over Nieciecza, which appears in 1599.⁹⁶

Numerous ponds, which existed at the end of the sixteenth century in the suburbs and on the fringes of Cracow, were also included in our plan, both those with their own name, as well as unnamed ponds. These objects prove that fish breeding was well developed in the agglomeration of Cracow. The majority of the ponds was supplied by the water from the Rudawa and its arms, and the water from the Wilga and the Prądnik. Of the more important ponds we should mention: a) a large pond in Zwierzyniec, where now Na Stawach Square is; b) a pond on the site of the present-day Na Groblach Square; c) a pond in a place called Żabikruk, by the exit of Wiślna Street; d) a pond situated across

⁹³ K. Bąkowski, *Dawne kierunki rzek pod Krakowem*, pp. 168–169; M. Tobiasz, *Dziejowe przemiany sieci wodnej*, pp. 12–13. That the River Prądnik flowed behind the church of St. Nicolas is attested in many fourteenth century and later sources, like, for instance, documents from 1360, 1388, 1500, LK 1564 (KDMłp., vol. 1, 259; KDMK, vol. 1, no. 66; LK 1564, part 1, pp. 11, 16; LK 1659–1664, f. 353), or the plan of Cracow besieged by the Swedes in from 1655 (*Katalog dawnych map*, pp. 32–33). The change of the course is shown of the siege plan of the city, occupied by the Swedish and Transylvanian armies in 1657 (*ibidem*, pp. 34–35).

from Furta Żydowska ('the Jewish Wicket'); e) a pond below the city walls of Cracow, between Grodzka Gate, and Brama Nowa ('the New Wicket'), called Leipniger Pond, and St. Stanislaus Pond from the second half of the sixteenth century; f) a large pond south of the church of St. Nicolas in Wielopole; g) ponds near the city's bleachery; h) Jezierzysko Pond by Kazimierz city walls; i) the pond of St. Stanislaus near Skałka in Kazimierz; j) Kazimierski Pond on the right bank of the Zakazimierka; k) Jelitowy Pond in Dębni; l) two ponds in Czarna Wieś near Rybitwy; ł) ponds in Czarna Ulica and Półwieś Łobzowski.⁹⁷

A definite majority of utilitarian structures in the suburbs and suburban villages of Cracow was driven with energy from the rivers. The most mills were situated on the arms of the swift Prądnik, mostly in villages located north of Cracow, i.e. Zielonki, Biały Prądnik, Czerwony Prądnik, and Rakowice, which are not covered by our plan. Piaseczny mill lay closest to the town (near present-day Mogilskie roundabout), it was recorded e.g. in 1303, and 1355, and the mill below the church of St. Nicolas, called Mikołajski (Nicolas = Mikołaj), recorded in 1318, and later. Both mills belonged to the burghers.⁹⁸ An arm of the Rudawa, called Rudawka or Młynówka, recorded already in 1286, also served utilitarian purposes. Royal mills were situated on this river: a) Bieniasza, later called Kamienny, and then Dolny, registered already in 1335; b) Dębny mill recorded from 1396; c) Troczny mill built on Casimir Jagiellon's consent from 1448.⁹⁹ The Rudawka separated from the Młynówka. It surrounded the city within city walls and flowed into the Vistula near Leipniger Pond. Sometime before 1327 the miller Gerlach built a mill, at the specific request of Ladislaus I, by the Rudawka just below St. Nicolas Gate. Later the mill was called Gerlach's Mill, or Kutlowski Mill, and belonged to the administrators of Cracow. In the sixteenth century the following workshops operated next to the mill: metalworker, recorded in 1556, 1559, and 1564; loom, recorded in 1564; and a sawmill, that is timber mill, built by virtue of the privilege of Sigismund I from 1533, and attested to in 1539.¹⁰⁰ The Rudawka also flowed through Podzamcze, where the Cracow starosta's mill stood, called 'Młyn pod Kurzą Nogą' ('Mill under Hen's Foot'), recorded in 1345, 1432, 1529, 1564, and was burned down in 1658, as well as the mill by the Bernardine monastery, recorded in 1529, and in 1658 as burned down.¹⁰¹ In the light of Bogusław Krasnowolski's findings, the artificial arm of the Rudawa, flowing from the Norbertine monastery, and then through the Błonia, and near Kawior, was much older than this flume. There was a mill on this artificial river, which belonged to Zwierzyniec monastery, and was recorded in 1254, 1256, 1286, and 1287. Later – according to the same scholar – the mill frequently changes hands, and belonged either to the burghers, or to the nobles, and was called Granowski.¹⁰² On the arm of Rudawka, there was

⁹⁷ Żabikruk 1419, 1422, 1426, 1468, 1506, 1658 (Gr.Kr., vol. 1 p. 117; KDMK, vol. 1, no. 118; vol. 2, no. 466, 490; LK 1659–1664, f. 337); the pond between Żydowska Wicket and Wiślna Gate 1570, 1573, 1658 (AP Kraków, Acta dominorum provis. 1574, pp. 458–459, 502; LK 1659–1664, f. 337); ponds in Zwierzyniec 1593 (AP Kraków, Acta dominorum provis. 1575, p. 600); Paulkaufmanowska pond in Czarna Wieś 1596 (AP Kraków, Consularia Cracoviensia 454, p. 399); pond by the royal garden in Łobzów 1658 (LK 1659–1664, f. 406v); ponds by the city bleachery 1452, 1564 (KDMK, vol. 2, no. 550; LK 1564, part 1, p. 16); Leipniger pond in front of Nowa Gate 1420, 1437, 1439, 1443, 1517, 1528 (KDMK, vol. 2, no. 407, 418, 531, 540, p. 757; *Prawa, przywileje i statuta*, vol. 1, pp. 950–951); the royal pond outside the city walls of Kazimierz 1431, 1487, later called Jezierzysko (ZDM 7, 2094; KDMK, vol. 1, p. 277); Pond of St. Stanislaus by the church in Skałka 1599 (Ins. 1599, p. 156); royal pond on the right bank of the Zakazimierka, outside Kazimierz 1334, 1510, 1564, 1658 (MRPS, vol. IV, no. 1033; LK 1564, part 1, p. 19; LK 1659–1664, f. 372v, 427); the great lake in Dębni, called Jelitowe 1254, 1376, 1470–1480, 1558 (KDP 3, 28; KDMłp., vol. 1, 334; Długosz LB, vol. 3, p. 116; *Rachunki wielkorządowe Jana Bonera 1558*, comp. a monastery mill, recorded in 1470–1480 in *Liber beneficiorum* by Jan Długosz.¹⁰³ The arm, which at the time flowed just under the monastery, still exists today. Another mill, called Błonie, was situated by the royal Kazimierski Pond, which was supplied by water from the Wilga, the mill was recorded in 1411, and 1658.¹⁰⁴ Because of the difficulties in localizing the majority of mills, these structures were not shown of the plan of Cracow settlement complex.

The River Rudawa played an important role in Cracow's defensive capability. One of its arms, the Rudawka, already mentioned above, was used to fill the city moat – which ran along the city walls – with water. Only important structures of Cracow defensive system were included in the plan. The system itself was built during the Bohemian reign in Cracow (1292–1306) and comprised the city and castle walls with gates and 39 towers (which were not shown on the plans). The following gates were marked on the plan: Floriańska with Barbican, Sławkowska, Mikołajska, Nowa, Grodzka, and Szewska, and two wickets: Biskupia and Żydowska, situated in the fortifications of Cracow, as well as gates: Gliniana, Bocheńska, Wielicka, and Skawińska in the city walls of Kazimierz, built during the reign of Casimir the Great. Wawel Castle was also a part of the fortifications of Cracow, it was a separate defensive structure.¹⁰⁵

Important administrative buildings, as well as buildings of public use and utilitarian structures of the city were marked on the map. These were: Cracow town hall, attested to already in 1316, Kazimierz town hall, recorded in 1369 and 1425, Kleparz town hall, mentioned in 1465, and the cloth hall in Cracow, recorded already in 1306.¹⁰⁶ University buildings were also important structures, these were: Collegium Maius, built around a building offered to the University in 1400, and Collegium Minus, created in 1449 at the back of Collegium Maius.¹⁰⁷

Medieval and Renaissance Cracow took pride in its several dozen sacral buildings. At the end of the sixteenth century, there were 20 temples inside Cracow's city walls, seven churches in Kazimierz, five churches in Kleparz and its vicinity, three churches in Wawel, three in Stradom, three churches on the eastern side of Cracow, and six on the western side. The cathedral of St. Wenceslaus and St. Stanislaus the Martyr was the main temple of Cracow. It stood on Wawel Hill. 11 churches had the status of a parish:¹⁰⁸

- a) church of St. Ann, its parish encompassed the following streets: Św. Anny, Poprzeczna that is Jagiellońska to Szewska Street, fragment of Szewska Street, Gołębia, and fragment of Wiślna;
- b) church of the Holy Cross, encompassing Prądnik Biały village, and in Cracow the fragment of Św. Ducha Street (Szpitalna) from the church of the Holy Spirit ('Św. Ducha') to the church of St. Roch, and fragment of Floriańska Street;
- c) church of the Virgin Mary (Mariacki Church) on Cracow's market square, encompassing Bronowice Polskie village (now Bronowice Małe), and in Cracow almost entire Floriańska Street, the street Św. Jana, Sławkowska, Rogacka (now Reformacka Street), Żydowska (now Św. Tomasza), Sienna, Mikołajska, fragment of Św. Szczepana Street, fragment of Szewska Street, fragment of Wiślna Street, fragment of Gołębia Street, almost entire Bracka Street, fragment of Grodzka Street, fragment of Stolarska Street, fragment of Św. Ducha Street, and the entire market square.
- d) church of St. Stephen, which encompassed Biskupie, Bronowice Niemieckie (now Bronowice Wielkie), Czarna Ulica, Czarna Wieś, Garbary, Kawiory, Krowodrza, Łobzów, Mydlniki, Nowa Wieś, Półwieś (now Łobzowska Street), Rząska, the streets Garncarska, Krupniki, and Rybitwy

- in the suburbs, and in Cracow fragment of Św. Macieja Street, fragment of Św. Szczepana Street, and fragment of Szewska Street;
- e) church of All Saints encompassing Wawel castle, Podzamcze, Stradomia suburb (now Stradom), Zwierzyniec suburb to the house called Smoleńsk, part of Wał Miejski (City Embankment) from Stradomia to the church of St. Sebastian, and in Cracow fragment of Grodzka Street, fragment of Szeroka Street (now Dominikański Square), Kanoniczna Street, the so-called Psi Rynek, fragment of Bracka Street, fragment of Wiślna Street with the bishop's palace;
 - f) church of St. Florian in Kleparz, encompassing Kleparz;
 - g) church of the Corpus Christi in Kazimierz, which took its parochial district from the church of St. Laurence in Kazimierz, and encompassed part of Kazimierz town;
 - h) church of St. Jacob in Kazimierz, encompassing Borek, Jugowice, Kurdwanów, Łagiewniki, Płaszów, Podborze, Pokrzywnica, Prokocim, Swoszowice, Wola (Duchacka), Wróblowice, Zabłocie, and in Kazimierz: a quarter of the market square, Piekarska Street, a street behind the church of St. Jacob, Podbrzeże suburb, the suburb by the church of St. Leonard;
 - i) the church of St. Michael and St. Stanislaus in Skałka in Kazimierz, encompassing the territory of the old village Bawół, Dębniaki, Kobierzyn, Pychowice, Zakrzów, and in Kazimierz: a quarter of the market square and the streets up till Skałka;
 - j) the church of the Holy Saviour (Salvator) in Zwierzyniec, encompassing Bielany, Chełm, Olszanica, Podchełmie, Półwsie (Zwierzynieckie), Przego Street rzały, Wola (Justowska), and Zwierzyniec.

There were 16 religious monastic communities in the agglomeration of Cracow: a) the Benedictines of the Slavic Rite by the Church of the Holy Cross, situated between Kleparz, Biskupie, and Błonie; b) the Carmelites of the Old Observation by the Church of the Holy Virgin Mary in Piasek; c) Canons Regular of St. Mark by the Church of St. Mark in Cracow; d) Canons Regular of the Holy Spirit by the Church of the Holy Spirit in Cracow; e) Canonesses Regular of the Holy Spirit by the same church; f) the Dominican Sisters in Stolarska Street in Cracow; g) the Dominicans by the Church of the Holy Trinity in Cracow; h) the Franciscans by the Church of St. Francis in Cracow; i) Sisters of St. Clare by the Church of St. Andrew in Cracow; j) the Norbertine Sisters by the Church of St. Augustine in Zwierzyniec; k) the Bernardines by the Church of St. Bernard in Stradomia; l) the Order of the Holy Sepulchre by the Church of St. Hedwig in Stradomia; ł) the Bernardine Sisters of St. Colette by the Church of St. Agnes in Stradomia; m) the Canons Regular by the Church of Corpus Christi in Kazimierz; n) the Augustans by the Church of St. Catherine in Kazimierz; o) Paulines by the Church of St. Michael and Stanislaus in Skałka.¹⁰⁹

Hospitals cared for the homeless and ill. There were six hospitals in Cracow: a) by the Church of St. Valentine in Błonie in Kleparz; b) by the Church of St. Simon and St. Jude in Kleparz; c) by the Church of the Holy Spirit in Cracow; d) by the Church of St. Sebastian outside the walls of Cracow, by Leipniger pond; e) by the Church of St. Hedwig in Stradomia; f) by the Church of St. Leonard, outside the walls of Kazimierz.¹¹⁰

The following churches did not survive to our times: the Church of the Holy Spirit in Cracow, the Church of St. Philip and St. Jacob in Kleparz, the Church of St. Gertrude outside Nowa Gate, the church of St. Hedwig in Stradomia, the Church of St. Jacob the Apostle in Kazimierz, the Church of St. George in Wawel, the Church of St. Leonard outside the walls of Kazimierz, the Chapel of St. Matthias and St. Matthew in Cracow, the Church of St. Mary Magdalene in Okoń, the Church of St. Michael in Wawel, the Chapel of St. Peter in Okoń, the Church of St. Peter in Garbary, the Church of St. Roch in Św. Duchy (Szpitalna) Street in Cracow, the Church of St. Sebastian outside Cracow city walls, the Church of St. Stephen in Cracow, the Church of St. Simon and St. Jude Thaddaeus in Kleparz, the Church of St. Valentine in Błonie in Kleparz, the Church of St. Laurence in Kazimierz, the Church of St. Sophie in Kazimierz, and the Church of All Saints in Cracow.¹¹¹

The bishop's palace (*curia*) was situated by the city walls, near Biskupia wicket, close to the Franciscan monastery. It was moved there from Wawel by bishop Jan Radlica before 1384.¹¹²

An evangelical commune (Calvinist) called Brog functioned since 1571 in Cracow in a house in Św. Jana Street. It was destroyed during the anti-protestant riots in 1591.¹¹³

In the Jewish city, there were several important places of cult: the Old Synagogue built probably in the end of the fifteenth century, the Remuh Synagogue, which functioned from the second half of the sixteenth century, and the High Synagogue, that is New Synagogue, built before 1563.¹¹⁴

In our period the agglomeration of Cracow had a well-developed network of roads, both local and nationwide, as well as international. Moravia and Bohemia could be reached by the road leaving from Skawińska Gate in Kazimierz, and continuing through Zakrzów, Kobierzyn, Skawina to Zator and Oświęcim, or by the road running along the left bank of the Vistula from Wiślna Gate, through Zwierzyniec, Wola Chełmska, Chełm, Liszki, and Kaszów to Oświęcim. The connection with Ruthenia and Lithuania was maintained thanks to the road leaving from Mikołajska Gate, then leading through Piaski, Kamienny Most ('Stone Bridge') in Czyżyny, Mogiła, and further on through Brzesko Nowe, Koszyce, Nowy Korczyn and Sandomierz. There was also another road to Ruthenia, from Wielicka Gate, or Bocheńska Gate in Kazimierz, through Prokocim, Bieżanów, Węgrzyce, Staniątki, Bochnia, Tarnów, Rzeszów and Przemyśl. The road to Silesia left from Sławkowska Gate, down Długa Street, through Kleparz, Krowodrza, Tonie, Biały Kościół, and further on through Olkusz, Sławków, Będzin. The road to Greater Poland originated in the same place, and went through Kleparz, Zielonki, Brzozówka, Skała and Ogrodzieniec. Another road to Greater Poland, and Warsaw, and Prussia, ran from Floriańska Gate, next to the church of St. Florian, and through Prądnik Tyniecki (Czerwony), and then Bosutów, Dziekanowice, Kończyce, Słomniki, and Miechów. Słomniki could also be reached from Sławkowska Gate, down Długa Street, and through Witkowice, Węgrzyce, Michałowice. Traders heading to Subcarpathia and Hungary used the Wieliczka road, through Dobczyce.¹¹⁵

Cracow, its adjoining towns and suburbs, had a dense network of streets and squares. The names of the majority of streets in Cracow survive to this day: Floriańska, Św. Jana, Sławkowska, Mikołajska, Sienna, Szczepańska, Szewska, Wiślna, Bracka, Grodzka, Stolarska, Kanoniczna, Legacka that is Poselska. New names were given to the following streets: Św. Ducha (now Szpitalna), Rogacka (now Reformacka), Szrotarska (now Św. Marka), Żydowska (now Św. Tomasza), Świnia (now Św. Tomasza), Tandeta (now Mały Rynek), Gołęgia (now Jagiellońska), Garncarska (now Gołębia), Psi Rynek (now Franciszkańska), Szeroka (now Dominikański Square). Few streets in Kazimierz kept their names, these were: Krakowska, Piekarska, Bożego Ciała, and Św. Wawrzyńca. The names of the remaining streets were changed: Wielicka (now Krakowska), Św. Stanisława (now Skałeczna), Św. Jakuba (now Skawińska), Sukienników (now Józefa), Św. Katarzyny (now Augustiańska). The area around Krowia Street and the cattle market, called Psi Rynek, were developed. The name of the suburb Podbrzeże survived in the name of Podbrzezie Street. Changes in nomenclature occurred also in Kleparz. Długa Street kept its name from the Middle Ages, but Wąska Street is called Zacisze today, Krowia Str. – Św. Filipa, Biskupia – Krowoderska. In the western suburbs of Cracow, the changes in street names were fundamental. Półwie Street is now called Łobzowska, Tasemberg – Garbarska, Szeroka – Karmelicka, Czarna Ulica – Karmelicka, Wąska – Rajska, Garncarska – Krupnicza, Krupniki – Garncarska.¹¹⁶

There were many green areas in the sixteenth century Cracow and its surroundings: a) groves, like Bystrzec Forest by the Vistula, near Zabłocie and Płaszów;¹¹⁷ b) meadows and thickets called 'błonia' then, located on the fringes of Cracow, and near Kazimierz and Kleparz; c) gardens in the

suburbs, like the one at the castle in Łobzów;¹¹⁸ d) cemeteries, like the Remuh Cemetery shown on our plan, situated in the Jewish town of Kazimierz.¹¹⁹

Coats of arms of two cities: Cracow and Kazimierz, are an integral part of our plan of Cracow and its surroundings.¹²⁰

A simplified map, at a scale of 1:28,800, was added to this commentary. The map shows the urban complex of Cracow at the end of the sixteenth century, within the boundaries of this agglomeration.

III.6.15b.1 CRACOW IN 1598

Kamila Follprecht, Zdzisław Noga

At the close of the sixteenth century Cracow was still the capital of the state, even though for a long time the rulers spent more and more time outside the Wawel. The population of Cracow agglomeration (encompassing also the towns Kazimierz, Stradomia, and Kleparz, the Wawel hill, suburbs, and jurydyki) equalled some 33,650–36,700, and the population of Cracow inside city walls was around 14,700–15,900.¹ This was a diversified community. Many dignitaries temporarily resided in the capital, and Cracow was the largest concentration of various institutions of the Catholic Church in the Commonwealth. It is calculated that several hundred clergymen lived in the monasteries situated inside the city and in parochial churches. The University attracted youth, with over 200 students enrolled each year.²

The burghers also formed a mixed group, not only in terms of occupation and wealth (from the patricians to people, who lived in the city but did not have the citizenship, earning their livelihood doing odd jobs or begging), but also ethnic background. In the end of the sixteenth century, the Poles dominated in the city. According to estimated data, based on surname criteria, they constituted around 85% of the population. The second largest group were the Germans (10%). There was also a significant number of Italians (3%). Other ethnic groups were small. In total, they equalled 300 people (100 Scots, 50 Hungarians, 50 Frenchmen).³ The immigration must have been considerable, if in 1598 73 people obtained town rights in Cracow.⁴

At the close of the sixteenth century the urban layout of Cracow was still medieval. The located town was created in a geomorphological unit called Pradolina Wisły ('the Glacial Valley of the Vistula'), in its middle part, that is on a dry outwash fan of the Rudawa and the Prądnik, secured from the east and west by the rivers' broads. Near Barbican it reached 210–210 m above sea level, and gradually descended, reaching around 202 m above sea level near the southern border of the town.⁵ The old belief, that Cracow was once well supplied with water, finds no evidence in the newest research. In any case, at the end of the fourteenth century, no river flowed through the city, but the waters of the

¹ Detailed commentary on the size of Cracow agglomeration in: J. Laberschek, *Cracow i okolice w drugiej połowie XVI wieku*, [in:] AHP Kraków, in this edition: III.6.15a.1, also: L. Belzyt, *Kraków i Praga około 1600 roku. Porównanie topograficznych i demograficznych aspektów struktury społecznej i etnicznej dwóch metropolii Europy Środkowo-Wschodniej*, Toruń 1999, p. 130.

Rudawa were regulated, so as to surround Cracow from 1506, provide energy for the city's mills, and fill the moat.⁶

The plan of Cracow inside city walls was prepared at a scale of 1:2,000. It shows the spatial layout and ownership relations in 1598. The urban layout of the city, both blocks of buildings, and the street network, formed in the process of evolution. Of the important stages of the city's development, we could distinguish here the first location (around 1220), then the so-called great location (1257), the broadening of the urban layout as a result of the construction of the fortifications at the end of the thirteenth century respectively, and finally, the changes after the rebellion of vogt Albert (the vogt's keep and Okoł were incorporated into the city), and connecting Cracow with the Wawel with the defensive system.⁷

Since the great location of the city, the market square (in shape of a regular square with sides 200 m long) was the centre of the city. Our plan shows the main buildings built on the Market Square: the town hall, the cloth hall, the great weigh house and the small weigh house, and then the location of market stalls and markets. Residential plots, in general, are irregular in shape, as the buildings had to fit the pre-locational structures, and they underwent some later changes. The literature on this subject distinguishes three main types of plots: those situated by the market square, those between two streets, and those on the corners of the market square. Most of the urban layout of Cracow survives to this day, making our work on the plan much easier. However, the reconstruction of the area distorted after 1598 was partially caused by wearisome, long architectural and urbanism research conducted by Miejskie Biuro Projektów and Pracownia Konserwacji Zabytków.⁸ Even despite such thorough research, the area reshaped in the later redevelopment has not, unfortunately, been entirely studied by architects and archaeologists yet. That is why, the plan of redeveloped and still unsatisfactorily studied fragments of the town was based on the so-called Senate plan from the beginning of the nineteenth century.⁹ Earlier cartographic and iconographic sources fail to reach a necessary degree of accuracy.¹⁰

At the end of the sixteenth century, the economic situation in Cracow was still favourable, even though the best period for the city was already over. Buildings stood in almost every plot. The parcels maintained their characteristic, prolonged shape, despite the fact that neighbouring plots had frequently been merged, or divided, over the centuries. Our knowledge of these changes still remains incomplete.¹¹ Tenement houses with narrow facades stretched far into the back.¹² Often, another house stood at the rear of the parcel. Usually, the buildings which stood in the main streets of Cracow were

¹¹ We know the original size of a residential plot ('curial'). It was a rectangle 36 Cracow ells wide and 72 Cracow ells long (1 ell = 0, 586 m). A block comprised of eight plots; B. Krasnowolski, *Lokacyjne układy*, pp. 92–93.

¹² About plots in Cracow see: H. Jasieński, *Dawna kamienica krakowska, jej układ i wnętrze*, BK, vol. 83, 1934, pp. 18–88; J.T. Frazik, *Kamienice mieszczańskie w Małopolsce do połowy XVII w.*, "Kwartalnik Architektury i Urbanistyki", vol. 30, 1985, no. 2, pp. 153–179; J.S. Jamroz, *Układ przestrzenny Krakowa przed i po lokacji 1257 r.*, "Kwartalnik Architektury i Urbanistyki", vol. 12, 1967, no. 1, pp. 17–49; cf. M. Goliński, *Socjotopografia późnośredniowiecznego Wrocławia*, Wrocław 1997, pp. 19–22; W. Komorowski, *Kamienice i palace Rynku krakowskiego w średniowieczu*, RK, vol. 68, 2002, pp. 56–60.

made of stone (*kamienice, lapidea*), but wood was common farther from the Market Square.¹³ The authors marked only the parcels on the plan, and decided not to show building contours, as this would require long research, and would have a negative effect on the clarity of the plan. The only exception was made for important sacral buildings, which also serve as orientation points.¹⁴

The plan shows the sixteenth century names of streets and squares. When two names were used alternatively (e.g. Tworzańska = Floriańska, Szpitalna = Św. Ducha, Szewska = Świecka), only one was chosen. The nomenclature of streets and squares did not change much over the centuries. Differences were presented in Table 1.¹⁵

Table 1. Different names of streets and squares in Cracow (inside city walls)

Contemporary name of a street (square)	Sixteenth century name of a street (square)
Mały Rynek	Wendeta (Tandeta).
Dominikański Sq.	Szeroka Str.
Ducha Świętego Sq.	Developed area, the square was created, after the demolition of buildings in the eighteenth and nineteenth century.
Mariacki Square	Cemetery of Mariacki church.
Szczepański Square	Developed area between the contemporary Św. Szczepana and Żydowska streets, the square was created after the demolition of buildings early in the nineteenth century.
Wszystkich Świętych Sq.	Psi Rynek, in the sixteenth century developed area, the square was created later, after the buildings were demolished.
Dominikańska Str.	Cemetery of the church of the Holy Trinity.
Floriańska Str.	Tworzańska (Floriańska) Str.
Franciszkańska Str.	A part of Psi Rynek.
Jagiellońska Str.	Cross street of Szewska and Św. Anny streets.
Pijarska Str.	Not considered a street in the sixteenth century, parcels situated at the end of the streets: Rogacka, Sławkowska, Św. Jana, Floriańska, and Szpitalna, by the gates and city wall.
Poselska Str.	Legacka Str. (also called cross street of St. Michael Str., or the street behind 'Piotr Mały.'
Reformacka Str.	Rogacka Str.
Senacka Str.	Cross street of Grodzka Str.
Szczepańska Str.	Eastern part of Św. Szczepana Str.
Szewska Str.	Szewska (Świecka) Str.
Szpitalna Str.	Ducha Świętego (Szpitalna) Str.
Św. Krzyża Str.	A fragment north of Mikołajska Str. was called Świnia Str., fragment to the south was a cross street Ku Nowej Bramie.
Św. Marka Str.	Western fragment was called Rogacka Str., the middle fragment was called a cross street, the fragment between Szpitalna and Św. Krzyża streets was called Szrotarska Str., the fragment between Św. Krzyża Str. and the city wall was probably called Świnia Str.
Św. Tomasza Str.	The western fragment was called Żydowska Str., the eastern – Świnia or Różana Str., and the middle fragment was considered a cross street.

¹³ Compare: M. Friedberg, *Kraków w dobie Odrodzenia*, [in:] *Kraków. Studia nad rozwojem miasta*, p. 210; W. Komorowski, W. Niewalda, H. Rojkowska, *Kraków – rozwój zabudowy murowanej do połowy XVII wieku*, [in:] AHMP Kraków, plan no. 4.5; W. Komorowski, K. Follprecht, *Rozwój urbanistyczno-architektoniczny Krakowa w obrębie murów od połowy XIV do końca XVIII wieku*, ibidem, pp. 13–14.

¹⁴ Locating the churches and monasteries was easier thanks to the works of Henryk Gapski, Jerzy Paszcenda and other authors; H. Gapski, *Klasztory krakowskie*; J. Paszcenda, *Kościół św. Barbary w Krakowie z domem zakonnym księży Jezuitów. Historia i architektura*, BK, vol. 125, 1985; *Katalog zabytków 1971* (zob. wykaz skrótów w aneksie); B. Krasnowolski, *Krakowski ośrodek religijny*, pp. 86–92 and plan no. 4.8, 4.8a.

¹⁵ Unlike the plan, the list of owners shows current names of streets and squares, because it uses the current numbering. The sixteenth century names were given in brackets. The source records were compared with the studies by S. Tomkowicz and E. Supranowicz; S. Tomkowicz, *Ulice i place Krakowa w ciągu dziejów. Ich nazwy i zmiany postaci*, BK, vol. 63–64, 1926; E. Supranowicz, *Nazwy ulic Krakowa*, Cracow 1995.

The plan presents the layout of city walls, gates, and towers. According to a list made in 1575, there were seven gates in the city's fortifications (Grodzka, Wiślna, Szewska, Sławkowska, Floriańska, Mikołajska, Nowa), and one gate already closed then – Rzeźnicza. Three wickets were also marked: Poboczna, Biskupia, and Żydowska, as well as towers, each defended when necessary by merchants and burghers from one particular artisan guild, and usually called after their trade.¹⁶ The city walls were actually demolished in the nineteenth century (except for a short fragment near Floriańska Street), but they were properly reconstructed. On the other hand, the houses built near the walls were marked only hypothetically. Their existence is, in fact, confirmed by various sources, but precise localization is not possible in the light of present state of research.

Borders of blocks and parishes were also marked on the plan. The division of Cracow into four blocks of flats functioned since the Middle Ages, these were: Grodzki, Garncarski, Sławkowski, and Rzeźniczy, which constituted the basic units of the city (with fiscal and defensive functions). The division was marked on the basis of records from town tax registers.¹⁷ The borderline of Garncarski block, encompassing the western part of the city, ran from the city walls along Franciszkańska Street, then along Bracka Street to the market square, and crossed the square between the cloth hall, and the Great Weigh House and St. Adalbert. It encircled the cloth hall, the town hall, and other buildings on the main square, and led further north along Szewska street, until it reached the city walls. Sławkowski block encompassed the north-western part of the city. Its border ran from the city wall by the northern frontage of Szewska street, then along the houses in the market square standing between Szewska and Św. Jana streets, next along Św. Jana Street, until it came to the city walls. Rzeźniczy block stretched east from Sławkowski block. Its border ran along the eastern frontage of Św. Jana Street, then in front of the houses in the market square, between Św. Jana Street and Floriańska Street, then along Mikołajska Street, on the western side of Wendeta (Mały Rynek), and along Sienna Street to the city walls. The remaining part of the city belonged to Grodzki block. Its borderline led from the city walls, along Sienna Street, and then turned north and ran along the western frontage of the Wendeta. From the north-western corner of this square, the border of the block ran west along Mikołajska Street, and reached the market square. It crossed the main square of the city between the cloth hall on the one side, and Mariacki church, church of St. Adalbert, and the Great Weigh House on the other. Then it ran along Bracka and Franciszkańska Street, and came to the city walls.

There were five parishes in the city at the end of the sixteenth century. Their borderlines were marked according to the inspection of Cracow deanery conducted in 1599.¹⁸ The largest Mariacka parish, with the Assumption of Mary Church was situated in the centre. It encompassed all houses in the market square, and the streets: Floriańska (entire left side, i.e. even numbers today, and the right side from the market square to the next cross street, which was Szrotarska Street), Św. Jana, Sławkowska, Rogacka to the bathhouse (which belonged to St. Stephen parish), and then entire Żydowska Street and its cross street leading to St. Stephen school, as well as houses in a fragment of Św. Szczepana Street (from the market square, to the school); Szewska (Świecka) Street on both sides of the market square to the first cross street (now Jagiellońska Street); buildings on the left side of Wiślna Street to the market square, to the intersection of the street with Gołębia Street, then both sides of the fragment of Gołębia Street between Bracka and Wiślna Streets; Bracka Street except for two houses by its exit near the Franciscan church; Grodzka Street from the market square to the intersection with Szeroka Street, then the part of Stolarska Street closer to the market square, and the entire Sienna Street, the entire Św. Mikołaja Street with Wendeta, finally: both sides of Szpitalna Street (Św. Ducha) to the hospital of Scholars, that is to Szrotarska Street.

¹⁸ AV Cap. 3, f. 111; Wiz. Krk. 1599, pp. 38, 57, 63, 73.

The second largest All Saints parish ('Wszystkich Świętych') occupied the southern part of the city. It encompassed houses in Szeroka Street (on the one side to the estate of the provost of Miechów monastery inclusive, and to the brewery of the Dominicans on the other), the cemetery by the Dominican church, then the estates on both sides of Grodzka Street (from its intersection with Szeroka Street to Grodzka gate), Kanoniczna Street, and cross streets. The borders of the parish reached beyond the city walls.¹⁹

The other parishes were small. The parish of St. Ann encompassed the houses on one (closer to the parochial church) side of Szewska Street, from Szewska Gate to the intersection with a cross street (now Jagiellońska), then houses on both sides of this cross street (between the streets Szewska and Św. Anny), as well as all buildings in Św. Anny and Gołębia Street (from the city walls to the intersection of this street with Wiślna Street). The parish also encompassed the buildings on the right (western) side of Wiślna Street, from the market square to the city walls.²⁰

St. Stephen parish neighbored St. Ann parish from the north. The borderline between these parishes ran along Szewska Street, from the city walls to the cross street (now Jagiellońska Street), but the houses on the right side (looking from the market square) belonged to St. Stephen parish, which also encompassed the estates on the side of the cross street (connecting Szewska Street with Św. Szczepana Street) situated farther from the market square, as well as the estates on both sides of St. Stephen Street, but not the entire street, only the half farther from the market square, from the city walls to the intersection with the cross street (now Jagiellońska) and Św. Macieja Street. Houses in the latter (on the side farther from the market square) also belonged to St. Stephen parish. The borders of the parish reached beyond the city walls.²¹

The fifth parish in Cracow, the parish of the Holy Cross, occupied the north-eastern part of the town. The borderline of the parish ran along the right side of a fragment of Floriańska Street (from Floriańska gate to Szrotarska Street), and then along Szrotarska Street to the city walls.

The plan shows ownership categories in Cracow in 1598. Ownership relations were reconstructed on the basis of old documents of the city of Cracow kept in the State Archive in Cracow. This excellent source basis even convinced the authors to present the ownership relations at a precise moment, in 1598. All most important sources for this type of research from 1598 survived almost intact, namely: town tax registers from three blocks – Grodzki, Garncarski, and Sławkowski. The register for Rzeźnicki block did not survive, and for this part of town one later (1593) and one earlier (1607) register were used.²²

The information from town tax registers does not provide us with a complete picture of ownership relations in Cracow. The registers list the houses excluded from the city's jurisdiction only fragmentarily.²³ Source query of the basic series of town books was conducted in order to reconstruct the groups of estate owners, and determine their occupation and social class. Court books provided the most useful data, as they usually recorded house purchase transactions. The authors studied *acta scabinalia* from 1590–1602.²⁴ The query also covered council books from 1590–1602,²⁵ *vogt* books from 1592–1601,²⁶ testaments of the burghers,²⁷ and books of the High Court of Magdeburg Law at the castle in Cracow.²⁸ Recently published surveyors' books, which contain details on buildings and the names of estate owners, proved particularly valuable, yet the information concerns only houses and parcels entangled in a dispute, where the council sent sworn surveyors to assess damages, or the distribution of the estate.²⁹ Manuscripts consulted often during the identification of the owners came

from a less limited scope of time. Inscriptions from Mariacki church, published by Zenon Piech, were also used.³⁰ The printed collection of documents of the city of Cracow proved less useful.³¹

Of the literature on the subject, in the first place we must mention lists of house owners in some streets in Cracow, prepared by Adam Chmiel. The lists, despite many gaps, still offer valuable hints to those studying the estates in the city, and as they cover a broad chronological range, they could also help verify the source material.³² Similar lists of owners of houses in the market square in Cracow in 1655, recently published by Waldemar Komorowski and Kamila Follprecht,³³ were also useful, as well as the volume of *Atlas historyczny miast polskich* dedicated to Cracow, and the jubilee edition of *Nowe studia nad rozwojem miasta*.³⁴

The identification of the owners was based on numerous biographies from *Polski słownik biograficzny* in the first place, the monograph of the city in the Modern Age by Janina Bieniarzówna and Jan M. Małecki, as well as studies on the sixteenth century city council, or goldsmiths, printers, doctors, apothecaries, merchants, and other.³⁵ The identification of noble owners of estates was done mostly on the basis of armorials and lists of central and land officials.³⁶

The annex also contains a list of parcel owners, which served as a base for marking different types of ownership on the plan. The estates were put in alphabetical order, according to present-day names of streets and squares. Houses were ordered according to frontage (odd and even numbers), and in the cases of squares and market squares the numbering is continuous. Obviously, in 1598 houses did not have numbers, as numbering was introduced in the eighteenth century. The authors use contemporary numbering for technical reasons: to precisely and accurately signify a given, described real estate in the urban layout, and to make it easier for the readers to identify the estate on their own.³⁷

Contemporary house numbers were given in the first column. If there is a letter (A, B, C, etc.), it means that at the end of the sixteenth century this was a separate estate. The lack of a contemporary number means that a given structure no longer exists, and it was impossible to find its exact location.

The second column provides information about the owner of the estate: his name and surname, occupation, office or function (in case of burghers, only the most important ones: councillors, aldermen, member of a high court at Cracow castle), and in the case of the nobility, also the coat of arms. It was assumed, that the person recorded in town tax register was the owner of a given estate. Pledges and rents were excluded. Sometimes widows appeared as owners. It also happened that the inheritance

³⁷ See: J.S. Jamroz, *Mieszkańska kamienica krakowska*, Cracow 1983, p. 160.

proceedings were not over, and the owner's heirs were listed as owners in the table. The authors did not go into details of later divisions. Inheritance proceedings were long, sometimes took years to finish, and could take an unexpected course.³⁸ On the other hand, in case of purchases and sales completed in 1598 the name of the new owner was provided.³⁹ It should be made clear at this point that the footnote by the name of each owner included only basic source information, which allow for an unanimous confirmation of the information recorded in the table. Naturally, this does not mean that the footnote contains all source data, confirming the ownership of the estate, the occupation of the owner, or his office.

The third column shows the ownership category of a given piece of real estate: royal, Church, University, nobility, burghers, and town. This classification describes the situation well, as it distinguishes University buildings from Church property.⁴⁰ We failed to determine ownership categories for only four estates located in the streets: Floriańska (no number), Floriańska (now no. 32B), Gołębia (now no. 3), and Szpitalna (now no. 16C).

Royal property

Only two buildings belonged to this category – the arsenal, built next to Grodzka Gate by King Sigismund I, and the nearby foundry.⁴¹

Church property

Already at the end of the sixteenth century, the estates of the Church in Cracow were numerous and large. Church property comprised of sacral structures, monastery seats, various institutions of the Church (schools, hospitals), and residential buildings, and tenement houses.

The sacral space of sixteenth century Cracow was diversified. Apart from the five parochial churches (of the Holy Virgin, St. Ann, Holy Cross, St. Stephen, and All Saints), at the end of the sixteenth century, temples were also situated in monasteries. They could be found in male orders, which resided in the city for a long time: the Dominicans (of the Holy Trinity), the Canons Regular of the Holy Spirit (the Conventual Franciscans (of St. Francis of Assisi), and the Order of St. Marc (of St. Mark the Evangelist). In 1583 the Jesuits, recently invited to the city, took over the church of St. Barbara, and two years later also the chapel of St. Matthias and St. Matthew, located once on the current Szczepański Square. In 1597 they commenced the construction of a monumental temple of St. Peter and St. Paul, which was finished in 1619.⁴² Of the three female orders (Order of the Holy Sepulchre, the Dominican Sisters, and the Sisters of St. Clare), only the latter had its own temple of St. Andrew in Grodzka Street.⁴³

Apart from parochial and monastery churches, seats of monastic orders, other sacral objects were shown on the plan: the temple of St. Giles and the chapels of: St. Martin, St. Mary Magdalene, St. John the Baptist, St. Roch, St. Peter the Apostle, and St. Adalbert.⁴⁴ Chapels, which did not constitute separate objects, were excluded.

³⁸ See: Z. Noga, *Kamienica pod Modrym Lwem i jej właściciele w XVI wieku*, [in:] *Dom w mieście średniowiecznym i nowożytnym*, ed. B. Gediga, Wrocław 2004, pp. 176–181.

³⁹ For instance, in 1598 the successors of the dead counsellor Jan Zutter: citizen of Prague Mateusz Zutter and his sisters – Anna (wife of Jan Alantsee), Małgorzata (wife of Bartłomiej Chodowicz), Justyna (wife of Jana Liskowicz), and Jan Radwan, the widower of Zuzanna Zutterówna (with whom he had two sons, Jan and Piotr) and Anna, widow of Hieronim Zutter (had a son named Andrzej with him) sold their father's house (in Floriańska Str. between the house of the late counsellor Baptysta Fontana and the house of Andrzej Netinger, now no. 25) to their relative Jan Łyszkowicz for 3000 złp. (AP Kraków, MS 455, p. 37).

⁴¹ S. Tomkowicz, *Ulice i place*, p. 70.

⁴² Wiz. Krk. 1599, pp. 47, 63; J. Paszcenda, *Kościół św. Barbary*, pp. 41, 71.

⁴³ Wiz. Krk. 1599, p. 44.

⁴⁴ Division into chapels and churches was taken from: Wiz. Krk. 1599, pp. 19, 23, 42, 45, 49, 81.

The Church also owned buildings of Jesuit colleges, and schools organized by parochial churches (Mariacki, St. Stephen, St. Ann, All Saints), and other (of the Holy Spirit, St. John), as well as hospital estates (of the Holy Spirit, St. Stephen, St. Sebastian, and scholars). The Fraternity of Mercy, founded in 1584 by Piotr Skarga, owned a house in Sienna Street, which – together with the house of the literary confraternity of St. Barbara in Sławkowska Street – was treated as Church property.⁴⁵

Cemeteries were also marked. They functioned by the churches: of the Holy Virgin Mary, of St. Ann, of the Holy Trinity, of the Holy Spirit, of the Holy Cross, of St. Stephen, and of All Saints. Also Protestant communes were considered Church property: the Calvinist (Św. Jana Street), and Arian (Szpitalna Street), which were already in ruin in 1598.⁴⁶

A significant proportion of ecclesiastical properties were residential buildings. Among them stood the stately palace of the Bishops of Cracow, with its vast landholdings. Parishes and monasteries also owned estates (the Dominican monastery owned the highest number of houses). Clergymen connected to the cathedral owned houses in the city. The cathedral chapter was the largest owner, it had 21 houses in Kanoniczna Street, and houses in Grodzka Street. Houses belonging to lower clergy from the cathedral and the royal castle also stood in Grodzka Street.

Several pieces of real estate belonged to clergy from outside Cracow. The archbishop of Gniezno had a residence in Cracow, just like Gniezno chapter and the abbots from the Cistercian abbeys in Jędrzejów, Mogiła, and Koprzywnica, as well as: the abbot of the Norbertine monastery in Hebdów, the abbot of the Benedictines from Tyniec, and the Benedictine Sisters in Staniątki. Priests from the church of St. Florian in Kleparz, and even the parson of the collegiate in Wojnicz, also owned houses in Cracow.⁴⁷

University property

University estates were isolated from the property usually attributed to the Church by the literature. This way the influence of the Academy on the urban space was made clearer, and at the same time size of Church estates was presented in a more precise manner.⁴⁸ The University owned 14 pieces of real estate, concentrated around the streets: Św. Anny, Gołębia, Wiślna, Grodzka, and Bracka. The number includes mostly colleges (*Maius*, *Minus*, *Iuridicum*), and boarding houses: Węgieńska, Jeruzalem, Filozofów, Nowa, Prawników (*Juristarum*, *Iurisperitorum*), Ubogich (*Pauperum*).

Property of the nobility

We know that 73 pieces of real estate belonged to the nobility. They were situated mostly in the southern part of the city, near Wawel, usually in Grodzka and Poselska Streets. Few houses of the nobles stood in the market square and in the Mały Rynek ('Little Market Square'). They belonged mainly to families somehow connected to Lesser Poland, and occupying important land offices in the province. Several houses were obtained as a result of a marriage with a burgher. The share of estates belonging to the nobility did not exceed 10% back then, but it grew systematically.⁴⁹

⁴⁸ See M. Niwiński, *Stanowy podział własności*, map.

⁴⁹ Fifty years later the nobility owned already 105 parcels, K. Follprecht, *Właściciele*, p. 13.

Town property

Town property was included in a separate category. These were public buildings (town hall, bathhouse, kitchen), merchant structures (cloth hall, market stalls), town infrastructure (cistern, arsenal built in 1565 between Ciesielska and Stolarska tower⁵⁰) and several residential houses, owned by the town commune, and administered by the council.

Property of burghers

The burghers owned the highest number of units of real estate in Cracow at the end of the sixteenth century: 471.⁵¹ Several patrician families (Cyrus, Czeczotka, Pernus, Zalaszowski, del Pac) and some of the counsellors (Marcin Urbanowicz, Joachim Ciepielowski) did in fact own a few houses, but no person, or family, owned a concentrated property group. Although the information about the occupation of the burghers is incomplete (we failed to determine the occupation of 48 people). Table 2 offers an interesting image of occupational structure of house owners at the end of the sixteenth century.⁵²

Table 2. Occupational structure of burghers, who owned property in Cracow at the close of the sixteenth century

Occupation of the owner	Number of houses	Occupation of the owner	Number of houses
Merchant	104	Locksmith	8
Innkeeper	57	Salt merchant	6
Furrier	32	Saddler	6
Goldsmith	23	Surgeon (barber-surgeon)	6
Baker	20	Coppersmith	6
Shoemaker	20	Printer	5
Tailor	16	Musician	5
Butcher	16	Lawyer	5
Clerk	14	Bookbinder	4
Apothecary	11	Confectioner	4
Soapmaker	10	Mason	4
Doctor	9	Peddler	4
Lawyer	9	Other	83

Remember:

1. When the widow (in 65 instances), or the heirs (77 estates) appeared as an owner, the occupation of the deceased husband, or bequeather was listed.
2. 'Other' means the owners of estates, whose occupation could not be determined, and the 35 artisans of the following trade: pewterers (three), smiths (three), coopers (two), painters (two), swordmakers (two), feeders (two), brewers (two), saddlers (two), malters (two), joiners (two), clothiers (two), barber-surgeon (one), carpenter (one), hatmaker (one), seller (one), krupnik (a person who prepares barley malt extract) (one), pursemaker (one), armourer (one), śledziownik (sens not sure, concern herrings) (one).

⁵⁰ M. Friedberg, *Kraków*, p. 208; K. Pieradzka, *Rozkwit*, pp. 172–173.

⁵¹ By 1650 the number of burgher estates fell to 386; K. Follprecht, *Właściciele*, pp. 13–14; por. M. Niwiński, *Stanowy podział własności*, p. 573.

⁵² However, only house owners were included in the attached table, which therefore does not present a complete image of the spatial layout of different occupations in the city, as many craftsmen rented rooms for workshop and living. This also refers to merchants and sellers.

Table 2 proves that merchants dominated among burgher owners of real estate. The significant number of innkeepers probably resulted from the fact that Cracow was the capital city, constantly visited by many people. The same is true of bakers, situated just after prestigious occupations: furriers and goldsmiths.

The 'intelligentsia' was also visibly present. Apart from the 18 doctors and lawyers listed in the table (who often were also counsellors and University professors), we can also count officials here – the owners of 14 other houses (three houses of royal secretaries of burgher origin, one of the administrator's scribe, then three of city scribe, and houses of: receiver, fiscal scribe, customs scribe, and the scribe of the high court, bailiff, and the scribe of Garbary).

Merchants dominated among owners not only in numbers. Their houses were situated in prestigious spots, in the market square (34 in all 55 houses), and in the streets: Floriańska (15), Św. Jana (14), Szczepańska and Szczepański Square (nine). Houses of innkeepers, the second largest group, could be found almost in every street, but mostly in the streets leaving the city: Szewska, Mikołajska, and Sławkowska. Members of three other groups also owned houses in places related to their occupation. The butchers owned plots and buildings located mostly in Szpitalna and Świnia streets, all houses belonging to bookbinders stood near the University, in Gołębia Street, half of the houses of goldsmiths were located in Grodzka Street, an attractive spot for tradesmen. On the other hand, furriers owned houses scattered in the entire city (mostly in Grodzka and Mikołajska Street).

It was quite difficult to interpret the group of owners, who were ennobled. This mostly concerns patrician families. In such cases, if the owners had town citizenship, or were even counsellors or assessors, they were treated as burghers,⁵³ especially as their estates were subject to city law.⁵⁴ Information about ennoblement of the owners was placed in the footnotes to the main table.

Let us also add that in order to avoid any lack of clarity of the plan and unnecessary accumulation of details, the authors decided not to distinguish another group of property – property of guilds, which was treated as town property.⁵⁵

The footnotes also contain cultural names of houses that could be found in the sources. There were only 23 of them, and the list is certainly incomplete. The authors decided not to include possessive names, formed from names of current owners of the houses, as their duration was usually short (they disappeared when the owner changed).

Both, the plan and the table, are obviously static in nature. They are only 'photographs' of the space and citizens of Cracow at the end of the sixteenth century. The authors hope that the image they presented will become an impulse to research on the sociotopography of the city, conducted on a much broader chronological scale, which would show the dynamics of changes.

ANNEX

LIST OF REAL ESTATE OWNERS IN CRACOW IN 1598

Content-related abbreviations used in the LIST:

AP Kraków – Archiwum Państwowe w Krakowie (State Archive in Cracow)

Bąk-Koczarska 1999 – C. Bąk-Koczarska, *Mieszkańcy pałacu "pod Krzysztofory" w Krakowie. Właściciele i lokatorzy od XIV do XX wieku*, Kraków 1999

Bocheński 1937 – Z. Bocheński, *Krakowski cech mieczników*, BK, vol. 92, 1937

⁵³ Jan Kirstein Cerasimus, the king's secretary ennobled in 1578, was exceptionally treated as a nobleman, even though he came from a burgher family.

⁵⁴ There were burgher houses in Cracow freed from the city's jurisdiction by individual royal privileges. However, this was abolished by king Sigismund August on 26 May 1576. The document lists almost 50 burghers, who lost their status; *Prawa, przywileje i statuta*, vol. 1, no. 1, no. 232; Z. Noga, *Krakowska rada miejska*, p. 35.

⁵⁵ The following guild owned houses: goldsmiths (Bracka Str.), tailors (Grodzka and Szpitalna Str.) and bakers (Krzyża Św. Str.).

	Szrotarz ⁴³⁴	Br.

⁴¹⁵ The western fragment was called Rogacka Street, the middle fragment was described as a cross street, the fragment between Szpitalna and Św. Krzyża street was called Szrotarska Street, and the fragment between Św. Krzyża Street and the city wall was probably called Śtwinia Street (Tomkowicz 1926, pp. 107–109; Supranowicz 1995, p. 176).

III.6.15c.1 WAWEL HILL IN THE END OF THE SIXTEENTH CENTURY

Ryszard Skowron

The fourteenth and the fifteenth centuries had a decisive role in the development of Wawel hill. Between 1320 and 1370 various monumental buildings were being either built, or rebuilt in the Gothic style: the cathedral (consecrated in 1364), the castle, the church of St. George (consecrated in 1347), the church of St. Michael (consecrated in 1355). From the 1350s, **Wawel Hill** was becoming more and more compactly developed, and as a result, at the turn of the fifteenth and sixteenth centuries the formation of the so-called 'Wawel town' was almost complete. It survived until the end of the First Republic.¹

Characteristic features of the late-medieval urban layout of Wawel hill include:

- the buildings along the north defensive wall – from the castle's Dolna Gate, to Złodziejska tower ('Thieves tower');
- the buildings facing the western and southern elevation of the cathedral, along the road leading from Dolna Gate to the entrance gate of the royal castle;
- scattered buildings in the south-western part of the hill, enclosed within a quadrangle formed by the manor of the family Tęczyński (by the west defensive wall), the vicar house called Wspólny ('Common'; situated across from the southern elevation of the cathedral, the later Gród), Złodziejska tower, and Sandomierska Tower. There are no buildings adjacent to defensive walls between Złodziejska tower and the Tęczyński manor. Two building groups are clearly visible in this area: the eastern one, situated east of the castle, dominated by knights' manors (sparse source data), and the western one, dominated by Church property;
- rebuilt and expanded fortifications of the hill, namely the stone-brick walls, fortified with towers: of the Dolna Gate, Złodziejska, Sandomierska, Szlachecka, Panińska, Tęczyńska, and Lubranka (Senatorska).

In this period, ownership changes accompanied architectural and urban processes. Royal property decreased significantly with numerous endowments and sales of parcels and plots to the cathedral chapter, or nobility and aristocracy.

In the fourteenth century the expansion of the royal residence on Wawel hill, and the finishing of the cathedral, resulted in the intensification of secular settlement on the hill. During Casimir the Great's reign, the reorganization of the State and the stabilization of the capital character of Cracow made Wawel the centre of State administration and the seat for many State, court, and provincial institutions, of which the most important were: the royal chancellery, the royal archive and treasury, the great royal estates of Cracow, the burgraviat, the gord with the starosta and the land courts, and the high court of Magdeburg law. As such, having a house on the hill became very popular among the dignitaries of the State and the court. It must be remembered, however, that certain processes, which had a negative effect on the attractiveness of Wawel as an area for development, occurred at

Pianowski, *Z dziejów średniowiecznego Wawelu*, Cracow 1984; idem, *Wawel obronny. Zarys przemian fortyfikacji grodu i zamku krakowskiego*, Cracow 1991; A. Majewski, *Wawel, dzieje i konserwacja*, Warsaw 1993; R. Skowron, *Wawel. Kronika dziejów*, vol. 1: *Od pradziejów do roku 1918*, Cracow 2001; idem, *Przemiany w zabudowie miasteczka wawelskiego w okresie od XIV do XX wieku*, [in:] *Kraków. Nowe studia nad rozwojem miasta*, ed. J. Wyrozumski, Cracow 2007, pp. 67–88.

the same time. The hill was too small to be developed, to build manors and tenement houses, which would fulfil the requirements of the era. On the other hand, the intensely expanding Cracow offered much better conditions. At the same time, the number of royal and bishop's foundations for the cathedral grew, new colleges of the priests were being created, resulting in a fast increase in the number of clergymen, for whom houses were being built in Wawel, e.g. Lipowiec and psalter house. In the ninth decade of this century, the development stopped. The Renaissance castle, built in the first half of the sixteenth century by Sigismund I the Old, did not change the urban layout of the hill. The monumental, two-storey building with a high, pitched roof dominated over other buildings. Borek's house was also built in this period.

Already towards the end of the fourteenth century, the aristocracy – following in the footsteps of the bishops of Cracow and the royal family – began to build chapels and altars in the Gothic cathedral. As a result, the aristocracy had to provide living space for the clergymen, who administered chapels and altars. In turn, the nobles built new houses in Wawel, or offered the existing ones to the clergy. In the first place, we should mention here the families Kurozwęcki, Szafraniec, Rogowski-Hincz, Oleśnicki, Konicpolski, and Lanckoroński. Finally, at the end of the fifteenth century, almost no house on the hill belonged to the nobility, or aristocracy. A group of buildings situated north of the royal kitchens was an exception. It consisted of the houses of the families Tęczyński and Szydłowiecki, and of the noble Jan Tarnowski, Jan Filipowski, Mężyk, which were partially damaged in the fire of 1549.

Both processes ended around the middle of the sixteenth century, and created new ownership structures on Wawel Hill, which survived almost unchanged until the end of the First Republic. Its characteristic feature was almost complete elimination of buildings, which would belong to private individuals. Church property became dominant on 'Wawel Hill', and royal property (property of the State) was limited to the castle, fortifications, the Gord, two houses of burgraves, and two houses called Rabsztyn.

III.6.16.3 LUBLIN

Stefan Wojciechowski

The plan at a scale of 1:10,000 shows Lublin around 1570. It shows the streets, squares and suburban roads, the defensive wall surrounding the city, the important buildings and other elements. The probable range of meadows was marked with a different colour than abodes and arable fields.

The plan was prepared on the basis of the inspections conducted in 1565 and 1570, A. Hogenberg's drawing¹ and plans published in H. Gawarecki and Cz. Gawdzik's work.²

III.6.17.5 ŁĘCZYCA

Małgorzata Wilska

Cartographical sources from the last decade of the eighteenth century constitute the basis for the reconstruction of the plan of Łęczyca. Unfortunately, there are no plans from the period before the Partitions of Poland, and the earlier plans are Prussian and come from 1793 and 1795. Both were created before the commencement of fortification works that turned Łęczyca into a Prussian stronghold. Cartographical sources for the city and its nearest vicinity were studied and published by A. Tomczak.¹

The 1793 plan was prepared by Schmiedeke on a scale of 1:5,000. It covers the city and the area in the range of the villages: Tum, Dzierzbietów, Borki, Leszcze, Topola, Zabrodzie and Kozuby.² The 1795 plan, created by E. Goepfner, covers only the area of the city inside its medieval defensive walls, the castle premises were not prepared. However, the streets, building plots and the city hall were marked on this plan.³ Apart from these two, we have five other plans from 1795–98 covering the area of the city and its nearest vicinity.⁴ All of them are kept in the National Library in Berlin and constitute a good basis for retrospective reconstruction of the city plan of Łęczyca from the end of the sixteenth century. The defensive walls with towers and gates, moats and suburbs were reconstructed on the basis of these plans.

The plan prepared by the geometrician Grabowski in 1820, now kept in AGAD,⁵ is one of later cartographic sources that provide valuable foundation.

We have used cartographical material from detailed plans from the first half of the nineteenth century, that show the castle premises and north-eastern area of the city, occupied by a Dominican monastery.⁶

We do not possess views of Łęczyca that would help us reconstruct its spatial arrangement.⁷ Written sources were, however, extremely important. Łaski's *Liber beneficiorum* must be noted here, along with inspections, which contain detailed data, useful in reconstructing the sixteenth century plan.⁸ For instance, on the basis of the 1564 inspection we know about rebuilding and repair works on the castle walls supervised by the *starosta* Jan Lutomierski. The third gate called Wodna ('of water') was built at that time.⁹

⁷ Stronczyński's drawings from 1844–46 show fortifications, about which we know from other sources; K. Stronczyński's files in Gabinet Rycin UW, Atlas 3, *Widoki zabytków starożytności w Królestwie Polskim w latach 1844 i 1846 zebrane*, 1851, no. 26.

⁸ Łaski LB, II, pp. 169, 348–353, 388, 414, 416, 432,454; LWWK 1616, p. 194.

⁹ LWWK 1564, part 1, p. 89.

A. Tomczak's studies provided most of the information, J. Widawski's – concerning walls and castle in Łęczyca.¹⁰ Many important details can be found in T. Lalik's article about the Old Town in Łęczyca and in the nineteenth century monograph on Łęczyca by M. Rawita-Witanowski.¹¹

The city plan was prepared according to the assumptions of the city plans on a scale of 1:10,000 contained in the previously published volumes of this series of AHP. The plan shows Łęczyca within the city walls with its three closest suburbs: Cracow suburb in the south, Poznań and Ostój in the west. The latter formed at the end of the sixteenth century.

The city occupied a large area, bordering Topola and Kozuby in the north, an archbishopric village Tum in the east, a royal village Wilczkowice in the west, reaching Leszcze village. From the south the borders reached royal villages Dzierżbiewów and Lubień. Waliszew – a small hamlet marked on the map, belonged to the city, and was situated on the site of the former Old Town. The name Waliszew appears in the middle of the sixteenth century and was used interchangeably with Old Town (Stare Miasto).¹² Later this area becomes one of the suburbs of Łęczyca. We know from the 1556 privilege of Sigismund II Augustus that the city also owned Golutów, and Łaski informs us about the ownership of Wójciki demesne, situated near a mill on the Bzura River.¹³ In total, the city owned 21 lans in the sixteenth century, stretching in long strips from the border with Topola to Golutów and Kozuby, and two lans of Ostój west of town.

Topographical conditions influenced the placement and direction of the growth of the city and settlement in the vicinity of Łęczyca. There were swamps and water-meadows to the north, south and east that were unsuitable for settlement. The River Bzura turned from the south to the east close to the medieval city. The range of Łęczyca swamps was reconstructed from the cartographic sources from the eighteenth century, mainly on the basis of the plan of Łęczyca mayor district, known from the 1790 copy.¹⁴

In the sixteenth century, the road through the eastern gate was probably led on a dyke. The Bzura swamps, bordering the city from the east, provided natural defence and were connected with the valley of the rivulet Wróblinka, a tributary of the Bzura surrounding the city from the south, whose name was mentioned already in 1527.¹⁵ Arms of the Bzura were used to irrigate castle and city moats. The city was situated on a small islet, on a passage through a narrowing in the Vistula glacial valley.

Łęczyca was located shortly before 1268 by Duke Kazimierz, son of Konrad of Mazovia, on the same area on which it was situated in the sixteenth century. The former centre of the dense settlement layout of Łęczyca, stretching from Dzierżbiewów to the collegiate church in Tum, was situated in present-day Tum, and then next to the future St. Cross Church.¹⁶ At first, all settlements in this group were called by a common name: Łęczyca. In the sixteenth century this term began to denote only the city located under German law, and the area near the St. Cross Church appears in the sources as 'Antiqua Civitas', i.e. the Old Town. The place where the collegiate church stands (ecclesia maior) is then 'Lancicia Maior', and the village situated nearby was called Tum or Kościół.¹⁷ The term 'Tum' appears for the first time in 1354, but the name 'Ecclesia', that is: Church, still functions in numerous records in Łęczyca gord court books.¹⁸ The name Tum, used instead of Kościół, was accepted at the end of the sixteenth century.

Since the middle of the sixteenth century Łęczyca was surrounded by walls, built during the reign of Casimir III the Great. From the north the city was entered through the Poznań gate, sometimes

called Toruń gate in the sources. In the south there was the Cracow gate. The placement of the gates was a result of the course of the road functioning in the times before the location of the city, one of oldest in this territory, of nation-wide importance. It ran from Cracow in the south to Płock and Włocławek in the north.

There were nine towers on the walls surrounding the city (including two gate towers), placed in the north, west and south.¹⁹ In the east, the Bzura and its floodplains provided Łęczycza with natural protection.

The city space, enclosed within fortifications, created a regular quadrangle with partly chamfered corners. It was planned during the location, when the walls had not yet been built. The regularity of the plan lay on dividing the entire area – as presented by A. Tomczak²⁰ – into nine squares of nearly even sides. The middle part was intended for the market square. The regularity was disturbed by three large, stone buildings. In the south-western part of the city it was the parochial church of St. Andrew, with a school. The north-eastern part of the city was occupied by the Dominicans, that arrived at Łęczycza in 1270s. The eastern wall of the presbytery of the Dominican church of St. Dominic and St. Hyacinth directly adjoined the defensive wall.²¹ The longer wall of the monastery building was attached to the city walls next to the corner tower. The Dominican buildings strengthened the defence of the entire corner of the city walls. On the other hand, the area occupied by the monks hampered the possible development of this part of the city.

The south-eastern part of the city was occupied by the castle, built during the reign of Casimir the Great.²² It was included in the city walls network, but was a fortification on its own as well. It was built on an artificial mound, on a quadrangle plan with a slightly bent southern wall. It occupied an area of around 2,800 m². The road to the castle led through the city, and then to a drawbridge and a gate located in the western part of perimeter walls. The entire castle was surrounded by a moat, filled with water from the River Bzura. It can be seen on the 1793 plan. There was a square tower of side length approximately 10 m, with octagonal upper stories in the south-western corner. The main residential building was a three-storey brick tower, situated in the eastern part of the castle. This was the ‘old castle’. Next to it, there was a building, called the ‘great hallway’ in the sixteenth century inspection. There was a two-storey house, called the ‘great chamber’ in the north-western corner. This is where gatherings took place.²³

During the great rebuilding and expansion of Łęczycza between 1563 and 1565, supervised by the *starosta* Jan Lutomierski, a new building was raised in the north-eastern corner and also a new gate, called the Water Gate, was built. In the 1564 inspection we read that: ‘following the order of HRH he allowed to be built a gate from the courtyard toward the river, so that they bring water through this gate and the *starosta* could ride from the castle through this gate and not through the city, as it was before, and tell the mayor to open the gate when the *starosta* had to arrive early or leave late, because the castle was within the mayor’s authority’.²⁴ The castle, along with the courtyard where the outbuildings, e.g. stables, occupied the entire south-eastern corner of the city. It strengthened the defensiveness of this part of Łęczycza, but at the same time prevented any development of the city or the area between the castle and the market square. We do not possess any detailed source specifying the size of this utilitarian part of the castle, we must treat the state presented according to eighteenth–nineteenth century plans as hypothetical.

The area of the city within the city walls covered around 9 ha. Two main gates leading to the city were situated on the axis of the market square. The Poznań and the Cracow gate were located in square gate tower buildings, accessed by drawbridges over the moat. Inside, a street ran along the walls, interrupted in the north-western part by the Dominican buildings, and by the castle complex in

the south west. There was a city hall – probably made of brick – on the market square, attested to in the fifteenth century, with a pillory next to it and a dungeon in the cellars. The prisoners sentenced to beheading were executed by the executioner of Łęczycza outside the city, in a village Topola Katowa (today: Topola Kątowa).

Some of the buildings around the market square were partly brick.²⁵ Already in the fifteenth century the mayor of Łęczycza had a stone house in the city. The 1578 registers mention that there were two apothecaries, three goldsmiths, eleven tailors, eight furriers, twenty nine shoemakers, thirteen fishermen, seventeen potters, twelve salt traders and four butchers in Łęczycza.²⁶

According to the 1564 inspection there were 183 plots altogether inside Łęczycza; the original number of plots was probably close to this number.

From 1569 inspection we know that nineteen houses were inhabited by the Jews. The sources say, that in 1576 there were 115 Jews in Łęczycza, of whom fifty paid poll tax.

At the end of the eighteenth century there were more Jews than Christians in Łęczycza. Probably already in the sixteenth century the synagogue was situated by the walls, in the north-western corner of the city.

We know the names of some of the streets from the sixteenth century. From the Poznań gate three streets ran: Dominikańska (towards the Dominican church and monastery), Żydowska, also called Sukienna (towards the market square from the west), and Kowalska. Kaliska street left the market square to the west, and Rzeźnicza to the east, both these streets are known from later sources. Two streets ran from the southern part of the square: Kościelna, also called Farna, leading to the church of St. Andrew, and Wodna, towards the new Water gate. From later sources we know, that the street leading to the castle was called Zamkowa, although it seems that this name was commonly used much earlier, as already in the fifteenth century it was said, that the mayor has his house in the city ‘going towards the castle’.²⁷ The streets Kowalska, Kościelna and Zamkowa have kept their names to this day.

Outside the city walls, on the suburbs surrounding Łęczycza from the north, west and south, there were 134 plot-gardens, a little fewer than the number of plots within the city. In the Cracow suburb there was a wooden Church of the Holy Ghost, mentioned in 1521, and a hospital, that is an almshouse for poor burghers, next to it. In 1569 the king assigned a permanent donation from Ostoja demesne to the hospital.²⁸ The church was pulled down in 1825, but the hospital remained until the end of the nineteenth century.

Outside the city walls there were also various farm establishments, such as mills and breweries. One of the watermills stood in Stare Miasto, where the Łęczycza–Tum road crossed the Bzura, and another one stood by the castle. Next to it, there was also a horse mill. As there was also another mill in Tum village, in the sixteenth century a special dike across the valley turned the river back from Tum to the mill in Stare Miasto. There were also damming devices near both mills. In the sixteenth century breweries were situated on the banks of Bzura, near the Dominican monastery and the Water gate. From the middle of the sixteenth century until the seventeenth century the city’s butchery operated on the riverside. In the sixteenth century there was also a shooting range, placed by A. Tomczak in the Ostoja suburb.²⁹ In the sixteenth century the importance of Łęczycza decreased, despite *starosta* Lutomierski’s efforts. Since the end of the twelfth century province synods gathered in Łęczycza. In 1527, in the times of archbishop Maciej Drzewiecki, it was decided, that the synods would no longer be called to Łęczycza, but moved to Piotrków ‘for the lack of rooms and comfort of the participants’.³⁰ Only in 1547, during the plague, the synod gathered not in Piotrków, but in Łęczycza.

III.6.18.9b MALBORK

Wiesław Sieradzan

The fate of the town of Malbork¹ and the Teutonic Order were connected not only by the location document from 1286 under Chełmno law,² but also by the integration with the castle complex situated north of the town.³ The complex consisted of the High Castle, the Middle Castle and the Outer Castle, also called the Low Castle. The town's placement on an upland by the Nogat River and next to the capital of the Teutonic Order's state, had positive economic effects, particularly in the fourteenth century. However, during the armed conflicts as the events of the next century have shown, such a location became an obstacle, threatening the life and interests of the town's inhabitants. The close economic and political ties between the town and the Order lasted virtually until the end of the Thirteen Years' War, despite the takeover of Malbork Castle from the Teutonic Knights' mercenaries in 1457. Meanwhile, the status of the town, and, primarily, the castle, as a residence of the kings and Polish starosts at that time started to be emphasised by the Polish researchers as early as in the 1950s and 60s. Additionally, they stressed the improving state of town and castle economy in the sixteenth century, as well as the increase of the internal autonomy of the town which was of great importance. The latter was corroborated by a leading role played by Malbork, alongside Grudziądz, among the so-called 'small towns' at the assemblies of the Estates of Royal Prussia.⁴ The rapid development of Protestantism and religious education was emphasised as well.⁵

Nonetheless, the issue of the reconstruction of the space of the town of Malbork for the mid-sixteenth century encounters considerable difficulties connected with sources, as no plans of that period, or even iconography, were preserved. There is a commonly known painting of considerable size (274 x 195 cm), probably created by a Rhineland painter around 1485, which features the castle and the town from the east in the period of the battles for the town in 1460.⁶ Unfortunately, it was lost at the end of World War II. Slightly closer chronologically is the view of the castle and the town from

¹ The Polish name "Malbork" appeared for the first time in the mid-sixteenth century. Before that, the German name "Marienburg" was used.

² The town's origins date back a little. Santyr, the town and the seat of the Prussian Bishop Chrystian, was a centre from which at the beginning of the 1280s the population came to the place where Malbork was to be established. In 1284, the parish priest and the sołtys *Civitatis Sance Marie* appeared in a centre emerging near the commandery castle. The initiation of the located town construction should be attributed to Provincial Master in Prussia, Konrad von Thierberg the Younger (1284–1287). See W. Długokęcki, W. Sieradzan, *Malbork. Historia i rozwój przestrzenny*, [in:] AHMP Malbork, p. 5.

³ The connection between the town and the Order is also indicated by a coat of arms from medieval times placed on seals (the oldest on a document from 1399). Likewise, it can be observed on fourteenth century benches in the church of St. John the Baptist, which feature a gate and three brick towers topped with blue roofs and yellow spheres. The central, largest tower contains an image of a Teutonic Knights' shield (black cross on white background).

the west, probably by the royal engraver Casper Felbinger before 1595.⁷ Both views are of great historical and iconographic value, but at the same time, they provide only an approximate indication of the locations of individual buildings in the urban space. As far as the first one is concerned, the credibility of the presented contents was disputed among historians because the founders of the painting were the wealthier inhabitants of Gdańsk, who wanted to emphasize their participation in the fights for the city in 1460.⁸ The two vedutas are complemented by the 1587 view of the castle from the east by A. Möller.⁹ On the other hand, the inspections and inventories of the Malbork royal estate, written since the end of the sixteenth century in relation to its creation in 1590, when the Malbork castle properties were transferred to the Crown, are a very good source of information about the economic activities and functions of this institution and the castle area. Earlier descriptions of the Malbork royal estates in Żuławy are part of the inspections of the Malbork Voivodeship from 1565 and 1570. Both the first one from 1565,¹⁰ preserved in a copy by J. Sembrzycki, and the subsequent ones from the seventeenth century and eighteenth century, often complemented by cartographic depictions provide insight primarily into the development of the castle space, less so the area of the town. With regard to the occupational and national structure in the middle of the sixteenth century, valuable data can be found in materials from the interrogation of 650 witnesses in relation to the riots that took place in Malbork on 9 July 1570.¹¹

Despite continuous studies of the history of Malbork, the town has not yet been given an exhaustive scientific monograph, and the research into many aspects of the history of Malbork can hardly be called advanced. This concerns Polish rather than German literature, but the latter likewise did not provide a comprehensive account of the town's history either before 1945 or later.¹² Cartographic and iconographic sources, which are particularly useful for the reconstruction of the spatial layout of Malbork in the middle of the sixteenth century, have been studied in greater detail.¹³ It is apparent, however, that the authors were usually primarily concerned with the castle rather than the town, even though the two settlements were well integrated. A few remarks should be devoted to the contents of Malbork cartographic sources, including those from the subsequent centuries, especially in the context of their value for the reconstruction. The first period in Malbork cartography is related to the Polish-Swedish wars of the seventeenth century. The Swedish occupation imposed some onerous obligations on the Malbork burghers: to pay continuous contributions and to participate in the construction of new fortifications around the town. The fortifications formed a large encampment of a kind, surrounding the town and partially the castle from the east and south. They consisted of eleven bastions connected by earthen ramparts with a total length of 2,500 m.¹⁴ On the opposite side of the Nogat River at the level of the bridge towers, only a defensive structure called *Vogelsank* was built, which in a different form

¹² Relevant literature is presented in: AHMP Malbork, pp. 26 ff. (bibliographical notes on the history of the town of Malbork). Unfortunately, the town's spatial development plan (no. 2) included in this atlas omits the early modern period, assuming four chronological sections (up to 1346, 1346–1380, the second half of the eighteenth-nineteenth century, and the twentieth century). Thus, a certain time gap was created, as a consequence of a conjecture that no major spatial transformations took place in the first century after the end of the Teutonic Order's rule.

had already existed in medieval times. During the Polish-Swedish wars in the seventeenth century, with control over the Baltic Sea at stake, the town suffered heavy losses. From this period, more than 20 plans have been preserved, not only showing the location of troops during the siege of the town but also providing data on the size of fortifications. These plans, mostly of Swedish origin, are currently stored in Kunglige Kriegsarkivet in Stockholm.¹⁵ Most of them have been repeatedly reproduced and used for historical research, also employing the retrogressive method.¹⁶ Among other sources, the plan from 1629 by the cartographer Olaf Hanson Swart (1600–1644) is undoubtedly the most valuable. It was made to the scale of 1:3,000 and its dimensions are considerably large (123.5 cm x 53.4 cm). The high accuracy of this plan makes it possible, consulting the legend, to reconstruct the buildings in the town area and the elements of the fortifications. The highly valuable plan by Friedrich Getkant from 1639 belongs more to the category of fortification plans than typical town plans. However, this plan does not depict the internal development of the town.¹⁷ Four less known plans of Malbork fortifications date from 1626 to 1629. They were included in the “History of the First Swedish-Polish War” published in 1640 by the Elbląg historiographer and mayor Israel Hoppe (1601–1679).¹⁸

Drawings by the Swedish engineer and politician in the service of the Polish king, Erik Jönson Dahlberg (1625–1703), dating from 1656 and 1659, which were engraved as copperplates in 1699 by F. De la Pointe, are despite similar scale, characterised by a considerably greater accuracy. Both of Dahlberg’s plans contain valuable information on the history of fortifications and the art of siege in the seventeenth century. The first one provides less insight into the topography of Malbork than, which is perhaps more important, into the structure of the suburbs, broadly delineated in the east and south of the town, within the outer lines of the fortifications. A comparison of the two plans shows that the second one offers a better representation of the water conditions around the town and the castle complex.

The eighteenth century was not a heyday of the cartography of the town, not only in terms of the total number of plans but also their historical significance. Only 10 plans remain from this period. One of them dates to 1704, and it was probably created by Major L. Wisoky-Hochmuth, killed in 1709 at Poltava. It later came into the possession of King Charles XIII and has been kept in the Royal Library in Stockholm since 1873. It has no scale, yet the streets, the system of fortifications, and the castle with the fortifications on the opposite bank of the Nogat River are easily recognisable. Individual buildings within the town area can be identified using the attached legend.¹⁹ The important point for our considerations is that this plan provides an excellent, previously neglected, depiction of the development of the eastern and southern suburbs in comparison to the plans from the seventeenth century. Further research opportunities may arise particularly from the analysis of a small (23.3 cm x 15.5 cm) plan to the scale of 1:4,000, elaborated by G. Bodenehr ca. 1725. Already known to the Gdańsk historian Erich Keyser, it is currently housed in the Staatsbibliothek Preussischer Kulturbesitz (SBPK) in Berlin and the Jagiellonian Library in Cracow. Two plans from 1745 and 1765, drawn as part of an inspection of the Malbork estate carried out at that time, enabled us to reconstruct the topography of Malbork in the eighteenth century. The first one is the work of an unknown cartographer, whereas the other was prepared by the royal surveyor J.K.F. Müller. Overall, it can be concluded that these detailed inspection plans to the scale of approx. 1:1,127 provide a good insight into the topography of the areas outside the castle walls, particularly the lands by the Nogat River which belonged to the *starosta*’s district. On the other hand, the plans can be used for reconstruction of the scope of the town premises in the Outer Bailey, including the brewery, distilleries, tavern, granaries and barns. They also provide excellent insight into the sociotopography of the town. The two representations are

supplemented by a colour plan from ca. 1775, the work of J.C.F. Müller and J.K. Friedrich, drawn at a large scale of 1:750. At present, alongside a description of the castle buildings, it can be found in the collection of the SBPK in Berlin.²⁰

In the context of the issue in question, we cannot ignore the cartographical representations from the first half of the nineteenth century, which for the town of Malbork was a period of accelerated growth, and, most of all, of increasing efforts leading to the restoration of the castle. Over 25 plans of the town come from this period, valuable particularly for the depiction of the topography of Malbork and the defensive structures. The plans are directly related to the intention to rebuild the castle, primarily those elaborated by C.A. Gersdorf (1787–1850). A graduate of the Academy of Fine Arts in Gdańsk, Gersdorf supervised the construction works of the so-called “romantic restoration” of the Malbork castle in the years 1819–1850. His plans provide an insight into the consequences of the spatial changes, which had occurred particularly in the expanding suburbs of Malbork.

At the beginning of the nineteenth century, the ineffectiveness of the defence structures from medieval and modern times was pointed out. In 1807, it motivated the French authorities to order the demolition of the ruins of St. Mary’s Chapel, serving as an external entrance gate to the town from the direction of Sztum. In 1839, major spatial changes were initiated as a consequence of the removal of the outer defensive fortifications.

The cartography of Malbork from the years 1850–1914, when around 30 plans are known to have been elaborated, constitute a particularly valuable source base.²¹ It illustrates the dynamic development of the city from an industrial, demographic and spatial perspective, particularly in the years 1871–1914.²² Among the plans of the town and the former Teutonic castle from the 1850s, the most noteworthy are the coloured drawings by R. v. Gayl (1821–1871), an engineer, captain and cartographer. This military man born in Szczecin was a son of Friedrich Georg Ludwig Freiherr v. Gayl (born on 4 February 1776 in Malbork, died in Berlin on 12 January 1853).²³ Robert v. Gayl, before he started working on the plans of the new fortifications, taking into account the existence of the railway line and the bridge over the Nogat River, had been interested in the medieval and modern fortifications. Between 1854 and 1860 he did not only develop new plans of the Malbork fortifications but also supervised their actual rebuilding.²⁴ Gathering a series of plans under the title “Zur Festungsgeschichte Marienburgs” in 1855, he prepared a coloured situational reconstruction plan of Malbork during the reign of the Teutonic Order, i.e. until the middle of the fifteenth century. In the centre of this paper plan made at a scale of 1:5,100 are, naturally, the castle complex and the bridge bastion called *Vogelsank*, but also the developments in the Sztum suburb and in the area called *Geistlichkeit* (Malbork parson’s *jurydyka*, *juridical enclave*). It also includes the water conditions around the town and the castle. This plan is the most significant source for reconstructing the landscape of the town in the mid-sixteenth century. Using the progressive method (a snapshot approx. 80–90 years earlier) does not only provide a closer look at the spatial layout of the town and its suburbs at that time, especially their eastern and southern parts, but also includes a catalogue of important objects within the castle area belonging to the town, Teutonic Knights’ and, later, Polish authorities. Therefore, this plan is of fundamental importance for our research, although the question arises whether in the middle of the nineteenth century during the period of the romantic restoration of the castle, the aforementioned R. v. Gayl accurately portrayed the town at the end of the Teutonic Order’s rule. Leaving aside some minor imperfections, the answer to this question must be affirmative. At present, it can be stated without a doubt that the first stage of the castle’s restoration was, to a considerable extent, interdisciplinary in character, and included the involvement of historians. Among them, we should mention the Königsberg professor and archivist Johannes Voigt (1786–1863), and the Malbork pastor and doctor Wilhelm Ludwig Häbler (1768–1841).²⁵ Both provided valuable information and extracts from Teutonic and municipal sources, which were

primarily held in the archives of Königsberg. Before 1831, the latter wrote (in manuscript) a two-volume work titled “Über das Ordensschloß Marienburg”. It contained plans of the castle church before restoration, as well as drawings of bas-reliefs and paintings from St. Anne’s Chapel. W.L. Häbler’s text corroborated Johannes Voigt’s findings on the subject.²⁶ This plan is supplemented by a valuable and very carefully prepared drawing by Werner Dobisch from 1924, featuring the town of Malbork and its fortification system in the fifteenth century.²⁷ From an iconographic standpoint, the castle, and to a lesser extent the town, were also of interest to the architect Conrad Steinbrecht (1849–1923), who for 40 years supervised the works at the High Castle, and after 1902 at the Middle Castle. From 1923, his work was taken over by the district master builder and an exceptional conservator, Bernhard Schmid (1872–1947). He, as well, enriched our knowledge of medieval Malbork, by publishing an article on the Malbork town hall in the “Denkmalpflege” magazine. It was supplemented by a plan of the town of his creation, featuring the town’s division into quarters and the most prominent buildings and benches.²⁸ The plan reflects the spatial relations within the town walls in seventeenth century and eighteenth century.

Under the Second Toruń Peace Treaty in 1466, the town was incorporated into the Kingdom of Poland. Malbork became the capital of the voivodeship, the seat of the land court and other successively established institutions. At the beginning of the sixteenth century, in terms of population the town was a significant centre in the Republic of Poland, but within the Malbork Voivodeship it was clearly inferior to Elbląg. We should also note that the other towns of this Voivodeship, such as Dzierzgoń (the seat of the voivode), Nowy Staw, Sztum, and Tolkmicko were much less populated (up to 1,500 inhabitants). The average number of people admitted to the municipal law in Malbork, according to surviving sources from the years 1398–1769, was 17.2.²⁹ The inflow of population to the town in that period was decreasing, and there were no more exceptions in the number of new residents, such as 80 people in 1447 or 75 people in 1606. The Malbork castle acquired the status of a royal residence during the periods of both short and several months-long visits of Polish monarchs in Royal Prussia. At the beginning of the sixteenth century, a special official called ‘the castle constructor’ (*praefecto aedificiorum castris Marienburgensis*) was taking care of the technical maintenance of the building.³⁰ Were there more such officials in this century? Unfortunately, the sources fail to provide information on that matter.

In the second half of the fifteenth century and throughout the sixteenth century, despite the loss of its status as a regional capital, Malbork gained favourable conditions for further development through the control over the countryside. At the beginning of the modern era, considerable sources of income for the population of about 3,000 (4,500 together with the suburbs) were crafts and trade, especially in grain, which was not the domain of merchants, but that of the bakers.³¹ During this period, a number of crafts developed in the town, particularly cloth making, brewing, and butchery. The wealthier citizens, living in selected plots of land (137), held a monopoly on beer brewing, which was generating considerable income for the royal treasury. In the sixteenth century, some burghers already owned

²⁶ In Toruń, Karol Górski had at his disposal a copy of the monograph of this Königsberg historian, archivist and source publisher: *Geschichte Marienburgs, der Stadt und des Haupthauses des deutsche Ritter-Ordens in Preußen*, Königsberg 1824. Unfortunately, in this location the monograph was lost.

inns within the territory of the Malbork royal estate in Żuławy Malborskie. A strong position in the town was also held by the bakers' guild, which owned benches by the parish church of St. John the Baptist.³² Butchers from Malbork, apart from the so-called *Fleischerfeld* located to the south of the town walls, made good use of the pastures in Żuławy and on the banks of the Vistula. In total, at the turn of the sixteenth century and seventeenth century, 11 guilds operated in the town: barbers, coopers, blacksmiths, tailors, furriers, leatherworkers, hatters, bakers, butchers, cloth merchants and shoemakers.³³ We should also note that the town of Malbork was a major centre of printing. In 1492, goldsmith Jakub Karweyse (*Karwiese*) founded the first printing house in Prussia, and in 1577 a second one was opened by Mikołaj Scharfenberg.³⁴ The former published a biography of Blessed Dorothea of Mąków, written in German.

The favourable location of the town at the intersection of trade routes, one running along the Vistula (*via mercatorum*), and the other leading from the Margraviate of Brandenburg through Człuchów, Chojnice, Tuchola and Świecie to Chełmno, with branches from Tuchola towards Elbląg, Malbork and to the Duchy of Prussia (*via marchionis*), contributed to the development of trade and craft in Malbork. In the mid-sixteenth century, Malbork merchants, who despite constituting a fairly insignificant percentage of the population (ca. 5%), were often, as mentioned above, representatives of various guilds, and were active on the grain, wood, and beer markets of Royal Prussia.

The town entered the early modern period with its area defined mainly by the aforementioned town privilege of 1286.³⁵ The spatial layout of the capital of the Teutonic Knights' state, created in medieval times, showed many similarities with layouts of other Prussian towns (coastal ones),³⁶ both large, such as Elbląg, the Main Town of Gdańsk, the Old Town of Königsberg, Knipawa, and small, such as Pasłek, or the New Town of Braniewo. The area delimited by the town walls was a consequence of the location privilege stipulations and the extension of the urban territory to the east in 1380. Gradually, four blocks of buildings were erected there on the eastern side of the streets *Kratzhammer* (*Katzerhayn*) and *Neustadt* (*Nowe Miasto*).³⁷ On the north-south axis, the central space in Malbork was a wide street with the dimensions 32 x 300 m., serving as a market square (*Markt*). On each side of the street, four residential quarters (*Viertel*) of unequal size were located, with the larger ones on the eastern side. The Gothic town hall, probably erected at the beginning of the second half of the fourteenth century, served as the seat of the town council and town court (*ława miejska*), as well as the venue of the sessions (alternating with other towns) of the Teutonic Prussian, and later Royal Prussian *Sejmik* (*Dietine*).³⁸ It was located between quarters two and three on the eastern side of the market square. Four mayors with different competencies were elected from among the town councillors. In addition, there were two *kamlars* (*treasurers*), taking care of the town treasury.³⁹ Below the western façade of the town hall, there was the so-called *Laubengang*, or arcade, which was a fragment of the Lower Arcades.⁴⁰ However, there is no reason to assume that they were already entirely finished in the middle of the sixteenth century. Their design may have been introduced by German settlers from Silesia. On the ground floor inside the town hall, bread benches were laid out (30 in the fifteenth century). Butcher's benches (36 in medieval times) were located to the south of the town hall. In all probability, the booths for vendors and winemakers were not built until the eighteenth century.⁴¹ After approximately one century since the foundation of the town and its substantial extension to the east, the whole settlement became somewhat closer to the shape of a square, 240 x 300 m. in size. Notably, from the fifteenth century onwards, an inn *Karczma Kamienna* (*Steinhaus/Steinkrug*) operated at the corner of *Schmiedegasse* and *Kratzhammer* streets.

The largest Gothic building in the town was the parish church of St. John the Baptist,⁴² built on a quasi-rectangular plan. The original structure, first mentioned in 1319, was destroyed during the Thirteen Years' War. Shortly afterwards, a new three-nave Gothic church was built, and the work continued until the beginning of the Reformation, i.e., for over 50 years.⁴³ In 1534 the vaults collapsed, prompting further renovation work. In the sixteenth century, the church was already under the royal patronage, and before that under the Teutonic Knights' and the town's.⁴⁴ At first, it belonged to the Pomesanian diocese with a seat in Kwidzyń, and, after its discontinuance in the Protestant era, it became a part of the bishopric of Chełmno in 1577. The church was of the hall type, without a distinguished chancel, and it was situated in the north-western part of the town, adjacent to the market square from the east, to *Fischergasse* (*Rybacka*) from the south, and *Fleischergasse* (*Rzeźnicka*) from the west. On the northern side of the church, by the walls of the castle moat, a parish cemetery was located. Probably, as it can be gathered from the R. v. Gayl's plan, its narrower part encircled the church from the eastern side as well.

On the western corner of the street called *Gildegasse* or by the Nogat River, since 1440, in a brick building, there was the court of King Artus (*Konigartushof*), mentioned in the town's rule (*wilkierz*). According to K. Górski, the building disappeared from the urban space after the Thirteen Years' War. The location by the Nogat River was associated with a building emerging from the line of fortifications. Th. Breiter believed that, initially, the building was only defensive in function, and it became the residence of the Latin School as late as the second half of the fifteenth century; in all probability, his argument holds true.⁴⁵ Supposedly, the school had been previously located by the parish church.⁴⁶ Its origins can be traced to the foundation of the Grand Master Winrich von Kniprode (1351–1382), but the patronage over its activities was left in the competence of the town council, and it probably remained to be so in the sixteenth century. The school, about which we have extensive knowledge thanks to numerous preserved mentions, and particularly the unique bill from fourteenth century published in print by Th. Breiter, had as many as four teachers at the end of that century. It was attended not only by the children of the wealthier burghers from Malbork and beyond, but also by the so-called "other students".⁴⁷

To the north of this building, along *Fleischergasse*, near the Szpitalna Gate (mentioned in 1410 and 1508), a hospital named "Divine Cellar" (*Gotteskeller*) was located. It was probably not yet established at the end of the fifteenth century,⁴⁸ but as late as 1540. Originally, the site was occupied by a house for the vicars of St. John the Baptist church built in 1499. The founder of the hospital in 1540 was the supervisor of the town court, Johann Kaphardt.⁴⁹ During the Old Polish period, a tower and a bridge leading to the town were located further eastwards to the northern exit of Upper Arcades, by the southern moat of the High Castle, between the former conventual castle and the parish church of St. John the Baptist. On R. v. Gayl's plan, this bridge was already included in the Teutonic Knights' period, but in all likelihood, it was not built until after 1466. From the inspections of the Malbork and Chełmno Voivodeships in 1565, we know it was called "Furta" (*die Pforte*).⁵⁰

The town of Malbork had a double line of walls to the south, which was unique in the Teutonic Order state. Cartographic sources from the period of the Swedish wars allow us to determine the arrangement of buildings, especially between the inner and outer line of the southern fortifications.

⁵⁰ AHMP Malbork, plan no. 3.

Upon crossing the inner moat on the right, there was a gate leading to the bank of Nogat River, called “*Tranckthor*” since 1529. Next to it, in the middle of the seventeenth century or maybe even earlier, a bathhouse was situated.

In the sixteenth century, on the right side of the road to the outer Przewozowa Gate, a town hospital was located, while on the left side from the inner gate, the malt house, the armoury, and the town manor operated since the fourteenth century. In front of the line of the wooden-earthen bulwark (*Bollwerk*) with two towers, there was the so-called ‘outer Przewozowa Gate’ (*Mariacka Gate*). Two towers were adjacent to it on the inner side. Later, in the mid-seventeenth century, the one situated on the side of Nogat River, was called Gunpowder Tower (*Pulverthurm*). Supposedly, both towers housed prisons.⁵¹ The gate was supported by two wide arches standing across the moat. From the outside, it was decorated with two slender turrets with high spires. Above the gate was a chapel with a painting of the Blessed Virgin Mary, with stairs leading to it from both sides of the walls. The vicarage, located there since 1448, was under the patronage of the town council.⁵² One of the defensive structures of the town was a moat, which surrounded it, as it is presented in the reconstruction by W. Dobisch, from the south and east. In the latter section, it merged with the castle moat. The water came through the Mynówka Canal (*Mühlen Graben*) which was dug from Lake Piekarskie (*Bäcker See*, currently Dąbrówka), situated to the south of the town. The watering of the moats was enabled by the upland’s gentle decline towards the north.

