

Jerzy PRÓSZYŃSKI

**Catalogue of *Salticidae* (*Aranei*) specimens kept in major  
collections of the world**

To Monsieur Pierre BONNET whose  
"Bibliographia Araneorum" greatly  
promoted progress in arachnolo-  
gical research.

It is generally accepted now, that study of descriptions alone does not ensure proper identification of species of spiders and that examination of comparative specimens, especially types, is necessary. Unfortunately the types and other important specimens are scattered among more than fifty collections all over the world, the collections being often in disorder and poorly managed. The lack of information on whereabouts of comparative material makes finding of specimens a very difficult task. The aim of the present catalogue is to facilitate finding of comparative material of *Salticidae* for any research project by providing a guide to more important collections all over the world.

The catalogue is written from my personal notes made in 22 zoological museums I had opportunity to visit or to work in as well as from more or less complete lists sent to me by curators of numerous other collections, sometimes also compiled from various publications. It was unfortunately not possible to include all existing collections into present catalogue, to visit all collections personally is of course impossible and it was difficult for some curators to provide me with necessary information. The catalogue, however, gives information on whereabouts of specimens of approximately three fourth of described species and should be rather quite useful in promoting systematic research on *Salticidae*.

The list of collections studied or mentioned in the catalogue is given below, preceded by code abbreviations, under which they are referred to within the text and followed by concise information about the contents.

- Bas.** — Naturhistorisches Museum, Augustinergasse 2, Basel, Switzerland.  
Collections of SCHENKEL and MERIAN, also some species of MELLO-  
-LEITÃO. Contains specimens from Switzerland, the Americas and

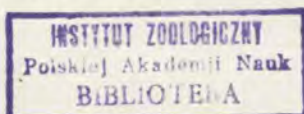

P. 255.

the Far East. There are numerous types (listed in the published catalogue<sup>1</sup>).

The order within collection is good and there is a catalogue arranged alphabetically by genera. The contents written from my personal notes.

- Bel.** — Canadian Agricultural Research Institute, Belleville, Ontario, Canada. Small American collection, the list sent me by Mr. B. CUTLER.
- Ber.** — Zoologisches Museum, Humboldt-Universität, 104 Berlin, Invalidenstrasse 43, German Democratic Republic. Great and very important collection containing materials of C. L. KOCH, KARSCH, DAHL and others. Alcohol collection arranged alphabetically within family by genera and species, each species in a separate jar. Some part of the collection, especially types of C. L. KOCH, preserved dry and these are to be moved into alcohol. Some part of the collection mounted by F. DAHL into permanent slides "DAHL type". The catalogue to the collection is being prepared, but not yet ready. Contents written from my personal notes.
- Bno** — Private collection of Professor F. MILLER, Katedra použité entomologie, Vysoká škola zemědělská, Zemědělská 1, Brno, Czechoslovakia. Informations on some species kept there are compiled from papers of F. MILLER.
- Brux.** — Institut Royal des Sciences Naturelles de Belgique, rue de Vautier, Bruxelles IV, Belgium. Small but interesting collection containing 126 species including 8 types (of GILTAY, ROEWER and SIMON), kept in a good order. Contents written from a list sent to me by Mr. J. KEKENBOSCH and from my personal notes.
- Bud.** — Természettudományi Múzeum Állattára, Baross utca 13, Budapest VIII, Hungary. Rather small collection containing material of CHYZER, KOLOSVÁRY, SZOMBATHY as well as some specimens of W. KULCZYŃSKI and perhaps L. DI CAPORACCO (unconfirmed opinion in some papers). There is no competent arachnologist supervising that valuable collection and the order is somewhat less than exemplary; there is no catalogue or any list of contents. Informations on some species are written from my personal notes made during my visit in 1961; it appeared impossible to obtain more complete informations since that time.
- Bue.** — Museo Argentino de Ciencias Naturales, Av. Angel Gallardo 470, Buenos Aires, Argentina. Important collection from Argentina and adjacent areas. Incomplete informations about some types were kindly sent to me by Miss M. E. GALIANO, informations on some other species compiled from her papers.
- Cal.** — California Academy of Sciences. Informations on some species were sent to me by Dr. H. W. LEVI.
- Cape** — South African Museum (N. H.), Cape Town, Republic of South Africa. Informations of this small but important collection containing material of LAWRENCE and african species of PECKHAM were sent to me by Mr. A. J. HESSE and Dr. R. F. LAWRENCE.

