An amusing mistake occurred in my previous publication, where I initially intended to describe four new species, then “in the last moment” decided to add two more, but inadvertently forgot to “update” the title and introduction, so the paper entitled “Four new species ...” contains the descriptions of six!

Besides, Dr. S. BÍLÝ kindly called my attention to the unfortunate omission of KBIN [Koninklijk Belgisch Instituut voor Natuurwetenschappen, Brussel, BELGIUM] – from where the specimen to become the holotype of *Chrysobothris maciejewskii* HOŁ. has been borrowed – in the list of collection acronyms, and to the correct publication date (2009) of the last volume of BELLAMY’s Catalogue (in the list of references I quoted the entire publication as “BELLAMY 2008”).