The developments of the southern and eastern suburbs continued throughout the medieval period, accelerating in the sixteenth century as the number of inhabitants steadily increased. In the southern suburb, along the route to Sztum (between the later *Ziegelgasse* (*Ceglana*) and *Fleischergasse*), south of the Przewozowa Gate (*Mariacka Gate*) there was a small, two-nave half-timbered church and St. George’s Hospital, mentioned in the sources as early as 1402. A certain distance from the town was caused by the fact that it was originally a leprosarium, which is also evident from its patron. Around the church, the deceased were buried.⁵³ In 1471, at the request of the town council, the Pomesanian Bishop Wincenty Kiełbasa integrated the St. George’s church, rebuilt after the destruction caused by the Thirteen Years’ War, with the nearby hospital, and granted the rights of its patronage to the council.⁵⁴

The Jerusalem Hospital, which was merged with the St. George’s Hospital in the 1620s and the building of which is still standing today, was constructed in the early sixteenth century. However, according to R. v. Gayl’s plan, it was already in operation during Teutonic times. In 1527 and 1528, a new hospital located “*bey Sant Jorgen*” is mentioned and listed next to the St. George’s establishment.⁵⁵ In the 1520s, when the Reformation tendencies spread to Malbork, in St. George’s chapel, which remained under the patronage of the town council, Martin Luther’s doctrine was preached by a citizen of Gdańsk, a former Dominican Jakub Knade (Knothe). A moderate Lutheran orientation was also supported by the Pomesanian bishop Erhard von Queiss, a former clergyman, who dissolved his Catholic bishopric during the secularisation of Prussia in 1525. Religious innovations quickly found new followers among the burghers, despite the formal prohibition by King Sigismund I the Old. In 1569, Sigismund II Augustus granted a series of permits which extended the scope of religious freedom for Protestants in the town council and among the townsfolk.⁵⁶ Catholics had become a minority in Malbork, yet they still owned the church of St. John the Baptist. Since the Protestants’ access to this church was very limited, in 1598 they moved their religious services to St. George’s church.⁵⁷

We should note, however, that among the patricians Calvinism spread, and their representatives argued with the Lutherans about the presence of altars in St. George's church. The conflict was not only of a religious, but also social and economic nature.⁵⁸ At the beginning of the seventeenth century, the Jesuits came to the town and established a school by the parish church of St. John.⁵⁹ They were involved in a prolonged dispute with the town council, *inter alia* over the Blessed Virgin Mary's chapel with the painting, built over the Sztumska Gate. The southern suburb was already heavily built-up in Teutonic times, especially along the above-mentioned streets. The remaining part of it consisted mainly of the homestead village *Hopfenbruch* (*Chmielniki*). Despite its name, the latest findings suggest that in the 1520s its inhabitants did not cultivate hops, but cabbage, and they kept livestock.⁶⁰ On the border with the village of Wielbark (*Willenberg*), to the east, a place was provided for storing manure, and the field on the right was owned by the hospital.⁶¹ The land on the eastern and western side of the Jerusalem Hospital also belonged to that institution. It should be added that the eastern part of the area, that was then called *Marienvorstadt*, was occupied by fields used for slaughtering animals.

In the mid-seventeenth century, in the southern suburb of Malbork beyond the line of fortifications, two west-east oriented streets existed: *Tischlergasse* (*Stolarska*, currently *M. Kopernika*) and *Mühlengasse* (*Żeromskiego*).⁶² The latter was mentioned in 1493 and led from the southern suburb to the Middle Mill (*Średni Młyn*). On the reconstruction plan of R. v. Gayl, this street is marked, but not yet named.

The second suburb of Malbork, already in existence in medieval times, was the area east of the then Middle Gate (*Mitteltor*) mentioned in 1380, leading to a church and a hospital dedicated to the Holy Spirit. For this reason, the gate was called the Gate of the Holy Spirit (1442, *Brama św. Duchy*) and later, in the modern period, the Pottery Gate (*Töpfertor*).⁶³ Before 1460, the hospital belonged to the Order and they appointed a hospitaller for it. Since 1460, the care of the hospital was taken over by the parish priest of the church of St. John the Baptist. From this period, the area opposite to the church (developed with timber-framed brickwork buildings) and the hospital was also at the parish priest's disposal, and came to be known as *Grosse Geistlichkeit* (the left side of the current Marszałka Józefa Piłsudskiego Street) and *Kleine Geistlichkeit* (*Sierakowskich*). In the seventeenth century, a *jurydyka* belonging to the clergy functioned in this area creating significant competition for the town's economy, if only due to the right to brew beer free of municipal tax. Its independence is evidenced by the fact that it had its own *softys* with first instance judicial competencies, and its inhabitants were not subject to municipal law. According to W. Długokęcki, the existence of a second gate in the eastern line of the town walls is disputable.⁶⁴ It seems that this view is valid for the earlier medieval centuries of the history of Malbork. This is because we have to take into account not so much because at the end of the fifteenth century an unknown artist from Gdańsk painted a second gate in this line of walls, placing it to the north of the Gate of the Holy Spirit, but rather the 1454 reference to the Piaskowa Gate (*Sandtor*) in the chronicle "Geschichte von wegen eines Bundes".⁶⁵ Accepting these two premises allows us to assume that the Piaskowa Gate existed in the mid-sixteenth century. Secondly, south of the hospital area, a street called *Gerbergasse* (*Garbarska*) existed already in 1420 as the tanners were

⁵⁸ A. Mączak, *Rozwój społeczno-gospodarczy Prus Królewskich: miasto i handel*, [in:] *Historia Pomorza*, ed. G. Labuda, vol. 2: *Do roku 1815*, part 1 (1464/44–1648/57), Poznań 1976, p. 268.

⁵⁹ A different opinion is presented by H.J. Borchert (*Marienburger Geschichtsbuch*, p. 136), who surmises that the Jesuits arrived in Malbork as early as 1593, the same year King Sigismund III Vasa visited the Malbork castle. The matter was settled by Mieczysław Józefczyk, according to whom in 1618 the Bishop of Chełmno and Pomesania Jan Kuczborski brought the Jesuits (two) to Malbork with the permission of King Sigismund III. See Ks. M. Józefczyk, *Kościół malborskie w I połowie XVII wieku*, [in:] *Jezuici w Malborku a życie religijne na terytorium diecezji pomezkańskiej w okresie nowożytnym*, ed. J. settling there during the sixteenth century and earlier. In Teutonic times, a tannery mill moved by water from the Młynówka Canal was noted there.⁶⁶

On the basis of the so-called “first drawing” by E.J. Dahlberg from 1656, it can be argued that there was a bridge connecting the High Castle and the northern part of the town.⁶⁷

There is not much information about the western suburb of Malbork. On the R. v. Gayl’s plan, it does not appear at all. However, we do know that at the beginning of the fourteenth century, the area between the town walls and the Nogat River belonged to the Order, but the town paid rent for the lease because a river harbour was located there.⁶⁸

Malbork played a significant role after the end of the Thirteen Years’ War, when the issue of the Polish King’s and the Prussian Estates relationship arose. Malbork and Grudziądz, similar in size and both under the influence of Gdańsk, hosted relatively frequently assemblies of those estates. In the years 1466–1492, Malbork is mentioned as the venue 32 times, and Grudziądz 25 times.⁶⁹ In 1521, King Sigismund the Old in the statutes for Prussia introduced assemblies in Malbork on St. Stanislaus’ Day and Grudziądz on the day after St. Michael’s Day.⁷⁰ According to S. Achremczyk, in the second half of the sixteenth century the assemblies of estates in Malbork were not questioned, unlike the earlier period.⁷¹ Nevertheless, Malbork was the more important of the two, not only because of its administrative rank and the location by the important fortress as well as a royal residence, but also because of the greater wealth of its inhabitants. Indeed, the town paid taxes four times higher than Grudziądz, as evidenced by the tax register from 1580.⁷² Consequently, it was ranked first among the so-called ‘small Prussian towns’. In the sixteenth – seventeenth century, Malbork was an example of a town situated near a fortress, i.e., a point of strategic importance and an area of storage, which could secure and maintain dominion over a part of the country. The issue of the income gained by the burghers of Malbork due to the organisation and management of those assemblies is debatable. After all, 120–150 deputies had to find a place to lodge and eat, usually in the town inns. This gave the town’s permanent residents potential opportunities to sell their products and services.

The issue of the nationality of Malbork’s inhabitants in the mid-sixteenth century is still open to discussion. The question of the geographical origin and social mobility of the ruling elite of medieval Malbork has already been raised by W. Długokęcki.⁷³ With regard to the early modern period, virtually the only sources which allow us to address this issue, albeit imperfectly, are the materials from the interrogation of 650 witnesses concerning the riots which took place in Malbork on 9 July 1570, when Polish gentry and their servants clashed with a group of Malbork shoemakers’ and bakers’ apprentices. Considering this source, A. Mączak’s estimates are perhaps a bit too optimistic, as they indicate that at that time around 16% of all inhabitants had Polish surnames, with Germans clearly dominating within the town walls. Polish surnames, usually belonging to farmhands and landless peasants, were more common in the southern and eastern suburbs, and above all in the Outer Castle (so-called *zamkowi*).⁷⁴ In this area, not only the servants and the army were Polish, but even the officials. Towards the end of the sixteenth century, more and more Scots and Mennonites were noted near the town and in the castle premises. Some Germans, looking for economic prosperity and religious freedom, came to Malbork from Silesia. Most of them were members of the Protestant faith.⁷⁵

In the sixteenth – seventeenth century, craftsmanship was the main source of livelihood for the inhabitants of Malbork. Among the craftsmen, the most numerous were bakers, shoemakers, butchers, brewers and representatives of metal crafts.⁷⁶ In addition, a hundred and several dozen workshops

operated in the town, including over 50 in the cloth industry, which continued to produce both inferior (grey) and superior quality cloth. However, a serious impediment to the development of certain crafts was slowly being created by *jurydykas* emerging in the suburbs, such as the one belonging to the clergy (the so-called *Geistlichkeit* at Sienkiewicza Street). Lower prices of goods produced and sold there, in particular beer and vodka, undermined the production of guilds run by the town's citizens, and thus, their source of income. Later on, similar issues were related to the *jurydyka* organised on the premises of the Low Castle, under the rule and with the consent of Malbork treasurer Jan Franciszek Bieliński (1667–1674).

As already mentioned, the town of Malbork is an example of a town by a fortress. The castle complex, even after the period of Teutonic rule, maintained its importance as the residence of Polish kings. Judging by a number of visits by the Polish rulers from 1457 until the end of the sixteenth century, Malbork castle cannot be regarded as their favourite place of residence. Undoubtedly, it only gained greater significance in this regard in the subsequent century. King Casimir Jagiellon visited the castle four times (1457, 1472, 1476 and 1485), John I Albert only twice, King Alexander once in 1504,⁷⁷ Sigismund I the Old once in 1526, same as his son Sigismund Augustus (once, in 1552). Stefan Batory spent more time at the castle because of the war with Gdańsk (in the years 1577–1578). The last to visit the castle in the sixteenth century was King Sigismund III Vasa. Considering the above, it can be concluded that Malbork served Polish rulers quite sporadically, mainly on occasion of some important events taking place in the northern borderlands of Poland. The housing conditions of the former Teutonic Order complex were not favoured by the Renaissance Polish rulers, nor by the officials of that complex.⁷⁸ The status of a “royal edifice”, i.e., the residence of the Polish king during his stay in Malbork, was acquired by the Middle Castle and the Grand Masters' Palace. The ownership profile of the castle as a royal residence prompted a concern for its technical condition, and necessary renovations or adaptations were carried out on a day-to-day basis. In the sixteenth century, the castle was occupied and governed by the following Malbork *starosts*: Piotr Szafraniec (1501–1504), and Ambroży Pampowski (*starost* general of Prussia, d. in 1510),⁷⁹ and later by somewhat inferior officials, the Malbork treasurers: Tarant (1511–1512), Melchior Glaubicz (1519), Jan Kostka (1569–1581), Jan Dulski (1581–1590) and Stanisław Kostka (1590–1602).⁸⁰

The second conclusion to be drawn from the analysis of the spatial changes in the vast castle space is that they do not drastically change in time, as evidenced by the lack of major alterations to the High Castle, the Middle Castle and the Outer Castle. The layout of the castle space has already been presented several times. At this point, we need only recall the most important stages of spatial development and the location of the most important buildings of administrative, residential, defensive and economic character, as well as, if possible, their functions in the sixteenth century. The entire defensive structure, covering almost 21 hectares and closely integrated with the town space in the south, was not built in a short period, but evolved between the end of the thirteenth century and mid-fifteenth century.⁸¹ Originally, it was a conventual castle erected in a suitable defensive location on the high bank of the Nogat River, by the route from Elbląg to Gdańsk. It was protected by marshlands to the east and north. After the northern and, later, the western wing was built, the construction of the remaining wings began, forming a quadrangle with dimensions of 51.6 x 60.7 m. The conventual castle was encircled by a moat. Its first floor housed a chapel of the Blessed Virgin Mary, chapter house, infirmary and dormitory. In the western wing, there was a refectory and commander's apartment. By the end of the

thirteenth century, the whole complex was surrounded by a defensive wall. It was complemented by a tower called 'gdanisko' in the south-western corner, serving both as a latrine and defensive structure. Starting by bridge towers, a pile bridge led across the Nogat River since the fourteenth century, and it survived until 1743. These bridge towers were probably not in a good state of repair already at the turn of the sixteenth century and seventeenth century. The maintenance of the bridge itself was the responsibility of the burghers.⁸² Next to the bridge towers, towards the north, houses adjacent to the castle walls were erected. Beyond the Kornuska Gate (*Brama Kornuska*), leading to the grain storehouse called *Kornhaus* (part of which was also used as a stable in the modern period), a bathhouse was located in the modern period.⁸³

Due to the castle's location close to the town and the Nogat River, the Outer Castle could only be planned on the northern side. The changes were introduced after the Order decided to move their capital from Venice to Malbork.⁸⁴ The existing conventual castle was insufficient for new purposes, hence the necessity to extend the monastery segment in the southern and eastern wings. In the years 1330–1344, the chapel underwent more substantial reconstruction and was extended towards the east to form a considerably large church of the Blessed Virgin Mary, the central church of the Order, expressing its spirituality and demonstrating its authority.⁸⁵ Underneath the church, there was St. Anne's Chapel where the Grand Masters were later buried.⁸⁶ Meanwhile, in the mid-fourteenth century, a decision was made to transform the former Outer Castle into the Middle Castle, which was to become the residence of the Grand Masters and the seat of the administration of the Teutonic Order's state. The residential function was performed mainly by the Palace of the Grand Masters built as early as the end of the fourteenth century. With the use of designs from Italy and masons who were in the service of the Order (particularly Nicklos Fellenstein from Koblenz⁸⁷), the most architecturally sophisticated building in the entire Teutonic state, and this part of Europe at that time, was created. The palace was located on the first floor and consisted of the Summer Refectory, the Winter Refectory and the High Hall, as well as the Grand Master's private chambers and St. Catherine's Chapel. The chancellery and the Grand Treasurer's office were located on the ground floor. Furthermore, in the western wing of the Middle Castle, there was the Grand Refectory, i.e., a great hall intended for feasts of the Order's dignitaries with knights, mainly from Western Europe, who were coming to join the anti-pagan campaigns. In the sixteenth century, it served as a royal banquet room, adjoined by the royal kitchen. The Grand Refectory was admired, not only in medieval times, for its architectural features and wall paintings. Centuries later, at the turn of the eighteenth and nineteenth century, the paintings of this hall, among others, caused a shift in the mindset of the ruling elites of the Prussian state, and they decided to save this monument after years of neglect.⁸⁸ The northern wing of the Middle Castle, which was occupied by the Grand Commander, was used for administrative purposes. The remaining part housed an infirmary.

The third part of the castle complex, the Outer Biley (*Przedzamcze*), had a different character. Situated north of the Middle Castle, it is the most recent part, developed throughout the fourteenth century and in the first half of the fifteenth century. This area, of a size altogether larger than the High Castle and the Middle Castle together, fulfilled technical and economic needs. Because it served the complex occupied by the Grand Master and the Order's administration, as well as the incoming guests, it housed numerous workshops, storehouses, stables, barns and living quarters. In addition, there were breweries,

⁸² *Źródła do dziejów ekonomii malborskiej*, vol. 1, p. 80.

⁸³ *Ibidem*, p. 84. Kornhaus was mentioned already in 1378. Nearby, there was a room for the *Kornmeister*, a Teutonic Knights' official responsible for the storage of grain.

malt houses, bakeries and smithies. Special attention should be drawn to the largest buildings on the opposite sides of the Outer Castle (*Podzamcze*): *Kornhaus* and *Zeughaus*. The former, which was not preserved to the present day, has already been mentioned as having a dual purpose (as a stable and a warehouse), and, on the eastern side, there was a warehouse for firearms and a former Teutonic carriage house (*Karwan*). In the sixteenth century, about 30 cannons were stored there, as well as numerous mortars, arquebuses, matchlock rifles and various kinds of bullets, and other equipment intended for war.⁸⁹ The Outer Castle served also as an accommodation for soldiers, the so-called Malbork *drabs*, up to 200 of them in peacetime. From 1358, under Teutonic rule, the Gothic church of St. Lawrence was intended for the castle servants. It was located in the southern corner of the development on the eastern side of the area. The parish priest of this church was subordinated to the Malbork parish of St. John the Baptist. Near the church there was a cemetery, used to bury, i.a., the convicts (there were prisons located in various areas of the whole castle complex) and the castle *drabs*.

In the eastern part of the walls, most probably in the fourteenth century, a Gunpowder Tower was built. As its name suggests, in the Polish times, it was used to store barrels of gunpowder. The defence system was supplemented from the east by the Snycerska Gate (*Brama Snycerska*), and from the south by the New Gate (*Brama Nowa*). The former stretched from the Malbork Vogt's house in the Outer Castle to the so-called Henry von Plauen's Ramparts, which surrounded the castle complex from the east and north with a wall 1 m thick. This defensive line was completed in 1414. Its purpose was to keep potential enemies and their artillery away from the castle. The most north-western tower in the Outer Castle was the *Buttermilchturm* (*Baszta Maślankowa*), also called *Modra* under the Polish rule.⁹⁰ Erected in the fourteenth century (1335–1340), it was almost 30 metres high and served as a guard tower. The whole defensive system was strengthened by internal and external walls, between which the aforementioned moat flowed. The water from the Malbork Flume Canal, probably dug in the first half of the fourteenth century, flowed from the south to the south-east corner of the fortifications. There, it divided in such a way that one branch ran towards the north along the eastern wall of the Outer Castle, and the other towards the west, where it forked to encircle the Middle and High Castle.⁹¹

In the light of the above remarks, we have to agree with M. Mierzwiński's view that during the entire period of Polish rule the medieval silhouette of the castle and its internal buildings underwent only minor transformations, noticeably adaptations of the rooms to new functions and changes needed to maintain the castle complex in good condition.⁹²

The sixteenth century, in contrast to the subsequent one, was therefore a period of relative peace and economic development for the town and the castle. The major administrative role of the castle for this part of Royal Prussia was coupled with its significance as a venue for assemblies of the province's estates. Although the castle lost its position as the centre of the Teutonic state, it largely maintained its military and residential importance, as well as its status as a significant centre of crafts.

III.6.19.8 MIELNIK

Andrzej Buczyło

Mielnik, at present a village lying on the Bug River, has a rich historical tradition. Once it enjoyed town status being simultaneously the capital of one of the three lands within the boundaries of the pre-partition Podlasie Voivodeship as well as the seat of the district court. The origins of Mielnik go back to the early Middle Ages.¹ The first references to the settlement in written sources are to appear in the Galician-Volhynian Chronicle, where the Princes Daniel and Wasyłko were to have stayed in the castle here.² This event was connected with the Tatar incursion into Lithuanian, to where the Ruthenian princes advanced as their allies. To date this reference in literature has been dated as the year 1260. However, recently Adrian Jusupović has shown that it follows to move it somewhat to the year 1258.³

Following the death of Bolesław Jerzy II, the last ruler of the Galician-Volhynian Principality, control over Mielnik became the subject of rivalry between Poland and Mazovia on the one hand and the Grand Duchy of Lithuania on the other. Between the years 1351 and 1355 Mielnik was to find itself within the borders of Lithuania.⁴ From that moment onwards besides short periods of rule by Mazovia (1382/1383, 1390-before 1405 and 1440–1444), right up until the concluding of the Union of Lublin, Mielnik found itself within the borders of the Grand Duchy of Lithuania. After 1569, together with the entire Podlasie Voivodeship, it became part of the Polish Crown. For the entirety of this period the town remained royal property.

The town's location was played out in two stages. Initially, following the taking of the land by the Mazovian Prince Bolesław IV, a charter was issued on the 22 September 1440 granting Mielnik Kulm Law rights.⁵ It has not been completely established as to where the town had its initial location. In the subject literature most often its positioning is shown as possibly being at the so-called Przedmieście Krzywczyckie, placed to the south-east of the settlement's current centre.⁶ However, recently conducted archaeological research has shown that the area of the later market square was already intensively utilised in the second half of the fifteenth century and visible were traces of widespread levelling works (in places the layers of sand, stone and clay are a metre in depth).⁷ This matter is undoubtedly in need

¹ Ł. Rejniewicz, *Mielnik, woj. białostockie*, "Informator Archeologiczny. Badania", vol. 22, 1988, pp. 148–149 date the remains of the castle found to be the eleventh-fifteenth centuries. A. and A. Andrzejewski have established the twelfth-thirteenth centuries for the oldest evidence of habitation on castle hill, pointing to the rather unintensive indications of exploitation – *idem*, *Mielnik nad Bugiem – miasto z przeszłością*, [in:] *Sic errat in votis. of further research (including archaeological excavations within the area of the former Przedmieście Krzywczyckie), but in the light of this data, the view as to an initial other location for the town more than likely will have to be revised.

The next stage in the town's development was to be the renewal of municipal rights, this time on the basis of Magdeburg Rights. This was carried out by the Grand Duke Aleksander Jagiellończyk on the 1 October 1501. Subsequently on the 26 October 1501 he confirmed the bestowing of the rank of vogt (*advocatus*) on the local burgher Mikołaj Rychlik.⁸ Mielnik was to remain a town until 1934, when it had its municipal rights revoked.⁹

Sources for the reconstruction of the town plan of Mielnik may be divided into the cartographic, the textual and the archaeological. The oldest cartographic source whose existence we know about was a town plan compiled in 1620 by the Gniezno canon Jan Drzewicki. The original itself is unknown, but nevertheless a coloured copy of it compiled in 1827 has survived. At present this is kept in the State Archives in Radom.¹⁰ Unfortunately as far as the layout and appearance of the town then the said is of more artistic value than it is topographic. However, its invaluable worth is the exact mapping of the changes in the hydrographic network that occurred in the mid sixteenth century. It was indeed as a result of incorporating the changes in the current and flow of the Bug that the first plan under the authorship of J. Drzewicki was drawn up.¹¹ Its much simpler drawn copy is equally a map compiled by the Prussian authorities in 1799 and preserved at the State Archive in Białystok.¹² In this self same archive are to be found a Prussian map of the centre of the town of 1804¹³ and a copy of a map of municipal grounds of 1803 (the author of which was lieutenant Łuske¹⁴) and produced by Kazimierz Iwazkiewicz, a surveyor of the Bielsk powiat in 1822. Mielnik is also visible on the maps of von Stein and Textor, as a result of its position on the border of the Austrian partition. It is also found on the map by Heldensfeld of 1804.

However, exceptionally valuable for research into the topography of pre-partition Mielnik was to turn out to be a map of 1819 coming from the collections of the Lithuanian State Historical Archive in Wilno.¹⁵ This had been hitherto unknown to researchers and as a result of its high degree of accuracy (the inclusion of buildings and the boundaries of the municipal lots), allowed for the inclusion of several changes in relation to those hitherto existing in the subject literature on the map herein presented.

The Mielnik municipal ledgers from the period up to the end of the sixteenth century have not been preserved, with the oldest surviving fragment being from only the years 1631–1698.¹⁶ Given this state of affairs, of immense importance has been the recourse made to sources compiled for the needs of the royal chancellery. For Mielnik inventories have been preserved for the years 1545 and 1551¹⁷ as well as one undated inventory (all are referred to in the source as military rolls).¹⁸ Thanks to the efforts of Tomasz Jaszczółt, the latter may be dated at around 1535, and so is the oldest. Unfortunately in relation to usefulness with regard to compiling the presented map of Mielnik they have not turned out to be overly helpful and here as a result of their form. Those who compiled the military rolls entries concentrated on listing the surnames of the inhabitants and their villeinage, yet completely failing to take into consideration the town's topography and division into streets. Only the inventory of 1551 notes, for example, the existence of churches in the town. The most valuable source is the

Mielnik register of the Volok Reform of 1560,¹⁹ providing most detailed data on the town's topography including the street network. For the second half of the sixteenth century and beginnings of the seventeenth century there have not been found any other materials of an inventory or inspection character that would allow for our state of knowledge on the town's appearance at the time to be broadened.²⁰

In connection with the extremely limited archive material that has survived on the pre-partition history of the town, a most significant role is being played by archaeological work. Research was conducted in the years 1959–1961 (Irena Górska, Urszula Perlikowska-Puszkarska) and in the 1970s (Łukasz Rejniewicz),²¹ while in recent years this has taken on a visible acceleration producing many exceptionally interesting findings. The excavations on the grounds of Góra Zamkowa (Castle Hill) and at the ruins of the church have been conducted by Aldona and Aleksander Andrzejewski,²² and recently digs in the market square and on the terrain of the present-day Orthodox cemetery have been carried out by Grzegorz Śnieżko and Michał Dzik.²³

It follows to point out first and foremost that from amongst the subject literature devoted to Mielnik the works of Dorota Michaluk hold prevalence. This author has devoted a separate book publication to the question of the town²⁴ along with several articles.²⁵ A small study on Mielnik has also been produced by Ryszard Celeda.²⁶ Both of these authors have included maps in their works, with reconstructions of the appearance of the town in the light of the inventory of 1560. In turn, Leonarda Dacewicz has analysed the micro-topography of Mielnik.²⁷

Mielnik is situated on the high right bank of the River Bug at the place where the Podlaski Gorge of the River Bug and the Drohiczyn Heights meet. It is worth adding that within the boundaries of the settlement, to the north of the built-up areas is to be found Góra Uszeście (two peaks 204 m and 172 m respectively above sea level), the highest peak of the Drohiczyn Heights. This specific geographic location (noticeable height differences, peaks and gorges, a large river with a changeable and unregulated current) has left an extremely noticeable mark on the structure and layout of the settlement. The buildings are clearly stretched along the river; and this is most visible on the presented map.

Ostrów situated on the left bank of the Bug also belonged to the town. Initially it was an extensive isle lying opposite the town itself, while the main flow of the river washed it from the south. Between 1552 and 1560 changes occurred and the main channel was to become the northern branch, flowing directly along the town.²⁸ At the beginning of the 1620s this resulted in a conflict between the inhabitants and the Mielnik starost Wojciech Niemira over the property rights to the meadows on Ostrów itself. The starost claimed that all the land located on the left bank of the Bug belonged to the starosty. The townsfolk rejected these assumptions, showing that though indeed this was the case prior to the change in the flow of the river these had been in fact municipal lands and consequently ought

¹⁹ ASK, LVI 171, ff. 121–228.

²⁰ In the inspection preserved for 1602 there is no data about Mielnik. The inspection of 1616 in turn provides most laconic information, not at all helpful in any reconstruction.

²¹ The results of this research has not been published in a printed form and is held at the Archive of Archiwum MPwB. Only Ł. Rejniewicz has published a short piece of information, idem, *Mielnik, woj. białostockie*, pp. 148–149.

²⁸ For it to occur between 1552 and 1560 is the fact that during the conflict the burghers informed that the town's boundaries had been demarcated in 1551. They also presented the inspection of 1552, which confirmed their rights. However they did not make recourse to the inspection of 1560.

to belong to them.²⁹ Another subject of dispute was also the Grabowiec forest situated to the north of the town. These conflicts started more than likely during the time Wojciech Niemira was starost. This allows one to conjecture that in the second half of the sixteenth century Ostrów, despite changes in the flow of the River Bug, was still considered to be municipal property.

In relation to layout Mielnik was, during the pre-partition period, a typical Podlasie small town; it was never walled nor possessed town fortifications. It was constructed almost exclusively of wood. In the second half of the sixteenth century the only mentioned stone buildings were the castle tower, the castle church and two buildings on the surrounding castle courtyard (*podzamcze*). Even though here there is no certainty it is possible the Orthodox church of the Resurrection was also of stone.³⁰ This wooden style of building, although highly typical for the Podlasie region, resulted in the settlement not resembling in appearance a typical townscape. It was rather more in keeping with corresponding suburban architecture, with large gardens and agricultural outbuildings.

The town according to the data of 1560 possessed 122 voloks of endowment, of which three voloks, exempt from payment, were bequeathed to the Mielnik Orthodox churches.³¹ The Roman Catholic Church, besides lots and municipal gardens, did not hold any voloks. This was connected with the fact that the village of Wajków was Church property.³² In the second half of the sixteenth century it was agricultural work that constituted the main source of income for the townsfolk. This is confirmed by the register of 1560, in which it is clearly stated that: ‘And therefore for this town a lot of voloks remain (*ostawiono*) for the inhabitants have nothing else to feed themselves with, the road has been turned towards Turna and Siemieszyce. Fairs and good markets you have nowhere, while the people are impoverished they still don’t go to the port to trade at all trying instead to eke out a living from the land.’³³

In the inventory of 1551 the exact number of houses was given – 4 *kopa* (i.e., a unit here of 65) and 4 houses,³⁴ making for 244 houses. In the tax register of 1588 284 houses are shown (16 market square town houses, 243 ‘street’ and 25 impoverished cottages).³⁵ Stanisław Alexandrowicz estimated the number of Mielnik inhabitants to be 1,524 persons for the year 1580.³⁶ This would mean that despite the severe crisis brought about by the change in the trade route and general poverty the number of inhabitants maintained itself at a stable level.

The main base source employed in compiling the map of Mielnik for the second half of the sixteenth century has been the Voloč Reform register of 1560, as well as retrospectively the map of the town of 1819. Helpful has also been the map by von Stein; even though its scale did not allow for an exact reflection of the town’s layout, marked on it was a precise patterning of the division into urban and suburban lots.

One should clearly emphasise that the lack of sources as signalled earlier has meant that the map is in large part hypothetical. The preserved register of 1560 is the solitary source describing the town in the second half of the sixteenth century, there is, consequently, no way of verifying the exactness of its entries. Additionally, a part of the information is far from sufficient and causes localisation problems for example ‘farmlands on the Hill’ or ‘farmlands on the Hill under the Lime.’³⁷ Preserved is an exact plan of the Mielnik lands of 1822 (a copy of the map of 1803), nonetheless the question arises as to how faithfully and accurately it reflects the state of land usage in the second half of the sixteenth century. It also follows to remember that following the third partition Mielnik found itself on the border of the Prussian and Austrian partitions and, for example, the municipal meadows were

Map 1. Mielnik and Krzywczyckie Suburb in the second half of the 16th century

situated already on the other side of the border, in a similar way to the majority of the Mielnik *starosty* lands. In addition, to the north of the town the terrains were clearly undulating in nature and sometimes with marked differences in height (cf. the recalled Góra Uszeście). Consequently, there is no certainty that even if a given piece of terrain was referred to as cultivated the land use was in fact this. As a consequence there is no attempt at marking on the map the division of urban lots according to land use or type. The category ‘garden-field lands’ (yellow on the map) are marked only in those places where no doubts whatsoever are aroused. All remaining grounds have been marked as belonging to the category ‘agricultural’ (light green in colour).

To be found to the south east of the strict centre of Mielnik itself is a suburb visible if only on the map by Textor. This was the so-called Przedmieście Krzywczyckie or as it was deemed in 1560 ‘the Town on Krzywczyce.’³⁸ This lay around 1.6 km to the south-east of the market square, on the road leading to Brześć Litewski. This relatively large distance has meant that on the Mielnik scale map of 1:10,000 the suburb is situated beyond the scope of the cartographic area. Hence the decision here to include a separate schematic map. Almost nothing was known about the ‘Town on Krzywczyce’ in the second half of the sixteenth century. It results from the register of 1560 that in nature it was a classic linear village running out along the main road. On its terrain was to be found a branch, leading to the south to the bridge on the River Bug.

The main square in the town was the market square (present-day T. Kościuszko Square). This does not have a regular rectangular layout. Most probably this is not a matter of any violation of

³⁸ Ibidem, ff. 143v–144.

former layout lines but rather the shaping of the terrain (neighbouring from the south-west with Góra Zamkowa (Castle Hill) and the course of the road routes (from the north the road leads from Drohiczyn in the direction of Brześć Litewski). The register of 1560 enumerates nine streets in Mielnik: Drohicka (at present a part of Brzeska Street to the west of T. Kościuszko Square), Szykałowicza (in 1819 Blachowska Street, at present Sadowa Street), Bielska (at present Królewska Street), Wysocka (identical with Stary Trakt), W tyle Kościoła ('To the rear of the Church') (in 1819 Błotna Street, at present Strażacka Street), Milejczycka and W tyle Rynku ('From the rear of the Market Square') (both probably nonexistent at present), Woskreszeńska vel Woskriesieńska (at present Bugowa Street), Browarna (at present Ogrodowa Street).

It follows to note that several significant corrections in the street layout have been introduced in relation to the maps of Mielnik existing in the subject literature. The main and the most visible is the change in the course of the Szykałowicza Street.³⁹ On hitherto maps it was curved in shape, both ends of which emanated from Drohicka Street. According to the subject literature it was also to have been built-up only on the one side, while the other frontage bordered at the rear with the lots of Drohicka Street. However the Volok Reform register of 1560 states that on the right hand side of the street buildings also stood, belonging to three households. What is more, on the map of 1819, on the right hand side of the street, are still marked three plots on which buildings stand. Equally the entry from the register of 1560 speaks of the street running 'at *przeg* from Drogicka Street,'⁴⁰ which might as equally mean 'across/ crosswise, perpendicular/ at right angles to.' This questions rather the version hitherto adopted, hence on the map it has been placed as if at right-angles leading out of Drohicka Street. In this version its course is in agreement with Blachowska Street as visible on the map of 1819.

Changed has also been the course of the W tyle Rynku Street. It ran parallel to the façade of the Market Square and combined within it the two streets of Bielska and Milejczycka running to the north. On hitherto existing maps it was placed more or less in the middle of these streets. However, from an analysis of the register of 1560 it results that it commenced between the houses of Waško Doroszewicz and Hryń Kurcewicz. Both townsmen occupied the first two plots starting from the Market Square, from the left-hand side of Milejczycka Street.⁴¹ This would have meant that this street was separated from the market by a solitary plot.

Mielnik lay in a place that saw the convergence of several trade routes. One of these ran along the Bug and linked Drohiczyn and Brześć Litewski. This was to have the greatest influence on the shape of the town, for it was along the river itself that the buildings of the town were to be constructed. From the west the road to Drohiczyn bore the name 'Drohiczyn way'.⁴² From the south-east it led to Przedmieście Krzywczyckie. And it was here that it crossed over, with the road leading to the bridge on the River Bug and further onto Łosice itself. An important role was also played by the town roads heading north. Counting from the the west these were respectively the roads to Milejczyce, Bielsk and Wysokie Litewskie.⁴³ The route heading to Bielsk bore the name the 'Bielsk way' and along its course the municipal gardens (allotments) were to be found.⁴⁴ Similarly the road to Wysokie was known as the 'Wysokie way'.⁴⁵

An important element in the road infrastructure was the bridge on the Bug. As is noted in the register of 1560 this was the only bridge across the river in the whole of the Mielnik powiat. It is worth emphasising that the existing bridge in Mielnik was damaged at the beginning of the 1550s and for several years the town did not have a permanent river crossing. This was to have far reaching consequences; for in 1554 Stanisław Tęczyński gained permission from the king to build a bridge

³⁹ The name of this street undoubtedly comes from the surname of the relevant burgher families. In the Volok Reform register there appears a Jacko Szykałowicz owning lots on both sides of the street – Ibidem, f. 125v.

⁴⁰ Ibidem.

⁴¹ Ibidem, ff. 126–126v.

⁴² Ibidem, f. 132.

⁴³ In the case of the Bielsk road it follows to remember that in the demarcation carried out in 1532 and here between two estates Boćki and Lewki, mentioned is the Mielnik road heading from Bielsk – *Lietuvos Metrika. Knyga nr. 17 (1530–1536)* ed. L. Karalius, D. Antanavičius, Vilnius 2015, p. 293.

⁴⁵ Ibidem, f. 131v.

across the Bug near Turna on the Siemiatycze estates.⁴⁶ This was to result in an immediate change in the course of long-distance movement. The bridge at Mielnik was to be soon rebuilt (there is already a mention in 1560), nonetheless this did not result in the town regaining its former position. The losses as a consequence of aforesaid were so large that it was quite simply underlined in the register of 1560.⁴⁷ The bridge was described as ‘new across the Bug well repaired,’ though one cannot exclude the possibility that this new crossing was not situated somewhere else than had been the previous one. This would be borne out by the enigmatic note about the Starościnski gardens (gardens that belong to the Mielnik starosta) being located ‘at the folwark [that is across the River Bug – A.B.] on the old road.’⁴⁸

Initially there existed a fort on the territory of Mielnik, one mentioned in Ruthenian times. For a long time its location remained unknown for the digs conducted on Góra Zamkowa (Castle Hill) failed to reveal any remains of the said.⁴⁹ This resulted in the advancement of a thesis that it could have been located somewhere else. The most often mentioned as a potential location was a site situated next to the Orthodox cemetery, where visible are traces of earth embankments. This was to be only confirmed through the subsequent archaeological research conducted after 2011. Additionally there were found in this place burials (the oldest through C14 radiocarbon dating reveals finds from the end of the thirteenth to the beginning of the fifteenth century) which show that this site in the late Middle Ages did not perform its original defensive function but that it had been readapted to act as a cemetery.⁵⁰

This was presumably connected to the raising of a new castle on the place referred to this day as Góra Zamkowa (Castle Hill). The first mention being in 1379.⁵¹ However, a broader description is only to be found in the inventories of 1545 and 1551.⁵² It results from these that it was comprised of two parts: an upper castle and a lower castle as well as a cutting with a draw bridge that divided the castle heights from the town.⁵³ A part of the castle’s working buildings: for example the kitchens and stables, were found ‘before the castle beyond the cutting.’⁵⁴ The object under consideration was shortly to be completely destroyed by fire. In 1560 mentioned is the existence of only the entrance tower ‘with an unrepaired gate’ and a church along with several buildings in the outer bailey (‘the manor house before the castle,’ ‘a second small house,’ stables, larder and kitchen).⁵⁵ The castle was presumably quickly rebuilt but unfortunately there are no sources allowing one to become acquainted with its layout and appearance. For this reason no attempt has been made to present it in an exact location on the map, marking merely the place where it was roughly situated. As an actual construction only the castle church has been presented.

In the second half of the sixteenth century there were four Christian temples in Mielnik: two Roman Catholic churches and two Orthodox churches. All of these have been marked on the presented map. The first Roman Catholic church of Corpus Christi, of the Assumption, of St. Nicholas and All Saints was founded by the Grand Duke Witold in 1420.⁵⁶ It was situated on the castle hill in the vicinity of the lower castle.⁵⁷ In the light of the latest research it follows to note that the present-day ruins of the temple are not to be identified as traces of the first church itself. During the archaeological research it was discovered that certain fragments of the eastern section of the church lay beyond the area of the

⁵⁷ At a later date it bore the designation of The Holy Trinity; KSZ, new series, vol. 12: *Województwo podlaskie (białostockie)*, no. 1 – *Siemiatycze, Drohiczyn i okolice*, ed. M. Kałamańska-Saeed, intro. and inventory I. Galicka, H. Sygietyńska, Warsaw 1996, pp. 34–35.

former defence perimeter of the castle. In the inventories for 1545 and 1551 it is stated that the church was dedicated to St. Nicholas.⁵⁸ It is not known whether this was the result of a change in dedication or simply that St. Nicholas was decreed to be the main designation.

The second Mielnik church of the Nativity of the Blessed Virgin Mary was founded by Sigismund I the Old in 1513 and here already within the town boundaries.⁵⁹ It quickly took on the function of being the main parish church (the castle church being deemed a branch of it).

As far as the Orthodox churches are concerned, the earliest is the Orthodox church of the Nativity of Our Lady. Mention is made of the temple in 1258 or 1259, when Daniel Romanowicz was to have prayed at the icon of Christ the Saviour found in the church.⁶⁰ The second Orthodox church of the Resurrection (*Woskresenskaya*) appears in the sources only in 1551 and here with the notation that the plot had been bestowed of old.⁶¹ It is important to here note that the Uniate church founded in 1596 did not impact on the denominational affiliation of the two Orthodox churches right up until 1646, only after this date were they to find themselves in the hands of the Uniates.⁶²

The location of the castle gardens (allotments) and 'Bug-side' gardens also requires broader treatment. Their exact localisation is unknown though there are certain pieces of circumstantial evidence that allow one to conjecture with a large degree of probability that they lay in the place indicated on the map. The register of 1560 states that the Bug-side gardens (allotments) ran from the castle gardens to the town breweries. In the inspection of the Uniate church of the Nativity of Our Lady of 1759 is to be found a note that the parish cemetery 'is bound on the one side by gardens (allotments), while on the other by a fence.'⁶³ This cemetery was situated on the terrain of the old Ruthenian fort in the vicinity of Góra Zamkowa (Castle Hill)⁶⁴ which allows one to approximately locate the castle gardens (allotments). To the east of these the Bug-side gardens begin, so as the very name suggests they must have had partial access to the bank of the River Bug. The adoption of just such an interpretation allows one to connect a street found on the 1819 map and that ran from Góra Zamkowa (Castle Hill) along the bank of the Bug in an easterly direction of the Bug as being Browarna Street and also mentioned in 1560, and which on hitherto maps had not been marked and here because of problems in providing it with an exact location.

Mills have also been marked on the map. Their location is hypothetical, nonetheless according to the register of 1560 there is found in a description of Drohicka Street a note that says that to the rear of this street were plots onto the Bug. Two of these have been established as belonging to mills and were exempt from taxation (their proprietors were the millers Adam and Sidor).⁶⁵ On the map of 1819 there is indeed a small side street that leads from Drohicka Street and of the name Młynowa (Mill Lane) leading to the bank of the Bug, where a few buildings appear. This is most probably therefore the place mentioned in the register of 1560, hence equally it was decided to locate the aforementioned mills here as with the marking of the course of the street. Formally Młynowa Street does not appear in the register of 1560, nevertheless some road to these lots 'to the rear of the street' must have existed. However, for obvious reasons no name has been marked as a result of its lack of source confirmation. These are for certain not all the mills that were situated in the Mielnik of the time. It is not possible to establish the position of the castle mills for they were located 'on boats' – one beyond the town above the bridge and three lower down from this crossing.⁶⁶

The question of Zabuże also requires some expansion. At present it constitutes a separate village situated on the other bank of the River Bug opposite the former Przedmieście Krzywezyckie. In this

⁵⁸ ASK LVI 171, ff. 5, 90.

⁵⁹ Mention of its construction is found in the repeat of the castle church charter issued by Sigismund I the Old (see above footnote 56).

⁶⁰ *Kronika halicko-wołyńska (Kronika Romanowiczów)*, p. 406.

⁶¹ "three voloks of land bestowed on these Orthodox churches of old"; ASK LVI 171, f. 12v.

⁶² AWAK, 33, pp. 358–359.

⁶³ LMAVB, ff. 41–319, p. 686.

⁶⁴ It is worth emphasising here that the cemetery lay at a certain distance from the Orthodox church itself. The research carried out on the territory of the present-day Orthodox church garden has not revealed any signs of graves; M. Dzik, G. Śnieżko, *Sprawozdanie z archeologicznych badań wykopaliskowych w Mielniku, woj. podlaskie, stan. "Cmentarz Prawosławny" i "Sad Cerkiewny" w 2013 r.*, Rzeszów–Warsaw 2014, pp. 10–13 (the research reports are held in the WUOZwB archive).

⁶⁵ ASK LVI 171, f. 125.

⁶⁶ *Ibidem*, f. 185.

region have been found traces of a settlement from the early Middle Ages and in the subject literature it has been presented as a settlement securing the Bug crossing. Then in this exact same spot a Starościński folwark came into being.⁶⁷ On the maps that exist in the literature Zabuże is also marked. However, none of the preserved inventories, inspections or tax registers of the sixteenth century actually give this very name. Obviously one cannot not rule out the fact that it was already in use in colloquial language in the second half of the sixteenth century if only as a result of its genesis ('territory beyond the Bug'), nevertheless due to the fact that no references for the name have been discovered in source material it has not been included on the map; with the place being marked merely with the location of the Starościński folwark.

It follows once more to emphasise that the picture of Mielnik in the second half of the sixteenth century as presented on the map is highly hypothetical in character. As a result of the dearth of sources, a complete and reliable recreation of many aspects of the urban infrastructure has been impossible. It has not been possible to establish, among other things, the position of the brickworks mentioned as being located around the Krzywczyckie plots (*morga* – a part/division of a volok: 1 volok = 30 *morga*) in the direction of Wajków, or the folwarks and several town gardens (allotments). For certain the conducting of research, particularly archaeological digs and excavations, will bring about many more findings; ones that will undoubtedly change the current state of knowledge on the layout of Mielnik in the second half of the sixteenth century.

III.6.20.1 NOWY SĄCZ

Marta Piber-Zbieranowska

The plan of Nowy Sącz¹ in the sixteenth century was reconstructed by means of retrogression based on the oldest cartographic sources, supplemented with data provided by written sources. However, it should be emphasized that the presented plan is a hypothesis, in which some elements are certain (as, for example, the location of monumental buildings), and others only probable, to varying degrees.

The earliest plan available to us comes from 1783. It is a schematic presentation of the city walls and the most important buildings: the castle, the town hall, the gates, wickets, and sacral buildings.² The author also provided a simplified draft of the hydrographic and road network around the city, and of the scarp, on which the city was situated. The description mentions the situation and ownership of fields north of the city, over the River Kamienica, and the location of a crossing over the Dunajec. Because of its schematic character, the plan played only a supporting role.

The plan made by Filip Antoni Moscherosch in 1804 was crucial in our reconstruction of the plan of Nowy Sącz at the end of the sixteenth century.³ It shows the city inside the city walls, without suburbs, but marking the scarp and its range. The layout of the plots and the buildings is very clear, as is the course of the defensive wall with its towers. The walls were almost completely demolished soon after the plan was drawn, and it is the only remaining cartographic projection of the walls. The legend of the plan focuses on the main buildings and roads running from the city. Street names were shown on the plan. Some of them have not changed since the Modern Era, and that made our identification easier.

Another cartographic source was the 1831 plan of Nowy Sącz by Maschk and Podgórski.⁴ It presents, though in a more schematic way, the layout of parcels in the city, and the division of grounds outside the old walls in the south. This plan already depicts serious gaps in the fortifications. Ownership and street names (in German) were described in the key to the plan.

Cadastral plans from the nineteenth century were necessary for the reconstruction of the plan of the old city. The plans used came from 1846, around 1850, and 1878, which played a supporting role. All plans were made at a scale of 1:2,880, and clearly showed the layout of city and suburban plots.⁵

¹ The order of words in the name of this city changes frequently in the sixteenth century. For practical reasons our plan and the commentary use the current version of the name. On the other hand, the main map and other maps show 'Sądecz Nowy', as this was the most common version at the time.

² This plan by an unknown author was published several times: J. Sygański (overdrawn), [in:] *Analekta Sandeckie do XVI i XVII wieku z planem miasta*, ed. J. Sygański, Lwów 1905, p. 111, explications pp. 112–113; R. Kesslerling, *Neu Sandecz und das Neu Sandezer Land*, Cracow 1941; K. Dziwik, *Rozwój przestrzenny miasta Nowego Sącza od XIII–XIX w. na tle stosunków gospodarczych*, "Rocznik Sądecki", vol. 5, 1962, p. 221.

³ The plan known from a copy made in 1812 by J. Schwartz (1:1,476); the copy made in 1933 by Bohdan Guerquin is kept in the collection of the Faculty of the History of the Construction of Cities at Warsaw Technical University, sign. U I–130, (street names in German), see *Ilustrowany katalog źródeł kartograficznych do historii budowy miast polskich*, no. 6: A. Liczbiński, B. Ufnalewski, *Katalog planów miast polskich w zbiorach Zakładu Architektury Polskiej Politechniki Warszawskiej*, Warszawa 1962, no. 60, p. 21. Plans were published by: T. Tołwiński, *Urbanistyka*, vol. 1, Warszawa 1939, p. 151 oraz K. Dziwik, *Rozwój przestrzenny*, p. 222 (with a scale in Austrian fathoms and metres). Polish names were provided in both cases.

⁴ Plan entitled "Grundriss der Kreisstadt Neusandec"; its photocopy can be found in the Institute of Arts PAN [hereinafter: IS PAN], sign. 2831; published by R. Kesslerling, *Neu Sandecz*.

⁵ Plan from 1846: District Museum in Nowy Sącz, sign. MNS 16 390/1 H/3850, sheet I–IX; plans from around 1850 and 1878: AP Kraków, sign. K.N.S 367 and 347.

The reconstruction of the areas situated on the other bank of the River Kamienica was based additionally on the land cadastre from 1897, covering the village Załubińcze (to the stream Łubinka) with the area called Piekło. The southern part of Piekło is the former Przedmieście Mniejsze (Zakamienica).⁶ The reconstruction of the suburbs and the road network was possible to a large degree thanks to Fryderyk von Mieg's map of Galicia from 1780.⁷ The following sources were also consulted: the plan of the conversion of the old Franciscan complex in Nowy Sącz by F.A. Moschenrosch from 1789;⁸ the project of the conversion of the old Piarist monastery from 1818;⁹ the plan of the city after the fire from 1890;¹⁰ the undated 'Plan Królewskiego Wolnego Miasta Nowego Sącza: miejska sieć rur' ('The Plan of the Royal City of Nowy Sącz: the city pipe network', because of the hydrographic network).¹¹

All images known to us of the city come from the first half of the nineteenth century. Of these, the ones showing Nowy Sącz from the north, from the right bank of the River Kamienica, were particularly useful. They helped us reconstruct the course and layout of the fortifications and the plan of the area before the city, at the foot of the castle, where the Rivers Dunajec and Kamienica met. These were: two lithographs by Emanuel Kronbach from 1820, and a lithograph based on Antoni Lange's drawing published in 1823.¹² The arrangement of the castle buildings was reconstructed on the basis of the images of the castle from the first half of the nineteenth century.¹³

Of written sources, we should mention court books (*acta scabinalia*) of Nowy Sącz from 1550–1600¹⁴ in the first place, also city bills,¹⁵ and the inspections and inventories of Nowy Sącz starosta's district;¹⁶ of Church sources – the visitations of Cracow diocese from 1597 and 1608.¹⁷ The tax register from the stationing of the army in 1652 was also helpful.¹⁸

There are several important monographs on Nowy Sącz. In the first place, we should mention the work by a long-term researcher of the city and its region, Rev. Jan Stygański, particularly his three-volume *Historia Nowego Sącza*, frequently quoted by later historians.¹⁹ K. Dziwik, F. Kiryk, and B. Krasnowolski²⁰ elaborated on the urban layout of the city, and I. Kwieciński and J. Widawski²¹ focused on the city walls and the castle. The new monograph of the city gathers and verifies the current state of knowledge.²²

The plan of Nowy Sącz was prepared in accordance with the rules applied for the already published city plans of this series of AHP, at a scale of 1:10,000. It shows the city within the city walls, along with two suburbs: Węgierskie (called Większe or Wielkie) in the south, and Zakamienica (called Mniejsze) in the east, on the right bank of Kamienica.

The city was located on a headland in the fork of the Rivers Dunajec and its right tributary Kamienica. The northernmost point of the city was situated some 300 m from the mouth of the river. The rivers surrounded the city from three sides, providing free access only from the south. The city lay on a hill, well defined by steep scarps, over a dozen metres high.²³ Dunajec reached the city near the Franciscan monastery. Here the stream Żeglarka (recorded already in 1412²⁴), flowed into the river. Earlier it encircled the city walls at the foot of the scarp. The stream bed lay in the valley of the Dunajec, and the edge of the scarp ran along the valley's meridian line. The area around the southern course of the Żeglarka was waterlogged and unfit for settlement, their range was reconstructed on the basis of the nineteenth century cartographic records. The River Kamienica flowed from the southeast and reached the city south of Młyńska Gate, then assumed almost meridian direction. The stream Łącznik (recorded in 1584²⁵) flowed into the river by the mild meander shown on the plan. The topography influenced the shape of the city (which resembled a triangle) and later development of suburbs, mainly towards the south. It also defined the prolonged shape of Wielkie suburb, situated between the two streams.

A cutting (later called Młynówka) was made along the River Kamienica). It ran on the eastern side of the city, and ended at the point of junction of Dunajec and Kamienica.²⁶ It supplied two royal mills with water. A little to the east of the place where the stream Łącznik flowed into the Kamienica, another canal was dug (later also called Młynówka, this name was marked on the plan), which brought water to the ironworks and mills situated north of the River Kamienica.²⁷

In 1292 Nowy Sącz was located by Wenceslaus II on the grounds of the old village Kamienica, which belonged to the bishop of Cracow. The parochial church of St. Adalbert, erected most likely in the twelfth century, probably stood in the centre of Kamienica. The city developed some 1,5 km north of the village, on the site of the old bishop's manor and the subsidiary church of St. Margaret.²⁸

The newly located city obtained 72 lan of land for use.²⁹ Researchers claim that the future buildings occupied some 10 Frankish lans. The remaining grounds were meant for cultivation.³⁰ Later, suburbs developed in this area, mainly Węgierskie suburb, which seized the grounds of the old village Kamienica with the church of St. Adalbert. 22 lans of arable land stretched near this church.³¹ Nowy Sącz also owned areas north of the city. Right outside Krakowska Gate there was a vogt's lan, with a pasture and manorial gardens, and earlier two ponds (1509). This was an unfortunate location, as numerous overflows of the Rivers Dunajec and Kamienica reduced the amount of land that was available.³² The city also owned the areas north of the mouth of the Kamienica into the Dunajec, to the

²³ Jan Długosz and Szymon Starowolski provide old descriptions of the town's location; cf. J. Flis, *Środowisko geograficzne*, [in:] *Dzieje miasta Nowego Sącza*, vol. 1, p. 17.

³⁰ J. Rajman, *Osadnictwo okolic*, pp. 61–63; K. Dziwik, *Rozwój przestrzenny*, p. 174. It is confirmed by royal inspections. The burghers paid here the rent from 62 lans (LK 1564, part 1, p. 153), and 10 lans belonged "ad communem civium utilitatem" (LK 1569, f. 235).

³¹ Doc. Diec. Krak. 1973, part 2, vol. 4, no. 526 (document of Cracow bishop Zbigniew Oleśnicki erecting the collegiate church in Nowy Sącz); Długosz LB, vol. 1, p. 547.

³² LK 1564, part 1, p. 154; LK 1569, ff. 60–60v, here also the house of the starosta's keeper and of the fishermen.

village Zabełcze, as confirmed by a document issued in 1299.³³ Later, the city's village Roszkowice developed here.³⁴ Before 1616/1617, city gardens were located over the River Kamienica, from the side of Krakowska Gate, but they were also destroyed by the overflows of the Dunajec, the Kamienica and the Łubinka.³⁵ Six lans were to be used as pastureland and meadows.³⁶ In the second half of the sixteenth century, Nowy Sącz had only 4,5 such lans. They lay by the Dunajec, and were constantly threatened with floods and damages caused by the river.³⁷ The situation of the city gardens was quite similar, and in 1569 they covered only 1,5 lans, as the rest was 'taken by the Dunajec'.³⁸

City hamlets Gorzków and Gołąbkowice were also probably located on these 72 lans meant for development and cultivation.³⁹ Gorzków's character in our period cannot be identified precisely, as the sources describe it either as a village, or a suburb. The term *villa* appears, for instance, in a document from 1448, in *Liber beneficiorum*, on the other hand, Gorzków is called *suburbium*. Town books from the second half of the sixteenth century again call it a village.⁴⁰ It seems fair to share Anna Dunin-Wąsowicz's opinion that Gorzków was 'a transitional form between a suburb and a village' at the time, that is how it is described in *Słownik historyczno-geograficzny*.⁴¹ This appears to confirm the term *antesuburbium*, found in some sources, which should be translated as 'pre-suburb'. As such, Gorzków should be treated as a farther suburb, not included in our plan. It was consistently omitted in tax registers, just like Gołąbkowice, which was consistently called a village. They lay by the River Łubinka, and occupied the area of 12 lans. In the first half of the sixteenth century, there were 14 demesnes belonging to the burghers here,⁴² and a brickyard.

At the moment of the location, the city was also endowed with 100 lans of forests. This area was meant for the location of villages. Two such villages were founded here until the end of the sixteenth century: Paszyn and Piątkowa. In 1564, the forests owned by the city were large enough 'for two villages to be located'.⁴³

It is obvious that at the end of the sixteenth century the area owned by the city was quite large. From the north the territory bordered on the village Roszkowice (the border ran along the River Łubinka),⁴⁴ and from the east with Gołąbkowice, reaching Falkowa village, which was partially owned by the city, and partially by the king. From the southeast Większe suburb neighbored on Gorzków, and then with Zawada, a village belonging to the nobility. From the south the urban area bordered on the grounds of the village Dąbrowa, a property of the Norbertines from Nowy Sącz. In the west the border of the city grounds was set on the River Dunajec. On its left bank lay the grounds of villages belonging to the monastery of the Sisters of St. Clare in Stary Sącz: Chełmiec,⁴⁵ Strugi, and Świniarsko Małe (Mała Wieś), and Świniarsko Większe, a village belonging to the bishop of Cracow.

The city was enclosed within a line of fortifications, and its shape was enforced by topographic conditions. It was extended to the south, and twice as wide here, than in the north. The layout was typical to located cities (chessboard pattern), with a market and a network of perpendicular streets, which divided the city into blocks of parcels.⁴⁶ The shape of the market square was determined by

⁴² Łaski LB, vol. 1, p. 560; LR 1529, p. 43.

⁴³ LK 1564, part 1, p. 154.

⁴⁴ Later a village Załubińcze was founded between Nowy Sącz and Roszkowice. It was noted in the end of the eighteenth century (Mieg) for the first time. The border with this village ran on the River Kamienica and did not cover Przedmieście Zakamienica or the fields stretching to the northeast, see cadastral plan from 1897.

⁴⁵ AP Kraków, AD 62, f. 204.

⁴⁶ The regular layout was partially distorted, because it had to fit the specific terrain. The blocks were organized in five rows. Rhein measurements (in Poland called also Chełmno measurements) were used during the foundation. The basic unit was the small rope, some 125 feet long (10 rods), i.e. 39,25 m. The city with the walls can be fit into a rectangle 15 × 10 ropes

the road Cracow–Hungary, which ran along the eastern frontage. The market square was 4 ropes long and 3 ropes wide, which gives us 18,487 m². Market squares in Stary Sącz and Kazimierz (in Cracow) have same proportions 4:3.⁴⁷

Building plots, marked by the streets, were 1,5 ropes deep (around 59 m). However, due to specific terrain conditions regular depths of plots could be found only by the market square and in rows running parallel from the western and eastern block by the market square. In the remaining parts of the city, the plots were around 1 rope deep.⁴⁸ Towards the end of the sixteenth century, the blocks situated on the fringes of the city were not, it seems, densely developed, just like it would appear on the 1804 plan. That is why in ‘uncertain’ places we refrained from marking with black contours. This mostly concerns the northern part of the city near the castle, and the southern area, in the vicinity of Węgierska Gate. Residential areas measured within the blocks varied in size. The broadest plots were situated by the market square, narrower ones were by the streets.⁴⁹ The breadth of plots by the market square is confirmed by original divisions in the southern part of the western frontage of the market square, which survives to this day, and are clearly visible also on the 1804 plan. Only these divisions were marked on our plan. Reliable reconstruction of the layout of the sixteenth century parcels was impossible, due to changes caused by numerous floods and damages of the Swedish Deluge.

The street network remained almost unchanged. Moscherosch’s plan served as a basis for the reconstruction of the sixteenth century state.⁵⁰ In turn, no contemporary street name survived: Drwalska (or Drzewna), Młyńska, Polska, Szpitalna (called ‘Szpitalska’ in the sources), Różana, Węgierska, Zaszpitalna, Biskupia, and Balwierska. Some of these names were listed on Moscherosch’s plan, and on the plan by Maschk and Podgórski from 1831. These plans allow us to conclude that: Drwalska Street is the current Jagiellońska Street (the fragment from Wałowa Str.), Młyńska Str., which led to the gate sharing the name, is now Lwowska Str., and Szpitalna Str., one of the main streets in the sixteenth century, a prolongation of the western frontage of the market square, is the current Piotra Skargi Str. The name of the present-day Św. Ducha Str. appears to be the oldest one. It was used already in the seventeenth century, originally as *Za Świętym Duchem*.⁵¹ The name was not recorded in the sixteenth century sources, but we have a *retro Hospitale*⁵² street, which should be translated as ‘behind the hospital’, or Zaszpitalna Str. (this name appears on our plan). The hospital of Nowy Sącz, situated by the monastery and the church of the Norbertines, was dedicated to the Holy Spirit (‘Św. Duch’).⁵³

long (i.e. 588,75 × 392,5 m), so the sides were like 3:2 in proportions, Beiersdorf, Krasnowolski 1992a, p. 101. The distance between Krakowska and Węgierska Gate was 15 ropes, and between the city wall in the west and the surviving fragment of the wall behind the collegiate of St. Margaret in the east – 10 ropes. The difference between the width of the city in its broadest and narrowest place (i.e. between the western wall and Młyńska Gate) was some 220 m. See also the calculations of the settlement area of Nowy Sącz in various units: B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 1, Kraków 2004, part 1, tab. 6, p. 151. Krasnowolski gives exact measurement of rows and stripes of buildings. It was 9 ropes along the east-west row (353,25 m), and 14,5 rope from the north to the east (569,12 m), B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 2, p. 155, table 6.1 and il. 110, p. 158. The city walls were some 1700 m long, and the area covered 19 ha (Widawski, Mury, p. 312). The rectangular market square, situated in the southern part of the city in the middle row of blocks, prolonged along the north-south axis “to fit the general disposition of the layout”, B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 1, p. 187.

⁴⁷ B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 1, pp. 187–188 (tab. 10, “Rozmiary i proporcje rynków”).

⁴⁸ Z. Bieiersdorf, B. Krasnowolski, *Rozwój przestrzenny*, pp. 105–106.

⁴⁹ The parcels in Nowy Sącz were measured by B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 1, p. 184, tab. 9. The parcels by the market square were 4 rod wide, and by the streets 2,5 rod. However, the latter differed in terms of their depth: those in the blocks which ran from the western and eastern row by the market were 1,5 rope deep, others were 1 rope deep.

⁵⁰ The width of streets in this period can only be calculated in estimation. We know they differed according to the function of a street. Main transit streets running north-south, which divided the town into strip, and Młyńska Str. were around 3 rods wide; streets reaching the bishop’s manor and the Franciscan monastery, west from the market square, probably some 3,5 rod; streets between blocks of buildings, which only facilitated the communication (the so-called *miedzuchy*), as well as street running along the city walls – 1 to 2,5 rod, B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 2, p. 155.

⁵¹ AP Kraków, AD 554, f. 7. Listed here between Szpitalna and Młyńska Str. The name Św. Ducha Str. is listed on all plans from the nineteenth century.

⁵² AP Kraków, AD 65, ff. 399–400; AD 66, ff. 191, 192, 229, 330, 439, 656.

⁵³ The same identification (without any explanation) in A. Żaboklicka (Dunin-Wąsowicz), *Zadłużenie hipoteczne domów w Nowym Sączu w końcu XVI w.*, PH, vol. 53, 1962, no. 4, pp. 784, 786 and 798. About streets see F. Leśniak, *Obszar miasta, zasiedlenie i stosunki własnościowe*, [in:] *Dzieje miasta Nowego Sącza*, vol. 1, pp. 316–317. Different identification of Szpitalna and Zaszpitalna Streets in J. Rajman, *Najdawniejsze nazwy ulic w Nowym Sączu*, “Rocznik Sądecki”, vol. 20, 1992, pp. 68, 74–75.

On the plan from 1804 the street running through the entire city at the back of the western block by the market square is divided into two fragments, which bear different names: the one from the castle to a small street leaving from the north-eastern corner of the market square is Franciszkańska Str., and then from this place to the city walls in the south – Różana Str. It seems fair to relate the name Różana to a large fragment of this street, i.e. the street, which left from the south-western corner of the market square and ran west (today it is part of Pijarska Str.). The name ‘Franciszkańska Street’ does not appear in the sixteenth or seventeenth centuries, it must have been created later then, perhaps already after the liquidation of the Franciscan monastery situated in the northern part of this street. The name ‘Różana’ should be associated with the monastery gardens located in this street, still visible on the 1804 plan.⁵⁴ The sixteenth century Węgierska Street is now certainly A. Dunajewskiego Street.⁵⁵ Moscherosch’s plan shows us Furmańska street here. This name is well-attested for the seventeenth century. It was listed e.g. in the register of the stationing of soldiers from 1652 (*platea Vectoralis*) in the list of streets in Nowy Sącz.⁵⁶ According to J. Sygański, a similar list from 1651 records a compound name: *Vectoralis seu Hungaricalis*.⁵⁷ The sixteenth century court book confirms that Węgierska Street was later called Furmańska (since the first half of the seventeenth century). In 1584, Stanisław Bartusz handed his house (called *Lithwinowski*) situated on the corner of Węgierska Street, near a house called *Dudlawinski*, to his son-in-law, a bathhouse worker named Wojciech. Another entry concerning this transaction, it was noted that the said house stood *in platea dicta furmanska*.⁵⁸ The present-day Kazimierza Wielkiego Street was called Polska Street in the sixteenth century (*platea Polonialis*). On Moscherosch’s plan this street is called Krakowska. Written sources allowed us to identify Polska Street. We know that: 1) Polska Str. reached the market square;⁵⁹ 2) houses in Polska Str. reached the buildings of the royal manor;⁶⁰ 3) a nook leading to the Franciscan Monastery of the Holy Virgin left from Polska Str.;⁶¹ 4) a cross street (*platea transversalis*) connected Szpitalna Str. with Polska Str.,⁶² so these streets were parallel.

Two sixteenth century streets, Biskupia (*Episcopalis*) and Balwierska (*Capillationis*), which appear in the town books frequently were identified only hypothetically.⁶³ The problem of their identification has so far been neglected by the literature.⁶⁴ The course of Biskupia and Balwierska streets should be connected with the location of the manor of the bishop of Cracow and the city bathhouse. The exact location of the bishop’s manor is uncertain, as no remains of the building survive and no field research was ever conducted. The building was erected at the beginning of the sixteenth century, although the original residence of the bishops of Cracow in Nowy Sącz probably dates back to the city’s

⁵⁴ The name “Różana” was also used for another street, which ran from the north-eastern corner of the market square to the city wall. On the plan from 1804 it was called “Side Różana”. Entries in town books mention “a corner house on the market square between the house of Barbara Sołtysówna and Różana Street” (AP Kraków, AD 52, f. 120), “a house in Różana Str., between another house and the city wall” (AD 60, ff. 13, 367; AD 66, f. 647), “house in Różana Str. by the city walls” (AD 66, f. 569). In other place the street was simply called a cross street (of Różana Str.) running to the city walls (AD 68, f. 134), see J. Rajman, *Najdawniejsze nazwy ulic*, p. 73.

⁵⁵ The name of the street alone (Węgierska means “Hungarian”) suggest this street was situated in the southern part of the city, near the gate, which lead to the road to Hungary, and probably led directly to the road. Węgierska Str. is well-attested in the sources from the sixteenth century: AP Kraków, AD 60, ff. 3, 254, 460, 518; AD 61, ff. 466, 662; AD 65, ff. 111, 574; AD 66, ff. 143, 201–203, 216, 317, 397.

⁵⁶ AP Kraków, AD 554, f. 7.

⁵⁷ J. Sygański, *Historia*, vol. 2, p. 1.

⁵⁸ AP Kraków, AD 66, ff. 201–203, 673, 685. See A. Żaboklicka, *Zadłużenie hipoteczne domów*, plan, p. 784. On the 1804 plan the name Furmańska Str. denotes also the fragment along the old city walls between Węgierska Str. and Drwalska Str. (today part of Szwedzka Str.). It seems unjustified to call this fragment Węgierska Str. in the sixteenth century, though. (See J. Rajman, *Najdawniejsze nazwy ulic*, pp. 68, 72, 74). The sources call it simply “vicus civilis”; AP Kraków, AD 60, f. 254.

⁵⁹ AP Kraków, AD 60, f. 568 (1567). The entry mentions a corner house on the market square, between Polska Str. and Anna Gardoniowa’s house.

⁶⁰ AP Kraków, AD 54, f. 4.

⁶¹ AP Kraków, AD 66, f. 231.

⁶² AP Kraków, AD 66, f. 654; AD 70, f. 123. From “The register of three...” (AD 554, ff. 3–5) we know that Polska Str. was quite long, and the number of houses and plots was more or less the same as in Szpitalna Str., listed next. We cannot agree with J. Rajman’s identification (idem, *Najdawniejsze nazwy ulic*, pp. 68, 72–73).

⁶³ Balwierska Str.: AP Kraków, AD 49, f. 319; AD 52, f. 4; AD 60, ff. 214, 215, 248, 263, 340, 380; AD 62, f. 247; AD 149, f. 192. Biskupia Str.: AD 62, ff. 412, 419, 309. See also footnote 74.

⁶⁴ Only J. Rajman made an attempt at localization; idem, *Najdawniejsze nazwy ulic*, pp. 68, 71, 72. See below.

location.⁶⁵ The manor sustained significant damage during the great fire of the city in 1522, but it was rebuilt thanks to the efforts of bishop Piotr Tomicki, the Vice-Chancellor of the Crown.⁶⁶ Still in 1540 the bishop's *pallatium* was considered large, but already 29 years later the city inspector recorded that: 'through the manor of the bishop of Cracow there is quite a large gate to the city, where the wall collapsed', which was probably caused by an overflow of Dunajec.⁶⁷ The rebuilding was considered during the visitation of bishop Jerzy Radziwiłł in 1597, but it was never done. In 1608, the building was in ruin (only foundations remained, and one room with cellars, and the gate), but the inspector again ordered the manor to be rebuilt. Again, the plan was abandoned, and the fires from 1611 and 1637 completed the destruction. In 1652 only an empty square with a garden called 'Biskupie' remained in this place. They belonged to the Sisters of St. Clare from Stary Sącz.⁶⁸ Sometime before 1655, the sisters ordered a church and a monastery to be built in 'Biskupie', but still in 1670 the work was not finished. In 1732 the entire area was seized from the Sisters of St. Clare by the Piarists. They finished the church (its outline is clearly visible on the 1804 plan), and built their monastery in the northern part of the square, adjacent to the city walls. Parts of the monastery survive to this day inside the current prison.⁶⁹ The 1608 visitation tells us that the manor was connected with the city walls, and one could see the River Dunajec from above. The bishop's manor must have been situated in the southern corner of the city then, adjacent to the western city wall, probably north of the tower, thus fulfilling the defensive functions of the city.⁷⁰

Sources inform us that the city's bathhouse was located near the bishop's manor, and the road leading there left from one of the corners of the market square.⁷¹ At the beginning of the seventeenth century the bathhouse was destroyed in a fire.⁷² From then on it probably fell into ruin and was demolished. Before 1659 the grounds where the bathhouse used to stand were added to the square 'where the Sisters of St. Clare built'.⁷³ The bathhouse must have been situated near a watercourse. The stream Żeglarka flowed under the scarp near the western fragment of the city walls, and that is why the bathhouse probably stood just by the walls. Houses in Biskupia Street stood across from (*ex opposito*) the bathhouse.⁷⁴ The sources tell us that in our period there were at least several houses in this street. It appears it would be the most justified to identify this street with the southern fragment of the current Pijarska Str., i.e. between Hoffmanowej Str. and Szwedzka Str.⁷⁵ The location of

⁶⁵ The 1608 visitations mentions a date 1515 above the gate (AV Cap. 25, f. 76). See Z. Beiersdorf, B. Krasnowolski, *Sztuka renesansu i manieryzmu*, [in:] *Dzieje miasta Nowego Sącza*, vol. 1, pp. 485–486.

⁶⁶ J. Sygański, *Zabytki dziejów*, p. 28.

⁶⁷ LK 1569, f. 269. The renovation works of the wall "behind the bishop's" were underway in 1601; AP Kraków, AD 150, f. 62; J. Sygański, *Zabytki dziejów*, p. 28–32.

⁶⁸ AV Cap. 25, f. 76; AP Kraków, AD 554, f. 9.

⁶⁹ J. Sygański, *Wyroki ławicy sądeckiej 1652–1684*, Lwów 1818, no. 23, 55; idem, *Zabytki dziejów*, p. 13; Z. Beiersdorf, B. Krasnowolski, *Sztuka renesansu*, p. 485; idem, *Urbanistyka i sztuka baroku*, [in:] *Dzieje miasta Nowego Sącza*, vol. 1, pp. 688–691.

⁷⁰ This location of the bishop's manor is known also from other towns (e.g. Nysa), Z. Beiersdorf and B. Krasnowolski assume on the basis of the surviving projects of the conversion of the Piarist monastery from 1818 that the single-storeyed building adjoining the main wing of the monastery from the north could be the remains of the bishop's old manor. The 1608 visitation, however, mentions that only foundations remained from the manor and one room with cellars, so perhaps the building should rather be connected with the construction works conducted by the Sisters of St. Clare.

⁷¹ ASK LIV 24, f. 16v; AGZ, vol. 9, no. 75; AP Kraków, AD 61, ff. 640, 700; AD 71, f. 136; AD 72, f. 534.

⁷² LK 1628–1632, f. 152. This occurred after 1617, because the inspection from that year does not mention any damages to the bathhouse, LK 1617–1620, f. 55.

⁷³ LK 1659–1664, p. 544.

⁷⁴ AP Kraków, AD 54, f. 10; AD 61, ff. 640, 700; AD 65, ff. 208–209, 318; AD 66, ff. 355–356; AD 71, f. 236; AD 72, f. 534; AD 150, ff. 336, 341; ASK LIV, 24, f. 16v. That the bathhouse stood by the city wall is confirmed by the entries in city bills: "sudden wind stole the roof from the new wall behind the bathhouse" (AP Kraków, AD 150, f. 336); "the carpenter repaired behind the bathhouse, on the new wall" (ibidem, f. 341).

⁷⁵ The Biskupia Str. would then be a continuation of Różana Str. This seems to be indirectly indicated by A. Dunin-Wąsowicz (Żaboklicka), in her description of Biskupia Str. together with Różana. She does not, however, mark Biskupia on her plan, eadem, *Zadłużenie hipoteczne domów*, p. 795. The linked location of the streets could be suggested by an entry, in which the name Różana was crossed over, and "Episcopalis" was written, AP Kraków, AD 60, f. 396. The name probably disappeared when the bishop's manor ceased to function: the name Różana was probably extended. The tax register from 1652 seems to confirm this theory (AP Kraków, AD 554, f. 9), it notes three plots "on bishop's grounds" in Różana Str. J. Rajman identifies Biskupia Str. with present-day Hoffmanowa Str. (idem, *Najdawniejsze nazwy ulic*, p. 73).

Balwierska Street has so far usually been omitted in the literature on the subject, perhaps because the sources provide us with very few hints here.⁷⁶ We must agree that the fifteenth century name *platea Depilationis* should be identified with the sixteenth century *platea Capillationis*.⁷⁷ A document from 1432 tells us about a square situated *in acie in platea depilationis versus balneam*.⁷⁸ The name of the street also seems to imply its location, though indirectly. Barber-surgeons ('balwierze') offered their services in the bathhouse. The 1616 inspection mentions that 'barber-surgeons add to the rent' from the bathhouse, which belonged to the king.⁷⁹ The name Balwierska was assumed for the street, which ran from the south-western corner of the market square and led to the bathhouse, which now constitutes a fragment of Hoffmanowej Street.⁸⁰

Streets, whose names appear in the sources only once, were not included in our plan, as there were no clues about their location. These were the streets: Krakowska (perhaps this was the name used for a fragment of Szpitalna Street, near Krakowska Gate) and Stary Sącz (this is undoubtedly the same street, which was called *platea Antique Civitatis* in the fifteenth century sources).⁸¹ Blocks of buildings were separated by narrow, boundary streets. These streets, which now have their own names, were called *vicus* (a nook, a cross street), or *platea (via) transversalis* in the sources, along with the name of the main street, or the place to which they led. They are well-attested to on the 1804 plan.⁸² These streets were mostly used for communication, but there were houses in some of them (e.g. in a cross street of Młyńska Str., now the fragment of Jana Sobieskiego Str. from Wałowa Str.).⁸³ As in other cities, narrow roads could also be found by city walls.⁸⁴

According to A. Dunin-Łasowiczowa's (Żaboklicka) calculations, there were 248 houses inside the walls of Nowy Sącz in the second half of the sixteenth century. The numbers run as follows: Market Square – 39, Drwalska Str. – 23, Młyńska Str. – 20, Węgierska Str. – 19, Polska Str. – 67, Szpitalna Str. – 40, Różana Str. – 21, Zaszpitalna Str. – 19.⁸⁵ Wooden buildings dominated in the city. Brick houses stood mostly in the market square, or on the main streets (Polska, Szpitalna, Młyńska, Drwalska, and Węgierska) from the side of the market square (usually on the corners).⁸⁶

The construction of the city fortifications probably began soon after the location document was issued, at the turn of the thirteenth and the fourteenth centuries. The origins of this undertaking are attributed to the founder of the city – Wenceslaus II. The construction lasted probably till the

⁷⁶ We believe the location suggested by J. Rajman (as Fryzjerów Str.) to be incorrect, he also seems to unnecessarily treat Łażni Str. separately.

⁷⁷ AP Kraków, AD 49, f. 97; F. Kiryk, *Rozwój urbanizacji*, p. 153; J. Rajman, *Najdawniejsze nazwy ulic*, p. 72.

⁷⁸ AGZ, vol. 9, no. 25.

⁷⁹ LK 1616, f. 55. Melchior, the bathhouse worker, owned a house in Balwierska Str. (AP Kraków, AD 63, f. 228).

⁸⁰ It seems that the name Łażni Str. ("platea balnei") found in the sources denoted Balwierska Str. (AP Kraków, AD 52, f. 63, year 1535). J. Rajman suggest that Fryzjerów Str. is the current Tymowskiego Str., and Łażni – the junction of the current Pijarska and Szwedzka streets (idem, *Najdawniejsze nazwy ulic*, pp. 72–73), this however seems unjustified.

⁸¹ MRPS, vol. II, no. 1255; vol. V, part 1, no. 3485; AP Kraków, AD 53, f. 102. J. Rajman identifies Krakowska Str. with the street known from the 1804 plan, idem, *Najdawniejsze nazwy ulic*, pp. 68, 72; about Starosądecka Str., ibidem, p. 74.

⁸² The cross streets were 1 to 2,5 rods wide (B. Krasnowolski, *Lokacyjne układy urbanistyczne*, vol. 2, p. 155). The sources tell us about: a nook running to the collegiate church of St. Margaret (AP Kraków, AD 65, f. 753; AD 66, f. 199); from Polska Str. to the Franciscan monastery (AD 60, f. 534; AD 65, f. 229; AD 66, f. 231); crossing Różana Str. (AD 61, f. 67; AD 66, f. 344), running from Różana Str. to the town walls (AD 60, ff. 13, 367; AD 66, ff. 569, 647; AD 68, f. 134); connecting Polska Str. with Szpitalna Str. (AD 66, f. 654; AD 70, f. 123); crossing Młyńska Str. and running to the town walls (AD 65, f. 716; AD 68, f. 141; AD 72, f. 823). About the term *vicus* see P. Tyszką, *Obraz przestrzeni miejskiej Krakowa XIV–XV wieku w świadomości jego mieszkańców*, Lublin 2001, pp. 141–147.

⁸³ AP Kraków, AD 72, f. 823.

⁸⁴ Especially along the southern and western (partially) fragment of the walls. The house in Różana Str. situated "ex una vie publice circa murum civilem"; AP Kraków, AD 71, f. 594; see also ibidem, AD 60, ff. 246, 254.

⁸⁵ A. Żaboklicka, *Zadłużenie hipoteczne domów*, p. 786. In her commentary on the prices of towns, the author treated Różana and Biskupia Str. together (p. 795). However, only Różana Str. appears in her list of the number of houses, without any information, whether the houses in Biskupia Str. were included. Balwierska Str. does not appear in the list at all. The numbers can be compared with the data from the middle of the seventeenth century' there were 224 houses in the city then (J. Sygański, *Historia*, vol. 1, p. 158; vol. 2, pp. 1–2, here numbers of houses in particular streets).

⁸⁶ A. Żaboklicka, *Zadłużenie hipoteczne domów*, pp. 790–792, 795–799. Some of the houses were part brick and part wooden. The author also gives prices of houses in individual streets (see the plan of Nowy Sącz ibidem, p. 784) and compiles information about the social structure of the inhabitants of individuals streets; on this subject see F. Leśniak, *Obszar miasta*, p. 318–320.

beginning of Casimir the Great's reign, when it was finished.⁸⁷ Later (from the second half of the sixteenth century to the middle of the seventeenth century) the walls were often fortified and repaired. Due to the strategic location of the city, near the border with Hungary, the succeeding monarchs paid for the repairs. In the second half of the sixteenth century, the modernization of the fortifications began, so they could withstand firearms. Most of the works focused on the gates and towers. The construction of the outer wall began in the same period. The sources call this wall 'mały' ('little'), 'niżni' ('lower'), 'przymurek', or 'parakan'. At first it protected the city only from the south, but later also from the west, near the castle.⁸⁸ The works were still underway in the first half of the seventeenth century.⁸⁹ Only small fragments of the wall survived to our times. However, they helped us determine the course of the fortifications on our plan.

The city's fortifications comprised of: the wall with the gates and towers (probably double wall in the south and west), and a dry moat and an earth embankment from the south.

Entering the city was possible through the fortified gates. Krakowska Gate was situated in the north, and Węgierska gate in the south, on the same axis. The location of the gates is a result of the course of an old communication route, leading from the north to the south, in the valley of the Dunajec.⁹⁰ It functioned probably long before the location of the city. The route crossed the city along the eastern frontage of the market square. It ran from Gdańsk and Cracow (through Bochnia) to Nowy Sącz, and from here through Stary Sącz, Piwniczna and Lubowla to Koszyce. In Węgierskie suburb the road to Zawada and Nawojowa left the road, and later went through Tylicz to Bardiów.⁹¹ Młyńska Gate was situated in the south-western corner of the city, at the exit of a street leaving from the market square. A highway ran from the gate, over the River Kamienica, and further on to Grybów, then through Gorlice to Biecz, and then to Jasło.⁹² The location of the gates was schematically presented on the 1783 plan. Soon afterwards the gates were destroyed, but the beginnings of main roads leaving from the city can be seen on the 1804 plan. The location of the gates in Nowy Sącz and the course of outgoing roads was reconstructed on this basis. The original layout of outgoing roads cannot be determined from later cadastral plans: the roads were broadened and regulated, especially in the northern part of the city, where (more or less on the site of the old Krakowska Gate) a junction was built, from which roads leading to Tarnów, Limanowa and Bochnia led. Młyńska Street (later Lwowska Str.) was also straightened and broadened, which was probably related to the regulation of the River Kamienica, these changes can be seen on the cadastral plan from 1846. The city bills from the end of the sixteenth century tell us, there was a fourth gate, Polska Gate, in the city.⁹³ However, we decided not to place it on our plan. The name suggests the gate was situated at the exit of Polska Street, so to the right from Kowalska tower. An entry in the 1564 inspection seems to confirm there were two towers in the northern part of the city, it mentions 'Dolny mill, situated in front of the gates, on a channel running from the River Kamienica'.⁹⁴ The 1804 plan shows us the beginning of the road leading over the Dunajec, to Limanowa. At the same time, it can be seen that the wall on the right side of the city was already partially destroyed, so we cannot reject the possibility that the road was built shortly before.

⁸⁷ Earlier literature ascribes the construction of the walls to Casimir the Great, see: Widawski, Mury, pp. 309–310, with literature. The review of the sources and research on the city walls of Nowy Sącz also in: Z. Beiersdorf, B. Krasnowolski, *Sztuka gotycka*, pp. 226–229. These researchers quote the records hitherto overlooked, according to this Wenceslaus of Bohemia freed the city from tributes and customs and the money was used to pay for the repairs of the walls (ibidem, p. 228).

⁸⁸ AP Kraków, AD 149, ff. 708, 731; AD 150, ff. 84, 113 ("a painter was hired to paint the small wall from Węgierska gate to Młyńska Gate"), 120, 202, 203, 388; AD 151, ff. 301, 368, 378. The great wall: AD 150, ff. 145 ("money for shingle and nails used on the wall from Krakowska Gate to Młyńska Gate"), 319, 320, 325, 336, 347, 353, 368. According to J. Sygański, the wall was over 7 m tall and 1,5 m wide; idem, *Historia*, vol. 2, p. 5. See also: Z. Beiersdorf, B. Krasnowolski, *Sztuka gotycka*, pp. 235–236.

⁸⁹ There are entries mentioning "works at the wall" in the own bills from the beginning of the seventeenth century, also in other parts of the city, near Krakowska and Młyńska Gate; AP Kraków, AD 150, ff. 59, 84 (also see above); Widawski, Mury, 1973, p. 311; Z. Beiersdorf, B. Krasnowolski, *Sztuka gotycka*, p. 229.

⁹⁰ Both gates mentioned in the inspection of roads from 1570. The inspectors entered the city through Krakowska Gate, and left through Węgierska Gate; LDK, p. 36; see also AP Kraków, AD 149, ff. 621, 629; cf. F. Kiryk, *Początki miasta*, p. 94–95.

⁹¹ See M. Wilska's chapter about the roads in AHP Cracow volume and chapter III.5.1 in this volume.

⁹² Młyńska Gate: AP Kraków, AD 65, f. 30; AD 150, ff. 97, 112, 224, 245, 353; J. Sygański, *Historia*, vol. 1, p. 204; vol. 2, p. 8.

⁹³ AP Kraków, AD 149, ff. 612 (1578), 619, 621, 640 (1579).

⁹⁴ LK 1564, part 1, p. 156; cf. J. Rajman, *Osadnictwo okolic*, p. 64.

It seems justifiable to assume that Polska gate was rather a wicket meant for pedestrians, as would appear from the lay of the land: the scarp was several metres high here. Also, later city bills list only three gates next to the amounts paid on entering the city: Krakowska, Młyńska, and Węgierska.⁹⁵

The River Dunajec protected the city from the northwest and partially from the west, the Rivers Kamienica and Młynówka fulfilled the same role in the northeast and east. From the south the city was separated by a moat.⁹⁶ The defence ability of the southern fragment was additionally strengthened by a broad and high earth embankment, recorded in 1532, but probably created already in the fifteenth century.⁹⁷ The western fragment of the embankment (4 m high) survives to this day near the city's market.

There were 15 towers in the defensive wall of Nowy Sącz. Three of them were built as an extension of the gates, and three constituted parts of the castle. The remaining gates were located along the wall, according to their defensive conditions. Węgierska Gate was the most fortified: it had circle towers on both sides, Krawiecka on the right, and Tkaczy on the left. Bednarska tower was built above the gate.⁹⁸ Kuśnierska tower was situated over Młyńska Gate, and Szewska over Krakowska Gate.⁹⁹ The south-western corner of the city was well fortified: Kramarska tower stood on the side of the moat, and in the west there was a square tower of unknown name, perhaps connected with the bishop's manor.¹⁰⁰ Rzeźnicza tower stood behind the Franciscan monastery. There were three towers at the castle, of which two had names: Szlachecka and Kowalska.¹⁰¹ From the northeast the city was defended by three towers: Garncarska, Piwowarska, and Sukiennicza.¹⁰² The obligation to defend and care for the towers fell on the members of particular guilds. The towers were either semicircular, or quadrangular, which can still be discerned on the 1804 plan. The rectangular tower left of Młyńska Gate was found during excavations in 1961.¹⁰³

The castle in Nowy Sącz was built in the north-western corner of the city, in the highest place on the hill, which was some 15 m above the River Dunajec here.¹⁰⁴ We do not know the exact time of the construction, it is assumed that it occurred at the turn of the fourteenth and fifteenth centuries.¹⁰⁵ The castle was incorporated into the existing defence system, probably by adding the buildings to the defensive walls. The reconstruction of the urban layout was impeded by the lack of sufficient written sources and thorough field research of the sixteenth century castle, especially as it sustained severe

⁹⁵ AP Kraków, AD 150, ff. 14–16, 19–21: “Foralia ex porta Cracoviensi, Hungaricali, Molendinali”. Sygański writes about grodzka gate, situated between the castle and Krakowska Gate, but inconsistently, because in some other place he located the gate inside castle grounds; idem, *Historia*, vol. 2, pp. 4, 8. The images of the castle and the tower from the second half of the nineteenth century prove that this place was quite steep and there was a path there.

⁹⁶ AP Kraków, AD 62, ff. 174, 265, 436; AD 66, f. 3. J. Sygański (idem, *Historia*, vol. 2, p. 5) believed the moat was filled with water; J. Widawski (Widawski, *Mury*) and Z. Beiersdorf and B. Krasnowolski (idem, *Sztuka gotycka*, p. 234) claim there was a significant difference in levels, which made it impossible to fill the moat with water (the so-called dry moat).

⁹⁷ AP Kraków, AD 51, f. 132. The response of Sigismund I form 1543 concerning the complaints of the starosta and the town commune about the counsellors of Nowy Sącz; the charges include: bad management of town money, when the walls and towers were badly repaired and covered, and the the embankments suffer because they serve as pastureland (J. Sygański, *Historia*, vol. 1, p. 204).

⁹⁸ Fortification works of Węgierska Gate (1555–1557): AP Kraków, AD 149, ff. 1–17, 615, 708. Numerous records from the beginning of the seventeenth century: AD 150, ff. 93 (“shingle and nails for Krawiecka tower”), 100, 357, 365, 403; AD 151, ff. 195, 276, 308, 315. There probably was a drawbridge by at Węgierska Gate, “the pipe master worked by the drawbridge in Węgierska Gate”; AD 150, ff. 191; “a the wheel and axle in Węgierska Gate fell down”, ibidem, f. 346; similarly ff. 91, 201. Names of the majority of towers are attested for the beginning of the seventeenth century, but their origins date back to the late medieval period, or early modern era; Z. Beiersdorf, B. Krasnowolski, *Sztuka gotycka*, p. 236; see also Widawski, *Mury*, p. 313 and *Aneks. Zestawianie baszt i bram Nowego Sącza wg stanu z XVII w.*, p. 318.

⁹⁹ AP Kraków, AD 150, ff. 376, 406; J. Sygański, *Historia*, vol. 2, p. 8.

¹⁰⁰ Some repair and construction works were being conducted at Kramarska Gate in the beginning of the seventeenth century; AP Kraków, AD 150, ff. 94, 410, 413, 414, 437; AD 151, ff. 193, 239, 241 (“a pillar under the round merchants’ tower”), 242, 270. The renovation of the tower “on the wall in Biskupie” is mentioned in 1610; AD 150, f. 340.

¹⁰¹ About Rzeźnicza tower see: Z. Beiersdorf, B. Krasnowolski, *Sztuka gotycka*, p. 238, footnote 91. Kowalska tower: AP Kraków, AD 150, ff. 93, 101, 114, 345, 406; AD 151, ff. 20, 222; J. Sygański, *Historia*, vol. 2, p. 8. Also see below.

¹⁰² AP Kraków, AD 151, ff. 308–309.

¹⁰³ Widawski, *Mury*, p. 307.

¹⁰⁴ The castle suffered much during the Partitions and the two World Wars. Now only Kowalska tower, partially reconstructed after 1945, can be admired.

¹⁰⁵ Widawski, *Mury*, p. 316. Recently Kołodziejski supports the theory concerning the earlier origins of the castle, according to him built probably at the same time as the walls: S. Kołodziejski, *Nowy Sącz*, p. 329; see also Z. Beiersdorf, B. Krasnowolski, *Sztuka gotycka*, pp. 239–240.

damage from the fire in 1611, and was renewed and rebuilt afterwards.¹⁰⁶ Therefore our presentation should be treated as approximate. The inventory of the starosta's district of Nowy Sącz from 1540 tells us that at the time the castle comprised two main buildings and several smaller utility buildings, the granary and stables among others, and there was a stone well in the courtyard. A storeyed residential part probably stretched for some 100 metres along the fortifications. There were two square towers on this fragment. Most likely, this was the building called *domus maior* in the inventory, in order to distinguish it from the newly-built 'new house'. The larger building, slightly bent in the middle, was fortified in the bend with a quadrangular tower, called *turris prior* by the said source. This tower was meant for a prison.¹⁰⁷ A tower was also built shortly before 1540 in the western corner of this building. The court's prison (*carceres curie*) was situated on the ground floor, and a room with windows on the second floor. This tower, called Szlachecka, stood close to the city gate (*porta civitatis*).¹⁰⁸ This could mean the wicket in the western part of the walls, between the castle and the Franciscan monastery.¹⁰⁹ It was shown on the 1783 plan, which says that the contemporary wicket (*ianua*), destroyed because of its old age, had once been called a gate (*porta*). Another castle building, the aforementioned new house, was probably situated south of the larger house, its short wall likely touching the city walls. The building stretched to the exit of Polska Street, as confirmed by an entry in the court books, which mentions a house in Polska Street between the house of Jan Woźnica and a corner house of the royal court.¹¹⁰ A wall with a gate separated castle grounds from the city.¹¹¹ The wall was fortified, and probably also heightened, by starosta Stanisław Lubomirski after a fire in 1611. Grodzka Gate, leading from the city directly to the castle courtyard, was probably built during the same work.¹¹²

The town hall stood at the centre of the city, in the Market Square. The 1804 city plan shows us the exact location of the town hall, situated closer to the northern frontage. The building burned down in the middle of the nineteenth century, and the current town hall was built in the middle of the square. The town hall, which functioned at the end of the sixteenth century, was built in the second half of the fifteenth century, or at the beginning of the sixteenth.¹¹³ We know it suffered in the fire of 1522. Apparently, for a long time the city could not afford the renovations, as in 1562 the town hall was still in danger of collapse. Between 1562 and 1564 the town hall in Nowy Sącz was renovated

¹⁰⁶ Our knowledge about the castle comes mainly from the inventory of the starosta's district of Nowy Sącz from 1540 (see footnote 16) and the entries in town books. More elaborate sources come from the seventeenth century. The inspection conducted in 1616–1617 tells us the castle had recently been renovated and probably expanded (LK 1616, ff. 83–84). The works began shortly after the fire in 1611 they lasted until 1616, and were commenced by the starosta of Nowy Sącz, Stanisław Lubomirski, and continued by his cousin Sebastian Lubomirski (the starosta of Nowy Sącz since 1613). Further information about the contemporary state of the castle can be found in the 1628 inspection (LK 1628–1632, ff. 184–185v). The Lubomirski family probably wanted to Lubomirscy make the castle more like a residence, see Z. Beiersdorf i B. Krasnowolski, *Sztuka renesansu*, pp. 505–509. About the fire see also J. Sygański, *Historia*, vol. 3, pp. 3–4. The reconstruction of the castle from before the fire in 1789 published by I. Kwieciński was also helpful (idem, *Zamek królewski*).