<sup>1</sup> FORCART L. 1961. Katalog der Typusexemplare in der *Arachnida*-Sammlung des Naturhistorischen Museum zu Basel: *Scorpionidea*, *Pseudoscorpionidea*, *Solifuga*, *Opilionidea* und *Araneida*. Verh. Naturf. Ges., Basel, 72: 47-87.

- Cop.** — Zoologisk Museum, Universitetsparken 15, København, Denmark. Small but interesting collection containing some part of THORELL's material, including types of 13 species and other material from various continents. Contents written from my personal notes.
- Dub.** — National Museum of Ireland, Kildare Street, Dublin 2, Ireland. WORKMAN's collection and some specimens from THORELL's. Arranged geographically. Informations on two types kept there were sent to me by Miss G. ROCHE.
- Dur.** — Durban Museum, Republic of South Africa. Information on a few species kept there are borrowed from ROEWER (1965)<sup>1</sup>.
- Fir.** — Istituto di Zoologia della Università, Via Romana 17, Firenze, Italy. Collection of L. DI CAPORIACCO containing material from Italy, Africa, South America, Asia and Pacific Archipelagoes. Specimen tubes kept in big glass jars as they were brought by various expeditions and are not sorted; the jars are often not labelled and usually there is no indication, which species can be found in particular jars. Part of jars is mixed with other collections and some could be discovered only after hours of search in various rooms of the Museum. There is no catalogue of any kind to this collection. All this is due to lack of an arachnologist supervising the collection, apparently left in disorder by death of L. DI CAPORIACCO. The collection is the most important assembly of L. DI CAPORIACCO specimens, other parts of DI CAPORIACCO's collections are kept in Genova and the Himalayan and Karakorum material in Milano. I could not confirm informations that some specimens of L. DI CAPORIACCO are kept in Budapest and Caracas. Contents of Firenze Museum collection is written from my personal notes.
- Frank.** — Natur-Museum und Forschungs-Institut Senckenberg, Senckenberg-Anlage 25, 6 Frankfurt a.M. 1, German Federal Republic. Great collection of KRAUS, ROEWER, STRAND, WIEHLE and others, containing material from all continents. Arranged by accession numbers within particular families, in an excellent although a bit complicated order. There is a good catalogue to the collection, arranged alphabetically by specific names within each family. There is also quite an important collection of unidentified *Salticidae*. Contents written from my personal notes.
- Gev.** — Museum d'Histore Naturelle, Route Malagnou, Genève, Switzerland. Collection of R. DE LESSERT, mainly from Switzerland and Africa, numerous types; kept in a good order but there is no catalogue. Contents written from my personal notes.
- Goa** — Museo Civico di Storia Naturale, Via Brigata Liguria 9, Genova, Italy. Medium size collection with large part of THORELL's collection (with numerous types), also SIMON's, L. DI CAPORIACCO's and others. Contains materials from South-East Asia, Australia, Africa and Italy, arranged geographically with species mentioned in particular papers kept together. The contents of particular jars is usually written on jar labels, but there is no catalogue to the collection.

<sup>1</sup> ROEWER C. F. 1965. Die *Lyssomanidae* und *Salticidae-Pluridentati* der Aetio-pischen Region (*Araneae*). Ann. Mus. Afrique Centr. 8<sup>o</sup>. Sci. Zool., Tervuren, 139, 86 pp., 73 ff.

