In the vicinity of 70 grain mills importing grain from different countries of SE Europe and North America many alien species were found to occur. The most interesting are: *Aegilops cylindrica* Host, *Ambrosia artemisiifolia* L., *Hirschfeldia incana* (L.) Lagrèze-Fossat, *Lepidium latifolium* L., *Rapistrum rugosum* (L.) All., *Sisymbrium orientale* L., *S. volgense* Bieb. ex Fourn., *Sorghum halepense* (L.) Pers.

The following species are fairly widely spread: *Alopecurus myosuroides* Hudson, *Ammi majus* L., *Bifora radians* Bieb., *Brassica elongata* Ehrh., *Centaurea solstitialis* L., *Eruca sativa* Mill., *Myagrum perfoliatum* L., *Neslia apiculata* (Fisch., Meyer, Avé-Lall.) C. A. Mey., *Turgenia latifolia* (L.) Hoffm. Some species were collected which have not previously been recorded in Poland. These were: *Aspera interrupta* (L.) P. B., *Brizochloa humilis* (Bieb.) Jirasek & Chrték, *Centaurea depressa* Bieb., *Cerastium dichotomum* L., *Gypsophila pilosa* Hudson., were collected.

Many thanks to Dr. Z. Szczęśniak and Dr. J. Paszner-Kotajewska for their help in identification of some species. This work was supported by the Polish National Science Foundation (KBN) grant No 302.009.02.01.