¹⁰⁷ Inventory of the starosta's district from 1540, ff. 14–14v.

¹⁰⁸ "Turris nova in acie prope portam civitatis in qua sunt carceres curie [...] et super [...] camera cum fenestris", ibidem, f. 15v. This can only mean the western corner of the larger house, because there was not tower in the eastern part of the castle. The inventory clearly mentions only two towers at the castle. There was another tower in the castle complex, in the east, but is stood several metres from the larger house and was probably built during the fortification works in the city. It was called Kowalska tower and was defended by the smiths (smith = kowal), what probably proves our assumptions; J. Sygański, *Historia*, vol. 1, p. 3; Widawski, Mury, p. 316. The name Szlachecka Tower is recorded in the 1616 inspection, f. 84, it does not, however, tell us, which tower this was. I. Kwieciński believed it was the middle tower (idem, *Zamek królewski*, pp. 27, 35). J. Widawski (Widawski, Mury, p. 316) does not solve this question, but also quotes Kwieciński. We believe that it was the western tower, which was called Szlachecka, because of the dungeon situated there, where nobles were probably imprisoned. There was another prison, the "main one" in the central tower, but only burghers and peasants were thrown there.

¹⁰⁹ J. Sygański calls it Grodzka or Miejska; idem, *Historia*, t. 1, vol. 1, pp. 4, 8. Cf. J. Rajman, who claims that there were two gates in the north: Krakowska and Grodzka (idem, *Osadnictwo okolic*, p. 64).

¹¹⁰ AP Kraków, AD 54, f. 4 (1535); AD 68, f. 147 (1588 r.).

¹¹¹ Inventory of the starosta's district 1540, f. 14.

¹¹² LK 1616, f. 83. Here also a detailed description of the castle; cf. J. Sygański, *Historia*, vol. 2, s. 4. Kołodziejcki and Widawski believe, that the castle was separated from the city also by a moat. Also Beiersdorf and Krasnowolski, basing on the layer plan of the area from 1896, believe there was a moat there (idem, *Sztuka gotycka*, p. 329), also: B. Krasnowolski, *Lokacyjne układy urbanistyczne*, part 1, p. 213. The lack of sources prevents us from verifying this belief. The ditch seen on the layer plan can be related to the foundations of the wall, rebuilt after the destructions of 1611.

¹¹³ Initially the town hall was not isolated and was probably situated in an ordinary house, bought by Oleśnicki for the mansionaries when the collegiate in Nowy Sącz was erected; J. Sygański, *Zabytki dziejów*, p. 22.

and rebuilt 'in Italian fashion'.¹¹⁴ The 1804 plan shows also the location of the city's well (at the centre of the market square), which existed already in our period.¹¹⁵ Butchers' stalls and other booths stood next to the town hall, arranged in a way known also from other cities, Cracow in the first place. The measures and weights stood outside the building.¹¹⁶

At the close of the sixteenth century there were three sacral buildings inside the city walls in Nowy Sącz, they were shown on our plan: the collegiate church of St. Margaret (parochial church); the church and monastery of the Holy Spirit, which belonged to the Norbertines, and the church and monastery of the Holy Virgin Mary – a property of the Franciscans. The outline of the collegiate church of St. Margaret was depicted on the basis of the reconstruction of the blueprints of this church made by S. Świszczowski according to the 1608 visitation.¹¹⁷ In the direct surroundings of the collegiate, there was a complex of canon buildings described by Jan Długosz, and then mentioned in the visitations from 1597 and 1608 (with a cemetery). The house, which now stands at the junction of the streets Św. Duchy and Lwowska, called 'Gothic', was probably the dean's residence; from the north it touches another building, most likely an old college of the vicars. The remaining buildings in this complex: the house of the poor matrons of Nowy Sącz, the house of the altarists and the curator, and the archdeacon's house were situated east of the aforementioned buildings, and south of the church cemetery. The parson's garden was probably located east of the collegiate, behind the cemetery. The collegiate school and the house of the provost (former parish), which stood adjacent to the city wall, stood in the garden. The buildings were shown in this arrangement of Moscherosch's plan, and then on our plan.¹¹⁸ On the opposite side of the city, in the western building block, there was a church and a monastery dedicated to the Holy Virgin Mary. Both buildings belonged to the Franciscans, and were founded by Wenceslaus II at the end of the thirteenth century.¹¹⁹ This complex was demolished at the end of the eighteenth century, and the remnants were then incorporated into the Protestant church, which now occupies the old chapel of Transfiguration of Christ. The reconstruction of the layout of the Franciscan complex at the end of the sixteenth century was possible thanks to the records of the visitation and Moscherosch's plan of the rebuilding of the old complex from 1789.¹²⁰ Its church, which had a much prolonged body and a short, three-sided chancel, adjoined the monastery quadrangle. Three chapels were added to the church: the original chapel of the Transfiguration of Christ (mentioned in the 1597 visitation, the exact date of building is unknown) in the south, the original chapel of St. Bernard was built west of it, and the chapel of St. Katherine – also recorded in the Radziwiłł visitation – in the north.¹²¹ The new, three-span chapel of the Transfiguration of Christ was founded by Konstanty Lubomirski and built in 1663–1672, the former chapel was probably adapted.¹²² The church

¹¹⁴ AP Kraków, AD 149, ff. 157–159, 185, 187, 189, 192, 233. The town hall had a clocktower AD 149, f. 157 (expenses for the clock: AD 149, ff. 63, 100, 149, 177, 622, 641); J. Sygański, *Historia*, vol. 3, pp. 22–26; Z. Beiersdorf, B. Krasnowolski, *Sztuka renesansu*, pp. 496–502. The trumpeter's post was situated in the tower of the church of St. Margaret, which was taller; F. Leśniak, *Obszar miasta*, p. 312, footnote 11.

¹¹⁹ About the date and the reasons behind the foundation of the church and monastery of the Franciscans see Z. Beiersdorf, B. Krasnowolski, *Sztuka gotycka*, pp. 202–210, there summary of the newest research.

¹²⁰ AV Cap. 9, f. 163.

¹²¹ The original chapel of St. Bernard is listed in the Franciscan visitation from the turn of the sixteenth and seventeenth century: "capella in fine ecclesiae" (Archiwum Prowincji Franciszkanów w Warszawie, Quatro visitationis sign. B–4, quoted in Z. Beiersdorf, B. Krasnowolski, *Sztuka renesansu*, p. 514, footnote 58). In 1622 Jan Dobek re-founded the chapel of St. Bernard in thanks for his lucky return from Chocim. According to this visitation, the chapel of St. Catherine stood near the monastery cloister. Basing on Moscherosch's plan, Beiersdorf and Krasnowolski assume that the chapel formed a part of the western wing of the monastery (ibidem, p. 515).

¹²² J. Sygański, *Historia*, vol. 3, pp. 46–47; Z. Beiersdorf, B. Krasnowolski, *Urbanistyka*, pp. 677, 681–685.

of the Holy Spirit had only one nave. The building was long, with a three-sided chancel. The abbot's house adjoined the church from the west, and the monastery, which had three wings and a courtyard separated from the street by a wall – stood on the northern side. The cemetery was situated south of the church and the abbot's house. It separated the monastery complex from the hospital and the bathhouse located behind it. At the back of the monastery buildings, there was a garden by the walls, which could be found still on the 1804 plan.¹²³

The reconstruction of the areas situated outside the city walls is hypothetical to a large degree. For several centuries these grounds were subject to many changes caused by human activity.

A suburb called Większe or Węgierskie lay south of the city, behind Węgierska Gate. This name can still be found on the nineteenth century cadastres. The range of buildings presented on our plan is only a proposition. The arrangement of houses in Większe suburb was shown on Mieg's map, but in a schematic way. It could be assumed in approximation that the buildings in the suburbs stretched along the current Jagiellońska and Grodzka Street. The range of buildings was probably defined by the churches: of St. Valentine (with hospital), St. Nicolas and the original parochial church of St. Adalbert.¹²⁴

The visitation conducted in 1608 mentions that the church and hospital of St. Valentine were located in Węgierskie suburb.¹²⁵ The church was burned down during the Swedish Deluge in 1655, but it was rebuilt in 1678.¹²⁶ It still existed at the end of the eighteenth century (it is shown also on Mieg's map), but later was demolished. Its location was marked in estimation. J. Sygański, who wrote at the beginning of the twentieth century, placed the church near the contemporary city park. We decided to accept this localization in our work, using the cadastres from the nineteenth century.¹²⁷ According to contemporary sources, the city garden was located right behind the hospital of St. Valentine.¹²⁸

A small, brick church dedicated to St. Nicolas was usually called chapel in the sources.¹²⁹ It was surrounded by a cemetery and burned down in 1742. It probably stood on the site of the current church of the same denomination.¹³⁰

The old parochial church of Nowy Sącz (until 1448) was situated some distance from the city. It was dedicated to St. Adalbert and does not exist now. The small building was wooden and surrounded by a cemetery. There was a house by the church which was once a presbytery, and in our period it belonged to the vicars of the collegiate church of St. Margaret.¹³¹ The literature on the subject places it at the junction of current Grodzka and Nawojowska streets.¹³²

Behind Młyńska Gate, on the other bank of the River Kamienica, along the road to Grybów, there was another suburb of Nowy Sącz, called Zakamienica.¹³³ In this suburb there was a church

¹²³ AV Cap. 9, ff. 140 ff.; 25, ff. 207–210; AP Kraków, AD 149, ff. 599, 692; AD 150, f. 353; J. Sygański, *Historia*, vol. 3, p. 68; Z. Beiersdorf, B. Krasnowolski, *Sztuka gotycka*, p. 218 oraz fig. 63–67; eidem, *Sztuka renesansu*, pp. 511–513.

¹²⁴ The sources record also "Przedmieście Wielkie" and "Przedmieście do Św. Wojciecha"; AP Kraków, AD 62, 339; AD 68, f. 126; J. Sygański, *Historia*, vol. 2, p. 8.

¹²⁵ "Domus cum horto in suburbio maiori sandecensi inter sacellum s. Nicolai et fundum abbatis sandecensi"; AP Kraków, AD 65, p. 579.

¹²⁶ There is a garden with a bathhouse, and a cemetery and provost's house next to the church and the castle. The record does not precise, which hospital this was, and says only that there were 40 patients there; AV Cap. 25, ff. 3–4, 191, 199. The entries in town books tell us this was a hospital for the leprous; AP Kraków, AD 60, f. 72; AD 66, ff. 69, 249. The 1597 inspection records that the church was wooden and required repairs; AV Cap. 9, f. 168v. See B. Kumor, *Archidiaconat sądecki. Opracowanie materiałów źródłowych do Atlasu historycznego Kościoła w Polsce*, ABMK, vol. 8–9, 1964, pp. 51–52.

¹³⁰ The later church of St. Nicolas can be seen on Mieg's map and (with churchyard) on cadastral plans. The dead were buried on the churchyard until 1781; J. Sygański, *Zabytki dziejów*, p. 161; idem, *Historia*, vol. 3, s. 161; Z. Beiersdorf, B. Krasnowolski, *Rozwój przestrzenny*, p. 115.

¹³¹ "In campo a civitate remotius templum est tituli sancti Adalberti et Georgii, cimeterium non omnino malum," AV Cap. 9, f. 169v; AV Cap. 25, f. 177.

¹³² Church of St. Adalbert still appears on Mieg's map. It disappears in the eighteenth century. About its location see Z. Beiersdorf, B. Krasnowolski, *Rozwój przestrzenny*, pp. 97–99.

¹³³ "Suburbium retro fluvium Kamienicza," AP Kraków, AD 62, ff. 222, 410, 420; AD 66, ff. 470, 612. Sygański calls this suburb "little suburb" (idem, *Historia*, vol. 2, p. 8). The range of the suburb was shown on Mieg's map.

dedicated to the Holy Cross, and a cemetery,¹³⁴ the church was demolished in 1830.¹³⁵ Its approximate location can be read from the 1783 plan, the building is also shown on Mieg's map. The square where the church used to stand is recorded on the cadastral plans.¹³⁶ An Arian temple stood probably not far from the church of the Holy Cross. Its location shown on our plan is a hypothesis. J. Sygański (basing on an unknown source) noted that in 1568 the Arian commune, together with a school, stood 'where now the inn called Piekło ('hell') stands'.¹³⁷ The name Piekło can be found still on the 1897 plan, and this was the basis for our localization.¹³⁸

The location of the church of St. Helen raises much doubt. Around 1597, the whole church was taken by an overflow of the Rivers Dunajec and Kamienica. It was rebuilt prior to 1608, but moved somewhere else, to the other bank of the Dunajec.¹³⁹ The researchers of Nowy Sącz place the church of St. Helen by the castle, near the road leading to the bridge on the Dunajec.¹⁴⁰ However, we believe the location on the other bank of the River Kamienica, by the road to Zabełcze village, is more appropriate. Numerous entries in town books mention gardens or demesnes situated over the River Kamienica (*retro or trans fluvium Kamienica*) near this church.¹⁴¹

The sixteenth century town books of Nowy Sącz record various names of streets situated outside the city walls: Św. Wojciecha, Św. Mikołaja, and Św. Heleny, which should naturally be connected with sacral structures of respective denominations.¹⁴² Yet it seems these were not official names, but abbreviated transcripts, created by omission of two words in the middle, for instance from: 'a street leading to St. Adalbert (Św. Wojciech)'. The identification of these streets is very difficult, as the records are imprecise. The situation of the street called Pośrednia in the sources is quite similar.¹⁴³ We know this street led to the church of St. Adalbert, but at this stage of research we cannot distinguish it from the aforementioned Św. Wojciecha Street. As such, we decided to exclude this street from our plan.

The visitation of roads conducted in 1570 mentions two permanent bridges in the vicinity of Nowy Sącz. The one over the River Dunajec, just by the castle, was the most important for the city. It is called 'great bridge' in the sources.¹⁴⁴ The 1783 plan calls it a city bridge. The other bridge was

¹³⁴ "Capella sancti Crucis ultra fluvium Camienicza", AV Cap. 9, f. 169v; AV Cap. 25, f. 182; AP Kraków, AD 62, f. 412; AD 66, f. 487. In 1597 the church was not inspected inside because of the overflow of the River Kamienica; see also B. Kumor, *Archidiakonat sądecki*, p. 50.

¹³⁵ J. Sygański, *Zabytki dziejów*, p. 162; idem, *Historia*, vol. 3, p. 161.

¹³⁶ Z. Beiersdorf, B. Krasnowolski, *Rozwój przestrzenny*, p. 118.

¹³⁷ J. Sygański, *Historia*, vol. 1, p. 142. Initially the Arians, because of the starosta of Nowy Sącz, Stanisław Mężyk, held their masses at the castle chapel. Then the starosta built a temple for them over the River Kamienica. The temple operated in Nowy Sącz until 1608; J. Tazbir, *Arianizm w ziemi sądeckiej*, "Rocznik Sądecki", vol. 8, 1967, pp. 313–316; J. Kracik, *Kontrreformacja i katolicka reforma*, [in:] *Dzieje miasta Nowego Sącza*, vol. 1, pp. 411–412; see also E. Pawłowski, *Nazwy miejscowości Sądeckizny*, part 1: *Nazwy miast, wsi, przysiółków oraz dzielnic miejskich i wiejskich*, Wrocław 1971, entry: *Piekło*.

¹³⁸ See footnote 6.

¹³⁹ AV Cap. 9, f. 169v. The church was founded by innkeeper Szymon of Świniarsko. The church was built "in fundo moderno Monialium antiquam Sandecz," ibidem, 25, f. 213. The new church of St. Helen was destroyed during the Swedish invasion, and in 1686 the new church was built, thanks to the effort of the abbess of the Sisters of St. Clare from Stary Sącz.

¹⁴⁰ Z. Beiersdorf and B. Krasnowolski are basing on an entry from the 1608 invasion, which says the church of St. Helen originally stood "in fundo civili fluvium versus Kamienica" (idem, *Rozwój przestrzenny*, p. 118). Similarly J. Rajman, *Najdawniejsze nazwy ulic*, pp. 68, 70–71. By the castle, behind Krakowska gate, there probably was a small suburb, visible still on the plan from 1783 and Mieg's map.

¹⁴¹ The demesne was situated over the River Kamienica, between the chapel of St. Helen and the field belonging to Jan called Tatar, the town miller; AP Kraków, AD 68, ff. 153, 154, 170; "Hortum post ecclesiam S. Helene, trans fluvium Kamienica", AD 71, f. 597; "praedium cum horto retro ecclesiae s. Helenae ex una horti Lazaris sutoris parte ex altera viae communis situm", AD 60, f. 497; "hortus retro fluvium Camienicza post ecclesiam s. Helenae penes hortos curie civitatis sandecensis", AD 61, f. 650. The source mentions also a house with a garden, situated in Sącz suburbs over the River Kamienica "towards the church of St. Helen" (AD 65, f. 730) and a demesne in the suburbs behind the St. Helen, near the garden of harnessmaker Wojciech (AD 65, f. 707). Perhaps this was the suburb, which was called "Krakowskie" in another entry, situated *trans fluvium Kamienicza* near the gardens of Wojciech Rymarz and Andrzej Budowniczy on both sides and towards the River Dunajec (AD 68, f. 122). However, this was a floodplain, so it was unlikely that there would be any buildings in the area; cf. A. Dunin-Wąsowicz, *Kapitał mieszczański*, p. 123, footnote 18.

¹⁴² AP Kraków, AD 50, f. 872; AD 52, f. 50; AD 56, ff. 292–293; AD 60, f. 506; AD 62, ff. 240, 296, 336; AD 65, f. 755; AD 66, f. 123.

¹⁴³ "Domus extra moenia civitatis sand. in intermedia platea eundo ad sacellum s. Adalberti", AP Kraków, AD 65, f. 229; AD 66, f. 231; "platea intermedia qua itur sacellum versus divi Adalberti", AD 66, f. 564; also AD 66, ff. 231 and 664.

¹⁴⁴ LDK, p. 36; MRPS, vol. IV, part 1, no. 6931; AP Kraków, AD 149, f. 708; AD 151, f. 53. The town was granted the privilege to build this bridge in 1453, AGZ, vol. 9, no. 57.

situated over the River Kamienica, probably near its confluence with the Dunajec, north of Krakowska Gate, on a road running in the valley of the Dunajec from Cracow and Bochnia through Nowy Sącz to Hungary.¹⁴⁵ This bridge can be seen on Mieg's map. Both bridges were depicted on an image of the city from the north, drawn in 1840. One could reach Zakamienica suburb from the city on the so-called 'ławy' ('boards'). The current of the river, quite strong in this place, often took and destroyed the boards. Numerous entries from the beginning of the seventeenth century record the expenses of repairs done by a carpenter.¹⁴⁶ These boards over the River Kamienica were shown on the 1783 plan.

Two mills were marked on the plan. The Dolny and Górny mills belonged to the starosta's district of Nowy Sącz and were situated at the foot of the scarp, on the eastern side of the city, on a special channel dug from the River Kamienica. The location of Dolny mill is better attested to in the sources. We know it was located near the castle.¹⁴⁷ We place Górny mill near Młyńska Gate, where the water flowed into the channel.¹⁴⁸ The third mill, recorded in the sources, stood close to the church of St. Adalbert. Its approximate localization can perhaps be seen on one of the cadastral plans, which shows us remnants of the old mill pond, between the stream Łącznik and the current Nawojowska Street.¹⁴⁹ Still, this is only an assumption and the mill was not marked on our plan.

Finally, we should say something about these objects, which were not included in our plan. The four steel mills ('hamer'), which operated in the vicinity of Nowy Sącz in the second half of the sixteenth century were not shown, as the sources fail to provide their precise location. We know only they were situated on the channel draining water from the River Kamienica. The mills shown on Mieg's map cannot be used as a clue, because the steel mills ceased to exist sometime before 1659, probably taken by the water.¹⁵⁰ Similarly, as it was impossible to find the exact location of other utilitarian devices and structures operating in the city at the time: the bleachery,¹⁵¹ the brickyard,¹⁵² or the city stables,¹⁵³ as well as numerous demesnes in the suburbs, we decided not to mark them on our plan.¹⁵⁴

Translated by Agata Staszewska

¹⁴⁵ "There were many gardens behind Krakowska Gate on the other side of the bridge, and they were destroyed by the Rivers Dunajec, Kamienica and the third one – Łubinia", LK 1616, f. 54. About communication routes in Nowy Sącz see above.

¹⁴⁶ AP Kraków, AD 150, ff. 213, 338; AD 360, 366; The pipemaster made rafts on the River Kamienica, on which the people walked, AD 151, f. 50.

¹⁴⁷ LK 1564, part 1, pp. 156–157. Vogt's house and a saw mill were situated by the lower mill, LK 1569, f. 54; see also LK 1628–1632, ff. 156v–157; K. Gołachowski, *Inwentarz archiwum*, no. 101. Since 1521, i.e. from the moment of the buyout of one third of mills, the mills were under town's administration; F. Leśniak, *Obszar miasta*, p. 312.

¹⁴⁸ Like that also F. Leśniak, *Obszar miasta*, p. 313. Beiersdorf and Krasnowolski situate the mills Dolny and Górny between Węgierskie suburb and the River Kamienica, by the flumen; eidem, *Rozwój przestrzenny*, p. 116.

¹⁴⁹ Z. Beiersdorf, B. Krasnowolski, *Rozwój przestrzenny*, pp. 98, 116.

¹⁵⁰ "Aquaeductum ad malleos eundo in suburbia Sandecz", AP Kraków, AD 72, f. 361; "predium inter rippam sive aquae ductum ad malleum deducentem", AD 71, f. 628; AD 72, f. 80; "officinam cultorum faciendorum, vulgariter slofarnya seu hamri nuncupatam, in torrente seu ripa illius, qui defluite fluvio Camienicza circa civitatem Sandecensem, erigere", MRPS, vol. V, part 1, no. 384; LK 1569, f. 240; LK 1659–1664, p. 545: steel mills "were long gone, and the water took the land". About the location and the functioning see A. Żaboklicka, *Hamry nowosądeckie. Z zagadnień produkcji sierpów na przełomie XVI–XVII wieku*, KHKM, vol. 12, 1964, no. 1, pp. 3–17, especially p. 7.

¹⁵¹ The inspection tells us the bleachery was located on town grounds, LK 1564, part 1, p. 155. J. Sygański placed it "behind the church of the Holy Cross, over the River Kamienica, right by the road to Gołąbkowice, near the big ponds" (idem, *Historia*, vol. 2, p. 69). F. Leśniak assumes the bleachery was situated by the Kamienica, near Młyńska Gate (idem, *Obszar miasta*, p. 313), similarly J. Rajman (idem, *Najdawniejsze nazwy ulic* 1992a, pp. 68, 70). Different locations probably result from the fact that in the beginning of the seventeenth century there were two bleacheries, the only one – partially taken by the water, and the new one – built in another place; LK 1616, f. 57v; LK 1628–1632, f. 153.

¹⁵² The location of the brickyard also causes some doubts. F. Leśniak places it in Przedmieście Większe (idem, *Obszar miasta*, p. 314); Beiersdorf and Krasnowolski place it over the Kamienica, basing on the records from the middle of the seventeenth century (eidem, *Rozwój przestrzenny*, p. 118), similarly J. Rajman (idem, *Najdawniejsze nazwy ulic*, p. 71).

¹⁵³ AP Kraków, AD 60, f. 147; AD 62, f. 268.

¹⁵⁴ The sources offer numerous records of demesnes in the suburbs: along the road from the church of St. Adalbert and near the church (LK 1564, part 1, p. 153; LK 1569, f. 236; LK 1616, f. 53v; AP Kraków, AD 56, f. 36; AD 60, f. 345; AD 62, ff. 227, 296, 339; AD 65, f. 510), between the stream Łącznik and Młynówka (AD 72, ff. 361, 811, 819), between the River Kamienica and the moat (AD 62, f. 265), by the church of St. Nicolas (AD 62, f. 98), in the suburbs over the River Kamienica behind the church of the Holy Spirit: LR 1529, p. 43 (20 demesnes belonging to the nobility noted here); AD 62, ff. 337–338, 428; AD 65, f. 469; AD 66, ff. 171, 305, 469, 487).

III.6.21.5 PIOTRKÓW TRYBUNALSKI

Henryk Rutkowski

Piotrków – the largest urban area in the territory of Sieradz and Łęczycza Voivodeships – was one of the most important political centres in sixteenth century Poland. Before 1569 it was the usual place for the gatherings of the *Sejm Walny* (General Diet), and from the 1578 the Crown Tribunal for Greater Poland (in the broadest meaning of this province) was situated there.¹ The settlement complex in Piotrków consisted of two main parts: Piotrków and Wielka Wieś integrated with the city (the name of the village was Wielga Wieś).² The border between the city area and the grounds belonging to Wielga Wieś ran along the River Strawa, considered to be a tributary of Koprzywnica, that is present-day Wierzejka, also called Rakówka or Skawa (today it is assumed otherwise – that the Wierzejka flows into Strawa, which again flows into Luciąża). Strawa marked the border for many centuries, in the thirteenth century it was probably called Pirsna and separated Rozprza and Wolbórz castellanies.³

The reconstruction of the plan of Piotrków in the sixteenth century was based on later cartographical sources. They were broadly used by Kazimierz Głowacki, who included numerous reproductions of old plans and maps in his study.⁴ For our study, two sources were especially important, one of which was the oldest plan drawn after the fire that on 8 November 1786 destroyed a large part of Piotrków. The plan on a scale of 1:2,000 covers the city, part of the suburbs and a fragment of Wielga Wieś.⁵ The source has no title, and no name of its author is given, we know, however, that it is connected to Dominic Merlini, the architect of the king and the Commonwealth. He was in Piotrków on 13 September and assessed the size of the reconstruction needed after the fire, and also designed a partial regulation of the city.⁶ Merlini therefore should be considered either the author of the plan, or the person who ordered it to be made. For the first time the plan was published by Wojciech Kalinowski and Henryk Rutkowski.⁷

The other cartographic source is ‘Plan sytuacyjny miasta obwodowego Piotrkowa wraz z Jurydyką, Wielką Wsią i Żydowskim Miastem’ (‘The Situational plan of the district city Piotrków, together with

¹ The Greater Poland province comprised then the following Voivodeships: Poznań, Kalisz, Sieradz with Wieluń land, Łęczycza, Brześć Kujawski, Inowrocław, Dobrzyń land, Mazovia, Płock, Rawa, Pomorania, Chełmno, Malbork and Warmia; H. Rutkowski, *Piotrków Trybunalski w XVI i pierwszej połowie XVII wieku jako miejsce zjazdów szlacheckich*, [in:] *750 lat Piotrkowa Trybunalskiego*, ed. R. Rosin, Piotrków 1967, pp. 43–74.

² Town plan analysis of Piotrków is included in: W. Kalinowski, H. Rutkowski, *Piotrków Trybunalski*, “Ochrona Zabytków”, vol. 7, 1954, no. 2, pp. 77–93; K. Głowacki, *Urbanistyka Piotrkowa Trybunalskiego*, Piotrków–Kielce 1984, pp. 18–23, 30–34, 36 (here cartographic reconstruction of own plan from the mid-sixteenth century is included); W. Glinowski, *Układ przestrzenny, obwarowania i zabudowa miasta w XVI–XVIII w.*, [in:] *Dzieje Piotrkowa Trybunalskiego*, ed. B. Baranowski, Łódź 1989, pp. 43–72.

³ Rosin, Wolbórz, pp. 15–17 and map.

⁴ K. Głowacki, *Urbanistyka*, passim. New archive signatures of town plans are included in: *Plany miast*, pp. 268–271.

⁵ AGAD, Zbiór Popielów, no. 204, f. 582.

⁶ AGAD, Zbiór Popielów, ff. 574, 579–580; K. Głowacki, *Urbanistyka*, pp. 53–55.

⁷ W. Kalinowski, H. Rutkowski, *Piotrków*, p. 78 (fig. 76), see also pp. 84, 89; K. Głowacki, *Urbanistyka*, p. 7 inaccurately ascribed the discovery of this plan to Kalinowski. The plan was shown to H. Rutkowski by Ryszard Cieśla. H. Żerek-Kleszcz informs about another, draft plan of the burned Piotrków from 1786, kept in the Princes Czartoryski Library in Cracow (H. Żerek-Kleszcz, *Klęski elementarne w dziejach miasta w XVI–XVIII w.*, [in:] *Dzieje Piotrkowa*, pp. 161 ff.). If a detailed list of damages was created by Piotrków garrison, as claimed by the author, then they also probably made a detailed cartographic sketch.

the Juridic, Wielga Wieś and the Jewish town'), created by Wilhelm Bergemann in 1824. The plan on a scale of 1:1,500 contains the project of the regulation designed in 1825 and confirmed in 1827.⁸ Our study was based on the copy of Bergemann's plan published in 1950 and 1954.⁹ Also, 'Mappa brouillon gruntów miasta obwodowego Piotrkowa' ('Draft map of the grounds of the district city Piotrków') on a scale of 1:4,000 was used, mainly to prepare an additional map of broader range, created in 1824 by W. Bergemann as well.¹⁰ Gilly's and Brodowski's earlier maps served the same purpose.

The layout of Piotrków was adjusted to the topographic conditions. The city, surrounded by defensive walls, lay on a flat cape, heightened above the waterlogged river valleys, from which the Strawa flowed around the city in the north and east, and its tributary Strawka – in the south. The line of the city walls formed the shape of an irregular circle around 1,050 m long. Its meridian axis was 320 m long, and its parallel axis – 300 m, and the area of the city was 8 ha. Piotrków was fortified with a wall by the order of Casimir the Great. This investment was at least partially accomplished during his reign. There were three gates in the high wall: the Sieradz gate in the west, the Cracow gate in the south and the Wolbórz gate in the east (the distance between the two latter gates was especially short).¹¹ Contrary to Jarosław Widawski's opinion, the Piotrków wall was strengthened only by two towers from the west.¹² As we agree with all other findings of Widawski, we would like to refer to a later hypothesis by K. Głowacki. It probably resulted from a continuation of a careful statement of Kalinowski, who under the influence of the name Nowe Miasto ('the New City') pointed to the possibility that in the fourteenth century the located city was smaller.¹³ Following this thought, Głowacki concluded that in the times of Casimir the Great the city wall probably enclosed an area smaller than the later area in the west and north, and the placement of the gates was different then, even where the fortified district was not moved in the fifteenth century.¹⁴ Assuming that in the fifteenth century almost half of the fourteenth century walls were demolished, only to be replaced by new walls elsewhere would be a completely unconvincing hypothesis. The author did not take into consideration the fact that the costs of building new walls were huge and we do not know a single example where such city walls, of brick or stone, were moved in Middle Age Poland.¹⁵

The layout of the city was presented according to Merlini's plan, from which we also took the names of the streets. Four of these names to this day remain the same as in the eighteenth century: Grodzka, Łazienna Mokra, Sieradzka and Rwańska. Of the remaining streets: Łazienna Sucha (the name from Bergemann's plan) is today Konarskiego Street, Dominikańska – Wojska Polskiego, Kościelna – Farna. The street that was called Rycerska in 1786 is today called Szewska, and two old streets – Nowe Miasto and Szewska – constitute Rycerska street today (the 1824 plan shows that this change was made gradually). The street Krótka marked by us falls along the southern frontage of the present-day Czarniecki square. We have omitted the name of Żydowska Street on our plan, as it is dubious that it already existed in the sixteenth century (it would run along the western frontage of Czarniecki square), the names of the streets running by the walls were also omitted, they were called Podmurze ('By the wall area') on Merlini's plan.

The internal division of building blocks into plots, drawn on the basis of the plans from 1786 and 1824 is, naturally, only a hypothesis of the state from the end of the sixteenth century, possible to varying degrees in various places. In the area occupied in the seventeenth century by the monasteries of the Dominican Sisters, the Piarists and the Jesuits the changes were so big, that we made no

attempt at even trying to reconstruct the earlier burgher plots. In 1565 and 1629 around 190 houses were counted in the city and the majority of them were of wood.¹⁶

The brick town hall (non-existent today) stood on the small market square (50 × 65 m), that served as the seat for the Crown Tribunal. The city authorities, perhaps, used the Vogt's house ('kamienica Wójtowska') then. The house was situated on the plot in the eastern frontage of the market square, on the corner of Grodzka Str. There were two brick temples from the fourteenth or the fifteenth century in the city: the parochial church (*farny*) of St. Jacob and St. Stanislaus and St. Dorothy (today St. Hyacinth's church) by the Dominican monastery. The parson's manor (in the south) and the parochial school (next to Wolbórz gate) stood by the city wall next to the parochial church and its graveyard.¹⁷ To the west of the Cracow gate there was a bath house by the wall.¹⁸

The layout outside the fortified city was reconstructed mainly on the basis of Bergemann's plan from 1824. The course of main roads in the suburbs can be considered almost certain for the sixteenth century, the same for the range of the waterlogged area. Other markings show a much more hypothetical state, that is – in other words – indicate one of the possibilities. It is especially true for the suburban buildings, usually consisting of loosely scattered buildings in the farms of the suburban dwellers, in demesnes belonging to burghers or in the manors of the nobility. The borderline between the suburbs and what was called garden and arable grounds (where also barns or sheds could be situated) was not so definite in reality, as our markings would suggest.

The suburbs and city fields stretched in three directions from the city: to the south-east, to the south and to the west.¹⁹ The names of the suburbs are known from later sources, although some of them could be found already in the description of Piotrków parish from the beginnings of the sixteenth century (e.g. demesnes of Rokszczyce).²⁰ The Cracow suburb is attested to in the 1629 inspection.²¹ The small brick Church of the Visitation to the Blessed Virgin Mary stands since 1373 in the spot where the Cracow suburbs divided into three arms.²² It was built on the grounds belonging to the reeve of Piotrków, that according to a document from 1397 covered the fields called Obrytka and Zdzienitka and more.²³ The former name survived to this day, the name Wójtostwo is also known, which allows us to assume that the reeve owned the area stretching in a broad belt from the city to the borders of Piotrków. A name Dziedziczka appears in this area in the nineteenth century, which probably derived from the medieval name Zdzienitka.²⁴ At the beginning of the Cracow suburb, on the bank of Strawka, there was a wooden hospital (almshouse) with the Holy Trinity chapel²⁵ (marked with a special sign on our map).

In the 1661 inspection, apart from the Cracow suburbs, two other suburbs were mentioned, lying to the west of the city walls: Sieradz and Rokszczyce suburbs.²⁶ The first one appears on Merlini's plan, it is the present-day Narutowicza street. Rokszczyce suburb was later called Bełzatka suburb (as in Merlini), it corresponds to the present-day Słowacki street, and further on: Bełzacka. Otherwise it is known, that in the middle of the seventeenth century there was also Byki suburb, that was called Toruń suburb in the eighteenth century (now these are Toruńska and Wojska Polskiego streets). It must be assumed that it was treated as a part of Rokszczyce suburb, and that is why it was omitted

in the 1661 inspection; contrary to what was done in the *list of smokes* (i.e. the list of houses) from 1789, where Toruń suburb is listed, and Bełzátka (Roksyce) suburb is omitted.²⁷ The case of the late appearance of two southern suburbs – Przebórz and Wrocław – in the sources is a similar situation. In 1789 the first one was probably included in the Cracow suburb, and the other one called Wójtostwo. Now Przedborska street corresponds to Przedbórz suburb, and Jagiellońska and Reymonta streets correspond to Wrocław suburb.

The smallest suburb of Piotrków was the one lying east of the city, between the Wolbórz gate and the bridge over the border River Strawa, the one which was called the Warsaw suburb by Merlini. The earlier name was carried by the 1629 inspection, but it is connected with a street, not the suburb: ‘the street called Kramnice’.²⁸ Now it constitutes a part of Starowarszawska street.

Finishing the description of this part of the plan, covering Piotrków, we provide the numbers concerning the property of the nobility, according to the data (not very precise) from the inspection. In 1565 17 units of real estate belonging to the nobility (one in the city, 16 in the suburbs) were listed. There were eight senators among the owners. After 1569, when Warsaw became the seat for the *Sejm* (Diet), the houses in Piotrków became redundant for the senators and even though the property of the nobility on city grounds grew, the magnate property was replaced by gentry property. In 1629 there were 14 or 15 houses of the nobility in the city, and 20 or more of such estates in the suburbs.²⁹

In Wielka Wieś, the royal castle was marked as the only object of certain locality. It was a brick palace in the form of a tower, built for Sigismund I the Old between 1512–1519. This building that still exists to this day, surrounded by a moat, the sixteenth century sources call a castle or a tower.³⁰ The castle was the centre for the royal court, i.e. the group of residential, utility and administrative (storeyed senators’ house, single-storeyed house for the envoys) buildings, that – except for the castle – were made of wood. After 1569 this court emptied, became neglected and gradually fell into ruin. Only the castle found itself in a better situation, and in 1569, when the gord *starosta’s* district was created, it became the seat for the court of law and the gord office.³¹

During the *Sejm* (Diet) period in the history of Piotrków, a district of manors developed around the royal court. The manors were used, under the king’s grant, by secular and spiritual senators or other high clerks. In 1568 there were 38 such manors in Wielka Wieś. Soon afterwards the magnates lost their interest in these buildings, which were given to other users or started to fall into ruin.³² The fate of the property of the archbishops of Gniezno is exceptional. The property was a 1503 bestowal, situated on a quite large area in the south-western part of Wielka Wieś (between the Strawa and the present-day streets Starowarszawska and Jerolimska) there was, among others, a manor or a palace of the archbishop. It was used by primates during the *Sejms* (Diets) and synods of Church province in the sixteenth century and the first half of the seventeenth century, that mostly gathered in Piotrków. However, later this Church property was organized into a jurisdiction with settlers who did urban jobs. In the eighteenth century Jurydyka (jurisdiction) – as the only settlement of this character near Piotrków, it did not need another name – it was subject to the Gniezno chapter.³³ Then there was already Miasto Żydowskie (the Jewish town), subject to the *starosta* of Piotrków, on the site of the old royal court and senators’ manors.

The northern part of Wielka Wieś had an agricultural character. In 1565 there were 42 serf farmsteads there and three *hortulani* farmsteads.³⁴ The location of the buildings of the *starosta’s*

demesne is known, its grounds were distinguished by a borderline. All buildings in Wielka Wieś were marked as rural due to the legal situation of this area, but in terms of buildings it was the same as in the suburbs, only more concentrated (especially the manors).

The layout of Wielka Wieś was prepared on the basis of Bergemann's plan, and presents the state from 1824, with only small corrections. Earlier this settlement had been destroyed several times, and the lack of clear property divisions on the *starosta's* grounds and the population changes fostered chaotic spatial transformations. As such, it is difficult to say, what parts of the presented layout could correspond to the end of the sixteenth century. This part of the plan of Piotrków should be treated as a cartographical substitute.

Piotrków, Wielka Wieś and Bugaj. This additional map was prepared to present the estimated localization of the court of Sigismund Augustus on Lake Bugaj. Bugaj is a lake through which the River Wierzejka, former Koprzywnica, flows. This natural body of water is quite small, but since at least the sixteenth century the water in it has been artificially dammed and as a result the term 'pond' was used. According to the 1565 inspection, the length of the pond was 11 furlongs, that is around 1,500 m, and the width near the dyke – 2,5 furlongs, namely around 350 m. Such is the size of Lake Bugaj nowadays, when the water is dammed, and exactly this is the size shown on our map. The second body of water on the same river was the pond Wierzeje, already non-existent in the eighteenth century. The inspection provided its potential length (6 furlongs) and width (3 furlongs). It also emphasizes that the pond was not stocked. Taking into account the fact that the pond was added to Łaski's *Liber beneficiorum* some time after the completion of the text, it could be assumed that in 1565 it was relatively new.³⁵ Our reconstruction of this pond on the map is rather schematic, our priority was its proper localization. The cartographical sources allow us to place the crossing of the road from Piotrków through Wierzejka with precision – it is the spot in which Wierzejska street crosses the rivulet now. It must be assumed that this road marked the southern bank of the pond. The described crossing was called Wierzeje ford, the name that was distorted on Perthées map of Sandomierz Voivodeship: Brod Wierzec. Our placement could be supported by the layout of old local names (Wierzeje, Ku Wierzejom – 'Toward Wierzeje').

Alexander Gwagnin included the following information in his description of Piotrków (given after the 1611 translation): 'Outside the city there is also a wooden manor, very expensively built by a delightful grove called Bugaj, where he king [...] lives during the *Sejm* (Diet) or gathering of any sort, for healthier air'.³⁶ This spacious manor was built around 1560 by Piotr Żochowski, vice-*starosta* of Piotrków. The building and finishing works extended well into the 1560s, but already in 1562 the king lived in Bugaj. As is described in the 1568 inventory the manor by the Bugaj pond (also called by this name) was surrounded with a sheet pile fence, in which there were two gate towers, partly brick. One of them was situated in the west ('from the city'), and had a clock, and the other stood in the east ('from the pond'). Apart from that there was a 'third gate to the field in the south'. There were many wooden buildings on the manor grounds, a one-storey 'great house' and a storeyed house for the king's guards. There were two stables for 50 horses in the manor, and three new stables, not yet finished, behind the pond, each for 240 horses.³⁷

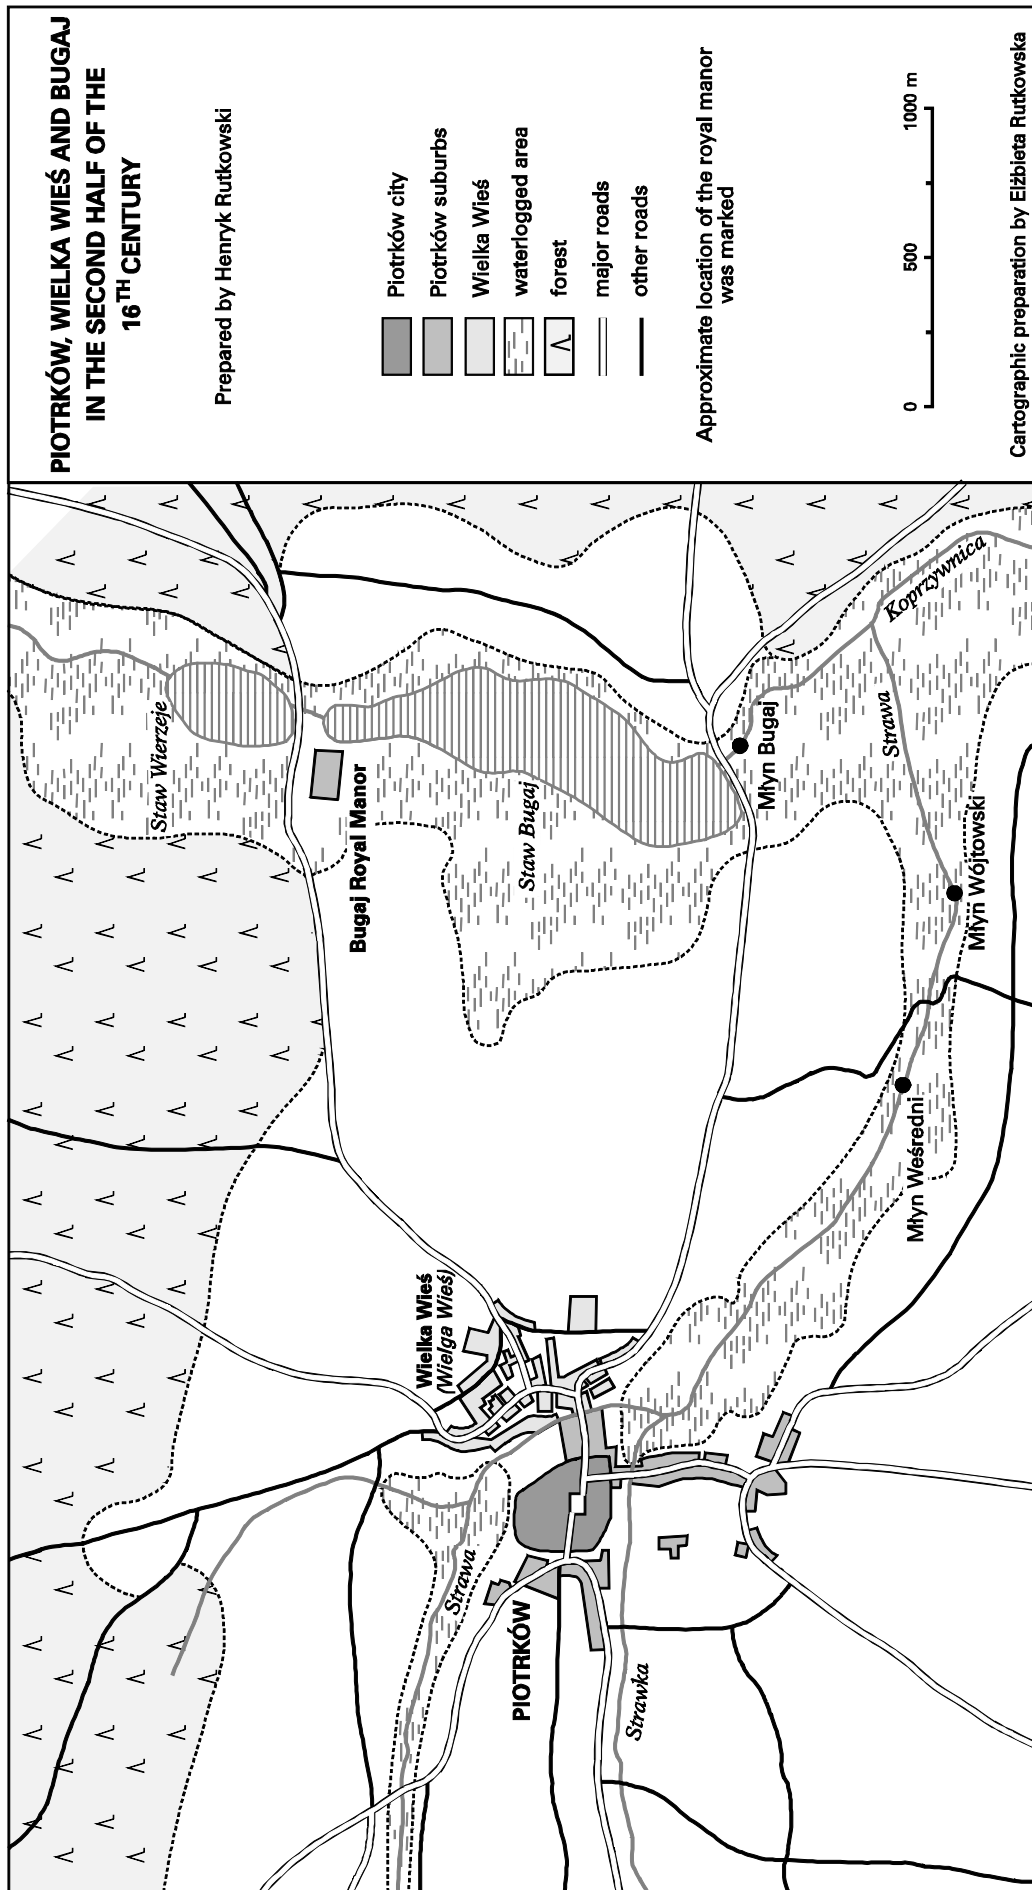

The matter of the localization of Bugaj manor was taken up by Głowacki, but the results he obtained were appallingly wrong. He disregarded the conclusion, published along with source information already in 1958, that the placement of the manor in the vicinity of Wielka Wieś is a mistake.³⁸ Głowacki returned to this old idea and declared, that Sigismund Augustus's manor was situated just outside the border of the archbishop's Jurydyka, in the area of the present-day roundabout of the streets: Jerozolimska, Sulejowska and Ślaska. In order to avoid the inconsistency with the fact that the royal house was situated by the pond, he decided that in the sixteenth century Lake Bugaj was

Map 1. Piotrków, Wielka Wieś and Bugaj in the second half of the 16th century

called Wierzeje, and the Bugaj pond stretched along the course of the River Strawa.³⁹ This ignores the clear statement of the inspection that the pond Bugaj is ‘on the same bent and source’ as the Wierzeje pond.⁴⁰

The estimated location of the manor on our map is based on two premises: 1) the manor was situated on the western bank of the Bugaj pond, 2) it was situated near the Wierzeje pond, that took its name from the manor. It is an exceptional name in hydronymy, that cannot be found anywhere else in the drainage basin of the Warta or the Oder. The noun ‘wierzeje’ or ‘wierzeja’ meant gate, door.⁴¹ For outside observers, the prominent elements of the royal seat were the gate towers, the rest was hidden by the fence. The location near the road made the communication with e.g. manorial buildings on the other side of the pond easy. It could be added, that the 1824 plan places the name ‘Łąki Królówki’ (‘Royal Meadows’) nearby.

The splendid manor on the Bugaj did not survive long, already in 1588 it was destroyed to a large degree.⁴² In the middle of the next century Andreas Cellarius observed its downfall.⁴³

Mills were marked on the additional map – apart from Bugaj that appears on the main map, there were also two other mills: Wójtowski and Weśredni. The latter was also called Poznański, and was hypothetically placed where the Farny mill is located on the maps from the end of the eighteenth century. Two other mills near Piotrków, that is near Wielka Wieś, could not be located.⁴⁴

This map offers a more detailed picture of the communication network in the close vicinity of Piotrków, supplementing the roads from the main map with other chosen roads. Of the latter two connections could have greater importance in the sixteenth century, which were so led from Wielka Wieś (and so, from the royal castle), that they by-passed the city. The first road connected the track leaving to the north with the continuation of the Byki suburb – in the place where is split (the trace of the greater part of this road today are the streets Spacerowa and Partyzantów, until the crossing with Mickiewicza street). The second connection functioned between the road leaving Wielka Wieś to the south-east (now the streets Jeruzolimska and Sulejowska) and the continuation of the Przedbórz suburb (Zalesicka street); the map shows only a part of this connection.

III.6.22.4 PLESZEW

*Milena Stępniaak, Michał Gochna*¹

Among the city maps included in this volume of AHP, Pleszew (known as Pleszów in the sixteenth century) represents a private town owned by noble families. In order to reconstruct the spatial layout of the town in the sixteenth century, we used the retrogressive approach, supplementing data from later cartographic sources with information from written source material dated to the time period we were studying.

The basis of our research was the map of Pleszew created after the fire of 1806, which is currently kept in the State Archive in Poznań.² It is a copy in the scale 1:1,000 created in 1827. The original is unknown. Plots of the town's buildings are drawn on the plan with a division into those that burned down in 1806 and those that survived. The map reveals that most of the central part of Pleszew was destroyed (in our reconstruction, this section corresponds to the range of the town during the sixteenth century). The boundaries of the plots of land and the streets were drawn in two ways: their actual layout from before the fire was delineated and the new ones, which ran very similarly to the old ones, were marked down in an attempt to regulate the town layout. These changes were not significant and usually involved straightening or widening parts of city streets, lengthening some of them, aligning the boundaries of town quarters in such a way that their boundaries became straight and intersected at an angle of 90 degrees or close to this. This regulation turned out to be permanent – the current layout of the streets and the boundaries of the town quarters largely correspond to the plans adopted at the time. In our reconstruction, we decided that the starting point were the boundaries of plots and streets marked on the map in the older version, before the fire.

Besides the boundaries of plots and streets, the plan also marked areas adjacent to three churches in Pleszew: the church of the Beheading of St. John the Baptist, the hospital church of the Holy Spirit and church of St. Florian. However, the church buildings themselves were not drawn. Four figures were marked on the market square: Mary, Mother of God, along with Saint John, Lawrence and Florian. In their vicinity, four unspecified buildings appear in two blocks of buildings that could correspond to the town hall and merchant stalls. Some streets have names and some of them are in German.

Apart from the aforementioned map of Pleszew from the first half of the nineteenth century, we also made use of other cartographic source material: a handwritten version from 1793 of David Gilly's map and its printed version from 1802–1803, *Urmesstischblätter*, *Messtischblatt*, and WIG.³

However, written sources, such as town books of council and jury offices, play the main role in our reconstruction of the plan of Pleszew in the sixteenth century.⁴ Most of the cases brought before the town's court concerned predominantly the inheritance of property, settling of the dowries and purchase and sale transactions or real estate exchange. A characteristic feature of these notes was the detailed description of the location of settlements, which were the subject of the transaction through the listing of the names of streets, neighbours and nearby facilities. Therefore, this information served as a supplement to the existing verified findings, in an attempt to reconstruct the spatial arrangement of Pleszew and its suburbs. In turn, the economic potential of the town was demonstrated through the tax registers from the second half of the sixteenth and early seventeenth centuries.⁵

The history of Pleszew has been the subject of many studies. These include the works of Maria Majczakówna⁶ and Franciszek Kryszak,⁷ although some of the conclusions contained therein are already outdated and require verification. The first of these publications is a summary of a study by Majczakówna, which does not contain any footnotes and bibliography and the work remains unknown. The same is true of Władysław Zientarski's *Zarys dziejów parafii i pod wezwaniem Ścięcia św. Jana Chrzciciela w Pleszewie*.⁸ The pivotal study of the history of Pleszew is the monograph of the town from 1989, written under the direction of Marian Drozdowski, and the schematic plans of medieval Pleszew.⁹ Among the more recent works, articles published in "Rocznik Pleszewski" must be mentioned, among others those published in the course of work on the new monograph of Pleszew,¹⁰ editorial works by Tomasz Jurek¹¹ and Adam Kozak¹² and others.¹³ Unfortunately, the reconstruction of the changes in the spatial arrangement of the town have not attracted greater interest of scholars researching the history of Pleszew.¹⁴ In the studies cited, this topic appeared sporadically. The limited archaeological excavations also provide some interesting findings.¹⁵

Topographic conditions were one of the most important factors influencing the location and development of Pleszew. The town is situated on a moraine plane called Kaliska Hügellands and part

⁴ We used the notes from Pleszew's town records gathered in the State Archive in Poznań, in the collection of the Records of the town of Pleszew (AmPl), among which there were council books from 1428–1563, 1564–1640, 1570–1572 (fragments) and juror books from the years 1494–1554, 1558–1569, 1569–1584, 1584–1597, 1598–1636.

of the Greater Poland Lowlands. The height differences in individual parts of the town are minor. The height of the position of the market is 129.9 m above sea level, reaching 130.9 m above sea level in the east side of the sixteenth-century town (near the intersection of today's Kaliska and Wodna Streets), 129.9–130.1 m above sea level on the northern side (near Haller Street) and 127.5–130.5 m above sea level west of the church of St. Florian (near Copernicus Street). To the south, we observe the biggest slope of the terrain, which reaches around 118.9 m above sea level near the River Ner.¹⁶

Several watercourses flow around the town. The aforementioned Ner (Radobycz in the sixteenth century) flows into Prosna east of Pleszew. In turn, the Pleszewski Potok begins to the north of the town, (at the beginning of the twentieth century and earlier, one of its sources was located near today's Glinki Street).¹⁷ At a slightly greater distance, approximately 9 km, to the west of Pleszew lies Lutynia, which is the left tributary of the Warta.¹⁸ The climate and soil conditions favored agriculture, especially rye cultivation, and cattle and pig husbandry.¹⁹ On the other hand, the location in the vicinity of Kalisz and Jarocin was decisive in the expansion of the town along the trade route connecting Poznań with Cracow.

The date of the location of Pleszew remains unknown. The oldest mention in the sources about the town comes from 1283. In the diploma issued by Przemysław II, the Duke of Poznań and Kalisz, Pleszew is mentioned along other towns under Kalisz's jurisdiction. The term *civitas Plessow*²⁰ was used, evidencing that the town already had town rights. It was privately owned. Its founder is unknown. The first information about its owners is dated to the late fourteenth century. In the years 1391–1400, the town was owned by Wawrzyniec of Kępa, also known as Rozdrażew, who was the son of Wincenty of Kępa, voivode of Poznań, from the house Doliwa. At the beginning of the fifteenth century, he sold the town to Sędziwój of Szubin, voivode of Kalisz, thus passing it to the Pałuki family. Pleszew often changed hands in the fifteenth century. As a result of frequent arguments, the town was even divided between the Trzielski family and the Zaremba family of Cielcza. Finally, in 1443, the town was bought as a whole by Mikołaj Cielecki.²¹ During this time, Pleszew was an average sized town, since from 1458, it sent 12 infantrymen with the Malbork expedition.²² This places it in the II category of centres.²³

After the death of Mikołaj Cielecki in 1465, the town was divided among his sons Stanisław, Jan, Wojciech and Mikołaj. Pleszew was divided once again in 1467 after the death of Jan Cielecki. The document concerning the division contains interesting information about the court residence in Pleszew, which will be further explored in this chapter. Based on this source, Paweł Dembiński estimates that the population of the town at the time, along with the residents of the court and the servants, was 337–450 people.²⁴

The unification of the town happened thanks to the effort of Mikołaj Cielecki, who was able to pay off the claims of the remaining heirs.²⁵ This owner also cared about local churches; in particular, he was a driving force in the restoration of the parish church of St. John the Baptist and to the founding of mansionaries in the town in 1447.

The second half of the fifteenth and sixteenth century also saw many changes in ownership of the town. During this period, Pleszew belonged to the Tęczyński family, the dukes of Racibórz from the Přemyslid, Kościelecki and Zborowski dynasties.²⁶ Anna Tęczyńska, daughter of Zbigniew Tęczyński, is remembered in the history of Pleszew as a generous benefactress who cared about the cultural development of the urban center. She was the founder of the church of the Holy Spirit along with

a hospital for the poor.²⁷ Around 1504, she married Mikołaj III, the duke of Racibórz from the Přemyslid dynasty, who in 1506 bought Pleszew and several other villages from his wife through a repurchase agreement (Pol. *wyderkaf*). However, after the death of Mikołaj, his brother Walenty, duke of Racibórz, waived the entries and so Pleszew returned to the widow.²⁸ In 1531, Anna Raciborska resold the town of Pleszew along with the manor and villages to her future husband, the *subcamerarius* of Dobrzyń, Jan Kościelecki of the Ogończyk coat of arms, who expanded the Pleszew lands through the purchase of the village Malinie, formerly belonging to Andrzej Maliński.²⁹ Anna Tęczyńska died around 1552 and Jan Kościelecki married Katarzyna of Górka. After his death in 1553, the town was governed by Katarzyna until her marriage to Rafał Działyński, castellan of Brześć Kujawski, in 1555.³⁰ Later the Pleszew estates fell to Jan Kościelecki's sisters, Jadwiga and Zofia.³¹ From 1569, sources testify the next owner of the town was Jan Zborowski of the Jastrzębiec coat of arms, the castellan of Gniezno and the starost of Odolanów.³² He died in 1604, and the management of the property fell to his wife, Katarzyna Zborowska of Konary, daughter of Jan Konarski from Kobylin.³³

Information from tax registers can testify to the position of Pleszew in the second half of the sixteenth century. Depending on the year of collection, the town paid a tax on five or six mills, a fulling mill, kasha mortar (from 8 to 10 wheels in total), 10 boiling pots and 9 town *lans*. At that time in Pleszew, there were over 80 craftsmen.³⁴

The current topography of the town allows, to some extent, to recreate its possible layout in the sixteenth century, including its range, thanks to the streets running around the center to the north (Tyniec and Panieńska), to the east (Kiliński) and to the south (Garncarska). Their trajectory was most likely dictated by the existing fortifications and/or the moat. The extension of the center along the exit road to Poznań and its subsequent reconstruction caused its medieval outline from the west to be blurred, but the town plan from 1806/1827 allows for the reconstruction of this part of the border of Pleszew.³⁵ It seems that the town limits outlined in this way correspond to its presumed size in the sixteenth century, which is indicated by the abovementioned data from tax registers.

Already in the Middle Ages, Pleszew was surrounded by some sort of fortifications. We do not know their nature, but they were certainly not made of masonry.³⁶ In 1558, they were called

²⁷ M. Majczakówna, *Pleszew*, pp. 8–9.

²⁸ Teki Dworzaczka, 816 (no. 863) 1508: “III. Walenty, by the grace of God the Duke of Śląsk, Opawa and Racibórz relinquishes his inherited lands, that is the town of Pleszew and its surrounding villages, along with his rights and records to these lands, most importantly the record of 10,000, from which his deceased brother, Mikołaj, Duke of Śląsk, Opawa and Racibórz, through his wife Anna he had the right to repurchase the town and its surrounding for the aforementioned Anna, his sister-in-law”; cf. S. Małyżko, *Dziedzice miasta Pleszewa*, p. 64.

²⁹ Teki Dworzaczka, 2726 (no. 4 terrestris insriptiones et resignationes) 1531: “obl. 1531. Anna of Tenczyn, heir in Pleszew, widow of deceased Miklasz Duke of Racibórz, forever relinquishes her inherited domain castle and town Pleszew along with the surrounding villages Baranowo Wielkie and Baranowo Małe, Piekarzewo, and ½ of Zawidowice, Radzim, Lassowo, Lapkowo, Czasnijno, Wolija, Zlijebicz, Piwonice, Gostyczyna, Zagorzyno, the town of Raszkowo and the villages Raszkowno, Gorzno, in Malinice 4 *lans*, Zirniki, Wyganki, the town of Potarzyca with the village Potarzycka in the Kalisz district to Jan of Kościelec, *subcamerarius* of Dobrzyń, son of Mikołaj Kościelecki platinus of Kalisz and starost of Brześć Voivodeship and Dobrzyń land forever relinquishes; Andrzej Zakrzewski *wojski* of Poznań Voivodeship and starosta of Rogoźno, Jan Pruszek cupbearer of Kalisz Voivodeship”.

The image of a masonry tower, either on the present-day coat of arms or on the one from the sixteenth century, must be treated as a symbolic manifestation of the power of the town rather than evidence of existing masonry fortifications; cf. M. Gochna's chapter *Coats of arms* in AHP Greater Poland volume and chapter no. III.7.4. in this volume.

val[[]uas.³⁷ The town was likely surrounded by a fence, but the final confirmation of the nature of these fortifications requires further research.³⁸ Their probable location is now marked by the trajectory of Garncarska (*Potter*) and Tyniecka (*Tyniec*) Streets, to which leads Bramkowa (*Gate*) Street, suggesting its connection to the town gate or wicket.³⁹ The name of Tyniecka Street, meaning “railing” or “wooden fence”, would confirm the thesis that there was a fence in its vicinity.⁴⁰ Furthermore, we know that a gate led to the town near Stokowa Street,⁴¹ though its location was unknown. The possible fence surrounding Pleszew gradually disappeared. At the end of the eighteenth century, it was no longer there.⁴² Since the nature and exact trajectory of the town fortifications is unknown, we did not mark them on our map.

The town was partially surrounded by a moat. It was mentioned in the entry from the town registers in 1531, when the Pleszew authorities divided the property between the brothers, Jan the parish priest from Wilkowyja and Marcin, who was to keep 2 empty *lans*, a slaughterhouse, a garden and a house to the west of the moat (*extra* indicates that these properties lay outside the city).⁴³ Part of the moat still existed in 1793, and a small bridge ran across it at that time.⁴⁴ This is evidenced by the fact that in the case of the other exit roads from the town, bridges were not needed, so there was probably no moat during that period. This thesis is to some extent confirmed by the town plan from 1806/1827, which shows a fragment of the watercourse, which we treated as the remains of the former moat, only on the western border of the sixteenth-century Pleszew. Moreover, archeological survey research carried out in the 1980s at the intersection of Kaliska (*Kalisz*) and Garncarska Streets, i.e., at the eastern border of the sixteenth-century city ruled out the existence of both a moat and town walls in this location. It was then that waste pits were discovered containing a significant number of fragments of derived ceramics most likely from a nearby pottery workshop.⁴⁵ Keeping this in mind, we have decided that only part of the moat that appeared on the plan from 1806/1827 will be marked on our plan, taking into account the archaeological research, in the light of which the buried moat forms the present-day Łąkowa (*Field*) Street.⁴⁶ However, it should be noted that the matter of the fortifications of Pleszew (palisade, moat) requires further, in-depth study, especially archaeological research.⁴⁷

Moving on to the description of Pleszew inside the town limits, we start with the presentation of the street layout. The oldest of them were the following streets: Kaliska,⁴⁸ Gliška⁴⁹ (*Clay*), Kozia⁵⁰ (*Goat*) and Stokowa⁵¹ (*Hillside*). Already at the beginning the fifteenth century, they were partially paved.⁵² In the council book from 1428–1563 in 1485, an entry was made in which Ful the shoemaker, Piotr, brother of the shoemaker Stefan, and Piotr Piórko were supposed to build a “wall on the ground”, that is, a stone road also referred to as a pavement. In the next entry, the townspeople with the following

³⁷ AmPl, I. 11, pp. 1–2.

³⁸ Oral information from G. Gmyrek, based on his many years of experience of excavations in Pleszew, during which no traces of earth fortifications or palisades were found.

nicknames, Siadło, Uszko and Miedźwiedz with Ryba, were to each build one measure, that is, a rod of pavement, on the mayor's orders.⁵³ The busiest and oldest trade routes were Krakowska (*Cracow*) and Wrocławska (*Wroclaw*) Streets, and in the case of rural ones – Lenartowicka Street.⁵⁴

In the second half of the sixteenth century, the following street names have been confirmed: Ciasna ((*Tight*) called as a *uliczka*, as indicated by its name), Glińska, Jarocka, Kaliska, Kościelna (*Church*), Kozia, Lenartowska, Łazienna (*Bathhouse*), Malińska (*Malinie*), Młyńska (*Mill*), Pleszewska (“going towards Kalisz”), Poboczna ((*Side street*) behind the houses), Poznańska (*Poznań*), Stokowa, Grodzka (*Gord*), Zduńska (*Potter*), “the road to Chodecz” (modern Chocz; there, to the north of the town, the inhabitants of Pleszew had gardens⁵⁵ and granaries;⁵⁶ other terms for this street: “the road to the Borkowski mill”, “the road leading to Choczewo”, “the street going towards Chorzew or Młyn Borowy”), “the road leading to St. Florian” (the townspeople had gardens in its vicinity⁵⁷), “street leading to the potters”, “street to the church of John the Baptist”, “street on Przedmieście Wielkie (*Greater Suburb*)”, “street leading from Malińska Street towards the castle”, “street leading to the market in the suburbs”, “street in Waliszewo”, “the street they used to walk to the town hall”, “street, which led towards Zduńska Street” and “the street along which they were walking towards the horse mill”. Some of these street names which we have securely identified, have been marked in our reconstruction on the basis of the plan of the town from 1806/1827. Perhaps *Toepfer Strasse* (currently Krzyżowa Street), also marked on that plan, was Zduńska Street, which is mentioned in other sixteenth century sources, but we were unsure of this and therefore left it out of our map.

According to Maria Majczakówna, townhouses in Pleszew were made of wood. Most of them only had a ground floor, less often a first floor. They consisted of several rooms with or without stoves. In addition, they had food storage chambers and kitchens, and in the homes of wealthier residents, there were also servants' chambers.⁵⁸ Every wealthier townsman from Pleszew owned a house with a field or a garden, a stall or a slaughterhouse,⁵⁹ and many of them also owned a brewery (although it could mean only beer weighing equipment). Traces of wooden residential buildings have been discovered during the archaeological excavations carried out in Pleszew.⁶⁰ In 1793, all town houses were described as wooden.⁶¹

Individual houses had access to water from the water supply system. Entries from the town books testify to the existence of several baths in the city. In the suburbs of Pleszew called Waliszew,⁶² the location of which is not exactly known, there was a public bathhouse. A note from 8 February 1591 concerns the purchase by Frącek Raczek and his wife Jadwiga of the house located near the property of Paweł the tailor, by the road leading to the corner of the market to the public bath.⁶³ The entries

⁶³ AmPl, I. 13, pp. 262–263: [8 February 1591] The note concerns “the sale made to the famous Frącek Raczek and Jadwiga, his wife, of the house by the famous Jakub Szyda, located near Paweł the tailor and the road to the town bath for 28 *grzywnas*”; ibidem, pp. 291–292: [5 June 1592] “The sale of the house on the corner of the market square, near the road to the bathhouse and to the house of Jan Gomółka, with the cattle, *gierada* and all needed to make beer by the famous Walenty

from 1564 contain interesting information. The pages of this book were seriously damaged, though we are still able to learn that the owner of the town at the time, Jadwiga z Kościelca, ordered her steward, Wojciech Pruskowski, to buy the bath from honest Anna, wife of Paweł the bath attendant.⁶⁴ After his death, the building became run down, probably as a result of neglect; eventually, Anna relinquished the bath to the community of the town.⁶⁵ Another interesting piece of information is contained in the note from 1570, confirming that the water for the bath was drawn from the well. Honest Dorota Wiórkowa, together with her guardian, the famous Wawrzyniec Kostrzewa, renounced part of the square for development of the well “for the needs of a bathhouse” and for the benefit of the inhabitants of Pleszew. In return, she was free to draw water for domestic needs.⁶⁶

The inhabitants of Pleszew could also draw water from the town well, which was located in the market square.⁶⁷ We do not know its exact location, so we did not mark it on our plan.⁶⁸

Town books also contain information about wells shared by neighbours. An interesting record comes from 1537 and confirms the existence of a well between the brewery of provident Elżbieta Janeczkowa and the house of Mikołaj Lisk. They reached a settlement regarding its joint use. Mikołaj sold his part to Elizabeth for 1 grosz, reserving the right to leave from his house towards the swamp, or “to the clay”, without deviating with the cart or horses towards the right side of Elżbieta’s malt house.⁶⁹ In 1588, the famous Mikołaj Bąba allowed the famous Tomasz Róziński to use the well freely,⁷⁰ and in 1590, Maciej a tailor from Karminiek sold the house with free passage through the back of Frącek Raczek’s property and free water use from the well (as he himself had the right from Andrzej the miller and Katarzyna Sędzianka) to the famous Jakub Szyda, a burgher from Pleszew, and his wife of Jadwiga, for 6 *grzywnas*. The house was adjacent to the town bathhouse and the house of Paweł the tailor from the back.⁷¹ In turn, the entry from 1576 concerns the exchange of property between the townspeople and a joint permit to collectively use the well and drain the water from the malt house through the gutters embedded in the ground.⁷²

Bieńczyk and Anna, his wife, to the famous Walenty Widelczyk and Łucja, his wife, for 150 *grzywnas*. Additionally, Walenty Widelczyk has no property to this *gierada* or any obligation according to the contract between them, only Łucja, his wife”.

⁶⁴ AmPl, I. 3, pp. 2–3; AmPl, I. 10, pp. 337–339; [24 February 1552] “Testament of the deceased Paweł the barber. *Famati* Grzegorz Szczurek and Błażej Kruz, townspeople of Pleszew, the executors of the will of *providi* Paweł the barber from Pleszew and Anna his wife appeared in court and requested that the inscribed testament be legally recognized. On 24 February 1552, in the bathhouse, *providi* Paweł the barber in Waliszewo of the town Pleszew, weak of body, but sound of mind, wrote the testament at noon: to Anna and their children, he left the house with all its appliances, and all its goods. Anna promises to give 2 *grzywnas* to Szymon her servant. To her brother she relinquished the goods, he wrote it down and established guardians and executors of the will, *famatos* Grzegorz Szczurek and Błażej Kruz, townspeople of Pleszew”.

⁷² AmPl, I. 12, pp. 312–314; [22 June 1576] “Exchange of property or demesne by the noble Jędrzej Bedoński and Pitor Chocki with his wife Elżbieta. Jędrzej gave his demesne by the Kruz and malt house of Orszulanka with the free use of the

The market in Pleszew is square in shape, and the streets running from its centre did not cross each other in the corners and so created the shape of a cross. This is a so-called “turbine” layout of streets, which also appears in Krobia and Koło in Greater Poland.⁷³ Such a layout of the town was determined by the placing of the buildings, which created two clusters one following the other on each side of the market.⁷⁴ The most important buildings were erected in the town centre and nearby streets. The houses by the market square were inhabited by wealthy townspeople, often sitting on the council. A note from the town books from 3 July 1592 contains the information about the famous Marcin Wołek, the mayor of Pleszew, who, through an agreement with his nephews, kept a house by the market square, inherited after his father Piotr Wołek.⁷⁵

There was a town hall in the market square, which was probably built here only in the sixteenth century. Before that, the council gathered in the house of the mayor or one of the councillors.⁷⁶ There are three entries in the oldest book of the town council from 1501 and 1555 that seem to confirm this thesis. These are sales transactions and the division of property, which concerned real estate in the form of slaughterhouses, also known as “bread sheds”, that stood in the market square, next to the town hall.⁷⁷ Moreover, after 1551, there is no information that the council gathered in the mayor’s house, hence it can be assumed that it already had a permanent seat. Franciszek Kryszak believes that, originally, there were cloth halls in the market square, later turned into a town hall, next to where slaughterhouses were erected.⁷⁸ The existence of slaughterhouses and stalls in the market was confirmed by archaeological research.⁷⁹

The aforementioned information is the only known one about the location of the sixteenth-century town hall. It is not quite certain exactly in which part of the market it was located. A little more can be said about this by analysing the plan from 1806/1827. We can see on it two burnt building blocks placed in the market: one smaller (approximately 10 x 15 m) and the other much larger (20 x 40 m), divided additionally into three parts of a similar size (approximately 13 x 20 m each). The latter was drawn a dashed line 2 to 3 m wide, adjacent to the western end and south-western corner of the building. Perhaps this was done to mark the adjacent slaughterhouses or their parts. It can therefore be presumed that one of these blocks referred to the town hall. In the eighteenth century, there was probably a clock on the building. In 1761, because of the terrible state of the town hall, it was briefly moved to the tower of the parish church. After the renovation of the seat of the town authorities, it returned to its original location.⁸⁰ The existence of the town hall was confirmed in 1774⁸¹ and 1793.⁸² It finally burned down in the fire of the town in 1806. The present town hall, built in 1835⁸³ is located in the southern part of the market square and does not include any part of the aforementioned two building blocks drawn on the plan from 1806/1827 within the market square.

In our reconstruction, we decided to designate the smaller blocks of the two (10 x 15 m) of market buildings drawn on the plan from 1806/1827 as the town hall. This is due to the fact that

well for the malt house to Piotr and his wife and their descendants, this property stretches from the street of the suburb to the malt house of Wojciech Orszulanka. Jędrzej Bedoński has allowed for the free flushing of water from the malt house through his land through gutters, with no harm to put the gutters in the ground, and allowed for the use of the well in perpetuum. Piotr Chocki with his wife gave to Jędrzej Bedoński through trade their demesne by the street running through the suburb and by the malt house of Jędrzej to the street running to the Przedmieście Wielkie Pleszewskie”.

Pleszew as a medium-sized city, it could not afford to build a town hall as large as would suggest the second block (approximately 20 x 40 m). This block probably included commercial buildings and stalls. Putting up a town hall with dimensions corresponding to a smaller block from the city plan was already possible in Pleszew. We can find a certain analogy in Sulmierzyce (in the sixteenth century Sulimierzyce), where a preserved wooden town hall from 1743 still stands. Its dimensions are similar to the alleged town hall in Pleszew. It has a tower with a clock (removed in 1879, then the tower was slightly lowered), so it is a situation analogous to the town hall in Pleszew, which in the second half of the eighteenth century, as noted above, also had a clock.⁸⁴ It is likely that the town hall in Pleszew at the time stood in the same place as its sixteenth-century predecessor. It is possible that the bigger block was composed of slaughterhouses and stalls, though we decided against marking it as such on our map, since this interpretation is uncertain. The history and location of the town hall of Pleszew requires further study. Based on archaeological excavations, we marked the slaughterhouses as located in the south-eastern part of the market square.⁸⁵

There were three churches in the town. The parish church of St. John the Baptist in the first half of the fifteenth century is described as “long-established”.⁸⁶ Unfortunately, the foundation document of this parish did not survive. In the mid-fifteenth century, four mansionaries were supposed to reside here.⁸⁷ In the early period of its existence, it could have been a church with a different *patrocinium*, and probably only at the beginning of the fifteenth century a new church was built, dedicated to the Beheading of St. John the Baptist.⁸⁸ Interestingly, in the times of Anna Raciborska it was already most likely a brick building.⁸⁹ In 1515, the heiress of Pleszew founded a chapel at the parish church dedicated to its patron, St. Anne, and also offered 3 *grzywnas* for the maintenance of the altarist.

In Jan Łaski’s *Liber beneficiorum* from 1521, the first description of the property of the Pleszew parish was listed. There are mentions of a “beautiful and wonderfully built with masonry” church and its property, which included parish buildings, a house for two vicars, a school and seven houses for mansionaries. At that time, the local parish priest, Grzegorz Bieroński, was helped by two vicars, who were dependent on the parish priest, and seven who were dependent on the foundation. Such a number of clergy and wealth of property ranked Pleszew’s parish as wealthy in the sixteenth century.⁹⁰

The building of the parish church was partially destroyed during the fire of the town in 1606. During its reconstruction in the years 1616–1618, a wooden tower was added.⁹¹ The church was destroyed a second time in a fire in Pleszew in 1715, when the top of the wooden tower collapsed on the main nave.⁹² Eventually, the church was almost completely burned down during the great town fire in 1806. It was restored in 1816, most probably with the use of the walls that had not been damaged by the fire, and in 1873, when a neo-gothic chapel was added.⁹³ Assuming that the present-day shape

⁸⁴ KZS, vol. 5, no. 11: *Powiat krotoszyński*, ed. Z. and J. Kęłowski, Warsaw 1973, p. 57. According to the tax registers from the second half of the sixteenth century, Sulmierzyce was a town slightly smaller in terms of economic potential than Pleszew. At that time, the town was paying a tax on 14 town *lans* (at that time Pleszew was paying for 9 *lans*; the following figures in parentheses correspond to the situation in Pleszew), 2 mill wheels (8–10 wheels), one boiling pot (10 pots), 14–16 craftsmen (over 80), 8–12 cotters (30). However, in 1563 we have a record that it there was a fire in Sulmierzyce at some point, the town was probably going through a crisis. Already in the register of 1618/1620 its situation is better, 34 craftsmen and 29 female cotters were recorded. According to the head tax from 1673, the towns were similar in population numbers. There were 640 people in Sulmierzyce, and 702 people in Pleszew, and apart from the townspeople of Pleszew, also manor servants and town owner with his wife were also included. The poll tax from 1674 lists 245 people for Sulmierzyce and 510 for Pleszew, though for Pleszew, it was added that this number also included the population of the nearby mills; RPWP, kls, 1552, no. 372, 735, 747; RPWP, kls, 1563, no. 89, 182, 372; RPWP, kls, 1564, no. 495; RPWP, kls, 1565, no. 573, 685; RPWP, kls, 1576, no. 384, 470, 485; RPWP, kls, 1579, no. 593, 708; RPWP, kls, 1580, no. 588, 702; RPWP, kls, 1581, no. 87, 705; RPWP, kls, 1591, no. 572; Parczewski, pp. 90, 94–96; Toll tax kal. 1673, k. 24; Toll tax kal. 1674, k. 150.

⁸⁵ Based on the suggestion of G. Gmyrek.

⁸⁶ Łaski LB, II, p. 31. S. Kozierowski believes that it was erected in the twelfth or thirteenth century, which is tied to its first mention in the town in 1283; idem, *Szematyzm historyczny ustrojów parafjalnych dzisiejszej archidiecezji Gnieźnieńskiej*, Poznań 1934, p. 161.

⁹³ KZS, vol. 5, no. 19, p. 18.

of the church building was very similar to the shape of a sixteenth-century church (without the added chapel), we treated the present outline of the church as the basis for marking it on our plan.

The church of St. Florian was probably the oldest existing church in the town, which already existed in the pre-location period.⁹⁴ The first mention of it comes from 1444.⁹⁵ It was a chapel located outside the town, by the trade road towards Jarocin.⁹⁶ It may have served as a cemetery chapel.⁹⁷ A gate led to it.⁹⁸

In her study, Maria Majczakówna included an erroneous piece of information about the foundation of the temple by Protestants during the Reformation.⁹⁹ The owners of the town at the time, the Kościelecki family, converted to Protestantism around 1560 and brought a Lutheran preacher to the parish church. It would belong to the dissenting group for 60 years. On the other hand, the Catholic bourgeoisie congregated at the chapel of St. Florian, or in the hospital church of the Holy Spirit. The church of St. John the Baptist was restored to Catholics by the later owner of the Pleszew estate, Adam Sędziwój Czarnkowski, voivode of Łęczyca, in the first half of the seventeenth century.¹⁰⁰

The church of St. Florian had a masonry presbytery and sacristy, which were added a little later according to Stanisław Małyszko – it was supposed to serve the Protestant inhabitants of Pleszew. In 1635, the church was expanded, possibly with the addition of a chapel. It is possible that the wooden part of the church was constructed then, which is evidenced in 1719. It was severely damaged by a storm in 1745 and rebuilt shortly thereafter.¹⁰¹ The church currently exists in this form.¹⁰²

On 16 June 1518, king Sigismund I the Old approved a new foundation for Anna Raciborska. It was the Hospital of the Holy Spirit, built outside the town “for the greater glory of God and for help to the poor”.¹⁰³ The complex of buildings consisted of a wooden shelter, a hospital church and an apartment for provost.¹⁰⁴ There was a cemetery around the church.¹⁰⁵ The church burned down in 1695, but it was quickly rebuilt.¹⁰⁶ According to the inspection from 1719, it was then a wooden building, which had an entrance with a tower with a bell. The hospital building consisted of two rooms. The church and hospital burnt down on 25 May 1854¹⁰⁷ and were not rebuilt. The location of this church in the sixteenth century is uncertain. We know that in the seventeenth and eighteenth century, it was located near the Holy Spirit and Poznańska Streets. According to some scholarly works, the hospital church of the Holy Spirit was built there at the time of its foundation.¹⁰⁸ Others point to it being relocated there only in 1616.¹⁰⁹ Since we cannot securely establish this, we decided to mark the church of the Holy Spirit as situated near Święty Duch (*Holy Spirit*) and Poznańska Streets on our plan.¹¹⁰

¹⁰⁸ S. Bródka, *Pod zaborem pruskim (1793–1918)*, [in:] *Dzieje Pleszewa*, pp. 91–211; A. Szymański, *Pleszew w dobie szlacheckiej*, pp. 51–91, this author mistakes the information from the editor found in the footnote with the text Łaski's writing. W. Zientarski (idem, *Zarys dziejów Parafii*, p. 6) states that already in 1518, the church was founded “by the ‘jarocka’ road”; however, on p. 8 he writes that the church was moved to a new location in 1616. Unfortunately, the lack of footnotes does not allow us to check the source of this information.

¹⁰⁹ Łaski LB, II, pp. 31–32, footnote 5, contains information based on a visitation at the church in 1811 that the church was moved to its current location after the fire of 1616, when it was rebuilt by Adam Mikołaj Załuski from Otok. Similarly in E. Linette, *Pleszew*, p. 7, based on S. Kozierowski (idem, *Szematyzm*, p. 162), who does not provide the source.

¹¹⁰ The visitation from 1811, referred to by the aforementioned authors, does not provide a precise answer. It states that “the hospital church of the Holy Spirit in the town of Pleszew in the Kalisz department, in the Odolanów district was founded by His Highness Adam Mikołaj Załuski from Otok in 1616 by the public road near Jarocka Street. After burning down, it was moved near the town houses by Anna Racyborowska, the heir of the Pleszew estates, for a general visit according to the document from 1811”; AAG, ACons. E 32, f. 453. The chronology presented in this text is disordered – Anna Raciborska was

We based its location on the plan of the town from 1806/1827, scholarship and archeological excavations.¹¹¹

Locating the castle, or rather the Pleszew manor, the residence of the heirs to the town, also caused a few problems. Until presently, no material traces of this structure have survived. We learn about what the Pleszew manor house looked like from the extensive description of the property included in the copy of a document establishing another division of the town, which was carried out after the death of Jan Cielecki in 1467¹¹² among his brothers Mikołaj, Stanisław and Wojciech. Mikołaj received the part of the town without the manor. Stanisław was allocated half of the structure, which most likely formed its main section, along with the palisade on the left side, a bridge, a defense tower (so-called *samborza*) and the basement. The inside of the castle included representative rooms – a large white chamber, to which the hall doors led. Above it, on the first floor, there was the bedroom, the chapel and the so-called “summer sitting room”, which was divided between Stanisław and Wojciech. Stairs led to the chambers upstairs. Furthermore, the part that belonged to Stanisław included a so-called clay hut with a hall, two other houses, a stable, a garden and a larger orchard that stretched from the stable to the Ner River and trench post, as well as a dike and the area up to the fence situated between the orchard and the meadow, including a pond next to this ditch.¹¹³

In turn, Wojciech received half of the manor behind the door, which led to the chamber located on the opposite side of the white room belonging to Stanisław. Above this room, there was another chamber, located opposite the to the room and chapel belonging to Stanisław. He also acquired all the property extending up to the church of St. Florian, two smaller orchards, the first of which extended from the trench post to the dyke of Stanisław’s Pond, while the other orchard lay next to the brewery, which also became his property. In addition, in Wojciech’s section, there were outbuildings: the so-called white and black house and a kitchen with a chamber next to the chamber belonging to Wojciech and located on the opposite side of the hall, behind the door leading towards Radobycze.¹¹⁴

In 1465, the manor house was surrounded by a trench (with a bridge), also mentioned in 1752.¹¹⁵ The existence of the manor house in the sixteenth century is confirmed by multiple sources from that period, which also mentioned the castle garden at Grodzka Street,¹¹⁶ leading to this residence. The horse mill near the manor house is mentioned many times, but we were unable to pinpoint its exact location.¹¹⁷ The scholarship usually advocated locating the manor in the southwest part of the town, already outside its medieval section.¹¹⁸ We consider this assumption to be correct. This is indicated by many factors. In the local tradition, it has been accepted that evidence of the manor is the street that once led to it, the aforementioned Grodzka Street, which currently connects to Ogrodowa (*Garden*) Street. The park on the latter street was called the “castle garden”.¹¹⁹ An inventory from 1781 described the manor as standing “in front of the mound, or the Lord’s orchard, which is located towards Malenie [Malinie – M.G., M.S.]”, so in the part of the town from the side of Malinie.¹²⁰ In turn, on the town map from 1806/1827, it can be clearly seen that the town developed in almost all directions except to the southwest. This confirms the location of the manor house in this place, which resulted it being impossible to build new houses in this area.¹²¹ The location of the object in question is confirmed by

the owner of the town a lot earlier than Załuski (see above). The location of the church during the times of the abovementioned owners remains uncertain.

the UMTB map, which shows the manor house with the roads leading to it and with a garden. We based our reconstruction of the manor and gardens in this area on this map, amended with the results of archaeological research.¹²² It is a location similar to the one Janusz Tomala established.¹²³ The existence of gardens (orchards) with ponds around the manor house in the eighteenth century is confirmed in turn by Pleszew's inventories, indicating the poor condition of the manor house during that time.¹²⁴

Various equipment was located outside the town limits. Tax registers from the second half of the sixteenth century record the existence of five (1565) or even six (1579 and later) mills in the vicinity of Pleszew. The names of some of them are known: Podborny (also called Borkowski; two water wheels), Maliński (one water wheel), Labkowski (one water wheel), Gajda (two water wheels), Wyszota (one water wheel), Laszowski (one water wheel).¹²⁵ Furthermore, a cloth mill (two water wheels)¹²⁶ and a kasha mortar (one wheel).¹²⁷ In the town books, we also find information about mills such as Koński,¹²⁸ Kaldoszewski¹²⁹ or an unknown water mill with water damming devices on the special dike next to Pleszew.¹³⁰ The location of most of these mills remains unknown, possibly the names can refer to the same aforementioned structures, as was the case with the Podborny mill, also called Borkowski. In this case, we know its location – it stood on the Radobycz River by the southeast road to Chorzew; it belonged to Grzegorz the miller.¹³¹ In his will, written on April 24th, 1558, we read that he distributed his property, i.e., a house, a mill and the pool, among his sons; he donated 10 *grzywnas* for the tower of the parish church, and 2 *grzywnas* for the building of the church of St. Florian, which lay “outside” Pleszew, and to the hospital of the Holy Spirit outside the town.¹³² Młyn Podborny/Borkowski was located beyond the reach of our plan.

Many of the townspeople of Pleszew brewed beer and hard liquor; some had breweries near their houses. For example, in 1540, Jan the bathhouse attendant sold his brewery near Glinki at the end of Waliszewo to Wojciech the hatmaker.¹³³ From 1479 onwards, the tax registers consistently name 10 boiling pots, which were taxed in the town.¹³⁴

At the present stage of research, it is difficult to clearly define how many suburbs there were in Pleszew. Entries from the town books indicate that they developed along the main trade routes, and one of the held a market.¹³⁵ The well-known names of the suburbs are: Waliszewo, Przedmieście Pleszewskie (*Plesze Suburb*) in Glinki, Przedmieście Wielkie (*Greater Suburb*; its other name is “towards Lenartowice”), Kaliskie and Koszutowo or Koszuty, also referred to as the Przedmieście Mniejsze (*Smaller Suburb*).¹³⁶ In one of the suburbs, named Pleszewski, there was a municipal school.¹³⁷ There is a mention in the note from 28 November 1597, about the sale of a house on Kaliska Street, next to Maciej Wilczek's house and the transverse road, and Jakub Domagała's house, in the back of the

square and garden belonging to the Pleszew school,¹³⁸ which suggests that it was the Kaliskie Suburb, often also called Pleszewskie, and also Greater. It developed along Kaliska Street.¹³⁹ In turn, in the suburbs towards Lenartowice, the townspeople owned numerous arable lands.¹⁴⁰ Waliszewo was probably located north of Pleszew, near Glinki, and the entry from 30 September 1575 confirms the existence of a bathhouse in this area.¹⁴¹ The town also developed towards the church of St. Florian, where the inhabitants owned farms and arable land. For example, in a note from 30 May 1575, the famous Łukasz Waży mięso settled the dowry of his wife Małgorzata and secured it on his own estate – on 1.5 quart of arable land and on *przydziałki* and *blewizgi* and on the demesne located in Pleszew's suburb "towards St. Florian".¹⁴² Malinie, which was a deserted village in the sixteenth century, was also called a suburb.¹⁴³

There is also a mention from 1537 of a swamp in Glinki, a suburb located to the north of Pleszew.¹⁴⁴ In this area there was also a pond called Stoki.¹⁴⁵

III.6.23.7 PŁOCK

Kazimierz Pacuski

The plan of Płock at the close of the sixteenth century was based on the previous reconstruction prepared for the map of Płock Voivodeship around 1578 by R. Cieśla.¹ For the sake of achieving a fuller presentation of the suburbs we decided to change the previous range, broadening it in the south and east, and narrowing in the west.

The source basis consisted of the oldest plans of the city from: 1793 – by Göppner, 1798 – by Schonwald and 1803 – by Schmid, as well as later cartographic records.² Thanks to S.M. Szacherska's help, we were able to reach and use written sources, unknown to R. Cieśla.³ The source data were interpreted and marked on the modern city plan at a scale of 1:5,000, which was accepted at the cartographic base of our work. Unlike R. Cieśla's plan, we refrained from a simplified version of ingoing roads, the shape of the interchanges, and the exaggerated presentation of city walls. Additionally, as with the plans of Warsaw and Rawa, we decided to exclude certain details, e.g. the approximate localization of the bathhouse, cropping house and the mills on the Vistula.⁴

Borders of ownership divisions shown on the map usually overlap with those presented by R. Cieśla and depict the reality of the close of the eighteenth century and the beginning of the nineteenth. Fragmentary entries found in the sources confirm the stability of such divisions, therefore we can refer this state to the end of the sixteenth century, especially in the case of Płock suburbs. It was assumed that the plots inside the city walls were divided regularly around the market square, and the division was schematically projected. 16 building plots were located along the longer frontage of the market square, and eight along the shorter one, each was 8 m wide and 34 m long on average.⁵ The wider plots situated next to the city walls probably contained utilitarian and residential buildings in the sixteenth century, just as they did in the eighteenth. Large utilitarian facilities were situated in these plots. We refrained from showing the dense parcelling of the Jewish district near Żydowska and Jerolimaska Street, known from detailed divisions from 1803, considering the cartographic depiction of the dense ownership later than the second half of the sixteenth century.⁶

The reconstruction of the layout of the vicinity of the Canonry Markey Square was based on the oldest plans of the city. The different arrangement of this part of the city is a result of a different arrangement structure. This area remained in the hands of the Church probably since the twelfth century. The bishops manor was situated here, along with utilitarian buildings and the houses of canons and church servants. The Chapel of St. Peter was connected with the bishop's manor at the

¹ R. Cieśla, *Plan miasta Płocka* in WP commentary, pp. 48–51; main map, *Miasto Płock około 1578 r.*, at a scale 1:10,000.