- Ham.** — Zoologisches Institut und Zoologisches Museum, Von-Melle-Park 10, 2000 Hamburg 13, German Federal Republic. Large collection containing types and numerous material of L. KOCH, KEYSERLING and others. All species arranged alphabetically within families, each species in a separate jar. The order is exemplary, names and synonyms arranged according to ROEWER's catalogue. There is a catalogue to the collection, the list of types is already published<sup>1</sup>. Contents written from my personal notes.
- Har.** — Museum of Comparative Zoology, Harvard University, Cambridge, Mass. 02138, USA. One of the biggest and most important collections of world. There are types of about 800 species described by PECKHAMS, EMERTON, BANKS, CHICKERING and other, the list of these was sent to me by Dr. H. W. LEVI. I do not know the collection of non-type specimens there, but it must be rich. There are also rich unidentified material from both Americas and some other regions.
- Hels.** — Zoological Museum, University, P. Rautatiekatu 13, Helsinki, Finland. Small collection from Finland and New Foundland. Contents written from my personal notes.
- La Plata** — Museo Historia Naturales, Universidad de la Plata, La Plata, Argentina. Informations on some specimens kept there are compiled from papers of M. E. GALIANO.
- Lei.** — Rijksmuseum van Natuurlijke Historie, Raamsteeg 2, Leiden, Holland. Collections of VAN HASSELT, DOLESCHALL and VAN HELSDINGEN, mainly from Indonesia and Netherlands. Collection is kept in a good order, but there is no catalogue to the collection. There is also unidentified collection from Indonesia and New Guinea. The contents of the collection written from my personal notes.
- Len.** — Zoological Institute, Academy of Sciences of the USSR, Universitetskaja nab. 1, Leningrad, USSR. The identified collection is relatively small but quite interesting, there is rich unidentified material from the Soviet Union. Informations about that collection has been brought to me by Mr. C. DZIADOSZ.
- Lon.** — British Museum (N. H), Cromwell Road, London S. W. 7, Great Britain. One of the richest collections of the world containing many types of various authors, and very rich non-type material. The catalogue to the collection is being prepared now. The contents written from my personal notes.
- Lu.** — Zoological Institute, University, Helgonavegen 3, Lund, Sweden. Small collection from Scandinavia and LINDBERG's collection from Afghanistan (identified by ROEWER). Contents written from my personal notes.
- Mil.** — Museo Civico di Storia Naturale, Corso Venezia 55, 20/21 Milano, Italy. Part of the L. DI CAPORACCO collection — from Himalaya and Karakorum only. The list of species kept there was sent to me by Mr. V. LEONARDI.

<sup>1</sup> RACK G. 1961. Die Entomologischen Sammlungen des Zoologischen Staatsinstitut und Zoologischen Museums Hamburg. II. *Chelicerata* II: *Araneae*. Mitt. Hamburg. Zool. Mus. Inst., Hamburg, 59, 60 pp.