² These plans were described and published in diminution in: Nowowiejski, p. 139 f.; K. Staszewski, *Plany i pomiary miasta Płocica oraz gruntów podmiejskich od roku 1793 do lat ostatnich*, Płock 1938, p. 22.

³ S. M. Szacherska is currently working on *Zbiór dokumentów i listów miasta Płocka* [Szacherska 1975–1987]. She is the author of the chapter on Płock in the sixteenth century, eadem, *Złoty wiek 1495–1580*, [in:] *Dzieje Płocka* [in print].

⁴ Two cropping houses were situated – according to S.M. Szacherska – on the Market Square and near Bielska Gate. The bathhouses stood in Sukiennicza Street and by the Vistula near the castle. The horse mill used for milling malt stood in by the Dunajek (which flowed in the moat) next to the castle wall. Water mills operated on the Brzeźnica and the Vistula. There are numerous records about granaries, especially by the Vistula.

⁵ The measures can be read from the oldest plans of the town; they were determined by R. Cieśla, *Plan miasta Płocka*.

⁶ In 1616, there were only 25 Jewish houses in Płock and a synagogue, whereas in 1803–77 Jewish properties; Nowowiejski, pp. 133, 143 and LP, p. 58 (1616).

time. It was located over the bricked gate leading to the manor from the castle. R. Cieśla localized the chapel roughly in the bricked gothic building, which now houses the Scientific Society of Płock (Towarzystwo Naukowe Płockie), making it clear in the commentary that the building probably served as a chancellery and court of the bishop, and the chapel was situated between the castle and the palace.⁷ This localization was rejected. The bishop's manor was identified with the middle part of the palace, built at the turn of the sixteenth and seventeenth centuries probably on the site of the earlier structure, often mentioned by the sources.⁸ The gothic house 'Pod Trzema Trębami' ('Under the Three Trumpets') was built in this part of the city, next to the Grodzka Gate, most likely at the turn of the fourteenth and fifteenth centuries. The house belonged to the provost of the cathedral.⁹

The town hall, recorded already in the fifteenth century, was marked in the market square on the basis of the oldest city plans. The parochial church of St. Bartholomew, built probably in the middle of the fourteenth century, was marked in the north-western corner of the market square, together with the parochial school, a hospital for the poor, and a free-standing corner belfry. The church was oriented then and its façade faced the west.¹⁰

The collegiate church of St. Michael was the oldest church in the area, founded in the twelfth century by the duke. At some time prior to the middle of the fourteenth century it became a parochial church.¹¹ The collegiate school functioning by the church has a long tradition over several centuries. At the beginning of the fifteenth century a second monastery, of the Dominican Friars, was built near the collegiate church. There was a church by the monastery dedicated to the Holy Trinity.¹² The bricked church of the Holy Ghost with a hospital of St. Valentine was built in the sixteenth century near the Bielska Gate, on the site of an earlier temple,¹³ probably of wood. A synagogue was located in its vicinity, undoubtedly already in the sixteenth century. The building, closely connected with the life of the Jewish population, residing in Płock since the early Middle Ages, was replaced by a bricked structure at the end of the eighteenth century.¹⁴ Buildings constructed of wood dominated all over the city, while inside the walls the streets were paved.

The city was surrounded by a defensive wall from the fourteenth century. There were three gates in the walls, bay windows and a moat. On the side of the Vistula the fortifications were not recorded in cartography, except for some fragments of the northern part near the parochial church.¹⁵ This fragment of the city wall with brick towers was reconstructed on the plan in a manner as close to reality as possible.

The cathedral was marked on the castle hill and the cathedral school stood nearby.¹⁶ The Benedictine Abbey with the church of St. Adalbert was also marked. The mistaken localization of castle buildings shown on R. Cieśla's plan was corrected – R. Cieśla marked them on the site of the old ducal gord, a location which was already invalid in the sixteenth century. R. Cieśla rejected the reconstruction of the hill buildings at the end of the sixteenth century conducted by an architect S. Szyller on the basis of written sources.¹⁷ Two reconstructed lines of the castle walls were marked. Also, the

⁷ See Nowowiejski, pp. 609 f.; R. Cieśla, *Plan miasta Płocka*, p. 49.

⁸ The bishop's palace built in the beginning of the seventeenth century was relatively large, probably larger than the previous structure. The parcel was probably not so regular before the eighteenth century, as it appears on the oldest plans.

⁹ T. Żebrowski quite justly links this investment with the provosts of the Płock chapter, and especially duke Henryk around 1390; T. Żebrowski, *Płock w latach 1138–1495*, [in:] *Dzieje Płocka* [in print].

¹⁰ Nowowiejski, pp. 492 f. (study by rev. W. Mąkowski).

¹¹ *Lites ac res gestae inter Polonos Ordinemque Cruciferorum*, vol. 1, ed. 2, 1890, p. 78 (year 1338).

¹² J. Kłoczowski, *Dominikanie polscy w XIII i XIV w. na Śląsku*, Lublin 1956, p. 311. Previous hypotheses, which moved the origin of this monastery back in time, were wrong.

¹³ Nowowiejski, pp. 601 f.

¹⁴ *Ibidem*, p. 134.

¹⁵ According to T. Żebrowski, *Płock w latach 1138–1495*, the sources mention three wickets in the walls from the Vistula. A piece of information about one of them survived in the Teki Naruszewicza ("the Files of Naruszewicz"), MS in the Library of the Princes Czartoryski in Cracow, vol. 30, f. 26 (year 1513). In the eighteenth century a stone tower was attested near the hospital of the Holy Trinity "vigore privilegii ducum Masoviae kapitule darowana" (Documents of the bishop's inspection from 1775, quoted by Nowowiejski, p. 350). In 1550 King Sigismund August gave that tower, from the direction of the Vistula River, to his medic. After the death of the medic, he gave it to the Płock chapter, MRPS, vol. V, no. 879.

¹⁶ Nowowiejski, pp. 31, 33. The school actually functioned in the town, opposite to the castle, perhaps on the site of the current bishop's house, according to T. Żebrowski.

¹⁷ Nowowiejski, pp. 108, 111, 113. The description from the 1572 inventory is particularly valuable; LP, pp. 162–170.

gate and entrance to the castle, earlier incorrectly presented by R. Cieśla, were localized. The castle held a customs house, among others. The customs official had a wicket at his disposal, allowing for an exit from the castle towards the river. Many houses stood here, they belonged to the vicars of the cathedral and the servants of the castle and church. There were also some utilitarian buildings.

The plan shows also the crossing through the Vistula and the roads connecting it with the city, due to the importance of this facility in the city's economy. The crossing was localized in estimation next to the present-day end of the bridge, in the area called 'Przedmieście' ('Suburb') or 'Stara Przysiań' ('The Old Haven') in the sixteenth century.¹⁸ The ford, the crossing, and the driveway on the scarp, possible here thanks to the lay of the land and controlled by the castle (earlier: the gord), played an important role in the development of Płock already at the time of its growth in the ninth–tenth centuries. Fishermen and ferrymen inhabited this area and the Rybaki, situated below.¹⁹ The chapel of the Holy Cross and an active cemetery administered by the Dominicans were also located here.²⁰ The New Haven lay most likely next to the Old Haven, perhaps near the monastery of the Norbertine Sisters, where there were also some convenient roads leading to the top of the scarp.

Three monasteries were situated on the scarp, in the suburbs later called Wyszogrodzkie: that of the Norbertine Sisters (since the twelfth century), that of the Dominican Friars (since the first half of the thirteenth century), and that of the Dominican Sisters (probably since 1531).²¹ The Norbertine Sisters brought the name of St. Mary Magdalene to the street, which constituted a part of the Wyszogród route. The monastery's *hortulani* lived next to the Dominican monastery, a little closer to the city, and the castle's *hortulani* inhabited the area in the vicinity of the monastery of St. Mary Magdalene on the scarp. The seat of the Norbertine Sisters probably did not change its location in the first half of the sixteenth century, as could be assumed from the writings of Rev. W. Mąkowski; the 1593 inspection clearly informs us there was a newly-renovated brick church there, as well as a brick monastery, brick parson's house and numerous utilitarian buildings. However, the property of the Norbertine Sisters certainly expanded during this period, and the monastery was further developed.²²

In this suburb – aptly called *suburbium magnum* in the source – there was a small church, built in 1465 and dedicated to St. Leonard and St. Catherine (later only to St. Catherine) with a hospital for the clergy.²³

In the suburbs, next to the Bielska Gate (in the eighteenth century: the Bielskie Suburb) there was a chapel dedicated to St. Giles, built probably during the reign of Władysław Herman. In 1419 a garden was attested to here, reaching the road to Płońsk.²⁴

The Jeruzalem suburb lay near the Dobrzyńska Gate. In the eighteenth century it was called 'Dobrzyńskie suburb'. A chapel dedicated to St. Phillip and St. Jacob stood here. It was mentioned in the 1320s along with a square and a garden.²⁵

The streets and interchanges in these suburbs were marked according to the oldest plans of the city. The names of the streets were taken from the fifteenth–sixteenth century written sources and the said plans. In fact, almost all names denoted streets inside city walls.²⁶ We refrained from using the conventional name 'przymurna', which referred to the street running along the city walls. Localization difficulties prevented us from marking Wąska or Św. Łukasza Street, which led to through the Grodzka Gate to Cegielna Street, named after the city's brickyard, and then along Św. Idziego Street to the chapel of St. Giles (Św. Idzi).²⁷

The graphic presentation of the residential area and utilitarian/garden parcels is a generalization based on the corrected state from the end of the eighteenth century and the beginning of the nineteenth. It is largely hypothetical due to the fragmentary nature of the data. The sandy banks of the Vistula, marked according to the oldest city plans, were considered barren areas. The lack of detailed data did not allow us to mark the city's pasturelands and meadows.²⁸ The outline of the Vistula's scarp was based on the oldest plans, with certain corrections caused by landslides, e.g. along the castle hill, where the scarp was washed away by the Vistula and part of the castle walls was destroyed.

(1973)

Translated by Agata Staszewska

²⁸ Probably since 1435, the town pasturelands covered six lans from prince Władysław's bestowal near the Kostrogaj, north of the city. See T. Żebrowski, *Płock w latach 1138–1495*; idem, *Z dokumentów plockich*, [in:] *Dziesięć wieków Płocka*, ed. 3, Płock 1969, p. 47.

III.6.24.4 POZNAŃ SETTLEMENT COMPLEX

Paweł Dembiński

The map shows the left-bank Poznań within the ramparts (after the city's incorporation and chartering in 1253) and its closest suburbs – namely, Święty Marcin, Nowe Ogrody, Wymykowo, Święty Wojciech, Garbary, Nowa Grobla, Gaska (the street otherwise called Za Bramką), Piaski, Stelmachy, Rybaki, and Czapniki, Półwsie, and the juridical enclave (*jurydyka*) of Wenetowo. The map also shows the small town of Chwaliszewo; the other featured places include Summum (Ostrów Tumski) and Zagórze, the small towns of Ostrów, Śródka, and Stanisławowo (Łacina), the municipal villages of Kundorf, Winiary, and Bonin, the Church-owned village of Zawady and the settlement of Święty Jan (Komandoria), the municipal (later on, Chapter-owned) village of Pietrowo, and the royal village of Rataje. Outside the map, some important settlement facilities associated economically with Poznań are depicted. These included the municipal village of Wierzbica (south of Poznań), in whose area a demesne farmstead of the Wilda family was developed in the fifteenth century, which with time turned into a separate village named Wilda. Moving westwards, the municipal villages of Gaj and Jeżyce were situated, along with Sołacz, being a combined noble- and city-owned property. These four settlements are plotted in the main map.

Our attempt to create a map of the Poznań settlement complex in the sixteenth century has been based upon Old Polish maps and plans of Poznań and its surrounding areas, views of the city, as well as written sources. Among the few maps available worthy of attention is the map by the Swedish army officer, engineer and cartographer Erik Dahlbergh, compiled around 1655, printed 1697 in Nuremberg by Samuel von Pufendorf and published in 1696.¹ Compiled in the scale of approx. 1:6,000, the map was meant primarily to render the qualities of Poznań as a stronghold, hence the primary focus on the facilities and structures of military importance (fortifications, retrenchments, gates, wicket doors and entrances, waters in the city's direct neighbourhood, churches situated outside the city – not far from its walls), the other items neglected. Apart from Garbary, the Dahlbergh map showed virtually no suburbs or nearby small towns forming the conurbation.

Thus, we have no map dating to the period preceding the 'Deluge' of 1655–60 (i.e. Swedish invasion and occupation of the Polish-Lithuanian Commonwealth, as part of the Second Northern War) campaigns that would depict the location of the settlements outside the city's walls. This observation is quite essential as, despite the vast devastations caused by the war against the Swedes with the said suburbs destroyed, any map of sixteenth-century suburban settlements in the area of Poznań is but a reconstruction, largely drawing upon sources other than cartographic or iconographic records. The other existing maps dating to the eighteenth century, through valuable indeed, do not reflect the city in its heyday during the Jagiellonian age.

¹ *Ichnographia [Iconographia] Posnaniae, Metropolis Poloniae Maioris...*, monochromatic copperplate engraving, 1655, drawn by Erik Dahlberg, engraved by [François] Lapointe], 31.4 x 25.1 cm, collection of the Poznań University Library, [in:] *Plany Poznania*, city maps described and ed. D. Książkiewicz-Bartkowiak, Poznań 2010, no. 2. This map of Poznań is discussed in: H. Münch, *Plany Poznania z przed roku 1793 i ich wartość dla badań nad topografią miasta*, KMP, 1937, pp. 1–48, with a discussion of the other Old Polish maps of Poznań; J. Młodziejowski, *Plan Poznania z czasów wojen szwedzkich*, KMP, 1947, pp. 55–63; *ŻK*, no. 1, pointing to the map's scale of 1:6,000; cf. also W. Czarniecki, *Plany historyczne miasta Poznania*, Poznań 1961, describing the historical maps of Poznań and its surrounding area destroyed during the Second World War occupation; S. Alexandrowicz, J. Łuczyński, R. Skrycki, *Historia kartografii ziem polskich do końca XVIII wieku*, Warsaw 2017, p. 196.

Among these maps or plans, the one coming to the fore is a 1704 map (scale 1:5,600) drawn during the siege of Poznań – seized in those days by the Swedish troops – by the joint Polish-Saxon-Russian army, known as the Samuel Faber map.² It does feature the suburbs and reflect, at least indicatively, the change in the ground surface as well as, not quite precisely, the hydrographic network and wetlands.³ Whether the depression visible west of the ramparts was natural,⁴ given the eighteenth-century project of upgrading of the city's fortifications and their alignment to the then-modern warfare methods with use of artillery, is difficult to say.⁵ Made in 1728, in the scale of 1:5,500, the city plan by the municipal assessor Jan Rzepecki shows Poznań the city and its adjacent areas, including suburban: Garbary, the suburb before the Wrocław Gate (Brama Wrocławska), Nowa Grobla, Święty Marcin, Święty Wojciech, the villages of Kundorf and Winiary, as well as Ostrów Tumski; the small towns of Chwaliszewo, Ostrów, and Śródka, Zawady village, Święty Jan (Komandoria) settlement, and St. Roch's church. Rzepecki marked the surface features of Wzgórze Winiarskie hill, the courses of the waters, and (in rough terms) types of farmland, i.e. 'cornfields' and 'pastures'. He used diverse colours to mark the type of land ownership, and precisely drew the individual land plots within the city's walls.⁶

As remarked by Renata Graf and Alfred Kaniecki, the first precise map of Poznań is the so-called Prussian plan, scale 1:5,000, made by unknown cartographer.⁷ It shows Poznań on the left bank of the Warta, together with its suburbs, Kundorf village, and the towns of Chwaliszewo, Ostrów, Śródka, and Wyspa Tumska isle. The area's features are rendered and the courses of the period's arms of the Warta River and its tributaries Bogdanka, Wierzbak, and Cybina are precisely shown, as is the road network, bridges, and fords. Within the ramparts and the newly-erected fortifications, churches, public edifices and city blocks are depicted. As opposed to any of the earlier maps of Poznań, the so-called Złota Góra (Golden Hill) was marked within the ramparts (specifically, within the open ground southwest of the Dominican monastery). Graf and Kaniecki identify the feature as a 'two-level outlier of the higher terrace level'. Based on the inspections carried out in 1728 and 1740, it can be inferred that it was actually an elevation formed by the waste and refuse stocked at that place.⁸

² *Belagerung der Stadt Posen*, monochromatic copperplate engraving, 1704, by P.S. Faber, 38.4 x 27.9 cm, collection of the Poznań University Library, [in:] *Plany Poznania*, no. 3; according to ŻK, no. 3, the map was originally published in S. Faber, *Ausführliche Lebens-Beschreibung Carls XII., Königs in Schweden*, vol. 4, Frankfurt und Leipzig 1705. (in ŻK, nos. 4 and 5, discussed also the other city maps, from 1709 and 1721, referring to the Faber map). The manuscript map by Peter Sigfried Tabbert, portraying the city during its siege by the Saxon-Russian troops in October 1704, is unclearly related to this map; cf. S. Alexandrowicz, J. Łuczyński, R. Skrycki, *Historia kartografii*, 196, esp. *Cartographica Poloniae 1570–1930. Katalog źródeł rękopiśmiennych do historii ziem polskich w zbiorach szwedzkich*, comp. U. Ehrensward, Warsaw-Stockholm 2008, p. 161, no. 871, p. 351, Fig. 11.

³ See also R. Graf, A. Kaniecki, *Sposoby przedstawiania elementów środowiskowych na XVII- i XVIII-wiecznych planach Poznania i ich wiarygodność*, "Przegląd Geograficzny", vol. 80, 2008, no. 3, pp. 334–360; here, pp. 351–352.

⁴ A photograph of a copy of the Peter Sigfrid Tabbert map, shown by R. Graf, A. Kaniecki (idem, *Sposoby przedstawiania*, p. 352; the map's author being referred to as 'P.S. Fabbert') features no (cross)hatching that would suggest a land depression (for more on P. S. Tabbert's, see footnote 2).

⁵ For the modernisation of the Poznań fortifications in the seventeenth and eighteenth centuries, see Z. Pilarczyk, *Obronność Poznania w latach 1253–1793*, Warsaw-Poznań 1988, pp. 164 ff.

⁶ *Jurisdictionum Posnaniensium Remonstratio...*, hand-coloured copperplate engraving, 1728, by Jan Rzepecki, engraved by 'Moises in Poznań', 67 x 104 cm, collection of the Staatsbibliothek zu Berlin, [in:] *Plany Poznania*, no. 4. For more on this plan, see ŻK, no. 8; M. Warkoczewska, *Jak zrujnowany Poznań o przychylność starosty generalnego Jana Jerzego Przebendowskiego zabiegał*, KMP, 2004, no. 4, pp. 261–267.

⁷ R. Graf, A. Kaniecki, *Sposoby przedstawiania*, pp. 352–354 – which included a photograph of that plan; ŻK, no. 9, in which black and white copy of very low quality.

⁸ R. Graf, A. Kaniecki, *Sposoby przedstawiania*, pp. 352–354. In 1728, the structure was described as "a mount elevated by dung and manure, called Żydowska ['Jewish']"; M.J. Mika, *Opis Poznania z roku 1728*, KMP, 1950, p. 254. The inspection record of 1740 reads, "to a dozen cubits in height, from one end to the other, is the Żydowska Góra ['Jewish Mount'] encumbered with manures, the carrying away of which would require several thousand to be collected, for those manures and rabble, without becoming aware of the size"; *Opisy i lustracje Poznania z XVI i XVII wieku*, ed. by M.J. Mika, Poznań 1960, p. 203. It cannot be established whether the waste was piled up at that place due to its specific terrain conditions—a slightly elevated ground—preventing the construction of buildings or use for commercial purposes, or the dump site was formed on an empty ground formed resulting from a fire or warfare damage; the latter option seems more plausible. A developed space in this part of the city is featured in the map of fifteenth-century Poznań as reconstructed in Wiesiołowski, *Socjotopografia*, Fig. 9 (for more on how valuable this study is for the recognition of the city's image within the ramparts, see below). The elevation is not featured, let us add, on the 1771–1773 Geyer map, which otherwise renders the land relief much in detail (cf. below). Given the information quoted after the inspection record, the name 'Złota Góra' vel Goldberg assumes an unambiguously derisory purport.

The 1761 plan by I.G. Daumann, of approximately 1:3,600, shows the city itself, its major features and blocks within the fortifications, including the closest foregrounds and the developments of Wzgórze Świętego Wojciecha hill.⁹ The watercourse flowing within the walls, between the Bogdanka Mill near the Dominican nunnery and the city's moat, close to the Wronki Gate (Brama Wroniecka), is shown as well.

Highly valuable is the map made in 1771–3, scale approximately 1:6,100, attributed to S.F. Geyer.¹⁰ The map renders the city's developments within the fortifications (incl. the eighteenth-century walls in Wroniecka, Mokra, and Żydowska (marked as 'Sukiennicza' in our map) Streets, obstructing the entry to the Jewish Quarter), the towns of Chwaliszewo, Śródka, and Ostrów, and the suburban villages – Kundorf, Winiary, Bonin, Zawady, Święty Jan, Łacina, and Wilda. The map is of importance for identification of the landform, the course of the waters¹¹ and the road network around Poznań in the second half of the eighteenth century.

A much larger area is presented in the map by Karol Grund,¹² prepared in 1780, at the scale of 1:6,830. Villages and settlements situated further away from Poznań are plotted on it, including Sytkowo, Sołacz, Winiary, Jeżyce, Kundorf, Bonin, Zawady, Komandoria (i.e. Święty Jan), Pietrowo, Łacinę, Rataje, Żegrze (herein, as 'Zegrz'), Luboń, Wilda, and Górczyn ('Górczyno'), many of them together with the ranges of their related fields. The map features cultivated land (ownerships indicated), pastures, meadows, and forests of Dębina, the course of roads and the landform. The map has proved particularly useful in determining the position of the *jurydyka* of Wenetowo and the range of the suburban village of Wierzbica. The latter perished by the eighteenth century, and Wilda village emerged on the ground formerly occupied by it.

The reconstruction of the Poznań settlement area herein proposed has moreover drawn from the *Planta M. Poznania 1784*, the map by Jan Bończa Krzewski, dated 1785 (its 1926 copy has been used), Prussian maps from 1795 (featuring Poznań and its nearby villages), 1803–4, and 1841.¹³

As far as the useful iconography featuring the old Poznań is concerned,¹⁴ of primary importance is the city's northern-view panorama, published in 1618 by Georg Braun and Franz Hogenberg, in Cologne,¹⁵ in volume six of their work *Civitates orbis terrarum*. The view is probably from Wzgórze Świętego Wojciecha (St. Adalbert Hill). It is the earliest view we are aware of, a sort of city plan with considerable amounts of detail regarding the layout of the urban area, the city's major buildings – the castle, the town hall, the marketplace with (selected) stalls, walls, and gates, the Red Tower (Wieża

⁹ *Plan de La Ville de Posen dans L'Etat ou elle consiste L'année MDCCLXI*, manuscript, in colours, 1761, by I.G. Daumann, 25.5 x 21.3 cm, collection of the Staatsbibliothek zu Berlin, [in:] *Plany Poznania*, no. 5; ŻK, no. 10.

¹⁰ *Plan von der Stadt Posen*, manuscript, in colours, c. 1771–3, author unknown (probably, S.F. Geyer), 43.0 x 66.9 cm, collection of the Staatsbibliothek zu Berlin, [in:] *Plany Poznania*, no. 6; ŻK, no. 11. According to the *Historische Pläne und Grundrisse von Städten und Ortschaften in Polen. Ein deutsch-polnischer Katalog*, ed. A. Jammers, with contributions from E. Kemp, Wiesbaden 2000, p. 319, the map was made c. 1775 (the editors do not specify its author's name).

Czerwona), the Górk Palace, St. Mary Magdalene's Collegiate church, the churches of the Dominican friars and Dominican nuns, the Holy Spirit church, the Observant Franciscan and the Carmelite churches), suburbs, Chwaliszewo town (incl. its town hall and St. Barbara's church), and the cathedral island (shown partly with the fortifications, the Cathedral, Our Lady's and St. Nicholas's Collegiate churches), and Łacina. The panorama moreover renders (albeit in a deformed way) the course of the waters close to the city (the Warta's branches and the moat), and the bridges. In spite of its somewhat formulaic form, with drawings of small, almost identical houses marking the development lines, the image renders the extensiveness of the city's entire settlement complex before the Swedish invasion. No such value is represented by the city's schematic view drawn around 1631.¹⁶ The subsequent such views date to the eighteenth century, the time Poznań severely suffered during the Great Northern War. The city is shown on these views from the south (the 1704 view, documenting the siege by Augustus II's army¹⁷) or south-east (views from 1728¹⁸ and 1734). Especially the latter one made by Friedrich Bernhard Werner and showing probably a view from St. Roch's church tower, is of high documentary quality.¹⁹ The other one is the south-eastern view from ca. 1793 r.²⁰ As a useful source, no less important are the numerous gouaches by Karol Alberti, evidencing the apparition of a number of buildings – many of them no more existing, demolished under the Prussian Partition as part of the city's redevelopment project.²¹

The written sources related to Poznań and the juridical enclaves and small towns forming the Poznań conurbation, in spite of the damages inflicted during the repeated wars, have survived quite abundantly; most of them are stored today at the State Archives and the Archdiocesan Archive in Archive in Poznań. These records have been discussed by Irena Radtke, Antoni Gąsiorowski, Stanisław Nawrocki, Marian Banaszak and Feliks Lenort.²² Of significance for the proposed map were primarily the files generated by supreme secular (kings, dukes and their officials) and ecclesiastical authorities (bishops, their vicars and the local Chapter) as well as the municipal authorities (city council and municipal tribunal/magistrates' court). For the Middle Ages, many of them have been published in print, particularly in the *Greater Poland's Diplomatic Code (Kodeks dyplomatyczny Wielkopolski)*.²³ The mediaeval town council files and some of the municipal tribunal's files have been edited by Adolf Warschauer and Kazimierz Kaczmarczyk.²⁴ Editions dedicated to the privileges obtained by Poznań and a number of files (deeds, acts) from the Old Polish period related to this city (illustrations, municipal statutes (so-called *wilkierzs*) have been prepared by Feliks Pohorecki, Witold Maisel, Marian J. Mika, and other authors.²⁵ Of paramount importance in view of recognition of the city's topography, the suburbs included, are especially the registers of the municipal tribunal preserved since 1430. They recorded the trade in real properties and in the rents allotted to them, specifying the position of houses

¹⁶ M. Warkoczevska, *Widoki starego Poznania*, p. 30.

¹⁷ *Poznań ściśle obleżony Roku Pańskiego 1704 ...*, copperplate engraving 18.5 x 31.3 cm; this view is discussed in M. Warkoczevska, *Widoki starego Poznania*, pp. 33–34, Fig. 6; eadem, *Portret miasta*, pp. 11–13.

¹⁸ It is a panorama featured within the city's plan by Poznań's assessor J. Rzepecki; M. Warkoczevska, *Widoki starego Poznania*, pp. 34–35, Fig. 7; *ŻK*, no. 8; *Plany Poznania*, no. 4.

¹⁹ For more on this view, see M. Warkoczevska, *Widoki starego Poznania*, pp. 36–7, and, esp., eadem, *Portret miasta*, pp. 18–21, giving the precise date of its making.

and parcels by street and name (plus nickname) of the owners of adjacent properties. Similarly for the municipal villages, however without giving a street name since a village would normally have one road. For the fifteenth century, those registers (nine altogether, totalling approximately 15,000 entries) have been used by Jacek Wiesiołowski in his studies on the city's late mediaeval sociotopography²⁶ – and, in compiling a map of Poznań within the ramparts, with all the pieces of real estate plotted.²⁷

The modern research into the history of Poznań dates back to the nineteenth century; these studies were commenced by Edward Raczyński and Józef Łukaszewicz, two amateur enthusiasts cooperating with each other. Łukaszewicz, a librarian at the Raczyński Library, published *Obraz historyczno-statystyczny miasta Poznania*,²⁸ a study on Poznań in historical and statistic terms. Raczyński, bibliophile and collector, founding father of a public library, was primarily active as a patron. His passion as a research scholar led him to the publishing of the *Diplomatic Code of Greater Poland (Kodeks dyplomatyczny Wielkiej Polski)*, a collection of diplomas related to the province, or the *Wspomnienia Wielkopolski*, a book on the history of the region and Poznań.²⁹ The initiator of the German Historisches Gesellschaft für Provinz Posen (1885), Poznań-based archivist Adolf Warschauer, has considerable merits in discovering the city's history – both as the editor/publisher of historical records and populariser.³⁰ The growing interest in the past of Poznań after Poland regained independence in 1918 translated into a series of non-institutional publications on its history and numerous articles published in the *Kronika Miasta Poznania*, some of them covering Poznań's institutions, families, buildings or objects related to the city and its dwellers.³¹ Among the publication worth one's attention are certainly the studies by Mika and Maisel, referred to above, and the work by the Rev. Józef Nowacki exploring the history of Poznań archdiocese – *Dzieje archidiecezji poznańskiej*, with the first volume dealing with the Poznań Cathedral and the second with the diocese and largely covering Poznań's Church institutions such as St. Mary Magdalene's parish, the adjacent parishes of St. Martin and St. Adalbert St. Margaret and St. John, convents and hospitals (hospices), as well as ecclesiastical institutions in small towns outside Poznań.³² The sacral buildings originally used by many of those institutions were described in *Katalog zabytków sztuki w Polsce*,³³ a catalogue of art monuments in Poland. The agglomeration's legal structure has been depicted by Zofia Kulejewska-Topolska.³⁴

In the 1960s, the work on a historical-geographical dictionary of Polish Lands in the Middle Ages' (*Słownik historyczno-geograficzny ziem polskich w średniowieczu*) was initiated. As part of this long-term research project, fascicles under its aegis were published in print since the 1980s, comprising entries related to the once-Voivodeship of Poznań, including the villages and towns situated outside Poznań, such as: Bonin, Chwaliszewo, Czapniki, Jeżyce, Ostrów, Pietrowo, Stanisławowo, Summum,

²⁶ AP Poznań, Akta miasta Poznania, sign. I 291–I 299. J. Wiesiołowski's *regests* are kept at the Library of the Poznań Society for the Advancement of Arts and Sciences [PTPN], MS 1545. Let us emphasise that the analogous archival resource available for the sixteenth century is even larger, consisting of eight volumes of seconds of City Council resignation registers (AP Poznań, Akta miasta Poznania, sign. I 300–I 307), and nine Magistrates' Court resignation registers (ibidem, sign. I 309–I 317).

³³ KZS sn, vol. 7: *Miasto Poznań*, part 1: *Ostrów Tumski i Śródka z Komandorią*, comp. B. Dolczewska et al., ed. E. Linette, Z. Kurzawa, Warsaw 1983, part 2/1–2/2: *Śródmieście – kościoły i klasztory*, ed. Z. Kurzawa, A. Kuszelski, Warsaw 1998–200).

³⁴ Z. Kulejewska-Topolska, *Struktura prawna aglomeracji osadniczej Poznania od XV do końca XVIII wieku*, Poznań 1969; Z. Kulejewska, *Rozwój zabudowy miejskiej poza murami. Powstawanie jurydyk*, [in:] *Dzieje Poznania do roku 1793*, vol. 1, part 1, pp. 398–404; eadem, *Ustrój prawny jurydyk*, [in:] ibidem, pp. 404–409.

Śródka, Święty Gotard, Święty Jan (also, Święty Jan – House of the Knights of Saint John of Jerusalem), Święty Łazarz, Święty Marcin, Święty Wojciech, Wenetowo, Wierzbica, Wierzbny Młyn, and Wilda. Their names used here follow those most frequently used in the mediaeval period, as identified for the dictionary's purposes.³⁵

The anniversaries of the foundation and incorporation of Poznań repeatedly provided the opportunity to recall the city's old glory; conferences and publications summarising the knowledge of Poznań lent splendour to the celebrations.³⁶ Poznań saw a modern synthetic study on its history, up to the Second Partition of Poland (1793), published in as late as 1988.³⁷ Among the rich literature on Poznań, special attention is deserved by the already-quoted study penned by Jacek Wiesiołowski, *Socjotopografia późnośredniowiecznego Poznania*, summarising the knowledge on the colonisation and settlement within the city's its ramparts and the agglomeration's social change in the late Middle Ages.³⁸ Given the scarcity of analogous research for the sixteenth century,³⁹ maps or plans from the period, with only a few maps produced before the mid-seventeenth-century 'Deluge', the Wiesiołowski study has offered the basis for making up a plan of the city within its walls. As regards our proposed map of the settlement complex, the maps compiled by Adolf Warschauer, Zbigniew Zieliński, Anna Rogalanka, and Stefan Abt⁴⁰ have proved quite useful.

A system of roads going out of Poznań has primarily been presented by Stefan Weymann⁴¹. Fifteenth-century traffic routes within the city and in its closest neighbourhood are discussed by Jacek Wiesiołowski, in the above-quoted study.⁴² The use of water within the city's limits has been addressed by Urszula Sowina; the historical physiographic conditions and the hydrographic system within the conurbation of Poznań are shown, based on geological analysis and historical research, by Alfred Kaniecki.⁴³ This author has also presented the locations of Poznań watermills. For a more precise identification of the deployment of these mills, the material from the files of the Section for the Historical-Geographical Dictionary of Greater Poland, Institute of History, Polish Academy of Sciences (IH PAN), has proved useful.⁴⁴

³⁵ SHGPoz, part I, pp. 89–90, 235–242, 281; SHGPoz, part II, pp. 84–95; SHGPoz, part III, pp. 515–518, 659; SHGPoz, part IV, pp. 634, 745–749; SHGPoz, part V, pp. 134–253, 542–544, 608–611, 616–617, 657. For the demesne farms and municipal villages, cf. also J. Majewski, *Gospodarstwo folwarczne we wsiach miasta Poznania w latach 1582–1644*, Poznań 1957. As regards the reference of names to physiographic objects, the recently published monograph *Nazewnictwo geograficzne Poznania. Zbiór studiów*, ed. Z. Zagórski, Poznań 2008 does not seem quite reliable: for example, the name "Noteć" is referred to an arm of the Warta outside Poznań and the river's right tributary (p. 314); the name "Rudnik" is erroneously referred to Wierzbak (p. 314); also, see SHGPoz, part IV, p. 215; SHGPoz, part V, p. 525, footnote 4.

⁴⁴ For the locations of watermills in the vicinity of Poznań, cf. also J. Gołaski, *Atlas rozmieszczenia młynów wodnych w dorzeczu Warty, Brdy i części Baryczy w okresie 1790–1960*, part 1: *Środkowa Warta, Proсна i Barycz*, Poznań 1980.

The above-enumerated material (together with the maps, surviving mainly for the Old Polish age) proved supportive in determining of the locations of the bridges.⁴⁵

To summarise the above argument on the condition of the surviving sources, particularly the cartographic and iconographic records, let us emphasise that the proposed map of the Poznań settlement complex is a reconstruction based on historical records whose chronology deviates, at several points, from the *terminus* adopted for the AHP series as at the end of the sixteenth century. Hence, the proposed map of Poznań is but a firm version of the status that calls for a finer elaboration, in a number of essential details, by way of laborious archival search, research, and investigation. Consequently, certain items whose location could not be precisely defined have been omitted.⁴⁶

Poznań is situated within the longitudinally oriented, broad valley of the Warta River. The major tributaries in the area are Cybina and Główna (right-bank), Bogdanka (alias Rudnik, Flisa) and Wierzbak (left-bank). The Warta would overflow broadly in that area into several branches, some of which have perished, forming natural fords that facilitated transport and offered conditions that welcomed settlement. The valley is composed in that area of seven terrace levels, the lowest of which – terrace (river floodplain) I – is approximately 800 wide and ca. 53 m AMSL high (in absolute height terms) and appears on both banks.⁴⁷ The second terrace, 55 to 57 m AMSL high., appears ‘in a small fragment’ on the left side of the Warta which is adjacent in the south to the Bogdanka valley. It was thereon that the town of Poznań was located in the thirteenth century. Terraces IV (62.5–66.5 m AMSL) and VI (70 m AMSL), situated higher, became the sites at which the suburban villages, presently integrated into the city, were founded.⁴⁸ Each of the highest terrace levels, some of them isolated, was named a ‘mount’ (*góra*): hence, the Zamkowa, Świętego Wojciecha, Czerwowa (Łysa), and Muszyńska Mounts. The hydrographic network shown in the map is a reconstruction of the Poznań settlement area at the end of the sixteenth century, compiled on the basis of later maps and the findings of A. Kaniecki.⁴⁹

The favourable natural conditions, among which the convenient crossing of the numerous arms of the slow-flowing Warta seems to have excelled, fostered the development of colonisation and settlement, which initially spread in the area of floodplain I. It was right there, in the area of Ostrów Tumski (Summum) and Zagórze, that the early Piast stronghold (burg-city) was erected, along with the cathedral and outer baileys.⁵⁰ Around this centre, other settlements developed by the middle of the thirteenth century which later on formed the extensive settlement area of Poznań.⁵¹ On the right bank of the Warta, those included the ducal settlement of Śródka, with a market,⁵² and the settlement that emerged by St. Michael’s (St. John’s) church, which was thereafter, at the end of the twelfth

⁴⁵ For more on the bridges, see *Opisy i ilustracje Poznania*, pp. 72 (Wielki Bridge), 89 (Łacina), 123 (Wielki and Łacina), 193 (Łacina), 194, 195 (Wielki), 204 (Wielki), 221, 225–9, 240, 300 (Wielki); *Warta*, [in:] SHGPoz, part V, pp. 518–23, footnote 5. Our map does not feature the bridge located between Nowa Grobla and Chwaliszewo (which functioned while the Wielki Bridge was destroyed), as marked on J. Rzepecki’s map (*Plany Poznania*, no. 4); also, cf. J. Łukaszewicz, *Obraz historyczno-statystyczny*, pp. 71–73; A. Chybiński, *Most Chwaliszewski*, KMP, 1924, pp. 49–56; Z. Karolczak, *Tajemnice mostu św. Rocha*, KMP, 1995, no. 3, pp. 295–301; W. Karolczak, *Mosty w dawnym Poznaniu (do 1939 roku)* [exhibition catalogue], Muzeum Narodowe w Poznaniu, Poznań 1996; A. Ryżyński, *750 lat poznańskich mostów*, Poznań 2003, pp. 5–39; idem, *Most Cybiński*, KMP, 2003, no. 1, pp. 430–440; idem, *Kiedy wybudowano pierwszy most przez Wartę w Poznaniu*, KMP, 2014, no. 1, pp. 245–256; J. Borwiński, *Most św. Rocha. Odkrycie dokumentów z aktem erekcyjnym. Dzieje największej przeprawy mostowej dawnego Poznania*, KMP, 2014, no. 1, pp. 267–282.

⁴⁶ This is true for, e.g., the city’s brickyards (cf. footnote 80). The remark is also applicable to the old Jewish cemetery, whose exact location is shown in the eighteenth-century maps, at the earliest. Also the localisation of the city towers, known by their names proper of names of their proprietors, also raises doubt (see below for more).

century, bestowed to the Sovereign Military Order of Malta (Knights of St. John of Jerusalem).⁵³ On the left bank of the river, terrace II area, right by the river passage, a commercial settlement developed since the eleventh century. The beginning of the following century saw the appearance of a nearby St. Gotthard's church: originally situated probably in the north-eastern part of the later city, within its ramparts, the church disappeared by the late mediaeval period. It was most probably designed for the foreign merchants participating in the far-reaching trade between Rhineland and Rus'.⁵⁴ The possible appearance at so early a stage of a settlement by what is St. Martin's church today is a debatable matter.⁵⁵ Otherwise, there is no doubt that a settlement developed since the twelfth century by St. Adalbert's (*św. Wojciecha*) church.⁵⁶

A breakthrough moment in the history of Poznań settlement complex was the incorporation of the municipal commune at the left bank of the river, as formally approved by the ducal document dated 1253.⁵⁷ As the recent research by Tomasz Jasiński has demonstrated, this act was probably strictly related to the intensified flows of commodities (chiefly, salt and cloth) from Saxony to Prussia and the movement of Saxon (and Silesian) settlers into the territory of the state constructed at that time by the Teutonic Order.⁵⁸ It however seems obvious that, regardless of the above-specified premises, the duke's striving for benefits from the progressing commercialisation was among the reasons behind the incorporation.⁵⁹ The course of the foundation/incorporation was a long-lasting process. Leaving aside the complicated political situation, in the specific case of Poznań it was conditioned by the need to settle the ownership relations: in particular, the area where the new commune was to emerge had to be obtained from the Church, in exchange for economic concessions – an idea that aroused social resistance.⁶⁰ The difficulties obstructing the bringing about of the objective in question were indubitably contributed to also by the natural conditions. The ducal locality of Śródka, which in the 1230s was intended to become a centre of the new municipal commune, did not have access to a resource of

⁵⁴ W. Błaszczuk, *Wyniki badań archeologicznych w strefie osady Św. Gotarda na Starym Mieście w Poznaniu*, [in:] *Początki i rozwój Starego Miasta*, 165–181; W. Fritze, *Hildesheim – Brandenburg – Posen. Godehard-Kult und Fernhandelsverkehr im 12. Jahrhundert*, [in:] *Beiträge zur Entstehung und Entwicklung der Stadt Brandenburg im Mittelalter*, Berlin-New York 1993, pp. 103–130; M. Młynarska-Kaletynowa, *O kulcie św. Gotarda w Polsce XII i XIII wieku*, [in:] *Spółczesność Polski średniowiecznej. Zbiór studiów*, vol. 6, ed S.K. Kuczyński, Warsaw 1994, pp. 75–91; SHGPoz, part V, pp. 134–135. On the said commercial route which arguably functioned between, approx., 1135 and 1159, cf. T. Jasiński, *Uwarunkowania lokacji Poznania*, [in:] *Civitas Posnaniensis*, pp. 162–167.

⁵⁵ I. Skierska remarks that no unambiguous identification of the time and place of the founding of the settlement is possible (SHGPoz, part V, pp. 160–162, discussing the arguments on the location of the original Święty Marcin settlement). Earlier on, it was accepted that the settlement emerged in the 12th century (Z. Kaczmarek, *Przywilej lokacyjny dla Poznania z r. 1253*, *PZ*, vol. 9, 1953, no. 6–8, p. 155), developing along the route leading to Buk (A. Rogalanka, *Poznań u progu lokacji*, p. 167). That the settlement situated by the present-day St. Martin's Church appeared so early has been denied by archaeological research, which dates it instead at as late as the late fourteenth/early fifteenth century. Presently, archaeologists believe that the original centre of the village was located at Góra Przemysła (Góra Zamkowa), in the area of the present National Museum edifice; J. Kaczmarek, *Między grodem a miastem. Przemiany osadnicze na terenie aglomeracji poznańskiej w X–XII wieku*, [in:] *Civitas Posnaniensis*, pp. 47–48; eadem, *Archeologia miasta Poznania. Stan badań i materiały*, vol. 1, part 1–2, Poznań 2008, here part 1, pp. 322–324, 326; P. Pawlak, *Cmentarzyska przedlokacyjnego Poznania*, pp. 77–78; M. Przybył, *Poznań na tle szlaków komunikacyjnych*, p. 120. There is no doubt, however, that in the late mediaeval period the settlement stretched along the road to Buk, near its crossing with the highroad to Wrocław; SHGPoz, part V, p. 162.

⁵⁶ The settlement is believed to originally develop not at Wzgórze Świętego Wojciecha (no traces of it have been found there) but more southwards, on the bank of the Bogdanka, by the Lubusz road that ran along the rivulet's northern bank; J. Kaczmarek, *Między grodem a miastem*, p. 46; SHGPoz, part V, p. 196–254, lists the relevant literature; cf., esp., an extensive comment by G. Rutkowska on p. 196. For the settlement's location in the fifteenth to eighteenth centuries, see A. Rogalanka, *Poznań u progu lokacji*, p. 168.

⁵⁷ *Przywileje miasta Poznania*, no. 3.

⁵⁸ T. Jasiński, *Uwarunkowania lokacji Poznania*, pp. 167–172.

⁵⁹ For a detailed discussion on the issue, see S. Gawlas, *Przełom lokacyjny w dziejach miast środkowoeuropejskich*, [in:] *Civitas Posnaniensis*, pp. 133–162.

⁶⁰ Cf. T. Jurek, *Przebieg lokacji Poznania*, [in:] *ibidem*, pp. 173–191, specifying the reference literature on Poznań's incorporation.

flowing waters comparable to that of Saint Gotthard settlement. The numerous watercourses – Bogdanka, Wierzbak, and the side riverbeds of the Warta – were capable of providing vast amounts of running water indispensable in the processing of cloths and hides, and favoured the setting up of facilities such as mills and waulk (fulling) mills. Moreover, they formed a natural defensive barrier.⁶¹ It has to be noted, though, that the close distance to the Warta and the potential flooding of the swollen river posed quite a considerable threat to the dwellers; they faced a flood in as early as 1253.⁶²

The death of Duke Przemysł I in 1257 deprived Poznań of its guardian; his successor Boleslaus the Pious (Bolesław Pobożny) preferred Kalisz and Gniezno instead. The commune developed rather slowly: its parish (with St. Mary Magdalene's church), necessary for a newly incorporated centre, was set up only in 1263 (extending solely to the town within its fortifications),⁶³ as was the local hospital. Soon afterwards, in 1274, Poznań was burnt down in a Brandenburg invasion,⁶⁴ but gained a good master and landlord in Duke, and later King, Przemysł II.

In association with the founding and incorporation procedure, the thread of seventeen villages 'bestowed' on the city by the duke in 1253 remains unclear.⁶⁵ The view has been accepted that the said villages (of which some, irrefutably, did not belong to the city at the moment of its incorporation)⁶⁶ were only subjected to the German Law enforced by the vogt of Poznań. Within their limits, the vogt had a monopoly on settling the settlers, founding mills and hunting; he could also measure out thirty *lans* for his own purposes, and another twenty for pastures of the burghers. This was, arguably, the actual land bestowal granted by the duke.⁶⁷ Still, the city's landed property expanded with time. In the late years of the Middle Ages, Poznań possessed the villages of Kundorf, Winiary, Bonin, Jeżyce, Gaj, Luboń, Wierzbica and, partly, Górczyn (AHP: Górczyno).⁶⁸ Pietrowo, which initially belonged to the city, was property of the Poznań Cathedral Chapter already as of 1584.⁶⁹ At the beginning of the

⁶¹ On the role of natural conditions, cf. A. Kaniecki, *Poznań*, pp. 124 ff.; "it was more advantageous to have mills constructed on smaller watercourses or on the arms of the Warta: it was easier then to build dams, thereby avoiding the effects of high-water stages and hummocks" (p. 129). Also, see M. Słoń, *Miasta podwójne i wielokrotne w średniowiecznej Europie*, Wrocław 2010, p. 355.

⁶² Cf. T. Jurek, *Przebieg lokacji Poznania*, p. 183.

⁶³ On St. Mary Magdalene's (since 1471, Collegiate Church) cf. Now2, pp. 607–611; W. Gałka, *O architekturze i plastyce dawnego Poznania do końca epoki baroku*, Poznań 2001, pp. 74–75, 107–109, 122–123, 132–134, 215, 239; a separate KMP volume deals with this particular church: no 3, 2003. According to S. Skibiński, the Poznań parish church was initially housed at the Dominican Sisters' Church, but this view is indefensible; idem, *Gotycka architektura kościoła farnego pod wezwaniem Marii Magdaleny w Poznaniu*, [in:] *Początki i rozwój Starego Miasta*, pp. 422 ff.; contributory opinions by E. Linette and A. Gąsiorowski are also reported therein, pp. 470, 475–7. On the church's foundation date, T. Jurek, *Wokół zagadek najdawniejszych dziejów poznańskiej fary*, KMP, 2003, no. 3, pp. 46–62, with reference literature specified; idem, *Przebieg lokacji Poznania*, p. 187. In the opinion of M. Słoń, the origins of the Poznań parish date back to 1253; M. Słoń, *Fundatio civitatis. Program fundacyjny procesu lokacyjnego na przykładzie Wrocławia, Krakowa i Poznania*, [in:] *Procesy lokacyjne miast w Europie Środkowo-Wschodniej. Materiały z konferencji międzynarodowej w Łądku Zdroju, 28–29 października 2002 roku*, ed. C. Buško, M. Goliński, and B. Krukiewicz, Wrocław 2006, pp. 227–245; idem, *Fundacja Poznania. Dominikanie, fara, szpital i lokacja miasta*, [in:] *Ambona. Teksty o kulturze średniowiecza ofiarowane Stanisławowi Bylinie*, ed. K. Bracha and W. Brojer, Warszawa 2016, pp. 81–106.

fifteenth century, the burghers temporarily held land partitions in the noble-owned village of Sołacz, situated not far from the city; Poznań finally bought Sołacz out at the end of the sixteenth century.⁷⁰

In spite of the difficulties summarised above, the construction of the new city progressed with astonishing consistency. This is attested by the mostly preserved regular, chessboard layout of streets (whose historical names are marked on the map⁷¹) and city blocks adjacent to the large square-shaped market, with sides of approximately 140 m).⁷² The layout is visible in the earliest maps/plans and in the city's panorama dated 1618. In the midst of the market square, wooden (and then, possibly since the end of the fourteenth century, brick) developments – stalls, including butcher stalls⁷³ (marked (a) to (e)). The city hall, whose origins possibly date back the late thirteenth/early fourteenth century, was built in the north-eastern part of the market. A weigh-house stood nearby, along with a cloth cropping house (west of the weigh-house; not marked in the map).⁷⁴ Among the public edifices within the ramparts, the parish (later, collegiate) church of St. Mary Magdalene should be mentioned, along with the monastic churches of the Dominican monks (St. Dominic's; the community was resettled into the Saint Gotthard settlement in 1244) and Dominican nuns (SS. John and Paul; later on, St. Catherine's)⁷⁵ and St. Stanislaus's church, built at the beginning of the sixteenth century. The latter was bestowed to the Jesuits, who were brought into Poznań in 1570 (the other bestowal was St. Gertrude's chapel, adjacent to the namesake hospital).⁷⁶ The map furthermore features the Górká Palace, which was formed of joint tenement houses occupying a block area along one of the market's sides. In the first years of the seventeenth century, the edifice became property of the Benedictine nuns' convent; the cloistresses had it redeveloped into a monastery.⁷⁷

⁷⁰ SHGPoz, part IV, p. 598–601; for the acquisition of the village by the municipality at the end of the sixteenth century, see Z. Kulejewska-Topolska, *Struktura prawna aglomeracji*, p. 162.

The Poznań city hall is discussed in a dedicated KMP volume, no. 2, 2004; also, see above, footnote 73.

⁷⁵ Now2, pp. 762–763, 776; J. Wiesiołowski, *Klasztory średniowiecznego Poznania*, [in:] *Początki i rozwój Starego Miasta*, pp. 405–419; KZS sn, vol. 7, part 2/2, pp. 20–48; W. Gałka, *O architekturze i plastyce*, pp. 50–60, 71–74, 125, 127, 138, 146–149, 209–215, 298; J. Kowalski, *Gotyki wielkopolski. Architektura sakralna XIII–XVI wieku*, with photographs by M. Potocki, Poznań 2010, pp. 26–31, 38, 47–48, 53–54, 348, 355. The literature and sources related to the Dominican friars' monastery are discussed in K. Kaczmarek, *Stan i potrzeby badań nad klasztorami męskimi średniowiecznej diecezji poznańskiej*, [in:] *Historia życia konsekrowanego w archidiecezji poznańskiej*, ed. L. Wilczyński, Poznań 2010, pp. 12, 17, 25, 28–29; A. Skorupińska, *Klasztory żeńskie w średniowiecznej diecezji poznańskiej*, [in:] *ibidem*, pp. 36–39. The Dominicans of Poznań are dealt with in a separate KMP volume, no. 3, 2004. On St. Mary Magdalene's parish church, cf. footnote 63.

⁷⁶ In 1521, the Poznań judicial vicar [officialis] integrated with the hospital the adjacent bankrupt foundation of St. Gertrude's hospital and chapel (neither is shown on the map); on the St. Stanislaus Church and hospital bestowed to the Jesuits, cf. Now2, pp. 652–653, 738, 769; KZS sn, vol. 7, part 2/1, pp. 1–50; SHGKart; also, see W. Gałka, *O architekturze i plastyce*, pp. 262–298; *Kronika Jezuitów poznańskich (młodsza)*, vol. 1: 1570–1563, ed. L. Grzebień, J. Wiesiołowski, Poznań 2004. A separate KMP volume is devoted to the Jesuits of Poznań, no. 4, 1997.

⁷⁷ The building, inherited from the Górká family by Piotr Czarnowski, was sold in 1595 to the Lutheran community for the enormous amount of 20,000 fl.; a year later, after the protests related to the planned construction of a Protestant church, it was given up by the Lutherans to Czarnkowski for the same amount. The palace was eventually bought out by the municipality,

We have not reconstructed the range of Poznań's Jewish Quarter, as it cannot be delineated precisely. Jews inhabited the city's northern part, limited, roughly, by the streets Wroniecka and Żydowską (called 'Sukiennicza' in our map) and what is today Mokra St. A synagogue was most probably located in the middle of that quarter.⁷⁸ Jewish houses were moreover situated in close proximity to the Dominican Friars' monastery, along Przed Mnichy and Mała Żydowska Streets.⁷⁹ No public facilities such as the baths (in Woźna and Kozia (here: 'Świętosławska') Sts.), brickyards,⁸⁰ or the city's *marształ* (i.e. stable) are plotted. Located in Kozia (Świętosławska) St.), the stable ceased to exist in the 1460s. The other structures/facilities not marked on the map include the brothel and the latrines in Woźna St.⁸¹

The fortifications of the left-bank town (now residually preserved) become emerging – initially, probably wooden ones – from the moment of incorporation. Their integral part was the ducal castle erected on the hill towering over the newly founded town. The castle was redeveloped gradually during the second half of the thirteenth century, starting with a massive tower. The archaeological and historical studies carried out have produced no concordant opinion as to the stages of its construction.⁸² The panache of the complex's concept makes its completion by Przemysław II open to doubt; in

which thereafter, in 1605, resold it to Magdalena Mortęska, abbess of the Benedictine nuns of Chełmno. In 1607, the Benedictine Sisters' convent was brought from Chełmno to Poznań, and the former palace became a nunnery; T. Jakimowicz, *Pałac Górków w Poznaniu*, ed. 1, Poznań 1971, pp. 21, 71 f. (ed. 2, Poznań 1998, pp. 30–31); Now2, p. 775; W. Gałka, *O architekturze i plastyce*, pp. 159–164, 208; J. Skuratowicz, *Pałac Górków w Poznaniu*, Poznań 2008.

⁷⁸ This is how the location of the 'Old' Synagogue can be determined, based on the records from Poznań magistrates registers from 1491, 1497–8 (AP Poznań, Akta miasta Poznania, sign. I 298, ff. 140v, 216v, 225v; the records have been used thanks to the *regests* of J. Wiesiołowski, PTPN Library, MS No. 1545; for the location of this synagogue, arguably Poznań's oldest, cf. also *Stadtbuch von Posen*, pp. 65*–66*; *Opisy i lustracje Poznania*, pp. 64, 259; KZS sn, vol. 7, part 2/2, p. 116; R. Witkowski, *Żydzi w Poznaniu. Krótki przewodnik po historii i zabytkach*, Poznań 2012). The synagogue's location is so marked on the Prussian plan of Poznań from 1841 and 1871 (*Plan von der Stadt und Festung Posen*, [in:] *Plany Poznania*, no. 18; also, cf. *Neuester Plan der Stadt Posen*, multicolour lithograph, 1890, ed. by 'E. Rehfeld in Poznań, 72.9 x 37.1 cm, collection of the PTPN Library, [in:] *Plany Poznania*, no. 19). LWWK 1564, part 2, p. 271, informs that there were two synagogues in Poznań as of 1565 (the other one is not plotted). According to J. Witkowski (idem, *Żydzi w Poznaniu*, p. 80), the 'New' Synagogue was most probably built after the city's fire of 1590, right next to the Old one. According to J. Wiesiołowski, the Jewish school/synagogue was located in Sukiennicza St. (Wiesiołowski, *Socjotopografia*, p. 181), which is not contrary to the above statement as long as it was situated at the back of the buildings standing along the said street, to the left when going from the market toward the walls. The Jewish baths were probably located near the synagogue (*Akta radzieckie poznańskie*, vol. 1, no. 1002; on the baths, cf. J. Rudzińska, *Żydzi w późnośredniowiecznym Poznaniu*, [in:] *Civitas Posnaniensis*, pp. 345–360, esp. 358; U. Sowina, *Woda i ludzie*, pp. 222–224). Contrary to E. Leszczyńska's statements (eadem, *Przyczynek do dziejów funkcjonowania poznańskiej dzielnicy żydowskiej w sąsiedztwie średniowiecznych murów obronnych*, KMP, 1996, no. 1, pp. 138–139), the Jewish cemetery was not situated within, but rather outside, the city walls—*ex opposito castris*, "in close proximity to Dorota Paczkowa's garden" (outside the urban development area), as is attested by a 1442 record (AP Poznań, Akta miasta Poznania, sign. I 291, k. 90; the record has been used thanks to J. Wiesiołowski's *regests*, PTPN Library, MS 1545). Our map does not render the cemetery's location (cf. footnote 46). On Poznań Jews, cf. L. Koczy, *Studia nad dziejami gospodarczymi Żydów poznańskich przed połową wieku XVII*, KMP, vol. 12, 1934, no. 3, pp. 257–299, 333–362, KMP, vol. 13, 1935, pp. 47–63, 171–231; and, the article by T. Nożyński, *Żydzi poznańscy w XV w. (1379–1502)*, KMP, vol. 10, 1932, pp. 86–99, 249–263—of a lower scholarly quality and affected by anti-Semitic views. Separate KMP volumes, no. 3, 2006, and no. 1, 2009 are devoted to local Jewry; also, cf. A. Teller, *Warunki życia i obyczajowość w żydowskiej dzielnicy Poznania w pierwszej połowie XVII wieku*, [in:] *Żydzi w Wielkopolsce na przestrzeni dziejów*, ed. J. Topolski, K. Modelski, Poznań 1995, pp. 57–70; J. Suproniuk, *Jews in the towns of Greater Poland* in AHP Greater Poland volume and chapter III.2.2d.4 in this volume, specifying the literature on Jewish settlement in Greater Poland.

⁷⁹ Wiesiołowski, *Socjotopografia*, pp. 177–181; also, cf. J. Rudzińska, *Żydzi w późnośredniowiecznym Poznaniu*, pp. 345–360.

⁸⁰ To precisely identify the brickyards' locations is difficult. J. Łukaszewicz (idem, *Obraz historyczno-statystyczny*, p. 191) finds that one of them was in the vicinity of the theatre, i.e. the former Musza Góra; similarly in A. Gąsiorowski (idem, *Późnośredniowieczna konurbacja*, p. 228). Another brickyard, according to J. Wiesiołowski (in his commentary to J. Łukaszewicz, *Obraz historyczno-statystyczny*, p. 205) stood in the area of the municipal court; in our map, this location is identifiable with the vicinity of the pond on the Bogdanka river, north of the castle.

⁸¹ A. Gąsiorowski, *Późnośredniowieczna konurbacja*, p. 222; Wiesiołowski, *Socjotopografia*, pp. 156–157, 166.

Zamku Przemysława w Poznaniu*, KMP, 2004, no. 4, pp. 27–38 (reprinted from the 1955 monument restoration documentation

all probability, the project was accomplished by his successors. In Władysław II Jagiełło's time, the multilateral structure was composed of the tower and a large rectangular (17.6 x 58 m) house situated north of it, whose longer side was integrated into the city fortifications. The other massive tower (12.7 x 15 m; possibly, a keep) adjacent to the castle in the north probably already stood at that time. The castle hosted the monarchs paying visits to Poznań; otherwise, it was the residence of Greater Poland's *Starostas* General and their burgraves.

At the beginning of the sixteenth century, the castle was redeveloped by *Starosta* Łukasz Górka. His son and successor in office (1536–51), Andrzej, had it rebuilt after the 1536 fire; the reconstruction made no major change to the castle's outward appearance. The main three-storey building was redeveloped to become adjacent to the great tower. No superstructure was added to the northern-end two cellars.⁸³ The gate was set apart from the great tower as a new brick entrance from the town (south) was erected. The thus redeveloped castle is featured on the Braun engraving from 1618; its projection is marked on the 1655 Dahlbergh plan.⁸⁴

The aforementioned map by Swedish officer Erik Dahlbergh shows possibly the most plausible shape of the town's fortifications constructed in the Middle Ages, as preserved until the end of the sixteenth century (except for the earthworks marked in that map). Since our map, due to its too-small scale and amassed items with explanatory notes, does not render the inner wall's outline, the walls as they are depicted in Dahlbergh's map need to be described here in some detail. The map shows a contour of the inner wall together with the towers/bastilles as well as the outer wall with its less numerous towers. The map features an outline of the castle's rampart, four city gates – Wroniecka (Wronki), Wielka (Great), Wodna (Water), and Wrocławska (Wrocław) as well as wicket-gates within the walls – Ciemna (Dark) (not featured in the Dahlbergh map's legend), Dominikańska (Dominican), Żydowska (Jewish) (Dahlbergh has 'Śmierdząca' (*Odoriferous*)), and Zamkowa (Castle).⁸⁵ The Dahlbergh map features the main public edifices (city hall, weigh-house, stalls, St. Mary Magdalene and Dominican churches) as well as churches and mills in direct neighbourhood of the walls – hence, of military significance.

As it seems, Dahlbergh, a military engineer, who was incidentally seconded by Swedish king Charles X Gustav to evaluate the military usefulness of Polish castles and towns, accurately rendered the Poznań fortifications. However, his drawing seems not to show all the 32 bays and overhangs (bastilles) in the inner wall, otherwise known from the written records.⁸⁶ Regardless of his failing to mark the bays' rear walls (facing the city and developed in the sixteenth century), let us emphasise that particularly in the south-eastern section of the rampart (between the Wrocławska and Woda Gates), many of those buildings or structures have been adapted into apartments and merged with the other buildings annexed

later on to the city wall.⁸⁷ Given the Dahlbergh's assumptions, it hampers identification of the towers/bastilles.⁸⁸ This is particularly true for the Zegarna (Clock) (also called Czerwona (Red)) dominant in the walls' line (apart from the gate towers and the castle), situated at the outlet of today's Kozia St. (marked here as 'Ku Wieży Zegarnej St.').⁸⁹ It was a tall structure (approximately 20 m in height) with massive walls, as clearly portrayed in Braun's 1618 etching; apart from its military function, it was a city prison. A clock face was fixed on its top, facing the city.⁹⁰ Identification is problematic also with the old passage in the city walls, called Bramka Glinna (Clay Wicket): not in use anymore in the sixteenth century, it was once located between the Zegarna Gate and the castle, probably along the axis of the present-day Paderewskiego St. ('Podgórcze St.' in our map).⁹¹ The Baszta Biała (White Tower), located in this very section of the walls, cannot be recognised, either.⁹² This holds true for the so-called Baszta Mennicza (Coinage Tower), which was part of the inner wall line, between the castle and Wroniecka Gate.⁹³ Albeit Dahlbergh's map basically shows no suburbs, one interesting detail can be identified on it all the same – a tower in Garbary area, right before the former Wielki (Big) (later on called Chwaliszewski) Bridge.⁹⁴ The tower is also shown on the Braun etching of 1618.

Intensely developing since Władysław Jagiełło came to the throne, Poznań was soon surrounded by suburbs. As aforesaid, some of them (Święty Marcin, Święty Wojciech, and, in the right bank of the Warta, Święty Jan) were quite old. The most considerable among them, in Antoni Gąsiorowski's opinion,⁹⁵ was Piaski, located south-east of the city walls. A branch of the Warta, called Kamionka in the eighteenth century, and later Struga Karmelicka, flowed around the area in the east; in the west, there flew another arm of the Warta, forking off from the Kamionka, called Noteć; it supplied water to the city's moat near the southern section of the walls.⁹⁶ Since the prices of real properties in Piaski were much lower than those charged within the walls, less affluent burghers tended to settle down there, to dwell in their own modest houses or in houses rented from rich burghers who bought ought land in Piaski. Also noblemen purchased realties in Piaski, at times, in the sixteenth century.⁹⁷ The city *kutlof*, i.e. slaughterhouse, was situated in that suburb.⁹⁸ Piaski was composed of two separate settlements that were initially 'profession-related': Rybaki (the name denotes a fishery area; fishermen were subjected to the jurisdiction of the *starosta* general) and Czapniki (cap-makers/hatters), which were essentially the suburb's streets at which craftsmen of other professions, such as shoemakers or weavers, settled as well.⁹⁹ Gaska (from the German *Gasse* – 'laneway') was another local street,¹⁰⁰ leading from Ciemna Bramka (Dark Wicket) in the city walls toward All Saints' church, founded in the 1420s (and made a collegiate church at the beginning of the seventeenth century) and the related hospice for indigent priests, situated within the parish New Cemetery (Nowy Cmentarz),¹⁰¹ and further

⁸⁷ H. Münch, *Plany Poznania*, p. 28.

⁸⁸ Quite much is known about some of them though; for instance, Baszta Katowska [Executioner's Tower] near the outlet of Woźna (Butelska) St. housed the municipal whorehouse, cf. J. Wiesiołowski, *Baszta katowska, jej lokatorzy i sąsiedzi. Opowieści z wykusza katowskiego na Woźnej*, KMP, 1996, no. 1, pp. 163–179.

⁸⁹ Cf. *Wieża Zegarna, czyli Czerwona*, KMP, 1996, no. 1, pp. 264–268; Wiesiołowski, *Socjotopografia*, Fig. 9.

Kulejewska-Topolska, *Struktura prawna aglomeracji*, pp. 155–156, covering the disputes between the *starostas* and the municipality over the jurisdiction over fishermen and gradual building of the *starostas'* juridical enclave in the sixteenth and seventeenth centuries; A. Gąsiorowski, *Późnośredniowieczna konurbacja*, pp. 227–228; Wiesiołowski, *Socjotopografia*, pp. 206–22; SHGPoz, part I, p. 281.

¹⁰⁰ Cf. Wiesiołowski, *Socjotopografia*, pp. 213–216.

¹⁰¹ The All Saints' Church was destroyed during the 'Deluge'. For more on this church, the related foundations for indigent priests and (in the fifteenth century) the Holy Saviour's hospice for arrivals, cf. Now2, pp. 618–620, 653. By the New Cemetery and by the alley deviating from Gaska in the opposite direction, along the city moat, clergymen holding benefices

on toward the Assumption, St. Bernardine of Siena, and St. Francis church, and the Franciscan Observant (Bernardine) monastery founded in 1455,¹⁰² which had its St. Anne's chapel (1480).¹⁰³ Associated with the monastery was a convent of Bernardine Tertiary Sisters, who around 1464 inhabited a small house in Wodna St., within the walls, and then the house in the parish New Cemetery;¹⁰⁴ none of those houses are shown in our map. Another ecclesiastical institution in Piaski was St. Valentine's hospital, established in the second half of the sixteenth century.¹⁰⁵ A road went through Piaski leading to the Calced Carmelite convent's Corpus Christi church, located in the common, more southward of Piaski, founded at the beginning of the fifteenth century.¹⁰⁶ Slightly southwards, an aggregation of scarce houses called Nowa Troska, existed at the end of the sixteenth century; south-west of the said church, on the bank of an arm of the Warta, Stosy was situated – a small settlement that emerged by the piles of timber which was floated down the Warta. Save for the parish New Cemetery and the All Saints' church, the entire area belonged to St. Martin's parish.¹⁰⁷

Before the Wrocław Gate and along the road leading from Poznań to Kościan (and then, to Wrocław), other suburban settlements spread. One such suburb was Stelmachy,¹⁰⁸ with a Holy Cross church and hospital, founded in the fifteenth century.¹⁰⁹ Further southwards, the settlements were increasingly rural; hence, the suburb's name of Półwsie ('half-a-village'). The houses erected there, with their adjacent pens and, in the area's southern park, demesne farmsteads, were owned by well-off inhabitants of the town within the walls – merchants, stall-keepers, brewers, butchers, and other representatives of the city's most affluent crafts.¹¹⁰ Along the Wrocław road's arm bending south-west (toward Buk, and Głogów too), a settlement called Nowe Ogrody was situated. The village emerged in the fourteenth century, had its own administrator (*sołtys*) and a partial serf-government; in the middle of the fifteenth century, when its lands were gradually taken over by Poznań burghers and noblemen (the Ostroróg family), the village turned into a suburb.¹¹¹ Between Półwsie and Nowe Ogrody, a juridical enclave of Wenetowo was located. Initially owned by nobles, later on by St. Lazarus's municipal

at St. Mary Magdalene's Collegiate Church had their houses there in the fifteenth century; see Wiesiołowski, *Socjotopografia*, pp. 216–217.

¹⁰² Now2, p. 765; J.A. Mazurek, *Bernardyni w Poznaniu*, "Studia Franciszkańskie", vol. 4, 1991, pp. 245–288. On the location of the first brick Bernardine monastery, destroyed during the 'Deluge' and rebuilt slightly southwards, cf. A. Kuztelski, *Pierwszy klasztor bernardynów w Poznaniu (z prac nad katalogiem zabytków Poznania)*, KMP, 1991, no. 1–2, pp. 180–184; also, cf. KZS sn, vol. 7, part 2/1, pp. 97–110. The reference literature is listed in K. Kaczmarek, *Stan i potrzeby nad klasztorami męskimi*, pp. 13, 17, 20.

¹⁰³ Now2, pp. 749, 765; KZS sn, vol. 7, part 2/1, pp. 97–98. On St. Anne's Fraternity and Chapel, cf. J.A. Mazurek, *Bernardyni w Poznaniu*, pp. 276–279.

¹⁰⁴ AP Poznań, Akta miasta Poznania, sign. I 296, f. 31v (record dated 1464[?]), f. 92, with a mention of the nuns' undeveloped real property in Garbary suburb; ibidem, sign. I 297, f. 15v, with a mention dated 1476 on the purchase of the house in the parish New Cemetery (records used thanks to J. Wiesiołowski's *regests*, Biblioteka PTPN, MS 1545). It was probably after the burning of those buildings in mid-sixteenth century, that the nuns received a permission for constructing a brick house, which in A. Kuztelski's opinion was situated at what is today Bernardyński Sq., somewhat south-west of the Bernardine monastery buildings. The enclosure for the tertiary nuns was imposed only in 1595, as construction of the new church was commenced; the church was consecrated in 1603 as dedicated to Most Holy Saviour (today, the Transfiguration Church; KZS sn, vol. 7, part 2/1, pp. 62 ff.). On the tertiary nuns, cf. also Now2, pp. 777–778.

¹⁰⁵ On the hospital, cf. Now2, pp. 653–654.

Gałka, *O architekturze i plastyce*, pp. 110–116, 123–124, 225–228, 250, 322–327, 333–336; KZS sn, vol. 7, part 2/1, pp. 73–94; J. Kowalski, *Gotyk wielkopolski*, pp. 230–240; T. Ratajczak, *Kościół Bożego Ciała w Poznaniu*, Poznań 2014. The literature on the Carmelites is listed in K. Kaczmarek, *Stan i potrzeby nad klasztorami męskimi*, p. 13. A separate KMP volume deals with the Carmelites (among others), no. 3–4, 1992.

¹⁰⁷ Z. Zieliński, *Rozwój terytorialny miasta*, p. 258; S. Waszak, *Ludność i zabudowa*, p. 88; on parish affiliations, cf. Now2, pp. 354–355, 618–620.

¹⁰⁸ Situated near an important junction, Stelmachy was mainly inhabited, in the fifteenth century, by blacksmiths, wheelwrights, and carriage-builders—all related to transport services; cf. Wiesiołowski, *Socjotopografia*, 198–200.

¹⁰⁹ It was a leprosy hospital (run by provisors [administrators] of the municipality's Holy Spirit hospital), which existed already at the beginning of the fifteenth century; in 1420, a provostry under the patronage of Poznań burgher family of Peszel was founded at the hospital; cf. F. Pohorecki, *O dawnym szpitalu i kościółku Św. Krzyża w Poznaniu*, KMP, 1931, pp. 336–363, reprinted in KMP, 1990, no. 3–4, pp. 69–88; Now2, p. 652.

¹¹⁰ On Półwieś/Półwsie, cf. Wiesiołowski, *Socjotopografia*, pp. 202–208; J. Wiesiołowski, *Półwieś – Rybaki i ich mieszkańcy w XV i XVI wieku*, KMP, 2007, no. 3, pp. 7–19.

¹¹¹ On Nowe Ogrody, cf. Wiesiołowski, *Socjotopografia*, p. 201.

hospital and the Benedictine nunnery.¹¹² Wenetowo had partly been established on the lands of the aforementioned suburbs and of the municipal village of Wierzbica.¹¹³

The suburb of Święty Marcin stretched west of the namesake (St. Martin's) parish church (redeveloped early in the sixteenth century),¹¹⁴ along the road leading to Buk, and, further on, to Gubin.¹¹⁵ The area consisted of three parts: the one located north of the aforementioned road was owned by the Poznań Cathedral Chapter; the other one, situated on the southern side of the road, was the municipality's property; the third encompassed the arable land around St. Martin's church at the Wzgórze Świętomarcińskie (St. Martin's Hill), located on both sides of the road, which was the endowment of the church's parson, administered by himself.¹¹⁶ Two cemeteries were situated within the settlement, one by the church and the other west of it, north of the Buk highroad.¹¹⁷ A settlement emerged in the sixteenth century in that area – north of the road, not far from the cemetery and a Jewish cemetery arguably located close by – that was called Muszyńską or Musza Mount, which was originally property of Kundorf village.¹¹⁸ It was populated in the century's latter half by smallholders (*hortulani*) and was the city's property.¹¹⁹ The sixteenth century saw the emergence of a new suburb west of Święty Marcin – Wymykowo, whose developments were founded near the junction of the Buk highroad and the road diverting south-east toward Nowe Ogrody, and along that particular local road. Wymykowo was initially owned by noble proprietors, the families Kokalewski and, subsequently, Szamotulski, who collected levies from the numerous smallholders settled in the area. Before 1570, the suburb was acquired by the municipality of Poznań.¹²⁰ The parish of St. Martin was extensive in itself, covering – apart from the aforementioned Piaski area – the areas of Nowa Grobla, Garbary, Rybaki, Stelmachy, Nowe Ogrody, Półwsie, Wenetowo, Wierzbica, Wymykowo and, in the sixteenth century, Musza Góra and other localities situated further away from Poznań.¹²¹ The village of Kundorf, on the southern side of the Bogdanka (Flisa), north-west of the walls, was the city's property, though in the middle of the fifteenth century certain forensic rights in it were held by the provost of the Holy Spirit Hospital outside Poznań.¹²² An important route to Frankfurt (and to Szczecin) went through the settlement.¹²³ The village was part of St. Adalbert (*św. Wojciech*) parish.¹²⁴

¹¹² On the Benedictine nuns, cf. footnote 77. On the St. Lazarus hospital, cf. M.J. Mika, *O dawnym szpitalu św. Łazarza w Poznaniu*, KMP, 1948, no. 2, pp. 103–119; Now2, p. 654; J. Wiesiołowski, *Poznańskie szpitale i ich kaplice w świetle wizytacji Rogalińskiego*, KMP, 2007, no. 4, pp. 13–18; SHGPoz, part V, pp. 160 and (for further findings) 543.

¹¹³ On Wenetowo, cf. SHGPoz, part V, pp. 542–524; on Wierzbica, cf. *ibidem*, pp. 606–611.

¹¹⁶ SHGPoz, part V, pp. 160–196, esp. the commentary on p. 163.

¹¹⁷ On the cemetery, *ibidem*, p. 193. The latter cemetery (established in the sixteenth century) was situated between today's Kantaka and Ratajczaka Sts., according to I. Skierska; *ibidem*, p. 162.

¹¹⁸ SHGPoz, part III, pp. 220–221; SHGPoz, part V, p. 163. For the Jewish cemetery, cf. footnote 78.

¹¹⁹ SHGPoz, part II, pp. 239–248.

¹²⁰ Kokalewscy are attested as the owners of Wymykowo suburb for 1554–61; in 1561, Wymykowo was sold by them to Jan Świdwa of Szamotuły, Castellan of Biechowo (AP Poznań, Poznań Gr. 98, f. 521; *ibidem*, Poznań Gr. 20, f. 76v; *ibidem*, Poznań Gr. 106, f. 29v). Jan Świdwa, son of his namesake father, held Wymykowo still in 1566 (*ibidem*, Poznań Gr. 20, f. 507). A part of Wymykowo lands was purchased in 1567 by the municipality from Elżbieta Świdwa, the castellan's widow; as of 1569, residents of Wymykowo are listed in tax registers; the suburb is subsequently recorded as property of Poznań (J. Wiesiołowski, *Kościół i osada Święty Marcin w średniowieczu i w okresie staropolskim*, KMP, 2006, no. 1, pp. 41–42; cf. *Opisy i lustracje Poznania*, pp. 30, 65, 101, 107; Z. Kulejewska-Topolska, *Struktura prawna aglomeracji*, p. 162). At the beginning of the seventeenth century, certain lands in Wymykowo were purchased by the Benedictine Sisters of Poznań. The nuns formed thereafter a juridical enclave of their estates near Poznań (incl. in Wenetowo), and were later on involved for a number of years with a dispute over this *jurydyka* against the city of Poznań (*eadem*, *Struktura prawna aglomeracji*, pp. 46, 109, 110, 170–171, 176. This author mistakes Wymykowo for Wenetowo, though; cf. SHGPoz, part V, p. 544).

¹²¹ Now2, pp. 354–355.

¹²² SHGPoz, part II, pp. 239–248.

¹²³ This is how a 1374 record on a “great road” passing by Kundorf village to Kaźmierz (AHP: “Kazimierz”) can be understood; SHGPoz, part II, p. 240; cf. Weymann, Drogi, pp. 232–233, with a description of the course of the road to Frankfurt.

¹²⁴ SHGPoz, part II, p. 240.

North of the city, behind the moat and the Wroniecka Gate, the area of Święty Wojciech suburb stretched.¹²⁵ The suburban developments extended from the Holy Spirit hospital, situated in close proximity to the gate,¹²⁶ westwards along the city moat, up to Glinki, situated west of the ramparts, where in the fifteenth century two modest-sized demesne farms owned by a nobleman and a burgher were located; small tenement houses were erected there in the sixteenth century.¹²⁷ The suburb's developments were however mainly situated along the road starting from the abovementioned gate and leading through Wzgórze Świętego Wojciecha (St. Adalbert's Hill) to St. Adalbert's parish church situated there,¹²⁸ and then on to Szamotuły and, much further on, to Szczecin.¹²⁹ Similarly to St. Martin suburb (more colloquially termed *świętomarcińskie*) the ownership of the area under discussion was split into the municipality and the parson at St. Adalbert's church, whose authority in his allotted part was that of a *soltys* (village headman).¹³⁰ The vineyard at the foot of Łysa Góra hill, being a part of the suburb, was exempted from the city's jurisdiction, by the king's *libertation* (specific exemption), at the end of the fifteenth century (without its own administration or court); following a series of owners, it belonged in the mid-sixteenth century Stanisław Kokoszka Pawłowski, the landlord of Bonin. The mighty family of Ostroróg also had their *jurydyka* within the suburb;¹³¹ a Bohemian Brethren's community church (*zbór*) and hospital was set up in the second half of the sixteenth century in that very area.¹³² It was not the only Reformed Church institution in that suburb. Since 1592, based on a settlement with the St. Adalbert church's parson, Fr. Jan Mrowiński, the Lutherans had their cemetery at Łysa Góra, and had established a *zbór*, a school, and a hospital for the poor next to it.¹³³ The Catholic parish of St. Adalbert covered a vast territory, encompassing Kundorf, Glinki, and the suburban areas north of the Bogdanka (possibly including the mill named Bogdanka within the city walls), north of the ramparts and Wielki Bridge on the Warta, whereas the river stood for the eastern frontier of the parish district that stretched across Bonin, Szeląg (AHP: 'Szyling'), Winiary, Jeżyce, and Sołacz far north-westwards, covering Strzeszyn (AHP: 'Strzeszyno'), Piątkowo, and numerous other villages.¹³⁴

North of the hill called Czerwowa (Łysa) Góra, behind Wierzbak, the Wzgórze Winiarskie highland stretched. Its southern slope was home to the buildings of Winiary municipal village. West of Winiary, in the area on the Warta that belonged in the first years of the fifteenth century to the village authority of Winiary, a separate demesne farm, and then village, of Bonin emerged.¹³⁵ The area between Wierzbak, Święty Wojciech, the city moat, and the Warta was occupied by pastures belonging to Poznań burghers, and called Groffowe – later, distorted as Grochowe – Łąki (Groff's/Pea Meadows).

¹²⁵ For more on this suburb, cf. Wiesiołowski, *Socjotopografia*, pp. 191–198; SHGPoz, Part V, 196–253, with reference literature; G. Rutkowska, *Przedmieście Święty Wojciech w średniowiecznym Poznaniu*, KMP, 2012, no. 4 (volume on Wzgórze Świętego Wojciecha [St. Adalbert Hill]), pp. 29–52; also, cf. footnote 56.

¹²⁶ For more on this earliest hospital in the chartered town, cf. Now2, p. 651, specifying 1254 as the incorporation date; according to T. Jurek, similarly to the town's parish church, the hospital was founded only ten years later; SHGPoz, part V, pp. 247–248; cf. above footnote 63.

¹²⁷ Wiesiołowski, *Socjotopografia*, pp. 200–201; SHGPoz, part V, pp. 163, 196.

¹²⁸ Various authors (e.g., Now2, pp. 355, 643–644; Wiesiołowski, *Socjotopografia*, p. 192) often erroneously argue that one more church, St. George's [św. Jerzego], was erected on the hill. G. Rutkowska disposes of this erroneous view in her remarks to the "Święty Wojciech" entry (SHGPoz, part V, p. 198; G. Rutkowska, *Kościół świętych Jerzego i Wojciecha*, KMP, 2012, no. 4, pp. 53–62), arguing that there was only one church in that hill in the Middle Ages which bore a double dedication of SS. George and Adalbert. On the St. Adalbert temple, cf. KZS sn, vol. 7, part 2/2, pp. 72–93; J. Kowalski, *Gotyki wielkopolski*, pp. 282–285; W. Gałka, *O architekturze i plastyce*, pp. 39, 48, 109, 110, 124, 125, 132, 209, 221, 223, 232, 250; *ibidem*, the map of Poznań on p. 48 has an erroneously marked St. George's Church; A. Kuztelski, *O architekturze kościoła św. Wojciecha raz jeszcze*, KMP, 2012, no. 4, pp. 63–75.

East of the city, between its moat and the Warta riverbed, the suburb of Garbary stretched, an area under the city's jurisdiction, affiliated to St. Martin's parish. The settlement, essentially a densely developed street, was populated by artisans processing hides and manufacturing leather products.¹³⁶ A *kutlof* (slaughterhouse) was situated in the settlement's southern part.¹³⁷ Two important roads out of Poznań led via Garbary: one went through the Wielka Gate, Międzymoście,¹³⁸ Wielki Bridge, Chwaliszewo, to Ostrów Tumski, and then on, via Ostrów, to the small town of Śródka, where the routes split.¹³⁹ The road through the Wodna Gate would traverse the area of Garbary and went further on through Nowa Grobla, Łacina Bridge, to Stanisławowo, and then, along the transit route, to Kalisz or Warsaw, circumventing the aforementioned church towns (more on them follows below).¹⁴⁰

South-east of the Wodna Gate, an isle on the Warta called Nowa Grobla was encountered. In line with the 1424 court verdict concluding the municipality's dispute with Bishop Andrzej Łaskarz and the Chapter, approved by Władysław Jagiełło, the isle belonged to the city. Yet, the commune was barred from developing its area.¹⁴¹ Poznań burghers endeavoured to settle the isle's status and to be allowed to develop the area, for which King Władysław III finally consented in 1443.¹⁴² In 1447, King Casimir IV Jagiellon (Kazimierz IV Jagiellończyk) confirmed the permission and granted his consent for bank reinforcement works.¹⁴³ In the fifteenth century, the settlement was inhabited by non-guild craftsmen; half of the houses were owned by burghers settled down within the walls, which means that the house were inhabited by cotters (wage-workers).¹⁴⁴ Nowa Grobla belonged to St. Martin's parish.¹⁴⁵

The aforementioned small town of Chwaliszewo was located on the other large isle situated in the middle of the Warta's arms, east of the Wielka Gate and the Garbary area.¹⁴⁶ The Chapter had the right to the isle confirmed by King Władysław Jagiełło, by means of the said 1424 document; the corporation was moreover permitted to have the isle area developed.¹⁴⁷ Soon, in 1427, Chwaliszewo was named a town (*oppidum*), as the local vogt received from the Chapter the stalls and butcher stalls as the endowment.¹⁴⁸ However, the area's status as a settlement was formally ratified only in 1444, with King Władysław III's consent given to the prelates and canons for the town's incorporation.¹⁴⁹ In 1475, Chwaliszewo, along with Ostrów and Śródka, were granted the right to trade in salt by King Casimir

¹³⁶ Wiesiołowski, Socjotopografia, pp. 223–228; Garbary is dealt with in a dedicated KMP volume, no. 3, 2017.

¹³⁷ Wiesiołowski, Socjotopografia, pp. 227. The other *kutlof* was located in Piaski; cf. footnote 98.

¹³⁸ Meant here is the part of Garbary between the bridge over the city moat (behind Wielka Gate) and the Wielki Bridge (Wiesiołowski, Socjotopografia, p. 223). The name, literary meaning "Inter-bridge", is not marked on our map.

¹³⁹ Leading through the village of Główna was a route toward Toruń (Thorn) or Warsaw, as well as toward Lublin, Cracow, and Lwów. The road turning from Śródka toward Święty Jan settlement led further on to the village of Żegrze (AHP: 'Zegrz'), Środa, Kalisz, and then on to Cracow; Weymann, Drogi, pp. 221, 222–223, for the options of the road to Lublin; pp. 224–225: the described variant of the Cracow road goes round Kalisz (where the staple right was in force), pp. 226–227, 240.

¹⁴⁰ Wiesiołowski, Socjotopografia, p. 229.

¹⁴¹ KDW V, no. 393, 395. The verdicts related to, inter alia, the disputes between Poznań Bishop Andrzej Łaskarz and the Cathedral Chapter, on the one hand, and the Poznań municipality, on the other, over the right to collect fees for crossing the Warta and the obligation to maintain the passage (by constructing bridges). In the course of the dispute, the king confirmed the Chapter's ownership of the dike leading from Wielka Gate to Summum (i.e., the so-called Grobla Kapitulna [Capitulary Dike], on which Chwaliszewo later emerged), and bound the bishop and the Chapter to reinforce its banks and maintain the bridge on the Cybina as well as the one between Grobla Kapitulna and Ostrów Tumski; KDW V, no. 393, 395 (containing a mistaken *regest*; cf. SHGPoz, part I, p. 235).

¹⁴² KDW V, no. 705, for the *regest*'s content; *Przywileje miasta Poznania*, no. 43, where the editor misidentifies the common *post Cerdones* (i.e. behind Garbary) mentioned in the document with the one of Wilda village.

Jagiellon.¹⁵⁰ The town developed well, to the extent that at the end of the fifteenth century the built-up area extended along the road linking the Wielki Bridge and Summum.¹⁵¹ It is hard to determine the actual position of the town hall at the time. The surviving seventeenth- and eighteenth-century views and the early nineteenth-century development plan suggest that the building was located in the centre, aligned with the row of houses, on the northern side of the road to Ostrów Tumski.¹⁵² Chwaliszewo originally belonged to St. Nicholas's parish in Zagórze (i.e. southern part of Ostrów Tumski). In the years 1455–77/84, after Nicholas's church burnt down, the parochial rights were transferred on the hospital church of St. Barbara, erected in the fifteenth century in the isle's eastern part.¹⁵³ Opposite the church, St. Laurence's hospital was built at the beginning of the sixteenth century.¹⁵⁴ At that same time, Chwaliszewo received from the Chapter the jurisdiction on the secular residents of Zagórze.¹⁵⁵ Ever since its appearance, Chwaliszewo repeatedly entered into conflicts with the city within the walls.¹⁵⁶

East of Chwaliszewo, Summum (i.e., a mount) was situated (called 'Dom' in German, 'Tum' or 'Ostrów' in Polish), with SS. Peter and Paul Cathedral church, the collegiate churches of Our Lady and St. Nicholas's.¹⁵⁷ The area was mainly populated by the clergy – perpetual vicars of the Cathedral, canons and prelates of the Cathedral (and the Collegiate Churches), and the bishop ordinary, who in the sixteenth century would visit Poznań less and less frequently.¹⁵⁸ These clergymen had their residences around the Cathedral; as it seems the area's initially chaotic development was rearranged by the end of the fifteenth century, especially with the Summum rampart built by Bishop Jan Lubrański. The houses stood by the road leading from Chwaliszewo toward Śródka (extending north and south from today's cathedral square, where a cemetery was situated in the fifteenth century) and by the smaller alleys splitting off it (present-day Posadzego, Lubrańskiego, and Dziekańska Sts.).¹⁵⁹ Some of those homesteads were located also in the southern part of Wyspa Tumska, in the area called Zagórze. The most magnificent of the residences was the bishop's residence, a palace standing south of the Cathedral and connected with it by a porch.¹⁶⁰ Other grand houses, situated closer to the Cathedral, were used by the canons, who occupied them together with their *familiares*; the smaller houses were the abode of the vicars (mainly in the isle's western part and in the periphery of the built-up area); the psalterists dwelled in a common house called the *psalteria*.¹⁶¹ Given the mobility of the bishops who constantly travelled across the diocese or sojourned at the royal court – in any case, oftentimes taking active part

Wieczorek, *Inicjatywy budowlane biskupa Jana Lubrańskiego na Ostrowie Tumskim w Poznaniu w świetle źródeł archeologicznych*, [in:] *Poznań we wczesnym średniowieczu*, vol. 7, ed. H. Kóčka-Krenz, Poznań 2012, pp. 35–36.

in the political life of the country – their forensic and administrative duties were partly taken over in the area of their residence by vicars general and *officials*, who usually resided in Ostrów Tumski on a perpetual basis, managing their respective offices from their homes (and, from the latter half of the fifteenth century onwards, most probably from their rooms at the bishop's palace).¹⁶² Among the Summum's major buildings, the Lubrański Academy edifice from the first half of the sixteenth century deserves a mention.¹⁶³ There was a Cathedral school at the island as well.¹⁶⁴ Jurisdiction in that area was directly exercised by the Cathedral Chapter and the bishop. The laypeople residing in this enclave of the clergy, mostly servants to high-level clergymen, had the St. Nicholas Collegiate church assigned as their parish; its parochial rights extended to Chwaliszewo as well.¹⁶⁵

Reconstruction of the modern-era fortifications of Wyspa Tumska, built in 1504–12 and finally completed in 1549, on order of Bishop Jan Lubrański¹⁶⁶ is a difficult task. The Lubrański wall is shown (from the north) on Braun's engraving from 1618, fragments of it are also visible on the 1704 perspective view of Poznań from the south (*Stragona albo stołeczne miasto Poznań...*) and on a detail of Werner's panorama dated 1734.¹⁶⁷ Remnants of the wall from the west are visible on the plan drawn in 1772–3, attributed to Geyer.¹⁶⁸ In light of the survey archaeological research, it can be inferred that the rampart was probably erected along the outer edges of the embankment that had once surrounded Ostrów Tumski, and had been destroyed by then.¹⁶⁹ The outline shown on the map is our reconstruction which is based on the assumption that all the major Summum buildings were located within the walls. The number of bastilles/towers erected along those fortifications is difficult to determine. There were towers, most probably at the entrances from the direction of Ostrów and Chwaliszewo,¹⁷⁰ and both are shown on Braun's 1618 engraving. The gate from the Chwaliszewo direction is features on the aforementioned views from 1704 and 1734. The gate tower from the same direction is shown in Rzepecki's plan from 1728¹⁷¹ as well as in the one attributed to Geyer.¹⁷²

Our map tries to differentiate between the two church towns of Ostrów and Śródka, situated next to each other (in reality, possibly forming one row of development). The former was property of

¹⁶² Now2, p. 205.

¹⁶³ Ibidem, pp. 678–702; KZS sn, vol. 7, part 1, pp. 77–101; R. Linette, *Z dziejów budynku dawnej Akademii Lubrańskiego*, KMP, 1999, no. 2, pp. 181–212; W. Gałka, *O architekturze i plastyce*, pp. 154–156; J. Skuratowicz, *Akademia Lubrańskiego. Pomnik wielkopolskiej kultury i nauki*, Poznań 2007; M. Wiczorek, *Inicjatywy budowlane*, pp. 29–35.

¹⁶⁴ On the school: Now2, pp. 672–678; SHGPoz, part IV, p. 746; K. Stopka, *Szkoły katedralne metropolii gnieźnieńskiej w średniowieczu. Studia nad kształceniem kleru polskiego w wiekach średnich*, Kraków 1994, as per Index (for the school's location, see pp. 20–21); also, cf. J. Wiesiołowski, *Szkolnictwo*, [in:] *Dzieje Poznania do roku 1793*, vol. 1, part 1, pp. 331–338.