- Min.** — Department of Entomology, Institute of Agriculture, University of Minnesota, St. Paul, Minn. 55101, USA. Small collection from the USA, also private collection of Mr. B. CUTLER, who sent me these informations.
- Mke** — Milwaukee Public Museum, 818 Wisconsin Ave., Milwaukee 3, Wisconsin, USA. Part of the PECKHAM collection with numerous types. There is no arachnologist supervising that collection. The informations on types was sent to me by Dr. H. W. LEVI.
- Mos.** — Zoological Museum, Moscow University, Heczen Street 6, Moscow, USSR. My informations are limited to a few species from the FEDTSCHENKO expedition.
- Nat.** — Natal Museum, Loop Street, Pietermaritzburg, Natal, Republic of South Africa. Informations on a few specimens compiled from ROEWER (1965).
- N.Y.** — The American Museum of Natural History, Central Park West at 79th Street, New York, N. Y. 10024, USA. Large collection from all over the world, the list of types was sent to me by Dr. W. J. GERTSCH.
- Os.** — Zoologisk Museum, Universitetet i Oslo, Sarsgate 1, Oslo 5, Norway. Small collection from Norway, the contents written from my personal notes.
- Oxf.** — Department of Zoology, University Museum, Parks Road, Oxford, Great Britain. Collection of O. P.-CAMBRIDGE with numerous types, also recent collection of J. A. L. COOKE. During my visit in 1965 the collection was being set in order and I do not know how far that went in the meantime. The list of contents was sent to me by Dr. J. A. L. COOKE.
- Par.** — Muséum National d'Histoire Naturelle, 61, rue de Buffon, Paris Ve, France. The most important collection in the world, containing the bulk of SIMON's collection, as well as some parts of collections of SCHENKEL, STRAND, BERLAND and MILLOT, DENIS, FAGE and some recent material of JÉZÉQUEL. There is a good catalogue arranged alphabetically by specific names, but not divided into families. The specimens arranged by catalogue (tube and jar) numbers. The contents written from my personal notes.
- Rio** — Museu Nacional, Quinta da Boa Vista, Rio de Janeiro, GB, Brazil. Informations on some species compiled from papers of M. E. GALIANO.
- S. Paulo** — Secretaria da Agricultura, Dept. da Zoologia, Av. Nazareth 481, São Paulo, SP, Brazil. Informations on some specimens compiled from papers of M. E. GALIANO.
- Sto.** — Naturhistoriska Riksmuseet, Stockholm 50, Sweden. Large collection with considerable part of THORELL's collection including numerous types, there are also some types of TULLGREN and some of SCHENKEL. The order is good and there is a catalogue to the collection. The list of contents was sent to me by Dr. P. I. PERSSON and checked with my personal notes.
- Sy.** — The Australian Museum, 6-8 College Street, Sydney, Australia. Small collection containing 89 species from Australian region, including some types. The list of contents was sent to me by Mr. C. N. SMITHERS.

- Ter.** — Museum Royal d'Afrique Centrale, Tervuren, Belgium. The identified collection (DE LESSERT, ROEWER) is rather small but very interesting and contains numerous types. There is also large unidentified collections containing about 10.000 tubes. The informations were sent to me by Prof. P. L. G. BENOIT and checked with my personal notes.
- Up.** — Zoologiska Institutionen, Uppsala, Sweden. Small Scandinavian collection, the contents written from my personal notes.
- US.** — United States National Museum, The Smithsonian Institution, Washington, DC 20560, U.S.A. The list of a few types of I. FOX species was sent to me by Dr. H. W. LEVI. I was informed that there are numerous specimens of spiders, mainly from both Americas and Liberia, also some unidentified collections, but I do not know the details.
- Ut.** — Department of Zoology, University of Utah, Salt Lake City, Utah 84101, U.S.A. Collections of CHAMBERLIN with types. Incomplete informations were sent to me by Dr. H. W. LEVI.
- War.** — Instytut Zoologiczny, Polska Akademia Nauk, ul. Wileza 64, Warszawa, Poland. Large and very important collection of KULCZYŃSKI (Europe, Siberia, South-East Asia, Australia, New Guinea and some other areas), TACZANOWSKI (Palaeartic Region and South America), KEYSERLING (South America) and other authors, also recent collections of PRÓSZYŃSKI and STARĘGA. There are numerous types and there is also some unidentified material. The collection is being set in order and the biggest part of it is accessible now; there is a catalogue to the collection and the catalogue of types is in preparation for print.
- Wien** — Zoologische Abteilung, Naturhistorisches Museum, A-1014 Wien I, Burgring 7, Austria. Medium size but very important collection of REIMOSER with some specimens of DOLESHALL, L. KOCH, KULCZYŃSKI, SIMON; recent collection of KRITSCHER is kept separately. The collection is arranged systematically with each species kept in a separate jar. There is a good catalogue to the collection arranged by genera within each family. The contents written from my personal notes.
- Wr.** — Muzeum Zoologiczne, Uniwersytet Wrocławski, ul. Sienkiewicza 21, Wrocław, Poland. Contains GRUBE's collection from Siberia (types) and Silesia; also recent Silesian collection of Dr. M. CZAJKA and private collection of Doc. S. PILAWSKI from Southern Poland (Silesia, Beskida) and Ukraina. The contents of collection was communicated to me by Dr. M. CZAJKA, Dr. J. WIKTOR and Doc. S. PILAWSKI, I had also an opportunity to revidé GRUBE's types.
- Ya.** — Peabody Museum, Yale University, New Haven, Connecticut 06511, U.S.A. List of 23 types of PETRUNKEVITCH was sent to me by Dr. H. W. LEVI.

The compilation of a catalogue of collections presents some difficulties because of various nomenclatures used by various authors during last 100 years. It would be useless to list separately every synonym found written on the labels in the collections studied. To overcome that difficulty all names were checked with nomenclatorial system used

by BONNET in his "Bibliographia araneorum"<sup>1</sup> and any differences or synonyms were amended according to BONNET. To avoid new confusion arising from these changes, I had to quote in full all names and synonyms written on the labels whenever they differ from those used by BONNET. Names which agreed with BONNET are quoted throughout the catalogue in their first letters abbreviations. To simplify quotation system small spelling differences, and especially differences in endings like *-us*, *-um*, *-ium*, *-ion*, *-a* are not taken into account.

Some few exceptions from BONNET's system have to be introduced because of the progress in the systematic research achieved since 1939. These exceptions concern mainly South American species studied by M. E. GALIANO and also genera studied by J. PRÓSZYŃSKI (papers both printed and in preparation), for instance genera *Attulus*, *Pseudomogrus*, *Sitticus* and *Yllenus*.

Type-specimens are marked with word "TYPE", but such indications were impossible whenever types were not labelled as such. For instance majority of SIMON's collection in Paris consist of type-specimens, but none is labelled so. The specimens deserving particular attention because of their large number or some other features are marked by exclamation sign in parentheses (!). Doubtful cases or suppositions (for example supposed type-specimens) are marked with question mark and that is put into parentheses whenever that qualification comes from the author of the catalogue (?).

Some difficulties arisen from the specimens labelled with names apparently never published or which could not be synonymized. To avoid creation of new "nomina nuda" I was forced to remove all such names from the catalogue, although their publication could be of some help to arachnologists reviding particular genera. Presence of such specimens in particular collections is signalized under heading "undescribed" at the end of each genus. The specimens labelled as "sp. n." in the collections or identified to the genus only are quoted under heading "unidentified" also at the end of each genus. I have found that there is many very interesting specimens among these "unidentified", often recognized already as a new, but not yet described.

In spite of my efforts I was unable to find specimens of some 800 species mentioned by BONNET. These lacking species are omitted in the catalogue but their list can be easily inferred from comparison of the present catalogue and the BONNET's "Bibliographia araneorum". All species omitted in this catalogue can be therefore, considered as "no information" cases. The reasons for that omission are different.

Specimens of some species may be kept in the collection I had no opportunity to study. For instance 24 species of FRANGANILLO may be kept in Academia de Ciencias de Cuba, La Habana, Cuba. 11 species of BERLAND may be in Bishop Museum, Honolulu, Hawai 96819, U.S.A. Majority of lacking species of MELLO-LEITÃO may be kept in the collections in La Plata, Rio de Janeiro and São Paulo (see the list of Museums above). Some of species of L. DI CAPORIACCO may be kept in Museo de Biologia, Escuela de Ciencias, Univ. Central de Venezuela, Caracas, Venezuela and also in Budapest. 5 species of KOLOS-VÁRY and 15 of SZOMBATHY are most probably in Budapest.