¹⁶⁵ Now2, p. 354. Albeit Fr. Nowacki (ibidem) states that Ostrów the town also belonged to St. Nicholas's parish, this opinion is not convincing. This small town was probably affiliated to the parish of St. Margaret in the neighbouring Śródka; SHGPoz, part V, pp. 99, 103, footnote 20. J. Nowacki's information (Now2, p. 324) whereby Pietrowo village belonged to St. Nicholas's parish is likewise unconvincing. According to S. Karwowski (idem, *Komandoria i kościół św. Jana Jerozolimskiego w Poznaniu*, "Roczniki Towarzystwa Przyjaciół Nauk Poznańskiego", vol. 36, 1911, p. 51 [referring to no underlying source]), Pietrowo was excluded in 1586 from St. John's parish and attached to that of St. Margaret in Śródka, to which it irrefutably belonged in the nineteenth century; cf. SHGPoz, part III, p. 659. Let us add that a 1580 tax register does not feature Pietrowo among the villages of St. John's parish; ASK I 6, f. 164.

¹⁶⁶ Now1, p. 117; SHGPoz, part IV, pp. 747–748.

¹⁶⁷ *Stragona albo stołeczne miasto Poznań ...* and the Werner view are discussed in M. Warkoczewska, *Widoki starego Poznania*, pp. 33–34, no. 17, pp. 36–37, no. 23; cf. eadem, *Ostrów Tumski na dawnych widokach i fotografiach*, KMP, 2003, no. 1, pp. 105–125.

¹⁶⁸ *Plan von der Stadt Posen*, [in:] *Plany Poznania*, no. 6.

¹⁶⁹ After P. Pawlak, A. Sikorski, P. Wawrzyniak, *Mury obronne biskupa Jana Lubrańskiego*, KMP, 2003, no. 1, pp. 86–104; here, 102; also, cf. J. Skuratowicz, *Akademia Lubrańskiego*, pp. 14–17 (chapter on archaeology by H. Kóćka-Krenz); M. Wiczorek, *Inicjatywy budowlane*, pp. 23–39, esp. 29–31, on the discovery in the Lubrański Academy area of a defensive structure from (probably) fifteenth century. This, among other things, has inspired the suggestion made by Z. Pilarczyk, M. Danielewski, K. Kościelniak (idem, *Wojenny Poznań*, pp. 110–113) that Ostrów Tumski's rampart were built in the fifteenth century. This conclusion is additionally based on the dating, with use of the dendrochronological analysis (specified as 1476), of the timber from the canonry's roof truss; the canonry was located at today's 11 Ostrów Tumski St., forming part of the fortifications. However, this argument is doubtful as a record is known from Poznań Chapter's metrics suggesting that old oak logs were meant to be used. The Chapter provided such old oak logs to Przedwój of Grądy from the curia of the deceased provost Wojciech Jastrzębiec (AAP, sign. CP 28, f. 70), possibly for construction-related purposes.

Poznań Cathedral Chapter.¹⁷³ Ostrów originated in the fourteenth century, but it was only in 1435 that the Chapter made the first attempt at chartering it, and eventually gained the foundation privilege from King Władysław III in 1444.¹⁷⁴ The locality included in fact several houses situated by the street leading from Summum toward the market in the town of Śródka (presently, Ostrówek St.), right behind the bridge on the Cybina. Ostrów was only of the tiniest towns in the Kingdom of Poland.¹⁷⁵

Śródka was originally a ducal trading settlement that functioned near the burg-city at Ostrów Tumski. It bears traces of colonisation reaching as far back as the ninth century.¹⁷⁶ Duke Władysław Odonic (d. 1239 r.) took efforts to have the locality chartered, yet to no avail.¹⁷⁷ Since the foundation of the town on the left bank of the Warta and the related rearrangement of land utilisation, Śródka began to lose in importance.¹⁷⁸ In 1288, Duke Przemysław II granted Śródka to Poznań bishops. He permitted artisans to settle in Śródka and pursue their work there, allowing small-scale trading as well; yet, he would not permit to hold markets or fairs, and banned to the locals the trade in cut cloth. The duke re-established the ban in 1293, making the residents' rights more precise.¹⁷⁹ In the fourteenth century, Śródka undeniably held the complete municipal rights, once there is a 1328 mention of a vogt.¹⁸⁰ The town was a road junction outside Poznań: it was there that highroads leading to Toruń (Thorn), Mazovia, and Cracow split up.¹⁸¹ It received in 1425 from King Władysław Jagiełło the right to fairs; 1475 marked the granting by Casimir Jagiellon, Władysław's son, of the right to sale fine salt.¹⁸² The ploughland held by burghers was situated north-east of the city, on both sides on the road to Kostrzyn, on the original land of the village of Główna (outside the map's range), which was partly bestowed in 1442 by Bishop Andrzej Bniński to the burghers of Śródka.¹⁸³ In the middle of the sixteenth century, the town included eighty-five homesteads located by the market and in the alleys reaching it.¹⁸⁴ A hospital

¹⁷³ On Ostrów, cf. SHGPoz, part III, pp. 515–518. A separate KMP volume deals, *inter alia*, with this town; no. 1, 1997.

¹⁷⁴ In 1335, reference was made to burghers *de Insula* (most probably, from Ostrów; KDW II, no. 1153). In the 2nd half of the fourteenth century, Trojan (1349–90), provost of the Poznań Cathedral Chapter, issued to Mikołaj, son of Mikołaj nicknamed Kicino, the vogt of Ostrów, a new privilege for the vogtship (KDW III, no. 1810). M. Słoń (idem, *Miasta podwójne i wielokrotne*, pp. 126 f.) believes that this would “by no means indicate that the settlement was urban” (also, cf. SHGPoz, part III, pp. 515–517; on the document dated 1435, see KDW X, no. 1391; on the 1444 document, cf. *Przywileje miasta Poznania*, no. 47; KDW V, no. 736). The name “Insula”/“Ostrów” apparently stands for an insular location. A. Rogalanka (eadem, *Poznań u progu lokacji*, p. 156) maintains that the settlement was situated “on a small island between Śródka and the cathedral isle”, connected “by the bridges with both neighbouring centres”. As emphasised by this author, “none of the preserved maps bears but a trace of that island”. King Władysław III's 1444 document for Śródka (quoted above) does however mention a stream (*amnīs*), arguably flowing on the right bank of the Cybina; its course remains unknown, though. Given all the above remarks, let us note that settlement in that area was probably of a much earlier date. Archaeological research done in the border area between Śródka and Ostrów point to its tenth-century origins; see footnote 176 (below).

¹⁷⁵ For example, as of 1563, the levy collected from ten local artisans was paid; in 1570, received from Ostrów was the collection from the local inn whereat vodka was dispensed from merely four artisans and four cotters; ASK I 5, ff. 244, 413, the piece of information owed to RPWP; also, cf. [J. Wiesiołowski], *Najmniejsze miasto Korony Polskiej. Ostrówek, jego lokalizacja i trwanie*, KMP, 1997, no. 1, pp. 210–215.

¹⁷⁶ W. Hensel, Z. Hilczer-Kurnatowska, *Studia i materiały do osadnictwa Wielkopolski wczesnohistorycznej*, vol. 5, Wrocław 1980, pp. 195–196; J. Kaczmarek, *Archeologia miasta Poznania*, vol. 1, part 1, pp. 302, 310–313.

¹⁷⁷ On Śródka, see W. Schulte, *Die Schrodka*, pp. 237–76; H. Likowski, *Miasto książęce Śródka*; Z. Kaczmarczyk, *Przywilej lokacyjny*, pp. 148–154. The latter author denied the attempts to incorporate Śródka in the 1230s; A. Rogalanka, *Poznań u progu lokacji*, pp. 148–162, successfully opposed his argument. On the chartering of Śródka after the war lost by Duke Władysław Odonic to Henry I the Bearded (Henryk I Brodaty) in 1234, and the loss from a portion of Greater Poland, settlements on the left bank of the Warta included, see: T. Jurek, *Przebieg lokacji Poznania*, pp. 173–191; also, cf. M. Słoń, *Fundatio civitatis*, pp. 227–245; idem, *Miasta podwójne i wielokrotne*, pp. 124–126, 137, 350 (remarks on the loss by Śródka of custody from Władysław Odonic after the war lost to Henry the Bearded and the settlement's gradual vegetation), 353, 357, 472; SHGPoz, part V, pp. 89–104, esp. 102–3; M. Słoń, *Fundacja Poznania*, pp. 82–84, 87–97; also, see above and footnote 61.

¹⁷⁸ In 1245, the residents of Śródka lost the lawsuit against the Poznań bishop over the land situated south of the settlement; *Monumenta Poloniae historica. Nova series*, vol. 6, ed. B. Kürbis et al., Warszawa 1962, p. 8 [Annals of the Gniezno Chapter].

¹⁸¹ See above; also, footnote 139.

¹⁸² KDW V, no. 412, vol. 8, no. 1032; *Przywileje miasta Poznania*, no. 34, 69.

¹⁸³ The land probably stretched between the so-called Łączny Młyn, (a mill settlement, outside the map's limits) situated on the Cybina and the farmland of Zawady village; SHGPoz, part V, p. 97; *Przywileje miasta Poznania*, no. 40.

¹⁸⁴ The figure comes from a 1564 list of dues collected for the Bishop of Poznań; SHGPoz, part V, p. 96; Inw. bp. poz. 1564, pp. 274–275.

founded in 1596 functioned at the parish church of St. Margaret (whose rights extended to Zawady village).¹⁸⁵

Among the other villages and small towns featured in the map, the village of Święty Jan was the oldest and, possibly, strictly associated with the burg-city centre at Wyspa Tumska and with the fair settlement in Śródka; it was situated somewhat east of the Śródka road junction. The archaeologically evidenced traces of mediaeval settlement in that area date back to the ninth century.¹⁸⁶ The significance of this settlement seemingly increased after the foundation by Duke Mieszko III, around 1170, of a hospital at the local St. Michael's church.¹⁸⁷ The hospice was designed not quite for the sick or poor, but rather for the purpose of handling the mercantile traffic in the area of the nearby Śródka and on the Ostrów Tumski isle.¹⁸⁸ In 1187, the hospital was transferred to the Knights of the Order of St. John of Jerusalem (most probably, together with St. Michael's church), who moreover received from the bishop of Poznań, in 1201, a canonry at the Cathedral Chapter.¹⁸⁹ The settlement and the convent thereby became a centre of the Order's extensive complex of estates,¹⁹⁰ hence, the village's name (meaning 'Saint John'), established with time. The name of the modest convent, with apparently a small number of friars dwelling in it,¹⁹¹ influenced the renaming of the *patrocinium* of the parish church – St. Michael's turned into St. John the Baptist, the latter name being featured on our map.¹⁹² Apart from Święty Jan the settlement, the parish of St. John¹⁹³ extended in the sixteenth century to the episcopal village of Główna and the royal villages of Żegrze (AHP: 'Zegrz') and Rataje, and, until the 1580s, the village of Pietrowo.¹⁹⁴ A school associated with the parish (not marked in the map) was active between the fifteenth and seventeenth centuries.¹⁹⁵ Based on the tax registers, the settlement of Święty Jan was, in the sixteenth century, a small village consisting of a few *lans*.¹⁹⁶

North of Śródka, situated was a prestimonial village owned by the Cathedral Chapter of Poznań, called Zawady. This medium-sized settlement was inhabited as of 1521 by eighteen or nineteen smallholders (*hortulani*).¹⁹⁷ A transit road from Poznań went through the village and then, behind it, split into

¹⁸⁵ Now2, pp. 353–354, 652; SHGPoz, part V, p. 103. On the St. Margaret parish church, cf. also KZS sn, vol. 7, part 1, pp. 129–134; W. Gałka, *O architekturze i plastyce*, pp. 36–37, 109–110, 125, 333. In the 1230s, the time Śródka was to be chartered, the St. Michael (St. John) hospital held by the Knights of the Order of St. John of Jerusalem might have acted as the hospital for that settlement; cf. M. Słoń, *Fundatio civitatis*, p. 239.

¹⁸⁶ J. Kaczmarek, A. Gałęzowska, *Gdzie massa węgla, z drzewa palonych [...] między skorupami się znajduje*, KMP, 2010, no. 4, p. 7–27; J. Kaczmarek, *Archeologia miasta Poznania*, vol. 1, part 2, pp. 94–113.

¹⁸⁷ The information on Duke Mieszko III's foundation comes from the annalist Jan Długosz, who however erroneously refers the fact to the Order of St. John of Jerusalem, whose Knights had not arrived in Poznań by then; *Ioannis Długossii Annales seu cronicae incliti Regni Poloniae*, vol. 5–6, Warsaw 1973, p. 94; also, cf. *Repertorium polskich dokumentów doby piastowskiej*, vol. 1: *Do końca wieku XII*, ed. Z. Kozłowska-Budkowa, Cracow 1937, no. 115; A. Gąsiorowski, *Najstarsze dokumenty*, SŻ, vol. 8, pp. 94–95; vol. 9, pp. 56–57.

¹⁸⁸ T. Ginter, *Działalność fundacyjna*, pp. 86–87, 92–93; also, cf. the above remarks on the twelfth-century commercial route between Rhineland and Rus', plus footnote 54.

¹⁹⁷ AAP, CP 111, ff. 19, 106. Artisans appeared in the village in the sixteenth century; M. Michalski, R. Witkowski, *Średniowieczne i staropolskie wsie Główna i Zawady*, KMP, 2002, no. 2, pp. 34–67. From 1521 on, the village was excluded from the group of prestimonials and was included in the corporation's "table" (supply) estates, administered by the procurator; cf. K. Lutyński, *Kapituła katedralna w Poznaniu*, p. 160. Zawady village (among others) is dealt with in a dedicated KMP volume, no. 2, 2002.

two routes – one leading northward, to Rogoźno (and then to Ujście or toward Bydgoszcz), the other one heading eastwards, via Główna village, toward Gniezno.¹⁹⁸ The village of Pietrowo, located south of Śródka, on the right bank of the Warta, initially belonged to the duke, who bestowed it to Poznań; before 1585, the Poznań Cathedral Chapter purchased it from the municipality and set up a small town there on the verge of the seventeenth century; a succursal church dedicated to St. Sebastian existed there in that century.¹⁹⁹ Stanisławowo, the neighbouring town, situated slightly south of Pietrowo, emerged right on the right bank of the Warta, at the local bridge's outlet. It was incorporated in 1562 by Greater Polish magnate Stanisław Górka,²⁰⁰ then the tenitary (estate tenant) of the nearby village of Rataje.²⁰¹ This triggered a fierce dispute with Poznań, whose authorities claimed that an incorporation on the city's land was illegal, whilst a competitive centre would be detrimental to the city. In spite of a series of verdicts passed (beginning with 1571) in favour of Poznań, their enforcement became possible after Górka's death in 1592.²⁰² Finally, in 1599 Stanisławowo lost its urban status and turned into a suburb (called Łacina ('Latin') and, later on, Miasteczko ('Small Town')), as approved by King Sigismund III Vasa (Zygmunt III Waza) in 1601.²⁰³ The seventeenth century saw the construction of a St. Roch Church and the founding of a local parish, with the resulting exclusion of Łacina's residents from the jurisdiction of St. John's parish.²⁰⁴

III.6.25.7 RAWA

Wojciech Kalinowski

The city plan of Rawa Mazowiecka in the second half of the sixteenth century was based on a modern geodetic base-map at a scale of 1:5,000 and the following historical plans: the plan of the starosta's demesne and the Jewish town from 1799,¹ the plan of the town's residences from 1817² and the plan of the city grounds from 1823.³ Apart from the scattered studies on Rawa's history,⁴ we resorted to inspections from 1564, 1570, 1616, 1630, 1661, and 1789,⁵ the documents of the Committee of Mazovian Voivodeship from the nineteenth century⁶ and the documents of the Government Committee of Internal Affairs and the Police from the same century.⁷ The cartographic sources and written materials allowed us to localize the fields belonging to the city, the Church and the starosta, as well as some already non-existing structures.

Still, the reconstruction of the sixteenth century city plan of Rawa encountered severe obstacles. At the time Rawa was considered a large city, with 441 houses according to the inspections, so it was inhabited by some 3,000–5,000 dwellers.⁸ The layout was probably regular in general, with a small rectangular market square in the centre, i.e. in accordance with the widely-accepted pattern of located medieval towns. The number of houses allows us to believe that in the sixteenth the city must have had suburbs, especially in the so-called Nowy Świat (Koński Rynek), by the road to Piotrków. The burgher buildings of Rawa were probably entirely, or almost entirely, made of wood, just as at the close of the eighteenth century.⁹

The Swedish Deluge in the middle of the seventeenth century was particularly disastrous for the city. The inspection conducted in 1661, so several years after the catastrophe, lists only 32 houses and 400 empty plots in Rawa.¹⁰ For a long time the city could not recover from the calamity, and at the

¹⁰ LR XVII, p. 121.

close of the eighteenth century it had only 175 houses.¹¹ The 1817 plan proves that the damage must have distorted the original arrangement severely. Irregular shortcuts between various points in the city (e.g. between the entrance from Piotrków to the entrance from Warsaw) must have formed in place of the paths trodden through the ruins or empty squares. The new layout of the city was partially established, and partially regulated by the plans from 1817 and 1825.¹² These large transformations of the spatial arrangement of Rawa from the seventeenth and nineteenth centuries make our reconstruction of the plan of the founded city (particularly in the south-eastern corner) hypothetical.

This also applies to medieval fortifications. If the gothic castle – preserved in artifacts and partially examined during the conservation works – raises no doubts, then the case of the city fortifications remains unsolved due to the lack of archaeological research.

Certainly, there was no brick or stone wall; this issue was clearly settled by J. Świącicki at the beginning of the seventeenth century.¹³ In Central Poland only 13–15% of medieval towns had brick fortifications.¹⁴ Usually these were cities situated higher in the settlement hierarchy, just like Rawa.¹⁵ It seems there must have been some sort of fortifications, perhaps an embankment or a palisade, because the plan shows visible squares before the gates and lines limiting the city's development.¹⁶ To the north-west and east the city was protected by watercourses, which could be crossed on bridges confirmed in 1506 (over the River Ryłka – the Warsaw Bridge, and over the River Rawka – Łowicz Bridge).¹⁷

The outline of the market square and the location of the town hall were confirmed by the 1817 plan.¹⁸ The church and college of the Jesuits, built in 1613, were marked west of the market square. These structures go slightly beyond our time frame, but it seemed more justifiable to include the Jesuit complex than to reconstruct the earlier layout of this part of town, for which we had no source basis. It could be assumed, by the example of other towns, that the plots for the buildings were repurchased from the burghers by the Jesuits.

The location of the remaining monumental buildings is unquestionable. The surviving relics of the castle and its plan drawn in the 1920s¹⁹ allowed us to outline the general form of the structure. There are still fragments of the gothic walls in the Hospital Church of the Holy Spirit and the post-Augustan Church of the Assumption of Mary, confirming their historical location.²⁰ The parochial church (*farny*), now non-existing, must have been a gothic structure,²¹ as proven by the outline of the presbytery

¹² See footnote 2 and “Plan osady sukienniczej w Mieście Rawie z częścią miasta przyległo tejże Osadzie” made in 1825 by geometrist Jan Leśniewski. Scale 1:1,500. Original in the collection of the Dep. of Pol. Arch. of the War. Univ. of Tech., sign. U. III. 17. Another copy in WAP in Łódź, cartographic collection.

¹³ Świącicki, p. 104.

¹⁴ J. Widawski, *Średniowieczne fortyfikacje miejskie w Polsce Centralnej*, TS of PhD Thesis, Wydział Architektury Politechniki Warszawskiej.

¹⁵ Some nineteenth century authors (e.g. M. Baliński, T. Lipiński, *Starożytna Polska*, vol. 1, Warsaw 1843, p. 563) mention the city walls. They are quoted by W. Kalinowski, S. Trawkowski, *Przebudowa Rawy Mazowieckiej*, p. 183, who also base on the great amount of debris (6000 carts) driven out of the town in the beginning of the nineteenth century for the construction of an embankment by the River Rawka (AGAD, akta KWMaz. No. 1079 – the protocol of regulation works from 1825). Possible doubts could only be solved by archaeological research, but these usually focused on the castle and the gord “Anielska Góra” (*Informator Archeologiczny. Badania 1968, ZMiOZ, IHKM PAN, PTA, Warszawa 1969, s. 363–364, pp. 363–364*).

¹⁶ The centre of the neighbouring land, Sochaczew, was in the sixteenth century surrounded by a wooden palisade; H. Rutkowski, *Rozwój przestrzenny Sochaczewa od XIII do XVIII wieku*, [in:] *Dzieje Sochaczewa i Ziemi Sochaczewskiej*, Warsaw 1970, p. 42.

¹⁷ These bridges were listed in the privilege of Alexander Jagiellon in 1506, which granted the town the income from the bridges (AGAD, akta KRSwiP no. 459 – historical and statistical description of the town from 1822).

¹⁸ In the beginning of the nineteenth century there was an inn called “Ratusz” (“Town hall”), which confirms the location of the old town hall. In the western frontage there was still another block then, which was liquidated during the expansion works on the market square in the 1920s; cf. W. Kalinowski, S. Trawkowski, *Przebudowa Rawy Mazowieckiej*, pp. 181 ff., and J. Kubiak, *Studium urbanistyczno-historyczne m. Rawy Mazowieckiej*, Warsaw 1965, TS PP PKZ.

¹⁹ The plan made by constructor Karol Trautsohl prior to 1830 (when he stopped being the district constructor in Rawa – see S. Łoza, *Architekci i budowniczowie w Polsce*, Warsaw 1954, p. 314), AGAD, Zb. Kart. Present research conducted at the castle by PP PKZ will probably allow to determine the more precise layout.

²⁰ W. Kieszkowski (*Zabytki Sztuki w Polsce. Inwentarz topograficzny*, vol. 1, no. 1, pp. 143–148), in his description of the both churches failed to notice the surviving gothic presbytery of the church of the Augustans or the fragments of the gothic brickwork visible on the walls of the church of the Holy Spirit.

²¹ Cf. Łaski LB, II, p. 292; LR XVI, p. 6; LR 1789, p. 4.

shown on the 1817 city plan (the remaining part of the church did not exist back then) and an entry mentioning that it was built of gothic brick.²² Our plan of Rawa shows a probable projection of the entire church based on the said outline of the presbytery.

Three demesnes marked on our plan (belonging to the starosta, the hospital and the city) were localized on the basis of the 1817 plan. The same plan helped us determine the course of outgoing roads, which were regulated only in the nineteenth century. Only the road leading to Warsaw was marked according to its route shown on the plan from 1799 ('alter Warschauer Weg'), as it was moved already in the middle of the eighteenth century. Ownership division of fields and gardens were usually shown in accordance with the 1817 plan, with some modifications: the number of plots to the south of city buildings in Koński Rynek ('The Horse Market') was increased.

The channels of the Rivers Rawka and Rylka (old names: Rawa, Rylska), as well as canals and pond, were marked according to the state recorded at the beginning of the nineteenth century, which probably resembled the earlier hydrography, and was not changed before 1820.²³ There may be some doubts concerning the course of the canal which connected the Rawka with the Rylka to the northeast of the castle hill, as the canal was illegible on the 1799 plan and could be just an old watercourse regulated in the eighteenth century.

The names of the rivers were given in their sixteenth century form, whereas the names of several streets and the Koński Rynek square were confirmed only at the turn of the eighteenth/nineteenth centuries.²⁴

III.6.26.2 SANDOMIERZ

Kazimierz Pacuski

The reconstruction of the plan of Sandomierz at the end of the sixteenth century was based on the oldest plans of the city, i.e. the plan from the eighteenth century (which shows the city within city walls),¹ the plan of the city and its surroundings from 1809,² three marginally different topographical plans of the city's military situation from the 1809 campaign (suburbs also shown here),³ F. Reinstein's regulation plans from 1820,⁴ and Jarocki's plan from 1826,⁵ as well as later plans and views. Mayer von Heldensfeld's detailed field picture from 1801–1804 played an auxiliary role, important especially in the case of the road network outside the city walls.⁶ These plans were analysed retrospectively.

General views of Sandomierz proved very useful. The first, published by G. Braun and F. Hogenberg in 1618, presents the panorama of the city seen from the south at the turn of the sixteenth and seventeenth centuries, so in the period for which our reconstruction was made.⁷ The second, more precious as a source, was made by E. Dahlbergh in 1656. It shows Sandomierz from the south east.⁸ Of written sources *Liber beneficiorum* by Jan Długosz was especially useful, as well as *Liber retaxationum* from 1529, the inspections and inventories of royal property from between the sixteenth and the eighteenth centuries, and B. Maciejowski's inspection from 1604.⁹ The studies used were: the nineteenth century monograph of Sandomierz by M. Buliński based on rich source material, the newer draft on urbanization of Sandomierz by W. Kalinowski, T. Lalik, T. Przykowski, H. Rutkowski and S. Trawkowski, the collection entitled *Studia Sandomierskie* from 1967 (especially articles by A. Miłobędzki

and H. Rutkowski) and J. Widawski's work dedicated to city defensive walls in medieval Poland.¹⁰ The unpublished reconstruction of the division of parcels of the location layout north and south of the Market Square, kindly provided by its author Prof. Dr. W. Kalinowski, was also used.¹¹

The plan of the city was prepared according to the rules assumed for the already published plans of voivodeship cities (Lublin, Płock, Warsaw and Rawa Mazowiecka) of this series of AHP at a scale of 1:10,000. It shows the city inside and outside city walls, within the range of 1 km, that is, the closer suburbs: Cracow suburbs, the Old Town, Opatów suburbs, Zawichost suburbs, and Rybitwy. Sandomierz also had farther suburbs, with many demesnes belonging to burghers and churchmen: Chwałki, Gierlachów, Gołębice, Kobierniki, Nabrzezie, Rzeczyca Sucha, Strochcice, Suchorzów, and three vogt villages: Ocinek, Radoszki and Wysiadłów.¹² Finally, the royal demesne Mąkoszyn – also inhabited by *hortulani* – was situated on city grounds. All these settlements located farther from the city were presented on the main map.

The layout of Sandomierz, located in 1286, was marked out again in 1349 during the reign of Casimir the Great, when the area of city buildings was expanded. At this time the city was given its large marker square, 120 × 100 m, with two streets running from each corner; some 40 parcels were planned around the market square, 10 m wide and 40–50 m long on the average.¹³ In the second half of the sixteenth century the embankments were replaced with defensive walls around 1,700 m long, with at least 16 towers. The course of the walls and the placement of towers were reconstructed on the basis of oldest plans and iconographic sources. J. Widawski's hypothesis, marking as many as four towers in the wall south from the Dominican Gate, was rejected;¹⁴ this wall was flanked by castle towers, providing enough defence.

There were three gates in the city walls in the sixteenth century: Cracow gate in the south near the Castle, Opatów and Zawichost gates in the north; the latter was created probably later than Opatów gate, but not later than the sixteenth century.¹⁵ M. Buliński did, in fact, include undocumented information about a fourth gate in his work, 'Lublin or fishermen gate', which was 'destroyed already in the seventeenth century because of the silt and drop of the hill, and we do not know how big it was'. This gate (*Porta piscatorum*) led to Rybitwy.¹⁶ Obviously, it was not marked on the plan from the second half of the eighteenth century, it is also not mentioned in the detailed 1789 inspection. However, earlier pictures of Sandomierz fail to show it as well. The first of them, from the turn of the sixteenth and seventeenth centuries – shows a gate in the wall and stairs leading to the Vistula; the second – from 1656 – does not show stairs in this place.¹⁷ Probably, the gate mentioned by Buliński should be identified with the sixteenth century gate to Rybitwy. However, it never had any important communication value, and certainly was used only by pedestrians. The area of a busy harbour on the Vistula near Sandomierz is attested to several kilometres from the city, between Kamień village belonging to Wąchock abbey (Kamień Łukawski) and Gorzyce. This crossing was situated on an important old road leading along

Kalinowski i in., *Sandomierz*, p. 171, on p. 25: Reconstruction of the plan of the chartered town at the turn of the fourteenth and fifteenth century, scale 1:5,000; *Studia sandomierskie*, pp. 367 (including: A. Miłobędzki, *Zamek sandomierski*, pp. 243–282; H. Rutkowski, *Z dziejów Sandomierza w okresie Odrodzenia*, pp. 287–338; drawing 3 after p. 224: Sandomierz in the Middle Ages, scale around 1:9,000); Widawski, *Mury*, pp. 400–417, Fig. no. 201–210.

¹¹ My sincere thanks to Him for this, as well as for providing access to enlarged plans of Sandomierz, and for the consultations.

¹² Data concerning demesnes situated in the suburbs, and ownership changes in this area were described by M. Buliński, *Monografia miasta*, p. 120–127, see also H. Rutkowski's remarks (idem, *Z dziejów Sandomierza*, pp. 291–294), who introduced a useful division of suburban settlements into closer and farther. Suburban settlements were not listed in tax registers from the sixteenth century, we know them from Długosz LB, and from LR 1529, and the seventeenth century tax registers.

¹³ W. Kalinowski et al., *Sandomierz*, pp. 20–26; cf. also S. Lazar, *Rozwój przestrzenny Sandomierza X–XIII w.*, "Roczniki Humanistyczne", vol. 6, 1958, no. 5, pp. 5–85.

¹⁴ Widawski, *Mury*, pp. 412 f. and Fig. 51.

¹⁵ Ibidem, pp. 414 f.

¹⁶ M. Buliński, *Monografia miasta*, pp. 14, 95. The gate called Lwowska, situated in the "winter" east is mentioned by J.N. Chałczyński, *Historyczno-statystyczne opisy miast starożytnych w Polsce*, vol. 1, Warsaw 1856, p. 81. This probably concerns later period.

¹⁷ Plan from the second half of the eighteenth century (see footnote 1). LS 1789, part I, pp. 8 f. lists the gate called Zamojska, perhaps identical with the gate to Rybitwy ("Furta na Rybitwy"). For the view from the middle of the seventeenth century see especially B. Heyduk, *Dahlbergh w Polsce*, drawing 84 (enlarged).

the left bank of the San through Leżajsk and Jarosław to Przemyśl, and then to Lwów, it would be difficult to assign any importance in contacts with Lublin to this road.¹⁸ Travellers to Lublin used the convenient crossing in Zawichost, and then the road through Urzędów, or Kraśnik.¹⁹ Zawichost Gate was certainly used by travellers leaving the city in this direction (perhaps the name Lublin Gate refers to this gate), not the nearby Opatów Gate. This road was probably also used when one wanted to reach the crossing in Kamień, and avoid the waterlogged valley of the Vistula. All this leads us to the conclusion, that M. Buliński's interpretation of the role of 'Brama Rybacka' ('Fishermen Gate') is not precise, and theses created on this basis by the authors of the collective study from 1956, and then by J. Widawski,²⁰ lack necessary justification.

The reconstruction of the division of blocks into parcels within city walls is only an approximation, because in the seventeenth and eighteenth centuries the number of houses and plots, especially in side streets, decreased significantly.²¹ Wood was the most popular building material in the city, which – given the concentration of the buildings – increased the risk of fire spreading.²² Only in the western frontage of the Market square in the second half of the sixteenth century were there only stone buildings, other frontages were mixed: stone and wood.²³

The reconstruction of the street network was based on the oldest plans of Sandomierz, and supplemented with data from town tax register from 1563 gathered by H. Rutkowski (eight streets inside the walls),²⁴ as well as with information provided by Długosz about the fifteenth century and source materials included by M. Buliński in his monograph, and numerous other sources. It was assumed that the street name of Św. Maria Magdalena only denoted the upper part of the street which connected the Market Square with Cracow Gate, near the monastery church of St. Mary Magdalene, and the remaining part of the street was called Zamkowa or Grodzka.²⁵ The name of the Podole street – situated next to Św. Piotra street – was omitted, because it was difficult to identify.²⁶ According to the data found in the 1789 inspection,²⁷ it was assumed that Żydowska street reached Dominikańska Gate also at the end of the sixteenth century.

Only monumental buildings were marked on the map: the castle, churches and monasteries, the town hall and the so-called House of Długosz – the seat of the college of mansionaries of Sandomierz chapter founded by Długosz. The medieval castle was rebuilt in the sixteenth century into a Renaissance castle, with three residential wings around a courtyard closed with a wall and a gate from the north or north – east. The entrance to the castle from the city led over a wooden bridge built over a ravine, there was also another bridge here from the area of the collegiate.²⁸ All churches shown on the plan were brick, except for the Church of St. John the Baptist in the Old Town (rebuilt and consecrated in 1585; pulled down in the middle of the eighteenth century) and the Church of St. Adalbert in Opatów suburbs (burned in 1809).²⁹ There were schools by three churches (not marked on our plan): collegiate

¹⁸ T. Wąsowicz, *Sandomierska sieć drożna w wiekach średnich*, [in:] *Studia sandomierskie*, pp. 113–130, as well as the precious maps after p. 128. It is worth adding that Eryk Dahlbergh found a ford over the Vistula, useful for mounted travellers, in the area of Sandomierz in April 1656; see B. Heyduk, *Dahlbergh w Polsce*, p. 65.

¹⁹ See LS 1564/5, p. 155, as well as the information from Dahlbergh's journal; B. Heyduk, *Dahlbergh w Polsce*, p. 65.

²⁰ W. Kalinowski et al., *Sandomierz*, p. 26; Widawski, *Mury*, pp. 414 f.

²¹ About see especially M. Buliński, *Monografia miasta*, pp. 92–94.

²² About fires in Sandomierz – *ibidem*, pp. 73, 89–91.

²³ H. Rutkowski, *Z dziejów Sandomierza*, pp. 293 f.

²⁴ *Ibidem*, p. 294.

²⁵ As suggestes by, e.g., information provided by Długosz (Długosz LB, I, pp. 398, 400–402) concerning the houses in Św. Mary Magdalene Str. Certainly farther from the church of St. Mary Magdalene, but in the same street line, there was an abode situated "in platea castrensi penes area dominorum de Mielecz", described in the document of the exchange from 1540; the Archive of the Princes Sanguszko, vol. V, p. 300.

²⁶ About this street: M. Buliński, *Monografia miasta*, pp. 94–96. Perhaps it was identical with the street Podwale, shown on the fragment of the plan from 1826 near Rybitwy suburbs.

²⁷ LS 1789, p. 9.

²⁸ A. Miłobędzki, *Zamek sandomierski*, pp. 258–266; Guerquin, *Zamki*, p. 261.

²⁹ M. Buliński, *Monografia miasta*, pp. 391–394; W. Kalinowski et al., *Sandomierz*, p. 56. Długosz does not give the entire name of the church of St. John in the Old Town, M. Buliński did not know it as well. The name of St. John the Baptist was recorded in the document of Maciej Wielicki, the bishop suffragan of Włocławek, from 1585, which confirmed the consecration of this church, the document was quoted by S. Lazar (*idem*, *Rozwój przestrzenny Sandomierza*, pp. 69 f.), also the visitation from 1604 – AV Cap. 65, f. 526.

school, maintained by the scholastic of Sandomierz chapter, and parochial schools in the city (school of St. Peter) and in the Old Town (school of St. Paul).³⁰ In 1570 there was a protestant church, probably organized ad hoc in one of the houses during the gathering of the Protestant denominations.³¹

Large parts of the area within city walls did not belong to burghers. Church institutions owned the area near the collegiate of the Holy Virgin (houses of prelates and canons, lower clergy and church servants were situated here) as well as the churches: parochial of St. Peter (given to the Jesuits in the beginning of the seventeenth century), of St. Mary Magdalene with a Dominican monastery, of the Holy Spirit with the hospital of the Regular Canons de Saxia ('*duchacy*'). Individual houses belonged to churchmen and magnates. In the sixteenth century, the number of noblemen's houses grew, and burgher houses decreased, and the magnates won relief from town jurisdiction for their estates in Sandomierz.³² The Jewish population lived north west from the Market Square, near the wall, in Żydowska street ('*Jewish Street*'); there were not many Jewish houses in the second half of the sixteenth century. A synagogue, known already in the Middle Ages, operated here.³³

Within city walls the dominating type was the dense residential-economic development, outside – larger garden-utilitarian parcels, and the settlement was the most dense on the Old Town hill near the churches of St. Paul (parochial church for the majority of suburbs), St. Jacob (by the Dominican monastery) and St. John the Baptist. According to the town tax register from 1563, there were 110 houses in the Old Town and Cracow suburbs, later – especially after the destructions of the Swedish Invasion the Old Town depopulated, and lost the position of the most important settlement of Sandomierz city outside the walls; other suburbs were much smaller.³⁴

Bigger and more bothersome utilitarian facilities operated in the suburbs, for instance: the tannery, mills – on the Vistula near the castle, on the '*cutting*' from Pokrzywnica (Koprzywnica), the town's brickyard (near Koćmierzów). Numerous granaries were built by the Vistula near the harbour (also in the sixteenth century), because Sandomierz was one of the major centres of crop distribution in Lesser Poland, crops were floated on the Vistula to Gdańsk.³⁵ Public institutions – public baths, operated by the Vistula outside the city walls.³⁶

Vineyards were being built already in the Middle Ages on the high scarp of Sandomierz, and thanks to strong sun exposure of the southern slopes, and especially the favourable microclimate of the upper parts of the slopes³⁷ they provided not insignificant amounts of wine. Some of the vineyards, belonging to Church institutions, are better known.³⁸ The vineyards were not marked with separate signs, but shown as gardens. Similarly – the royal hop-field, situated near the castle in Cracow suburbs.³⁹

The reconstruction of the lay of the land was based on the nineteenth and twentieth century plans, yet we tried to present an earlier state. It must be remembered that between the sixteenth century and modern times the lay, not only of the loess Sandomierz scarp, but also of other territories, e.g. the valley of the Vistula, underwent various, often significant changes. The processes of natural erosion of the surface combined with intense activity of man; source data implies that due to the intense use

³⁰ H. Rutkowski, *Z dziejów Sandomierza*, pp. 299–306.

³¹ *Ibidem*, p. 307 and footnote 123.

³² See especially M. Buliński, *Monografia miasta*, pp. 107–111. We know e.g. about the tenement house of Wiktoryn on Sienno, the castellan of Małogoszcz, situated in Opatowska Str. (year 1519, MRPS, vol. IV, no. 2904) or about the residence of the family Mielecki (see footnote 25).

³³ M. Buliński, *Monografia miasta*, pp. 139 f. In 1570 there were eight Jewish houses. According to LS 1564/5, p. 86 twelve Jewish paid here. H. Rutkowski, *Z dziejów Sandomierza*, p. 292, calculated the number of Jews on 150. We know about a Jewish cemetery in the fifteenth century, which was situated near the vineyard of the curator; Długosz LB, I, p. 387; see also W. Wójcik, *Miasto i kościół w Sandomierzu w XVI–XVIII w.*, CPH, vol. 14, 1962, no. 2, pp. 101 f.

³⁴ Data compared by H. Rutkowski, *Z dziejów Sandomierza*, p. 294.

³⁵ W. Kalinowski et al., *Sandomierz*, pp. 38–41; H. Rutkowski, *Z dziejów Sandomierza*, p. 297. Sandomierz granaries are well-attested in the iconography of the oldest views of the town, however, they usually did not survive to this day.

³⁶ W. Wójcik, *Miasto i kościół*, p. 120 n.; H. Rutkowski, *Z dziejów Sandomierza*, p. 301. In 1612 the town's bathhouse was taken by flood.

³⁷ J. Paszyński, *Klimat Sandomierza*, [in:] *Studia sandomierskie*, pp. 165–178. The cold air from the uplands came down, into the valley of the Vistula, so the hills were not prone to sudden drops of temperature and ground frosts.

³⁸ See M. Buliński, *Monografia miasta*, p. 127–129. Also see the remarks about vineyards and numerous orchards around Sandomierz in the description of Poland by Stanisław Sarnicki from the sixteenth century; W. Kalinowski et al., *Sandomierz*, p. 47 (Polish translation).

³⁹ This hop-field is mentioned in LS 1564/5, p. 86; LS 1789, part I, pp. 24 f.

of the unfortified surface of the road network new ravines outside the city walls were created and the existing ravines became deeper. Also, inside city walls the streets running downhill changed into ravines, difficult to cross (streets: Tkacka, Zamkowa that is Św. Marii Magdaleny, and others). Vast changes occurred also in the valley of the Vistula, also due to the change of the current.⁴⁰ The reconstruction of the shoreline of the Vistula was based mainly on the plans from the beginning of the nineteenth century, and the picture obtained was modified thanks to the oldest pictures of the city from the turn of the sixteenth and seventeenth centuries and from 1656.

All sixteenth century names shown on the plan were reconstructed – not always precisely, perhaps – because we know them mostly in their Latin form.

(1993)

Translated by Agata Staszewska

⁴⁰ About the lay of the city grounds and the changes in the valley of the Vistula see U. Karaszewska, *Warunki naturalne rozwoju Sandomierza*, [in:] *Studia sandomierskie*, pp. 133 ff., ibidem hypsometric draft (p. 139) and bibliography (pp. 156–158). The consequences of the usage of the roads near the scarp are vividly described in LS 1789, part I, pp. 9 f.

III.6.27.5 SIERADZ

*Anna Dunin-Wąsowiczowa*¹

Sources. Two books of the town council have been used, from 1561–1595 and 1596–1609,² the court book has also been surveyed.³ The inspections and inventories of the city have been used as well.⁴

In the case of cartographic sources, the most important were the plans of the city, or part of it, from 1795, 1803, 1821, 1823 and 1848; what is more, later plans of Sieradz have been inspected, and Gilly's map has also been used.⁵

The latest surviving plan of Sieradz is Strasbourg's manuscript on a scale of 1:2,900 entitled: *Situations-Plan von der Stadt Sieradz und wo daselbst nach lit. A ein grosses konigliches Getreide-Friedens-Magazin erbauet werden kann.*⁶ It covers the area within the walls, the suburbs and the castle grounds, schematically showing building segments and individual buildings in some places. The descriptive elements relate to the roads running from the city, hydrography, the parochial church, the Dominican monastery and the castle buildings (*Das zerfallenes Schloss-Hoff*). The relief, along with the height on which the city is located, was marked by hatching, the inundation line of the Warta was drawn (*inundationis Linie*). The plan was created in 1795 as an appendix to Boethecke's report from 4 August 1795 (it was hitherto dated 1796).⁷

Another cartographic source used was Hoffman's plan on a scale of 1:1,250 created in 1803 (on the basis of measurements taken in 1802), showing the city walls and the plots for lease (*Plan von den zu vererbpachtenden Stadtwallen zu Sieradz aufgenommen im Monat September 1802 und copirt durch Hoffman*).⁸ The borders of particular plots and the buildings are visible, the key gives the area of seventeen plots in square rods.

Mappa posiadłości rządowych Poświętnej Górki, Jurydyki Dominikańskiej (z przyległościami w mieście Sieradzu Województwie Kaliskim sytuowanych, do Ek(ono)miey (Mąc)kiey należący(ch), is a manuscript plan made in 1821 by Ignacy Szeffer (scale around 1:5,000).⁹ It is a plan of nationalized former Church property with outlines of all plots with buildings, both in the city and in the suburbs, so the localization of church buildings can be found (however, the chapel of St. Nicolas, pulled down at the beginning of the nineteenth century, is absent from the plan). There are no street names and

⁶ AGAD, Zb. Kart. 48-4.

⁷ See e.g. U. Sowina, *Sieradz. Układ przestrzenny i społeczeństwo miasta w XV–XVI w.*, Warsaw 1991, where aforementioned plan is reproduced twice smaller (appendix). 1795 date is mentioned not until: *Plany miast*, no. 3964.

⁸ AGAD, Zb. Kart. 371/373-21.

⁹ AGAD, Zb. Kart. K 486-18.

the relief was not marked, Poświętne and Wójtostwo were signed. City plots and land constituting former property of the Dominicans were marked with numbers (probably related to the measurement register), at times areas or parts of land were given in morgen or square rods.

The above-mentioned plan became the basis of the later reduction together with the actualization of the state of the property. This is *Plan posiadłości rządowych w terytorium miasta Sieradza znajdujących się, w Guber(ni) Warszawskiej P(owie)cie Sieradzkim Ekonomii Męka położonych, Zrysowany w roku 1848 z planu oryginalnego Ignacego Szeffer z roku 1821 przez Lasta 1:20 000* (The plan of the state property within the territory of the city of Sieradz in Warsaw Province Sieradz District Męka land. Drawn in the year 1848 from the original plan by Ignacy Szeffer from 1821 by Last, 1:20,000). This record contains a table giving the area of state property (together 302 morgen 212 rods) and calculations concerning the state in 1823/4 and the 1847 changes.¹⁰

The 1823 plan of Sieradz, destroyed during the Second World War was used on the basis of the copy entitled *Plan miasta Sieradza w guberni Warszawskiej w powiecie Sieradzkim położonego, dzielany w 1823, W. Ziółkowski mier(niczny) przy(sięgły)* (The city plan of Sieradz in Warsaw Province, Sieradz district, done in 1823 by W. Ziółkowski, sworn surveyor) made in 1859 by A.Z. Gustowski.¹¹ The colours explained in the key marked: 1. Buildings according to ownership (houses belonging to the state, church, burghers, army and the Jews) and building material (brick, wood and timber framing); 2. Gardens; 3. Fields; 4. Various places. For the first time the names of major streets were marked. The plan contains elements of hypsometry (relief shown by hatching) and hydrography (oxbow lakes of the Warta and the River Żeglina).

Apart from the already mentioned cartographical sources, the following plans were used: situational and meliorative plan of Sieradz from 1864, consisting of three sheets,¹² situational and architectonic plan of the Dominican monastery from 1865 by Chwastkiewicz and Łochowski,¹³ the plan of the border territory between Sieradz and Monice village from 1844 by Dworzaczek,¹⁴ the plan of the Warta between Siedlątkowice and Sieradz from the nineteenth century (undated) by Moldenhawer.¹⁵

Sieradz territory. In the sixteenth century Sieradz territory consisted of several parts. The located city lay on the left bank of the Warta, and also on the left bank of the rivulet Żeglina, on a terrace 7–9 m high above the oxbow lake (143–149 AMSL).¹⁶ East of the city, beyond the Żeglina, there was the castle complex, connected to the fortified city with a road built on a dike through the flood plains, with a bridge over the rivulet. Outside the city ramparts there was an area occupied by suburban buildings, demesnes, gardens, fields and pastures belonging to the city. The entire territory under city jurisdiction stretched over 2,5–3 km to the north, north-east and south, where it bordered on villages belonging to Sieradz *starosta's* district (Dzigorzew, Męka, Woźniki, Monice, Jeziora and Kłock).¹⁷ In the west, however, where it neighbored on villages belonging to the nobility (Rakowice, Smardzew and Charłupia Mała), the borderlines of the city grounds were around 3,5–5 km from the Sieradz centre. A fifteenth century *jurydyka* of the nobility was situated there (north-west of the city), in 1537 it was taken over by the Pstrokońscy and it was called Pstrokońszczyzna until the nineteenth century.¹⁸ The area under Sieradz jurisdiction covered around 30 km² in the sixteenth century, whereas the city and suburban buildings occupied the area not much bigger than 1 km², and the rest constituted the agricultural facilities of the city, arable or uncultivated.¹⁹

¹⁰ AGAD, Zb. Kart., 352-114.

¹¹ The plan can be found in Sieradz City Museum, a photographic copy in the Institute of Fine Arts PAN, neg. 920–922. The measurement register of Sieradz in Warsaw district, Sieradz district from 1823 is related to this plan (AGAD, Komisja Województwa Sieradzkiego, 430a, ff. 1-42).

¹⁹ Measurements taken in 1823 allow to determine the range of the city grounds as 171 ha, together with fields belonging to the burghers.

City fortifications.²⁰ So far it has been assumed that Sieradz was surrounded by a defensive wall.²¹ This opinion must be considered wrong. The sources attest to the wall only in the southern part of the fortifications, near the Cracow gate, closing the exit of the Wszystkich Świętych street (today Kolegiacka).²² The term ‘extra muros Siradienses’,²³ appearing in the fifteenth century, conveys general information about the location of an object outside Sieradz fortifications and does not prove that the entire city was surrounded by defensive wall. The Cracow gate was the only gate made of brick, because it often appears in the sources as ‘the brick gate’ and this name is enough to distinguish it.²⁴

The argument that the walls constituted only a part of the fortifications finds evidence in 1628–1632 inspections. The inspectors that dealt with the walls of Piotrków, Wieluń and Łęczycza²⁵ did not mention Sieradz walls at all. Calling upon the obligation to check whether ‘the walls around the cities are not damaged’ they described only the ramparts.²⁶ We can therefore assume that the partial walls were not so important to the defensive capability of Sieradz, that their good state would be cared for or marked in the inspection as satisfying. It should be noted, that when the Cracow gate and the adjoining wall was under construction, the fortification of the entire city in this way was certainly scheduled, but the plans were not realized.²⁷ Sieradz was fortified with earthen ramparts, that during the inspection were ‘partly touched by old age, partly by the roads running on them, and partly also by the houses built on them’.²⁸ For that reason the inspectors ordered the walls to be repaired (strengthened with sand) and determined the way of conducting these works.

Two ramparts, separated by the moat (or one rampart, the moat and its wall from the side of the city), defended Sieradz from three sides, from the south, west and north. The moat was dry or waterlogged, but not watered.²⁹ It was 14 m broad and 5 m deep.³⁰ On the eastern side there were no fortifications of this kind, there the defence was granted by the natural slope.³¹ It is probable, however, that the slope was also artificially fortified in some places. The inspectors measured the length of the wall and obtained 2,563 ells.³² This equals around 1,500 m, and means that the entire circumference of the city was measured.

The Prussian executor of the city walls plan from 1803 acted differently – he excluded the slope. In the eighteenth century the fortifications no longer fulfilled their original role, the ramparts were divided into plots and developed, the walls fell into ruin and were demolished during the Prussian reign. The Cracow gate was still marked on the 1795 city plan, in 1800 only half of it still existed, and it does not appear on the plan of the ramparts from 1803.³³ Although the first of the above-mentioned plans shows significant inaccuracies, the locality of this gate raises no doubts as it is consistent with the course of the rampart to the west from the gate and the lay of the slope in the east.³⁴

²⁰ Prepared by Henryk Rutkowski. Records from town books gathered by Anna Dunin-Wąsowiczowa.

³² LWWK 1628, part II, p. 84.

³³ Plans from 1795 and 1803; SGKP, vol. 10, pp. 573, 575; J. Kobierzycki, *Przyczynki do dziejów ziemi sieradzkiej*, part 2, Warsaw 1918, p. 48; Widawski, Mury, p. 423; J. Milczarek, *Sieradz*, p. 38.

³⁴ From the 1803 it could be assumed that fragments of the gate and the walls were hidden in the building in 15 Kolegiacka Str.; cf. *Katalog zabytków sztuki w Polsce*, vol. 2: *Woj. łódzkie*, Warsaw 1954, pp. 308 f.

The defensive wall, adjoining the Cracow gate on both sides, was short in the east, probably reaching the edge of the slope. It was much longer in the west. The placement of the Cracow gate and the wall based on cartographical sources differs from what was shown by Urszula Sowina of the plans of Sieradz from the fifteenth and sixteenth centuries. She moved the line of the fortifications too far from the parochial church. As such, her reconstructions of the plots in Wszystkich Świętych street, on the southern border of the city, is unacceptable.³⁵ The problem of the course of Podmurna street is related to this inaccuracy (or two streets of similar names, one inside the walls, and the other – outside)³⁶

Following Jarosław Widawski's example, we take the south-western part of the wall from the 1803 plan (with a small break near the still existent T-shaped house in 2 Ogrodowa Str.). In the spot farthest from the gate, just behind the end of the wall, one can see a narrow road, leading from the city, through the ramparts, to the Kalisz road. The plans from 1795, 1821 and 1823 attest that it was a passage of secondary meaning, but functioning for a long time, since it created a shortcut to the market square, reaching the Gołębia street (today Krótka) diagonally. This shortcut does not exist today (its traces remained in the borders of some of the estates) and we have only approximate knowledge of the planning of this place. Sowina did not see this communication route, that she did not find in the town books. She assumed the division of the western block in Gołębia street only into plots perpendicular to this street.³⁷ Here it must be said that the best place to cross the line of the fortification for the street leading south-west from the market square was precisely the point where the defensive wall met the earthen rampant.³⁸ A lane from the Wszystkich Świętych street, on the back of the southern market square block ran towards the same passage (today Ogrodowa street).

A tower, connected with the wall, stood nearby. Its lease was mentioned in 1580.³⁹ Perhaps the remnants of this tower are in the foundations of the above-mentioned house in 2 Ogrodowa street.⁴⁰

The wooden Warcka gate, situated on the ramparts, closed the exit of the Warcka street, here you could leave the city in a north-westerly direction.⁴¹ In 1599 or 1600 part of this gate was leased.⁴²

A third gate in the Sieradz fortifications is also mentioned in the literature on the subject – the Grodzka gate, but the fifteenth and sixteenth century sources fail to mention it. It would be standing in Grodzka street – or on the edge of the slope, or somewhere else.⁴³

The city within the fortifications. The plans from 1795, 1821 and 1823 formed the basis for the reconstruction of the city layout in the second half of the sixteenth century. The plans were compared with the results of Sowina's studies. The records in the town registers, made during real estate transactions, as well as inspections, played an auxiliary role.

The area within the fortifications did not exceed 14 ha, so it was slightly bigger than 0,5 of Teutonic lan, or 0,75 of Chełmno lan. In the northern edge of the city, on a hill, there was a brick church of St. Stanislaus with a Dominican monastery (founded in the second half of the thirteenth century).⁴⁴ The parochial (*fara*) church of All Saints stood on the southern edge (it was built of wood

³⁵ The author expresses doubts concerning her reconstruction in various places in her book; U. Sowina, *Sieradz*, pp. 34, 37, 39, 106–108, 111 f., 114 f., and appendix maps.

³⁶ U. Sowina, *Sieradz*, pp. 36 f., 108, 111 f., 117, 180, 183. Podmurna street is mentioned in the second half of the sixteenth century, see: AGAD, Księgi miejskie, Sieradz, no. 6, f. 70 (1559), no. 9, f. 154v (1574) and other.

³⁷ U. Sowina, *Sieradz*, pp. 34, 121 f., and appendix map.

³⁸ This place is mentioned in the 1569 document, mentioning: "particulam certam valli civilis penes murum et angiportum tenden[tem] ad forum septimale, e regione Val. Wędzich telletextoris long[itudine] ad propugnaculum lat[itudine]", AGAD, Księgi miejskie, Sieradz, no. 14, f. 9v.

³⁹ "propugnaculum alias baszthę, in vallo situm domui Stanislai Pieczka contiguo, [...] ea tum conditione, ut murum non dissipet et via publica ibidem salva maneat", AGAD, Księgi miejskie, Sieradz, no. 9, f. 400.

during the location of the city in the thirteenth century, later it was rebuilt in brick after the fire of 1447; the gothic tower was finished only in 1585).⁴⁵

The Sieradz market square is based on a rectangular plan, the longer sides are 120,5 each, and the shorter sides – 69 and 67,5 m. Taking into consideration the supposed distortion of the original size, it is assumed that during the location the market square was meant as two squares, each with sides equal to 100 ells (an ell being 62,6 cm).⁴⁶ Perhaps the longer frontages consisted of two building blocks (four plots each), separated by narrow streets;⁴⁷ our plan does not show that. There was a wooden, at least one-storey, city hall on the market square, with a tower and arcades on three sides. It was situated closer to the centre of the square than the next city hall, that appears on plans of Sieradz.⁴⁸ Butcheries and shoemaker's storehouse were adjacent to the seat of the city authorities.⁴⁹

Mnichowska (or Mniska, Mnisza; today Dominikańska) street led from the north-eastern corner of the market square north, towards the Dominican monastery, reaching the borders of the monastery's graveyard.⁵⁰ The street parallel to Mnichowska, leaving from the north-western corner of the market square, was called Błotna.⁵¹ Two streets ran from the market square in an easterly direction: Grodzka from the north (now Zamkowa),⁵² and Czapnicza from the south.⁵³ They were connected by Sukiennicza street, also called Tkaczy, running on the back of the eastern market square block and Wszystkich Świętych street.⁵⁴ Two streets leaving the market square to the south have already been mentioned: Wszystkich Świętych street going towards the Cracow gate and Gołębia street. Warcka street, already-mentioned as well, went west from the monastery, towards Warcka gate.⁵⁵

There was another market square, other than the main one, within the city in the sixteenth century, called Tatarczy Rynek (circulus cicerinus). It was situated in the north-eastern part of town, in a hollow between the city hill and the Dominican hill. Its shape was irregular (today it is the area between Szewska street in the south and the continuation of Warcka street near the Dominican monastery).⁵⁶

The sixteenth century inspections and inventories did not specify the size of Sieradz buildings.⁵⁷ According to the 1628–1632 inspection, there were 262 houses in the city, belonging to the burghers,

⁴⁵ Katalog zabytków, vol. 2, p. 302; cf. U. Sowina, *Sieradz*, p. 20 (author dates foundation of church to the early thirteenth century and joins that fact with prechartered settlement).

⁵⁰ “domum sitam...penes plateam Mnichowska dicta” (1559), AGAD, Księgi miejskie, Sieradz, no. 6, f. 131 (101?) (erroneous numeration after f. 108v); “domum... acialem in platea monachorum penes vicum monachalis cimiterii”, no. 9m f. 89v; “vicus alias opłotki” (1591), f. 430; cf. W. Kalinowski, S. Trawkowski, *Studium*, p. 22; U. Sowina, *Sieradz*, pp. 32 f., 40.

⁵¹ U. Sowina, *Sieradz*, pp. 32 f., 93–103.

⁵² “in platea Castrensi”, AGAD, Księgi miejskie, Sieradz, no. 9, ff. 135, 147v; “exustio plateae Castrensis” (1581–33 houses in this street burned then), *ibidem*, f. 263; U. Sowina, *Sieradz*, pp. 35, 39, 137–155.

⁵³ “curiam... inter plateam pileatorum et domunculum advocatiale in platea pannificum” (1589), AGAD, Księgi miejskie, Sieradz, no. 9, f. 390. Identified according to W. Kalinowski, S. Trawkowski, *Studium* (Sieradz town plan in Middle Ages in 1:5,000 scale). In 1534 noted as Wodna street (Sowina, *Sieradz*, p. 36).

⁵⁴ “in platea pannificum penes domum advocatiae Siradensis” (1588), AGAD, Księgi miejskie, Sieradz, no. 9, f. 350v; “in platea pannificum inter domum Martini Baliczki et plateolam publicam iacentem” (1589), *ibidem*, f. 366; U. Sowina, *Sieradz*, pp. 35, 37 f., 128.

⁵⁵ “platea Wartensis” (1559), AGAD, Księgi miejskie, Sieradz, no. 6, f. 164; (1575), no. 9, ff. 144, 159v; (1587), f. 357v. According to U. Sowina, *Sieradz*, pp. 33, 104 in the fifteenth century a part of what was later Warcka street was called Żydowska street, cf. W. Pogorzelski, *Sieradz*, p. 103. The street running from the south-western corner of the market square to the place where the wall joined the rampart was probably called Murowa. This information from 1599 was given by W.H. Gawarecki, *Wiadomość statystyczno-historyczna o mieście Sieradzu*, “Przegląd Warszawski Literatury, Historii, Statystyki i Rozmaitości”, vol. 1, part 2, 1840, p. 323.

⁵⁶ “in domo... in circulo cicerino alias na tatarczim rinku” (1591), AGAD, Księgi miejskie, Sieradz, no. 9, f. 439; according to Kalinowski and Trawkowski this name appeared in the middle of the sixteenth century, *ibidem*, *Studium*, s. 23. This market square certainly took its name from the tatarcka (kind of buckwheat) market. The localization based on Sieradz inventory data from 1789, AGAD, ASK, XLVI, no. 110, pp. 49–61, where Tatarczy Rynek was situated between Dominikańska Str. and Zamkowa Str.

⁵⁷ The sixteenth century inspection gives the price of the rent on houses, that appeared in the same form in seventeenth century, LWWK 1564, part II, p. 1.

21 belonging to the nobility, 40 to the churchmen and 13 houses were abandoned. In total, 323 houses were inhabited, and together with the abandoned ones, there were 336 houses in the city.⁵⁸ After the Swedish wars (the Swedish Deluge), according to the 1661 inspection, there were 364 houses then.⁵⁹ The inspectors' information in the seventeenth century was related to the houses within the entire city fundum, with suburbs. Almost all houses were of wood.

U. Sowina established that the number of plots within the city fortifications in the first half of the sixteenth century was less than 200. The number of built-up plots, marked on Sieradz plan from 1821 in the same area slightly exceeds 200, according to our calculations. It could also be added that the area within the ramparts could be divided (without isolating the market square and the streets) into roughly 150 regular city plots, 2,500 ells² each (the size read from the plan by U. Sowina – 25 ells × 100 ells),⁶⁰ or into around 200 plots of 1,800 ells each (the plot visible in the western frontage of the market square – 18 ells × 100 ells).⁶¹ The plots represented on our plan are a hypothesis, in various places close in varying degrees to the state from the sixteenth century. We did not make an attempt at reconstruction where it would be particularly difficult.

Suburbs. The suburb along the road leaving the city through the Cracow gate to the south was called St. Nicolas suburb, or the Cracow suburb. The first name was related to the chapel (church) of St. Nicolas standing by the road in the place where the name Poświętne appears.⁶² This wooden chapel, remaining till 1812 was located on the basis of the plan of Sieradz from 1795.⁶³ The suburb name 'Cracow', even though it appears already in the fifteenth century, was accepted no sooner than in the eighteenth century. This suburb neighbored on Błonie, close to the fields of St. Nicolas chapel and city meadows called Chabie.⁶⁴ Porzece, situated south-east of the city, whose lands reached Żeglina, in the sixteenth century constituted a separate suburb of Sieradz. In the south-west of St. Nicholas suburb there was a place (locus) Krasawa, called from a stream of the same name, whose traces can still be found in present-day toponymy.⁶⁵

City fields lay to the west of the city. They reached the borders of the royal village of Kłocko and the city's enclosure (indago civilis alias zapusta). In the latter area the city council began to measure new fields, divided into furlongs and sold to the burghers. As a result, two town villages of Sieradz were created on the cleared thickets: Zapusta Mała and Zapusta Wielka.⁶⁶

The Holy Ghost suburb lay to the north-west of the city, by the road which was a continuation of Warcka street. It was called after the church and hospital of the Holy Ghost situated in this area, attested to at the beginning of the fifteenth century.⁶⁷ Part of this suburb was called Nowe Przedmieście Sieradzkie (Sieradz New Suburb), Nowe Miasto Sieradzkie (Sieradz New City) or Nowe Miasto Przedmieście Św. Ducha (New City Suburb of the Holy Ghost) in the second half of the sixteenth century.⁶⁸ At the foot of the Dominican hill stretched the village of Rybaki. Its inhabitants were fishermen, catching fish in the Warta.⁶⁹

III.6.28.1 SIEWIERZ

Małgorzata Wilska

Siewierz was the city of the Duchy of Siewierz, which belonged to the bishops of Cracow since 1443. The name 'Siewierz' was spelled 'Siewior', 'Syewyor', or 'Siever' in the fourteenth and fifteenth centuries. In 1554, the version 'Syewyerz' appears, although the old form 'Siewior' was still used sporadically until the seventeenth century.¹

The reconstruction of the urban layout of Siewierz in the sixteenth century was based mainly on the colour plan from 1786 at a scale of 1:4,500, now kept in the National Library,² and on the cadastral plan from 1872 at a scale of 1:2,500.³ Both plans offer a clear image of the spatial arrangement of Siewierz, which generally survived to our times. Major changes occurred in the vicinity of the castle, as a result of changes in the geographical environment. In the sixteenth century, the pond, created on the marshes of the River Czarna Przemsza, encircled the castle and joined the moat. In the nineteenth century the pond disappeared and waterlogged meadows emerged in its place, some of which still exist today.

The visitation of Cardinal Radziwiłł from 1598 and the seventeenth century inventories of the key of Siewierz were our most important archival sources. The first place among studies is occupied by a collective publication edited by Feliks Kiryk entitled *Siewierz, Czeladź, Koziegłowy. Studia z dziejów księstwa siewierskiego*. It consists of articles by M. Antoniewicz, F. Kiryk, J. Laberschek, Z. Noga, A. Nowakowski, and J. Rajman,⁴ and others.

The beginnings of Siewierz remain unknown, and the scholarly debate concerning the original location of the city has yet to end. One of the hypotheses suggests that in the twelfth and thirteenth centuries the first castellan gord was situated to the southwest of the current city, on a low elevation, around a Romanesque Church of the Beheading of St. John the Baptist, in which the synod of the Polish bishops gathered in 1233.⁵ A. Tomaszewski spoke against this belief, because the excavations conducted around the church of St. John did not find any remains of a gord.⁶ With time, the hamlet was moved into the valley of the River Czarna Przemsza and that is where the town was founded. It obtained town rights in the thirteenth century. The date of founding: 1276, is not certain, as the document of location did not survive.

According to J. Laberschek, the existence of Siewierz is attested to from 1304.⁷ The term 'Duchy of Siewierz' was first used in 1341. In the fourteenth century, Siewierz with surrounding territories belonged to the dukes of Bytom, and then to the dukes of Cieszyn.

The year 1443 was a turning point in the history of the city. That year Wenceslaus, the Duke of Cieszyn, sold Siewierz to Zbigniew Oleśnicki, the Bishop of Cracow.⁸ The purchase contract lists three towns (Siewierz, Czeladź, and Kozięgłowy), and 20 villages. It also concerned the rights of authority over the entire territory of Siewierz, which covered three towns and 60 villages altogether. The land of Siewierz, some 679 km², became in fact a sovereign duchy belonging to the bishops of Cracow, who started to use the title of a duke in 1486. The title survived until 1800.

The bishops of Cracow had legislative and judicial power, granted privileges, and had their own army. In 1519 the complex of Kozięgłowy, bought from Krystyn of Kozięgłowy, became part of the bishop's estates. From then on, the property of the bishops was divided into two keys: the key of Kozięgłowy, and the key of Siewierz. Other villages in the duchy belonged to the nobility, which was dependent on the bishops and did not possess the rights of the nobles from Poland. The gord starosta and the land court resided at the castle in Siewierz.⁹

The city developed around an irregular, rectangular market square. Its eastern side was the longest and slightly bent.

Three exit streets ran from the market square: Bytomska Str. led to the west, Kozięgłowska Str. – north, and Krakowska – south. A two-storeyed brick town hall stood in the market square, it was rebuilt after the fire in 1580. Butchers' stalls were located next to the town hall. The market square was encircled by wooden houses on wall base, or stone houses. The 1668 inventory tells us that there were 33 houses around the Great Market, of which six were uninhabited. At the same time, there were 25 houses in Bytomska Str., 15 in Kozięgłowska Str., and 36 in Krakowska Str., of which four were uninhabited. A marketplace called 'Świńskie targowisko' ('Pig market') was situated in the north-western part of Siewierz, later it was renamed 'Wołowe Targowisko' ('Oxen market'). The inventory from 1668 lists 25 houses there. The south-western side of this square bordered on sand dunes called 'Wielkie Piaski' ('Great Sands'), which can be seen on the plan from 1786. Often, the houses on this side of the market square were being buried under the sand, as confirmed by many entries from the seventeenth century inventories, which mention 'sand-covered' houses in the square.

The burghers of Siewierz were obliged to repair Krakowska Street, which left the market square in the south. A document issued in 1567 emphasized it was 'according to the old custom'.¹⁰

A hospital and chapel of St. Valentine stood in Krakowska Street in the sixteenth century. A small square, which belonged to the hospital, was situated nearby and from it ran a street called Podrzeczna in the seventeenth century, which led to the parochial Church of St. Matthias the Apostle. The hospital chapel of St. Valentine was made of wood, and bricked only in the beginning of the seventeenth century. In 1598 there were three altars in the chapel, and the right of patronage belonged to the members of the town council of Siewierz.

The hospital owned three gardens in Siewierz: one situated near the chapel of St. Valentine, one by the chapel of St. Leonard,¹¹ and one behind the chapel of St. John¹² between gardens of the burghers. Additionally, the hospital had four meadows, three in Piwonia and the so-called Bacholin meadow, as well as two squares right by the chapel. Hospital buildings were to be built there. In 1503 Maciej Wilk, a burgher of Siewierz, had a garden by the River Czarna Przemsza. The garden stretched towards Stary Siewierz ('the Old Siewierz'), i.e. the area of the chapel of St. John. In 1552 bishop Jan Konarski presented the city with fields, a pond, and the confirmation of the right to use the bishop's forest called Piwonie. We know the burghers tried to clear the forest and the thickets to gain additional land for cultivation. In the end of the sixteenth century and in the beginning of the seventeenth Siewierz had 30 lans of town fields and gardens, not including the fields and gardens of the local parson, or castle grounds.¹³

⁸ Z. Noga, *Osadnictwo*, pp. 165 ff.

⁹ A. Nowakowski, *Sądy i prawo w dawnym Siewierzu*, [in:] *Siewierz, Czeladź, Kozięgłowy*, pp. 280–283; see also idem, *Dzieje ustroju*, p. 43.

¹⁰ Noga, *Słownik*, p. 130–131.

¹¹ The wooden church of St. Leonard stood by the road to Cynków, and for the first time it was mentioned in 1503. There are no cartographic grounds to put it on our plan.

¹² The garden next to the chapel of St. John lay on the grounds of the current village Kuźnica Świętojańska.

¹³ F. Kiryk, J. Rajman, *Miasta*, p. 338–339. We could not locate the majority of gardens and fields.

The Church of St. Matthias the Apostle was probably originally a subsidiary of the Church of St. John. After the foundation of the city, it became a parochial church. In the fifteenth century it was wooden, only the chancel was made of stone. It was rebuilt in 1598, and was entirely bricked then. The following villages belonged to the parish in Siewierz: Dziewki, Gołuchowice, Łagisza, Sulików, Trzebieszawice, Warężyn, Wojkowice Komorne, Żelisławice, as well as ironworks established near the city in the sixteenth century (Piwonia, Sulikowska, Czekanka).¹⁴

There was a school by the parish in Siewierz, it appears in the sources in 1521.¹⁵ The first provost of the school, Stanisław Prandota, was mentioned in 1545.¹⁶ A garden was situated near the church of St. Matthias, it adjoined the castle garden. Also, at the times of Długosz the endowments of the parsons of Siewierz consisted of two ponds, and in the course of the sixteenth century, the number of fish farming ponds increased to six.¹⁷

A road led from the church square to the castle. The nineteenth century plan calls it Kościelna Street. Another road led from Krakowska Street behind the church, and reached the mill situated on one of arms of the River Czarna Przemsza, below the castle pond. This mill, established at the end of the fifteenth century, was marked on the basis of the 1786 plan. The bishop's privilege from 1567 obliged the city to maintain a public road, which ran from Stary Młyn ('the Old Mill') in Krakowska Street, and the toll (3 dinars from a cart) was to be collected by the town council. In 1574 bishop Franciszek Krasiński established a bridge toll on the River Przemsza in Siewierz, and allowed 3 dinars to be collected from each ox and horse, and 2 dinars from a sheep.¹⁸

Favourable natural conditions, rapid current of the river, as well as its numerous arms, allowed for eight mills to operate in Siewierz in the sixteenth century, as confirmed by written sources. However, we were unable to localize the mills.¹⁹ Perhaps we should look for them on the ponds and marshes north of the city.

The castle of Siewierz, attested to in the sources in 1337, was probably built already at the beginning of the fourteenth century, among the marshes and swamps of Czarna Przemsza, which gave it natural protection. The castle underwent general conversion in the first half of the sixteenth century, by order of Bishop Piotr Tomicki, and later at the time of Bishop Franciszek Krasiński. Around 1530 the northern wing was converted, along with the tower. Further changes occurred between 1533 and 1574. The entire Renaissance layout of the castle and the fence comes from this period. The burghers of Siewierz were obliged to repair the castle fence, as well as to break the ice on the castle moat in winter, as stated in the 1523 document. In 1574 Bishop Krasiński transferred the costs of maintaining the castle to the nobility and burghers of Siewierz.

B. Guerquin believes²⁰ the original brick castle was built on an irregular plan, which could be suggested by the shape of the eastern part, residential area with a single row of rooms. Other parts of the castle, together with the tall gate tower with a double entrance from the north, come from the sixteenth century. A two-storeyed gatehouse on a rectangular plan, with a semi-circle wall on the outside, was added to the gate tower in the sixteenth century. The entry and the wicket for the pedestrians were located on the upper floor. Loopholes fit for firearms were situated on both levels. A wooden drawbridge was located before the barbican.²¹ It was thrown over the moat, which was connected to the large pond encircling the bishop's residence from the south and east. Large parts of the sixteenth century Renaissance building survived to this day, even though the castle was abandoned at the end of the eighteenth century.

The grounds of the castle demesne and the gardens adjoining the waterlogged meadows lay north of the castle. These parts of the landscape also survived intact to modern times.

The hereditary office of the vogt is mentioned in Siewierz since the second half of the fourteenth century. It is impossible to determine the endowments of the vogts of Siewierz unambiguously. In the fifteenth century they consisted of 2 lans of arable land, situated near the chapel of St. John. We know that in the sixteenth century the vogt also owned a garden by the River Czarna Przemsza, next to the fish pond, as well as three meadows, a mill by the castle, and a bathhouse.²²

In the 1530s a fire broke out in the city and destroyed many buildings. Afterwards, in 1535 Bishop Piotr Tomicki freed the city for 10 years from payments. In 1570s fire consumed the buildings by the market square, as well as the town hall in which town books were kept. In 1578 Bishop Piotr Myszkowski allowed the burghers to settle again in the destroyed part of Siewierz, and in 1589 established a rent from the newly-built houses, the money was used for town need. This means that despite the cataclysms the city could blossom in the sixteenth century under the care of the bishops of Cracow. It was a centre of craftsmanship. In 1567 the artisans from Siewierz were freed from castle works. Guilds in Siewierz were granted various privileges, for instance from Bishop Jerzy Radziwiłł, at the close of the sixteenth century. In 1593 the bishop granted a charter to the guilds of tailors and shoemakers. In the following year the same bishop gave a charter to the guild of furriers, and in 1596 granted a common privilege to the guilds of locksmiths, coopers, coppersmiths, harness makers, carpenters, malt makers, and feeders.

In the sixteenth century 12 fairs were organized in Siewierz every year. In 1567 Bishop Filip Padniewski allowed an oxen market to be held every Monday, and freed the city from market fees for five years. Next year the same bishop imposed a rent from wine on the city. In 1580 Bishop Piotr Myszkowski freed the burghers from tolls on iron, salt, cattle and sheep in the entire duchy. These reliefs were probably caused by the difficult situation of burghers after the fire in the city, and the Bishop of Cracow wanted Siewierz to prosper.

Many important routes led through Siewierz and the entire duchy. The customs house in Siewierz appears for the first time in a document issued in 1223. The road Cracow–Wrocław, running through Będzin, Sławków, Olkusz, as well as its branch Siewierz–Czeladź, crossed the city. Siewierz lay on the tract of routes running from Cracow and Lesser Poland to Greater Poland (through Koziegłowy), and of international routes to Bavaria through Bohemia to Ruthenia.²³

This important location of the Duchy of Siewierz, also in terms of trade, between Silesia and the Crown, greatly increased the value of every piece of land. This was the result of numerous border conflicts with Silesia and the Crown, from the sixteenth century until the eighteenth. The Duchy of Siewierz ceased to exist in 1790, when it was incorporated into the Crown.

(1998)

III.6.29.7 WARSAW

Wanda Szaniawska

The reconstructed plan of Warsaw shows the entire agglomeration at the close of the sixteenth century. At the time, the agglomeration had two centres: Old Warsaw (Stara Warszawa) founded at the turn of the thirteenth/fourteenth centuries, and the hundred years younger New Town of Warsaw (Nowe Miasto warszawskie). The suburbs, densely developing along the main tracts and field roads, were under the jurisdiction of both towns. Some of the fields belonging to both towns and a part of the demesne of the starosta's district of Warsaw were divided into plots. The northern and southern suburbs, built along the most important, old route from Czersk to Zakroczym (forming the axis of the settlement of the towns) reached the borders of suburban villages already in 1530: Kałużyczyn (Folwarki) and Solec in the south, and Polków in the north. In the west, the suburbs were much smaller. The fields – of the town and the demesnes – remained outside the area of urban development. The plan shows only a part of the fields, which stretched further on to the borders of the village Wielka Wola. To the east, the River Vistula defined the border of Warsaw's urban complex. Old Warsaw had access to the sandbanks of the Vistula, including the largest Kępa Solecka (Kawcza, Holenderska and later Saska). The plan shows also some of the settlements on the right bank of the Vistula, where the urbanization process began to develop with the construction of a permanent bridge over the river (1568–1573).

It should be added that up to now research on the urbanization and development of Warsaw failed to recreate the state of the development of the entire city complex at the close of the sixteenth century. Studies focus on individual units of the complex, principally on Old and New Warsaw. However, the diversity of the available source basis, chronological framework and different methods of cartographic presentation prohibit the automatic combination of published reconstructions without further supplementary research.

The plan of Old Warsaw around 1600 reconstructed by St. Żaryn, based mainly on the results of architectural research, provides us with the division of building plots into parcels and shows gothic brick buildings.¹ The plan of the New Town in the fifteenth century, prepared by A. Berdecka on the basis of other plans and written sources, contains only the street network and plots, without ownership division and buildings.² Various studies on the development of particular streets and town districts offer valuable help in drawing a detailed plan of the town. These studies describe the history of the old town buildings of the Warsaw chapter,³ the eastern side of Bernardyńska Street ('przedzamcze', i.e. 'the area before the castle'),⁴ as well as an attempt at reconstructing the development of Krakowskie Przedmieście between the fourteenth and eighteenth centuries.⁵ D. Kosacka in her work on the arrangement and nature of the development of the northern suburb in the eighteenth century devoted

the first chapter to the history of the area also in the fifteenth – seventeenth centuries, but without cartographic representation of the changes occurring.⁶

The lack of any detailed studies on the spatial arrangement of western suburbs, which developed on the grounds of the demesne of Warsaw starosta's district and city fields, impedes our efforts at reconstructing the entire urban complex in the sixteenth century.⁷ The published plans of these areas show the development in the first and second quarter of the seventeenth century.⁸ Only some information concerning the street network and location of several properties could be referred to the end of the sixteenth century. We also lack work on the spatial development of the eastern suburbs, stretching in a narrow belt on the slopes of the scarp of the Vistula and the river's bank.

Z. Biernacki's⁹ and T. Wyderkowa's¹⁰ describe changes in the Vistula's channel and the character of the right-bank settlement, important for the urban complex of Warsaw.

The first attempt at a detailed reconstruction of the entire Warsaw urban complex around 1600, showing general development of parcels, was made for the purposes of the exposition at the Muzeum Historyczne M. St. Warszawy ('The Historical Museum of Warsaw').¹¹ This commentary refers to this reconstructions and the publications mentioned, and introduces some supplementing information and possible corrections thanks to an expansion of the research basis, both in terms of written sources and cartographic records.

The geographical environment and road network were prepared – apart from the aforesaid publications – on the basis of written sources and plans of the city and its vicinity from the seventeenth–eighteenth centuries.¹² The oldest, detailed delineations of Warsaw from the sixteenth–seventeenth centuries are only known from various records, as they were lost.¹³ Still, the three surviving fragmentary plans from the first half of the seventeenth century lack geographical elements. Only one

of the plans includes the road network, up-to-date also at the close of the sixteenth century.¹⁴ The following eighteenth century plans of Warsaw contain valuable information about the hydrography, roads, forestation and the range of fields: by C. Albrecht from 1705, by C.F. Hübner from 1733, by P.R. de Tirregaille from 1762 and by M. Deutsch from 1777.¹⁵ Also helpful were the cartographic drawings of individual town districts, streets and plots.¹⁶ The most complete characteristic of the right-bank grounds was shown by F. C. Schmidt in his drawings from 1733 and 1739, and by M. Deutsch on his plans.¹⁷ Images of Warsaw from the end of the sixteenth century and the first half of the seventeenth provide us with supplementary details.¹⁸ The images show mostly the topography of river-side areas and the location of the sandbars of the Vistula.

The characteristic feature of all the plans mentioned is the fact that they portray only the most important elements of the geographic environment, which was much more diversified outside the urban complex. In this respect, the northern suburbs of the left-bank Warsaw and the areas situated on the right bank of the Vistula are better documented. The main element of the lay of the land of the left-bank Warsaw is the scarp, cut by the ravines of the old streams. Until the end of the seventeenth century, the scarp determined the direction in which the city developed. The main hydrographic element presented on our map was naturally the Vistula, but other important watercourses were also included. These were the rivulets Belcząca and Nalewka, flowing towards the Vistula through the north-western suburban grounds. Their course was based on the plans published in D. Kosacka's work.¹⁹ Smaller streams, roughly localized on the basis of various source entries and absent from the old plans, flowed through southern suburbs, namely: the Kamionka, between the estates ('jurydyka') of the Franciscan Sisters and the castle, and the Jordan near Gnojna Street (Bednarska).²⁰ The presented course of the streams is only a hypothesis, it refers to the canals, which existed there later and were recorded on the delineations of A. Hiż, and to the ravines shown on the panoramas of the town. The following watercourses from the Middle Ages were excluded from our plan: the Dunaj, which supplied the moat surrounding the old town's defensive wall, and an unknown canal mentioned in a document from 1413, which flowed 'ex opposito' of the church of St. John.²¹ Probably it was canalized already at the close of the fifteenth century.²² Waterlogged areas and ponds at the foot of the scarp, between Gnojna Street and the ravine of the later Oboźna Street, were marked on the basis of the eighteenth century situational plan of the Kazimierzowski Palace²³ and Hübner's plan of Warsaw from 1733.

Small meadows survived as town pasturelands in this densely developed area. They lay near the rivulet Nalewka. Larger thickets grew on the sandbanks of the Vistula and waterlogged riverside grounds. Forested areas lay beyond the northern suburbs.²⁴

The nomenclature reflected the diversity of the substratum. The undeveloped sandbar in the southern suburb was called 'Piaski' ('sands'),²⁵ and the 'Glinki'²⁶ ('clays') located to the north referred

to the clay bed situated on the edges of the scarp, particularly in the area of Nowe Miasto and below the Bernardines' estates, and exploited by the city's potters and brick makers.

The spatial layout of the city was centred around the old route between Czersk and Zakroczym, parallel to the River Vistula near the edge of the scarp, and two streets, running at right angles from the Czersk–Zakroczym road. One of these roads led through the suburban villages to Tarczyn and then to Wrocław, the other – through Wielka Wola, Błonie and Sochaczew to Poznań. The local road layout and the street networks of both cities and the suburbs were based on these routes and connected them with the rural background, the Vistula and the long-distance tracts. Fragments of these roads appear on the oldest surviving plan from 1621 and partially also on the plan of the town Leszno from 1654.²⁷ Later, some fragments of the western ingoing roads to Krakowskie Przedmieście and a fragment of the Poznań highway (the end of Długa Street) were regulated and moved due to the construction of the bastion embankments (1621–1624), the foundation of a magnate town of Leszno and the realization of the Saxon Axis.²⁸

Our detailed reconstruction of the spatial layout of the urban complex focused on the two cities and their suburbs. The main task – the reconstruction of the street layout and building plots with their division into parcels and the character of the development around 1600. The abundant supply of historical plans was not enough to fulfil our assumptions, as the earliest plans come from the seventeenth century, and despite some interesting details, they present a different picture of the development, and the much-changed spatial layout of the city. Therefore it was necessary to compare the cartographic data with the written sources.

The valuable existing source publications on this issue²⁹ and the rich collection of surviving archival records fail to provide the satisfactory documentation required for a precise reconstruction, devoid of hypothetical localization of some of the plots and backstreets. Further problems were caused by the lack of a uniform source basis for the entire city complex. The most valuable information came from the lists of names of the payers of the *szos* tax, ordered by streets and plots. This type of material survived only for the Old Warsaw and its suburbs.³⁰ Still, not every property was included in these lists, which usually ignored the estates exempted from the town's jurisdiction, which belonged to the king, the clergy, churches and monasteries. That is why in order to determine the possibly most precise number of parcels at the close of the sixteenth century, we included, apart from the lists of the town tax, all surviving inspections and other tax records from 1565–1655.³¹ These were used in a retrogressive way to correct the localization and number of parcels recorded in the most useful town tax record from 1594–1620.³² In the cases of properties, which were not subject to town law, various data obtained from real estate transactions helped us to complement the missing information.³³ The street network and the lists of properties around 1600 were prepared on the basis of the gathered materials.

The general urban arrangement of Old Warsaw survived without major changes, thanks to gothic brick buildings. However, in several places it differed from what was depicted on St. Żaryn's plan. Various changes occurred in the sixteenth century in the gothic arrangement. The growing population seized those pieces of town grounds which still remained unoccupied. Streets along the city walls were built over (at the back of the block by the market square from the Vistula, in Krzywe Koło Street,

²⁷ D. Kosacka, *Plany Warszawy*, no 92: "Delineatio Novae Leschnae cum partibus adiacentibus" (known from a reproduction), 1654. The junction of Długa Street with Droga ku Św. Trójcy, before the jurydyka was established. The delineation of Leszno Street forced the continuation of Długa Street be moved.

²⁸ The realization of the Saxon Axis pushed the road to the starosta's demesne (Królewska) and forced the regulation of the road to Rakowiec.

³¹ See footnote 29 and AGAD, Warszawa Ekonomiczne, sign. 1431 "Comput osiadłości miasta Starej Warszawy y circumferentey jego... 1655...", published in parts in: *Źródła do dziejów Warszawy*, pp. 127–131, entitled "Deskripcyja albo komput kamienic, dworów, domów...".

³² AGAD, SW 534, ff. 191–234.

³³ We used the collection of town books of Old Warsaw: AGAD, SW no. 2–7, 535–544; the town book of New Warsaw: AGAD, NW, no. 1–4, no. 133–134 and fragments from the Warsaw court books.

near Krakowska Gate), such as the ingoing streets and backstreets, which divided the block (e.g. on the western side of Świętojańska Street, in the northern block by the market square, in the southern frontage of Piekarska Street). After 1579, four small parcels situated by the city walls were isolated from a square in Szeroki Dunaj Street. The town's chandlery was located there.³⁴ In the middle of the fifteenth century, the Jews were evicted from the town. Since then, the parcels in the Jewish district situated at the back of Piwna Street, between the streets Piekarska and Dunaj, were gradually taken over by the burghers. The old horse mill, situated by the city walls near the old ghetto, was also removed in the middle of the sixteenth century, and ten small parcels were marked out in its place, on which small wooden servant houses were built.³⁵ The development of the city buildings was accompanied by the growth of church and monastery complexes. The Augustans gained several properties inside the walls, purchased or endowed. As a result, Cudna Street, recorded still in the middle of the sixteenth century, ceased to exist.³⁶

As a residence of the subsequent *sejms* and the monarch, Warsaw gained political importance and the castle complex was expanded, resulting in several changes on the eastern side of Bednarska Street. Still in 1568, four properties in this street belonged to various noblemen and there was the office of the gord court of Warsaw land situated resting on the axis of Grodzka Street. The development of the royal castle initiated by Sigismund August (1568–1572) required that three plots be liquidated, and only cellars remained of the old court building.³⁷ The new arrangement of the area before the castle from around 1600 – when the castle was in the process of general reconstruction ordered by Sigismund III – was best shown on the plan from the beginning of the seventeenth century, which included the draft drawings showing the floor of the western part of the castle and the adjacent areas.³⁸ The plan depicts a plot situated by the city walls, the location of Krakowska Gate and the direction in which one entered the castle, probably already in the fifteenth century. The arrangement presented on the plan, except for the planned elements, was confirmed by the written sources.

It should be noted here that the number of parcels presented on the reconstructed plan does not equal the number of properties listed in some streets in the town tax registers. The parcels were often divided and consisted of two residential/utilitarian buildings. Such a situation was particularly common on the western side of Grodzka Street and the northern frontage of the market square. However, given the scale of our plan, we decided not to mark these parcels and only include them in the list provided below.

The formation of suburbs, in their sixteenth century shape, ended in the 1530s, encompassing the area of some 100 ha (without city fields), so almost four times more than the area of both towns.³⁹ Fifteen streets comprised the communication network. On the western side they formed a functional arrangement connected with the main roads and field roads, crystallized in the fifteenth century and the beginning of the sixteenth. In the middle of the sixteenth century, the road running between the city fields and developed suburban fields gained in importance. It was called 'okolna' ('encircling') or 'droga ku św. Trójcy' ('the road to the Holy Trinity'), that is leading to the chapel of this denomination founded in 1544. The road connected the northern and southern suburbs, and also met other roads leading to suburban villages. Several small side and back alleys were created apart from main streets with front buildings. The alleys divided large parcel complexes on the Rynek Przedmiejski ('Suburban Market Square') and by the road to the Holy Cross. On the eastern side of the suburbs, the ravines on the scarp were turned into streets.⁴⁰

³⁹ The area of Old Warsaw is now 10 ha, together with the defensive walls, New Warsaw around 13 ha, the entire urban complex at the close of the sixteenth century 125 ha.

⁴⁰ "Platea Vistulam versus" – that is what the ravine of the present-day Bednarska Street was called, and sometimes also the road and alley running along the southern edge of the Bernardines' property.

Table 1. The number of parcels and properties in Old Warsaw around 1600

Name of the street	Number of properties		Number of plots reconstructed by the author	Remarks on the number of properties based on the town tax register according to St. Żaryn (hereinafter <i>Ż.</i>) – see footnote 1
	In 1565 according to the inspection	In 1600 according to the town tax register		
Rynek (Market Square)	40	40	40	Without the town hall
Św. Jana (Jezuicka)	6	8	8	<i>Ż.</i> marked three parcels in the western frontage of the street, while there were only two at the time
Grodzka (Świętojańska)	23	28	29	Without the church of St. John. <i>Ż.</i> marks two streets in the western frontage. One of them had already been developed at the time
Bernardyńska	9	10	10	<i>Ż.</i> does not mark all parcels on the western side. Wrong hypothesis concerning the arrangement of the parcels on the side of the castle
Św. Marcina (Piwna)	15	17	10	Without the church and monastery of the Augustans. In 1600 there were five properties at the back of Grodzka Street. <i>Ż.</i> gives a different division of the western frontage
Piekarska	17	22	15	In 1600 the properties in Żydowska Street and those created on the location of the old mill were included
Piwna	15	17	15	In 1600 properties on the side of Piwna and Dunaj streets were listed under Piekarska Street. <i>Ż.</i> marks 14 parcels
Dunaj	12	20	20	<i>Ż.</i> does not mark parcels by the city walls on the northern side
Żydowska	5	does not appear	–	In 1600 the parcels were ascribed to Piekarska Street and Dunaj Street. In the reconstruction – to Dunaj Street
Nowomiejska	12	15	15	In 1600 the corner property in Krzywe Koło was included, as well as two side properties of the block by the market square
Krzywe Koło	18	23	18	In 1600 five properties at the back of the market square block were included
Kanonie	not listed	not listed	14	Properties excluded from the city's jurisdiction
Dziekania	not listed	not listed	3	Properties excluded from the city's jurisdiction
In total	172	200	197	Without the town hall, two churches and a monastery

The reconstruction of the spatial arrangement of the suburbs of Old Warsaw was prepared on the basis of a plan created by an unknown author in 1621⁴¹ and Hoppe's plan from around 1641. The arrangement of blocks and streets in the south-western part of the suburbs towards the end of the sixteenth century was shown on the first of the quoted plans, whereas the plan by I. Hoppe, despite having many valuable details, contains numerous errors and gaps. For instance, it fails to show Dziekańska – a small alley listed in town tax registers, or Łaza-rzowska Street. On the other hand, there is a street marked on this plan, which was a continuation of Kozia Street in the south-western direction separating peripheral burgher properties from the estates of the nobility. Perhaps this street

⁴¹ See footnote 8, no. a.

appeared in the second quarter of the seventeenth century. It was not included in our plan, which presents the situation at the close of the sixteenth century.

Ownership division was prepared and depicted in detail based on the registers of the taxpayers of the town tax from 1579–1594. Table 2 shows the suburban street network and the number of properties.

Table 2 proves that the tax registers from different years show a different number of recorded streets and properties. The most complete list of streets was included in the town tax register from 1579, whereas the next register – from 1594 – leaves out several of the streets, in which there were properties, whose owners were excluded from town jurisdiction. These were the streets on the eastern side of Krakowskie Przedmieście, running down towards the Vistula *Vicus stricta* and *Vicus post Moniales*, with residences of the nobility and clergy, and Dziekańska Street (*Decanatus*) located on the grounds belonging to the chapter of St. John.

The table reveals some significant divergences between the numbers of parcels in one street. In certain cases it was a reflection of ownership changes due to dividing or combining several parcels in the hands of one owner, as in Długa Street and Krakowskie Przedmieście. Yet the differences in Freta and Rybitwy streets are the result of a clerk's error, who either overlooked properties, or recorded properties in two neighbouring streets under one name.

Ownership division recorded in town tax registers was reconstructed after the seventeenth and eighteenth century plans were compared with source records on individual properties arranged in chronological order. Still, we failed to determine even hypothetical localization of many parcels.