Types of some species were destroyed during the war — for instance of 3 species of BRISTOWE, 5 of DÖNITZ and STRAND, 8 of MENGE, 11 of SAITO<sup>2</sup>.

Among others, I have no informations on whereabouts of specimens of 7 species of BANKS, 16 of KARSCH, 20 of C. L. KOCH, 8 of L. KOCH, 5 of KULCZYŃSKI, 31 of LUCAS,

<sup>1</sup> BONNET P. 1945–1961. Bibliographia araneorum. Analyse méthodique de toute la littérature aranologique jusqu'en 1939. 1–3. Toulouse. 1 : 832 pp., 28 tt.; 2 : 5058 pp.; 3 : 591 pp.

<sup>2</sup> It can be add that some of collections survived by a miracle — like that of W. KULCZYŃSKI and W. TACZANOWSKI in Warszawa kept in the building set purposefully in fire by the Nazi German troops after the cease of hostilities in October 1944.

29 of NICOLET, 27 of PECKHAMS, 10 of O. P.-CAMBRIDGE, 12 of F. O. P.-CAMBRIDGE, 10 of ROSSI, 80 of SIMON, 22 of TACZANOWSKI, 15 of THORELL, 64 of WALCKENAER. Some of these are presumably lost, some could be kept in various small collections and some may be also hidden among collections studied (mistakes in labelling, omission in the catalogues and so on). I would be very grateful for informations on any specimens omitted in this catalogue.

It must be stressed here that correctness of quotation of any specimens in this catalogue depends from correctness of identification and labelling of the specimens in the collections, and from correctness of the existing catalogues to particular collections. It is unfortunately quite normal that there are numerous mistakes in the collections, the order in some collections is such that some species could be simply overlooked. The informations given in this catalogue can be considered as indication of presence of particular species in various collections; the lack of informations, however, does not exclude possibility that it could be discovered there later on.

In spite of these reservations it is hoped that the present catalogue will help in finding of comparative material for particular research projects and will therefore promote further progress in research on systematics of *Salticidae*.

I wish to stress that completion of this catalogue would be impossible without assistance of numerous arachnologists and curators, and to express my warm gratitude and thanks to all contributors. I thank to all persons indicated above in the list of collections, who sent me informations on particular collections. My research in the Museums visited were much facilitated by kind hospitality and assistance of persons supervising particular collections. For that I am especially grateful to Mr. S. CARFI - Firenze, Dr. D. J. CLARK - London, Dr. J. A. L. COOKE - Oxford, the late Dr. W. CROME - Berlin, Dr. L. FORCART - Basel, the late Dr. H. GISIN - Genève, Dr. M. GRASSHOFF - Frankfurt a. M., Dr. Delfa GUIGLIA - Genova, Dr. P. J. VAN HELSDINGEN - Leiden, Mr. M. HUBERT - Paris, Mr. J. F. JÉZÉQUEL - Paris, Dr. J. KEKENBOSCH - Brussels, Prof. O. KRAUS - Hamburg, Dr. E. KRITSCHER - Wien, Prof. B. LANZA - Firenze, Dr. G. RACK - Hamburg, Mme. F. REBIÈRE - Paris, Mr. J. C. REGNIER - Genève, Prof. S. SEGESTRALE - Helsinki, Miss M. STENKIL - Lund, Prof. E. TORTONESE - Genova, Dr. L. TUXEN - Copenhagen, Prof. M. VACHON - Paris.

The typescript of the catalogue was read by Prof. O. KRAUS, and various points discussed personally or by mail with Dr. H. W. LEVI, Dr. B. PISARSKI, Dr. M. PRÓSZYŃSKA, Dr. W. STARĘGA, to whom I wish to express my warmest thanks.

The very special thanks are due to Prof. M. VACHON, who gave great contribution in correcting the typescript, clarifying numerous problems and suggesting amendments.