In the light of the reconstructed suburban layout we can see clusters of short, narrow parcels with dense residential and utilitarian development (Rynek Przedmiejski, Freta Street, Mostowa Street) and rows of spacious garden plots with houses, manors and various type of utilitarian buildings (Łazarzowska Street, Przeczna Street, Droga ku św. Krzyżowi).

The sources mention also several demesnes situated at the exits of suburban streets.⁴² Larger parcels, especially on the eastern side of Droga ku św. Krzyżowi, contained several properties belonging to different owners.⁴³ Yet these secondary ownership divisions inside larger parcels were not included in the reconstruction, hence the differences in the numbers between the division marked on the plan and the number of properties in Table 2.

In the case of New Town, the possibilities of determining the number of plots and ownership divisions look much worse. Apart from the entries mentioning the general number of properties found in the inspections, only one list of possessors from 1510 survived for the whole sixteenth century⁴⁴ and several for the second half of the seventeenth.⁴⁵ Therefore we decided to base our reconstruction on all available sources, correcting them with data from the town books of New Warsaw from 1477–1598.⁴⁶ Still, we failed to depict the complete development, ownership relations or the character of parcel development, particularly of backstreets, parcels located by the Vistula and by the outgoing roads to the north and west towards the suburbs of New Town.

The dense urban complex was limited to Freta Street⁴⁷ and the blocks around the market square. In other areas, along the streets Zakroczymska, Morgowska and the roads leading down towards the Vistula the plots were occupied by scattered buildings and gardens. Throughout the sixteenth century the formation of the streets in Now Town continued (Garncarska Str., Szewcka Str., Tylna Str.). In the middle of the sixteenth century, a fragment of Świętojska Street marked the border between the jurisdiction of Old and New Warsaw.⁴⁸

⁴² Town tax register from 1594–1620 mentions an apothecary's demesne by Krakowskie Przedmieście and three demesnes in Długa Street: Bolkowski, Płochiński, Półtoraków.

⁴³ This mostly concerns the parcels bestowed to the mansionaries and vicars. The parcels were leased on emphyteutic law to the burghers of Warsaw.

⁴⁴ See *Źródła do dziejów Warszawy*, footnote 29.

⁴⁵ *Ibidem*; *Spis Obywatelów Miasta Nowej Warszawy 1655*, Stockholm, Riksarkivet, Extranea IX 82.

⁴⁶ AGAD, Nowa Warszawa, no. 1, 2, 3, 4, 5, 6, 133, 134, 135.

⁴⁷ Part of Freta Street from Świętojska Str. to Rynek Nowego Miasta was considered part of the New Town. This fragment of Freta Street was also called “the street to New Town” or “Freta Novae Civitatis”.

⁴⁸ AGAD, SW 4, f. 16v, (year 1553).

Table 2. Names and number of properties according to tax registers from 1565–1594

1565 inspection		1579 town tax register		1594 town tax register		Remarks
Name of the Street	Number of properties	Name of the street	Number of properties	Name of the street	Number of properties	
Southern suburbs						
Rynek Przed- miejski	40	Subur- bium Bernardi- norum	42	Subur- bium Craco- viense	74	Originally called Freta Czimensis, Suburbium Czimense, since the wane of the 15 th century - Suburbium Bernardinorum (after the church and monastery of St. Bernard). In the last quarter of the 16 th century two fragments of the street were differentiated: Rynek Przedmiejski and Droga ku Św. Krzyżowi (a chapel founded prior to 1508)
Świę- tokrzyska	27	Platea S. Crucia	27			
Bykowiec	24	Bykowiec	12	Bykowiec	12	Bykowiec was the name denoting part of the area on the eastern side of Droga ku Św. Krzyżowi. Hence it was often identified: "Platea s. Crucia Bykowiec dicta", "in platea Bykowiec ad s. Crucem", "in Sub-urbio Cracoviensi vulgo Krakowskie sive etiam Bykowiec"
		Vicus Strictum	14			
Za Mnisz- kami	20	Vicus post Moniales	20			The road behind the monastery of the Sisters of St. Francis leading towards the Vistula. Properties situated here were not localized
		Platea Vistulam versus	17	Platea Vistulam versus	17	Droga ku Wiśle - the road leading to the Vistula (later Bednarska Street), properties listed under this name were not localized
		Decanatus	22			Dziekańska Street (now Trębacka) located on the grounds belonging to Warsaw chapter, so the properties leased by the burghers were excluded from town jurisdiction
Laza- rowska	8	Laza- rowska	11	Laza- rowska	11	Sometimes called Kozia Street. In the beginning of the 17 th century the new name - Senatorska - becomes popular, as this road was used by the delegates and senators to reach the election grounds in Wola
Przečna	7	Przečna	5	Przečna	5	In the beginning of the 17 th century the other name - Miodownicza (later Miodowa) - gains in popularity. Tax registers fail to show the total number of properties
		Post muros	18			Parcels situated outside the city walls, localized in various places, partly in what later became Podwale

Freta	25	Freta	30	Freta*	74	Information about the number of properties only relate to Freta Street in Old Town (the border ran along Swietojska Street)
Waliszewo	34	Waliszewo	35	Waliszewo	38	The road to the crossing over the Vistula. After the bridge was constructed (1568-1573) it was called Mostowa
		Post Pontem	4			
Rybitwa	36	Piscatoria	85	Rybitwia	3	Localization of properties in this street was not determined

* Including properties in Rybitwia.

It was difficult to reconstruct the buildings occupying the Rynek Nowomiejski (the Market Square of New Town, 140 × 120 m), which was almost twice as large as the Rynek Starej Warszawy (the Market Square of Old Warsaw, 70 × 93 m). The town hall stood at the centre of the market square. Plots containing residential houses, market stalls and butchers' stalls were located on both sides of the town hall.⁴⁹ Sources suggest there existed two narrow blocks divided by an alley leading to the town hall, situated on the southern edge of the eastern block. The plan of New Town from 1667 confirms this arrangement.⁵⁰ However, the inner market block depicted on the plan is shaped like an irregular quadrangle, with a truncated northern frontage, better connected with the communication route towards Zakroczyńska Street,⁵¹ and this was the shape presented on our reconstructed plan.

The division of grounds belonging to the Świętojska *jurydyka* of the Canons Regular was the source of many problems. Already in the middle of the sixteenth century there were 29 habitations here, and some gardens with breweries and granaries.⁵² These were leased by Warsaw burghers by virtue of the law of emphyteusis. Yet there are no data concerning their size and arrangement, so we were unable to introduce even a hypothetical division of these grounds at the close of the sixteenth century. Precise division of the parcels in this block appears only on the plans from the eighteenth century, which are roughly similar to the divisions marked on the plan of New Town from 1667. On the other hand, Hoppe's plan from around 1643 shows a different depth and width of the parcels in this *jurydyka*. No plan shows the number of properties listed in the register of leaseholders from 1543–1575.⁵³ We were also unable to determine the ownership division of the riverside area, as we failed to establish the localization and number of properties at the close of the sixteenth century.⁵⁴ However, the source documentation allowed us to draw a quite probable division of blocks in Szewska,

⁴⁹ The list of properties based on entries from New Warsaw town books; AGAD, Nowa Warszawa, no. 3, 4, 134.

⁵⁰ The plan of the part of the city from Długa Street to Franciszkańska Street and from Rynek Nowego Miasta to Nalewki Street. Lithography by J. Herkner, scale around 1:11,000; see D. Kosacka, *Plany Warszawy*, no. 124.

⁵¹ On Hoppe's plan of Warsaw from around 1641 the buildings inside the market square were marked as a rectangular. The reconstruction of A. Berdecka (footnote 2) for the sixteenth century marks two rectangular market square blocks.

⁵² Mentioned in "Resignationes et cessiones ortorum et bonorum et arearum Sancti Georgii Warschowiensis...", MS in BJ, no. 5189, f. 327.

⁵³ Ibidem, ff. 11–167.

⁵⁴ Basing on fragmentary entries and the number of properties listed in the register of the town rents from 1510, we could assume that also at the close of the sixteenth century there were more than 50 properties here.

Garncarska, Zakroczymska and Morgowska Street. The fullest source records concerned the market square properties and those located in Freta Street. Given the difficulties in localizing some of the streets and properties, we provide a list of all materials on the development of New Town in the table.

Table 3. Names of streets and the number of properties in New Warsaw

Street	Number of properties		The file of the properties in the second half of the sixteenth century	
	In 1510	In 1544

Houses in the Market Sq. next to the town hall	–	8	12	
In total	125	224	274	
Rybaki	47	80	86	

Our plan shows parts of right-bank villages: Praga and Kamion, where the urbanization process began at the close of the sixteenth century. The villages, situated favourably along the Vistula, in the closest vicinity of Warsaw and connected with it by a bridge, turned into town settlements in the first half of the seventeenth century.

The literature on the subject claims that already at the close of the sixteenth century the chapter of Płock exploited the opportunity to develop these areas economically and founded the town of Skaryszew in 1590 on some of the grounds of the chapter's village Kamion.⁵⁵ However, this belief lacks necessary source confirmation. The documents of the Płock chapter prove that Skaryszew was created in the seventeenth century, probably prior to 1625. It burned down in 1638 and was located again in 1641.

In the seventeenth century Praga became a town settlement. For years this village was a centre of the wood and grain trades. Jan Zamoyski, the Great Chancellor of the Crown often came to Warsaw and appreciated the economic values of Praga. In 1583 he bought it from Jan Praski and in the same year sold it to Marcin Białobrzski, the bishop of Kamieniec, in exchange for six villages. During

⁵⁵ T. Wyderkowa, *Dzieje Pragi*, p. 139, the author cited W. Trojanowski, *Kamionek i Praga*, Warsaw 1920, p. 11. Trojanowski based on the inventory of the chapter from 1694 and the documents of the bishop of Płock, but did not provide precise references to the sources. It must be stated that the files of the Płock chapter from 1578–1656 (microfilms in the National Library in Warsaw) oppidum Skaryszew appears only in 1630, whereas still in 1600 we find records of Kamion. Archive of the Chapter of Płock, no. 8, p. 203, microfilm 12340.

Białobrzęski's time Praga became a settlement. In 1620 it was mentioned as 'oppidum'. Still, it was located under Chełmno law only in 1648.⁵⁶

J. Humnicki devised a probable cartographic depiction of the development of this area at the close of the sixteenth century, based on the analysis of the eighteenth-century plans and iconographic records from the sixteenth–seventeenth centuries.

In the second half of the sixteenth century the new structure of ownership became established, in response to the fact that Warsaw became the seat of the central authority of the State. The number of estates owned by the nobility, earlier insignificant, increased several times as burgher parcels were being bought by the nobles and magnates related to the royal court and the current machinery of the State, who travelled to Warsaw during the *Sejms* and the king's visits. At the time this group consisted mostly of Mazovian secular and spiritual dignitaries. Mostly, they bought larger suburban properties from the burghers, situated in the southern suburbs along the ingoing roads leading to the castle and the election field in Wola. Ownership changes influenced the transformation of the spatial arrangement of plots and their development. The new, large property of Jerzy Mniszech, the starosta of Łuków, could be a good example here. It was created between 1593 and 1605 from eleven old gardens and burgher habitations.⁵⁷

Except for Miodowa Street, burgher property in the southern suburb was becoming more and more limited to small plots, forming narrow blocks of densely situated residential houses and utilitarian buildings on the fringes of Krakowskie Przedmieście. This type of property was still dominant in the northern suburbs, where only a dozen plots or so, located in the streets Długa, Zakroczyńska, Morgowska and along the roads leading to the Vistula, came into the possession of the nobles. The nobility owned few estates inside both towns.

The assets of the heirs of the Duchy of Mazovia did not change much. Within the city, the old estates of Mazovian dukes became royal property in 1526. The estates consisted of the castle complex, the demesne and the garden in Krakowskie Przedmieście. The great royal stables were built on the edges of the garden, and ten plots were delineated, starting from its southern side, which in 1573 were bestowed upon the artisans and royal servants.⁵⁸ Royal property was expanded by the three estates of the nobility situated in front of the castle and bought by Sigismund Augustus.⁵⁹ Additionally, in 1603 the royal salt works were established on three plots in Krakowskie Przedmieście, which were also purchased from the burghers. The salt works operated until 1655.⁶⁰

Several burgher plots located at the exit of the street Do Przewozu (later Mostowa Street) were liquidated due to the construction of the first permanent bridge over the Vistula. The Mostowa Tower was built in their place in 1582.

Already in the fourteenth–sixteenth centuries, a significant share of city grounds was given to six churches, three monasteries and the clergy. The majority of the estates belonged to the chapter of St. John, which owned a dense complex in Kanonia and Dziekania, and several large parcels in Krakowskie Przedmieście bestowed upon the chapter, the dean, the mansionaries and the vicars. The endowments of the Canons Regular were quite large (the Świętojerska *jurydyka*), as well as those of the Augustans (the complex consisting of a church, a monastery, a hospital and a cemetery in Piwna Street and a demesne on the scarp near Krakowskie Przedmieście). In the sixteenth century the assets of the Church grow at the cost of burgher property. Several suburban parcels were given to the chapel of the Holy Cross, founded before 1508. In 1544, part of the demesne in Długa Street was bestowed upon the Chapel of the Holy Trinity, founded by one of the burghers from the Old Town. In the third quarter of the sixteenth century the *jurydyka* of the Sisters of St. Francis and the *jurydyka* of the Devout Maidens and Widows situated next to it were finally formed (the process began at the close of the fifteenth century). At the turn of the sixteenth and seventeenth centuries the purchase

⁵⁶ T. Wyderkova, *Dzieje Pragi*, p. 139.

⁵⁷ AGAD, MK 534, f. 112.

⁵⁸ AGAD, MK 119, ff. 395–405. See also the study mentioned in footnote 5.

⁵⁹ AGAD, Księgi grodzkie ziemi warszawskiej 73, f. 203v; 74, f. 958. In 1568 Sigismund August bought out the properties of A. Uchański and St. Wolski. The date of the purchase of the third property, of the family Pogroszewski, was not determined.

⁶⁰ In 1588, Jan Falkowicz, a burgher from the Old Town, scribe at the Warsaw salt works, bought a parcel with three houses from the medic Piotr Gmercius (AGAD, SW 538, f. 103), and then bought a salt storage. In 1603, Hieronim Reth, the vice-administrator of the royal salt chambers, bought these salt works on behalf of king Sigismund III, see footnote 5.

of properties in Grodzka and Św. Jana Streets began in order to make room for the foundation of the college and church of the Jesuits. The plots in Freta Street area were also being purchased, for the construction of the church and monastery of the Dominicans.⁶¹ Some 50 plots constituted a private property of various clergymen. The most impressive one was the Renaissance residence of the Bishop of Poznań, situated in Old Town in Św. Jana Street (Jezuicka Street), and the residence of Wojciech Baranowski, the Bishop of Płock (in Senatorska Street). The latter was one of the first palace and garden layouts in Warsaw, realized at the close of the sixteenth century on the grounds of several repurchased burgher properties.⁶²

Constant ownership changes and the difficulties in localizing all estates prevented us from preparing a topographic presentation of the ownership structure. As such, only important estates were marked on the map.

Unfortunately, town tax registers – our main source for the plan – fail to provide consistent data on the development of individual plots, and the descriptions they contain are even insufficient to determine a detailed image of the development of the city. The analysis of the town tax rate allows us only to establish the arrangement of residential houses, wooden and brick. The lowest rate from brick buildings was 30 *groszy* (1 florin).⁶³ The owners of wooden buildings paid a lower tax. The rate depended on the location of the buildings. Inside the city wall the rate varied from 12 to 7½ gr., and in the suburbs from 15 to 3 gr. The conformity of St. Żaryn's findings based on architectural research with the source records were cross-checked proved for the Old Town.⁶⁴

Brick buildings dominated near the main communication and trade routes: in the Market Square, in Grodzka, Nowomiejska, Berdnyńska street, as well as in the streets Krzywe Koło, Św. Jana, Św. Marcina and Piwna. Wooden buildings could still be found in Piekarska and Dunaj streets.

Unlike the bricked Old Warsaw, the suburbs and New Town were almost exclusively of wood. There were only two bricked tenement houses in Freta Street, belonging to a wealthy coppersmith from the Old Town, and a bricked building of the 'bourse' of the family Baryczko at the corner of the streets Długa and Freta.⁶⁵

Of all six churches marked on the plan five were bricked, only the church of the Holy Spirit in Długa Street remained of wood. Of wood construction were also three chapels: dedicated to the Holy Cross, the Holy Trinity and the chapel, or rather a small church by the monastery of the Franciscan Sisters.

Of the several dozens of manors, which existed at the time, the one of the family Mniszech and the palace of Bishop of Płock Wojciech Baranowski were certainly made of brick.

Our reconstructed plan shows only monumental buildings (the castle, the churches and the monasteries), as well as manors and some utilitarian buildings. Due to the fragmentary nature of the utilized sources, not all public buildings – typical to a city – could be marked. For instance, apart from the town halls of Old and New Warsaw, there must have been some buildings of the suburban authorities, as Przedmieście Krakowskie and Freta had a separate mayor, council and court. The houses of both vogts fulfilled not only residential functions, but also served as public buildings. They were situated along the main communication routes, in the western frontages of both market squares. We found no records mentioning the location of guild inns. Of some 20 guilds operating in Old Warsaw we know only two houses: that of the tailors in Piwna street, and that of the shoemakers in Dunaj Street.⁶⁶ We also know about the house of the Brotherhood of Mercy in Krakowskie Przedmieście and about the shooting range of the militia located on the grounds between the city walls.⁶⁷

⁶¹ Town tax from 1594–1620 does not list any burgher parcels in 7, Freta Str. The parcels were liquidated, so that the Dominican complex could be built on the site.

⁶² AGAD, SW 538, f. 173 (year 1591); MK 138, f. 85, (year 1593) purchased by Wojciech Baranowski, the bishop of Płock. In 1613, Wojciech Baranowski, already the archbishop of Gniezno, gave the "palatium seu domum lapideam..." to the cathedral chapter of Gniezno (MK 155, ff. 289v–292, 292v–293v, 295v–296).

⁶³ The payment rate was determined on the basis of town tax rate listed by houses and tenement houses, AGAD, SW 534, town tax from 1579–1593 and 1594–1620. In one case the town tax was raised from 18 gr to 30 gr because the house was bricked.

⁶⁴ See footnote 1.

⁶⁵ AGAD, SW 534; see Freta Street, f. 228, Długa Street, f. 224.

⁶⁶ AGAD, SW 534, see Piwna Street and Donay, ff. 208–209.

⁶⁷ Shooting range was situated between the two city walls, probably near Krakowska Gate, on its western side.

Schools, cemeteries and hospitals were located near churches. There was also a hospital for the war-crippled founded in 1578 by Stephen Báthory in the vicinity of the Chapel of the Holy Trinity.

At the time Warsaw was the centre of contemporary territorial, State and Church organization and all related buildings were situated in the city centre, near the castle, the temporary residence of the king and the location for the *sejms*. The building occupied by the gord court in Podzamcze since 1568 was demolished during the expansion of the castle in the times of Sigismund August, and the court was given several rooms inside the castle complex. Buildings of Church authorities comprised a separate complex located on the grounds allotted to the chapter of Warsaw and the dean. 'Custodia' was situated in the old defensive tower, and the dean's bricked manor stood by the college.

Following our rules, the plan does not distinguish utilitarian buildings or the catchment areas of particular artisan workshops and other trade/production devices, which were only discussed. The fragmentary information concerning the type of utilitarian buildings found in town tax registers refer only to 30% of properties. We noted two kinds of definitions used: general ones like *area*, *praedium*, or detailed ones, denoting buildings – *lapidea*, *domus*, *curia*, *braseatorium*, *promptuarium*. However, having compared these definitions from town tax registers with the data from property tax rates, inventories, wills or documents of purchase and sale, we had to admit that the town tax registers were almost useless in determining the nature and location of utilitarian buildings. The registers fail to mention the numerous stables, barns, pigsties, cowhouses, various sheds and bathhouses. Entries mentioning breweries and granaries are rare.

Random query and our knowledge of the source material allow us to determine that the utilitarian parcels were dominated by breweries and malhouses located in Freta Street, Rynek Nowomiejski (the New Town Market Square), Zakroczymska Street, Rynek Przedmiejski (the Suburban Market Square), and in other streets to a lesser degree. The sources from the end of the sixteenth century do not mention any breweries in the Old Town. Granaries, which appear in the sources quite often, were linked with the grain trade and farming activity of the dwellers. These structures were situated in residential parcels, gardens or stood on the scarp near the Vistula. Some of them were of brick. The majority of granaries were located in Długa Street, in the New Town, by the Road to the Holy Cross, and also in some suburban streets.

At the close of the sixteenth century, artisan workshops were scattered over various streets and their location was related to the wealth of the artisan. Larger clusters of workshops of the same type and traditional location belonged to the fishermen (Rybitwia Street), shoemakers (Szewcka Street in the New Town, Mostowa Str., Dunaj Str.), wheelwrights and harness-makers (Freta Street), bakers (Piekarska Street), butchers (Dunaj Str., the Rynek Nowomiejski, the Rynek Przedmiejski), locksmiths and sword makers (Krzywe Koło Str., Nowomiejska Str.), goldsmiths, pewterers, and clockmakers (Grodzka Str., Nowomiejska Str.). Potter and stove-fitter workshops were located in Zakroczymska Street, Poboczna Garncarska Street, and by the Road to the Holy Cross. Smithies were usually built at the ends of suburban blocks in outgoing streets. We found no records of tanneries, which must have existed because tanning was one of the most developed branches of Warsaw craftsmanship.

Of the buildings situated on separate plots, we know about the city chandlery in Dunaj Street by the defensive wall, a cropping house at the corner of Nowomiejska Street, an outbuilding of the copper-smiths in Freta Street (on the site of the future church and monastery of the Dominicans), a pewterer's shed near the Świętojański cemetery, and about the city's brickyards in the New Town, behind the Church of the Holy Virgin, and in the southern suburb below the property of the Bernardine Friars.

Large production facilities of Warsaw were located outside the area shown on the reconstructed plan, in an industrial area dating back to the Middle Ages. Corn mills were situated in Polkowo by the River Drna, except for two ship mills on the Vistula and two city mills in Solec. Other facilities were also located in Polków: the fullery, the bleachery, the polishing workshop and the paper mill bestowed upon the dean of Warsaw.

Trade facilities concentrated along the main communication route from Zakroczymska Street to the Rynek Przedmiejski. Weigh houses (in Old Warsaw probably located in a separate building near the town hall⁶⁸), market stalls, butchers stalls and various booths could be found in both market squares.

⁶⁸ As suggested by an entry concerning the expenses for the "redevelopment of the weight house", AGAD, Warszawa Ekonomiczna, f. 38 (year 1585).

The main gates to the city, especially Nowomiejska Gate, were also surrounded by merchant stalls. Fish, meat and wax were sold in a small square in Dunaj Street, and cattle was sold in Bykowiec.

Grain was traded on the riverside, under the scarp on which the Old Town was located, near the granaries of Old Warsaw patriciate. Building materials were stored in Solec, probably on the site mentioned in the sources from the first half of the seventeenth century. The salt trade required a place to store salt. Sources from the second half of the sixteenth century mention three salt works: somewhere in the New Town, by the Vistula behind the demesne of the Augustians (belonging to a merchant called Umięcki) and the aforesaid royal salt works in Krakowskie Przedmieście. Its spatial arrangement was recorded on the 1621 plan. Various wares were stored in the Giełda ('Guild') of the family Baryczko in Długa Street, which was also a place for business meetings.

To finish our characterization of various economic facilities, we should mention the city bath-houses and waterworks, which brought the water from the sumps in the Nalewki and Długa Streets to the well in the Old Town Market Square.⁶⁹ Toll points were established to collect payments from goods driven to Warsaw, especially from beer and for the 'paving' toll. At the close of the sixteenth century they were situated at the exit of Dziekańska Street, near the chapel of the Holy Cross, by the chapel of the Holy Trinity and next to the church of the Holy Spirit in Długa Street. In this areas of intensified traffic barriers were built, to allow a better control, particularly during the plague.

The permanent wooden bridge over the River Vistula aroused much admiration. Its construction lasted almost six years (1568–1573). The bridge was located on the old crossing, it stretched from the exit of the street called Wieliszewo (later Mostowa Street) and probably reached the crossroads in Praga village near the later Ratuszowa Street. The bridge was made of 22 spans supported by pillars and was around 500 m long and 6 m wide. In 1603 it succumbed to the spring ice.⁷⁰

Only few of the described utilitarian buildings were marked on the plan, those whose localization could be determined.

The reconstructed picture of the layout and buildings of the Warsaw city complex was based on a measurement plan at a scale of 1:6,000 prepared by J. Humnicki.⁷¹ The entire plan is an attempt at reconstruction, so we decided not to mark hypothetical course of streets, or division of blocks into parcels, with dashed lines, and instead marked everything with continuous lines. In case the source basis was insufficient to reconstruct the spatial layout of plots, only the supposed outline of the block was shown.

The scarp was copied from the measurement plan and its course was corrected on the basis of cartographic sources. In order to highlight the lay of the land, the scarp was shaded with lines. The sixteenth century course of the Vistula was based on its modern course.

The main body of the plan – the nature of urban development – was depicted by colours. The two town centres and suburbs were distinguished. Fragments of city fields, the demesne of the starosta's district, and neighbouring villages shown on the plan were marked with a different colour, to highlight the urban complex.

The character of the buildings, without distinction of brick and wooden structures, was limited to a general division into dense city development and scattered suburban buildings. In the case of the latter, residential-utilitarian parcels and utilitarian-residential parcel with gardens were marked in a different manner. The castle, all sacral structures (those localized, and the supposed location of the chapels of the Holy Trinity and the Holy Cross), and the more important public buildings were highlighted, as well as some utilitarian facilities localized hypothetically on the basis of source data. Manors were marked on the properties of the nobles, secular and Church dignitaries according to source records, so as to present the ownership structure typical to Warsaw at the close of the sixteenth century.

Names of streets were given according to the most common form found in the sources in their Polish wording – copied directly from the sources or translated from Latin.

⁷¹ J. Humnicki scaled fragments of historic plans and localized the sandbanks of the Vistula, prepared the development of the right-bank side and the reconstruction of the Vistula's channel (on the basis of Z. Biernacki's work in the Historical Museum of Warsaw).

III.6.30.8 WĘGRÓW

Michał Gochna

From amongst the town plans reconstructed in the current volume of the AHP that for Węgrów presents it as a private town. In a similar way to the other constructions of urban settlements in this series here also employed have been first and foremost the retrogressive method, relying on later cartographic representations and verifying them on the basis of preserved sources and the literature available.¹

The fundamental cartographic source used to sketch the present map is the Austrian topographic map for the years 1801–1804 of a scale of 1:28,800, which was directed by Colonel Anton Mayer von Heldensfeld (further referred to as the Heldensfeld Map). This is the earliest known image of the town presented in such detail together with buildings and diversity in land use in the town itself and its environs, including fields, meadows, cultivated fields, wetlands and forests. A later map from 1822 has been used as a supplement; it was compiled by Adolf Mateusz Dowkontt, the constructor of the Siedlce district, because of the need to reorganise the Jewish settlements in Węgrów.² On this map visible is only the south-west part of the town – the Jewish district and the New Town – together with the buildings around the Old Town market square. This map is exceptionally detailed, while Henryk Bartoszewicz considers its scale to be around 1:2,000.³ Drawn on it are individual buildings with the annotation as to their ownership divided into municipal (Christian), Jewish, nobility and Church. Marked are also streets together with their names, squares, gardens, meadows, waterways as well as the Jewish cemetery. On the sketched content representing the then urban expanse there has been superimposed a layer of draft building quarters and districts and the proposed new street names.⁴ After a comparison with the map by Dowkontt with a generalised visualisation of the town shown on Heldensfeld's map, it follows that the Austrian cartographer has faithfully etched the building quarters in the south-west part of the town. Equally the merchant stalls on the market place of the Old Town possess a similar structure on both maps. Greater distortions have occurred in the area of the plot belonging to the Węgrów priests to the south of the principal church. There occurred a distortion of the picture in a south-east direction, although in comparing this fragment of the map with the land plan of the Węgrów parish of 1867 one may note that on the Austrian map marked is the shape of the College of the Apostolic Union of Secular Priests and the four-sided blocks of gardens similarly to those of the 1867 map.⁵ Another mistake can be seen in the course of the current street ul. Piwna, which on Heldensfeld's map is placed too far to the west. Yet despite these inaccuracies one should positively appraise the usefulness of Heldensfeld's map in the reconstruction of a Węgrów street plan.

To a lesser degree earlier and later plans and sketches of Węgrów or its parts have been of help. From the beginning of the eighteenth century comes a sketch of the principal parish church together

¹ I would like to thank Roman Postek, the director of the Armoury Museum at Liw Castle for the consultation on the plan of the town and its commentary.

with the building of the seminary for the Apostolic Union of Secular Priests.⁶ The network of streets together with the marking of the building quarters is also presented on the Quartermaster's Map. The entirety of the town is visible on the map of 1893 on which can be already seen a certain transformation in the town including building on the market square of the New Town.⁷ Fragments of the town have also been captured on the mentioned map of the grounds of the Węgrów parish of 1867, a sketch presenting the layout of planned trading halls on the market square of the Old Town of 1873⁸ as well as on the situational plans for a proposed gaol conducted between 1902 and 1913.⁹

The main problem in the reconstruction of the urban layout of sixteenth-century Węgrów is the lack of sources that are inventory in nature and originating from this very century. The greatest amount of information as to the town's economic situation is provided by the tax register of 1580, in which the number of houses is mentioned (with a division into town houses, street tenements and impoverished dwellings), voloks, economic units as well as the number of artisans with specific division into particular occupations, yet this is information too scant to allow one to reconstruct the then urban expanse.¹⁰ Consequently the main source for the development of the present plan was served by the inventories of Węgrów estates (also called the Stara Wieś estates) for the years 1619 and 1621.¹¹ Additionally recourse was made to the inventory of the mid seventeenth century,¹² of the privileges bestowed on the town by its owners¹³ as well as from other sources including the poll tax registers of the seventeenth century.¹⁴ Of help were also the results of archaeological digs and research conducted in Węgrów during the renovation work being carried out on the market square.¹⁵

The matter of reconstructing the spatial layout of Węgrów has already been looked at several times. One of the first pieces of research are the works of Tadeusz Wyszomirski and Anna Czapska.¹⁶ Others that need to be included are the publications of Józef Kazimierski, "A Catalogue of Art Monuments. The Warsaw Voivodeship. Węgrów Powiat", and the monograph on the town's history edited

by Arkadiusz Kołodziejczyk.¹⁷ In recent years some time has been devoted to the matter by Aneta Średzińska and Michał Gochna.¹⁸ Mariusz Karpowicz and Wojciech Jerzy Górczyk have also written on the transformation of the space around the parish church after its rebuilding at the beginning of the eighteenth century.¹⁹ The majority of the reconstruction has been based on the aforementioned inventories of the Węgrów estate from the first half of the seventeenth century, as well as the town's development as depicted in later centuries. For the sixteenth century the research was conducted to a limited degree as a result of the small number of preserved sources. The matter of a reconstruction of the urban layout of Węgrów rather constituted in these works a part of a broader understanding of the town's more general history. A text by Cezary Ostas devoted to this very matter has been used only as an additional source in the present work and here because of the lack of footnotes.²⁰ In turn Henryk Bartoszewicz has written about the topography of Węgrów and environs as well as about the various cartographic sources.²¹

In moving on to a description of the present map it follows to start from the town's geographic location. Węgrów is situated on the Southern Podlasie Lowlands (a sub-province of the Central Polish Lowlands), in the mesoregion of the Węgrów Depression.²² The territory upon which the town is situated becomes lower in a westerly direction i.e., in the direction of the River Liwiec. On the eastern boundaries of Węgrów the height reaches from 125.8 to 126.6 m above sea level (AMSL) (the environs of the present-day cemetery at Kościuszki street), within the area of the Market Square around 124.68 m. above sea level, further 123.3 m (the neighbourhood of the streets Rzemieślnicza and Narutowicza) to 119.93 m AMSL close to the area of the River Czerwonka's inflow into the Liwiec.²³

The main waterway in the environs of the town is the Liwiec, the left bank inflow to the Bug. Its course has changed over the course of the centuries, with these changes being both the result of natural factors and man's intervention. This was possible at the height of the town as a result of a fairly broad, in the sixteenth century marshy,²⁴ plain (approximately 120 m AMSL), situated between Węgrów and Krypy. The present-day fragment of the river at the height of the weir on the stretch of Żeromskiego Street was regulated and straightened following the end of the Second World War. Before the war the river had run a course more or less in the stretch of the current channels that supplied the local power station (blown up in August 1944 by the Germans).²⁵ In turn, and already shown on the WIG map of 1933, there is represented the stream flowing in the environs of Krypy, coming from the main course of the Liwiec, combining with it at the height of Popielów (Popowo).²⁶ A similar state of affairs is presented by earlier maps from the beginning of the twentieth century,²⁷ while the Quatermaster's map of 1843 shows the situation to be opposite where the main course of the Liwiec runs just next to Krypy while

in the vicinity of Węgrów the course of the stream is annotated *R[zeka] Kopanka* (R[iver] Kopanka). Exactly the same name is given it on the aforementioned plan by Dowkontt of 1822, which may point to the activities of man with the aim of returning running water in the town environs following the change in the course of the main current. Finally, for the oldest topographic map of these environs, that is Heldensfeld's map, the main course is situated at Węgrów. It is not known precisely how the course of the river in the seventeenth and eighteenth century took shape, although there are strong references to the floods that hit the town during this period.²⁸

Information on the changes in the course of the river for the period of interest to us comes from the border drawn up in 1546 between the Crown and the Grand Duchy of Lithuania.²⁹ Disputes over the change in the river course were conducted in this area between, among others, the Papliński Family of the Drohiczyń land and the Górski Family of the Liw land, as equally Mikołaj Wrzelowski of Mokobody and the Żukowski family of Żuków. In the case of the Węgrów estate, to which was included at the time besides Węgrów equally Stara Wieś and Borzychy, the dispute raged over a section to the south of Borzychy, at the height of Turna (Liw land). Tomasz Gałązka, a clerk to the owner of the Węgrów estate Stanisław Kiszka, accused the then Turna nobility and starosts of Nur and Liw lands that they had dug up the dam on the Liwiec and consequently diverted the course of the river towards the Lithuanian side, flooding in the process the Szeszuł Mill on the Węgrów property and taking away a part of the terrains belonging to these properties. The Liw land starost replied that the Szeszuł Mill had stood at the Mazovia branch of the Liwiec, to which the Węgrów governor replied that this was untrue as the mill had been built on the River Telówka, into which flowed other streams from the east: the Zalesie, Miedzna (presently the Miedzanka),³⁰ Brodnia, Połazie, Krupka, Jaśniki, Czerwonka,³¹ Hada (at present the Ada),³² Kobyłka and Ruchenka.³³ The subsequent disputed stretch already concerned the course of the river in Węgrów itself. The Węgrów governor accused the Liw land starost of constructing a dam that diverted the course of the river to the Mazovia side for purpose of powering mills in Liwiec, which presumably included Krypski Mill. The dam was located on a high section of town, but before the bridge, along the road which ran from Węgrów to Liw.³⁴

In summing up the above disputes and attempting on their basis to chart the course of the Liwiec in the environs of Węgrów at this time, it follows to note two main changes in the river channel. The first concerned the directing of the flow to the Liwiec side here at the now nonexistent Szeszuł Mill, which was situated somewhere at the height of Turna.³⁵ The second referred to the diverting of the main course of the Liwiec at the height of Węgrów with the aim of powering the mills in the Liw land. In as far as the first change does not raise any noticeable doubts then the second matter is complicated by the fact that in the eastern part of the valley was to have flowed the River Telówka, into which was to have flowed streams from an eastern direction. Although in the demarcation of 1546 the Telówka was referred to as a river (*na rzece Thelyowce*) it was in fact more a branch of the Liwiec than a separate stream itself. This is noted on the Quartermaster's map of the aforementioned River Kopanka, and to which – one may conjecture, it flowed more or less as did the Telówka. For the Kopanka according to the aforementioned map derived from the Liwiec at a height of roughly the Jewish cemetery and joined up with the main flow of the Liwiec in the environs of Ludwinów. So given that at the height of Węgrów the course of the Liwiec was directed towards the west, while along the eastern side ran a branch of its own name, then it follows to suppose that prior to the intervention of the Liw land starost the main course of the Liwiec did not flow through Węgrów itself as has been noted by Heldensfeld,

³⁵ The name “Sessul” appears also in the inventories for 1619 and 1621 where mentioned are “meadows on the Sessul”. AR XXV, 4549g, p. 151; Inw. 1621, p. 132. On Heldensfeld's map there can be seen on this stretch two mills: the one without any denotation is somewhat to the north of Popów while the Starowiejski (“Starawies Mühle”) is at the height of Ludwinów. On the branch of the river at Turna, another mill was to be found (“Turner Mühle”).

but rather along the centre of the valley. Such a speculation is borne out indirectly by the maps of Perthées, Heldensfeld and that of the Quartermaster; on which at the height of Krypy one may see three branches of the river, wherein on the first of the maps the main course flows along the centre, on the second as the eastern branch, while on the third as the western. Two of the branches – the western and the central – join, according to Heldensfeld and the Quartermaster’s, just beyond Krypy, carrying on to Krypski Młyn. However, it cannot be excluded that in the very village of Krypy or in its immediate environs there existed more mills, given that in the delimitation of 1546 they are referred to in the plural (‘Mazovian mills’).³⁶ Although it does follow to remember that between 1546 and the time when the recalled maps were created, there could have occurred in this area hydrological changes of such a magnitude that their listing with each other could have a weak basis; and yet we have decided to provide the course of the rivers and their branches as presented on the recalled sixteenth-century source and to mark the name Telówka to designate the branch of the River Liwiec running through the town.

Besides the Liwiec there flowed through Węgrów and its environs a series of other already mentioned streams. Through the town itself and its immediate environs there flowed, and here enumerating from the north, the Ada (beyond the map’s scope), the Czerwonka and the Ruchenka (at present a stream flowing in the northern part of the town, having its source in the environs of Ruchna and flowing into the Liwiec at the height of the municipal reservoir). Between the Czerwonka and the Ruchenka the delimitation also mentioned the River Kobyłka – reflecting at present a stream partially built on, whose open fragment runs along the current Żeromskiego Street and flows into the channels at the Liwiec.³⁷ In the inventories of 1619 and 1621 it bore the name Kobyлина.³⁸ This brook, visible on among others the map by Dowkontt, was to mark in the sixteenth and seventeenth centuries the northern boundary of the New Town and the southern of the Old Town.

Węgrów was founded at the place where two trade routes joined – from Warsaw (earlier from Czersk) through Liw, Węgrów, Krzemień and Granne (or through Drohiczyn) to Wilno (this route was to be later known as the Great Lithuanian Road) as well as from Gdansk to Łuków, further linking up with the routes to Lublin and Lvov.³⁹ The town took its name from the nearby brook known as the Węgiel (possibly this was another name for the River Ruchenka⁴⁰), about which Elżbieta Kowalczyk-Heyman has recently written.⁴¹ In Ruthenian it was known as Uhrów, while the owners of the town of the Węgrowski family were known as Uhrowski.⁴²

In written sources Węgrów makes its initial appearance in 1414 when the owner of the town was Piotr Pilik, the Mazovian voivode, who also founded the parish church.⁴³ Following Pilik’s death around 1435, Węgrów could have returned, as supposes Tomasz Jaszczół, to being under the authority of the Lithuanian dukes while the owner of the settlement could have been Jan Nasuta, the Drohiczyn starost, as in 1475 he was nominated to be the Węgrów starost.⁴⁴ In the years 1440–1444 the Drohiczyn land was ruled over by the Mazovian duke Bolesław IV. Subsequent known owners of the town, and here just after the transfer of Węgrów to the Grand Duchy of Lithuania, were Stanisław of Olomouc (authenticated in 1451), an unknown by their first name Węgrowska (possibly the wife of Stanisław, appearing in the sources of 1471–1479) together with a son Wawrzyniec and a daughter called

³⁶ T. Jaszczół, *Granica pomiędzy ziemią drohicką i liwską*, p. 50. The inspection for the Mazovia Voivodeship of 1565 enumerates amongst the mills lying on the Liwiec and being on the payroll of the Liw starosty besides the Krypski Mill also the Zamiejski Mill. On the Korytnica River mentioned are three mills; LM 1565, part 2, pp. 178, 187.

Bogdańska).⁴⁵ In 1496 Paweł Węgrowski, the son of Wawrzyniec, was designated the town's owner. Following his death the properties passed into the hands of his sister Małgorzata (Maryna). She, prior to 1506, married to one Janusz Kostewicz, a subsequent Podlasie voivode, who betrothed the Węgrów estates in 1509.⁴⁶ After his death in 1527, Węgrów was to again become the property of Maryna right up until 1536, when her daughter Anna brought the town in dowry to Jan Radziwiłł, at the time a grand Lithuanian deputy cup-bearer.⁴⁷ Radziwiłł's death in 1542 led to the division of his property between his three daughters: Petronela, Elżbieta and Anna. As a result of the second division carried out in 1545 the Węgrów estate fell to the eldest of them – Anna, from 1544 the wife of Stanisław Kiszka, the owner of the estate at Sokołów situated near to Węgrów.⁴⁸ This marriage did not last long for in 1554 Stanisław died, leaving governance over all the properties to his spouse. He left fatherless three children: two sons – Jan and the death mute Stanisław – as well as a daughter, Anna.

Anna Kiszczyna as an efficient organiser was to successively increase the size of her holdings, becoming within the course of a dozen or so years one of the richest heiresses in the Grand Duchy of Lithuania.⁴⁹ She was to introduce a series of reforms on her estates, including the Volok Reform (and according to Jarosław Zawadzki especially within her Podlasie properties). In how far these affected Węgrów and the Stara Wieś estate is not known. In 1569 she transferred these estates to her son, Jan, upon him turning of age, but he was to renounce the rights to them in favour of his mother in the very same year.⁵⁰

In 1574 a conflict arose between Jan and his mother, the cause of which being her marriage to Krzysztof Andrzejowicz Sadowski. Jan carried out a foray onto those estates belonging to Anna situated in the Grand Duchy of Lithuania, with Anna herself taking refuge at the manor in Stara Wieś, lying nearby Węgrów. She was to be imprisoned by her son on this estate for many months, with him demanding she transfer the rights to her lands to him. Finally Anna succumbed and undertook this property division, bestowing Węgrów on Jan, who was to be in possession of the town until his death in 1592. From then the heiress to the Węgrów estates was to be his wife, Elżbieta Ostrogska, although doubts as to the authenticity of Jan Kiszka's will were raised by his mother claiming that it was she who should have inherited the properties. Despite the dispute Anna was not to regain Węgrów, with Elżbieta remaining its owner.⁵¹ In 1593 she married Krzysztof 'the Lightning Bolt' Radziwiłł, the Great Wilno Hetman and voivode of the Wilno province, whereby she continued to manage her Węgrów estates.⁵² Following Elżbieta's death in 1599 a dispute over her estates began, including the estate of Węgrów, and this between her brothers Janusz and Aleksander Ostrogski as well as the son of Krzysztof Radziwiłł – Janusz. The Węgrów and Sokołów properties were finally to fall to Janusz Radziwiłł at the beginning of the seventeenth century.⁵³

Although the generally sketched above course of elements with regard to changes in ownership of Węgrów is fairly well known in the existing subject literature, a question still not fully answered is the dating of one of the most important events in the history of any town and that being the acquisition of its charter rights. Almost the entirety of the literature concerning the history of Węgrów points to these rights being bestowed by the Mazovian prince Bolesław IV and here in 1441.⁵⁴ There

⁵⁴ From amongst the most important items see A. Czapska, *Węgrów: monografia*, p. 6; KZS, vol. 10, no. 26, p. 22, J. Kazimierski gives the same date for this publication; idem, *Z dziejów Węgrowa*, p. 269; S. Alexandrowicz, *Powstanie i rozwój*

is, however, an absence of sources as such, ones that could actually confirm this date – the founding document was to have been burnt during the town hall fire in the seventeenth century.⁵⁵ Yet this date cannot be excluded for the aforementioned prince did for the period 1440–1444 rule the Drohiczyń land, displaying notable activity in bestowing on the Mazovian nobility the settlements herein to be found. He also gave municipal Kulm Law rights to the two settlements of Tykocin and Mielnik.⁵⁶ What is more, possibly the founding of Nowy Liw in 1453, situated on the left bank of the Liwiec, was an attempt at strengthening the capital of the Liw land particularly after the granting of town rights to Węgrów.⁵⁷ However, Węgrów received chartered rights somewhat earlier, between the year 1414 i.e., the first mention of the place name and here in the character of a village, and 1436, when it appears in the court book of the Drohiczyń land of the Węgrów councillor (Mikołaj) and burghers (Jan Przedbor, Jakub, Jan called *Maliay*).⁵⁸ Similarly from the Warsaw land court book of 1437 comes a mention of another Węgrów inhabitant (Paweł).⁵⁹ Tomasz Jaszczółt conjectures that an attempt at being granted a town charter could have been pushed for amongst the Mazovian princes by Piotr Pilik. This would have been the second initiative of this nature on the part of the Mazovia voivode within the realm of the Mazovia-Podlasie borderlands. For in 1425 he obtained permission from the Mazovian prince Janusz I The Elder to found a settlement on the ground of the village of Rażny – admittedly lying in the district of Kamieniec of the Nur land but on the southern side of the Bug (the founding was not to happen).⁶⁰

In analysing the most likely date for when Węgrów was granted municipal rights it follows to take into consideration one additional motif, and namely the matter of the town's coat of arms. Towards the end of the sixteenth century it was charged with a bear facing the sinister (left) heraldic side, and above the bear the Columns of Gediminas.⁶¹ Tomasz Jaszczółt has shown that a bear is visible in the coat of arms of Niedźwiada, which served the Ołdak family and from them came the family that ruled the town – the Węgrów family.⁶² This would indicate that the giving of the aforementioned coat of arms happened following the re-inclusion of Węgrów to the Grand Duchy of Lithuania after 1444 and possibly with this confirmed was the giving of town rights to Węgrów on the part of the Lithuanian rulers. The appearance in the emblem of the Columns of Gediminas might in turn show that the coat of arms, and possibly here equally municipal rights, were gained by Węgrów at the beginning of the rule of the Lithuanian duke Zygmunt Kiejstutowicz, that is between the years 1432 and 1440.⁶³

Regardless of from whom and when Węgrów received municipal rights it is known that in the year 1486 the town was administered under Kulm Law. This information is confirmed by the privilege for

miast województwa podlaskiego (XV – I połowa XVII w.), “Acta Baltico-Slavica”, vol. 1, 1964, p. 139, and on the basis of this article equally in: idem, *Powstanie sieci miejskiej Podlasia na tle wczesnych procesów urbanistycznych w Wielkim Księstwie Litewskim*, KHKM, vol. 28, 1980, no. 3, p. 423; J. Maroszek, *Rzemiosło w miastach podlaskich w XVI–XVIII w.*, [in:] *Studia nad produkcją rzemieślniczą w Polsce (XIV–XVIII w.)*, ed. M. Kwapień, J. Maroszek, A. Wyrobisz, Wrocław 1976, p. 97; S. Kosiński, *W mrokach historii*, [in:] *Węgrów: dzieje miasta i okolic w latach 1441–1944*, p. 15. Aneta Średzińska in writing about the bestowing of municipal rights on Węgrów in 1441 makes recourse to Teki Glinki, however the cited piece does not contain such information. There are also various excerpts of Jan Glinka from parish acts as well as his notes on the history of the town and Węgrów churches along with photographs; A. Średzińska, *Dzieje miasta*, p. 35; National Institute of Cultural Heritage in Warsaw, Teki Glinki, vol. 435, pp. 1–12.

⁶³ A hypothesis of Dr. T. Jaszczółt's, which he shared in comments regarding the present volume. The self same columns were visible on the Brześć Litewski coat of arms of the sixteenth-century; see E. Rimša, *Pieczenie*, pp. 338–339.

town rights granted in the self same year to the settlement of Mordy lying within the Drohiczyn land. In this charter it is written that Mordy was to receive Kulm Law in the very same form bestowed on Węgrów.⁶⁴ Possibly this charter or charters did not apply to the whole of Węgrów but merely to one of its composite parts – the Old, the New, or the Ruthenian Town. Węgrów was divided into these parts in the first half of the seventeenth century although most probably this division already reflected the settlement's development in earlier centuries.

The earlier mentioned possession of Węgrów by the Mazovian voivode Piotr Pilik at the time when the Drohiczyn land were controlled by Lithuanian dukes, as well as the appearance within the sources of the Węgrów starost, forces the question as to the state affiliation of this area in the first half of the fifteenth century. Aleksander Jabłonowski writes that at this time there existed the district of Węgrów. The links between Węgrów and Mazovia are also shown by the fact that one of the conditions for the taking over by Kazimierz Jagiellończyk of the Drohiczyn land in 1444 was to have been that Węgrów remained, together with its environs, within Mazovia. This condition was not to be met and the town became a part of the Grand Duchy of Lithuania.⁶⁵ Mention of this matter was recalled in later years; in 1459 the parliamentary deputy Jan Rytwiński, the Sandomierz starost, demanded from the king, while at a congress in Piotrków, the completion of the agreement and the inclusion of the Węgrów district (*districtus Wangrowyecz*) within Mazovia.⁶⁶ Possibly the distinctiveness of the territory was the outcome of its border situation from an earlier period, when the boundary between Mazovia and Podlasie ran by means of the water divisions that constituted the Liwiec and the Bug, in part possibly along the length of the River Cetynia.⁶⁷ One may conjecture, not determining the actual state affiliation of the Węgrów district in the first half of the fifteenth century, that the area for a certain time displayed presumably an identity separate from the Drohiczyn land. Regardless of whether it was an entity fully autonomic within the structure of these land or not, after its inclusion within the Grand Duchy of Lithuania in 1444 there is an absence of traces as to the territory's identity.⁶⁸

The changed and as one can see not totally specified state affiliation of Węgrów was to have had an impact also on its ethnic structure. The characteristic mixing of Polish and Ruthenian ethnicity across the Drohiczyn land resulted in the creation of identical settlements being defined as *Lackie* (Polish) or *Ruskie* (Ruthenian) (e.g., Kosów, Jabłonna). In Podlasie towns this revealed itself in the practice of naming specific parts of settlements in this very same way.⁶⁹ And so it was in Węgrów. In the light of the inventories for the years 1619 and 1621 the settlement was divided into three towns: the Old, the New, and the Ruthenian. Although the oldest mentions as to such a division are known from these very sources, they most likely document a state of affairs in existence earlier, in the sixteenth and possibly even in the fifteenth century. The influx of Ruthenian settlers to Węgrów should be tied to those centuries, while the settlement process could have been initiated by the Lithuanian dukes, who in supporting the Ruthenians in the town and giving them a coat of arms with the emblem of Lithuania attempted to erase the earlier links of Węgrów with Mazovia. If this was the case then the creation of the Ruthenian Town should be dated to the second half of the fifteenth century. An additional element that could confirm this is the fact that the then town owners – the Węgrowski family – quite likely used

the Niedźwiad coat of arms, whose emblem can be seen in the Węgrów coat of arms together with the Columns of Gediminas. However, from an analysis of the urban layout it results that the Ruthenian Town was the part to come into being the latest. This is borne out by its location in the south-eastern part of the town, set apart from the main trade routes. In such a state of affairs the supposed charter granted by Bolesław IV of 1441 could have referred to the founding of the New Town which in turn could be treated as an attempt at cementing the authority of the Mazovians in this area. The question that is unexplained is the matter of the actual identity of the three parts of the town in relation to the law and finances. Evidence of a difference in jurisdiction could be content of the privileges bestowed by Bogusław Radziwiłł on the 14 April 1650, which, among other things, were to abolish it and to standardise legislation in the town.⁷⁰

So let us move onto a spatial description of Węgrów. The central point was represented by the rectangular 'square' of the Old Town with dimensions of 100 by 160 metres. Anna Czapska supposes that initially the market square was triangular in shape reflecting the trading square that had developed on the edge of the two main arteries running through the town.⁷¹ Confirmation of her suppositions are borne out by the remains of a wall by the church, running at an diagonal in the direction of the market square, along the diagonal of the market square in a continuum of the route from Sokołów through Węgrów to Liw.⁷² However, this thesis, uncritically accepted within the subject literature, has been devised on a flawed basis. The present-day wall was built at the beginning of the eighteenth century while the diagonal course of its northern section is the result of the then constructed wall together with belltowers, which was to have created a symmetrical composition around the church in relation to the market square itself. Consequently, on this basis one is unable to conjecture as to the initial layout of the market square. The recalled section of wall was later to be transformed into its eastern part, which was to be cut through to allow access to the continuation of Kościuszko Street.⁷³ However, it seems as if the market square, initially a trading area for the local peasantry, at the early stages of settlement formation was of a somewhat different shape than at present. This is borne out by two pieces of evidence.

Firstly, both on Dowkontt's plans as on those for Węgrów of 1893 one can see that the present-day Kościuszki Street at the junction with Mickiewicz Street is fairly wide, entering as if into the area of the church. Heldensfeld's map shows in turn that this street widens as it gets closer to the centre of the town, although it follows to remember about possible cartographic misrepresentations.

Equally the present-day street Kościuszki Street, on the section that runs along the church wall, widens out in the direction of the market square: with the difference in its width being approximately 18 metres in the eastern part and around 26 metres in the western part, counting from the border of the contemporary plots.

Secondly, it follows to look at the layout of plots within the town limits. Those situated at the northern frontage of Kościuszki Street from the market square side in an easterly direction run obliquely in relation to this street more or less from the north east to the south west. The plots situated within the limits of the present-day streets of Piwna, Przechodna, Szamoty, Broniewskiego as well as those situated to the west of the present-day town park, as equally the park itself and the plot on which the former cloister and reformist church stood, have a similar layout. Equally the recalled streets possess such a course. Only with the plots in the quarter bordered by the streets of Gdańska, Piwna (on the section of it running latitudinally), Staszica and the northern frontage of the market square are directed at right angles to the expanse of the market square, where in the western part of this quarter the plots have preserved their slanting course.⁷⁴ In turn the plots along the southern frontage of Kościuszki Street

⁷⁰ A certain separateness of the Ruthenian Town was manifest in the different taxation employed when compared to the other parts of the town, about which the said privilege recalls. This part of the town was exempt from the overall sum of 2,500 zł, which the town was to pay the owner, but instead had imposed on it a duty of 25 zł a volok. AGAD, dok. perg., no. 2298.

⁷¹ Czapska, *Węgrów: monografia*, p. 16.

⁷² *Ibidem*.

⁷³ Fragments of the original wall were discovered during works on renovating the Mariacki Market Square in 2010–2011; J. Zasłona, B. Plit, *Nadzór archeologiczny na Rynku w Węgrowie*, p. 158. (I would like to thank Mr. R. Postek for his consultation on the matter).

⁷⁴ Geoportalski, *Ewidencja gruntów i budynków*, https://mapy.geoportal.gov.pl/imap/Imgp_2.html?gmap=gp0 (access 01.09.2020).

on the section from the present-day street of Kilińskiego Street in an eastern direction run from the south-east to the north-west. The above layout leads to the supposition that initially the present-day Kościuszki Street broadened in a westerly direction and here a lot earlier than can be seen on Heldensfeld's map, and more or less from the current bend/turn at the height of Kowalska Street, creating a broadening trading square on which the church was built, dividing the expanse here into two parts: a western, from which the town's market square arose, and an eastern which was gradually built on. This hypothesis may be confirmed by the mention of the agreement between Bogusław Radziwiłł and the priest Marcin Zaliwski of 1641, during which as Tadeusz Wyszomirski writes, '[...] Duke Bogusław bequeathed to the Węgrów church two plots/squares adjoining the church cemetery to the rear of the church: opposite the horse market: once a hospital was there, and then fire destroyed it; while the second square had an adjacent garden with it'.⁷⁵ This proves firstly that in this part of the town was situated a market known as the horse market, and secondly that both plots behind the church were the property of town residents: on one was founded a hospital (in 1622 Elżbieta Zofia granted a privilege for the said),⁷⁶ and that the second was a plot with a garden. One may consequently draw the conclusion that to the east of the church was an expanse of less building density which could have been the remains of the initial elongated trading market. For the quarter mentioned at the northern frontage of the market square was more than likely transformed during the changes occurring to the town market square.

So there arises the question as to when this alteration to the urban structure of Węgrów took place? Was this when town rights were bestowed or maybe at a later period? The town inventories from the first half of the seventeenth century already mention a market square of four frontages, and so any changes to the town's layout must have occurred before the year 1619. Then the number of houses were presented thus:

Table 1. The number of houses in particular frontages of the Market Square at Węgrów in the light of inventories for the years 1619 and 1620

Frontage \ year	1619	1621
First	9	9
Second	3	2
Third	29	29
Fourth	9 + 2 empty plots,	9 + 2 empty plots
Total number	50 + 2 empty plots	49 + 2 empty plots

Startling is the number of houses in the third frontage – a whole 29 (in the first, parallel, merely 9). Such a significant difference raises the question as to whether these are in fact numbers signifying individual households. However, what we probably do have is a list of the owners or rather co-owners of the properties. This may be pointed to through the differentiation in the taxation rates (from 5 to 24 grosze) as well as by the fact that in two cases the dues were paid by individuals who more than likely were related to each other.⁷⁷ A similar situation occurs in the case of the remaining frontages.⁷⁸ In connection with which one cannot treat the above cited figures as the full list of market-square houses. If we were to compare this data with the tax register of 1580, which mentions only 20 market-square houses, as well as with the register of 1588 – 19 houses – it might turn out that over the course of thirty years there did not occur a significant proliferation in buildings at the market square, as might have been judged on an initial comparison of the data from the registers with that derived from the inventories. It obviously follows to remember that the tax registers reflect not an actual state of affairs but only the subject of taxation. It is known that in 1580 20 market-square houses were subject to taxation while in 1588 – 19; however, unknown remains the number of houses that were exempt from

⁷⁵ T. Wyszomirski, *Z przeszłości Węgrowa*, pp. 42–43.

⁷⁶ *Ibidem*.

⁷⁷ Inw. 1621, p. 107: “Jan Ratyński Borzyk and Stanisław Ratyński Borzyk’ – each at 7 gr; note of “Jan Skalik[,] Mikołaj Skalik these both receive” – twice 10.5 gr.

⁷⁸ *Ibidem*, pp. 106–107, in the initial frontage: “Abram Gnojeński 4.5 gr[,] Bartosz Gnojeński, cartwright 4.5 gr”.

the payment of taxation. Assuming that the number of houses in the registers is lowered, while that data from the inventories have a tendency to increase matters, it would follow to adopt as the minimal and maximum number to be presented in these sources as from 20 to 50.

Interesting is the modest number of houses within the second frontage of the market square. This must have been the eastern frontage, at which stood the parish church. Though the question arises as to why there were there properties belonging to citizens when more than likely the whole length of the frontage was taken up by a church with cemetery? It is known that on the territory of the church and cemetery there was directly attached to the south the grounds of the presbytery, so the location of this property on the southern side of the church is highly unlikely.⁷⁹ Yet it would follow to locate it on the north side of the church. Helpful in resolving this question is the plan by Dowkontt. Marked on it is that the quarter of buildings at the corner of the present-day streets of Kościuszki and Staszica had the successive street number 28, as buildings in the northern frontage (from 21 to 28 counting from the eastern side), and so in terms of records it is included within the then market-square plots. Additionally it has been moved somewhat to the south in relation to the line of the market-square frontage (and so is the case at present). In connection with this the houses mentioned in the seventeenth-century inventories I have located exactly here.

So taking into consideration the above described fate of the town following the death of Jan Kiszka in 1592 to the completely legal taking over of the town by Janusz Radziwiłł in 1614 (he had partly taken control of the town somewhat earlier)⁸⁰ and the turbulence caused by the unclear property situation in relation to ownership in this period, one may suppose that any action to reorganise the layout of the town would have been taken earlier, when such property relations had been regulated. It is indeed highly likely that after such a regulatory act was when the wooden revetment of the road in the current course of the Piłsudskiego Street and the western frontage of the market was created, excavated in the years 2017–2018.⁸¹

Streets ran off from the market square although not all are identifiable or can be linked to the cartographic evidence available. It is known that from the north-east corner in an easterly direction ran Wileńska (Długa) Street, from the south-east corner Podłęzna Street departed in a westerly direction, while the Żydowska Street went in a southerly direction.

Anna Czapska shows that in addition another two streets ran off from the market square, one each from the centre of the northern and southern frontages. Confirmation of this thesis is to be the course of the present-day Rynkowa Street and on the opposite side the route taken by Piwna Street and the layout of the plot found in this section.⁸² Looking at Dowkontt's plan one can admittedly see breaks in the buildings, however these are the widest in the eastern part of both frontages, while Heldensfeld depicts a break only in the southern frontage where he has not marked the course of any streets. None of these cartographic representations show the course of the street described by Czapska – in the market square frontages at the height of the present-day streets of Rynkowa and Piwna drawn in are buildings (only behind these has Dowkontt located Przyrynek Street, the present-day Rynkowa Street). Given that the matter is uncertain, it has been decided to present the look of the frontages on the basis of the plots as marked by Dowkontt.

An extension of Żydowska Street was New Town (Nowe Miasto), having the shape of a widened street, as is borne out by both inventories for the years 1619 and 1621. These enumerate not four frontages, as was the case for the Old Town, but two sides of the street (28 houses on the one side and 30

⁷⁹ This is borne out by the inventory of the Węgrów presbytery of 1619; T. Wyszomirski, *Z przeszłości Węgrowa*, pp. 36–37.

on the other, known as *od Liwa* (from Liw) that is western). On Dowkontt's plan one can see that the road running from Liw to the New Town widens, though the Town itself takes the shape of a rectangle. Maybe this constitutes the remains of an attempt to regulate the market square. The inventories also mention four houses 'beyond the Kobylina' that is situated here on the River Kobylina. Depending on the perspective, the said 'beyond' could indicate the buildings on the southern or the northern side of the river. Taking into consideration the order that the sides of the street were enumerated in the inventories i.e., the 'New Town' – 'beyond the Kobylina' – 'the other side from Liw' one may conjecture that the description is one leading from the southern side, which would locate the buildings 'beyond the Kobylina' on the northern side of the River Kobylina.⁸³

The locating of the third 'town' – the Ruthenian – is what raises the greatest doubts. In a similar way to the New Town, it also did not have a four-sided market square in the middle but rather a single main street, possibly widened. On both sides there were situated 39 properties, while the landless tenants resident there were referred to as residing 'in Ruthenia' (1619) or 'in the Ruthenian Town' (1621).⁸⁴ The location of this district in the south-eastern part of the town is borne out by first and foremost the name, in existence to this day, of Ruthenian (*Ruszczyzna*) to designate this terrain.⁸⁵ In addition there were to be found in these vicinities small voloks belonging to the Ruthenian priest (*agris poponis Ruthenorum*), mentioned in 1540.⁸⁶ In comparing these entries with Heldensfeld's map we can in fact find on them a fairly dense concentration of buildings assembled along a single street. In conclusion, we have placed there the Ruthenian Town.⁸⁷ That said unknown remains the localisation of the so-called Ruthenian Settlements mentioned in the inventories immediately after the Ruthenian Town.⁸⁸ Also the poll tax of 1662 also mentions amongst the inhabitants of Węgrów adherents of the 'Greek [...] religion.'⁸⁹

There also appear in the mentioned inventories the names of two other streets. In as far as in the case of the already discussed streets of Wileńska (Długa), Podłużna, Żydowska, Kozia or the New Town, I have based myself on Dowkontt's plan, which locates them precisely, though in the case of the remainder their identification causes certain problems. One of these is the Rucheńska Street. Józef Kazimierski as well as Wiesław Ratajski place it where at present is the Zwycięstwa Street.⁹⁰ On the town plan of 1893 we can see there the street Ruska (*Ruszkaja*),⁹¹ while Dowkontt's plan does not cover this area. Taking into consideration its name it shows that it ran in the direction of Ruchna, as well as the fact that the inventories have mentioned 19 properties on one side of the street and 21 on the other side, it follows to identify it as has been presented by the aforementioned authors with the present-day Zwycięstwa Street, along the length of which Heldensfeld placed buildings on both sides.

Two streets bearing the name Kozia have been noted in the inventories. Only one of them has been found on the plan. The first Kozia Street is mentioned as being between Rucheńska (the one

⁸⁷ The location is different from the one suggested by J. Kazimierski, who situated the Ruthenian Town in the form of a four-sided market square in the place of those grounds belonging to the Catholic presbytery from at least the end of the seventeenth century and presumably and earlier (as is borne out by the plans of Church territory from the beginning of the seventeenth century and 1867); idem, *Z dziejów Węgrowa*, pp. 272–273, "Plan Węgrowa 1620 r.". The Diocesan Archives in Drohiczyn, Zespół Akt Parafii Wniebowzięcia NMP w Węgrowie, sign. III/Q/1, p. 36; AGAD, Archiwum Zamoyskich, sign. 3009, p. 53; AGAD, Centralne Władze Wyznaniowe, sign. 711, f. 378. Equally, in writing these words and here following on from Kazimierski, M. Gochna has mistakenly marked the Ruthenian Town in an earlier reconstruction of the town, idem, "Porządki jako największe i najlepsze". *Bogusław Radziwiłł w dziejach Węgrowa*, "Węgrów ok. 1620 r. – plan miasta (rekonstrukcja)". These divisions are mentioned already in the nineteenth century by Józef Grajner in his diary of his travels around Podlasie in 1856 with his description of Węgrów seeing him recall: "The townsfolk of Węgrów are always up for discourse, retreating in their thoughts to their golden age when [...] there were clearly two distinct towns: a Polish and a Ruthenian, and which now only exists in the title"; idem, *Wycieczka na Podlasie*, "Biblioteka Warszawska. Nowa Serya", vol. 4, 1857, p. 81.

immediately after Wileńska) and Podłęzna. This was most certainly not a long street (on one side 10, on the other nine houses) and judging by the first names, surnames and nicknames of the inhabitants, the street was inhabited by a Christian population. I have identified it, following on from Józef Kazimierski, with the later Koźła Street, a fragment of which can be seen on Dowkontt's plan (to the rear of the parish church), while on the plan I have retained the name given in the inventory.⁹² The second street to bear the name Kožia mentioned in the inventories was inhabited in its entirety by Jews, judging by the names of the property owners, which numbered seven.⁹³ It was mentioned after Żydowska street, as the last in the inventory. Józef Kazimierski localises it (as 'Kožia or Jatkowa') in the place of Przyrynek street visible on Dowkontt's plan (at present Rynkowa Street). However, it cannot be excluded that the matter refers to the pre-war Tylna Street (at present Nowa).⁹⁴ Given the above outlined doubts, this name does not appear on the plan.

The building structure of the town shown on Heldensfeld's map and Dowkontt's plan indirectly reflects the professional activity of the town's inhabitants. Loose forms of building prevail, where on urban plots besides houses are to be found outhouses enabling agricultural work to be undertaken. In the Jewish district where the population was chiefly employed in crafts and trade, the buildings are relatively dense, while the houses either have no gardens whatsoever or have merely scraps of land.

The chief Christian church in Węgrów was to be found on the eastern frontage of the market square. The church was founded in 1414 by Piotr Pilik and carried the name of the Virgin Mary, of St. Peter, Paul and Andrew the Apostles as well as of St. Catherine the Martyr and Virgin.⁹⁵ In 1451 the owner of Węgrów, Stanisław of Olomouc, increased the bequest to the Węgrów church by one volok of land for the altar funded by him. He also bequeathed three voloks to the Węgrów parish priest and his ministers, while to the teacher at the local school he presented one volok – all with the rights to free milling and net fishing. In turn, in 1507, Janusz Kostewicz bequeathed to the church three *grzywnas* (a money denomination) annually from the town and to this numerous rents. He was to increase his endowment in 1509 by thirty two homesteads with gardens in the direction of Liw.⁹⁶ In 1558 the church together with the presbytery and incomes was confiscated from the Catholics and given to the Reformist Evangelists by the then owner of the town Anna Kiszczyna. Soon the Protestant community transformed itself into a Polish Brethren congregation, and as such was already functioning in 1563, when at its head stood Marcin Krowicki.⁹⁷ With the town being taken over by Elżbieta Ostrogska and Krzysztof 'The Thunderbolt' Radziwiłł, the church was returned to the Calvinists and the Polish Brethren preachers expelled. The exact date for these changes is unknown.⁹⁸ It is known that in 1596 the church was closed, something confirmed by a letter from the Węgrów burghers to Radziwiłł of that very year. In this letter the inhabitants of Węgrów describe the two-fold intrusion on the part of the Catholic priest from nearby Sokołów Podlaski (Sokołów), who tried together with his helpers to conduct a Mass there.⁹⁹ In that same year an agreement was concluded between Elżbieta and Krzysztof and Bernard Maciejowski, the bishop of Łuck, on the strength of which the Catholic priest had all his properties and incomes returned to him.¹⁰⁰ The church itself was returned to the Catholics in 1630, while in 1634 the construction of a new wooden Evangelist church (it burnt down in 1678) was completed.¹⁰¹

⁹² On the town plan of 1893 this street is described as Ogrodowa with only the subsequent street in an easterly direction bearing the name Kožia.

The date for the erection of the stone parish church remains unknown. The present-day baroque church was built in the years 1703–1706 (it was consecrated in 1711) in place of the previous temple, burnt down by the Swedes in 1703.¹⁰² In the light of the existing subject literature this was to have been a Gothic construct dating back more than likely to the sixteenth century. Although Anna Kiszczyna funded the congregation at Iwie,¹⁰³ she was rather not the sponsor of the stone church in the case of Węgrów. For more probable is that in 1558, when she bequeathed the church to the Protestants, it had already been rebuilt. It is doubtful that it was the Evangelists who build a stone church in place of the wooden one. Given the above it follows to presume that the church came into being either in the first half of the sixteenth century or still in the fifteenth century. It is known in turn that Jan Kiszka was buried at the Węgrów church on the 5 September 1592.¹⁰⁴ Taking into consideration that towards the end of his life he possessed many properties in the Grand Duchy of Lithuania,¹⁰⁵ one may presume that he was buried at one of the more significant churches, which would be evidenced by the existence of a stone building at this time. According to Izabela Galicka, Hanna Sygietyńska and Dariusz Kaczmarzyk the church was built in the sixteenth century, while the remains of this temple are the buttress walls of the nave with corner turrets in the façade (from the western side) as well as the presbytery and vestry. In turn, according to the authors of the above publication, ‘in the attic above the vestry visible [are] the upper sections of the s[outhern] wall of the presbytery with three ogival windows and buttresses.’¹⁰⁶ Paweł Tołstoj, travelling through Węgrów in 1696, was to thus describe the local parish church: ‘в том местечке ест костел римской великой, каменной, многим болше московской соборной цэркви строение. тот костел древней, убор в том костеле богатой’ [In this small town there stands a large Roman-Catholic church, stone in build, much larger than the Moscow cathedral church. This church is older, with in the church rich ornamentation].¹⁰⁷ As a result of the above accounts we have located the church in the place of the present-day basilica. Around the church we have drawn in the cemetery, whose remains were uncovered in 2010.¹⁰⁸ The wall encircling the church has been placed as it is with the present-day one. Between the southern part of the wall and the areas belonging to the presbytery there was at this time no street as such (at present Kościelna Street), which is shown by the Węgrów presbytery inventory of 1619.¹⁰⁹ This street was marked out during the construction of the Baroque church.

Contrary to the hitherto assumptions and local tradition the founding of the church of St. Barbara did not see realisation and most probably this church was never actually built.¹¹⁰ In turn the church of the Presentation of the Blessed Holy Mary, located on the spot of the Łubiński chapel in the present-day cemetery (beyond the scope of the present plan) is an eighteenth-century foundation.¹¹¹

The Jewish synagogue has been marked on the plan. Jews appeared in Węgrów at the beginning of the sixteenth century, constituting at the beginning of the next century around 20% of the town’s

¹¹⁰ AGAD, Archiwum Zamoyskich, sign. 3009, p. 6. In changing all hitherto bequests to the church noted was: “Nec noc Joannis Hosiewicz et Margarethae Haeredum Anno Millesimo Quingentesimo Septimo ad vitae tantum tempora sui capellani duravisse, tum eorundem fundatorum sub anno millesimo quingentesimo nono pro ecclesia Sanctae Barbarae non esse effectuates”. This church was to have occupied the place of the present-day cross at the junction of Piłsudskiego Str. and Stadionowa Str. The church was allegedly burned down in 1703 by the Swedes. This cross with the church of St. Barbara is equated in, for example, the card index of the Polish Institute of National Heritage, where it is noted that an original Rubens hangs there (burnt) and in the environs were to be scattered the ashes of insurgents from the January Uprising. National Institute of Cultural Heritage in Warsaw, kartoteka, woj. mazowieckie, Węgrów, Kościół św. Barbary – spalony. During construction work round the cross, carried out in the second half of the twentieth century, human remains were uncovered (information from R. Postek).

¹¹¹ B. Szady, *Geografia struktur religijnych i wyznaniowych w Koronie w II połowie XVIII wieku*, Lublin 2010, p. 694.

inhabitants.¹¹² Information as to the existence of the synagogue and a Jewish school comes from both Radziwiłł inventories.¹¹³ Possibly it already existed in 1596, from which are derived a medical tract written down in Węgrów in both Hebrew and Yiddish.¹¹⁴ We have marked the synagogue on the plan in the location of the later, nineteenth-century synagogue. Similarly, the inventories note the Jewish cemetery which we have included as it appears on Dowkontt's plan.¹¹⁵

The building standing near the market square, the so-called *Dom Lipki* (Lipka House) has been referred to in local tradition as the Polish Brethren printing house, which would point to its sixteenth-century origin. It was the authors of the 'Catalogue of Monuments of Art' that designated its construction – and here in the seventeenth-century – as alleged, pointing to its fundamental reconstruction in the nineteenth century.¹¹⁶ For there are no bases whatsoever to connect the activities of the Polish Brethren printing house (whose activity in the second half of the sixteenth century raises no doubts whatsoever¹¹⁷) with this building and its location on the present plan.

Nothing is known about the Węgrów town hall in the sixteenth century. In 1643 an administrator of Bogusław Radziwiłł, Jan Pękalski, drew up an administrative design for the town including the planned construction of a town hall but here matters concerned the next century. It is known that the town hall burnt down in 1650, yet it is unknown as to whether the building existed before 1643 and whether it was functional, or possibly after 1643 and the fire broke out before the year 1650 itself.¹¹⁸

We have also marked on the plan the pond situated close to the crossing of the present-day streets Strażacka and Zwycięstwa. The Węgrów presbytery inventory of 1619 informed of its existence for that self same year.¹¹⁹ Its localisation (together with a fragment of the stream that feeds it) we have adopted on the basis of Dowkontt's plan. This pond is visible on the plan of the presbytery plot drawn by Reisner at the beginning of the eighteenth century as well as on the map by Heldensfeld. One can see on the plan of the presbytery lands of 1867 that it had already then been moved and shaped into a trapezium placed at the present-day streets of Zwycięstwa between the streets Strażacka and Mickiewiczza. It also appears on the town plan of 1893. At present this is a strip of greenery, a trapezium in form, with a bus stop.

The Węgrów estate inventories provide many place names functioning within the town and its environs to designate meadows, fields, enclosed areas and mills. Given that their inclusion within the actual town area as such, and here given the current state of research, is only possible to a highly hypothetical degree we have consequently decided not to locate them on the plan. Possibly detailed research into the nineteenth and twentieth century will enable a more comprehensive application of the retrogressive method and result in the identification of concrete names, particularly of those for the mills.

We know that Węgrów had a customs house (similarly to that at Liw in neighbouring Mazovia).¹²⁰ Anna Kiszczyna viewed unfavourably the activities on her lands of this and other customs houses, who hampered the work of toll collectors, something that resulted in a reprimand on the part of the king,

Sigismund August.¹²¹ ‘Common’ payments were also collected by Janusz Kostewicz, which met with the opposition of the Mazovian princess.¹²²

Finally it follows to mention the economic potential of Węgrów in the sixteenth century. This is reflected in the tax registers for this century. The most information is provided by the register of 1580. Mention has already been made of the 20 properties located at the Market Square. Besides this tax was paid also on 148 street houses as well as 115 poor cottages and three burnt down street houses. To which added must be 55.5 settled voloks, two wojt voloks as well as 31 gardens, while two and a half ‘fire ravaged’ voloks were exempt from taxation. The town also had mills, which comprised six mill roller wheels as well as three annual wheels. Unfortunately, the register does not provide information as to whether each of the wheels were housed in separate mills or equally whether the mills were equipped with more than one wheel (or if the situation was a mix). The register also enumerates Węgrów craftsmen: 10 bakers, six stove-fitters (of which four were impoverished), five salt traders, four wheelwrights, three cobblers, three smiths, three butchers (of which one was impoverished), three tailors (of which one was impoverished), two furriers, two locksmiths, two carpenters, two cartwrights, two leatherworkers, one saddler and one impoverished sword maker. Besides this tax was levied on nine landless tenants and three stills. The amount of taxation brought was 126 zł and 24 gr.¹²³ 100 zł of excise tax was paid.¹²⁴

The register of 1588 notes in Węgrów: 58 municipal voloks, 19 market square houses, 148 street houses, 115 poor cottages, 31 ‘attached’ gardens (presumably at homesteads), three stills, 47 craftsmen, nine landless tenants, six inherited mill wheels, three annual mill wheels, and three vacant voloks (fallow).¹²⁵

According to Stanisław Alexandrowicz, who has based his calculations on the register of 1580, Węgrów in the second half of the sixteenth century had approximately 1,698 inhabitants.¹²⁶

In relation to its size and economic potential Węgrów was third amongst the towns of the Drohiczyn land, and here after royal Drohiczyn and the privately held town of Ciechanowiec. This is shown by the number of houses in 1580 (Drohiczyn 328, Ciechanowiec 336, Węgrów 283) as well as also the amount of excise paid for 1578 (Drohiczyn 452 zł 22 gr, Ciechanowiec 107 zł 22 gr, Węgrów – according to Jabłonowski 97 zł 18 gr, according to the manuscript 100 zł). With regard to the number of voloks, in 1580 Węgrów (60 voloks) gave way to Siemiatycze (147), Sokołów (87), Drohiczyn (83), Wysokie Mazowieckie (78) and Ciechanowiec (75).¹²⁷

III.6.31.1 WIELICZKA

Michał Zbieranowski

The plans of Wieliczka and the Wieliczka mine luckily survived, and could be used as a basis for our reconstruction of the late sixteenth century plan of the city. They were made by Marcin German, surveyor and foreman of the 'Regis' shaft.¹ He arrived in Wieliczka probably in the 1620s. His plans for the town and the mine were created between 1631 and 1638, on the basis of German's own measurements. The plans comprised of four maps at a scale of around 1:1,260, the first of which showed the town, and three other showed the precise layout and range of successive levels of the mine. Despite significant difficulties, and the imperfect measurement techniques of the age, German's plans are very accurate. They show town buildings (sometimes with details, as in the case of the Church of St. Clement), the streets (unfortunately without their names), salt mine facilities (shafts with buildings upon them (kleta), saltworks, mine castle), the course of preserved city walls with towers, sacral objects (churches of St. Clement, St. Sebastian, hospital of the Holy Spirit), town facilities (vogt's office, butchers' stalls, town hall). Ownership divisions were also presented with much detail. Plot borders were also presented on German's plan, both inside the town, and in the suburbs, the majority of them as marked with their name, or the name of their owner.²

In 1645 Adam Kazanowski, the żupnik (zupparius salis, administrator of the salt mine), published Marcin German's maps of Wieliczka by order of king Ladislaus IV. The plans were published in Gdańsk as intaglios at a scale of around 1:3,800, made by a well-known Dutch engraver Wilhelm Hondius (Willem de Hondt). Illustrations showing work in the mines and on the surface (saltworks, transportation, etc.), and a detailed list of pits, galleries, shafts and chambers for each level of the mine³ were added to the plans. Unfortunately, in comparison to German's maps from the 1630s, Hondius's intaglios of the town have fewer details, and sometimes even have small mistakes. The town buildings were simplified. Some of the structures, which were presented on German's plan quite precisely, were shown in an almost symbolic way (e.g. Kłosowska Gate, church of St. Clement) or incorrectly (the rectangular Church of St. Sebastian was presented as a rotunda). Also, almost all descriptions of property were removed. However, in one case Hondius's engravings are complementary to German's plans: they include a description of saltworks in the northern part of the town ('Kerbaria'), which were not shown on the earlier plan.

J.E. Nilson's intaglios from the middle of the eighteenth century, as well as a cadastral plan of Wieliczka from 1847, played an auxiliary role in the preparation of our plan.⁴

The first entries mentioning Wieliczka come from the beginning of the twelfth century. Archaeological research confirms that Wieliczka was a centre of salt making, as well as a centre of trade, already at that time.⁵ The foundation of the town was connected with the large-scale, systematic rock salt production in the second half of the thirteenth century. In 1290 Przemysław II confirmed the founding document issued probably by Henry IV Probus. Wieliczka was originally located under Frankish law,⁶ in 1336 Casimir the Great transferred the town to Magdeburg law, in the imitation of Cracow.⁷

The urban layout of the town developed in two stages. First, as a result of the foundation under Frankish law in 1290, then during Casimir the Great's reign, after the transfer to Magdeburg law and the building of the city walls. The base layout was not changed until the end of the sixteenth century (and can partially still be seen in the current plan of the town). In the sixteenth century the classic foundation layout underwent partial changes due to frequent fires and mining. The Market Square is situated in the central part of the town (Upper Market Square – Rynek Górny⁸), and streets leave from the corners – two perpendicular streets from each. Butchers' stalls, other merchants' booths, and the pillory stood in the middle of the square. Salt stalls of retail sellers were probably situated in the western corner of the northern frontage of the Market Square. The town hall was built in the southern frontage, probably at the beginning of the fifteenth century. The first building burned down during a fire in 1556.⁹

The parochial church in the town was dedicated to St. Clement. Originally wooden (from the thirteenth century) it was rebuilt in the fourteenth century (probably prior to 1354) as a three-nave hall Gothic temple. Two chapels were added on the northern side: of the Name of Jesus (for preaching) and a domed chapel of St. Stanislaus and St. Barbara (founded by the family Gawroński).¹⁰ Already in the second half of the seventeenth century the church sustained significant damage as a result of a mine collapse, and was demolished after 1786.¹¹ Between 1804 and 1816 the church was rebuilt in its current, Classicistic form.¹² The presbytery and parochial school stood south of the church.¹³

There was also another one, small wooden church in Wieliczka, dedicated to St. Sebastian. It stood outside the city walls, to the southeast of the town, and was founded by Sebastian Lubomirski, to whom his family owned its power. The church was consecrated on 29 June 1598 by Cardinal Jerzy Radziwiłł, the bishop of Cracow, and luckily survived to this day.¹⁴

The last of sacral institutions in Wieliczka at the close of the sixteenth century, the Hospital of the Holy Spirit with a chapel, was situated north of the mine castle. The hospital was built after 1363 at the request of the town counsellors, the mine administrator and the fraternity of porters, it was meant to care for the poorest and crippled workers of the salt mine.¹⁵

¹⁵ J. Piotrowicz, *Dzieje miasta*, p. 86.

The Wieliczka Salt Mine Castle stood in the north-western part of the town.¹⁶ It dated back to before the foundation of the town, i.e. prior to 1290. Its construction was initiated by Duke Henryk Probus, who needed a residence for the administrator (żupnik) of the salt mine, but also for the mine's administration. Originally, the building comprised a quadrangular wall, some 60 × 57 m, with a storeyed rectangular house, 16 m × 10 m. During Casimir the Great's reign the castle was expanded, the wooden floor of the residential building was bricked. A one-storey wing with a basement, in the form of a square with sides 13 m long, was added on the western side. In the 1360s the structure – described as 'a house amidst the mine' in the sources – was modernized, another floor was built over the western wing, and the so-called gord room ('izba grodzka') was arranged on the ground floor. The entire structure was connected with town fortifications built at the time, which comprised town walls 1 km long, defended by (probably) 21 towers. In 1473 and 1475 the castle had to be rebuilt again due to fires, which broke out in the town.¹⁷ The northern wing, the so-called 'Mine House' was built then. A prison called 'Groch' was set in the basement. Between 1552 and 1553 a catwalk was built over the courtyard, on second floor level, connecting the Mine House with the House amidst the Mine'; another floor was also added to the western wing, and the royal chamber was built there. The building was decorated in the Renaissance style at the same time. The third building of the castle, situated north of the House amidst the Mine, housed the mine's kitchen, which served meals to the workers and carters. Various utilitarian facilities occupied the southern part of the castle grounds, these included: wood storage sheds, a small bathhouse, stables and the entrance to the so-called mine orchard, created on the side of the old mine subsidence.¹⁸

Since the second foundation in the fourteenth century, the town was surrounded by walls, which also encircled the castle. Initially, there were two gates: Kłosowska in the south, and Krakowska in the north. Kłosowska Gate can be found still on German's plans from 1638 and 1645, Krakowska Gate was already gone at the beginning of the seventeenth century. We do not know, when it was demolished or destroyed. Its exact location also remains uncertain. The gate was probably situated at the exit of the street running longitudinal from Kłosowska Gate, along the western frontage of the Market Square, between the Salt Mine Castle, and the wall encircling the church of St. Clement.¹⁹ According to tradition, there were meant to be 21 towers on the walls of Wieliczka (19 regular and two gate towers). However, the city walls were destroyed as a result of mine operations (both from production needs and collapse). Only nine towers on the southern and western side, and small fragments of curtain walls by the castle and both sides of Kłosowska Gate can be found on German's plan. Perhaps there is another tower on this plan, near 'Regis' shaft. In the east the liquidation of the walls was certainly hastened by the construction of 'Seraf' shaft in 1442. In the north-eastern part the destruction of the town's fortification was probably caused by the intense exploitation of 'Regis' and 'Wodna Góra' shafts.²⁰

The sixteenth century names of streets in Wieliczka are known from the sources, but we cannot be sure of the exact location of the streets. The only street marked on the manuscript of German's plan from 1638 is Św. Jadwigi Street, which ran from the south-western corner of the market square, heading west.²¹ Kłosowska Street probably ran from Kłosowska Gate, and Krakowska Street – from the north-western corner of the town walls due north, between the hospital of the Holy Spirit and

¹⁶ S. Świszczowski, *Średniowieczne założenia Zamku Żupnego w Wieliczce i ich rozwój*, SMDŻ, vol. 2, 1968, pp. 152–170; K. Kubik, *Dzieje rozbudowy zamku żupnego w Wieliczce (XIII–XX w.)*, SMDŻ, vol. 6, 1977, pp. 77–95.

¹⁷ Wieliczka was a wooden town, because of the mine underneath and as such it was prone to fire. The greatest fires occurred in 1473, 1475, 1535, 1549, 1556, 1591; F. Kiryk, *Rozwój urbanizacji*, p. 263.

¹⁸ J. Piotrowicz, *Dole i niedole Wieliczki za panowania ostatnich Jagiellonów i królów elekcyjnych (do "potopu" szwedzkiego)*, [in:] *Wieliczka. Dzieje miasta*, pp. 144–145; S. Świszczowski, *Urbanistyczny rozwój*, p. 29.

¹⁹ S. Świszczowski, *Urbanistyczny rozwój*, p. 29. Although J. Widawski places Krakowska Gate at the exit of the street running from the north-eastern corner of the market square, more or less between the shafts "Regis" and "Wodna Góra"; Widawski, *Mury*, p. 479; similarly J. Piotrowicz, *Dole i niedole*, the little plan after p. 144.

²⁰ Widawski, *Mury*, p. 477; S. Świszczowski assumes that the construction of the fortifications could have not been finished due to the mine activity; idem, *Urbanistyczny rozwój*, p. 29.

²¹ Also in this case we are not completely sure, whether this name was in use. The remaining street names known to us are: Żebracka, Warzycka (probably by the saltworks), Kowalska, Ślusarska, Szewska, Podszkolna, Świętokrzyska (perhaps near the old church of the Holy Cross, which had already ceased to exist in the sixteenth century), Wójtowska, Przedmiejska, Krowia, Piekarska, Wąska, Wieżna, Furmańska, Tworkowska; J. Piotrowicz, *Dzieje miasta*, p. 101; idem, *Dole i niedole*, p. 144.

saltworks. Krzyszkowska Streets was marked on the cadastral plan of Wieliczka from 1847, it ran east-west from the lower market square.²²

The mine under the town and the mine facilities on the surface influenced the urban layout of Wieliczka. Apart from the aforementioned buildings of the Salt Mine Castle, there were five shafts in Wieliczka in the second half of the sixteenth century. The oldest was 'Regis' shaft, situated northeast of the church of St. Clement, dug in the fourteenth century.²³ The next was 'Seraf', dug in 1442, which became the most important shaft in Wieliczka for the next two centuries. It was opened in order to allow for further mining of salt from the deposits reached by the 'Seraf' shaft. It was located in the eastern part of the town, at the level of the Upper Market Square ('Rynek Górny'). Its construction required the eastern part of town walls be demolished.²⁴ The remaining three shafts were created in the sixteenth century.²⁵ 'Boner', built in 1532 and 1533 was first of them. It was opened in order to allow for further mining of salt from the deposits reached by the 'seraf' shaft. It was dug east of 'Seraf' shaft, roughly at the level of the Upper Market Square. The shaft 'Bużenin' was dug in 1564–1565, even more to the east of 'Boner' shaft, already on the grounds of Mierzączka suburb – first it was meant as an air duct, which later became a regular, mining shaft. Until the end of the sixteenth century this was the easternmost shaft in Wieliczka. The last of the newly-dug shafts was 'Loiss' (Loyss), built by the family Loiss, burghers from Toruń, between 1577 and 1579.²⁶ The family owned saltworks in Toruń, to which rock salt was floated on the Vistula.²⁷

The so-called Wodna Góra ('Water Mountain', also called 'Góra Surownicza', 'Raw Salt Mountain') was the sixth, additional shaft, dug sometime before 1381 to remove water from the mine. It was situated north of the church of St. Clement, and northeast of 'Regis' shaft.²⁸

Saltworks, called 'karbaria' ('kerbaria' on Hondius's engravings), lay outside the city walls, west of the Hospital of the Holy Ghost, and north of the Salt Mine Castle. Its origins date back to pre-foundation times. In the end of the sixteenth century it had six towers with salt pans. Since 1577 it was aided by the so-called 'upper' saltworks, built by 'Bużenin' shaft, which had one tower.²⁹

Wieliczka is a particular town, even among other Polish mining towns. This is because the town was founded and developed on the mine, which had its consequences in the urban layout and buildings. Due to the possibility of collapse, the houses were built mostly from wood (even the town hall was wooden).³⁰ As a result, any fire was particularly dangerous, and caused much destruction.³¹ Moreover, the increasingly intense salt prospecting required new shafts be dug (for instance 'Seraf'), and more place for storerooms, artisan workshops, or stables for merchants. The town buildings suffered. Perhaps we could risk a statement that (at least in the second half of the sixteenth century), Wieliczka was a town added to a mine, not a mine in a town.

²⁹ Several dozen metres northeast from the shafts "Regis" and "Wodna Góra" there were the salt cisterns, but they are absent from German's plans. So we have no certainty that they were still in use in the end of the sixteenth century; J. Piotrowicz, *Dole i niedole*, pp. 101, 142.

³⁰ There were not stone buildings in Wieliczka apart from the Salt Mine Castle, the city walls, the gates and towers, and the church of St. Clement.

³¹ See footnote 18.

III.6.32.5 WIELUŃ

Małgorzata Wilska

The sixteenth century layout of Wieluń was reconstructed in the same way as the layouts of other cities in AHP.¹ The oldest cartographic records were analysed retrospectively. The 1702 plan, the so-called ‘Swedish plan’, shows the location of Wieluń, the circumference of the city walls, the castle, two gates, the moats and the outline of the closest suburb – the Cracow suburb.² The second plan comes from the end of the eighteenth century and was kept in the Czartoryscy Museum in Cracow.³ It shows the walls with the gates, the water network and the gardens between the walls and the buildings. Both plans are quite primitive and cannot form the basis for reconstruction.

The basic cartographic record, on which our study was based, is the detailed plan of Wieluń from 1799, prepared by Grappow on a scale of 1:4,000, presenting the street network, the plots, brick buildings, gardens, ramparts, defensive walls with the gates and towers, the castle, the castle square and pond, and the moats. This plan is known from the 1879 copy on scale of 1:1,500 by Ottoman Wolle.⁴ Another cartographic source is the 1823 plan, created by F. Bergemann, on which the ponds and the stream, the remnants of the moat, the defensive walls, the gates, the towers, streets and plots, the buildings and churches, and the suburbs are presented.⁵ We know a draft plan of the city, from the middle of the nineteenth century, on which the rivulet Wielunka and the nearby roads are marked.⁶

Łaski’s *Liber beneficiorum* and the inspections of royal property from the sixteenth–eighteenth centuries were some of the written sources used.⁷

In terms of older studies, valuable information could be found in Cz. Rokicki’s and W. Przygodzki’s works. In newer works: numerous publications of R. Rosin, J. Widawski’s book on defensive walls in the Middle Age Poland, and the publication containing materials from the session about Sieradz and Łęczyca Voivodeships that took place in 1993.⁸ Valuable detailed studies could be found in Conservation of Monuments Workshops and Warsaw University of Technology, where the documentation on the works carried out in Wieluń was gathered.⁹ Well-preserved city documentation, e.g. the list of the

streets from 1790, as well as numerous registers of Wieluń documents from 1509–1792 were used by R. Rosin, as can be seen in his studies.¹⁰

Wieluń, situated in a basin on the water divide of the Prosna and the Warta, lay on the crossing of important roads, e.g. from Lesser Poland to Greater Poland, and from Lesser Poland, Ruthenia and Lithuania to Silesia. In the thirteenth century Wieluń was the seat of castellany, moved from the nearby Ruda. The location of the city occurred before 1283, as in that year Wieluń is mentioned as a city. After the fire in 1335 the city was rebuilt during Casimir the Great's reign, around 1350.¹¹ Then the shape of the city formed, which survived for many centuries, and the construction of the walls and the castle began (Wieluń was incorporated into the defensive system of the castles on the border with Silesia). The rectangular market square, with streets running symmetrically in twos from the corners, was planned in the centre of the city. The city hall stood on the market square already at the end of the fourteenth century.

The walls surrounding the city, included in our plan, were built in several stages. In the fourteenth century, during the reign of Casimir the Great, their length equalled, as later on, 1,300 m, but there were no towers. The two gates – the eastern one was called Rudzka, or later the Cracow gate, and the western one – Dąbrowska or Kaliska, were situated in rectangular gate towers.¹² The walls were 1,80 m thick and 8–8,5 m high, probably with a crenellation on top. The entire city was surrounded by a moat, created by joining the many ponds and watercourses,¹³ visible even on the plans from the eighteenth century. The castle was built in the south-eastern part of the city already in the fourteenth century.

In the fifteenth century a tower was added to the south-eastern part of the walls. It was called Katownia ('torture chamber'), Męczarnia ('torment'), or the Red Tower – it was probably the executioner's residence.¹⁴ At the same time both of the gates were being expanded, the gatehouse of Dąbrowska gate was prolonged and another tower was added¹⁵. In the sixteenth century two new towers were built: Swawolna, and the second one in the south-western part, also Rudzka gate was expanded, and a large building, shown on our plan, was added – the gunpowder magazine.¹⁶ It touched the wall from the north and this was the building raised in the sixteenth century. Much about the expansion near Rudzka gate is known from written sources. In 1593 the works were supervised by Melchior, a bricklayer from Brzeg, who built the tower and the building that was later called Prochownia ('gunpowder magazine'), as well as the city baths, situated near the gate. The information about the building of an earlier bath house comes from 1571.

In the sixteenth century a third gate was built in the southern part of the city walls, it was called Brama Nowa ('the New Gate'), or later: Gaszyńska. This new passage was made on the east side and fortified with a tower.¹⁷

The castle was situated within the walls, in the south-eastern part of the town.¹⁸ It was surrounded by water – also on the side of the city. Only in the east there was an entrance, through the castle outbuildings. The 1628 inspection states: 'entering from the city to the castle, the wooden gate with double doors, on wooden axes. Right next to it a wicket, on iron hinges'.¹⁹ The castle buildings were

¹⁰ See footnote 8 and R. Rosin, *Wieluńskie w okresie staropolskim. O stanie i potrzebach badań*, [in:] *Między Północą a Południem*, pp. 49–63.

brick, storeyed and there was a chapel in one of the towers on the eastern side. In the seventeenth century some of the stoves required repair, as was noted in the inspection. The period of prosperity of the city was already over by then. Several decades earlier, between 1552 and 1559, Queen Isabella Jagiellon – at that time widow of John Zapoyla's, the late king of Hungary, lived in the castle. Thanks to her support, Sigismund Augustus in the 1557 privilege returned Wieluń reeve's district, with its entire income, to the city. Several years later, in 1565, a fair was set for the day of the Holy Trinity. The 1564 inspection informs, that Wieluń *starosta's* district consisted of the cities Wieluń and Kamion, and villages: Bobrowniki, Wierzbie, Pątnów, Krzyworzeka, Mokrsko with a demesne, Wróblów, Pichlice, Sokolniki with a demesne, Czastary, Osiek, Kiełczygłów, empty Kniatowa, two leased villages Bieniec and Biała, Skomlin and Toplin. In the sixteenth century the city owned the villages: Kurów, Turów and part of Niedzielisk.²⁰

The parochial church of the Holy Virgin (at first – St. Michael Church) was situated at the intersection of the streets Żołnierska and Grodzka, on the south-eastern corner of the market square.²¹ In 1413 archbishop Mikołaj Trąba moved the collegiate from Ruda to this church, and granted benefices to it at the same time. It related to the development of the city in the fifteenth century. On the plan, to the west from Nowa gate, we can see the archbishop's palace, built in the middle of the fourteenth century by Jarosław Bogoria from Skotniki. The area occupied by the archbishop's manor was large, there were utility buildings and a garden. The palace building was situated near the wall. It functioned in the fifteenth and sixteenth centuries, and is mentioned for the last time in 1613.²² At the beginning of the seventeenth century, along with the entire archbishopric area it was bought by the foundress of the monastery and church of the Bernardine sisters, Anna Konicpolska, and given to this foundation. Since then the order of the Bernardine sisters took over the entire former territory of the archbishop. In the sixteenth century, during the fortification of the city walls, a tower shown on our plan was built 'behind the archbishop's manor'.²³

The oldest church in Wieluń – the Corpus Christi Church, belonging to the Augustinians – was located in the north-western part of the city. The friars were invited to Wieluń probably in the thirteenth century. When the church burned in the fourteenth century, the monastery and the church were rebuilt by Casimir the Great. The longer side of the church stood along Szewska street, behind it were the monastery building, the garden and some wooden utility buildings.

The city buildings, partly brick, occupied the blocks around the market square.²⁴ The plots, equally divided on both sides of the market square, faced the square. A garden belt, visible still on eighteenth century plans, stretched along the walls in the northern part of the city. Some confirmation of the existence of these gardens could be seen in the name of Różana street, running north from the north-western corner of the market square.

The names of the streets in Wieluń survived in quite early records.²⁵ In written sources they appear already in the fifteenth century, on plans – from the eighteenth century. Żołnierska street, leaving the market square south from the south-western frontage is mentioned from 1441 on (1441, 1510, 1549, 1661, 1790). On the 1821 plan it is called Augustiańska. In the list of the streets from 1661 the following streets are mentioned: Barycz, Grodzka, Błotna, Piekarska – called Gaszyńska later. Other streets appear in the eighteenth century. These are: Mnisia, mentioned in 1790 (in 1799 the same street is called Wielka Panieńska); Mała Panieńska between Żołnierska and the Bernardine sisters' monastery; Mularska along the south-western wall; Różana mentioned in 1790 and 1799 (the same street appear as Reformacka on the 1821 plan, and then again as Różana); Palestrancka mentioned in 1790 and 1799 and on the 1821 plan.

Outside city walls, to the south-east of the city, there were the monastery and the church of the Paulines, dedicated to St. Nicolas. It was founded before 1380 as a hospital church, and in 1388 it was taken over by the Pauline Fathers. The eastern suburb, situated near Rudzka gate – also called the

Cracow gate – was called Ruda suburb at the end of the sixteenth century, then the Cracow suburb. The suburb that formed in the west was called Kalisz suburb at the turn of the seventeenth and the eighteenth centuries. The Hospital of the Holy Ghost was situated there.²⁶ A large part of Wieluń city walls in the east, as well as Ruda gate, survived until the twentieth century. Only during conservatory works conducted in 1966 did the major part of this gate collapse. Considerable remnants of the city moats can still be seen today.

(1998)

Translated by Agata Staszewska

²⁶ Ibidem, p. 36 The first mention about the Hospital of the Holy Ghost outside the city walls comes from 1445. The inspections list a royal stable by the Pauline Fathers' monastery, and three mills; e.g. LWWK 1564, part 2, p. 84.

III.6.33.6 WŁOCLÁWEK

Tomasz Michalski, Andrzej Kwiatkowski

Sixteenth-century Włocławek (Włocław) was the diocese capital, the centre of the Włocławek cluster of estates, one of the largest ports on the Vistula, and a significant grain trading centre. As such it performed a significant function among all towns of Cuyavia and Dobrzyń land. Held by Włocławek bishops, the town represents Church property in this volume of the AHP series. Let us emphasise one vital piece of information at the very start – the presented plan is partially hypothetical. The identified information on the location of some elements, especially suburbs and town gates, which are known only from written records, was not completely precise.

Due to the scarcity of archival materials, reconstruction of the urban space of Włocławek in the second half of the sixteenth century was not an easy task. Due to the absence of surviving council, bench and vogt records, which contain invaluable information on the organisation and functioning of towns, the source base consisted primarily of inventories of supply estates of Włocławek Bishopric.¹ There are three inventories from 1534, 1582, and 1598 that correspond to our period of interest. They were issued in print by Bolesław Ulanowski and Leonid Żytkowicz.² They include such information as lists of streets, name lists of the heads of town-dwelling families or the number of households. Nevertheless, the preserved material is not complete in this case also, because the document from 1534 does not contain a sheet with a description of Włocławek.

The privilege of Bishop Stanisław Karnkowski from 1577 (preserved in bishop cartularies), included in a translation from Latin in the work of Maksymilian Borucki, was an equally important source for the reconstruction of the spatial layout of the town in the second half of the sixteenth century. The text of the regulation of the Commission of Good Order, established in 1787 by Bishop Józef Ignacy Rybiński in connection with the need to rebuild and improve the internal order of Włocławek's urban space, was also used for comparative purposes.³ At the beginning of the twentieth century, the Chapter's copy was published with commentary by Stanisław Chodyński, while the town hall's copy is currently kept in the State Archives in Toruń, in the Włocławek Branch.⁴ The real inventories of the documents of the Diocesan Archives in Włocławek, compiled and published in 1994–2002 by Stanisław Librowski also provided valuable, albeit scarce information.⁵

The basic cartographic source for the reconstruction of the presented plan is *Mapa geometryczna oznaczająca grunta miasta Włocławka w Województwie Kujawskim*, prepared at the request of the

Chodyński, Włocławek 1913, p. V; see: J. Hofman-Kupisz, *Włocławek w 1787 roku. Zabudowa miasta i struktura majątkowo-społeczna mieszkańców*, Włocławek 2001, pp. 21–32.

⁵ Between 1994 and 2002, a total of 7 volumes of inventories were published as part of the *Dokumenty samoistne* ("Independent Documents") series, and 11 volumes in the *Dokumenty w kopiańcach* ("Cartulary Documents") series. The last, 12th volume, was published after the author's death, with supplementation provided by Witold Kujawski (2015).

Commission of Good Order by Marcin Sitz, a surveyor, in 1787 (scale approx. 1:6,500, dimensions: 124 x 67 cm). It is the oldest known town plan, and it had been considered lost for years. It was found and is now stored at the Central Archives of Historical Records (AGAD).⁶ *Kopia planu siedzib miasta obwodowego i narodowego Włocławka sytuowanego w Województwie Mazowieckim* created by Józef Maliszewski in 1824 (scaled at ca. 1:1,000, dimensions 142 x 102 cm), was also referenced as an auxiliary material.⁷ Reproductions of both these files have been published twice in the publications of the employees of the Museum of the Cuyavia and Dobrzyń Lands in Włocławek and the Laboratory for the Historical Atlas of Towns at the Nicolaus Copernicus University in Toruń.⁸ There are no other pre-nineteenth-century iconographic materials that could be used as a reference aside from Abraham Boot's drawing of the bishop's castle and cathedral, dating to 1627–1628, and the painting of the Annunciation of Blessed Virgin Mary by Jakub Charzyński from 1629.⁹

It may seem that the town plans from later eras do not represent any great value in the context of research focusing on sixteenth-century Włocławek. However, once the transformations related to the spatial development of the town in subsequent centuries were removed, it turned out that the medieval spatial layout of Włocławek did not change much in later centuries. The tracing of the above-mentioned changes was possible mainly due to the extensive literature on the subject. So far, there have been four monographs devoted to the history of Włocławek and numerous articles which contributed to the knowledge of the subject. Their authors faced the same source limitations, which resulted in them putting forward different hypotheses. Due to the nature of this text, the works of Romualda Hankowska which focused on the town's spatial layout and its buildings from the town's beginnings to 1918,¹⁰ were of greatest help. Other particularly significant works included publications of Bogdan Zgłobicki,¹¹ Janusz Bieniak¹² and Jan Pakulski,¹³ as well as those of the team composed of Roman Czaja, Anna Marynowska, and Tomasz Wąsik, who recently prepared a commentary on Włocławek's atlas in the Historical Atlas of Polish Towns series.¹⁴ The findings of Michał Morawski remain of the fundamental importance for the subject in question, despite the fact that some of the author's too optimistic assumptions were, after many years, proved wrong in the course of archaeological research,¹⁵ just as in the case of Adam Ginsbert. The results of the research were discussed, for example, in the publications of Jan Grześkowiak,¹⁶ Leszek Wojda,¹⁷ and Krystyna Nadolska,¹⁸ and in more recent works by Krystian Łuczak and Alicja Drozd-Lipińska.¹⁹

In geographical terms, Włocławek is located in Płock Basin, which constitutes part of the Toruń-Eberswalde Glacial Valley. The area occupied by the town is located at the height of 58–59 AMSL, gently sloping towards the Vistula River (the terrace on the opposite bank is much higher – up to approximately 90 m), which, together with Zgłowiączka River, had been determining the direction of Włocławek's spatial development for centuries.²⁰ Both rivers sheltered the then town centre from the north and west, while the area of former marshes called Królewiec protected it from the south and east. Unfortunately, the smaller watercourses remain difficult to represent and take into account. Once numerous, their courses were later interrupted or the watercourses themselves often disappeared completely in early modern times. The plan from 1787 still shows Sadzawka Pond with supply ditches, a channel called Młynówka and a *cierniowy* (thorny) ditch. The town was surrounded on three sides by woodlands. As in the entire area of Płock Basin, most of the land around Włocławek was covered with mixed forests and dry pine forests (growing on sandy soils), and, to a lesser extent, with willow and poplar, as well as alder forests, and alder carrs (in wet, often marshy depressions). Forest cover structure most likely started to change in the eighteenth century in connection with drainage works. Multi-species deciduous and mixed forests began to be replaced with pine monoculture, and natural plant habitats on organic soils were turned into permanent grasslands.²¹

The earliest history of Włocławek is linked to the establishment of an open settlement in the bifurcation of Vistula and Zgłowiączka Rivers, which dates back to the turn of the tenth century. Over time, it transformed into a ducal gord. In the times of Boleslaus I the Brave, Włocławek was one of the most important military and administrative centres in the country, as evidenced by the chronicle of Gallus Anonymus which mentions Włocławek with such large towns as Gniezno, Poznań, and Giecz.²² In the twelfth century, Włocławek was the seat of the castellany, and hosted a port, a mint, and a customs house, which significantly influenced its development. The town was also affected by the establishment of the Włocławek Bishopric in 1123/1124 and the canonical erection of the first Romanesque cathedral in the outer bailey. This particular duality of power quickly began to be reflected in the spatial layout of the town. In the mid-thirteenth century, there were already two comparable early-city centres in Włocławek, *i.e.* the cathedral town (*civitas cathedralis*), under the bishop's jurisdiction, and the 'German' town (*civitas theutonicalis*), ruled by the Duke.²³ The Sieradz document of 1250 of Casimir I of Cuyavia indicates that the cathedral town was becoming stronger on the Vistula, in the area of the former outer bailey. It mentioned a trading settlement on Zgłowiączka River is associated with the later 'German' town, founded in its place in order to strengthen the Duke's rule. Casimir handed the town over to the Bishop as early as in 1255 by means of a document issued in Kramsk.²⁴ The time between the legal action of both documents, *i.e.* 6 October 1250 and 8 May 1255, is considered to be the approximate date of the first foundation of Włocławek (under the Magdeburg Law). The competition for supremacy over the developing town was finally ended with the demolition of the gord and transferring the castellany to Brześć Kujawski, and with Casimir I of Cuyavia reaching an agreement of with Bishop Wolimir in 1266. The agreement transferred the ownership of the rest of the duke's lands

located near the cathedral to the bishop, which made Włocławek into a bishop's town. The earliest mentions of the town's name can be found in the twelfth-century sources which are Wladislaw (Gallus Anonymus), Wlodislaw (Mogilno Falsification) and Vladizlau (the Bull of Gniezno).²⁵

The takeover of the entire town by the bishops of Włocławek did not affect its shape or spatial development. The division into the former cathedral settlement and the chartered town remained unchanged until the devastating invasion of the Teutonic Order in 1329, which resulted in the cathedral being burnt down completely and part of the town's population slaughtered.²⁶ In the literature on the subject, it is commonly assumed that Włocławek was quickly conquered because the plans to build stone or brick defensive walls had not been implemented, even though their construction was allowed, as per the agreement of 1266. The scale of the destruction made it necessary to bring new settlers to the area, so on 8 September 1339, Bishop Maciej of Gołańcza and two vogts, Mikołaj and Burchard, entered into an agreement, also known as the Second Foundation Act, on chartering the town with Chełmno law. The document defined the town's institutional framework, benefits and relations between the burghers and the town owner.²⁷ The spatial layout of the ruined Włocławek also underwent significant changes. The construction work on a new cathedral began almost immediately in 1340. It was moved from the square by Vistula River to the hill which had been previously occupied by the chartered town. A bishop's castle was to be constructed at the site of the former gord at the mouth of Zgłowiączka River. The town itself was translocated to the area by Vistula River, east of the destroyed Romanesque cathedral, which strongly linked its spatial structure with the river.²⁸ The urban layouts planned at that time survived in their basic outline to this date.

* * *

Moving on to later periods, it should be stated that the sixteenth century was undoubtedly a period of economic development and relative social stability for Włocławek. Admittedly, prosperity was disturbed by numerous fires and epidemics (in the years: 1511, 1515–1516, 1541, 1550, 1552, 1555, 1567–1569, 1572, 1579, 1581, 1585), but the period remained relatively peaceful in comparison with the fifteenth and seventeenth century which were plagued by such significant events as the Teutonic Knights' invasion of 1431, the epidemic of 1483, which killed two thirds of the town's inhabitants, the great fire of 1620, the plague of 1625–1626, which resulted in the town being abandoned even by the Chapter, the Cathedral's treasury being hidden, and the village serving as a shelter surrounded by a dug-out ditch, or, finally, the destruction of the town (at that time still in the process of being rebuilt) by the Swedes in 1657.²⁹ That last event, in particular, is responsible for the fact that – apart from a few sacred buildings – almost no material traces of buildings from bygone eras have been preserved to this day.

Włocławek was founded on the area corresponding to 42 Chełmno włóki in size, with the Bishop additionally granting the town 12 włóki of grazing pastures next to the brickworks on Zgłowiączka River. Michał Morawski suggests an alternative location – the area stretching, in the form of a wide strip, from Kapitułka Village to Lake Grzywno, yet this could not have been possible, as this area, referred to as Królewiec, was covered with forests and marshes. There were also seven włóki of land which belonged to the vogt's office (six in Papieżka Suburb, and one in Korabniki in the so-called Ołędry Zazameckie).³⁰ According to the calculations of Bogdan Zgłobicki, the size of the above-mentioned area was approximately 1,025 ha in total, of which the urban built-up area was 6.7 ha, meaning

that it represented 0.6% of the entire territory.³¹ Confirmed by archaeological research, the layout of the town foundation system showed a regular complex in the shape of a rectangle with dimensions of 300 x 250 m. Its western side was marked by Matebudy Street, its eastern edge reached up to the vicinity of Rybacka Street by the Vistula, while the southern border was marked by parcels located at Tumska and Łęgska Streets.³² Two centuries later, the eastern border shifted slightly, reaching Koniec and Kowalska Streets. On the western side, the situation was similar, so it is worth reiterating the reasons which, according to Zgłobicki, prevented the town from expanding westwards. The original border between the two parts of the town, separating church territories and the municipal commune, probably ran along Matebudy Street.³³ The division is still visible on the 1787 map, where ecclesiastical territory is presented less precisely than the zone belonging to the town. No area within it was named, even though there were at least three medieval streets within the territory – Bednarska, Gdańska and Jurska (known from the 1824 plan). The land occupied by cathedral clergy houses undoubtedly reached Zgłowiączka River in the sixteenth century, as evidenced by Bishop Mikołaj Dzierzgowski's granting 'a square and a house by Zgłowiączka River in Włocławek to canon Feliks Relski'³⁴ in 1544.

The chartered town began to develop naturally towards the south. Starting from 1517, documents note the existence of Cyganka / Czigany Street. The street ran along the parcel occupied by the church of St. Vitalis, located past town limits (*extra civitatem*).³⁵ Presumably, in the middle of the century, this area was intensively developed, mainly with houses of canons and vicars. In 1578, they owned 20 properties within the area, and by 1587, this figure went up to 23.³⁶ Sources report that during the construction of a bakery (1559–1561), Włocławek Chapter allowed to burn bricks for a new building of the cathedral school, transferred in the time of Bishop Stanisław Karnkowski to Cyganka Street, 'to a house with a spacious yard'.³⁷ Somewhere nearby, there was also the first seat of the theological seminary, canonically erected in 1569, in an old hospital of unknown dedication.³⁸ Importantly, Cyganka Street not only connected two transport routes, it also had a narrow connection with the market square *via* Wójtowska Street, which most likely developed from the so-called *miedzucha* (internal crossing along the border of parcels). Wójtowska Street, mentioned in the 1591 privilege, was characterized as 'old'.³⁹

The main part of sixteenth-century Włocławek was the market, which had the form of a square with the dimensions of approx. 75 x 75 m, placed in the central position in relation to the parallel town limits. Six streets used to start their course at the corners of the square. There were two short streets leading to the Vistula and the parish church – Świętojańska (now known as Św. Jana Street) and Szeroka (now Maślana Street). The square was connected with the bishop's castle by Zamcza Street, and with the cathedral by Tumska Street. Szpichlerna Street, which run parallel to the river, was also significant. Together they formed a town plan based on the central square, which was typical for the Middle Ages. The characteristic features of this version of spatial layout included the way the streets were connected, the small chequerboard pattern they formed, and the fact that they were located at some distance from the parish church. Wójtowska Street was established at the turn of the sixteenth century. Its creation began the process of opening the market to the south, which, in turn, changed the organisation of the urban space. Until the eighteenth century, Wójtowska Street was not connected with any supra-local road, and it was only in the nineteenth century that it gave rise to the most important communication artery in Włocławek, namely Nowa/3 Maja Street. Together with 19 (probable) parcels located around the market square, the square itself initially occupied as much as 34% of the town's

overall area. Individual parcels could have had depth of even 60–80 m, which is basically confirmed by the size of the eastern and western market blocks, where the closing streets, the so-called *zatylnie* streets (Browarna and Wiślana) have been preserved to this day.⁴⁰ Areas of scattered housing development—so-called *budy*, which were divided into parcels over the years, as the number of the town's inhabitants increased – formed on the outskirts of the town.⁴¹

Włocławek did not have any defensive walls, neither in the Middle Ages, nor in the modern era.⁴² Adam Ginsbert's assumptions concerning their existence and probable location, which the scholar formulated in the 1960s, were not confirmed by archaeological research or 1979–1985 cursory field research. It was rightly decided that it would be impossible for the town walls not to leave any traces or residual remains, not even within the external walls of the cellars of Old Town houses.⁴³ Nevertheless, it is beyond doubt that there existed town gates located along the main road routes. Two were erected at the end of Tumska and Łęgska Streets, while the third one, Kowalska Gate, mentioned in 1582, was most likely located near the intersection of Cyganki and Kowalska Streets.⁴⁴ They were used to control supra-local traffic and collect tolls from people coming to markets and fairs, in other words, they served representative and fiscal purposes. The limits of the built-up area were not defined by fortifications – which are not only defensive, but also symbolic in nature, as they separate two legal realities. In the case of Włocławek, the analysis has to include alternative structures that could function as substitutes of the town walls. The 1787 plan still depicts a ditch located at the back of Tumska Street, although it is uncertain whether we can treat it as a remnant of a medieval border. In the sixteenth century, it was connected with the water supply system that used wooden pipes to distribute water to individual streets, and was handed over to the local government community in 1577 on the basis of a privilege issued by Bishop Karnkowski. The same privilege incorporated Nowe Miasto Suburb into Włocławek, which defined the southern borders of the town until the end of the here-analysed period.⁴⁵

The dominant building material used in Włocławek was wood, which was sourced from the forests surrounding the town. The vast majority of secular buildings employed timber-framing constructions. If elements of log construction were introduced, then it was only on the ground floors; unfortunately, burgher houses from that period have not survived to our times.⁴⁶ Considering the length of the plots located near the market square, their spatial development could not deviate much from the patterns noted in other towns. A building was located in the front section of the plot, facing the square, with utility area and workshops, and, finally, barns and gardens. Easy access to groundwater made it possible to equip the courtyards with wells. Wood was commonly used in the construction of streets in Włocławek (beams were covered with layers of fascine, and reinforced with vertically impaled stakes), which were paved and repaired from the funds of town inhabitants.⁴⁷ For example, in 1597, the council brought ten boats of stones for paving, compensating the bishop for the violation of a ban on opening inns with live music and taverns selling alcohol.⁴⁸ On the other hand, the claim that brick houses were not constructed in Włocławek in bigger numbers, which appears in literature devoted to the town, is too exaggerated by far. The sources confirm the existence of an active *strzecha budowlana* (building lodge) related to a bricklayer by the name of Kokoszka. For obvious reasons, we only have information on work performed in existing sacred buildings. There were also two brickyards in Włocławek – one belonging to the bishop and the town's brickyard.⁴⁹ Moreover, the fact that in 1583 only one bricklayer was listed in residual sources, and in 1598, just two of them, does not confirm the

above-mentioned thesis, all the more so since carpenters or woodcutters are not mentioned in the inventories at all.⁵⁰

The oldest trace of a brick house in Włocławek comes from the second half of the sixteenth century and points to a tenement house on the eastern frontage of the Old Market Square at today's number 14, which, together with the adjacent building, has been adapted for the needs of the Museum of the History of Włocławek. Currently, the façades of the tenement houses are topped with gables typical for the Baroque period. Conservation and renovation work carried out on the front façade of the first one, however, exposed a brick wall fragment with a Gothic bond.⁵¹ No other relics of sixteenth-century secular architecture have been found to this day, so the most important objects used by the town's community can only be listed on the basis of a modest source stock, which does not contain detailed information on their locations. There was a town hall in the centre of the market square about which we only know that it was already in the state of complete ruin and 'was deserted because of old age' in the years of the Prussian Partition (1793–1806).⁵² There were cloth, butchers', shoemakers' and bread stalls and, from 1577, fishing stalls, as well as a tavern. The trading part of the market was concentrated in its southern section.⁵³ In 1569, a new hospital building dedicated to St. Vitalis, two bathhouses (the second one was built at the Chapter's expense in 1544) and two municipal apothecaries.⁵⁴ Multi-storey granaries built near the Vistula were an important element of Włocławek's landscape. In 1598, there were 27 granaries in the town, 12 of which were made of brick.⁵⁵

In the church part of the town, the bishop's castle loomed large over the houses of canons and vicars. It was funded by Bishops Maciej and Zbylut of Gołańcz, and rebuilt in the sixteenth century by Bishops Stanisław Karnkowski and Hieronim Rozdrażewski.⁵⁶ The castle complex, transformed into a safe and comfortable residence, surrounded by a circumferential wall, included two residential houses, a servants' building, a brewery, a bakery, a stable, a tower topped with a cupola in the south-east corner, and a gate tower on the south side. Outside the walls, on the left bank of Zgłowiączka River, there were other outbuildings, including a granary and a malt house. A bridge on stone pillars led to the castle, and from the south and east, it was surrounded by a moat which was 5 m deep.⁵⁷ The remains of this structure have been incorporated into the walls of the bishop's castle.⁵⁸

The most important sacred building was and still remains the Gothic Cathedral of the Assumption of Blessed Virgin Mary. Moved onto the hill in the time of Bishop Maciej of Gołańcz, it occupied one of the Old Town quarters. Although the consecration of the church took place in 1411, its construction and expansion lingered over the next centuries. The work conducted in the sixteenth century included: construction of the chapel of the Virgin Mary (started in 1503), covering the northern and southern towers with a roof (finished in 1526), construction of the sacristy on the north side (1516), and the chapel of St. Martin and the Chapter house at the southern tower (1527) and the Cibavit chapel (1541), as well as the mid-century extension of the southern sacristy.⁵⁹ The history of the cathedral is closely related to the history of a nearby church of St. Vitalis, which substituted for the cathedral after the Teutonic invasion. The (founding) date 1330 does not have to refer to its actual construction, as is sometimes assumed, but rather to the reconstruction of a pre-existing and previously destroyed church, pre-dating the invasion.⁶⁰ Commonly referred to as a 'hospital' church, because of its proximity to the nearby

St. Vitalis Hospital and a poorhouse, the church was thoroughly renovated in the sixteenth century. Brick vaults were constructed in 1535 and in 1569, it was also used by students of the theological seminary.⁶¹

The most important church of the new town was the parochial church of St. John the Baptist, situated on Vistula River outside the northern frontage of the market square. Its consecration, a culmination of a very long construction period, came late – in 1538. It also did not mean that all construction work had ended by that time, as the chapel of Eleven Thousand Virgins was built on the north side of the church in 1565, and, in 1580, a tower was added on the western side of the church.⁶² The earlier location of the church is unknown. It was referenced in Mogilno Falsification; thus, it must have existed already in the twelfth century, and was moved to a new place around mid-fifteenth century. A fragment of the brick wall, uncovered in 2012 at the level of the presbytery, may be a clue of its original location.⁶³ It is worth noting that a hollow in the floor of the parochial church, when compared to the level of the boulevard, allows to observe clearly how the areas of the Vistula bank were gradually elevated. The need to regulate the riverbank and protect the buildings against flooding was already recognised by the Commission of Good Order, which called for fulfilment of the duty to block the banks with fascines. These works were probably abandoned during the stagnation of Włocławek's growth at the beginning of the eighteenth century, but these phenomena cannot be fully analysed due to the lack of relevant sources. The area was finally elevated with the construction of the first boulevards (1844–1846). The opposite happened to the cathedral hill.⁶⁴ In the past, it was much higher, but its height was lost over time.⁶⁵

The church of St. Stanislaus, a half-timbered construction with brick infill, which was consecrated in 1474, still existed in the sixteenth century. Located on the site of the first Romanesque cathedral (the area of today's Gdańska, Bednarska and Zamcza Streets), it was probably destroyed by a fire after several decades of operation; in 1524, it was rebuilt and consecrated once more.⁶⁶ The buildings located near to the temple were long occupied by cathedral psalm singers. The year 1818 would have marked the end of the church's history (demolition), had it not been for an interesting discovery made at the beginning of the twentieth century. During the construction of Edward Brech's tenement house, the workers came across vaulted granite cellars.⁶⁷ This discovery, confirmed by later archaeological research, made it possible to determine the location of both buildings quite accurately.

Cemeteries are inseparable components of churchyards. Burial places of deceased townspeople existed near all Włocławek churches, including the cathedral, but there is no information that would allow us to precisely define their scope.⁶⁸

Włocławek experienced economic growth in the sixteenth century. The 1520 establishment of a water toll customs house acted as a catalyst for the town's more dynamic development and gave it a boost as a commercial centre.⁶⁹ From then on, all ships carrying goods had to stop here. The customs house registered increased traffic, which in the 1560s and 1570s reached 1,300 ships per year (and this counting only ships going downstream).⁷⁰ The town was connected with Vistula River, its natural

northern border, through six streets and a half-kilometre-long bank. Numerous grain merchants, trading nobles, port service and granary workers became common components of Włocławek's landscape. The town's inhabitants also specialised in river transport and boat-building services.⁷¹ This roll-out of the town's transport routes inevitably accelerated the development of municipal institutions, which is clearly noticeable when it comes to craftsmen. For decades, Włocławek had only one guild—the shoemakers' – established in 1452. In the sixteenth century, as many as four new craft guilds appeared: in 1542 – a tailors' guild, in 1544 – a bakers' guild, in 1577 – a fishermen's guild, and after 1581 – a furriers' guild. The town's system of professional corporations seemed modest in scope, but it should be noted that most specialist services were concentrated past town limits, and from 1619, partly in a common tavern keepers' guild.⁷² There are also privileges which provide information about the resumption of particular organisations' activities, without providing specific data concerning their initial establishment (e.g. brewers and potters guilds).⁷³ Włocławek lost its agricultural character in the sixteenth century; for the town's residents, agricultural work was merely an additional activity (in 1582, only 45 people worked in agriculture), as beer brewing, oil-making, and milling began to be more and more important. The breweries of Włocławek were not limited to the vogt's and the castle breweries, there were many active brewers (eight burghers' breweries were recorded in 1582) at the end of the century, which spurred poet Sebastian Klonowic to describe the town as being 'famous for its priests, tolls, and beer'.⁷⁴

There is no sufficient basis to calculate the exact number of houses or their inhabitants. The main source for such calculations are the lists of rents paid by burghers to the bishop, but they do not take into account whole groups, such as: clergymen, people serving in the Bishop's manor support services, leaseholders, tax exempted residents, etc. It is estimated that the numbers in question looked as follows: 1534 – 144 houses and 879 inhabitants, 1582 – 217 houses, 1598 – 255 houses and 1785 inhabitants.⁷⁵

The biggest problem with the reconstruction of the plan of Włocławek in the second half of the sixteenth century was the fact that its suburbs (Kokoszka, Nowe Miasto, Papieżka, and Strycharskie) remained widely undocumented, so the outline of their built-up areas is an estimate. As mentioned, the chartered town developed by expanding towards the south. The lack of sources does not allow to determine the beginnings of the expansion and urbanisation of Nowe Miasto Suburb, however, in 1534, 26 houses were recorded at Piekarska Street (*platea Pistorum*), which suggests that first residents had to appear in the area at the start of the century at the latest.⁷⁶ Its continuous growth is indirectly confirmed by the 1582 data which indicate that there were already 40 houses on Piekarska Street. This development must have been influenced by undoubtedly favourable location, *i.e.* the proximity of the town and two main transport routes – Kowalski and Brzeski tracts⁷⁷ – on both sides of the suburbs. The diagonal Zapiecek Street marked the border of the suburb. Today, the street itself is much shorter, but it still connected both above-mentioned tracts on the 1787 plan (Kowalska and Brzesko-Kowalska / Brzeska Streets). The change was finally introduced in the nineteenth century when regulatory work resulted in renaming the eastern section of Zapiecek Street as Żabia Street. Żabia Street itself was marked on the 1787 map only on the side of Brzeska Street, reaching Sadzawka Pond. Several dozen years later, it was connected with a 'new' fragment and formed a straight section of the road. We believe this area, between the outskirts of two urban centres (Cyganka and Zapiecek Streets), was not inhabited in the sixteenth century. There were land boundaries here, and according to the available sources, the area must have included gardens near the pond.⁷⁸ What remains unknown is the size of the area they occupied. The first rationale that could be seen as a confirmation of the assumed lack of buildings in this area may be the ease with which the area was developed in the nineteenth century. The still almost

empty squares located on the side of Brzeska Street were designated for Jewish settlement (clearly visible on the plan from 1824), and, in 1851, a building of the office of the district governor was built on the site of the reduced Sadzawka Pond. In 1861, the pond was finally filled in completely.⁷⁹ The second rationale may be the fact that Strycharskie Suburb, mentioned for the first time in 1564 as located near Kowalski tract, grew steadily in line with the economic development of Włocławek.⁸⁰ It seems this was the only possible direction for the expansion of the suburbs in the vicinity of Cyganka Street. The area located to the east of Kowalska Street, also called ‘the one near the Kowalska Gate’ in the 1582 inventory, was inhabited neither in the Middle Ages nor in the modern era. The area was covered in wetlands which ‘stretch to the Królewiec marshes’. Even in the interwar period of the twentieth century it was still impossible to ‘build cellars [there], and the abundant groundwater, badly contaminated, seeped into the walls of the houses’.⁸¹ The ‘fatal contamination’ had its origin in a cellulose factory opened in 1899. The construction of the collector connected to the factory resulted also in the disappearance of the springs at Łęgska Street (on the corner with today’s Towarowa Street), which used to provide water to the local community.⁸²

The toponyms seem to hint at the nature of the suburbs. There was a road which went through the forest and connected Strycharskie Suburb, which derives its name from the Polish word ‘strycharz’ denoting ‘brickmaker’, with a brickyard located at Grzywno Lake.⁸³ Nowe Miasto Suburb included streets whose names referred to cooking, such as Piekarska, Zapiecek, and Pieczyrogowska. The latter street, unidentified and mentioned only in the inventory from 1582, probably connected the corner of Piekarska Street with Kowalska Street.⁸⁴ The names of these streets, referring to, among others, baking and blacksmithing, clearly indicate that local residents conducted non-agricultural activities. The area of Nowe Miasto became the subject of a dispute between the town authorities and the bishop, which finally ended with a privilege granted in 1577, which incorporated the suburb into the town.⁸⁵ The statement claiming that ‘development of suburban settlement was not triggered by urban space build-up or groups and industrial facilities being pushed out of the town as there was no space for them or they became too burdensome’ ought to be considered somewhat unfortunate. Contrary to the claim that ‘the suburbs were horticultural and agricultural settlements operating some distance away from the town limits’,⁸⁶ there’s only one suburb which undoubtedly fits this description – Papieżka – which is not covered by the reconstructed plan and where the land of the vogt’s office was located. In the sixteenth century, the land became the property of the town.

Tradition identifies the last suburb with the burgher Kokoszka, probably the progenitor of the Włocławek family which rose to recognition in the sixteenth century. Its representatives were, among others, councillors, customs collectors, bricklayers, and mill leaseholders.⁸⁷ According to the preserved record, the area of this suburb was ‘partially built-up and inhabited’ as early as in 1430.⁸⁸ The existence of the suburb located at a considerable distance from the central centre should be associated with the nearby water mills and bridges, *i.e.* Słodowo, Lisek, Poraza, Świech.⁸⁹ They were connected with the town by Młyńska road, which changed into St. Vitalis Street within church territory.⁹⁰ Moreover,

the road connected the town with the areas located on the right bank of Zgłowiączka River, which were clearly used for commercial purposes. The records confirm that there existed a brickyard, a brewery, Ciemięga Mill (Cziemięga; in the vicinity of the channel), two vineyards, as well as bishop's and town's pastures.⁹¹ It has been established that the municipal gardens were situated in Kokoszka. The Bratkowszczyzna gardens were located next to the same tract, behind the church of St. Vitalis.⁹²

Out of all land roads passing through Włocławek, the following two tracts played the most significant role – Kowalski and Brzeski. They both led to the towns of Kowal and Brześć Kujawski, respectively. In historical terms, the old road to the bishop-held Łęg was equally important, since it was treated as the main axis for planning the chartered town in 1339, and, in the sixteenth century, it ran along important gate streets. On the other hand, locally, the most important transport route was Młyńska road, which led towards the 'industrial' part of the town (probably repaired several times at the cost of the Chapter), and Zamcza Street which connected the town with the bishop's castle.⁹³ The area of the castle could not have provided a way of crossing Zgłowiączka River in the sixteenth century, which can be seen on the 1787 plan. At that point, the castle was surrounded by a moat and was used for defensive and residential purposes. The burghers used an unspecified bridge over the Zgłowiączka, which they maintained at their own expense. The sources indicate that the crossing was located near the brewery.⁹⁴ Of course, on a general scale, the Vistula played the leading role in the area's transport network, serving as the most significant trade and transport route.

III.6.34.4 WSCHOWA

Arkadiusz Borek

In the sixteenth century, Wschowa (Fraustadt, in German) was the central town of the land of Wschowa, which in turn was the southernmost part of Poznań Voivodeship. Wschowa is one of the towns whose map we have prepared as part of this AHP volume because of the two factors. First, at the end of the sixteenth century Wschowa was one of the major Greater Polish towns, second only to Poznań;¹ the border town of Wschowa owed this position to its economic importance as a manufacture (cloth) and transit trade (Greater Poland–Silesia) centre. Second, the town was a cross-border one; at its origins, it prevalently stemmed from the Silesian, rather than Greater Polish, tradition. Hence, the town was German-speaking (the preserved municipal registers were all kept in German, ever since 1501) and Wschowa land, as a whole had its peculiarity.

The basic cartographic source of use in our reconstruction of the plan of Wschowa in the second half of the sixteenth century are two fairly precise cadastral maps, compiled probably at the end the eighteenth/early nineteenth century, in association with Prussia's taking over Greater Polish towns.² The maps were arguably made based on a lost map drawn as part of the activities of the local Commission of Good Order (*Boni Ordinis*) which operated in Wschowa³ in 1780–3 and 1788; the initial map was drafted in the former period.⁴ That the two maps used for our purpose were based on the *Boni Ordinis* Commission's map excerpt (arguably, on a mutually independent basis) is suggested by the use of the letter marking of the streets. These same markings are seen in *Inwentarz miasta J.K.M. Starej Wschowey*, which was produced in association with the activities of the aforesaid Commission.⁵ A concordant rendering is likewise identifiable in the division into land plots on both maps. Regrettably, neither of the

Nieustaiący Podług Praw Koronnych Wyznaczoney Pod Prezydencyą J.W. Jozefa Z Brudzewa Mielzynskiego*, Leszno 1783. This printed document is composed of the following sections: (i) *Stan Miasta* [The Condition of the Town], comprising *regests* of documents from the municipal archives of the Old and New Wschowa, collected by the Commission of Good Order; (ii) *Inwentarz miasta J. K. M. Starej Wschowey* [An Inventory of the City of H.R.M.'s Old Wschowa], being a list of plots within Wschowa, by street, as well as in Przczyzna Górna and Dolna; (iii) *Opis budynków publicznych i folwarcznych* [A description of public and demesne-farm buildings] (content as per the title); (iv) *Inwentarz Miasta J. K. M. Nowey Wschowy, czyli Miasta Starościńskiego* [An Inventory of the City of H.R.M.'s New Wschowa, that is, the *Starosta*'s Town] (content as in the Old Wschowa section, covering New Wschowa all the *starosta*'s estates); (v) *Pakt między sławetnym magistratem y porządkami miasta J. K. Mci Nowey Wschowy z jedney, a niewiernemi Żydami w tymże Nowym Mieście Mieszkalnemi z drugiej strony* [A pact between the glorious municipality and the orders of the H.R.Msty's town of New Wschowa, on the one, and the infidel Jews Domicyled in that same New Town, on the other hand] (content as per the title); (vi) *Inwentarz juryzdykcyi duchowney czyli proboszczowskiej wschowskiej* [An inventory of the clerical, that is, pasonic jurizdictyon of Wschowa] (content as in the other inventories with regards to the parson's estates). The sections have their own page numberings (or no such numbering at all). The publication will be referred to herein below as follows: (i) *Stan Miasta* [Town Condition]; 2. *Inwentarz Starej Wschowy* [Old Wschowa Inventory]; (iii) *Opis budynków* [Description of buildings]; (iv) *Inwentarz Nowey Wschowy* [New Wschowa Inventory] (no other sections are quoted or referred to).

two underlying cartographic representations has survived in a satisfactory condition. A copy of earliest was kept before the Second World War at the State Archives in Poznań and has been reproduced by Henryk Münch,⁶ who dated it at 1794. Its original copy has unfortunately not survived the Second World War. More fortunately, the Historical Atlas Department (ZAH) at the Institute of History, Polish Academy of Sciences (IH PAN) has preserved glass clichés of the maps once used by Münch, among them the Wschowa plan in question.⁷ However, a cliché cannot render its full range. The other map is kept at the Central Archives of Historical Records (AGAD)⁸ – again, not in extant form as its eastern section is now lost, losses at edge bends and smudges are visible. The available copy is incomplete content-wise as the author has not completed the drawing of the monastery, the moat, and areas north of the town. Grażyna Wróblewska dates the map between 1794–1812.⁹ For brevity, the source plans kept at the ZAH and AGAD will hereinafter be respectively referred to as the ‘ZAH plan’ and ‘AGAD plan’. The map of Wschowa proposed in this volume will be referred to as the ‘reconstruction plan’. It is worth remarking that other plans of Wschowa from the late eighteenth/early nineteenth were available still before the Second World War. As is indicated by certain German studies, they differed to an extent from those surviving till our day, as far as the content is concerned.¹⁰ Among them was, presumably, the original copy, or some of the later copies, of the *Boni Ordinis* Commission plan.

In spite of these scarcities, the use of both above-described plans enables one to cognise the town’s space at the end of the eighteenth century. This being the case, the basic problem in the compilation of a reconstruction plan was to remove the alterations occurring with the town’s development between the sixteenth and eighteenth centuries.¹¹ Use has been made of the fairly rich literature dealing with Wschowa/Fraustadt. Most of the basic findings regarding the town’s history and condition in the sixteenth century are owed to German historians who published their studies in, inter alia, the historical regional periodical *Das Fraustädter Ländchen*, issued from 1922 to 1941; particular mention is deserved by the scholars Hugo Moritz,¹² Werner Grosmann,¹³ Franz Pfützenreiter,¹⁴ and Willi Schober.¹⁵ More publications came out in post-war Poland, oftentimes repeating the pre-war findings expanding the issues of Wschowa’s town planning and defensive capability.¹⁶ These days there is another revival in the interest in the town’s and region’s history, animated by local circles and yielding more and more books on these topics.¹⁷

These publications enable one to elaborate on the subject-matter in a pretty comprehensive and reliable manner. Hence, save for exceptional cases, the hitherto intensely used sources such as the chronicles by Caspar Hoffmann (late sixteenth/early seventeenth centuries)¹⁸ or Samuel Friedrich Lauterbach (1710),¹⁹ and the aforementioned *Stan Miasta*, have not been referred to directly. The most important gap is the still far-from-satisfactory exploration of Wschowa's municipal registers, which were used by German scholars before the Second World War and today are kept at the State Archives in Zielona Góra (APZG) (fond 'Akta Miasta Wschowy', no. 363).²⁰ As part of our work on the reconstruction plan, only a random search through Register no. 99 was carried out, for toponymy;²¹ this query has mostly confirmed the previous findings. Wschowa's resource of eighteenth-century iconographic records (views of the city)²² has proved not quite important for our present purpose.

* * *

Wschowa was established on the edge of the Leszno Upland (*Wysoczyzna Leszczyńska*) and Baruth-Głogów Ice-Marginal Valley (*Dolina Barucko-Głogowska*). This peripheral location is visible in the area of the city itself. The area within the walls and the southern suburb are situated in an originally marshy basin, and the northern suburb on an elevation.²³ The difference in the height is noticeable, ranging up to a dozen metres at a distance of approx. 1 km (see Figure 1).

Figure 1. Elevation profile of Wschowa's Old Town area
(compiled by A. Borek, based on www.codgik.gov.pl/index.php/darmowe-dane/nmt-100.html
[accessed 23.01.2017])

These conditions and determinants informed the town's spatial development. Due to the terrain's humidity, its southern part did not expand over the ages, as opposed to the northern part.²⁴ The elevation enabled the erection of windmills; the presence of many such facilities in Wschowa is attested by the tax registers²⁵

and the later iconographic and cartographic representations.²⁶ The areas east of Polish Suburb (*Przedmieście Polskie*), and then of the New Town (*Nowe Miasto*), belonging to Przyczyna Dolna, were also wetlands. Due to scarcity of larger watercourses, Wschowa's supply with water was based on the shallow groundwater and a water supply system. Source plans show a large number of water intakes in the Old Town and suburban areas. Excavations in the Old Town area attested to such facilities once operating on burgher-owned land parcels.²⁷ It can be presumed that due to an easy access to the groundwater, wells were a commonplace feature in the urban area's yards.²⁸ A pond area stretched north-west (Ceglany Square), directly north and, probably, north-east (the area of today's Lwia Street, formerly *Teichstraße* (Pond St.) of the *Brama Polska* (Polish Gate)). A small fish-breeding pond was situated also in the vicinity of the castle.²⁹ The city's major reservoir of water was the ponds in Przyczyna Górna (where fishing was done as well³⁰). The one closest to the town (*Niederteich*) is first attested in 1571; the mentions of another two are of a later date, but the ponds' origin can be traced down to the mediaeval period.³¹ It was from Przyczyna that water-supply appliances (built in 1532³²) fed water into the city's water tanks, whilst the moat was supplied by a channel.³³ It is impossible to reconstruct the canal network, though. The watercourses visible in AGAD maps are broken and indistinct, possibly because the drawing was left unfinished; consequently, our reconstruction plan has no canals plotted.

In the Wschowa settlement complex area, the village of Przyczyna (Górna) is attested in 1210 – earlier than Wschowa itself. The view is popular among historiographers whereby prior to its foundation, a defensive burg-city existed at the present-day Wschowa castle, on an artificial height situated on the boggy area near Przyczyna. Its functioning was related to the region's border-area location and the need to guard the commercial route linking Lusatia and Saxony, via Głogów (*Glogau*) and Święciechowa (*Schwetzkau*), with Poznań and Gniezno.³⁴ Archaeological research has not confirmed this view; the earliest datable finds from the castle area come from the middle of the thirteenth century – paralleling Wschowa's appearance in written records. No earlier finds have been come across inside the ramparts/walls, either.³⁵ Consequently, there is no proof of any early settlement in Wschowa's Old Town area; the regular development inside the walls unanimously indicates that the settlement unit was chartered

in cruda radice.³⁶ Regarded as the first certain mention of the locality is the document by Dukes Boleslaus (Bolesław) and Henry (Henryk), sons of Duke Henry the Pious (Henryk Pobożny), issued in 1248 at *Veschov* (Wschowa). As of 1273, Wschowa was referred to as a town; its German name, as *Frowenstat*, is first recorded in 1290. The city rights were apparently granted to Wschowa between 1248 and 1273, the advanced town-planning concept indicates the closeness to the latter date.³⁷ The impulse for establishment of an urban settlement the economic development of the neighbouring area and thus the need to establish a conveniently situated site of trade and commerce.³⁸ After the period of Poland's fragmentation into provinces, Wschowa oscillated between Silesian and Greater Polish dukes; in 1343, King Casimiar III the Great (Kazimierz III Wielki) finally annexed the town, together with the entire Wschowa land, to the Kingdom of Poland. In 1349, the town was granted a confirmation of the German Law. From 1422 on, the Polish Law, in its Greater Polish version, extended to the whole land of Wschowa and its nobility, with a separate land court established. The land of Wschowa had its own 'castle *starosta*', independent of the *starosta* general of Greater Poland.³⁹

After its incorporation, Wschowa began to develop economically, which was apparently fostered by the political situation, stabilised after the integration with the Crown, the border-area location and the transport routes going through the town and making it a transit centre.⁴⁰ By 1310, Wschowa must have become one of region's major centres, as it entered with several towns in the Silesian-Lubusz border area into an order-keeping treaty⁴¹ – a successfully procured exemption from customs duties, the right granted to sell salt, organise fairs, mint own currency, and acquisition of two suburban villages.⁴² As it seems, Wschowa owed its economic position to its own manufacturing output, most of all. Cloth-making was the town's most important craft – an essential source of the city's income already in the fifteenth century, this particular industry played an ever-growing role in the following decades. According to Antoni Mączak, Wschowa was the most important drapery centre in early modern Poland; the local clothiers' guild had a prevalent influence on the town in the seventeenth century.⁴³ Clothiers definitely formed the largest professional group in Wschowa. Though the tax registers give a general number of artisans (i.e., 370),⁴⁴ the 1628 tax register notes as many as 204 clothiers; there were 230 as of 1635.⁴⁵ Milling and operation of windmills was the second most important profession (with 107 millers recorded as of 1628);⁴⁶ windmills were an essential feature of the landscape around the town. Apart

from those, Wschowa was home to other craftsmen, organising themselves in the fifteenth century into guilds.⁴⁷

The occurrence that has impacted sixteenth-century Wschowa the most severely was the fire of 7 June 1529, which consumed the then wooden town completely, with only a few houses in Głogów Suburb (*Przedmieście Głogowskie*) and the Bernardine monastery saved.⁴⁸ The destruction was so thorough that the reconstruction of the town, including the church and the town hall, took years, in spite of tax exemptions obtained by the municipality from the king and from the Church authorities.⁴⁹ Mateusz Lamprecht, a Wschowa-born Canon of Wrocław had a great role in the process; by means of foundations and donations, he endeavoured to encourage the burghers to erect brick buildings within the city walls. Yet, lumber remained popular as a construction material nevertheless;⁵⁰ this changed only after another great fire that broke out in 1685.⁵¹

Wschowa appeared to be a welcoming soil for the Reformation. After the local parson died in 1552, his office remained vacant; the municipality, initially supported with the local *starosta*, brought in a preacher who offered teachings in a Protestant spirit. By the latter half of the sixteenth century, the Catholic Church became virtually absent from Wschowa. The churches marked on the reconstruction plan were either taken over by Protestants or desecrated and turned into utility buildings. All the same, the Catholic Church launched a years-long campaign for retrieval of its possessions, mostly with a good result. The year 1604 saw the return to the Catholic community of their parish church and 1629, the return of the Bernardines. The municipality litigated the parson until 1631, and with the Bernardine Friars until 1637; this was followed by a normalisation of the mutual relations, with Wschowa remaining a Protestant town and the Catholics amounting to a small part of its population until the end of the seventeenth century.⁵²

An essential impulse for the town's development was provided by the inflow of people from Silesia on their escape from religious persecution and the Thirty Years' War.⁵³ This inflow of settlers resulted in the establishment by *Starosta* Hieronim Radomicki of a New Town, on the *starosta's* district lands, under the king's privilege of 1633, as a separate urban unit.⁵⁴ Alongside Protestants, Jews also settled in the area.⁵⁵ The following stage in Wschowa's spatial development was the colonisation, commenced in 1641, of an area described as a *Scheibe* (*Krag*), situated west of the Bernardine cloister, on the meadows and pastures owned by the municipality.⁵⁶ Scholars tend to accept that the so-called Upper New Town was set up before 1685, west of the Old Town and around the Green Market (*Zielony*

Rynek), thus suggesting that its incorporation was independent of the Lower New Town, north-east of the Old Town.⁵⁷ However, as per the *regest* of a 1636 document,⁵⁸ the Jewish Meadows (*Łąki Żydowskie*) (the later Upper New Town) were meant already then to become a chartered town area. The last to appear was a provost's juridical enclave called *Freiheit* (Wolnica), where residents were settled at the beginning of the eighteenth century; the area occupied a small space in what is today the corner of Wolsztyńska St. and Grunwaldzki Sq.⁵⁹ Since around the second half of the seventeenth century, Wschowa lost its previous dynamism of economic development, as a result of the general economic conditions and competition from the resiliently developing Leszno and other newly-chartered urban centres – though its importance had not been denied.⁶⁰ Wschowa gained new importance under the rule of the monarchs of the Saxon house of Wettin, becoming the place of the king's meetings with the Senate and foreign diplomats.⁶¹ The history of Wschowa as a Polish Kingdom's town comes to an end with its seizure by Prussia in 1793.

Another important element of the history of modern-era Wschowa was the conflicts between the municipality and the local *starosta*, which often led to riots. Put at stake were, repeatedly, the *starosta's* rights with respect to election of the city authorities, the juridical competencies, and the *starosta's* strife to leverage his own economic position, which was quite obviously opposed by the burghers who tried, on their part, to reinforce their own self-governing structures. One of those conflicts was the *starosta's* attempt to have a group of Jews settled down in the town in 1593⁶² (see pp. J. Suproniuk, *Jews in the towns of Greater Poland* in this volume).

Wschowa was frequently consumed by fires that encompassed its urban area to a larger or smaller extent (in the years 1431, 1435, 1469, 1474, 1512, 1522, 1529, 1545, 1567, 1598, 1634, 1641, 1644, 1685).⁶³ Plagues were no less frequent (1464, 1542, 1568, 1592, 1599, 1601, 1613, 1633, 1656, 1709/1710, 1726),⁶⁴ as were social riots (1518/1519, 1523, 1593, 1598, 1607, 1677, and 1680).⁶⁵ Since its incorporation in the state ruled by King Casimir III the Great (Kazimierz III Wielki), the town fell prey to external attacks several times, though the damages were not overly serious. The year 1383 saw an inefficient siege by Henryk VII, Duke of Żagań and Głogów; in 1474, Duke John II of Żagań, nicknamed 'the Mad', destroyed the Polish Suburb (*Przedmieście Polskie*); the area was affected again in 1665 by the invasion of the seditionaries led by J.S. Lubomirski, and in 1716 by the Tarnogród

confederates. In contrast to Leszno, Wschowa suffered no direct damage during the Swedish ‘Deluge’ invasion.⁶⁶

Strictly associated with Wschowa were the two adjacent villages of Przyczyna Górna and Przyczyna Dolna (i.e. the ‘upper’ and ‘lower’ one, resp.).⁶⁷ As aforesaid, the former is the earliest-attested settlement in the Wschowa settlement complex. First mentioned in 1210, it was chartered under the German Law in 1273; a local church is referred to as of 1345.⁶⁸ Together with Wschowa, both villages formed a compact settlement area stretching east to west. The cartographic sources since the end of the eighteenth century basically reflect a continuous built-up area between the three settlements; earlier on, the situation was probably similar. The aforementioned privilege chartering Przyczyna under the German Law points to its land as adjacent to the town (*civitate adiacente*).⁶⁹ Both Przyczyna villages belonged to Wschowa. Przyczyna Górna was bestowed to the town by Casimir the Great in 1345.⁷⁰ The local parish church, similarly to the churches of Wschowa, was occupied by the Protestants since 1578, then retrieved by the Catholics in 1642, and affiliated to the Wschowa parish in 1677.⁷¹ Przyczyna Dolna (the ‘lower’) was first mentioned in 1290, on the occasion of bestowal of its 15 *lans* to Wschowa; the subsequent mention comes from 1345, the date Wschowa received 50 *lans* in this village from Casimir the Great. The town of Wschowa took over the entire village as its property at the beginning of the fifteenth century.⁷² Both villages had a large area of arable land in the sixteenth century, based on which taxes were paid. With its 50 *lans*, Przyczyna Górna was one of the largest villages in Greater Poland; Przyczyna Dolna, having 17 *lans*, was high above the average in this respect.⁷³ Based on mentions scattered in the literature and municipal registers, Wschowa burghers were often the proprietors. The villages were sites of urban demesne farmsteads and industrial facilities (breweries, mills, fulling mills).⁷⁴ The role of the ponds in Przyczyna Górna has already been remarked upon.

The area north of the town was occupied by windmills. Tax registers refer to sixty-four windmills for Wschowa, this being Greater Poland’s largest figure. Although windmills was a typical feature in the landscape of the southern part of the Voivodeship of Poznań at the time, Wschowa clearly prevailed as regards the windmill statistics: Święciechowa, boasting the second highest number, had a half of Wschowa’s figure.⁷⁵ Windmills are reported to have surrounded Wschowa already at the beginning of the sixteenth century; they appeared in increasingly larger number, with eighty-six *Windmüllern* noted as of 1628 and as many as 101 in the early years of the eighteenth century.⁷⁶ It is impossible to determine their exact sixteenth-century localisations; to indicate this essential element of space development around Wschowa, a few windmills are featured on the reconstruction plan in their nineteenth-century sites.

Among the roads surrounding and traversing Wschowa, the one handling Poznań-to-Głogów/Głogów-to-Poznań transports was the major one, for quite obvious reasons. Moving from Poznań, the road offered two options: either directly from Śmigiel or via Śmigiel and Święciechowa (Święciechów). Passing through Święciechowa was also a road from Wschowa toward Leszno and, further on, Kalisz, along which traffic was generated by a dense network of fairs.⁷⁷ It would enter into Wschowa probably

through what is Staroleszczyńska St. today,⁷⁸ but its final section was probably altered by the incorporation of the New Town; hence, our reconstruction plan shows its course slightly modified. There were two routes leading to Głogów, one via Konradowo (*Kunersdorf*) and the other via Jędrzychowice. The road connecting Wschowa and Wolsztyn, along the line of the present-day Wolsztyńska St., was probably of a regional importance. The road course crossing both Przyczyna villages, traversing both the southern and northern suburbs, had both a regional and a local function. The routes toward Sława and Góra were its extension.

The town's border-area location left a quite significant imprint on its spatial development concept, rendering the urban space military-oriented; the Old Town area was clearly marked out by ramparts and external fortifications. These structures were a focus of particular interest of the rulers, who, since the emergence of the town up to the seventeenth century, granted the Wschowa with privileges and requiring, in exchange, that its defensive facilities be improved on.⁷⁹ Owing to its economic success and endeavours of the monarchs, Wschowa had an impressive defensive at its disposal. It is accepted that initially the fortifications were wooden-and-earth and the town used the natural protection of its marshy environment.⁸⁰ As aforementioned, the results of the archaeological research indicate that the first fortification in the present-day castle area might have emerged a little earlier than the town itself. The earliest discovered layers of the castle wall's foundations are dated at the former half of the fourteenth century, between the incorporation and Casimir the Great's subjugation. The castle walls were erected in parallel with the earliest section of the town's ramparts.⁸¹ No precise information on the development of the castle area's buildings is available; some is provided by the visitation records from the early seventeenth century, as confirmed by archaeological research and the castle's depiction in the AGAD plan.⁸² The wooden-and-brick buildings included the main building with the tower at the south-eastern corner; a porch along the southern wall; and, a building at the north-western corner, on whose upper storey the chancellery was situated. Although an integrated defensive system together with the town, the castle was predominant over the other surrounding buildings. A circle-like projection of the ramparts was dragged eastward by the castle, which was otherwise separate from the urban built-up area by a ground, a wicket-gate, a bridge (with a dry moat underneath it), and the gate proper. The castle as such had a wicket-gate on its eastern side, leading to the embankments (as visible on the AGAD plan).⁸³

The city's defensive ramparts (partly surviving to date) with which the castle was connected, emerged in stages. Before Casimir the Great's conquest, the section between the castle and the Polish Gate was built; after 1343, the fragment between the Polish Gate and the parish church, and between the castle and the present-day southern frontage of Zamkowy Sq., was built. The fortifications were completed after 1409, closing up the right on the south, with the Głogów Gate at the centre. In the middle of the fifteenth century, the entire complex was completed by adding a parallel band of the walls on the eastern side of the Polish Gate, thus delineating the course of the later Katowska St. (whose name refers to 'executioners'; the hangman's abode was situated 'between the walls of the city' until the end of the eighteenth century⁸⁴). The latter half of the fifteenth century, or the former of the sixteenth, saw the construction of a second wall by the parish church.⁸⁵ In spite of differing views offered by authors as to detailed findings, it has to be accepted that by the end of the period covered by the AHP scheme, the outline of the walls was complete; finally, in 1587–8, they were elevated.⁸⁶ The building material was stones and bricks. The walls' upper surface was topped by battlements and

wooden turrets.⁸⁷ An internal wall by the parish church is not clearly attested for the period concerned. The aforesaid eighteenth-century mention of the internal wall by the Polish Gate, and of the cemetery where burials took place in the sixteenth and seventeenth centuries, which did not cross the inner wall line, suggests that until the construction of the Jesuit school upon its foundations in 1751,⁸⁸ the inner wall still existed. Fragments of the fortifications survive today.

In the sixteenth century, three passages led to the city: the *Brama Polska* (Polish Gate) in the north, *Brama Głogowska* (Głogów Gate) in the south, and *Furta Kościelna/Furta Polska* (Church/Polish Wicket-Gate⁸⁹) by the parish church, all quite architecturally developed in the sixteenth century (turrets, small barbicans, necks).⁹⁰ The other two modest wicket-gates are problematic as we know nothing of their potential existence in the sixteenth century. One was situated by the castle, at the outlet of present-day southern frontage of Zamkowy Sq. (*Brama Błędna/Kacza* (Errant/Ducks' Gate); attested 1680 r.), and the other in Rzeźnicka St. (probably built in the eighteenth century).⁹¹ Due to no clear confirmation available, the reconstruction plan has neglected them. The walls were accompanied by external entrenchments in the form of a double moat⁹² and a bank. It can be presumed that Wschowa had two moats already in the fifteenth century, rather than only in since the sixteenth.⁹³ Fifteenth-century documents quite consistently use the plural when referring to the Wschowa moat; similarly in the *Metrica Regni Poloniae* entry dated 1553.⁹⁴ The presence of two moats or a very marshy area in the earlier period is also indicated by a considerable distance between the suburbs and the city walls (approximately 50 m). Hence, there is no ground for exclusion of an early chronology of both moats in question. They are first mentioned in 1409. The outer moat was situated right by the ramparts, at a 2–5 m distance, and was 11–13 m wide. As is testified by the buttresses found during the archaeological investigation underneath the Protestant Christ's Manger (*Kripplein Christi*) church and the former Jesuit school, the moat flew underneath the later-constructed buildings. The other moat was approximately 20 m off the ramparts and was approximately 20 to 50 m wide (at the castle's southern wall). As part of archaeological works, accumulated deposits of both moats and levelling strata were found.⁹⁵ A regeneration of the outer moat was carried out in the sixteenth century by enabling the supply waters from Przyczyna Górna, for which the city was granted permit from the king in 1532; the project was completed by 1571.⁹⁶ At the beginning of the sixteenth century, the inner moat had probably become neglected, as may be inferred from the fact that the baths located underneath it to 1529 were removed due to scarcity of water.⁹⁷ Our reconstruction plan shows it as a dry moat. The first visitation records mention just one moat (partly bogged); remains of the outer moat survived around the castle until the eighteenth century.⁹⁸ The date the bank was laid out between the two moats

⁹² So enormous a water defence zone was, obviously, hard to maintain. Cracow represented another such solution; U. Sowina, *Woda i ludzie*, pp. 87–91. The hydrographic (and economic) situation of these two towns was quite different, though. The Cracow moat was fed by the waters of the Rudawa, whereas Wschowa used the waters of Przyczyna Górna and the terrain's natural humidity. The attempt at examining the outer moat at the western section made as recently as in 2000 failed owing to the presence of groundwater; Drgas, Fortyfikacje, p. 50. That the grounds around the city must have been well hydrated is suggested also by a mention of a pond situated between the castle and the embankment; Schober, Straßennamen, p. 18.

is unknown; given the extension of Wschowa fortifications in the sixteenth century, it seems that the moats and the embankment could exist at that time.⁹⁹ This is confirmed by the attested fact that a pond was underneath the castle, located between the walls and the embankment.¹⁰⁰ Another bank existed right by the walls' face.¹⁰¹ A note from the 1628–32 visitation record pointing to the need for laying out the embankments seems to refer to the suburban areas;¹⁰² remains of those external retrenchments are still quite well visible in the field.

The town proper, understood here as the area surrounded by the moat, was set up on a rather small area (approximately 250 m along the north-south axis and approx. 350 m east-west; roughly 5.5 ha in total), in a depression below the elevation, adjacent from the west to the castle. Its layout was parallel to the depression and perpendicular to the main road. These small dimensions tend to be explained by the locality's initially small economic importance.¹⁰³

Authors point to the high standard of the urban area's layout as far as the town-planning concept is concerned, probably developed by a Silesian metrological team. One proof is, potentially, the deviation of the Polska and Głogowska Gates' axis by 35 degrees off the north-south axis, in order to ensure optimum use of the solar heat, as well as the clear and harmonious arrangement of the whole complex, possibly based on the nine squares. The town was erected on a roughly circular base, with grounds at the eastern and western ends and the built-up area arranged into nine blocks. There was a rectangular market at the centre (initially, 66 x 80 m, later, with the arcade erected, 58 x 75 m), two streets coming out of each of its corners¹⁰⁴. A characteristic feature of the Wschowa market was its arcades, constructed long after the 1529 fire and built-up in the nineteenth century, on initiative of the Prussian authorities.¹⁰⁵ The north-south line was marked out by the Gates Polska and Głogowska; the east-west line was set by the parish church surrounded by a square and the castle preceded by a small-sized ground. The ground in front of the castle seems to have remained undeveloped.¹⁰⁶ In light of the 1606 documentation of a dispute between the municipality and the Rev. Jan Krzycki, parson of Wschowa, it seems that the parish-church square was fairly densely built-up¹⁰⁷ – even more so, perhaps, than as shown on the reconstruction plan. The development area was restricted by the city walls, separated from the land plots by a narrow alleyway¹⁰⁸ (still marked in the AGAD plan).

The details as to the initial division of the urban area inside the walls into parcels of land are unknown; their exact reconstruction for the sixteenth century is impossible. It is accepted that the first extant plans, dating to the late eighteenth century, enable us to recognise their general layout, particularly around the market. At the same time, a considerable amount of irregularities is clearly indicative of changes in ownership.¹⁰⁹ Following the cartographic pieces from the late eighteenth/early nineteenth centuries, the reconstruction plan shows an outline of the indicative arrangement of plots in built-up blocks.

¹⁰⁶ Wróblewska, *Wschowa*, pp. 444–445. The two structures featured in the AGAD plan on the ground outside the castle are, according to the *Inwentarz Nowej Wschowy* [New Wschowa Inventory], a horse-drawn mill and a malt-house [*mielcuch*]. Since they are not attested for the sixteenth century, nor are they mentioned in the first visitation records, they are absent from the reconstruction map. In the ground's southern part, at the outlet of Kaznodziejska St., another building is visible on the AGAD map, not mentioned in *Inwentarz Starej Wschowy*. Given the fact that in the sixteenth century, when the walls still had a defensive function, the said building would have obstructed the access to them, whereas there is no information as to the date of its construction or its function(s) (as opposed to the school in the opposite part of the city), it is absent from our reconstruction map.

The walls were not a strict border of the main town, and burghers made use of the area between them and the moat. Behind what was later the *Kripplein Christi* church was a shooting range (so-called *Zielstatt* or *Zieglitz*), an area used by the local Brotherhood of the Rooster, established in the second half of the sixteenth century.¹¹⁰ The southern antemural was used, in turn, by the clothiers' guild, whose members would put out frames with cloth to be bleached; hence, that side of the antemural was nicknamed a '*blech*' (*Bleichen*). In more modern time, the name was only referred to the area east of the Głógów Gate, but a mention of the clothiers' frames *hinter der Bader* (at the rear end of the baths, behind Łazienna St.) indicates that it can be referred to the entire southern bulwark.¹¹¹

Owing to a limited development potential inside the walls, the town would expand in the suburban areas, primarily in Przedmieście Polskie, due to its convenient location. Situated on a wetland, Przedmieście Głogowskie developed to a limited degree.¹¹² Clothiers found a working place for themselves there.¹¹³ The municipality was granted consent from the king to expand outside the walls in 1548;¹¹⁴ this document does not mark the beginning of colonisation of the suburban areas – its role was basically to settle the process (by setting a certain number of allotments and extending the city's jurisdiction on the area).¹¹⁵ Przedmieście Polskie appears in the records since the middle of the fifteenth century.¹¹⁶ Colonisation in that area concentrated along the road to Poznań, which went toward the Polish Gate (then, *Steinweg*) and to the two routes perpendicular to it – the present-day streets Pocztowa and Garbarska, and, Niepodległości and Księża Kostki, then the main arteries of the suburb.¹¹⁷ Przedmieście Głogowskie was developed at a later date, in any case prior to the beginning of the sixteenth century.¹¹⁸ The area's layout was similar to that of Przedmieście Polskie, the main axes being the outlet road from the Głógów Gate and the one linking the two Przyczyna villages.¹¹⁹

The reach of the suburban areas appears as one of the major problems when it comes to reconstructing the map or layout of sixteenth-century Wschowa. Whereas the built-up area inside the walls as per the plans from the end of the eighteenth century can be regarded as reflecting the earlier situation, the suburban areas incessantly developed and were urbanised, particularly in the seventeenth century. The foundation of the New Town and Wolnica is quite well documented, as is the colonisation of more and more areas, the AGAD and ZAH plans marking their respective ranges (using colour distinctions and numbering of the plots). Based on these data, the suburban areas have been delineated in our plan. The area of the later New Town (the Lower and the Upper one) are marked as a garden/farming area belonging to the *starosta*. The 1636 document's *regest*¹²⁰ has it that *Łąki Żydowskie* (Jewish Meadows; *prata judeorum*) was meant to be the site of an urban centre, along with the Shepherd's Gardens (*Ogrody Owczarskie; horti pecorarii*). The former name certainly referred to the area of what was to become the Upper New Town (*Górne Nowe Miasto*). The Shepherd's Gardens, in this particular case, was probably where the Lower New Town (*Dolne Nowe Miasto*) emerged: the area, namely, of the *starosta*'s demesne farmstead, from which the street *Folwarczna* (Farmstead St.) has derived its name, according to some scholars. While nothing is known of the buildings in that area, it does not imply that there were no buildings present; some farm facilities/outbuildings must have been there. Residential houses stretched along Rybacka St., near *Łąki Żydowskie*; colonisation in that area is confirmed for the sixteenth century, whilst the meadows were named after the Jews whom the *starosta* tried to

have settled there in the late sixteenth century; yet, the municipality had them displaced in 1595.¹²¹ Also the eighteenth-century area of the provost's juridical enclave is marked as a garden/farming area.

The area bordering in the north-west on the Bernardine monastery's area housed the so-called 'brick barn' (*Ziegelscheune; horreum laterale*), which gave the name to the whole area, called Ceglany (Brick) Square (*Ziegelplan*, or, later, *Ziegelhof*). A pond and one or more brickyards were situated there; the chapels of Our Lady and St. Valentine were located nearby. The name probably encompassed the area – at least, partly – of what later became the Bovine Market (*Vieh Markt*). On the AGAD plan, the *Ziegelhof* extends south of the said market; the ZAH plan identifies the entire area as the Bovine Market. Since the latter name is known only since the yearly eighteenth century, the entire area in question is marked in our plan as Ceglany Sq.¹²²

Ponds, waterholes, and the so-called porcine pools (*Schwemme/Sauschwemme*), still visible on the source plans, were the important points in the suburban areas. There is a sixteenth-century mention of at least two such pools – one by the crossing of the *main Przedmieście Polskie* arteries and the other situated opposite the Bernardine cloister, with Our Lady's chapel located near it.¹²³ The AGAD plan shows two water reservoirs in this area, which are featured also in our reconstruction plan.

West of present-day Daszyńskiego St., behind St. Laurent's hospital, the city's clay ditch was located (appearing in the sixteenth century as the *Leimgrube*). A recess in its former site is visible to date on maps based on a numerical model of the terrain;¹²⁴ its approximate reach has been drawn on their basis.

The suburban built-up area is indicatively shown in our map based on the literature. According to Grosmann, the sixteenth-century development of *Przedmieście Polskie* encompassed the area along the main road, in front of the Polish Gate (up to the area parallel to present-day *Strażacka St.*), and the streets *Pocztowa* and *Garbarska, Niepodległości* (up to the monastery's buildings) and *Księdza Kostki* (up to *Przyczyna Dolna*; rather irregularly); also, partly, today's streets *Zielona* and *Lipowa*. *Przedmieście Głogowskie* was only developed up to the crossing with the road linking the *Przyczyna* villages. The area between *Garbarska Street* and the road toward *Głogów* was covered by meadows and gardens.¹²⁵ As the basis for his considerations, Grosmann apparently adopted the surviving sixteenth-century hodonomatic material, roughly encompassing the area concerned. Based on the mentions scattered in the literature with respect to the reach of the fires, one may presume that the area around the pond in front of the Polish Gate was also developed¹²⁶, as was present-day *Daszyńskiego St.*¹²⁷ and the area of *Wolsztyńska St.*¹²⁸ The sixteenth-century built-up area probably did not reach as far as the meadows or pastures west of the Bernardine cloister – that is, the seventeenth-century Circle.

Schuhmachergasse (Shoemakers' St., today the section of *Kilińskiego St.* between the market and the *Kripplein Christi* church) is believed to be the oldest among the names of *Wschowa* streets, dating back to mediaeval times.¹²⁹ *Zwei Eimergasse* (Two Pails, presently *Powstańców Wielkopolskich St.*), named after the two wells situated in that area, is first attested in 1679, which leads one to presuming

¹²⁸ Ceglany Square, in the time concerned. As of 1630, the area is reported to have had ninety-five houses (Braune, *Geschichte*, p. 35); houses are also mentioned at the end of the sixteenth century (APZG 363, sign. 99, pp. 501, 509).

¹²⁹ *Die Fraustädter Straßennamen*, p. 20; Pfütenreiter, *Straßennamen*, p. 26; Schober, *Straßennamen*, p. 18. For names of the streets, the basic linguistic forms adopted herein are their German names. The first municipal registers, from 1501 onwards, were kept in German, for which the local burghers obtained consent from the monarch in 1523; see Drozdowski, *Czynnik wyznaniowy*, p. 263. Our map marks the *Wschowa* streets with abbreviations based on their German names, the legend gives the German names along their Polish equivalents. The form *-gasse* is used consistently for the names of streets, as its use is confirmed in the town books.

that the name was not the earliest one.¹³⁰ Today's Kościelna (Church) St., going from the market to the parish church, was named *Unter der Kirchlauben* or, briefly, *Kirchlauben* (Under the Church's Arcades/Church Arcades), owing to the arcades built along it.¹³¹ The authors commonly accept that the name of present-day Rzeźnicka (Butchers) St., attested since 1556 as *Fleischergasse* or *Kuttelhofgasse*, comes from the local butcheries and slaughterhouses; it had become common by the sixteenth century, having ousted the earlier names of (*Heilige*)*Leichnamsgasse* or *Fronleichnamsgasse* (Corpus Christi).¹³² The records from the second half of the sixteenth century still use the name *Leichnamsgasse*, though;¹³³ thus, it is this latter form that we have regarded as basic.¹³⁴ The name *Badergasse* (Łazienna (Baths)) St., same as today. As per *Inwentarz Starej Wschowy*, p. 8, 'Cyrulika (Barber's) St.' comes from the sixteenth century, possibly in use since 1529 – the date the baths were erected there after a fire.¹³⁵ Parallel to it was *Langegasse* (Long, presently Ratuszowa, St.).¹³⁶ The southern frontage of Zamkowy Sq. was called *Wetschengasse/Wezengasse* in the sixteenth century; the name's most popular equivalent was Kacza (Ducks) St. (*Entengasse*), referring to ducks being driven out along that street into the moat's marsh. Schober was sceptical about this explanation, believing that there was yet no wicket-date in the street's wall in the sixteenth century and that the name was derived from the distorted word *Wetschker/Watschker*, denoting a sack or bag. Due to the aforementioned late sixteenth-century forms, it however seems that the most adequate equivalent would be Workowa (Bag), rather than Kacza Street. The street started to be named *Predigergasse* (Preachers' St.) in the seventeenth century.¹³⁷ The square's northern frontage was named, in turn, *Schlossgasse* (Castle St.).¹³⁸ Right in front of the castle (today, the eastern frontage of Zamkowy Sq.), *Weingasse*, *Weinlaube*, or *bei der Weinhütte* (Wine St.) was located, whose name came from a *starosta*-owned taproom.¹³⁹ The area behind Kilińskiego St., built up today, is the former *Schindergasse* (Executioner's St.), later *Kellergasse* (Keller Alley); the time of appearance of the latter name is unknown, certainly not the sixteenth century or thereabouts.¹⁴⁰

The toponymic material concerning the Polish Suburb (*Przedmieście Polskie*) is quite abundant. The street leading out of the Polish Gate (*Brama Polska*) and extending to the pond at the suburb's centre was called *Steinweg* (Stone Road/*Kamienna Droga*, so named because of the cobbling, today a fragment of Bohaterów Westerplatte St.).¹⁴¹ Its first cut-through was *Nonnengasse* (Nuns' St./*Zakonniczek St.*, presently Pocztowa St.)¹⁴² and its extension called *Mälzergasse* (Malt St./*Słodowa St.*, later on *Gerbergasse* – Tannery St., presently Garbarska St., meaning the same thing).¹⁴³ *Breitegasse* (Wide

St./Szeroka St., presently Niepodległości St.), in which fairs were reportedly held,¹⁴⁴ and *Forbrigesgasse/Fürbrigesgasse/Vorbrigesgasse* (today's Księżka Kostki), formed a parallel artery in the north. The name's origin remains obscure (though Schober found it obvious enough not to need explaining); in as early as 1611, the street was referred to as *Vorwerksgasse* (Farmstead St.), which name is believed to have come from the adjacent *starosta's* demesne farm or the fact that the road led to a municipal demesne farmstead in Przyczyna Dolna. Let us remark that already in 1543 did the street appear as *Gasse nach dem Vorwerk des Starosten*.¹⁴⁵ In the western part of the suburb, the streets *Breitegasse* and *Nonnengasse* were connected by the street *Mönchsgasse* or *Brüdergasse* (Monks' St./Mnisia St., presently Klasztorna (Monastic) St.), which reached the Church's Wicket-Gate (*Furta Kościelna*).¹⁴⁶ *Nonnengasse* extended southward as *Fischergasse* (Rybacka (Fishermen's) St., also called *Fischerei*, presently Zielona (Green) St.), rarely appearing as *Färbergasse* (Dyers'/Farbiarska St.). It was partly occupied by the settlement subordinated to the *starosta*; it is there that Jews would settle down in the late sixteenth century, hence the popular name *Iuderei* (later on, Jewish Meadows).¹⁴⁷ Opposite the south-western section of the walls, the street stretched which was named *Auf dem Graben* (Above the Moat; presently, Lipowa (Linden) St.).¹⁴⁸ *Töpfergrasse* (Potters'/Garncarska St., presently Daszyńskiego St.) was an extension of *Steinweg* and a part of the Poznań/Głogów road; the name first appears only in 1646, while its neighbourhood was basically described in the context of its location by the clay pit¹⁴⁹ (after which the street was named). All the same, we have resolved to have the name shown for the sixteenth century XVI, as it seems that it became common in the first half of the following century.¹⁵⁰ There is no certain information available as to the naming of present-day Strażacka St. In the eighteenth century, its northern part was named *Malzgasse* or *Bei der Roßmühle* (Malt/Słodowa St., By the Horse-drawn Mill), and later, *Alte Post Straße* (Old Post/Staropocztowa St.), the small square at its southern end as *Steinring* (Stone Square). It is unclear whether the name *Hirsewinkel* (Millet Alley), mentioned at the end of the sixteenth century, can be related to the latter.¹⁵¹ No other street names that can be found within Przedmieście Polskie in the latter period, can possibly be referred to the sixteenth century.¹⁵²

The toponymic material for the much more sparsely urbanised suburban area of Przedmieście Głogowskie is much poorer. As indicated by references in the town books, the outward street from the Głogów Gate was simply called in the sixteenth century *vor dem Glogischen Thor* (In Front of the Głogów Gate; today's Głogowska St.).¹⁵³ Since the name was in use at least until the end of the eighteenth century (cf. AGAD plan), it can be regarded as the name proper. Nothing certain can be said about the street's two further forks. Since both led toward Głogów, the name *Glogischegasse* cannot actually be referred to any of them.¹⁵⁴ The name of the road that linked the two Przyczyna villages in the sixteenth century remains anonymous to us. The names *Tuchbereitergasse* (Clothiers'/Sukiennicza St., presently Obrońców Warszawy St.), *Hinter den Bleichen* (later on, *Garten Straße*; presently, Moniuszki St.) came out at a later date.¹⁵⁵ *Tuchbereitergasse* can be directly associated with the descriptive name *Steinweg nach der neuen Mühle*, which however is not the name proper.¹⁵⁶

¹⁵⁶ Schober, *Straßennamen*, p. 23. The *Steinweg* going out of the Polish Gate is a different story as this common name has established itself in the toponymy and became a name proper.

At the centre of Wschowa, the rectangular marketplace was situated, with the town hall in the middle of its area. The town hall is first attested in 1435, the date it reportedly survived a fire (it is therefore presumed that the building was brick-built at that time). Burnt down in 1529, it was gradually reconstructed between 1556 and 1612.¹⁵⁷ 1580 saw a pharmacy installed inside its tower.¹⁵⁸ Its ground floor, apart from the functions related to the exercise of authority, was of public use as it housed the weigh-house and a taproom.¹⁵⁹ At the end of the sixteenth century, located by the town hall were two reservoirs of water from the water-supply system (*Röhrkasten/Röhrbrunnen*; tank sumps), the elder one to the east and the younger to the west. The latter was built in 1590 near the pharmacy and fed with water with use of pipes stretching from Przyczyna Górna. In 1592, the earlier one was firmly founded in the ground and the younger, perhaps, improved on. The year 1614 saw the erection of a fountain on the town hall's eastern side;¹⁶⁰ it is not certain whether it was founded upon an earlier reservoir or tank. Deeming this option plausible, I have decided to mark the latter, based on the ZAH map. The younger tank was situated west of the town-hall tower.¹⁶¹ Merchants' stalls were situated in the marketplace; we are aware of the location of two such structures; clothier stalls were situated on the eastern part of the southern frontage,¹⁶² while fishermen's benches stood by the old reservoir, which definitely means, at the market's eastern frontage.¹⁶³

Butcheries and a slaughterhouse were situated inside the city walls; the former were initially located at the marketplace. The fire of 1529 devoured the Corpus Christi (*Bożego Ciała*) church, which was never rebuilt. What we know is that it stood in the neighbourhood of the parish church, in the street named after the Corpus Christi church (see above). A more precise location is given in a 1545 note which states that the so-called *Piekło* (Hell) building was located opposite the ground where the church had once stood. This means that it occupied a part of the area of today's park adjacent to the church; in the sixteenth century, it might have been situated within the cemetery by the parish church.¹⁶⁴ The butcheries were relocated on that site in 1556; the facility remained there until 1606, the year the Catholic Church regained the area.¹⁶⁵ Not far from there, between the wall lines, a brick slaughterhouse was erected in 1577.¹⁶⁶

Among the sixteenth-century buildings, the aforesaid *Piekło* (*Hölle*) in Rzeźnicka St. has to be mentioned. Since the third quarter of the sixteenth century, it functioned as the seat of the municipal services.¹⁶⁷

¹⁵⁷ Moritz, *Mittelalter*, p. 238; Grosman, *WuW*, pp. 54–55; Schober, Ring; J. Muszyński, *Rozwój przestrzenny Wschowy*, p. 49; Wróblewska, *Wschowa*, pp. 449–450, 453, 460; Małkus, *Budowle*, pp. 69–70.

¹⁵⁹ Wróblewska, *Wschowa*, p. 450; Małkus, *Budowle*, pp. 67, 69; Czwojdrak, *Ulice*, p. 33–34.

¹⁶⁰ Braune, *Geschichte*, p. 20; Grosman, *WuW*, p. 59; Małkus, *Budowle*, p. 72. The relevant note in Hofmann (Biblioteka PAN w Gdańsku, MS 1645, entry dated 30 June 1592 [no page numbering]) is not quite clear; Grosman had doubts as to its interpretation. We finally have accepted, following this scholar, that Hofmann referred to reservoirs on both sides of the town hall.

¹⁶¹ Still in the Saxon time (under the Wettin monarchs' rule), a fountain is said to have been situated in front of the royal residence (today, 2 Kościelna St.), which should be associated with the reservoir; Czwojdrak, *Ulice*, p. 69.

¹⁶² W. Schober, *Die Fraustädter Stadtbrand vom 6. Dezember 1598*, p. 25, footnote 10; Wróblewska, *Wschowa*, p. 450.

¹⁶³ Biblioteka PAN w Gdańsku, MS 1645, entry dated 30 June 1592.

¹⁶⁴ See AP Poznań, *Księgi sądu i urzędu grodzkiego we Wschowie*, sign. 29, f. 193v.

¹⁶⁵ *Kronika klasztoru Braci Mniejszych Obserwantów, czyli we Wschowie 1455–1808*, transl. Fr. P.A. Turbański, *Wschowa* 1971, TS at the Franciscan Friars' monastery library in Wschowa, p. 16; Moritz, *RuG* 1, pp. 6, 8, 18, 39; Moritz, *RuG* 2, p. 27; Grosman, *WuW*, pp. 54, 58, 61; W. Schober, *Die "Hölle" in Fraustadt*, p. 18; Dworzaczkowa, *Kontrreformacja*, p. 26–27; Wróblewska, *Wschowa*, pp. 450, 455. Since the butcheries were removed early in the seventeenth century, there is no trace surviving of them in the background maps. Instead, two burgher-owned developed plots are visible, featuring a rather specific, elongated shape and arrangement not corresponding with the rest of the buildings, grouped into blocks. Since these plots must have coincided with the sixteenth-century butcheries' area, it has been resolved to mark the latter in those two plots' area.

¹⁶⁶ It is possible to localise the slaughterhouse by comparing the description in *Inwentarz Starej Wschowy* [Old Wschowa Inventory], pp. 8–9, with the AGAD map. Grosman, *WuW*, p. 57; Schober, *Straßennamen*, p. 18; A. Koerth, *Um ein neues Schlachthaus in Fraustadt zu Beginnen des 19. Jahrhunderts in südpreußischer Zeit*, "Das Fraustädter Ländchen", vol. 18, 1939, no. 10/11, pp. 31–32. Hence, the view proposed by G. Wróblewska (Wrólewska, *Mury*, p. 592), identifying the butcheries with the slaughterhouse and localising the Corpus Christi church outside the city walls, is misconceived. This author simply followed the a LBP heading (p. 194), which referred to the church as *extra (muros*, implicitly), whereas its *intra muros* location is attested already in 1489; AAP, AE III, f. 155v.

¹⁶⁷ The building can be localised by comparing the *Inwentarz Starej Wschowy* description against the *Stan Miasta: Inwentarz* [Town Condition: Inventory], pp. 8–9 and AGAD map. Grosman, *WuW*, p. 59; W. Schober, *Die "Hölle" in Fraustadt*; Małkus, *Budowle*, p. 72.

It is not known where the *Tanzhaus* (House of Dance), attested as of 1579 where social and other meetings or reunions were held, was actually situated.¹⁶⁸ The baths were, expectedly, situated on Łazienna St./*Badergasse*, at the street's very end, according to Schober.¹⁶⁹ Somewhere not far from that place, the city stable was located (no precise location is identifiable).¹⁷⁰

As Wschowa had the right to mint its own currency (coin), there was a city mint functioning in its urban area. It operated in the northern wing of the later Jesuit school (today, the building houses the Museum of the Land of Wschowa). After the 1529 fire, licensed beer was sold at that building; coins were minted again from 1588 to 1612; then, wine was sold under licence; finally, taken over by a Catholic parson, it became part of the Jesuit school.¹⁷¹ Apart from the city mint, the royal mint functioned in Wschowa since the late sixteenth century in Przedmieście Polskie.¹⁷² An inn of the clothiers' guild was located in the same area, in Mnisza St.¹⁷³ (its exact location is unknown¹⁷⁴). According to Grosmann, at the site of plot no. 5 in Staroleszczyńska St., the butchers' inn was situated.¹⁷⁵ Due to frequent alterations in the numbering of the plots since Grosmann's time, however, its location cannot be determined precisely.¹⁷⁶ After Wschowa conclusively acquired the vogt's district in 1532,¹⁷⁷ a municipal demesne farm (so-called *Mittelvorwerk*) was built on the former vogt's land.¹⁷⁸ In Przedmieście Głogowskie, not far from St. Nicholas's hospital, a laundry of the clothiers' guild (*Waschhoff/Waschmühle*) was situated¹⁷⁹ – presumably, roughly in the area of the later dye-house (which also belonged to the clothiers¹⁸⁰), and so it is marked at that place. Somewhat further up, behind the hospital, the furriers' guild building stood and pitches used by the guild to soak hides¹⁸¹ were situated (*Küschnerhaus, Küschnerspüle*),¹⁸² still visible in the AGAD plan. During the sixteenth century, the town was twice granted consent for construction of a watermill at the moat,¹⁸³ but nothing is known about putting the project into practice.

Prior to the Reformation, Wschowa abounded in religious buildings. Most of them were turned during the Reformation into farm or utility facilities, some fell into ruin, others were retrieved in the course of the Counterreformation. Almost none survives to date.¹⁸⁴ The most important among them was the parish church dedicated to the Most Blessed Virgin Mary (Our Lady) and St. Stanislaus,¹⁸⁵ probably founded upon the establishment of the town.¹⁸⁶ In the second half of the sixteenth century, it was used by the Protestant community. The church was mentioned in 1345, on the occasion of the fire.¹⁸⁷

¹⁸⁷ Wróblewska, Wschowa, p. 453.

Earlier on, in 1326, the parson of Wschowa is noted (*Iordano plebano in Frovenstadt*).¹⁸⁸ During its history, the parish church was repeatedly affected by fires (in 1435, 1529, and 1685); its present-day appearance results from a reconstruction at the beginning of the eighteenth century. Its impressive tower was erected in 1580–2; with its height of 72 metres, it was apparently the tallest structure in the whole of Greater Poland.¹⁸⁹ After the seizure by the Protestants in 1565, a new school building was erected opposite to it, by the Church's Wicket-Gate;¹⁹⁰ a year later, a clock was built right beside it; a new pastor's house (rectory) was set up in 1591.¹⁹¹ The rooms above the Church's Wicket-Gate were occupied by lower-ranking clergymen.¹⁹² All those buildings were taken over by the Catholic Church at the beginning of the seventeenth century.