<sup>1</sup> I had an opportunity to check the type-specimen of this species and have found that it is not related to any species of the genus *Pseudomogrus* SIMON, 1937, which is considered now as a junior synonym of the genus *Yllenus* SIMON, 1868. The generic name of this species must be therefore changed, but I defer that until finding of its systematic position will become possible.

## STRESZCZENIE

[Tytuł: Katalog *Salticidae* (*Aranei*) w ważniejszych zbiorach świata]

Przy obecnym stanie rozwoju arachnologii światowej prawidłowa i pewna identyfikacja pajaków, jak również wyciąganie jakichkolwiek wniosków o pokrewieństwach filogenetycznych lub rozmieszczeniu zoogeograficznym nie jest możliwe bez studiów nad materiałami porównawczymi. Uzyskanie takich materiałów jest jednak bardzo utrudnione ze względu na rozproszenie zbiorów w kilkudziesięciu większych i mniejszych Muzeach Zoologicznych lub pokrewnych instytucjach na całym świecie, niedostateczne udostępnienie wielu zbiorów oraz brak informacji o zawartości poszczególnych zbiorów.

Niniejszy Katalog ma ułatwić szybkie uzyskanie materiałów porównawczych do badań nad rodziną *Salticidae*. Katalog podaje informacje o zbiorach, w których przechowywane są okazy ponad trzech tysięcy gatunków *Salticidae*; ułożony jest w sposób zbliżony do „Bibliographia Araneorum” P. BONNETA (1945–1961) i uzupełniony danymi z najnowszej literatury. Pomimo usilnych poszukiwań nie udało się odnaleźć okazów dalszych 800 gatunków *Salticidae* — gatunki te są pominięte w katalogu, ich wykaz można jednak odtworzyć wyławiając opuszczone tu gatunki z listy podanej we wspomnianej bibliografii BONNETA.

Katalog został zestawiony na podstawie sporządzonych przez autora spisów zawartości zbiorów w odwiedzonych przez niego Muzeach Zoologicznych, oraz uzupełniony danymi nadesłanymi przez kuratorów niektórych innych muzeów; nieliczne dane uzupełniające zaczerpnięto również z piśmiennictwa. Pełny wykaz uwzględnionych zbiorów oraz nazwiska osób współpracujących z autorem podane są we wstępie do Katalogu.

## РЕЗЮМЕ

[Заглавие: Каталог *Salticidae* (*Aranei*) в важнейших сборах мира]

При настоящем состоянии развития мировой арахнологии правильная и уверенная идентификация пауков, а также вынесение каких-либо выводов о филогенетическом родстве или зоогеографическом распространении невозможна без изучения сравнительных материалов. Использование таких материалов, однако, очень затруднено из-за раскиданности сборов в нескольких больших и меньших Зоологических музеях или подобных институтах в целом мире, недостаточного доступа многих сборов, а также недостатка информации о содержании отдельных сборов.

Настоящий Каталог должен облегчить использование сравнительных материалов в исследованиях над семейством *Salticidae*. Каталог дает информацию о сборах, в которых хранятся больше трех тысяч видов *Salticidae*; оформлен в способ близкий „Bibliographia Araneorum” P. BONNET (1945—1961) и дополненный данными с новейшей литературы. Помимо старательных поисков в сборах не удалось найти списка следующих 800 видов *Salticidae*, находящихся в библиотеке Боннета, эти виды опущены в настоящем Каталоге.

Каталог составлен на основе сделанного автором списка содержания сборов Зоологических музеев, которые он посетил, а также дополненный данными, присланными кураторами некоторых других музеев, некоторые дополняющие данные взяты также с литературы. Полный список поданных сборов, а также фамилии людей, сотрудничающих с автором поданы в вступлении Каталога.

INDEX OF SPECIFIC NAMES MENTIONED IN THE CATALOGUE