Apart from the parish church and the Corpus Christi church, of which the latter was destroyed at the beginning of the sixteenth century, there were other churches, situated behind the city walls. The All Saints' cemetery chapel is attested in as early as 1429. Dismantled in 1663 or 1708, it was situated in the cemetery opposite the Church's Wicket-Gate, on the left, probably in the area of today's nunnery of the Congregation of the Sisters of Saint Elisabeth – and so it is marked on the plan. The chapel remained deserted during the Reformation.¹⁹³ In the town's north part, opposite the Bernardine monastery in the area of the later cattle fair, the chapels of St. Valentine and Our Lady were situated. The former, situated closest to the site of executions, which was located further northwards (and visible in the UMTB, outside our reconstruction plan), was called *Köpfkirchlein* or *Ziegelkirchlein*. In the Reformation years, a dog-catcher's establishment was arranged inside it. The chapel was not far from Our Lady's chapel, which is reported to have been situated opposite the monastery and close to the brickyard. During the Reformation, it was apparently turned into a stable.¹⁹⁴ The details regarding the chapels' locations (close distance to the brickyard and a water reservoir, bovine market neighbourhood, opposite the monastery, not far from the execution site) suggest that they were possibly situated not far from the eighteenth-century provost's juridical enclave (the area is partly beyond the scope of the reconstruction plan). The direct association of those chapels with that area is purely hypothetical, yet there is no doubt that they were located in that very neighbourhood, which has been reflected on the reconstruction plan.

Before the Reformation, Wschowa was home to three hospitals with chapels, namely: St. Nicholas's – in front of the Głogów Gate (clothiers' hospital); its location is known only in approximation, based on the tradition referred to by Grosmann;¹⁹⁵ St. George's – in front of the Polish Gate, at the junction of Szeroka St. and *Kamienna Droga*;¹⁹⁶ and, St. Laurent's – on Garncarska St.¹⁹⁷ The hospital chapels of St. Nicholas's and St. Laurent's are reported to have been turned into cowsheds during the Reformation.¹⁹⁸

¹⁹⁸ Moritz, RuG 1, p. 18; Grosmann, WuW, p. 58.

There was yet another chapel, in the Bernardine nunnery area; it was attested at a later date, and its dedication is unknown.¹⁹⁹

The Bernardine cloister was set up in the year 1456, in the town's gardens within the Przedmieście Polskie area. The congregation's nunnery appeared in 1505. The monks' cloister was entirely consumed by fire in 1558; its residents eventually left the town, overwhelmed at that point by Protestants. Also the nunnery became deserted some time afterwards (it was still in use in 1566), its buildings becoming property of the town. The monks returned in 1629; by 1644, their new residence was completed.²⁰⁰ The monastery's property was sold in 1564, with the consent from King Sigismund II Augustus (Zygmunt II August); the own bought it back in 1577. The monastic buildings at the middle of the sixteenth century cannot be reconstructed owing to the fire and the later reconstruction. What is known is that after the church's fire, a cemetery and St. Anne's church survived in the monastery's area, possibly with some remnants of farms. With the retrieval of the lands in 1629, also gardens, farm buildings/outbuildings and burghers' houses were mentioned in the records.²⁰¹ Likewise, the area occupied by the monastery in the seventeenth century was not identical with the previous one. In 1638, the Bernardine Friars agreed to have the land of the former Bernardine nunnery, which a year earlier were provided to them as municipal allotments situated beside their cloister, exchanged.²⁰² The pre-Reformation monastery complex was, therefore, smaller and encompassed the cloister, a yard, a garden, and a cemetery with St. Anne's chapel.²⁰³ This being the case, the reconstruction plan features an informatively marked area smaller than the monastery as per the AGAD and ZAH plans, which is meant to merely indicate the location, rather than the exact reach, of the pre-Reformation cloister.²⁰⁴ The localisation of the nunnery is likewise indicative. According to the later information regarding the construction of a new buildings in 1530, the monastery's area was situated by the Church's Wicket-Gate, right by the moat. This prompts one to identify the area with the westernmost plots on the southern side of Zakonniczek St.²⁰⁵ As with the friary, the marking is approximate only.

Sixteenth-century Wschowa had three cemeteries. The (most probably) earliest one surrounded the parish church. In spite of the doubts expressed by some authors as to its use in the sixteenth century, archaeological discoveries have confirmed that it was in use then.²⁰⁶ Another cemetery was located before the Polish Wicket-Gate, together with All Saints' chapel; mentioned in as early as 1526 (according to Schober), it is visible on the AGAD plan.²⁰⁷ Yet another one surrounded the chapel of

¹⁹⁹ A. Pańczak, *Bernardynki we Wschowie*, pp. 313, 323. The author approaches a 1592 note about a "small brick-built church" as one of the mentions of the chapel in the former Bernardine nunnery area. As the literature tells us, though, the "brick church" was St. Valentine's chapel.

²⁰⁷ Grosmann, *WuW*, p. 58; Grosmann, *Stadtplan*, p. 35; Schober, *Straßennamen*, pp. 18–19; Wiczorkowski, "Boża rola", p. 232. Both cemeteries are repeatedly mentioned in the documents of the dispute between the Wschowa parson and the municipality; see AP Poznań, Księgi sądu i urzędu grodzkiego we Wschowie, sign. 29, ff. 191r–222v.

St. Anne²⁰⁸ at the site of the former (burnt down) Bernardine convent; no clues are available so that its range could be marked out.²⁰⁹

The literature mentions other religious buildings prior to the Reformation – among them, the chapels of Holy Trinity, St. Barbara, Holy Spirit (with a hospital),²¹⁰ Sts. Jacob and Felix,²¹¹ and Holy Cross.²¹² Nothing is known for certain about those churches, save for the content of those notes. Moritz supposed that the latter might have referred to the chapels inside the other churches – possibly, altarage-funded chapels.²¹³ The Holy Cross chapel is worthy of a comment, as regards its existence. It appears among the lost churches in the lawsuits of the Rev. Jan Krzycki, parson of Wschowa, in his dispute against the municipality (see fn. 107). The references in the 1606 documentation of the royal commission's proceedings in this respect imply that it was situated near the Corpus Christi church; however, the commission could not resolve the question of its existence. The testimonies of the witnesses appear very interesting. The first six interrogated persons were uncertain of such a church or could not remember it, but they knew that a street was named after it. The seventh, Franciszek Tischler, who was a commendary of Wschowa in 1577, testified that he knew nothing of such a church in the town's area, whereas the street took its name from the Corpus Christi church. The ninth witness confirmed this statement. None of the subsequent witnesses mentioned the street or the chapel.²¹⁴ These circumstances make one sceptical as to the existence of the chapel in question.

An important point on the map of Wschowa was the Protestant *Kripplein Christi* church by the Polish Gate. It was erected in 1604, when the town was forced to return the parish church to the Catholic Church.²¹⁵ Hence its absence from the reconstruction plan; instead, private buildings – two cottages and the former baths, formerly part of the defensive complex²¹⁶ – adjacent to the Polish Gate, redeveloped into the said church,²¹⁷ have been made distinctive. Another noted historic monument that is not marked on the map is the Evangelical cemetery set up in 1609 in Przedmieście Polskie, and extended in 1630. It was established on a land that was formerly burgher-owned:²¹⁸ it was a horticultural-and-farming area with outbuildings.²¹⁹

* * *

It is difficult to specify the number of houses and inhabitants of Wschowa in the sixteenth century. A point-of-departure is the data contained in tax registers from the century's second half, which usually refer to 370 artisans and sixty-four windmills (the latter should be treated as separate production plants).

²⁰⁸ This chapel was perhaps dedicated to St. Martin as well; AP Poznań, Księgi sądu i urzędu grodzkiego we Wschowie, sign. 29, f. 199v.

²⁰⁹ MK 96, f. 345r; Moritz, RuG 2, p. 16; Czwojdrak, Kopaczyński, pp. 42, 48. The literature creates some confusion regarding Wschowa's cemeteries. Following Hofmann's statements, Schober writes as follows: "Dieser [i.e. the cemetery in front of Church's Wicket-Gate] wird dann als »alter Kirchof« dem im Jahre 1567 auf dem Grundstück des Bernhardinerkloster eingerichteten »Neuen« entgegengestellt"; Schober, Straßennamen, pp. 18–19; also, see Wieczorkowski, "Boża rola", pp. 231–233. It does not however seem probable that there might have been a fourth cemetery in the town, and second in the former Bernardine area (the first being the one around St. Anne's chapel, which had existed earlier on), established in 1567 – all the more that we do not come across it anymore. As D. Czwojdrak points out, it was rather about broadening of the already-existing cemetery outside the All Saints chapel, rather than a completely new development; Czwojdrak, Ulice, p. 78. Another solution to this problem is to accept that this is the first mention of a cemetery in front of the Furta Kościelna; this cannot be excluded, for when giving the 1526 date did not evidence it based on records.

Assuming that five persons would be the multiplier for one artisan payer²²⁰, we arrive at a population of 2,170; this ought to be regarded as an absolute minimum. Some authors would speak of the population of Wschowa of approximately 6,000 at the end of the sixteenth century; the first to have given this figure was A. Springborn, based on his own calculation (without specifying the methodology) from the register of the *Kripplein Christi* church.²²¹ The register covers the years 1582–95, recording births, marriages, and deaths. The register is now regrettably lost, so verifying these data is impossible. The figure of 6,000 seems inflated; it is probably inclusive of both Przyczyna villages. In the later years, with the immigrants from Silesia, Wschowa might have attained a population of this size. The hearth tax (*podymne*) register for the Voivodeship of Poznań from 1631 (before the incorporation of the new towns but in the midst of the migration process) gives the total of 675 houses.²²² Applying the multiplier of six,²²³ we arrive at 4,050 residents; with nine,²²⁴ the result is 6,075. At the end of the eighteenth century, Wschowa's population oscillated around 5,000.²²⁵ Taking these data into account,²²⁶ it seems that at the end of the sixteenth century, Wschowa's population was in the range of 3,000–5,000, basically not exceeding the very latter figure.

²²⁵ Nowakowski, Wschowa, p. 73.

²²⁶ Several authors (Grosman, WuW, pp. 61–62; Wróblewska, Wschowa, p. 458; Drozdowski, Czynniki wyznaniowy, p. 266; Małkus, Budowle, p. 73) offer us information on the number of houses in 1630 (146 inside the walls, 335 in the suburbs) and in 1635 (160 and 423, respectively); based on S. Lauterbach's chronicle (idem, *Fraustaedtisches Zion*, p. 496) and on the confrontation against the "chimney tax" data, the latter took prevalence. We are moreover aware of victims of several plagues at the beginning of the seventeenth century, hard to assess for credibility; see F. Pfützenreiter, *Pestepidemien in Fraustadt*, p. 22. The figures are in the range of 1,000–2,000 deceased, which seems to correspond with the estimates presented here.

III.7 COATS OF ARMS

III.7.1 CRACOW VOIVODESHIP

Zenon Piech

Coat of arms of the Voivodeship of Cracow

The coat of arms of the voivodeship has its origins in the coat of arms of the dukes and duchy of Cracow. It was formed in the fourteenth century. During Casimir the Great's reign, when the land coats of arms were finally created, the coat of arms of Cracow Voivodeship was granted the first place. It showed a crowned white Eagle on a red background.¹ The artistic style of the voivodeship's coat of arms was the same as in the coat of arms of the Kingdom of Poland, and the Eagle of the Kingdom often served as the coat of arms of the voivodeship. However, when both coats of arms appeared separately, in order to distinguish then the head of the eagle of Cracow Voivodeship was turned heraldic left, and often bore a band ended with a trefoil on his wings. The colours of the coat of arms of Cracow Voivodeship were the same as those of the coat of arms of the Kingdom of Poland: white Eagle in a golden crown, with a golden beak, claws and a band on the wings on a red background. The coat of arms of Cracow Voivodeship printed on the main map was prepared on the basis of source records from the sixteenth century, from the reign of Sigismund August. This coat of arms now belongs to Lesser Poland Voivodeship.² The coat of arms was placed on a cartouche from the fourth quarter of the sixteenth century.

Coat of arms of the land of Nowy Sącz

The first entry concerning the coat of arms of the land of Nowy Sącz comes from Marcin Bielski's *Kronika* ('Chronicle'), and the depiction was included in the armorial of Erazm Kamień and in *Herby rycerstwa polskiego* by Bartosz Paprocki. The coat of arms shows party per pale three red and three golden strips on the right heraldic field, and nine golden stars on the left red heraldic field.³ In *Korona polska* by Kasper Nasiecki the sides of the coat of arms are reversed.⁴ The coat of arms of the land of Nowy Sącz is a coloured variation of the coat of arms of Sandomierz Voivodeship, which bordered this land inside the Lesser Poland province. It is known only from information found in the armorials listed, there is no seal with this coat of arms, or any other source record.⁵ The coat of arms printed in this publication was taken from Bartosz Paprocki's *Herby rycerstwa polskiego*, and placed on the cartouche from the fourth quarter of the sixteenth century.⁶

Coat of arms of Cracow

The coat of arms of Cracow formed gradually, and reached its final shape around the middle of the seventeenth century. The oldest entry concerning the coat of arms of the city comes from 1370 and appears in the Chronicle of Janko of Czarnków. The author mentions a coat of arms on a standard carried by the burghers, who welcomed King Louis of Hungary on his arrival at Cracow, but tells us nothing about the features of the coat of arms. The oldest image of the coat of arms survived on the bell from the Mariacki church from the fourth quarter of the sixteenth century. It shows a city wall with a battlement, three towers of equal height, and an open gate with bars lowered to two-thirds.⁷

The original version of the coat of arms is somehow related to the oldest vogt seal of Cracow, which was then made the counsel seal. This seal also shows a building with three towers and an open gate. The architectural motives were accompanied by additional features: an uncrowned Eagle on a shield over the middle tower, higher than the rest, the patrons of Cracow cathedral and the city were placed over two lower towers: St. Wenceslaus and St. Stanislaus, and the coat of arms of the dukes of Cuyavia was placed twice, with a crown on the sides of towers. There was also a man kneeling under the open gate, probably the vogt of the city.⁸ The Eagle, which appeared already on the oldest seal, will be introduced to the coat of arms of Cracow only in the fourth quarter of the sixteenth century, and placed under an open gate.

Numerous artefacts from the fifteenth and sixteenth centuries (seals, illuminations, graphics, architectonic sculpture) confirm the initial form of the coat of arms. There are some differences in the height of the towers, which are sometimes equal, and sometimes the middle tower is higher.

There were no further changes in the coat of arms until the fourth quarter of the sixteenth century. The, an uncrowned Eagle began to appear sporadically inside the open gate. At the same time, a seal with the traditional coat of arms was introduced, without the Eagle inside the gate, but on a characteristic, Renaissance shield, with a rounded head and concave sides, with a closed crown. The crown emphasized the fact that Cracow was the capital city. Finally, all elements of the current coat of arms were united in 1661, when two city seals were made at the expense of Krzysztof Kranz, a counsellor of Cracow. An uncrowned Eagle was placed inside an open gate.⁹ This version of the coat of arms put on the official city seals marked the end of the formation of the city's coat of arms. However, the original version – without the eagle, or the crown – remained in use until the end of the eighteenth century. It was usually placed on small city seals.

The colours on the coat of arms of Cracow appear in two variants: white wall and towers on a blue background, or red wall and towers on a golden background.¹⁰ The current coat of arms of the city, reconstructed on the basis of thorough historical and heraldic studies was published next to the Cracow city plan.¹¹ It is the coat of arms from the fourth quarter of the sixteenth century. A red wall with three towers, of which the one in the middle is taller, on a blue background. There is a golden gate in the wall, with raised golden bars. A crowned white Eagle with a golden beak and claws was placed inside the gate. The coat of arms has a Renaissance shape, characteristic to Cracow, and there is a closed crown on top.

Coat of arms of Kazimierz

The sources fail to provide an unambiguous description of the coat of arms of Kazimierz. The oldest data come from the fourteenth century assessor's seal, made shortly after the foundation of the city (1335). It shows a crowned monogram K, and two small crowned royal heads on the sides.¹² The coat of arms refers to the founder of the city, king Casimir the Great, who gave the city his name. This coat of arms was very popular in the sigillography of Kazimierz, and was a dominant version from the end of the sixteenth century until the end of the eighteenth. It did not appear on an escutcheon on seals, but in other places (prints, super ex libri, illuminations in town books) it was placed on the shield. A document issued in 1566 by Sigismund August confirmed that it could be used as the coat of arms of the town only by the town council and the town court. Also, the Old Polish poems on the coat of arms of Kazimierz describe this coat of arms.

At the same time there was another version of the coat of arms, known already in the fifteenth century, which showed a crowned monogram K, or rarely: without the crown. It appears for the first time in the fifteenth century on an antependium of the altar in the church of Corpus Christi in Kazimierz, placed on an escutcheon. In the sixteenth century, the monogram K appears on the seals of Kazimierz. It was systematically placed on a heraldic shield, so it must have been treated as the coat of arms of the town.¹³ This role of the monogram is confirmed by the illuminations from the town books, super ex libri, Old Polish images of Cracow, Kazimierz and Kleparz, as well as the standard of the town shown on the so-called 'Stockholm roll'. In conclusion, it must be said that the coat of arms of Kazimierz was not settled, and two variations were used. As such, it is difficult to determine, which one was dominant.¹⁴ We publish one of the versions, showing the crowned monogram and two royal heads on the sides. However, it must be remembered it would be equally eligible to publish the crowned monogram. The colours of the coat of arms were reconstructed on the basis of source records: a golden monogram K, crowned with a golden crown, on a red background. The golden royal torsos are a suggestion of the author of this work. The coat of arms was printed on the cartouche from the fourth quarter of the sixteenth century.

Coat of arms of Biecz

The sources fail to provide an unambiguous description of the coat of arms of Biecz. The oldest seal, from the fifteenth century, shows standing figures of the patrons – St. Peter and St. Paul, with their attributes, the key and the sword, and a letter B (the monogram of the town) at their feet.¹⁵ City seals from the sixteenth–eighteenth centuries prove that this coat of arms was stable, but it always appears without escutcheon. Only on the fifteenth century court seal does the shield appear, with the torso of St. Peter and the key on it. Numerous records from the fifteenth–eighteenth centuries show the monogram of the city, the letter B, on an escutcheon. This version was very popular and appears on the parochial church, on the sixteenth century city seal, the super ex libri, and on an image from the town books, and on a sgraffito on the belfry.¹⁶ Despite that, there is a common belief in the current heraldic literature that the coat of arms of Biecz showed St. Peter and St. Paul and the monogram B.¹⁷ This version of the coat of arms is also now used by the city. This publication contains the coat of arms used in the Old Polish period: a golden monogram B on a red background. The style of the

monogram was copied from a tile dating back to the beginnings of the sixteenth century.¹⁸ The coat of arms was placed on a cartouche from the fourth quarter of that century.

Coat of arms of Nowy Sącz

The coat of arms of Nowy Sącz has its origins in the seals showing the patroness of the parochial church, St. Margaret. The oldest seal of the town Kamiénica (future Nowy Sącz), probably from the end of the thirteenth century, shows St. Margaret standing next to a dragon, and holding him on a rope. Another seal, from the beginning of the fourteenth century, shows St. Margaret on a throne, with a dragon at her feet, St. Margaret holding a cross on a long shaft with a banner in one hand, and a model of the church in the other.¹⁹ The image of St. Margaret known later as a coat of arms appears only on a fourteenth century city seal. The saint is standing on a dragon and is holding in her right hand a cross on a long shaft, with which she pierces the dragon's throat, in her left hand she is holding a palm branch, she has a crown on her head, and a halo.²⁰ The oldest confirmation of this presentation of St. Margaret as a coat of arms appears on the seal of the court of six towns from 1544–1545.²¹ The only difference is the dragon lying on his back, and St. Margaret has no halo. The city seals from the Middle Ages and the Modern Age confirm that the coat of arms stabilize. We do not know the colours of the coat of arms of Nowy Sącz in the Old Polish period, so we accept the colours used now.²² The background is blue, St. Margaret is wearing a white gown, a red coat, and a golden crown, and has a golden halo around her head. The figure is holding a golden cross on a long shaft in her right hand, and a palm branch in her left hand. She is standing on a green dragon. This composition does not conform to the rule of alteration. The artistic style of the coat of arms was copied from *Miasta Polskie w Tysiącleciu*, which was based on the Old Polish sources.²³ In order to refer to the end of the sixteenth century, the coat of arms was placed on a cartouche from the fourth quarter of that century.

Coat of Arms of Wieliczka

The fully-formed version of the coat of arms of Wieliczka appears already on the oldest city seal from the fifteenth century.²⁴ It shows mining tools: a mattock between two pickaxes. City seals from later period, from the sixteenth–eighteenth centuries, confirm that this version of the coat of arms was stable. It is assumed that the tools were golden, on a red background. The style of the coat of arms was copied from *Miasta Polskie w Tysiącleciu*, based on the Old Polish sources.²⁵ The coat of arms was placed on a cartouche from the fourth quarter of the sixteenth century.

Coat of arms of Częstochowa

The coat of arms of Częstochowa comes from the oldest fourteenth century city seal. It shows the city wall with an open gate and lowered bars, and three towers, of which the one in the middle is

lower than the two on the sides. On the heraldic right tower there is a lion sejant erect facing left, and an eagle with a golden crown, beak and claws facing right.²⁶ The lion and the eagle refer to Władysław Opolczyk, the founder of the city. The stability of this coat of arms is confirmed by two sixteenth century seals (great and small), and a seal from the second half of the eighteenth century. This coat of arms appears for the first time on a cartouche only in the end of the eighteenth century, however, we can presume that it was treated as a coat of arms of the city already in the Middle Ages, or in the sixteenth century at the latest.²⁷ We do not know the colours of the coat of arms of Częstochowa in the Old Polish period, so we accept the colours used now, as historically and heraldically justified. The shield is blue, the wall and the towers white, the bars black, the lion and the eagle golden. The artistic style of the coat of arms was taken from *Miasta Polskie w Tysiącleciu*, based on the Old Polish sources.²⁸ In order to refer to the end of the sixteenth century, the coat of arms was placed on a cartouche from the fourth quarter of that century.

Coat of arms of Siewierz

The first information concerning the signs of the city of Siewierz comes from the last quarter of the eighteenth century. In 1782 two seals were made, for the mayor and for the vogt, showing scales. The mayor's seal has a crescent between the scales, the vogt's seal – a six-pointed star.²⁹ Perhaps the fact that the same image appeared on both seals is proof that it had a long tradition and was well-known to the authorities and inhabitants, even serving as a coat of arms. However, this is not certain. In 1792 King Stanisław August Poniatowski conferred the coat of arms on Siewierz: 'a black eagle without a crown, girdled with a letter S, holding scales in one leg, which means justice, and an olive branch in the other'.³⁰ This is the first known coat of arms of Siewierz. In the current heraldry the coat of arms of Siewierz shows a white Eagle,³¹ but to faithfully refer to the Old Polish heraldic tradition, we publish a black Eagle with a golden monogram S on his breast, a golden olive branch, and golden scales in his claws. To maintain the style of other city coats of arms, the coat of arms of Siewierz was placed on a cartouche from the fourth quarter of the sixteenth century.

III.7.2 SANDOMIERZ VOIVODESHIP

Coats of arms of Sandomierz Voivodeship and Sandomierz city

Henryk Rutkowski

The coat of arms of Sandomierz Voivodeship consisted of two parts, created by dividing the escutcheon in length: on the heraldic right field there were six crosswise stripes, and on the left field – stars. The number of the stars and the colours of the coat of arms settled around the middle of the sixteenth century. In the copy of Jan Długosz's armorial from 1575 (the so-called Kamyn manuscript) and in Bartosz Paprocki's armorial from 1584, the coat of arms of Sandomierz Voivodeship looks as follows: there are three red stripes and three white on the right field, and on the left blue field there are nine yellow (golden) stars, three in each of the three rows.¹ In this form the coat of arms of Sandomierz Voivodeship was used also in the following centuries.² In the copy of Długosz's armorial from the middle of the sixteenth century (the so-called arsenal manuscript) one can see, on the other hand, an even older form: there are twelve stars, and the stripes are red and yellow (golden).³ The banner of Sandomierz Voivodeship, carried during the funeral of Sigismundus the Old in 1548 had, according to a contemporary report, stripes in these colours, but there were only nine stars, just as in the later period.⁴ The same banner was described differently, probably incorrectly, by Marcin Bielski, who mentioned red and white stripes, not red and yellow.⁵ Finally, it could be added that according to Długosz's description of the banner during the battle of Grunwald, there were only seven stars on the coat of arms of Sandomierz land.⁶

In order to present the coat of arms in the form which was used in the sixteenth century on our map, we could not have based it solely on the drawing from the arsenal manuscript, which formed the basis for the drawings of coats of arms in previous works.⁷ The number and layout of the stars, as well as the colours of the coat of arms, was presented in accordance with the later sources mentioned, and the drawing from the arsenal manuscript served as a pattern for the layout of the stripes and the shape of the stars. The assumed shape of the shield of the coat of arms of the voivodeship was the same as on the map of Mazovia.

The coat of arms of the city of Sandomierz in the second half of the sixteenth century was a crowned eagle, and before there were other images presented on the city's seals – half of an eagle, king on a throne, defensive wall, the Annunciation.⁸ The image of the coat of arms and of the shield were prepared based on the seal, whose print survived on a document of the town council from

III.7.4 GREATER POLAND

Coats of Arms

Michał Gochna

We have published the coats of arms of both Greater Poland voivodeships on the main map.

The coat of arms of the **Poznań Voivodeship** was a white eagle without a crown and a band on the wings, facing right, on a red background. This image was developed based on source records from the sixteenth century, mainly by Bartosz Paprocki, who in both of his main works presented drawings of the coats of arms accompanied with descriptions of the coat of arms and their colours.¹ I placed the coat of arms on the shield in the cartouche from second half of the sixteenth century.

I recreated the coat of arms of the **Kalisz Voivodeship** in a similar manner as I did with the coat of arms of the Poznań Voivodeship. It depicts the head of a crowned buffalo (aurochs) head with a golden ring in its nostrils, placed on a checkered background.²

The only known image of the coat of arms of the Wschowa land – the Jagiellonian cross – is provided by Zygmunt Słupski.³ This motif appears in the coat of arms of Wschowa (see below), with the difference that there are two rings between the beams of the cross in the town's coat of arms. The town's coat of arms during the reign of Stanisław August Poniatowski was limited only to the aforementioned cross with rings (both figures present on the coat of arms previously were removed).⁴ It can, therefore, be hypothesized that Słupski presented the town's coat of arms as the one for the entire Wschowa land (the disappearance of both rings from the regional coat of arms remains a mystery), while a coat of arms of the Wschowa land probably did not exist at all (we do not have any sources confirming its existence the sixteenth century). Therefore, we are not publishing it in this volume of the AHP. It should be noted that in the sixteenth century, the status of the Wschowa territory – whether it was only a district or also land – was not specified.⁵

Moving on to the description of the coats of arms of the towns, a little more space should be devoted to the coats of arms of two towns in particular – Kalisz and Pleszew – which raised the greatest concerns.

The coat of arms of the city of Kalisz from the sixteenth century⁶ was reconstructed based on a red seal attached to a document from 21 March 1565, issued by the mayor Jan Gumowski and the town councilors to the butchers' guild in Kalisz.⁷ A copy of this seal, which was also an important

⁵ See section about the Wschowa land in M. Gochna's *Borders of the state territorial units* [in:] AHP Greater Poland in this edition III.2.1.4.

⁶ T. Związek is the author of the section about the coat of arms of Kalisz.

⁷ AP Poznań, Cechy miasta Kalisz, sign. 27. For more on the sigillography of Kalisz, see M. Haisig, *Sfragistyka Kalisza*, [in:] *Osiemnaście wieków Kalisza*, vol. 1, ed. A. Gieysztor, Kalisz 1960, pp. 218–220. See footnotes for further literature on the subject. Unfortunately, the sixteenth century town documents stored in AGAD before the war were taken to Poznań in the 1940s, from where they did not return. Negative copies of these documents were made during that time period; the preserved town seals were x-rayed and, therefore, remain illegible. Parchment manuscript. no. 3737 (1526) and 3991 (1584) have no seals; on parchment manuscripts. no. 3785 (1542) the seal is damaged; on no. 3807 (1547), no. 3917 (1565) seals are present.

source of inspiration in these works, was published by Kazimierz Stefański before World War II.⁸ The seal has a diameter of 40 mm and hangs on a green and brown rope. The inscription on its rim reads: SIGILLVM CIVITATIS CALIS, with vegetative ornaments between the individual words. The imprint shows a trumpeter dressed in protective gear, standing on the city walls at night and facing to the right.⁹ He is winding a horn, which has a six-pointed star above it. The trumpeter is surrounded by two towers, each with two pairs of vertical windows. The roofs of the towers are crowned with battlements and semi-circular domes with spheres at the top. In the centre of the town walls there is an open gate with a portcullis raised to one third of its height. Above the town gate, there is a shape at the top of the walls that can be interpreted as a cartouche of the coat of arms – the trumpeter is partially hidden behind it.

The colours of the town's coat of arms are unknown,¹⁰ which is why they have been reconstructed in accordance to the general rules of heraldry, as suggested by Jan Marczyński.¹¹

The first known image of the Pleszew coat of arms is a drawing from its town book from 1583. It shows a tower with a pointed roof with three spheres, at its foot there is a structure, most likely a fence, on the sides of which feathers or mantlings protrude; below the fence, at the very bottom of the coat of arms, there is also a floral motif.¹² Another well-known image of the coat of arms comes from the seal of the Pleszew court of the jury and vogt. It is described by Marek Adamczewski: 'In the field of the seal, a tower, standing on a narrowing base, with battlements, covered by a pointed roof'.¹³ The narrowed base mentioned in the description can be equated with the fence from the image of the coat of arms from 1583. Both representations confirm that the tower had a pointed roof. Therefore, the description of the image of the coat of arms from 1630 confirms the use of the above-mentioned coat of arms from 1583 in the second half of the sixteenth and the first half of seventeenth century in Pleszew.

On the other hand, the modern version of the coat of arms – containing a roofless tower with battlements, mounted on four spheres – can be dated no earlier than the eighteenth century.¹⁴ Its seal imprint is dated to 1782. Its lower part is distorted; therefore, it cannot be assessed whether at the base of the tower there is a fence or balls.¹⁵ According to Marian Gumowski, the eighteenth-century image was adopted as the prevalent one in the nineteenth century.¹⁶ This view has been confirmed, among others, by town seal from 1811.¹⁷

Unfortunately, we do not possess information about the colours of Pleszew's coat of arms from 1583, which is why the colour scheme of the modern coat of arms has been used: a blue field and a white tower. I chose red for the roof based on analogous coats of arms of other towns in Greater Poland, which also share a blue field.¹⁸ The colour of the fence under the tower caused the biggest issues. Since I was unable to find any similar elements in other coats of arms of towns in Greater Poland, I decided that white (the colour of the tower) would be most appropriate.

⁸ K. Stefański, *Herb i pieczęcie m. Kalisza*, Kalisz 1927, p. 26.

⁹ This is a significant change from the medieval seal, where the trumpeter turned heraldic left. This change might be related to the attempted forgery of the town seal from 1511; see: M. Haisig, *Sfragistyka*, pp. 218–219; K. Stefański, *Herb i pieczęcie*, pp. 20–26. For the erroneous interpretation of documents linked to the forgery of seals in the late nineteenth century see A. Chmiel, *Materiały sfragistyczne. Pieczęcie miejskie*, „Wiadomości Numizmatyczno-Archeologiczne”, vol. 4, 1899, no. 1, pp. 15–18.

¹⁰ B. Paprocki only stated that the portcullis is black (idem, *Herby rycerstwa polskiego*, pub. K.J. Turowski, Cracow 1889, p. 900: 'The town of Kalisz uses the following coat of arms: a black portcullis in the walls, two towers, between which a man is blowing a trumpet; the town is in a secluded and defensible place, by the river Przosna on a great plain'); see also M. Haisig, *Sfragistyka*, p. 230.

¹¹ J. Marczyński, *W sprawie herbu i innych znaków miasta Kalisza. Władzom i samorządowcom miasta pod rozprawę*, „Zeszyty Kaliskiego Towarzystwa Genealogicznego. Kalisia”, vol. 4, 2015, pp. 79–98.

¹² AmPl, I, 13, p. 3.

¹³ M. Adamczewski, *Heraldyka*, p. 399; for the original seal, see ADWł, Dokumenty, sign. 1321.

¹⁴ According to M. Adamczewski (idem, *Heraldyka*, pp. 398–399) this image appeared in the years 1777–1784. However, M. Gumowski (idem., *Pieczęcie i herby miast wielkopolskich*, Poznań 1932, p. 246) dates it to 1777–1799.

¹⁷ AAG, ACons. E 32, k. 457.

¹⁸ Cf. the coats of arms of Trzciel and Żnin (M. Gumowski, *Pieczęcie i herby*, pp. 351–352, 402–405) and modern iterations of the coats of arms.

Less controversial is the coat of arms of **Poznań**. It developed gradually. In the sixteenth century, many types of the town's coat of arms were in use. Since it is impossible to establish which one was the legitimate one, I used the image from the oldest great seal, used in the town chancellery until 1637, as my basis. This image, with minor alterations, was also used in other town seals during the sixteenth century. It consists of a brick wall with three towers, of which the middle one – with battlements – is the tallest. In the opening of the gate, there are two crossed keys with a cross above them. Over the middle tower hangs a gothic shield with an eagle. On the tower, to the right, there is St. Paul with a sword leaning on his right shoulder; on the left side, there is St. Peter with a key on his left shoulder. Crescents can be found beside the figures of the saints, while six-pointed stars appear above them. The colours of the coat of arms were drawn from the polychrome decoration in the Great Hall of the Poznań Town Hall, dated to 1555. Thus, the wall, towers, saints and eagle are white, the keys, cross, crescents, six-pointed stars, St. Paul's sword, St. Peter's key, halos of the saints, the beak and talons of the eagle – gold, the background of the smaller shield – red, the field – blue.¹⁹

In the case of the remaining coats of arms, I referenced primarily Mark Adamczewski's work. The coat of arms of **Gniezno** – with an uncrowned white eagle turned right on a red field with a crown placed over the upper edge of the escutcheon – was found on the town seal from the years 1533–1653.²⁰ The coat of arms of **Kościan** – a tower with an open gate and two windows, with a battlemented gallery placed on supports – is based on the town seal dated to 1579–1597.²¹ During this period, there also may have been a coat of arms with a slightly different emblem: a tower with open doors, two windows, battlements, but without the roof and supports.²² Since it was impossible to establish which version was the dominant one, I decided on the more elaborate variation. I chose the colours suggested by Marian Gumowski: white field, red walls, blue roof.²³ The **Wschowa** coat of arms has been recreated based on the image from the town seal from the years 1606–1801.²⁴ It shows the Virgin Mary wearing a crown and with a raised hand facing left. Beside her stands Jesus Christ, also crowned, turned towards Mary with a raised right hand, in his left hand holding a sphere. Beneath them is located an escutcheon (in a cartouche), in which a double (Jagiellonian) cross can be found, with two rings between the arms of the cross.

The coat of arms of the bishopric town **Śródka** – a figure in a crown and coat, with a raised right hand holding a lily – was based on the seal from 1585.²⁵ The coats of arms of **Chwaliszew** and **Ostrów**, as was concluded by Marek Adamczewski, were identical. Their images – two crossed keys and a vertical sword (cleaver) – are known from a seal dated to 1571 and 1620.²⁶ The colours of the coat of arms are a red field and a golden emblem.²⁷ The coat of arms of the bishopric **Dolsk** is derived from seals dated to 1572 and to the seventeenth century. They represent the Archangel Michael who is trampling a dragon, with spear shafts crossed at the top. The two images can be differentiated by the hand in which the spears are held: in this reconstruction, the figure is holding them in his right hand. The colours are the following: the field is blue, the dragon is red, and the Archangel is white in a golden armour.²⁸

III.7.5 SIERADZ AND ŁĘCZYCA VOIVODESHIPS

Stefan K. Kuczyński

Land and city coats of arms were presented on the main map according to the sixteenth century sources.

The images of the coats of arms of Sieradz and Łęczyca Voivodeships and Wieluń land were based on the manuscript roll of arms ‘Stemmata Polonica’ from before 1569, which was an illustrated and completed copy of ‘Klejnoty’ attributed to Jan Długosz, kept in the Library of the Arsenal in Paris.¹ The emblems were taken from this roll, and their stylization was slightly changed, the shield patterns were also modified a bit. The colours of the coats of arms were copied from the source. Gold and silver were presented as yellow and white. The coats look as follows:

Coat of arms of Łęczyca Voivodeship – parted per pale, red half-lion in golden crown on the right silver, silver half-eagle in golden crown with such beak and legs on the left red field.

Coat of arms of Sieradz Voivodeship (Sieradz land) – parted per pale, black half-eagle in golden crown with such beak and legs on the right golden field, silver half-lion in golden crown on the left red field.²

Coat of arms of Wieluń land – Divine Lamb of God in golden cross nimbus, with a white flag, on which a red cross, on green grass.

The presentations of the coats of arms of the cities Łęczyca, Sieradz, Piotrków, and Wieluń were made on the basis of the sixteenth century seals of these cities and other source records from that period. The shape of the escutcheons was assumed in relation to the coats of arms of lands from the ‘Stemmata Polonica’. The colours of the coats of arms were taken from later sources.

The coat of arms of Łęczyca is based on the emblem appearing on the seal of the city, known from impressions found on documents from 1534–1544. The seal was probably made in the fifteenth century (here without the trumpeter on the middle tower, appearing on the oldest seal of the city from the fourteenth century).³

The city seal served as a base for the coat of arms of Sieradz. The seal is known from the impression from 1565, it was still used in the seventeenth century.⁴

The coat of arms of Piotrków refers to the image of the city’s coat of arms in the print of Fabian Myśliński from 1646, in which this coat of arms is presented in the fourteenth century stylization.⁵

III.7.6 CUYAVIA AND DOBRZYŃ LAND

Coats of arms of voivodeships and towns

Marcin Hlebionek

Brześć and Inowrocław Voivodeships (Cuyavia)

The Brześć and Inowrocław Voivodeships derive their coats of arms from the Cuyavian line of the Piast dynasty. This heraldic design was formed in the second half of the thirteenth century, and when this branch of the Piasts died out in the second half of the fourteenth century, it was adopted by the territory which was previously held by the descendants of Duke Casimir I Konradowic of Cuyavia. As a land coat of arms, the Cuyavian hybrid is unique, both in terms of its colours and the arrangement of emblem elements. The coats of arms of the voivodeships concerned are not mentioned in the armorials of the fifteenth and first half of the sixteenth century, and heraldists only referred to the coat of arms of Cuyavia, as common to both voivodeships. The image of the Cuyavian coat of arms placed in the heraldic frieze located in Sandomierz Cathedral, dated to the first half of the fifteenth century, shows a red half-lion and a white crowned half-eagle on a blue field.¹ However, according to the description of the Cuyavia banner as used during the Battle of Grunwald from Długosz's *Roczniki*, the field of the coat of arms was supposed to be parted per pale, with a black crowned half-eagle on a golden field on the *dexter* (right) side and a white crowned half-lion on the red field on the *sinister* (left) side.² In turn, according to *Klejnoty*, a work which is also attributed to Długosz, the coat of arms was supposed to represent 'pars una medietatem aquile rubee coronate in campo glauco et pro altera medietate medietatem leonis nigri coronati eciam in campo glauco'.³ Different arrangements of both components of the emblem and the tinctures used are noted in fifteenth-century foreign armorials. According to the Lynceni's armorial and Codex Bergshammur, on a shield parted per pale, there was a silver half-lion on the red right side, and a red half-lion on the golden left side. According to the *Złote Runo* armorial ('Armorial Toison d'Or'), the coat of arms represented a black half-lion on the golden right side and a red half-eagle on the silver left side on a shield parted per pale.⁴ Perhaps these discrepancies illustrate the successive stages of the formation of the coat of arms of this territory, especially the introduction of gold, which later filled the entire field. The shape of the Cuyavian coat of arms stabilised in the sixteenth century. The coat of arms with a black half-lion and a white half-eagle under a common crown on a golden field was used to represent Cuyavia already on the coloured Sejm woodcut from Łaski's Statutes,⁵ although in *Mszał Jasnogórski*, the Cuyavia coat of arms has a silver half-lion on the right red side, and a black half-eagle on the left golden side, under a common crown.⁶ Separate descriptions of the coats of arms of the Cuyavian voivodeships date back to the sixteenth century.

In *Gniazdo Cnoty*, Bartłomiej Paprocki distinguishes between the two coats of arms, although he describes only the coat of arms of Brześć Voivodeship (red half-eagle and black half-lion on the golden field), as the coat of arms of Inowrocław Voivodeship was not known to him.⁷ On the other hand, in his work *Herby Rycerstwa Polskiego*, he states that both Cuyavian voivodeships used one coat of arms, derived from the Cuyavia coat of arms, in which both elements of the hybrid were supposed to be black and the field – golden.⁸ Joachim Bielski and Aleksander Gwagnin, describing the coats of arms of Brześć and Inowrocław Voivodeships separately, also reduce them to a common pattern, but with the colours corresponding to the image of the coat of arms as depicted in Łaski's Statute.⁹ Kasper Niesiecki also assigns such colours to the coat of arms, although with the reverse configuration of their elements (a white half-eagle and a black half-lion on a golden field under a common crown).¹⁰ One has to agree with the opinion of Stefan K. Kuczyński, who believed that the colours of the coat of arms of the Cuyavian voivodeships were not entirely fixed at the end of the sixteenth century and even in the following centuries.¹¹

The reconstruction of the coat of arms was based on a model coat of arms published by Paprocki in *Herby Rycerstwa Polskiego*, assuming that the half-lion was black, the half-eagle was white (silver), and the field of the shield was golden, as depicted in Łaski's Statute.

Dobrzyń land

The coat of arms of Dobrzyń land is one of the oldest Polish land coats of arms. Its creation is connected with the return of that territory to the Crown in the mid-fourteenth century. The existence of this coat of arms even in the times of Casimir the Great is confirmed by numerous monuments of architectural sculpture. At that time, the emblem of the coat of arms depicted a crowned, bearded male head, often with horns, usually in a collar resembling a crown.¹² It appeared in a similar form in the fifteenth century. Nevertheless, the sources show evidence that this image was undergoing graphic evolution: with increasing frequency, the collar around the neck of the head was presented as a second, inverted crown. This is how the coat of arms of Dobrzyń land is depicted by Jan Długosz when he describes the land banner in his *Roczniki*, and a similar description can be found in *Klejnoty*, which are also commonly believed to be authored by Długosz.¹³ The fifteenth century also brings the first record of the tinctures of the coat of arms. According to Długosz's description of the Grunwald banners, the crowned horned head was placed on a yellow (golden) field. On the heraldic frieze from Sandomierz Cathedral, the emblem was placed on a blue field.¹⁴ Długosz states that the field of the coat of arms was supposed to be red; the Lynceni's Armorial, the Bergshammar Codex, and *Złote Runo* describe the field of the shield as black.¹⁵ At the turn of the sixteenth century, the shape of the coat of arms became more stable. On a coloured woodcut from Łaski's Statute, the coat of arms depicts a bearded male head with a golden crown with three fleurons on a red field. Horns grew out of the head, and at the bottom of the shield there was a second golden crown with three reverse fleurons. The coat of arms from the mid-sixteenth century is described in an analogous manner by the Arsenal manuscript of

Klejnoty,¹⁶ the armorial of Marek Ambroży from Nysa,¹⁷ and Bartłomiej Paprocki, although the latter does not mention its colours.¹⁸

The reconstruction of the coat of arms was based on its model version published by Paprocki in *Herby Rycerstwa Polskiego*, and the colours specified in historical sources – natural skin colour for the head, golden for the crown, black for the horns, and red for the field of the shield, as depicted in Łaski's Statute.

Brześć Kujawski

The coat of arms of Brześć Kujawski is derived from the seal images that appear even on the oldest, fourteenth-century seals of the town. It depicts a brick, embattled town wall with a closed gate, with three embattled towers above it. The middle one was the highest and featured a coat of arms with the emblem of the Cuyavia Piast line (a half-eagle and a half-lion). The standing figures of patrons are shown in the spaces between the towers: on the dexter side – St. Stanislaus *in pontificalibus*, with a crosier in his left hand, and, on the sinister side, St. Peter with two keys.¹⁹ A seal dating back to the fifteenth century contains the same image.²⁰ The design depicted on a sixteenth-century seal includes minor modifications: the central tower has a gable roof finished with a ball. On its right side, there is a kneeling figure, and on the left side, a standing figure representing St. Stanislaus.²¹ The coat of arms of the town appears in a different form in Paprocki's *Herby Rycerstwa Polskiego*. The illustration in this armorial shows a brick battlement in a cartouche, with three embattled towers, the middle of which is the tallest. In the wall there is a gate with open doors, and an uncrowned eagle facing left standing in the gateway. According to the description accompanying the image, Brześć had 'three towers for the coat of arms, the eagle as in Cracow'.²² Since the colours of the coat of arms in Old Poland are unknown, it was assumed that they corresponded with the heraldically and historically justified colours used in the town's contemporary coat of arms. The artistic stylization of the emblem was also taken from the contemporary version of the coat of arms.

Inowrocław

The image constituting the model representation of the old Polish coat of arms of Inowrocław appears on the town seal which dates back to the turn of the fifteenth century. The seal's field shows a coat of arms with an eagle between two battlemented towers connected through bases at the bottom, and a floral ornament above the shield.²³ The image of a shield with an eagle replaced the image from the fourteenth-century town seal which depicted a façade of a temple with two rosettes and a gable roof topped with a cross with a two-coloured flag.²⁴ This emblem, in the form developed at the turn of the fifteenth century, was still used in the sixteenth and seventeenth centuries, with just slight changes in the style of the image. At that time, the bases of the towers were reshaped to take the form of corners which bent towards each other, and the floral ornaments, originally located above the shield, were replaced by a heraldic lily. The lily first appeared on a mid-seventeenth century seal. Subsequent changes in the image of the town emblem took place in the eighteenth century, when the shield of the coat of arms disappeared and the eagle itself was depicted between the towers.²⁵ Bartłomiej Paprocki describes and illustrates the coat of arms of Inowrocław in a manner which does not take the local

²⁵ M. Adamczewski, *Heraldyka miast wielkopolskich*, pp. 340–341, no. B. 190–B. 195.

tradition into account, presenting it as a brick battlement with three embattled towers and an open gate with an eagle in the gateway. According to his description, the town was to have ‘three towers for its coat of arms, the eagle as in Cracow’.²⁶

We do not know the exact colours of the coat of arms in the times of Old Poland, and the significant changes that took place in the heraldry of the town in the eighteenth and nineteenth centuries make it even more difficult to determine. The reconstruction of the coat of arms was based on the image placed in the field of the town seal used in the sixteenth century. The solutions proposed by Marian Gumowski were adopted for the tincture: white (silver) for the shield’s field, red for the towers and their bases, green for the ornament, red for the inner shield’s field, and white (silver) for the eagle.²⁷

Dobrzyń-upon-Vistula

The only source of information about the shape of the coat of arms of Dobrzyń-upon-Vistula in the times of Old Poland are sphragistic monuments. Two town seals from the fourteenth century have been preserved to this day. Unfortunately, the image and legend on the first one, known to Marian Gumowski, were worn out and illegible.²⁸ The second, secret seal has an image of a two-storey tower between the capital letters D/B, with an open gate, topped with a hipped roof, with embattled long galleries at the height of the first and second floors, and two windows on the second floor.²⁹ This image, with slight corrections, repeats the representation depicted on the seal used in the sixteenth and seventeenth centuries. The difference between this version and the previous one is the fact that the tower has a gable, not hipped roof.³⁰ The ephemeral change of the seal’s image took place in the eighteenth century, when the emblem of the coat of arms of Dobrzyń land appeared in the field of the town’s seal.³¹

The reconstruction of the coat of arms was based on the image placed in the field of the town seal used in the sixteenth century. As the colours of the Dobrzyń’s coat of arms from the times of Old Poland remain unknown, we decided to adopt heraldically and historically justified colours used in the modern coat of arms of the town: the tower is white, the roof is green, the sigla are golden, and the field of the shield is red.

Włocławek

The only records of the coat of arms of Włocławek, used by the town in the sixteenth century, can be found in sphragistic materials. The coat of arms depicted on old Polish town seals probably comes from the Middle Ages. It appeared for the first time probably in the fourteenth century, after the renewed foundation of the town as was Piotr Bokota’s hypothesis, after the town was re-incorporated into the Crown under the Treaty of Kalisz (1343).³² The fourteenth-century seal, which has not been preserved to this day, showed the image of the town wall, with an open gate and three towers, the middle and highest of which was covered with a gable roof, and the two side ones were embattled. A shield with the Cuyavian hybrid was placed on the middle tower.³³ In the fifteenth century, the town simplified the seal image opting for three towers with gable roofs. There is a gate with a wicket in the middle, highest tower, and its roof is topped with a flag.³⁴ The town returned to the design known

from the fourteenth-century seal on another seal that was introduced in the sixteenth century.³⁵ Judging by the chronological element in the legend, the later seal of the town made in 1641 contains slight modifications: the shield with the emblem placed on the middle tower disappears from the coat of arms, and the gabled roof takes the shape resembling a bishop's mitre. Two side towers are topped with battlements.³⁶ The sixteenth-century seal of the Włocławek town court contains a slightly different image: a brick town wall with battlements and an open gate, and two towers above it: one embattled, the other slanted. In the eighteenth century, the emblem placed on the seals of the vogt's office was similar to the emblem of the general town seal.³⁷

The reconstruction of the coat of arms was based on the image placed in the field of the town seal used in the sixteenth century. Since the colours of the coat of arms in Old Poland are unknown, the heraldically and historically justified colours used in the contemporary coat of arms of the town were adopted, assuming white (silver) for the walls, and red for the shield field. The black colour of the cupola on the top of the central tower is consistent with the image of the emblem published in the work titled *Miasta Polskie w Tysiącleciu*.³⁸ According to Piotr Bokota, since the coat of arms on the middle tower of the emblem constitutes a reference to the Cuyavian branch of the Piast dynasty (probably to King Casimir the Great), and not the Cuyavian land itself,³⁹ the layout of the emblem and its colours were different than those of the territorial coat of arms. They correspond to the reconstruction of the coat of arms of the Cuyavian Piasts made by Stefan K. Kuczyński, according to which, the coat of arms consisted of a white half-eagle and a yellow (golden) half-lion on a red field.⁴⁰

III.7.7 MAZOVIA

Henryk Rutkowski

The coats of arms of the three Mazovian Voivodeships became established in the sixteenth century after this province was incorporated into the Crown.¹ The coat of arms of **Mazovian Voivodeship**, still sometimes called Mazovian Duchy after the incorporation, was the silver eagle (white) with spread wings on red background. This was an old symbol of the Piast dynasty, since the fourteenth century used as the coat of arms of the entire ducal Mazovia.² In the sixteenth century, the coats of arms of the two remaining voivodeships were created on the basis of this symbol. **Płock Voivodeship** adopted a black eagle with a golden (yellow) letter P on its breast as the coat of arms, and **Rawa Voivodeship** assumed the same eagle with the letter R.³

Just as on the map of Płock Voivodeship,⁴ the coats of arms of the voivodeships were based on a drawing from the armorial by Jan Długosz, made in the middle of the sixteenth century. The drawing shows the coat of arms of the Duchy of Mazovia, so also of the voivodeship of the same name: a white eagle (silver) with yellow beak and claws (golden) on a red background.⁵ In order to eliminate random mistakes of this drawing, the image of the eagle was slightly corrected, achieving a full symmetry of wings, legs and tail. The shape of the escutcheon was also modified. The same drawing, but with black eagle and added appropriate letters shows the coats of arms of Płock and Rawa Voivodeships.

The coat of arms of Old Warsaw was the mermaid, whose upper part was a woman wielding a sword and a shield, and lower part a bird-dragon. The drawing of the coat of arms of Warsaw was prepared on the basis of the city seal from the end of the sixteenth century.⁶

The coat of arms of Płock shows a gable and two church (cathedral) towers, with a defensive wall and an open gate below. The drawing was based on a fourteenth century seal.⁷

¹ Dr. Stefan K. Kuczyński advised us on the matter of coats of arms.

² Whereas the coat of arms of the Czersk-Warsaw province between the end of the fourteenth century and 1526 looked quite different: on shield party per cross, eagle and winged dragon interchangeably (former coat of arms of Czersk province); cf. III.7.8 PODLASIE VOIVODESHIP

Coats of arms of the Voivodeship and towns

Michał Gochna

The main map features a sixteenth-century coat of arms of the Podlasie Voivodeship, while the heraldic emblems of selected towns have been included on their corresponding town plans.

The Podlasie Voivodeship coat of arms was officially established during the creation of the Constitution on the 5 March 1569, which was a document pertaining specifically to the ‘reassimilation of the Podlasie lands into The [Polish] Crown’. In the document King Sigmund August decreed that the ‘military banners be adorned with the eagle, the symbol of the Polish Crown’.¹ This rule was not totally abided to by everyone. The knight on horseback emblem given to the Podlasie Voivodeship, in a similar way as it was to other Lithuanian provinces, at the diet of 1566 was used interchangeably.² This chapter, in accordance with Stefan Krzysztof Kuczyński’s conjectures accepts the split coat of arms, that is the crowned white eagle and Lithuanian *Pogoń* (Vytyś) on a *gules*, or red background that is divided in two down the vertical axis.³ The coat of arms featured on the map was based on its likenesses as found in the constitutional inventories of the Crown and the Grand Duchy of Lithuania and here created by Maciej Marcjan Ładowski as well as the ‘Polonia’ map, one charted by Karol Perthées.⁴ In both these depictions the eagle, when featured on the crest of Podlasie, is without a crown.⁵ These emblems were surrounded by a bordure borrowed from the *Pogoń* (Vytyś) crest that featured in the works of Bartosz Paprocki.⁶

¹ VC, vol. 2, no. 1, p. 219; VL, vol. 2, p. 79 (750).

² Although the crest was given to the Podlasie Voivodeship, it is noted that the matter concerned the standard for the Drohiczyń and Mielnik lands, with there being no mention of Bielsk. One may conjecture, however, that the coat-of-arms covered the voivodeship in its entirety. At this time a most similar image was bestowed on many a Lithuanian province, with variations being only in their colouration. The Podlasie standard was to have been yellow with the crest depicted against a white background; M.K. Любавский, *Литовско-русский Сейм. Опыт по истории учреждения в связи с внутренним строем и внешней жизнью государства*, Москва 1900, p. 230 (тиложеня): ‘хоругвь Дорогицкая и Мельницкая жолто-горачая, въ беломъ пою гербъ’. According to M. Bielski the Podlasie standard was to have had on the one side the Eagle with the Knight on horseback on the other, which could have resulted at the close of the sixteenth century in the portrayal of both emblems together on a shield; idem, *Kronika polska Marcina Bielskiego nowo przez Ioach[ima] Bielskiego syna iego wydana*, Cracow 1597, p. 9; K. Niesiecki, *Herbarz polski Kaspra Niesieckiego powiększony dodatkami z późniejszych autorów, rękopismów, dowodów urzędowych i wydany przez Jana Nep. Bobrowicza*, vol. 1, Lipsk 1839, pp. 204–207; B. Paprocki, *Herby Rycerstwa Polskiego Na pięciuro Xiąg rozdzielone*, Cracow 1584, p. 719; Gołaszewski, Zakrzewski, Ustrój, pp. 202–203.

³ S.K. Kuczyński, *Polskie herby ziemskie: geneza, treści, funkcje*, Warsaw 1993, pp. 95, 107, 183–184.

⁴ M.M. Ładowski, *Inwentarz Konstytucy Koronnych Y W[ielkiego] X[ięstwa] Litewskiego Przez Macieia Marcyana Ładowskiego od Roku Pańskiego 1550 do R[oku] 1683 Krotko Zebrany*, Lipsk 1733, p. 1 (Konstytucy Koronne y W[ielkiego] X[ięstwa] L[itewskiego]); K. Perthées, *Polonia secundum legitimas projectionis stereographicae regulas et iuxta recentissimas observationes adhibitiss MDCCLXX*, a copy of the map in the collections of ZAH. On Perthées’s map of Podlasie of 1795 we see only the Knight (*Pogoń*) in the Podlasie coat of arms.

⁵ On the strength of the aforementioned Constitution the image of the royal eagle was to have served in the depiction of all of the three Podlasie lands: Drohiczyń, Mielnik and Bielsk. Seal presses were even minted for each of them. We can see the Drohiczyń land seal with the emblem of the Eagle though without a crown in a document of 1590. One may therefore conjecture that the seals employed by the lands of Mielnik and Bielsk were similar in appearance. The Drohiczyń land were from 1516 to have employed seals with the Knight emblem in the coat of arms along with the letter ‘S’ and so it is not to be excluded that at a later time there was a fusion of both coats of arms as was the case with the emblem depicting the voivodeship itself. S.K. Kuczyński, *Polskie herby ziemskie*, pp. 183–184; M.K. Любавский, *Очерк истории Литовско-Русского государства до Люблинской унии включительно*, Москва 1915, p. 375; А.И. Шаланда, *Символы і гербы зямель Беларусі ў X–XVIII ст. геральдычна-сфрагістычныя нарысы*, Мінск 2012, pp. 96–97 (there the image of the seal for the Drohiczyń land of 1590).

⁶ B. Paprocki, *Herby Rycerstwa Polskiego*, p. 719.

The coat of arms representing the town of Drohiczyn was reconstructed on the basis of a municipal seal that dates back to 1581, and presented the head of an ox. It is presumed that this seal first started to be used regularly around the mid-sixteenth century. Sigillographic data from the eighteenth century indicates that the municipal authorities then employed a different crest, one featuring an oxen facing to the right, standing on a strip of land (with its right front leg raised or not, depending on the version in which it was depicted). The colours for the sixteenth century coat of arms were chosen in accordance with Marian Gumowski's depiction – a *sable* (black) ox on an *or*, or yellow shield.⁷ The bordure for this crest was borrowed from the aforementioned seal of 1581.

The reconstruction of the Bielsk town crest was aided by two municipal seals that date back to 1577 and 1616 respectively. They depict an aurochs facing the *dexter*, or left hand side of the shield. Over time the coat of arms evolved – seals from the eighteenth century depict the aurochs facing to the right, being heraldically the accurate side of the depiction. Here we have adopted the likeness that appears on the city seals, that is to say the left-facing version. The crest was coloured in accordance with Marian Gumowski, with *argent*, or a white background and red aurochs with gilded horns.⁸ The bordure was drawn on the basis of the seal of 1577.

Out of all of the municipal crests and coats of arms featured in this volume it is only the emblem for Mielnik that lacks visual indicators; ones that would categorically point to what it indeed looked like during the period of the sixteenth century. The crest first appears on an eighteenth century municipal seal, imprinted in two copies for the years 1777–1778. Here the depiction is of the pastoral Lamb of God in a field, surrounded by a halo and bearing a banner embellished with a cross. The top of the shield features a five-pointed crown, framed on both sides by palm branches which join together beneath the shield. The top also features two likenesses of the letter 'M'.⁹ This visualisation was utilized in the process of reconstructing the Mielnik coat of arms, although the recreation itself was limited to the items featured on the shield, with the palms, crown and letters being treated as seventeenth-century or eighteenth-century additions.¹⁰ The colouration was chosen on the example and model of a most similar crest from the Wieluń land featuring a silver lamb with a golden cross and halo along with a silver banner with red markings, with all this placed against green pasture and red background.¹¹ The aforementioned seal was also used as the basis for the crest's bordure.

The Węgrów crest was reconstructed on the basis of a municipal seal from 1596. It depicts a bear facing the *dexter* (left) side of the shield with the Columns of Giediminas¹² hovering above it. The colours, a red background with silver columns, are based on the description of the coat of arms found in a copy of a heraldry book compiled by Jan Długosz.¹³ The brown tint of the bear was ascertained on the basis of the Węgrów Privilege (charter) of 1651, in which King Jan Kazimierz grants the town, amongst other things, the rights to a new crest and municipal coat-of-arms. It features a bear **of natural colouration**, facing the sinister, or right side of the shield with its front right paw outstretched and the emblem of the Radziwiłł Bugles embellished.¹⁴ The crest is surrounded by the same bordure that features on the seal of 1596.

III.7.9b ROYAL PRUSSIA

Coats of arms of the province, voivodeships and towns

Marcin Hlebionek

The coat of arms of Royal Prussia was included in the set of Polish land coats of arms in the second half of the fifteenth century upon the incorporation of the Prussian lands into the Crown in 1454. In the same year, the first image of the escutcheon of this territory – eagle with a crown on its neck – appeared on the pennies minted in the Toruń mint. Differing from the version known from years to come, it illustrates the evolution of this coat of arms.¹ Already in 1456, another version appeared on the seal of the governor of this territory, as well as the slightly later (1457) issue of Toruń coins. It depicted an eagle with a crown around its neck, with an arm holding a sword rising from the heraldic right of the eagle's torso (Sword Eagle). The sign appears in a similar form on the seal of Kazimierz Jagiellończyk, in which the vambraced arm grows not from the eagle's body, but its right wing. In this form, the shield of the Royal Prussia coat of arms was preserved and used in modern times, as attested by subsequent national seals of Royal Prussia, but also numerous monuments of architectural sculpture.² It was also referred to in the fifteenth and sixteenth centuries by the coats of arms of the provinces into which Prussian territory was divided (see below). Information about its tinctures comes from *Klejnoty [Jewels]* presumably by Jan Długosz: the field of the shield was to be argent (silver), the eagle was sable, the crown – ore and the armed arm was the colour of nature.³ Such tinctures of the coat of arms were confirmed by its depiction in multiple sources: the painting *Okręt Kościoła* [Ship of the Church] (from around 1500), once located in the Artus Court in Gdańsk, stained copies of the coat of arms from Jan Łaski's *Statuty* [Statutes], and the armorials by Marek Ambroży of Nysa or Bartłomiej Paprocki.⁴ It was only in Joachim Bielski's *Chronicle* that a mention of different tinctures of the coat of arms appeared. According to Bielski, the coat of arms of Royal Prussia was supposed to represent the white eagle in the red (gules) field, with a golden (or) crown around its neck and an armed arm growing out of its wing.⁵ Although this information was repeated in subsequent armorials (e.g., by K. Niesiecki⁶), such tinctures of the coat of arms were rather not used publicly, as evidenced by the set of Old Polish flags of Prussian voivodeships described by Stefan Krzysztof Kuczyński.⁷

The reconstruction of the coat of arms was based on the image placed on the first national seal of Royal Prussia, also used in the sixteenth century, with the following tinctures: sable (black) for the Eagle, or (gold) for the crown, proper for the armed arm and argent for the shield field.

⁷ S.K. Kuczyński, *Polskie herby ziemskie*, p. 204.

Chełmno Voivodeship

As we have already mentioned, the coat of arms of the Chełmno Voivodeship in the sixteenth century referred to that of the province. As in the coat of arms of Royal Prussia, also in the provincial coat of arms, there was a black (sable) eagle in a silver (argent) field, with a golden (or) crown around its neck and an armed hand rising from its right wing or body. This shape of the provincial coat of arms is described by Długosz's *Klejnoty*, and in the seventeenth century it was placed on the land seal of this province, from which it disappeared in the next century and was replaced by the crowned Eagle.⁸ According to some nineteenth-century researchers, the tinctures of the coat of arms of Chełmno Voivodeship corresponded to those assigned to Royal Prussia by Joachim Bielski, as described above.⁹

The reconstruction of the coat of arms was based on the image from the first country seal of Royal Prussia, also used in the sixteenth century, with the following tinctures black (sable) for the Eagle, gold (or) for the crown, natural for the hand of the armed arm and white (silver, argent) for the shield field.

Malbork Voivodeship

Similarly to the Chełmno Voivodeship, the Malbork Voivodeship in the sixteenth century also referred in its coat of arms to that of the Royal Prussia, which represented a black eagle in a silver field with a crown on its neck and a vambraced arm rising on the heraldic right side of its body.¹⁰ The later tradition assigned some different tinctures to the coat of arms of Malbork Voivodeship: silver field, within a red (gules) eagle with a crown around its neck and a vambraced hand rising from its right wing or its right side of the body.¹¹

Again, the reconstruction of the coat of arms was based on its shape presented on the first national seal of Royal Prussia, also used in the sixteenth century, with the following tinctures: sable (black) for the Eagle, or (gold) for the crown, natural for the hand of the armed arm and argent for the shield field.

Pomeranian Voivodeship

After the Second Toruń Peace, all three Prussian voivodeships, Pomeranian included, used the provincial symbol (a black eagle with a crown around its neck and a vambraced arm rising from the right wing) as their coat of arms. This is how the coats of arms of the lands of Royal Prussia are described by Długosz's *Klejnoty*.¹² However, in the course of the sixteenth century, profound changes took place in the heraldry of the Pomeranian Voivodeship. The coat of arms initially used there (the Sword Eagle) was gradually being replaced by the Griffin, previously associated with the heraldry of Western Pomerania in general, and the Duchy of Słupsk in particular.¹³ The red griffin in the silver field was still only attributed to the Duchy of Słupsk by Bartłomiej Paprocki in his *Gniazdo Cnoty [The Nest of Virtue]*,¹⁴ but on the pages of slightly later *Herby rycerstwa polskiego [Coats of Arms of the Polish knights]* he already associates it with the Pomeranian Voivodeship.¹⁵ Griffin as the charge in the coat of arms of the Pomeranian Voivodeship is mentioned in the chronicle of Joachim Bielski ('in the silver field, the black Griffin')¹⁶ and later rolls of arms.¹⁷ From Błażej Śliwiński's research, we gather that the belief that it was the Griffin that was the proper coat of arms of Gdańsk Pomerania (and thus the Pomeranian Voivodeship) began to gain its strength at the turn of the sixteenth and seventeenth centuries. That was also a result of assuming the Griffin as a charge of the dukes of Gdańsk,

¹⁶ J. Bielski, *Kronika polska*, p. 8. Supposedly, contrary to the Paprockis' findings, the Griffin's colours may be connected with that of the Royal Prussia coat of arms.

¹⁷ Cf. e.g., *Herbarz polski Kaspra Niesieckiego*, p. 222; S.K. Kuczyński, *Polskie herby ziemskie*, p. 202; Błażej Śliwiński dates the common conjecture that the Griffin was the oldest coat of arms of the Pomeranian Voivodeship to the turn of the sixteenth century and seventeenth century. B. Śliwiński, *Herb województwa pomorskiego*, p. 155.

as evidenced by the placement of this coat of arms on the ducal tomb in Oliwa from 1615.¹⁸ In the seventeenth century, despite some turbulences, the Pomeranian Voivodeship's symbolic representation was dominated by the image of the Griffin.¹⁹

The reconstruction of this coat of arms was based on the image placed on the first national seal of Royal Prussia, also used in the sixteenth century, with the following tinctures black (sable) for the Eagle, gold (or) for the crown, natural beige for the armed arm and white (argent) for the shield field.

Chelmino

The medieval seals of the town of Chelmino depicted a Teutonic Knight rider holding a spear with a banner with waves on it.²⁰ The early modern coat of arms of the town, however, derives from the image placed in the medieval privy (*sigillum secretum*) and signet seals of the town and depicts three or four wavy stripes per fess, usually with a cross pattée (*Krzyż kawalerski*) between them.²¹ Genetically, it can be associated with the coat of arms known from the seal of the Teutonic Vogts of Lipienek.²² Based on the description of the Chelmino banner from Grunwald given by Długosz, the sixteenth-century town's coat of arms can be reconstructed as follows: red (gules) field, within two wavy stripes with three bends per fess, with a cross pattée sable above.²³ The understanding of its symbology changed at the beginning of the seventeenth century. It is documented by the image of the Chelmino coat of arms published in the work of Paweł Kuszewicz from 1623²⁴ There, instead of wavy stripes (rivers), nine hills topped with a Knight's Cross were featured. A similar shape of the coat of arms appears on the town map from the Steiner album (1750, without the cross pattée though) and the front description of Jakub Czechowicz's *Praktyka Kryminalna [Criminology in practice]* from 1769.²⁵ Nevertheless, rivers still appeared on the town seals as long as until the partitions.²⁶

The reconstruction of the coat of arms was based on the image from the sixteenth-century town seal depicting three wavy stripes per fess with a Knight's Cross over the middle one, assuming the following tinctures: white (argent) for the stripes, black (sable) for the cross, and red (gules) for the shield field.

Malbork

The imagery of the seals of Malbork had already been established in the Middle Ages. The great seal of the town of Malbork depicted a battlement with a closed gate, above which there were three towers, two smaller ones the sides with a gable roof and two windows, and a higher tower in the centre, also with a gable roof and a shield on which a monastic cross was featured. The image on the

oldest privy seal differed from the grand seal in that the town wall was rounded, and the monastic coat of arms was not placed on the central tower.²⁷ As far as the modern era seals are concerned, they refer to the images known from the medieval privy seal of the town described above.²⁸ It seems that the image known from these seals corresponded to that depicted on the town's coats of arms. The tinctures from Old Polish times, however, are unknown.²⁹ According to M. Gumowski the coat of arms had the following tinctures: in a silver (argent) field, a red (gules) battlement with a closed golden (or) gate, over which three towers with blue (azure) gabled roofs topped with knobs, flanked with two side towers with two windows.³⁰ Such a shield of the coat of arms of the Teutonic Oder does not appear in modern sigillography.

The reconstruction of the coat of arms was based on the image from the sixteenth-century seal of the city, adopting the tinctures proposed by M. Gumowski: red (gules) for the building, gold (or) for the gate, blue (azure) for the helmets crowning the towers and white (argent) for the shield field.

Elbląg

Until 1478, there were two towns of Elbląg, using different coats of arms. On the great seals of the Old Town of Elbląg there was an image of a cog with a helmsman, with a flag on its mast, on the flag there was a cross below in the seal field. The town seal made around the mid-fourteenth century featured on the ship's stern castle there was a banner parted per fess, cross pattée within each field.³¹ Meanwhile, the cross in the seal field disappeared. The coat of arms featured on the banner was featured on a privy seal used since 1357. It depicts a shield parted per fess, first cross pattée field flanked by two mullets, second: lozenged field, within cross pattée.³² Such an emblem, however, sans mullets, appears consistently on the later seals of the Old Town.³³ The lozenged pattern of the second field of the coat of arms in the fifteenth and sixteenth centuries is not used consistently. This may have been a form of a hachure which is supposed to indicate the colour differentiation of both fields, impossible to achieve in the monochromatic design of the seal.³⁴ The New Town of Elbląg, located in the mid-fourteenth century had a completely different coat of arms, which first appears on the oldest town seal: the shield parted per pale, within dexter – three roses per pale, sinister – a cross.³⁵

²⁷ The great seal: F.A. Vossberg, *Geschichte*, p. 30, Taf V, no. 1; C. Beckherrn, *Die Wappen der Städte Alt-Preussens*, Königsberg 1892, p. 44; O. Hupp, *Die Wappen*, p. 19; M. Gumowski, *Pieczęcie i herby*, p. 116; idem, *Najstarsze pieczęcie*, pp. 143–144, no. 265, tabl. XXI, no. 265; The privy seal: F.A. Vossberg, *Geschichte*, p. 35, Taf. XIV, no. 20; C. ²⁸ O. Hupp, *Die Wappen*, p. 19; M. Gumowski, *Pieczęcie i herby*, p. 117.

²⁹ M. Gumowski, *Pieczęcie i herby*, p. 118, mentions tinctures of Malbork coat of arms, which was depicted in the armoria of Konrad Grünenberg. In fact, what was there depicted was the coat of arms of a settlement called *Maryenburg in Bolland* (see *Des Conrad Grünenberg Ritters und Burgers zu Costenz Wappenbuch*, ed. R. Stillfried-Alcantara, A.M. Hildebrandt, Görlitz 1875, p. 44; Lief. 12, XVI). Even if, as the publishers claim (the page title suggests that the coats of arms of the four castles of the Holy Roman Empire) it really refers to Malbork, Grünenberg still used an imaginary coat of arms with a red (gules) cross with white (argent) border in the black (sable) field. The architecture depicted in the shield was deemed by Gumowski a background of a sort, or a supporter indicating its owner.

After the formal merger of the two towns in the second half of the fifteenth century, the New Town of Elbląg still had its own seal, although the scope of its use was strictly limited only to court and internal documents.³⁶ The sixteenth-century seals of the New Town of Elbląg presented the town's coat of arms as it had been shaped in the Middle Ages.³⁷ The restrictions on the usage of the New Town seals and the coat of arms resulted in the coat of arms of the Old Town coming to the fore in the system of municipal symbols of power. With time, it became a symbol for the entire town. In the sixteenth century, the coat of arms of Elbląg featured the field parted per pale cross within each field. Information on the tinctures of the Elbląg coat of arms can be found in the description of the town and the Elbląg commandry flags captured by Poles at Grunwald written by Jan Długosz. The field was divided per fess counterchanged, first: white (argent) field, within – a cross gules, second field: gules, within – cross argent.³⁸ Such established tinctures were used by the town in the early modern period. In the second half of the sixteenth century, there was a belief, perhaps inspired by the town's oldest privy seals, that the lower field of the coat of arms should be obliquely counter checked with gold (or). The description of the coat of arms with a checkered bottom field can be found in the poem devoted to the coat of arms of the city by Frederick Zameli,³⁹ although it does not appear in the town's view painted in the mid-sixteenth century by Kaspar Henneberg.⁴⁰

The reconstruction of the coat of arms was based on the image of the fifteenth-century signet seal depicting the Angel of the Holder as a supporter, red (gules) for the cross and white (argent) for the first field, white (argent) for the cross and red (gules) for the second, bottom field. The tinctures appropriate for the shield supported, not attested by the sources, were blue (azure) for the robes, black (sable) for the hair, and a natural complexion.

Gdańsk

Until at least the middle of the fifteenth century, the town Gdańsk consisted of three parts: the Main, the Old and the Young. Both the great and the privy seals of the Young City of Gdańsk depicted the standing figure of St. Bartholomew with a sword raised in his right hand and his own torn skin in the left, flanked by two eagles.⁴¹ Its matrix was taken by the last mayor, Mikołaj Stoltzfuss, who escaped from the town in 1455.⁴² The history of the seal of the Old Town of Gdańsk is slightly more complex. Both the greater seal and the privy seal of the town contained the images of St. Catherine of Alexandria with her attributes (a sword in her right hand, the left holding a wheel) and the Emperor Maxymius huddling at her feet.⁴³ Formally, the Old Town of Gdańsk was merged with the Main Town in 1457. The actual date of the merger of both centres is, however, debatable. To such conclusions may point the fact that both matrices of the Old Town were beyond the control of the Main Town authorities in the second half of the sixteenth century. It was only in 1593 that they ordered the search for the Old Town typars (matrices), which led to the discovery of one of them in 1594. The second, made in silver, was found only in the eighteenth century and was donated to the collection of the Gdańsk court.⁴⁴ The merger of the two formerly independent towns into one organism prompted them to adopt the system of signs previously used by the Main Town of Gdańsk. The grand seals of the Main Town, drawing on

the sigillography of Lübeck, depicted a ship (cog, later a hulk) with a star (mullet) at the height of the stork's nest.⁴⁵ However, this image was not turned into the town's coat of arms proper. As in the case of other large Prussian towns (Elbląg, Toruń, Chełmno), the modern coat of arms of Gdańsk stemmed from the sign appearing on privy seals of the town. It first appeared on a privy seal, probably from the fourteenth century, as evidenced by the sealed documents from the first years of the fifteenth century. It depicted a shield with a double cross.⁴⁶ However, on the joint seal of Toruń and Gdańsk, also from the fourteenth century, the emblem of the latter takes a different form: instead of a double cross, in the heraldic left pale (*pobocznicą*) two crosses pattee in pale (within dexter pale: a coat of arms of the town of Toruń).⁴⁷ The escutcheon was preserved in such in both on town seals and the banner captured by Poles in the Battle of Grunwald.⁴⁸ By the privilege of 25 May 1457, King Casimir IV Jagiellon added an honorary crown emblem to the Gdańsk's coat of arms.⁴⁹ On the Gothic privy seal of the town from that time, the shield of the new coat of arms was supported by two lions salient.⁵⁰ In this form, the coat of arms was preserved and used in the centuries to come. Nevertheless, in the second half of the sixteenth century, there were some slight graphic corrections introduced changing its symbolic meaning. The upper arm of the cross above was moved away from the inner rim of the crown, which it overlapped with before. Supposedly, according to some researchers, it was aimed at manifesting the stronger position of the town with relation to the Crown.⁵¹ Information about the tinctures of the coat of arms can already be found in the description of the Gdańsk flag captured by Poles at Grunwald, which mentions two silver (argent) crosses within the red (gules) field.⁵² The tinctures of the crown can be determined drawing on the privilege by King Casimir, where it was indicated to be golden (or).⁵³

The reconstruction of the coat of arms is based on the image on the reverse of the Gdańsk thaler from 1577, also called "a siege thaler" (*talar obłęźniczy*). The tinctures of the coat of arms are well-grounded and attested by the sources: white (argent) for the crosses, gold (or) for the crown, red (gules) field of the coat of arms, supporters – beige.

IV. CONCLUSION

IV.1.3 CONCLUSION – LUBLIN VOIVODESHIP

Stefan Wojciechowski

Lublin Voivodeship in the second half of the sixteenth century was presented on a detailed map showing all settlements which existed at the time and were known to us and were possible to localize. Our aim was to present the complete settlement network and to place each settlement in its exact location, yet unfortunately we were unable to avoid minor flaws. This commentary offers a general description of our source basis and method of work and could only substantiate a small part of the facts shown on the map.

The map presents the Voivodeship of Lublin in the sixteenth century depending on the degree to which it was possible to reconstruct the settlement with its administrative divisions, roads and landscape with hydrography and forestation. As such it could be used in further historical research, and help – together with other similar studies – to create a complete picture of the old Republic in its greatest period.

(1966)

Translated by Agata Staszewska

IV.2.8 AFTERWORD

Marek Słoń

The programme for the Historical Atlas of Poland. Detailed maps of the sixteenth-century was presented in the preface to the Lublin volume published in 1966 and written by the first series editor, Władysław Pałucki.¹ It was then to have covered the 13 voivodeships of Crown Polish lands, and to be issued in eight publications. The then adopted numeration of the volumes from the inception did not reflect the order in which they were published: the earliest issue bore the number 3, after which appeared number 7, while the volume designated as being no. 1 – the Cracow Voivodeship, was only to appear in the subsequent century:

Volume no.	Year of publication	Shortened title	Volume editor	Series editor
1	2008	<i>Województwo krakowskie</i>	Henryk Rutkowski	Stanisław Trawkowski, Małgorzata Wilska
2	1993	<i>Województwo sandomierskie</i>	Władysław Pałucki	Stanisław Trawkowski
3	1966	<i>Województwo lubelskie</i>	Władysław Pałucki, collaborated on by Stefan Wojciechowski	
4	2017	<i>Wielkopolska</i>	Krzysztof Chłapowski, Marek Słoń	Henryk Rutkowski, Marek Słoń
5	1998	<i>Województwo sieradzkie i województwo łęczyckie</i>	Henryk Rutkowski	Stanisław Trawkowski
6	2021	<i>Kujawy i ziemia dobrzyńska</i>	Wiesława Duży with the cooperation of Arkadiusz Borek, Michał Słomski	Henryk Rutkowski, Marek Słoń
7	1973	<i>Mazowsze</i>	Władysław Pałucki	
8	2021	<i>Województwo podlaskie</i>	Bogumił Szady, Michał Gochna	Henryk Rutkowski, Marek Słoń

With this publication we are presenting the reader with the last of the planned volumes. This year there will also appear an atlas of Royal Prussia in the second half of the sixteenth century. This will constitute a supplement to the work by Marian Biskup published in 1961 as part 1 of series B – Overview maps² –which allows for this province equally to be included within the cartographic reconstruction of the Crown at a detailed scale and with an appropriate explanatory commentary. However, this will merely constitute a supplement to the series as such which will see closure with the present volume.

The foundation for the entire undertaking is the creation of two mutually connected elements of the historical landscape – the settlement network and the territorial structures with taxation *powiats*

¹ W. Pałucki, *Foreword*, [in:] AHP Lublin, in this edition I.1.3.

² MRP.

(districts) and Catholic parishes at the fore. On the basis of the hitherto state of research adopted has been the premise that for the Crown Polish lands in the second half of the sixteenth-century it is possible to show points of settlement and their affiliation to the lowest ranking units of the country's spatial division.

Here lie hidden several specific conditions. The first being the actual existence of a settlement; for example, the possibility to establish what constitutes a village and what does not or would not constitute the said. This is far from obvious, for the inhabitation and settlement of a terrain in no way has to involve the concentration of domiciliary seats or economic objects in relatively close-knit units of a stable localisation and name, beyond which extends an uninhabited expanse. Most probably such a situation did not take place on the Polish lands prior to the process of colonisation on the basis of quit-rent, and for certain today this is not the state of affairs. At present every point on the territory of the country belongs administratively to some settlement, while the indication of the boundary of built-up terrain usually causes difficulties – the existence of such a clear demarcation is an increasingly rare exception.

The second condition is the affiliation of such settlements to definite and defined spatial structures. The lowest tier of Church unit, one used however also by state administration, was that of the Catholic parish. This was able to arise and maintain itself where there were believers of this denomination. In turn the state division was based on the judicial court districts which almost always corresponded territorially with taxation districts and divisions. The jurisdiction of the land and castle courts extended only to gentry estates, and consequently did not formally encompass or cover the whole settlement network. In addition the work of such offices was never documented in such a way that there was a systematic listing of all the villages under their jurisdiction. However, the taxation apparatus did conduct such documentation. Taxation registers were not only a reflection – ones obviously incomplete and distorted – of the actual state of affairs but equally they formed the said. The very fact of recording a given village within a taxation statement included it within the sphere of a given unit. In the eighteenth-century verified was the extent of a district, checking whether a given village was included within it in the taxation registers for the previous two centuries.

And here we touch on the third condition, of a source nature. The premise for the creation of detailed maps of the sixteenth-century was that for every area several taxation registers had been preserved along with at least one visitation, if not for the exact period under study but for one not much later in time. Furthermore it was accepted that the taxation lists would be ordered in relation to settlements and districts, with inspections enumerating villages within parish divisions.

All of these conditions were for the entirety of the Polish lands generally fulfilled, but with every step closer to the end of the series one found oneself not only getting closer to territorial peripheries but equally to methodological boundaries as well. The scale of exceptions grew so markedly that it clearly showed the limited application of the model hitherto adopted. In the Greater Poland volume (*Wielkopolska*) it was not possible to maintain the principles for the reconstruction of parish districts; on its northern boundaries this was excluded by the combination of subsequent colonisation, a strong Reformation movement as well as the specifics resulting from the poor condition of the source base preserved.³

In the case of Podlasie the difficulties turned out to be even greater and to various degrees concerned not merely a small part but touched on the voivodeship as a whole. The greatest undertaking and here in keeping with the first of the fundamental premises behind the series inception – for a relatively clear difference to be determined between a settlement and its absence. Here extremely often the form was that of a gentry holding, that is the grouping of small hamlets dispersed across the environs of the main settlement. The spatial boundaries between them from time to time do not allow for an unequivocal differentiation of a village, while their onomastics were extremely variable. On this was imposed the specifics of ownership and the registration of payments. In Podlasie noted are not so much payments for a village as for a given owner, while the estates and properties were often divided and localised in various settlements. The very same village could have been mentioned more than just once, while others completely forgotten. Besides the inclusion of the voivodeship within the Crown in 1569 meant

³ B. Szady, *Church administration borders. B. Dioceses of Poznań and Wrocław*, [in:] AHP Greater Poland, in this edition III.2.2b.4.

that on those territories in general arable land taxation (*lanowy*) was not raised in the 1560s and the records from this decade that are the ones in other volumes of AHP that have turned out especially valuable. In the case of canonical visitations the incomplete nature of the source base is even more striking. There dominated over significant swathes of land an Orthodox populace with Catholic parish structures only covering a small part of the inhabitants, while in some villages there simply were no Catholics. The visitation protocols drawn up were only compiled later; these did not cover all settlements, while their state of preservation is far from satisfying. During work on this volume it was for a long time unclear where it would be possible to reconstruct the parish districts. Finally they are but the result to a large degree has the virtue of hypothesis than certain factual findings.

The difficulties here presented do not exhaust the specifics of Podlasie rather they constitute merely a good illustration. To present this voivodeship in accordance with the principles of the series required the harmonious fusion of two areas of competency. On the one hand this was a knowledge of those very regulations, in other words the many years of practice of working within an atlas team; while on the other hand being rooted in regional historiography. In part this could be obtained through the careful selection to those who had compiled the previous volumes of historians specialising in the history of Podlasie, and connected first and foremost with the University of Białystok. However, essential was also the presence of people, who combined to a degree at least both abilities.

The team of authors for the present volume fulfilled these requirements. Headed by Bogumił Szady, knowing well the specifics of the eastern marches of the Crown in the modern era, a co-author of the Greater Poland volume, as researcher into Catholic Church structures as well as being an expert on the ontology of settlement and territorial units. Michał Gochna, the volume's joint editor, also worked on the Greater Poland volume, while continuing at the same time his research into his home town, Węgrów in Podlasie. Jarosław Suproniuk in coming from Białystok and being still connected with this area of the world has been a member of the Historical Atlas Department for over twenty years. Tomasz Panecki, a historian, geographer and cartographer in one, has experience not only of atlas work but has also been one of the main players in the project The ontological bases in the construction of historical systems of geographic information, headed by Bogumił Szady, knows Russian and Russian cartography well. However it was also necessary to invite individuals to cooperate on the undertaking who were outside of the hitherto existing team: Krzysztof Boroda, Piotr Guzowski and Marzena Liedke of the University in Białystok, Michał Sierba of the Belarusian Historical Association as well as Andrzej Buczyło and Tomasz Jaszczół of the Historical-Geographic Dictionary Unit for Medieval Mazovia and Podlasie at the Polish Academy of Sciences Institute of History. Without their erudition and understanding of Podlasie history this volume quite simply would not have come about. What these meant however, was the co-authorship of individuals who had not the experience of the atlas works into other Crown lands. Hence their expertise concerned but a single and completely exceptional voivodeship. Consequently the chapters written by them were naturally significantly different from the analogical texts that have appeared in previous volumes. One should not, however, perceive this as a weakness in the volume. Podlasie was different than the rest of the Crown, and therein it follows to write about it somewhat differently. The fundamental principles deciding on the series' cohesion and identity have been preserved.

This has been guaranteed by the acute eye of the series editor – Henryk Rutkowski. He carefully read each and every text and made many comments. There is no one who knows the AHP better. He commenced his work in the unit in 1953, becoming in 1977 its deputy head, while in 1992 the head of the unit itself. Four years later he retired though remained active, editing the Cracow volume published in 2008, and acting as the co-editor of the series in each of the subsequent volumes. His constant presence from beginning to end of this multi-generational project, the final baton to be passed to us, has been invaluable. We have introduced new notions and solutions, while thanks to him we have not severed our roots. He has ensured us access to the achievements and technical skills of our predecessors. We have become acquainted with some of them. For example, Anna Dunin-Wąsowiczowa, who was part of the atlas unit operating within the Warsaw Academic Society before it was transferred to the Polish Academy of Sciences Institute of History, and who helped us with work on the Greater Poland volume. Any attempt at enumerating all would for sure end with someone's services and contribution being overlooked, while they are all listed in the introduction to every volume. However, besides these concrete works is something more important and general which defies words, while at the same time

appears all so obvious. In the name of the whole team finishing the series I place here in the hands of Henryk Rutkowski a display of thanks to all those who preceded us.

The completion of the final volume in the series is an event worthy of emphasis. It has come about chiefly through the realisation of a cartographic reconstruction of the Polish Crown in the sixteenth century that was presented by Stanisław Smolka at the 1st Conference of Polish Historians in Cracow in 1880. A work has been brought to fruition that has stretched across a period of 140 years. Work was started when Poland as a state did not even exist, it continued when the Polish lands were crossed by two World Wars, it continued under the conditions of Soviet domination and a lack of sovereignty, it survived the whirl that was the transformations of post 1989, and was to find its crowning in a free Poland. Work on maps of the sixteenth-century Crown Polish lands was started in 1948, the atlas unit functioned at the Institute of History of the Polish Academy of Sciences from its inception in 1953. While the principles for series composition of the detailed sixteenth-century maps were established in 1964 and have been consistently adhered to right up to the final volume. For over a half a century a research unit employed on a full-time basis has been functioning. Within the context of world historiography there have been few undertakings that have been realised with such consistency and aplomb over such a long and at the same time difficult period.

In 2012 atlas work obtained financing from the National Program for the Development of Humanities (NPRH). The first project allowed for the Greater Poland volume to be completed, the development of the digital techniques essential for series realisation and a supplementation of the source edition programme. The second, commenced in 2015 saw a doubling in personnel + to 12 people, and was to result in a marked acceleration of activity. By 2020 four volumes were to have been published: Greater Poland, Cuyavia, Podlasie and Prussia. Simultaneously envisaged for the said project was a supplementation of the source base for the whole series (digital editions of the tax registers), its integration with the published volumes of *Słownik historyczno-geograficzny ziem polskich w średniowieczu* (*A Historical-Geographical Atlas of the Polish Lands in the Middle Ages*), and the accompanying monograph, including several PhD works. A part of these intentions have been moved as a result of, among other things, the effects of the pandemic, to a year later. The NPRH project is entitled *Atlas historyczny Polski XVI wieku* (*A Historical Atlas of Poland in the 16th-century*) – constituting the completion and enrichment of the series. Although the said ‘completion has yet to be realised, the present state of developments gives no worries to it not being finished. After 140 years Stanisław Smolka’s dream has been fulfilled.

Work on the individual maps of the Crown Polish lands in the second half of the sixteenth-century is coming to its end, but not that of the historical atlas. Equally the cartographic reconstruction for this epoch and these territories and terrains has been developed in such a way that it can be included with the state infrastructure of spatial data and consequently effectively propagated amongst all users, not simply professional historians. At the same time the expansion of the atlas so as to take in subsequent epochs and other parts of the former Commonwealth is already afoot, while the plans – in the form of projects awaiting financing and the formal concrete realisation of hitherto notions – are very broad indeed.

(2021)

Translated by Guy Russell Torr

LIST OF SETTLEMENTS

This list shows the settlement network of the lands of the Kingdom of Poland (the ‘Crown’ territory) in the second half of the sixteenth century. It differs from the cartographic form in that the location data it gives are less precise whereas unlocalised settlements are included along with varieties of sixteenth-century names, their present-day forms and, in some special cases, additional information.

In contrast to the practice present in certain volumes in the series, this list only encompasses the items featured on the main map in the Crown lands as well as inn settlements shown on the map of roads. Hence, there are no settlements from outside the Crown or the Ruthenian lands annexed in 1569. There are no names listed in the commentary and in the cartographical material other than of the scale 1:250,000, save for the map of roads. The pages on which the settlements appear in the text are not specified. There are no references to the varieties of sixteenth-century names. All these tools that facilitate the search for entries in a printed book are of limited usefulness in a digital edition.

Some of the elements constituting the entries in the list appear in every entry, others only in some of the entries. The order of these elements goes as follows:

1. **name from the second half of the sixteenth century**, i.e. the form shown on the map;
2. **important variants** of that name in the period concerned (in parentheses);
3. **present-day name**, *in italics* – if different from the sixteenth-century name;
4. **voivodeship affiliation** in the second half of the sixteenth century – abbreviated name of the voivodeship;
5. **district affiliation** in the second half of the sixteenth century – abbreviated name of the district;
6. **parochial affiliation** at that time – sixteenth-century name of the parish centre;
7. **type of settlement** that was not a village or a hamlet in the second half of the sixteenth century (e.g. town/city, mill settlement, demesne-farm settlement, suburb);
8. **ownership affiliation** in the second half of the sixteenth century – abbreviated name of category (noble ownership is not marked);
9. **geographic coordinates** of the settlement featured on the map (latitude (N) and longitude (E), both accurate to one decimal place).

Also, when the main entry is related to a group of settlements on the map, the names of particular hamlets belonging to this group are given in the second place, after the equation mark: (=). The ownership and character of the ‘related’ settlement, if different from the main entry, are also specified.

The names of lost settlements, i.e. non-existent but with precisely known location, are marked with a cross: (+). Approximate locations have one asterisk (*), unlocalised settlements have two asterisks (**) attached.

The variants of the main entry, whose relation with a given name is uncertain, and those which appear in the sources in a form that raises doubts (as it is probably incorrect), are marked with a quotation mark: (?).

If no contemporary name of a settlement appears in the list, this means that:

- if there is no cross or asterisk – the name of the settlement was identical in the sixteenth century with its present-day name; or,
- if there is a cross against the main entry – the settlement is lost; or,
- when the main entry is marked with an asterisk – the settlement was probably lost but we have managed to localise it in approximation.

A main entry marked with an asterisk and a contemporary name related to it signify uncertain localisation.

The alternative of district or parochial affiliation is marked with the conjunction ‘or’; for uncertain affiliation the question mark following the name of parish is used.

The list extends to names of noble environs in Podlasie Voivodeship. Such entries are composed of:

- the name of the environ in the second half of the sixteenth century, as specified on the map, which is the first (shared) segment of the name (e.g., Falki, Jabłoń, Łapy, Tybory);
- district affiliation in the second half of the sixteenth century (abbreviated name of district).

A list of all the noble environs and their constituent hamlets is contained in the Annex ‘Noble environs in Podlasie as confirmed by sources 1550–1600.’ (Chap. III.2.1.8).

The entries are automatically arranged in alphabetic order. For identical sixteenth-century names, the sequence is decided primarily based on special marks attached to them, the algorithmic order being space, bracket, equation mark, hyphen (-), comma, and asterisk; then follow the letters of alphabet.

More elaborate discussion of the issues reflected in the list is presented in the commentary, in particular Part III.3 (Settlement), esp. Chapter III.3.1 (Location of settlements) and Part III.4 (Geographic nomenclature).
